Consumption of Eggs.—Eggs of hens and ducks and other poultry, commonly eaten as food in this kingdom, are in point of quantity almost incredible. The aggregate number cannot be less than 1,000,000,000, and the value, at the lowest prices, three [illegible] pounds sterling. Fourteen hundred millions of eggs. The London and North Western Railway Company frequently receive at their station in Liverpool, in one day, from Ireland alone, upwards of 1,000,000 of eggs, and forward them into the manufacturing districts.

A Monument of Glass.—A column, consisting entirely of glass, bases on a pedestal of Carrara marble, and surmounted by a statue of Peace, six feet high, by the celebrated sculptor, Rauch, is about to be erected in the Garden of the Peace, at Potsdam. The shaft will be ornamented with spiral lines of blue and white.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

Is Paris to be brilliant or dull this winter? Will there be other balls than subscription balls for the poor in danger of starving, owing to the dearness of bread? That is the question. In the meantime Paris is at present dull enough. Those who have châteaux, horses, and dogs, enjoy shooting; those who have châteaux, but no horses, plant, those who have horses and no châteaux, show themselves in the fashionable promenade, which begins at the Church of the Madeleine, and ends at the Arc de Triomphe de l'Etoile; those who have dogs, and no horses, take them about with them muzzled—hying images of liberty as it now exists in France.

The Imperial family is at St. Cloud, where her Majesty the Empress is bored. She does not like St. Cloud, so that it is only a halting-place between Compiègne and Fontainebleau, where the Court will remain till Christmas. The Empress goes out riding, which is some contradiction given to the periodical reports of the state of her health.

The Prince Napoleon is returned from Stuttgard, where he went from a totally different motive to that of the project of a marriage; there is no Princess in the Royal family of Stuttgard to marry. The only possible marriage, and the one of which there has been a question at Compiègne, would be with the Princesse de Hohenzollern, grand-daughter of the Grand Duchess of Baden. She is not yet seventeen, and reportas yet very pretty. There is little going on in the shops, where the owners complain of selling nothing. *Les Ebrennes* do not promise well, owing, they say, to the Cossacks, and the Emperor Nicholas. The oath *a-la-mode* at present is "Memechikoff!" the energetic oath is the "D—l take the Russians!"

The theatres are full, consequently the salons are empty, but the new pieces given this week are detestable. Last Saturday witnessed three failures in the same evening. At the Théâtre Française, "Une Journée d'Agrippine," comedie in verse; at the Vaudeville, "Les Vins de France;" at the Théâtre des Variétés, "Le Cousin du Roi." To repair its last failure, the Théâtre Français is actively employed in mounting a piece in one act by Monsieur Alexandre Dumas; and another, also in one act, by Madame Emile de Girardin, entitled "Le Feu de Joie." At the Odeon, the "Roche Maupray," by G. Sand, is in rehearsal.

There are no new books worth the trouble of cutting and reading. This morning appeared "Les Mémoires de Dalbocquet, par un Bourgeois de Paris;" a parody on the "Memoires d'un Bourgeois de Paris, by M. Veron.

French industry is preparing actively for the Exposition, which is to take place in 1855, in Paris, if the war has not brought over the Cossacks, and established their encampments in the Champs Elysées, or has not conducted the French as lieutenants to Varsovie. What may happen a year hence—Heaven knows! who can know? In vain are the turning tables, the knocking-tables, questioned; nothing further is known, and the doubt remains obstinately as it was—a doubt.

At the present moment turning-tables is a mania, an infectious malady, from which the loftiest, the most enlightened, the most distinguished minds cannot escape; this infection has reached the Court, and the other day the Empress questioned a table, which answered her, in the presence of the Baron James Rothschild. "Who are your?" asked her Majesty of the table—"I am the spirit of your father, the Comte de Montijo," answered the table, and a most interesting and intimate conversation took place between the Sovereign and her father and his august daughter. There are salons where any one daring to dream of incredulity to these astonishing rentals would be exposed to the danger of being spectrophised and expelled: such is the tolerance which reigns in the nineteenth century. When one enters a salon in Paris for the first time, it is, therefore, prudent to begin by informing oneself whether turning-tables, speaking-tables, knocking-tables, or, in short, all the legion of invisible thinkers and speakers, are believed in. The book of M. Henneqnin, the late member of the last *Assemblée Législatif*, entitled "Souvons le Genre Humain" has appeared: *Dieux de la terre*—from whose dictation it has been written—gives but a poor idea of itself by this work. Nothing can be weaker than this weak hallucination.

The *salons* are almost as invasive as the tables—the leaders of the mode wear men's pockets, with deep pockets. The men, we suppose, will wear shawls. After all, there would be nothing very astonishing in that; have we not already seen men wearing fur muffs? We live in an epoch in which nothing can surprise us.

A telegraphic despatch from the General commanding at Oran to the Governor-General of Algeria, dated the 29th of October, states that the goum of Sidi-bel-Abbas, commanded by Captain Laurencle, had an engagement on the 26th ult., with the refractory Hamyans and Reraans, supported by all the Mazsa of Morocco. The enemy left 150 dead on the field. The French captured all their standards. 200 muskets some lances, sabres, and horses, with 4000 sheep and 250 camels. The French lost eight men killed and some horses, which some men wounded.

The position of the Russian Ambassador in Paris (M. Kisseleff) is becoming each day more embarrassing; and his stay is not expected to be protracted, if hostilities should continue upon the Lower Danube.

RUSSIA.

A Vienna letter of the 1st inst. states that Baron Meyendorff has formally declared that the Czar will not accept any arrangement, no matter by whom it may be proposed; and that the proposals which his Majesty lately submitted to the European powers are the only words of peace which will ever issue from his lips. This peremptory declaration is, of course, fatal to Lord Stratford de Redcliffe's proposal. At St. Petersburg it is not considered probable that the Emperor of Russia will consent to a pacific arrangement, if the Ottoman power should be for a time victorious. It is rumoured that London, instead of Vienna, is now the scene of negotiation; that the dispute is virtually settled; and that even the fortunes of the campaign will not affect the early and final arrangement of the quarrel. This rumour derives some confirmation from the continued buoyancy of the funded securities in Western Europe, but matters have gone so far in Wallachia and on the Black Sea, that few persons believe that the negotiations for peace will be uninfluenced by the result of the present campaign.

The 13th Division of Infantry has been stopped off from Sebastopol, and landed on the coast between Turkish Kaia and Redjé Kaléh. Steamers with troops have been sent up the river Anadol. Mouravieff's Infantry Division has left Odessa to take the place of the 13th Division in the Crimea.

Russia sends a very great number of Polish officers to the army of occupation. The eighth army corps is, to all intents and purposes, Polish, and even the word of command is in the Polish language. These reforms are the work of General Nepokoitschitzki.

A private letter from Odessa, of the 22nd ult., states positively that a great number of Russian naval officers and seamen had passed through that town during some days previous, on their way to Sebastopol. A report was prevalent that the greater portion of the seamen belonging to the Russian fleet in the Black Sea had been sent into the interior, and that they had been replaced by chosen officers and picked seamen sent from Cronstadt, who had been long trained in the Baltic. Trade was at a stand-still, and several merchant ships had arrived there to take in cargoes.

PERSIA.

Letters from the frontiers of Persia state that the Afghans had sent an Envoy-Extraordinary to the Shah of Persia, requesting him to aid the Turks, or otherwise they would march on Hamadan. This news is corroborated from other sources; while our Indian advices bring absurd and improbable rumours of alliances entered into by Russia with Dost-Mahomed and Persia.

HOSTILITIES BETWEEN RUSSIA AND TURKEY.

War is now actually raging on the Danube and on the coast of the Black Sea, and success would appear hitherto, for the most part, to have crowned the Turkish arms. The Ottoman forces have crossed the Danube at three different points, and in each case, even when opposed, have made good their footing upon the opposite bank. It would appear that at least 12,000 Turks have completed the passage into Lesser Wallachia; that on the 5th inst. a Turkish army of 15,000 men was encountered by the Russians after having crossed the Danube between Turtukai and Oltenitza, and that a protracted battle ensued, which would seem to have been in favour of the Turkish troops. The Russian armies in the Principalities are in a very inferior condition, both as to numbers and appointment, and are suffering severely from disease. In Asia, the Ottoman troops have been more decidedly successful, and the position of Prince Woronzoff is sufficiently critical to need all his skill, as a commander.

THE WAR IN WALLACHIA.

Letters from Constantinople, of the 25th ult., state that Omer Pasha was at Rahova, recently opposite the spot where the Schyl falls into the Danube, on the 19th. He had collected there 200 gun-boats, each armed with a heavy piece of ordnance, and capable of embarking a considerable body of troops. He was prepared to cross the Danube at that point in front of the centre of the Russian army. Gortschakoff had removed his head-quarters to Slatara, whence he was observing the movements of the Turkish troops. The Turks began the passage from Rustchuk to Giurgevo on the 2nd inst., under a heavy cannonade between the two places. A letter of the 5th bit., from Orsova, states that a very smart affair has taken place between the Turkish vanguard and about 2500 Russian Lancers. The conflict occurred at no great distance from Krajova, on the road between that place and Caracal, and after two hours' fighting, the Russian vanguard fell back towards Slatina. As this position on the Aluta would be difficult to maintain, it is believed that the advanced posts of General Dannenberg's army corps will join the main body near Piteshti, a place on the side of the river Ardschech. Dannenberg, who is said to be at the head of 45,000 regulars, 1000 Cossacks, and 200 guns, has his head-quarters at Piteshti. The head-quarters of the 5th corps of infantry, under General Luders, are to be removed from Odeschi to Ismail.

The Consul of France at Bucharest writes as follows, under date the 6th of November:—

On the 2nd and 3rd of November the Turks crossed the Danube from Turtukai to Oltenitza, to the number of about 15,000 men. On the 4th (sic) the Pasha attacked them with 9,00 men; and, after a three hours' hard contest with the bayonet took place between the two armies, and Turks maintained their positions at Oltenitza, and have fortified them. The Russians have retired to Little Russia. In the Russians set several villages and 180 private houses on fire. In the Russians set several villages and 180 private houses on fire. In the Russians set several villages and 180 private houses on fire

military authorities, the sick amount to about 12,000 men, most of whom are affected by a very singular complaint, which carries off great numbers: a bladder-like swelling appears on the chest, and in a few days suppurates, "discharging a substance like earth." The complaint is by some attributed to insufficient and coarse food, by others to the long and fatiguing marches in the summer

A letter from Bucharest, dated Oct. 29, says:—

The Hospodar Stirbey has left Bucharest for Vienna. His departure has been officially announced to the representatives of the foreign powers. The Government is carried on by a Commission, and the Russians have seized all the public funds and treasuries.

The prices of goods and victuals have been fixed at a very low rate by the military authorities. Whenever any dealer asks high prices he is at once seized and flogged by the soldiers who superintend the public markets

Sickness has begun to diminish amongst the Russian troops, owing to an improvement in their food, and to the mild and genial weather with which we are blessed here at present. The sky is without a cloud, and the sun is as warm as it is in England in the beginning of June. The Russian troops are now in cantonments *echelon* along the left bank of the Danube. They have thrown up field batteries, and cut trenches, and are quietly awaiting the advance of the Turks. The Russians will take no step to cross the Danube this winter. What they may do in the spring, circumstances will, of course, decide. That the Emperor is determined on war is shown by two facts—the advance of the flotilla on the 23rd inst., and the orders to the Hospodars to leave the Principalities. No one here has hopes of peace. The panic of the Wallachians at the approach of war is increasing daily. Some of the towns along the bank of the Danube, have been almost entirely deserted, and crowds of fugitives are daily pouring into Bucharest. Some of the Boyards have already fled into Austria, and others are preparing to follow their example. The Consuls-General of France and England are hourly expecting orders from their Governments to leave the Principalities.

A short time ago Prince Stirbey held a review of the Wallachian militia. After the review, the Prince was informed of Prince Gortschakoff's wish that the militia should join the Russians in their operations against the Turks. Prince Stirbey replied, that the Wallachian militia had to perform the duties of a garrison and police in the country, and that they could not be expected to take part in the campaign. Thereupon Prince Gortschakoff suspended the usual Wallachian authorities, and formed an Extraordinary Administrative Council. The Hospodar was invited by Prince Gortschakoff to lay down the reins of government for a time and to leave the Principality. The "invitation" was of course equivalent to a command, and the Prince obeyed. It appears that there is a general emigration among the higher classes, as appointments are ordered at Vienna for a great number of the most influential and wealthy Boyards. On the 24th, a Russian steamer, with two gunboats in tow, passed up the river from Galatz. This is a new breach of treaty, as Russian vessels of war have no right to go higher up the river than Reni, which is on the Prath.

A traveller, who has just returned from the seat of war, relates that Russian agents are travelling in the Principalities, "whose duty it is to learn the sentiments of the people, and to make lists of those who are favourable to Russia." According to these emissaries, the future prosperity of the country is to be assured by means of railroads, telegraphs, &c. Another bait which is held out is that the taxes are to be reduced to one-fourth of what they now are. The news of the passage of the Danube created a great ferment in Wallachia, and in some places there were demonstrations against the Russians. The state of siege was accordingly proclaimed, a measure to which the Russians never before resorted in these countries.

The extraordinary Administrative Council at Bucharest has made known that all Russian and Moldo-Wallachian merchant vessels have to cease to navigate the Danube from the 26th of October, and to remain at the place where they may chance to be. Under no pretence are wheat, salt, or any other objects to be sold to the Turks. Up to October 30, 16,000 Turks had landed at Kalafat. The Austrian Consul-General at Bucharest has been recalled.

Although small detachments of Turkish troops have crossed the Danube at many points; yet, contrary to all expectation, they have committed no excesses. Not only has neither theft nor robbery been committed, but even the provisions with which the men were supplied were paid for in ready money. It is evident enough that Omer Pacha has introduced the strictest discipline

Direct and positive news up to the 28th has been received from Omer Pacha's camp. On the preceeding day by twelve o'clock, 12,400 men had passed the river at Kalafat. On the 27th Omer Pacha was certainly on the right bank of the river. The vanguard of the corps advancing from Sophia, had reached Widdin. The troops which have already entered Wallachia will form the left wing of the corps which is to operate in the Principalities. Their first destination will be Krajova, and as soon as the other troops have advanced to their support, the river will be crossed at other places [This has occurred, but the Russian despatch relative to Giurgevo is far from being clear]. The news that 6000 Russian horse are in Krajova deserves no credit; but it is certain that the 2000 Lancers, who pushed on in forced marches from Slatina to Krajova, were the vanguard of an advancing corps. The intelligence that Dannenberg's army-corps, of 40 000 men, and more, is already in Lesser Wallachia, and its place filled up by Osten-Sacken's corps, is positively false. Up to the 25th October, Osten-Sacken's troops had not crossed the Pruth, and it is impossible that they can be placed between Bucharest and Giurgevo in the first half of November, unless steamers are employed, which is not very probable. It must be observed that, in the campaigns of 1828 and 1829, the Russians never operated with more than 15,000 men, although hostilities were carried on during the whole winter.

At Sahumia, the oath of fidelity has been sworn by the army in the presence of the Grand Mufti, who was in his robes of state with the Koran in his hand. The oath was, that the men should shed the last drop of their blood in defence of the sovereign rights of the Ottoman throne. Omer Pacha addressed a speech to "the Asiatic, African, and European officers and soldiers," after which the Grand Mufti offered up a prayer, the Amen to which was repeated by the whole army. The drums then beat, and a prolonged shout of "Long live the Sultan" was raised. Omer Pacha refused to permit the troops to defile before him, saying that he would not accept such a distinguished honour until he had gained a victory over the Russians. Among the foreigners present were Mr. Neale, the British Consul at Varna, a son of Baron Bruck's, and the Spanish General Prim, who received a splendid charger as a present from Omer Pacha.

A letter, written by General Prim to a person in Madrid, states that he is to be employed by the Sultan the moment hostilities commenced with Russia. General Prim, in his journey from Constantinople to Schumla was escorted by 600 cavalry. The journey was so fatiguing, on account of the rigour of the season, that only one officer, a Spaniard, reached the head-quarters of Omer Pacha safe and sound; 16 horses died immediately on arriving. It was very probable, should the General accept the command offered him by the Sultan, that he will be placed at the head of the divisions of the advanced guard.

At Constantinople, a most pressing want of money is already evident: the 60,000,000 piasters of the new paper money are already swallowed up; the agio on metal has risen to 18 per cent; and another issue of notes is already talked of at a greater discount than the last. This new issue may probably spread to the provinces as a legal tender, which will destroy public credit. 300,000,000 piasters have already been spent in the preparations for war. Contracts are now concluded on the condition of simple receipts being accepted as payment; and it is in this state of the finances that the Minister of Foreign Affairs—who is also the directing Minister of the Cabinet—receives 20,000,000 piasters in hard cash for an unfinished house on the Bosphorus, which the Sultan buys to give to the Pacha's son on his marriage with his daughter

The following note, justifying the passage of the Dardanelles by the combined fleets, was addressed officially by the Sublime Porte to the representatives of Austria and Prussia, dated 21st October, 1853:—

It is a matter of public notoriety that Russia, in violating existing treaties by the occupation of the two Principalities, has committed an act of a nature to justify war, and has by crossing the Pruth of deliberate, compelled the Sublime Porte to take up arms for the defence of her rights, whilst the Ottoman Government, with the desire of maintaining peace, pursued, on the contrary, a conciliatory line of conduct, and replied with moderation. In virtue of the treaty of 1841, the Straits of the Dardanelles and the Black Sea were closed against foreign ships of war, but the state of war produced by the acts of the Russian Cabinet has placed the Sublime Porte under the necessity of securing for herself the advantage of right which accrues to her from that convention, and the fleets of France and England, by order of the Sublime Porte, have been invited to enter into the Strait of the Dardanelles. The necessary firmans have been despatched on that head to the Governor of that Strait, and I have received the command of his Imperial Majesty the Sultan to give to your Excellency an official communication of that resolution in your quality of representative of the Court of Prussia (of Austria), a party to the above-mentioned treaty. I take advantage of this opportunity to offer your Excellency the assurance of my most distinguished consideration. RESCHID.

Letters from Constantinople state that Lord Stratford and M. de la Cour procured the delay of ten days, before the commencement of hostilities, by representing that France and England had presented an ultimatum to Russia in the sense of the modifications to the Vienna Note proposed by the Porte. The French Ambassador further informed Redschid Pacha that France and England had required assurances from Austria and Prussia relative to their intended policy during the approaching conflict. Both Ministers clearly saw that hostilities must, if possible, be suspended or postponed, but the representatives of Austria and Prussia did not meddle in the matter. The *Caradoc*, which arrived at Constantinople on the 19th, in five days from Marseilles, brought, or was said to have brought, news to the Turkish capital, that the Emperor Nicholas had not only accepted the mediation of England and France, but had withdrawn his claims to religious protection over the Rayahs belong ng to the non-united Greek Church. It was even said that the Emperor, in his desire that peace should not be interrupted, had directed that the army of occupation should be withdrawn from six to ten hours' march from the Turko Wallachian frontiers

The Turkish Government, after a long deliberation, has decided upon receiving foreign officers into the service of the Porte. Hitherto, they could only be received after embracing Islamism. A great many British officers had left Constantinople for Varna and Schumla: Lord Worsley, Colonel Buckley, and others, were among the number.

AMERICA.

By the *Canada* we have advices from New York to the 25th ult. A report—believed in England to be entirely without foundation is going the rounds of the American newspapers, that a treaty has been signed between Great Britain and Spain, by which the slave-trade is to be carried on uninterruptedly with the island of Cuba, on condition that the imported negroes are subjected to an apprenticeship of only ten years, and that at the end of fifty years slavery itself shall cease in that island. The Government organ at Washington assumes the truth of this rumour—declares that such a treaty could not be executed without giving Great Britain a continued protectorate over the island of Cuba, and calls upon the President to resist at all hazards any attempt of any European Power to interfere with the affairs of the American Continent.

The packet ship *Washington* had arrived at New York, from Liverpool, with nearly 100 deaths from cholera, and upwards of 60 cases on board at the time of her arrival.

Mr Webb, the celebrated New York ship-builder, who has just returned from Europe, has brought with him a commission from the Emperor of Russia, to construct a line-of-battle ship of 3000 tons, carrying 100 guns She is to have double engines of 500-horse power each, and a steam propeller as an auxiliary. His proposal, as originally made to the Russian Government, was referred to a commission of admirals and officers of rank, who, after rejecting it, still expressed a willingness to hear his views, when the matter was brought before the Grand-Admiral Constantine. The Yankee carried his point, and his ship is to be completed in two years.

A telegraphic despatch from Detroit states that an alarming fire was prevailing in the woods and swamps, which, on the 19th ult., had reached within a mile of the city, destroying houses, barns, fences, &c., in its course: 10,000 acres had been completely burnt. The forest was burning on the Southern Railroad, between Toledo and Adrian, and on the Central Railroad, near Dearborne. On the Pontiac Railway it was raging so fearfully that the falling trees had quite obstructed the traffic.

A letter from New York says:—

We seem to be on the verge, if, indeed, we have not reached it, of most important discoveries and inventions in atmospheric pressure as a motive power. The demonstration, on a small scale, of propelling rail cars by atmospheric pressure is already complete; but the most interesting application of this principle has been made by Mr. Richardson, who has satisfied our capitalists that it is entirely practicable to build an atmospheric tube from New York to Boston (200 miles) through which mail-bags or parcels of any description may be regularly, certainly, and safely sent in fifteen minutes. He has perfectly obviated the most apparent difficulty, which consisted in the collision of the parcel despatched on reaching its termination. This he has accomplished by the counter pressure, arising from the elasticity of unexhausted air, thereby reducing the shock until it becomes absolutely imperceptible. A considerable part of the stock for the building of this mail-tube has already been subscribed.

Another important invention is also described:—

A very important discovery has been made (or perhaps it might more properly be called an invention), by which an elasticity hitherto unknown has been imparted to cotton, that seems likely to create an immense demand for it in new directions. I speak particularly now of cotton mattresses and beds. Cotton costs from six to ten cents a pound; feathers, from forty to sixty. Although hair and wool mattresses have been extensively used in this country, yet, after all, the vast proportion of the North American people sleep on feathers or straw mattresses. The purity of cotton, and its freedom from any offensive smell, with the familiarity which all Americans have with it in almost every form, connected with the immense gain on the cost, promise to work a complete revolution in this department of domestic life. Under what is called the Robertson Patents a company has been organised for the manufacture of cotton beds, and they are now being introduced into our large cities under the title of *full mattresses*. If what is claimed for these cotton mattresses be true, we shall have more luxurious beds for about one-fourth the price we are now paying for ordinary kinds.

By the steamer *Atlantic* we have advices from New York to the 29th ult. She has brought 500,000 dollars in specie on freight. The *Northern Light* had arrived at New York from California, bringing 1,500,000 dols. worth of gold dust.

The late accounts from Washington state that on the 24th of October there were Treasury warrants entered for the redemption of £101,581 United States Stocks.

The revolution in Yucatan had been suppressed, after a loss of 300 men. The Spanish Minister had suspended his relations with the Mexican Government, and left the capital.

INDIA AND CHINA.

The following telegraphic despatch has been received by way of Trieste:—

The India Mail has arrived, with dates from Calcutta, October 8; Bombay, October 14; Burmah, Sept. 17, and Hong-Kong, Sept. 27.

Our territory in Burmah are in a state of siege, and the country in possession of the followers of Meatoon and other chiefs of equal rank, who give out that they are acting under the authority of the King of Ava. Our steamers are fired upon in going up and down the river, and the country is becoming a desert.

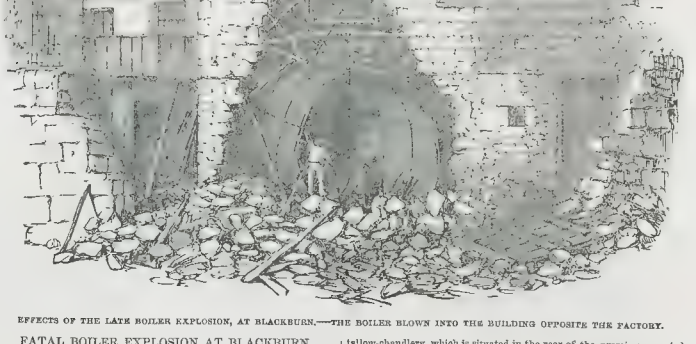
Mr. James Thomason, the celebrated Governor of the Agra Presidency, is dead.

Reports are current that a Russian army is invading Khiva and Bokhara; that Russia has entered into an alliance with Dost Mahomed and with Persia; and that a large Persian army has been collected in the valley of Sultanieh, for the purpose of co operating with Russia against Turkey.

Trade in India fair. Exchange at Calcutta, 2s 1d.

Shanghai has been occupied since the 7th of September by a band of insurgents.

At Amoy, on the 12th of September, the rebels completely routed a body of Government troops.



EFFECTS OF THE LATE BOILER EXPLOSION, AT BLACKBURN.—THE BOILER BLOWN INTO THE BUILDING OPPOSITE THE FACTORY.

FATAL BOILER EXPLOSION AT BLACKBURN.

On Wednesday morning (last week), at about eight o'clock, a terrible boiler explosion took place in Starkie-street, Blackburn, on the premises occupied as a weaving shed by Mr. W. Hesketh. On the 31st of March, 1846, a similar accident, attended with fatal results, occurred on the same premises (formerly known as the Eagle Foundry), in that portion of the building which was then occupied by Mr. Samuel Rodgett. The scene of the calamity on Wednesday week was at the Penny-street end of the premises, about forty yards from the spot on which the former accident took place. Fortunately, most of the hands were absent from the premises at breakfast. We regret to state, however, that five individuals have lost their lives by this awful calamity, and several others have been very seriously injured.

The scene of this dreadful accident is now a pile of ruins. The engine-house was on the west side of Starkie-street, about thirty yards from the corner of Penny-street. The building was one story in height, with a cellar; both being occupied as weaving shops. Behind the engine-house there was another building, which was an additional story in height. These buildings, which adjoined the chimney, were completely blown down, as well as the engine-house and the adjoining premises in Starkie street. The boiler was waggon-shaped, about 14 feet 6 inches in length by 5 feet 6 inches in width. It had eight cross-stays: four at the surface of the water, and four at the crown of the boiler. Besides these, there were three or four diagonal stays, and one longitudinal one. The force of the pressure converted the waggon shape of the boiler into an irregular circular one. The boiler was completely lifted out of its bed, and driven with great force across the street, through the wall of the yard opposite, behind the Fleece Inn, through the stable, and partly into the kitchen, in which was a servant, who escaped destruction in an almost miraculous manner. She was knocked from one side of the kitchen to the other, but is unable to describe the manner in which she was so struck. It is almost incredible that such a mass of iron as that which composes the boiler, which was adapted for a 16-horse power engine, could have been driven through such solid masonry as the walls on the opposite side of the street, so as to be firmly embedded in the locality which it now occupies (See the Engraving)

One end of the boiler was blown in the direction of Mr. Talbot's tallow-chandlery, which is situated in the rear of the premises occupied by Mr. Hesketh. A bystander, who was in Penny-street at the moment of the accident, states that the boiler flew across the street, "just as if it had been a shot discharged from a gun."

The force of the explosion was felt within a considerable circle around Starkie-street. The house of Mr. H Briggs, which is situated at the corner of the street, has been greatly injured. It is probable that the large mass of iron behind (underneath which the boiler was driven) will have to be taken down. A singular circumstance was noticed on these premises in connection with the accident. A beam, with cloth on, was driven from the factory through a single pane of glass into one of the rooms.

We understand that the boiler which has exploded was about being replaced by a new one, for which the dimensions had been taken about a fortnight ago. It is said that the boiler had been in use about fifteen years.

We have abridged these details from the *Blackburn Standard*.

The accompanying Illustration of one of the strange effects of the catastrophe is from a Sketch by Mr. John N. Haworth, of Blackburn.

THE "ARGO" IN A CYCLONE.

We have been favoured by a passenger in the General Screw Steamship Company's Steamer *Argo*, Captain Henry Hyde, commander, with the accompanying fearful picture of this noble vessel, in a Cyclone, off the Island of Desolation, on her voyage to Port Phillip, June 28, 1853. The following are the details:—

At 7.40 p.m. The wind increasing from the N.E., and barometer falling, we shortened sail. At eight, barometer 29.80. The gale was now very heavy, and split the foretopsail and foresail, and carried away foregaff. 8.30. Barometer still falling, and the ship running off her course to the S.E., with steam and sail she endeavoured to pass the Island, and get ahead of the Cyclone; but, in doing that the storm was travelling about the same speed as the ship, viz., fifteen to sixteen miles per hour, and a tremendous sea running. The Captain, who had great faith in Colonel Sir William Reid's "Law of storms," considered it more prudent to heave to for a few hours, to allow the centre to pass astern; and at 9.30 rounded the ship to under close-reefed main-

"MIDSUMMER NIGHT'S DREAM," AT SADLER'S WELLS THEATRE.—MR. PHELPS AS "BOTTOM," AND MISS WYATT AS "TITANIA."

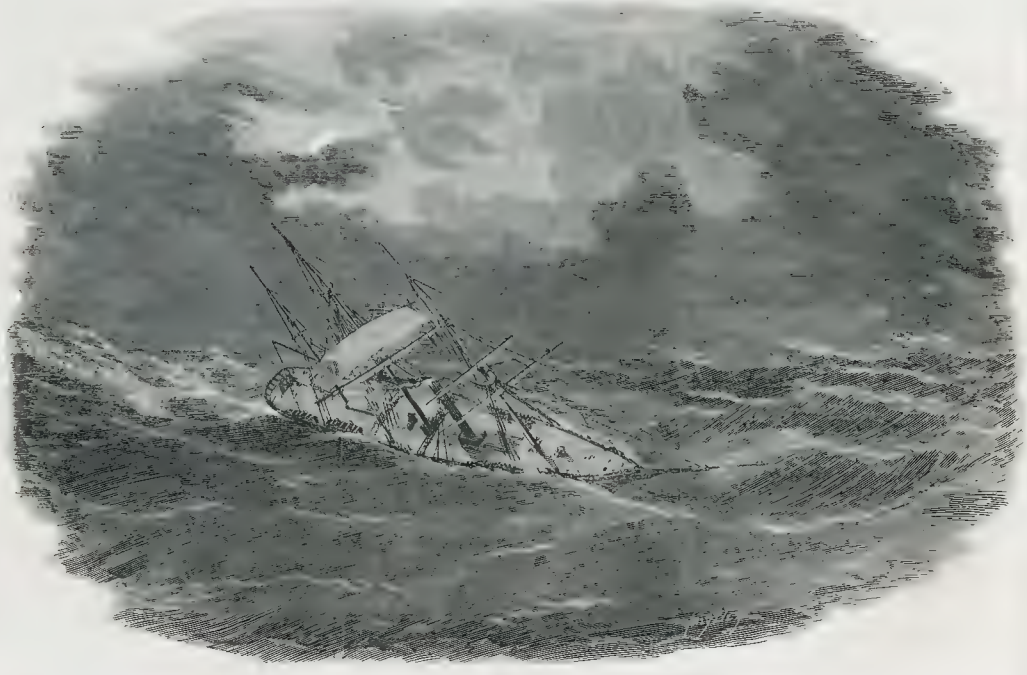
topsail, and disconnected the screw. At eleven it blew a perfect hurricane, lifting the quarter boats from the davits, and making the sea one sheet of foam. The gallant *Argo* behaved so well, and was so easy, that some of the passengers slept all night; and, had it not been for the split sails and broken spars, they would not have believed the vessel to have been in a gale.

The *Argo* has just accomplished the voyage round the world in 121 days—the greatest feat ever yet performed by any steam-vessel. She was built by Mr. Mare, of the Orchard Yard, Blackwall; her engines are by Messrs. Maudslay, Sons, and Field. She has proved herself one of the finest sea-boats afloat; reflecting alike credit on the enterprising company she belongs to, and the commander, officers, and engineers who have so successfully navigated her through the numberless difficulties of so long a voyage. The annexed are the data of the voyage:—Distance run, 27,900 miles. Consumption of fuel: outwards, 850 tons; homewards, 972 tons. Number of days out, 59; ditto home, 62: total, 121.

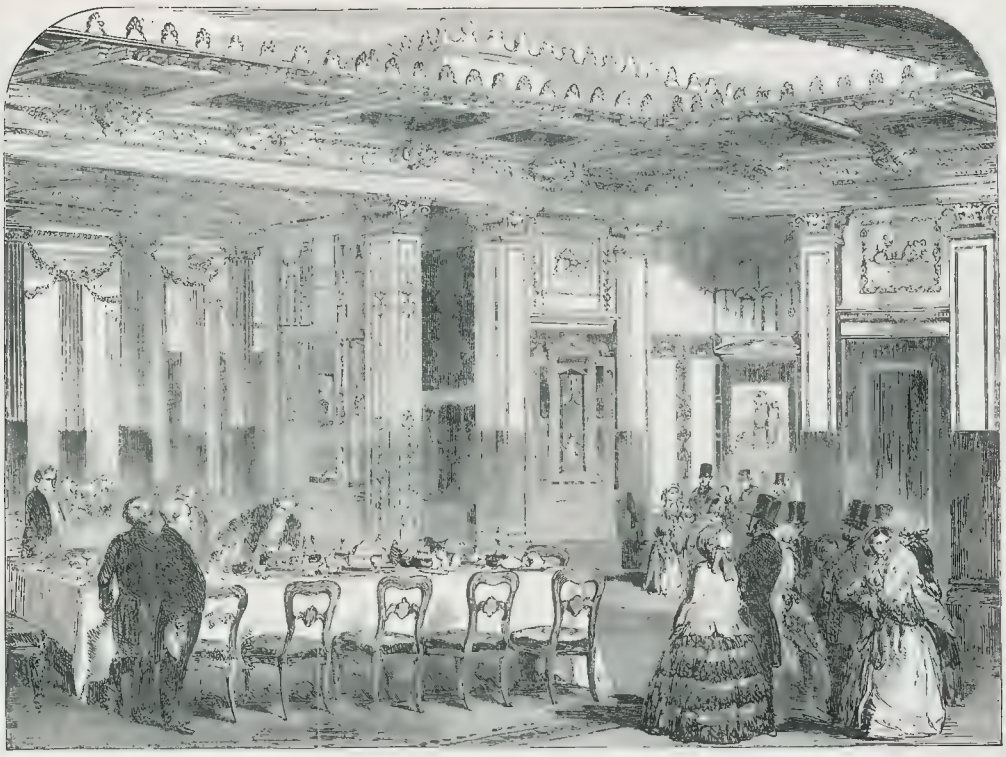
SADLERS' WELLS THEATRE.

THE run of "A Midsummer Night's Dream" at this theatre is one of the most remarkable facts of the theatrical season. It is a proof that the poetical play yet possesses charms for a large portion of the public—provided it be placed upon the stage with a due regard to its importance, and with such needful accessories as aid its interpretation. These, in the present instance, are nicely adjusted to the occasion: they are not overdone; but the illustrations are at once eminently beautiful and justified by the strictest expediency. It is fair to assume, however, that the excellent acting of Mr. Phelps, in *Bottom*, contributes greatly to the attractions of the drama. The philosophical conception of the part, and the highly artistic embodiment implied in its skilful and elaborate execution, entitle it to the most decided commendation.

We give this week an Illustration of the scene between him and *Titania*, the fairy queen, cleverly and gracefully performed by Miss Wyatt. Although the mask of the ass's head conceals the features of Mr. Phelps, the general characterisms of his acting in the part, come out strictly defined—we may see the comic *vis* in the attitude; and even in the wearing of the head itself, there is a manner provocative of laughter. The likeness of the actor will be as well traced by the suggestiveness thus indicated, as if the express features had been given. Altogether, the success of the piece may be accepted as a decided triumph for the poetic drama.



THE STEAM-SHIP "ARGO" IN A CYCLONE OFF THE ISLAND OF DESOLATION



HER MAJESTY'S VISIT TO THE CRYSTAL PALACE, SYDENHAM.—THE POMPEIAN COURT.

THE CRYSTAL PALACE AT SYDENHAM.

In our Journal of last week, we sketched the leading incidents of her Majesty's inspection of the Crystal Palace. In the above Illustration our Artist has represented the Queen on the arm of the King of the Belgians, accompanied by the young Duchess of Brabant and Prince Albert, entering the principal apartment, or *atrium* of the Pompeian House, where luncheon was laid.

This apartment—termed also *compluvium*, because the roof has an

VIEW FROM THE SOUTH GALLERY OF THE CRYSTAL PALACE, AT SYDENHAM.—FROM A PHOTOGRAPH BY H. P. DELAMOTTE.

opening of considerable size, through which the rain-water fell into a cistern or *impluvium* sunk in the floor, is very richly decorated. The walls are divided into compartments by pilasters, and each compartment is painted for [illegible] the height of [illegible] in a deep *marron* red, or a deep brilliant blue. [illegible] mythological [illegible] Andromache, by Hector [illegible] pictures are of no [illegible] in Pompeian houses [illegible] ground is first [illegible] dolphins, centaurs, dragons, birds, and deer, drawn in [illegible] Many letters are coloured green or [illegible] with ornaments in yellow, except the capitals, which are adorned with a white and blue [illegible] with yellow and red. [illegible] along the apartment [illegible] and red. A series of gilt figures supports the roof, which is white picked out with ornaments of red. [illegible] room, when completed, contains a marble basin, sunk in the floor, [illegible] mosaic.

It was in this apartment—at one period the only sitting-room that the Romans, when they had become luxurious and enlarged their houses, received their clients, as in a kind of ante chamber. But it still retained some part of its sacred character. The small conch was placed there, opposite the door; there, too, were ranged the images of ancestors, and the *focus*, or fire place, dedicated to the Lares. Around this apartment are the doorways of the [illegible] or sleeping rooms—narrow dens, without windows or light, except through the doors. The walls of the *cubicula* are richly ornamented by architectural designs, in golden, yellow, and other colours, on a deep black ground. Opposite the entrance, where the Queen appears, on the other side of the *atrium*, is the *tablinum*, a kind of recess in which the family records were kept; and beyond, supported by four pillars—of which the latter half is painted a deep red, the rest white, picked out at the capitals with blue—is the *peristylium*, a court open to the sky, with a small garden in its centre, the walls of which are also elegantly decorated with arabesque birds and flowers. [illegible] the *triclinium*, or dining-room, [illegible] is decorated with fanciful designs on a white ground, and may be considered the most pleasing apartment in the house.

There are also the *culina* [illegible] kitchen, the bath-room, and all the offices of the dwelling of a rich Pompeian. But Pompeii being only a third-class city, its mansions were less magnificent than those of Rome, although, perhaps, not less elegant.

The general conclusion to which this copy of the dwellings of the Roman citizen of Pompeii brings us is, that they were as much our inferiors in the arts of civilised comfort, as they were superior in taste and feeling for art. They employed artists, where we employ upholsterers and gilders, and house painters. In examining this series of apartments—in which Signor Abbate has exactly reproduced the forms and colours, as well as the proportions of the buried city, which he has spent his life in studying—it should be borne in mind that these buildings were erected in a climate where the greater part of the day would be pleasantly spent in the open air.

Decidedly the most interesting feature of this Pompeian House is the decoration, which seems to present a graceful mixture of many styles. Greek, Etruscan, and Roman. In some instances, the Greek style prevailed. "The decorations, in such cases, are divided into compartments of flat tints, with central pictures, surrounded by frets and other ornaments derived from mosaic-work. In the time of Augustus, Ludius introduced a system of [illegible] decorations," which [illegible] the *triclinium* in the Crystal Palace will show was carried to great perfection. After this, followed a more fantastic style, in which, as in the *cubicula* round the *atrium*, a quantity of architectural work is indicated of a very peculiar character.

Our other Illustration is engraved from a photograph taken by Mr. P. H. Delamotte, from the west gallery of the southern side of the Palace. Below [illegible] the Italian garden, with [illegible] statues, balustrades, and [illegible]; further on, the English garden; and further on, the [illegible] mount that is to be the Mount [illegible] excavations for the great trial lake where the auxiliary steam-vessels are to be immersed. On the right is the skeleton of the wing of the Palace to which the railway passengers are to be brought by a covered way. In the distance is the spire of Penge Church, and beyond are the Kent hills.

TESTIMONIAL TO PRINCE ALBERT.

A great meeting was held at the Egyptian hall, Mansion-house, on Monday last, for the purpose of forwarding the plan for raising a national testimonial to Prince Albert, to commemorate his invaluable services in its forwarding the Great Exhibition of 1851. And in the list of those who approve of the movement are—Lord [illegible] Archbishop of Canterbury, Westminster, Bedford, and other prominent peers, and a host of merchants, artists, and literary men. Among the gentlemen present were Captain Ralph Price, Admiral [illegible], Mr. [illegible], Mr. Scott Russell, [illegible], Mr. Tite, architect; the Bishop of Oxford, Professor Donaldson, Mr. Belmore, Mr. D. Nicoll, Mr. Sheriff Mure, &c.

The Lord Mayor took the chair, and, on opening the proceedings, stated, that in calling the meeting he did so to give an opportunity to those who were desirous of carrying out the object of the testimonial to meet it. There was no desire to [illegible] any man to disregard his duty in carrying out the object of [illegible] feelings of the country by concentrating that feeling at a public meeting.

The Lord Bishop of Oxford proposed the first resolution. He thought it was of great importance in the opening of the proceedings, that they should mark what should be the object of the meeting and the resolution did so; and if any wanted [illegible] examples of the project he could see no object, [illegible] that there would be many [illegible] would be many determined [illegible] endeared to the people [illegible] of the Prince [illegible] who, when the proposition was objected to, [illegible] account of the [illegible] [illegible] deserving; for as events passed on such things must [illegible] therefore they should commemorate the great fact of the exhibition while yet the memory of it was vivid; and then there was the fact that the memory of the object was in itself deserving.

[illegible] review of his public life, and [illegible] increase [illegible].

Captain Shepherd seconded the adoption of the resolution; and he did so because [illegible] Exhibition had conferred a benefit upon this country and the world [illegible] and [illegible] a theme of praise in every quarter; and for [illegible] it was their desire on this occasion to [illegible] some [illegible] commemorative of the services [illegible] obliged to the Lord Mayor [illegible] setting; for what was every one's business was nobody's business.

The Lord Mayor [illegible] had received several hundred letters from different parts of the country, expressing approbation of the object of the meeting.

The resolution was then agreed to.

The Provost of Eton proposed the second resolution. He felt so deep a debt of gratitude to Prince Albert for his encouragement of education, that it made him great pleasure in proposing the resolution.—

[illegible] review of his public life, and [illegible] increase [illegible].

Samuel Mawley, Esq., seconded the resolution. [illegible] Mr. John Wilkes expressed his pleasure at the [illegible] conference in the object of the meeting, to which he was sure the country would respond with alacrity.

The [illegible] papers named was 6,0, and the aggregate amount of subscriptions reached to £[illegible]. Letters had also been received from Birmingham, Durham, Exeter, Manchester, Hereford, Southampton, Sheffield, Blackburn, Dudley, Coventry, &c.

Mr. Alderman Wire moved the third resolution, which was:—

[illegible] proposed to act as a central committee to carry out the objects in view, with power to [illegible] the [illegible] the expenses of it.

The motion was carried unanimously.

Mr. G. Cubitt, Hall, advocated the patronage of sculpture more extensively in the country. Hitherto, sculpture had been [illegible] by monumental [illegible] he would be the commencement of a new era, and he hoped, hereafter, instead of applying almost exclusively to the painter, they would [illegible] to the sculptor, and produce works of art, even during their lifetime, [illegible] to their country. He should now propose a vote of [illegible] to the Lord Mayor, who had done so much to promote the interests and art of architecture (Hear).

Mr. John Wood seconded [illegible] Burges.

The vote of thanks was then passed to the Lord Mayor, and [illegible] ing terminated.

[illegible] with the most startling evidences of the progress which the mechanical arts are making in the country.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

English engravers are busily engaged for the approaching season. Our readers will not be indisposed to hear how they are employed, and with what new prints the shops, during the approaching winter and spring, are likely to be filled. Mr. Graves, the great London publisher, has more thousands than ever afloat on fine and mezzotinto; and Liverpool and Manchester (represented by Mr. Grundy and Mr. Agnew) are living London and Mr. Graves both in liberality and taste.

Mr. Samuel Cousins (the great mezzotinto engraver, and the worthy disciple of Fisher and Raphael Smith) is busy at work on "The Infant Samuel," by Mr. Sant—one of the leading attractions of the last Royal Academy Exhibition; and on "The Release," by Mr. Millais—the picture painted for Mr. Joseph Arden—and a still greater attraction at the same Exhibition. Mr. Atkinson (the worthy pupil of Mr. Cousins) has steel-plates before him on which he is placing, with his well-known dexterity of hand, the large Landseer of "The Duke of Wellington visiting the Field of Waterloo, in company with the present Duchess of Wellington;" a second Edwin Landseer, called "The Highland Congregation" (originally "The Free Kirk"); and, if we mistake not, a picture by Mr. Frank Stone—that charming group of children round which so many young, and old people too, gathered with delight at the last Royal Academy Exhibition. Mr. Bromley has in hand a Landseer in the Vernon Gallery; and a Leicestershire Hunting piece, from a favourite picture in the possession of Sir Richard Sutton. Mr. Simmons is engraving "The Landing of the Pilgrim Fathers," after Lucy; Mr. Easelon, "Columbus coming in sight of Land;" Mr. Charles Lewis "Watch Dogs," after Landseer; and two boy-Russells scampering on Highland ponies—the beautiful composition by the same artist rendered familiar to many by the old and popular lithograph. Mr. Willmore has Turner's "Golden Bough" before him; and a fine engraving he will assuredly make of it; as he cannot fail to do with "The Harvest Home," formerly Mr. Cartwright's property, now in the choice and increasing collection of Mr. Nayler, of Liverpool. Mr. Watt (the exquisite engraver of the "Highland Drovers") is still employed on Sir Charles Eastlake's picture of "Christ Blessing Little Children." Mr. Greatbach is giving his nights and days to "The Christening of the Prince of Wales." Mr. J. H. Robinson is adding further delicacy of finish to a picture for the Irish Art Union. Mr. Doo, if we mistake not, is employed upon a Leslie—a "Young Mother and Child"—one of the best of his recent compositions. Mr. Robert Graves is dedicating the whole of his time to "The Slide," after Webster. Mr. Henry Cousins is continually bending over "The Wreck," the fine *Yarborough* Turner. Mr. Mottram is engraving three very large pictures of John Martin, for Mr. M'Clean, of the Haymarket. Mr. Thomas Landseer is impatient to finish "Night" and "Morning," the two pictures by his celebrated brother, painted for Lord Hardinge. Some good engraver (we forget his name) is toiling with success over Maclise's "Caxton," and another "hand" not less deservedly eminent in *translating* Mr. Frederick Tayler's large and fine water-colour drawing, entitled "Weighing the Deer." Mr. Wallis has "Lucerne" in hand after Turner; and Mr. Prior "Zurich," after the *Windus* water-colour Turner. Mr. Joubert is hard at work on "The Play-ground" by Webster. Mr. Faed, on "Shakspeare and his Friends;" Mr. Jackson, on the "Parable of the Lilies," after Le Jeune; Mr. Robert Mitchell on "Christ Walking on the Sea," after Landseer, and Mr. Burnet on the large *Kilsmere* Turner—the well known companion to the marvellous Vanderveldes in the Bridgewater Gallery. So are we without a fair share of portraits. We are to have a new full-length engraving of Lord John Russell; a full-length of Lord Gough in his "fighting coat;" and a full-length of Lord Raglan. On the whole, the prospect of what the printsellers' windows will be like in London, Liverpool, and Manchester from December to June next, is unusually good.

We were wrong, it appears, in stating that there was no vacancy in the ranks of the Royal Academy. We were misled by the "Red-book," and had forgotten at the time that Mr. Frith was—what he deserves to be—a full Royal Academician. The vacancy caused by Mr. Frith's election has just been filled up by the election of Mr. Millais. We mentioned Mr. Millais's name, we will be remembered, in connection with the first vacancy in the ranks of the Association. His election has occasioned great rejoicings among the pre-Raffaelites; nor could the Academy have made a better selection.

There has been a sale this week at the Earl of Ducie's, in Belgrave-square, of a few choice pictures: among which we may mention six early portraits by Sir Joshua Reynolds, when he was scarcely out of the trammels of his master, Hudson, but revealing traces of his after manner; a genuine and good Cornelius Jansen; a clever portrait of Lord Rodney, by Gainsborough; a choice Clarkson Stanfield; and an early Mulready—an "interior of a barber's shop" much in the manner of those early pictures of the same great master which Mr. Sheepshanks has brought together with equal liberality and taste. We shall chronicle some of the prices in our next week's column of artistic gossip.

We have mentioned the choice and increasing collection of English pictures in the possession of Mr. Nayler, of Liverpool—a name among the patrons of art new, no doubt, to very many. His collection has been formed for him chiefly by Mr. Grundy. Mr. Nayler has not been a collector very long; but, by his wealth and liberality he has been able to form a noble collection, tempting possessors of good pictures by offering unheard of prices. Mr. Cartwright, the great dentist, is said to have surrendered six pictures by English masters to him for £10,000. There was no resisting an agent cheque to the tune of £10,000, and for pictures which, perhaps, originally, had not cost £3000. Is Mr. Rogers proof against Mr. Nayler and Mr. Grundy? Can Mr. Sheepshanks resist him?

Mr. Carlyle has brought Cromwell into fashion. His admirable edition of his letters has revived an interest in the great Protector, unfelt since his death. When a collector gave twenty-one guineas, at the Strawberry-hill sale for a letter from Cromwell to his wife, people held up their hands in wild amazement at such folly: but such folly (if folly it can be called) was exceeded the other day by Mr. John Young, of Blackheath, giving for a letter from Cromwell to his son Richard a still larger sum, viz, £37 6s. The letter is printed in Mr. Carlyle's volumes.

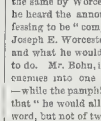
Joe Miller's tomb is at this present moment lying flat on its face in the Portugal-street burying-ground of St Clement Danes, and the grave of the immortal Joe is concealed by scaffolding and rubbish. We should be sorry to see the grave altogether obliterated, or the stone moved from its present site; but we fear that the new King's College Hospital buildings now going on will interfere with Joe's *hic jacet*; though Mr. Bellamy, the architect, will, we are assured, take care of poor Joe, and place his head stone in some fairly conspicuous place near to its present site. Whoever feels an interest in Joe and his "jests" should visit his grave before the exact position has become altogether untraceable.

The chief topic of conversation in literary circles during the present week has been a pamphlet from America, entitled "A Gross Literary Fraud Exposed, relating to the publication of 'Worcester's Dictionary' in London." "Worcester's Dictionary" is, in its integrity, an American publication; the London bookseller complained of, and in no measured terms, is Mr. H. G. Bohn. The pamphlet reveals one or two curious literary points. America possesses two rival Dictionaries of the English language, "Webster's" and "Worcester's." Now Webster hates Worcester, and Worcester hates Webster, with all the fury of female resentment. Each scorns the best at the other. They would not harness one another for untold gold. Indeed, if Webster was to introduce a new good word into his Dictionary, Worcester would not adopt it, because Webster introduced it. Webster would do exactly the same by Worcester. Imagine then Mr. Worcester's surprise, when he heard the announcement of a dictionary published in London, professing to be "compiled from the materials of Noah Webster, LL.D., by Joseph E. Worcester." Here he is made to do, what he had not done, and what he would evidently eat his right hand off, rather than attempt to do. Mr. Bohn, if the pamphlet is correct, has turned the two American enemies into one cage. The complaint calls for some explanation—while the pamphlet itself reminds us, in parts of Pope's far-seeing line, that "he would allow a dictionary-maker to know the meaning of one word, but not of two words put together."

A plan is commenced at last for the National Gallery. Almost all the pictures have been newly hung: the walls have been re-papered in a maroon or chocolate colour—and in the hanging, attention has been paid to the several schools to which the painters belong. Thus, Velasquez is hung between Murillo and Zurbaran. The rooms, however, are too small to allow of any full carrying out of the scheme of schools. The large Turner looks very noble in its new hanging. There are also a few additions to the collection described in another part of our paper of this week.

OBITUARY OF EMINENT PERSONS.

THE HON. CECIL JOHN LAWLESS, M.P.



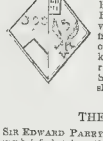
It was only last week that we recorded the death of Lord Clonmurry. We have now the melancholy duty of announcing that of his Lordship's second son, the member for Clonmel, which took place at his residence, Blackrock, Cork, on the 6th inst. The Hon. Cecil Lawless was born 1st August, 1820; and married, 7th February, 1848, Frances Georgiana, daughter of the late Morres Townsend, Esq., of Shepperton, co. Cork, and widow of the late John Wm. Digby, Esq., of Landerstown. Mr. Lawless represented the borough of Clonmel, for which he sat in three Parliaments.

LADY LANGFORD.

The accidental death by drowning of Lady Langford, on the 4th inst, is a subject of painful regret. Her Ladyship had been on a visit to Ardglian Castle, the residence of Colonel Taylor; and, about one o'clock on Friday week, went, accompanied by her maid, to bathe—as she had accustomed herself to do, daily, summer and winter—at a bathing-place connected with the castle by a bridge near the sea beach. The sea was very rough, and the Lady was unfortunately carried by the waves into deep water, and drowned before she could be extricated from the violence of the sea. The body was recovered and conveyed to the castle.

Lady Langford had only attained her thirty-third year. She was eldest daughter of the late Edward Michael Conolly, Esq., of Castletown. Her marriage to Lord Langford took place 26th July, 1842; and its issue consists of one daughter and two sons.

THE HON. LADY LEVINGE.



The Hon. Elizabeth Anne, Lady Levinge, widow of the late, and mother of the present, Sir Richard Levinge, Bart. of Knockdrin Castle, died at her residence, Merrion-square, Dublin, on the 28th ult., after a tedious illness. Her Ladyship, who had reached the age of 67, was daughter of Thomas Boothby Parkyns, first Lord Rancliffe, and sister of Maria Charlotte, Princess Polignac. She married the late Sir Richard Levinge in 1810, whom she survived little more than five years. Her death is regretted by a large circle of friends, to whom her amiable disposition and kindness of heart had endeared her. Her Ladyship's remains were conveyed from Knockdrin Castle on Saturday morning last, for interment in Portnashangan Church.

THE NORTH-WEST PASSAGE.

Sir Edward Parry has communicated to the *Times* the accompanying brief sketch of the proceedings of Lieut. Cresswell from the time he parted from the *Investigator* in Mercy Bay, till he arrived in England as the bearer of Captain M'Clure's despatches. This sketch Sir Edward Parry believes to be necessary to complete the record of these events up to the present time.—

Before Captain M'Clure left, the *Investigator* for Melville Island, he arranged for Lieutenant Gurney Cresswell to follow with the more sickly part of the crew. The party consisted of Mr. Wynniett (Mate, now Lieutenant, in sledded home), Mr. Piers (assistant-surgeon), Mr. Miertsching (Esquimaux interpreter), and 14 petty officers, marines, and seamen.

April 16th, at 5.30 a.m.—They left the ship, the remaining part of the officers and ship's company giving them three hearty cheers. There was one sick man on the sledge from the time they left the ship until their arrival at the *Resolute*. The wind blew strong from the westward, with snow drift; but, as all the requisite arrangements had been made for their start, Lieutenant Cresswell did not postpone it. At six p.m. they sighted the eastern land of the bay, and found by it that they had made a good distance. Shortly after leaving the ship Corporal Farquharson and Joseph Tacey broke down, and were obliged to haul out of the drag ropes. The form making pains in the chest, the latter suffering from a fall shortly before leaving the *Investigator*. They encamped on Point Back, about ten miles from the ship. On the 16th they started at six a.m.; but travelling proved very heavy, and the men already showed signs of weakness. The 17th they rounded Cape Hamilton. The ice had been thrown up by tremendous external pressure, between which and the land they had to drag the sledges. To accomplish this they were obliged to double-man the sledges (nine men to one) over at a time. As soon as they found a chance of passing their way through the hummocky barrier that lined the shore, they struck off on to the sea ice, and encamped about two miles from the land.

April 22nd.—They sighted Melville Island. Their daily journeys varied; sometimes the sun gave them a look to cheer them on their way; but, generally speaking, the weather was gloomy: the men suffering from weakness and fatigue, and the difficulty of drawing the sledges increasing from day to day. The ice was extremely rough and hummocky. One day they came upon a large field of ice from which the wind had blown away the snow, and the weight of the sledges appeared comparatively nothing. They were passing rapidly along, when one man was found to be missing. It was a poor fellow who had shewed symptoms of mental imbecility, but until then had travelled with the rest. The defection was grievous, but unavoidable. They sent back to search for him, and found him in a pool of melted snow. From that time great difficulty was experienced in getting him along. He was always throwing himself on the snow to lie down. They dared not put him on one of the sledges, as already the weight was great enough for their enfeebled party, with one man unable to walk and their needful baggage.

April 30th.—At 6.30 a.m., just as they were beginning their day's march, two men were seen coming towards the tents from the eastward. They proved to be Mr. Pim and a seaman, with a sledge and dogs; he had been sent out by Captain Kellett to assist them in, and land some stores at Winter Harbour. He was much surprised to find this party so far advanced in their journey. Lieutenant Cresswell wished him to send the things, as they did not require any immediate assistance. At this time Charles Anderson, being unable to walk any further, was taken on the sledge. Notwithstanding this extra weight, they made excellent progress, the men being in high spirits on the strength of being so near the *Resolute*.

May 2nd.—They started at eleven p.m., and arrived on board the *Resolute* at four a.m. on the following day. Captains Kellett and M'Clure met them on the floe. Captain Kellett gave them the heartiest welcome. The journey from the *Investigator* was made in sixteen days, the distance 176 miles.

The day following (May 4) Captain M'Clure set out on his return to his ship, and was accompanied by the surgeon of the *Resolute*, with instructions to examine into the health of the crew; Captain Kellett, as senior officer, having determined that, if twenty should be found volunteered to remain with Captain M'Clure, that gunnies officer should be at liberty to stay by his ship and attempt to bring her through, should [illegible] accordingly.

It was Captain Kellett's strenuous wish that a party of the *Investigator's* men should go on to the *North Star*, at Beechey Island; but as, out of twenty-four, only two were not affected with scurvy, he was obliged to

abandon the design. Captain Kellett placed the *Investigator*'s despatches in the hand of Lieutenant Cresswell, with directions to proceed to the *North Star* in company with Mr. Roche (mate), with a party of eleven men, the boatswain of the *Resolute*, and Lieutenant Wynniett, of the *Investigator*.

On the 13th of May they saw two musk oxen. Lieutenant Cresswell and Mr Roche went in pursuit. They wished to have shot only the cow, but, having wounded her, the bull would not let them approach her; they, therefore, had to shoot him also. The sledge being very heavily laden, they could not take more than the hind quarters of the cow away with them. Such is Arctic life. For eighteen months before quitting the *Investigator* nearly starved, and now leaving 500 or 900lbs. of excellent fresh beef for the wolves and Fox!

On the morning of the 2nd of June they arrived on board the *North Star*, Capt. Pullen, at Beechey Island. The journey was 300 miles, and had occupied four weeks to accomplish.

On the 5th of August the *Phœnix* arrived, commanded by Capt. Inglefield. At that time Capt. Pullen had been away a month from the *North Star*, to communicate with Sir Edward Belcher. By the time he returned the season was rapidly advancing, and the opinion of the most experienced was decided that Capt. Inglefield, in the *Phœnix*, should no longer delay his return home, without further waiting for Sir Edward Belcher's arrival at Beechey Island.

On the 22nd of August the *Phœnix* left Beechey Island. She touched at Disco, at Lievely (taking in coals, and at Hollestenburg, where they put in to complete their astronomical observations. At both places they met with Esquimaux, and joined with them in the dance and song. The women were clean and neat, and peculiarly simple and modest in their conduct.

On the 4th of October Capt. Inglefield and Lieut. Cresswell landed at Thurso, at the extreme north of Scotland. Fifty-three hours' travelling brought them to London. On Friday, Oct. 7, they arrived at the Admiralty, with tidings that the geographical question of the long-sought-for North-West Passage had been satisfactorily solved.

SKETCHES OF STRIKES AND RIOTS IN THE COTTON DISTRICTS

To give a mere catalogue of the strikes which have occurred in the factory districts of Lancashire, Cheshire, Derbyshire, and parts of Yorkshire, of which Manchester is the commercial centre, would occupy many columns of this journal. We select a few of those to which general interest attaches, either for their magnitude or for the evidence they afford of changes and revolutions in the industrial history of the country.

It is not since the inventions of the spinning-jenny, the mule, the self-actor, the carding-cylinder, the willow, the elephant, the "devil," the power-loom, the "speeded" loom, or the many mechanical and chemical appliances to bleaching, dyeing, and printing, that strikes have become prevalent; though most persons who have written of them date their commencement at the period when spinning-mills arose—namely, between 1765 and 1769. Strikes were as frequent before the invention of the jenny in 1765 as since: but they affected fewer persons.

A street and lane near the present centre of Manchester, retains the name of "Spinning Field." In that field—on the grass in summer time, in sheds around it in wet weather—hundreds of women, sometimes a thousand at once, sat on low stools, each with her single wheel and spindle; or, if the wheel and spindle were of a construction not admitting the woman to be seated, she tripped backward, forward, and again backward, over two or three yards of space, "whirring" the wheel with her right hand, its hand making the spindle revolve, her left hand drawing out the attenuating thread from the spindle's point. Merry days were those for the women. They kept the weavers at work, or at "play," as they had a mind. When they struck work it was not against a great master manufacturer, but, in most instances, against the operative weavers. Females earned more money at spinning than men did on the looms. A weaver would go out several hours in the morning collecting weft from the women for his day's work, giving one the present of a ribbon and another a promise, besides payment, before he could obtain what he required. In country districts the weaver had to travel many miles to farm-houses, hamlets, and villages, to look for his weft, and frequently returned without it. The warp (longitudinal threads; weft, transverse threads) was furnished to him by the Manchester chapmen, who went through the country with pack-horses. It was chiefly linen yarn from Ireland, the weft only being of cotton, although the product of the two was called "Manchester cotton."

In 1763 there were riots in Manchester, Bolton, Wigan, and Warrington, about wages and against strangers. These were the only towns, except Blackburn and Lancaster, which were then manufacturing places; but even Lancaster was more noted for its shipping than its weaving trade. As for Preston, it remained the aristocratic town of the county, many years after that time. In those days the gentry of landed estate did not throng to London, as now. "Proud Preston," as it was designated, was the focus of gentility for the north-west of England. It had, however, a considerable shipping-trade in its river, the Ribble; but, like that in the Lune, at Lancaster, it has been absorbed in the docks of stupendous Liverpool.

In 1765, James Hargreaves, a weaver, at Stonehill Moor, two miles south-east of Blackburn, adjoining Peel Fold (humble patrimony of a weaver, who had a large family of sons and one daughter; three looms in his house, and half a dozen cows in the yard—his name Robert Peel), in that year and place, James Hargreaves invented the spinning-frame. A hand-wheel, as then used by the women, was upset one day, while an impudent Manchester chapman attempted a familiarity with the daughter of the landlady at Knuzden Brook. The girl rose indignantly from her wheel; it fell backward; the horizontal spindle standing vertically, and still continuing to revolve. While others present belted that the presumptuous youth could not snatch a kiss from the indignant maiden, Hargreaves watched the revolving spindle; and a thought—an inspiration of thought—carried him instantly from the ale-house home. He laid his wife's spinning-wheel on its back, the horizontal spindle turned vertically; made the wheel revolve; drew a roving of cotton into a thread; and reasoned thus: why should not the band from the wheel move more spindles than one, each spindle twisting a thread? Why should I not make a clamp (two pieces of timber) to lay hold of a number of rovings, to draw them from the spindle, as my finger and thumb now draw one? Why not fix this clamp upon a frame—the frame upon four travelling wheels?

It was done. His wife, in admiration, asked, "But whot will then ca't, Jem?" "What an oo ca't after thysen', Jenny; they ca'd thee 'Spinnin'' Jenny afore aw got thee. What an oo ca't 'Spinnin' Jenny?"

[The present writer gives this, and the other incidents now first published, on the authority of some very old persons at Church and Accrington, with whom a few years back he associated, while collecting materials for a history of strikes.]

Coeval with the spinning-jenny was the carding-cylinder of Robert Peel. Both drew forth mobs of women, with tinder and matches, to burn the machines—tramping in their wooden-soled clogs on the stone causeways—and shouting with voices which made strong-hearted men tremble—even the stout and resolute Robert Peel, that sturdy father of four grown-up sons. You may, in fancy, see him, as he was then seen in the gap of a hedge; a blue woollen apron before him, and wearing a calf-skin waistcoat, the hair outward. He and his grown sons—William, Edmund, Robert (afterwards Sir Robert), and Jonathan, have by this time erected dye and print works at Brookside, carding and spinning works at Altham. He has a ware-room in Blackburn, in the Black Bull Inn yard. Yesterday the mob razed it to the ground. In the night they have been to Brookside, have fired the premises, and left them a smoking ruin. His sons have been hurt in the affray, and now the mob return from Blackburn, and, scouring through the fields, seem bent to Altham. He has come to the Fold, where his machinery is, to watch for the safety of Mrs. Peel, daughter Anne, and the younger children. He watches the streams of insurgent women from the gap in the hedge at bottom of his meadow. In two hours Altham is on fire; before night it is a wreck. His neighbours, James Hargreaves, wife and children, have fled for their lives, have gone towards Manchester in the night, and are hunted to-day. If he and family remain at Peel Fold to night they may not be alive to-morrow: they also flee. Hargreaves reaches Nottingham poor and dispirited; but after a time unites with Mr. Strutt, and works his inventions, and so the fortunes of the Strutts arise. Robert Peel, with no home of safety in Lancashire, settles down with his younger children at Burton-in-Trent, in Staffordshire. His son Robert finds pure water and green sward for a bleach-field, at Bury, seven miles from Manchester, and bleaches, dyes, prints; takes a partner; marries partner's daughter; has a son born on Shrove Tuesday, 1788, whose birthday is kept on "pancake day" every year; and hence the lad never shows his face but children run after him, clattering in wooden clogs, and shouting, "Pancake Bob," which annoys him so much, that leaving for Harrow School, he does not visit Bury till he has become famous as a statesman. But now, 1853, his statues are in the market-place, and on yonder lofty hill. At Whitsuntide of this year, 1853, the writer was beside the statue in the market-place, while twelve thousand holiday faces stood around—all children, fathers, mothers, wives, sweethearts, all better dressed—all meeting well dressed friends from other towns—all workers for better wages—all fresh from homes with better filled cupboards than ever known before—all in the bright May sunshine trooping around the statue which addressed them—if ever statue spoke to human understanding—(Oh! that artists who clothe modern statesmen in Roman togas, and surround them with allegories, had been there that day, and had seen this statue speaking to that people!) "It may be I shall leave a name sometimes remembered with expressions of good will in the abode of those whose lot it is to labour and to earn their daily bread by the sweat of their brow; when they shall recruit their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice!"

What an unhappy result of adverse incidents and absence of that spirit of arbitration, the mutual concessions, the friendly conferences between employers and employed, such as the cotton school of politicians tell us should, and would if they had their way, settle the disputes of nations, instead of armies and fleets; what an unhappy issue it is that Bury, so sunny-faced in May, should, with work still to do, bread still to eat, though a bad harvest has made it dear—should in November have its factories closed, its people gathered in gloomy discontent, not one step taken towards the rational settlement of trade differences more worthy of an intelligent people than at and before the invention of the first mill machinery. To return to that early period!

In 1763, Preston was the theatre of destructive riots. They arose from a contested election, but are memorable in the annals of manufactures as introducing to us one of the Preston voters, who was subsequently the centre-man of many riots and strikes. This was Richard Arkwright, son of a freeman of Preston (one of thirteen children), who possessed the franchise as a scot-and-lot voter, although he had been a resident—as barber, and dealer in hair—at Bolton. He had been for several years attempting the discovery of Perpetual Motion; latterly to spin cotton by rollers—a pair of rapidly-revolving rollers drawing the roving of cotton from a pair moving slowly. He was now, in the outhouse of one Smalley, an innkeeper, engaged in perfecting this machine when a mob of spinning-women from thence also. He went to Cromford, in Derbyshire, where, finding a fall of water to drive his machinery, he erected the cradle of the cotton trade, and of his own colossal fortunes. It may be remarked that the stream of water at Chorley, from which Arkwright was chased away by the mobs of 1769, was that on which Mr Richard Cobden attained eminence as a calico-printer subsequent to 1830. He, too, had to contend with strikes and mobs.

At West Houghton, in the same neighbourhood, some of the earliest cotton-mills were destroyed in 1769 by insurgent women—the men, who were weavers at time, being on the side of the mills, rather than on that of the spinning-women. West Houghton is, perhaps, the only place in Lancashire possessing in abundance all the elements of manufactures that did not recover from popular hostility.

A. S.

THE PRESTON WAGES DISPUTE.

THE Preston strike, or "lock out," as the operatives contend it ought to be called, still continues, and neither manufacturers nor work-people show signs of giving way. The magnitude of the industrial operations suspended will be seen, when we state that the dispute closes the mills of 4 firms, suspends a nominal horse-power of 1,000, throws 21,000 hands (nearly one-half of them women and children) out of work, arrests weekly earnings amounting in the aggregate to £10,000 or £11,000, and stops 1,400,000 spindles and 40,000 looms. It is difficult to appreciate the full significance of these statistics; yet such are the results, in one town only, of subjecting the relations between capital and labour to a principle of combined action when disputes arise.

The facts of the case seem to be that in 1847, when a general 10 per cent reduction took place, the millowners either promised their operatives—or they believed so—a general 10 per cent advance on the rates of piecework as soon as prosperity returned. Prosperity came, but with it no general rise—or at least none to the extent looked for. Dissatisfaction began to prevail; but the weavers had no union in Preston until the recent strike in Stockport, when delegates came over to collect subscriptions for the hands out there. The Stockport masters having succumbed to the pressure put upon them, the new-born committee of the Preston Weavers' Union, thought that the time had come for insisting on a general rise of payments in their respective trades there. They were encouraged to do so by some of the Stockport masters, who, having made the required advance, considered themselves as placed at a disadvantage in the Manchester market with those of Preston, in producing the same descriptions of goods. The operatives, having struck work in several factories, turned the machinery of their unions to account, in supporting the unemployed from the contributions of those still at work. Then the associated masters, feeling that the intention was to take them in detail, closed their mills; so that the strike may be correctly described a masters' strike. The townspeople of Preston who are not in-

volved in the question, and can look at it impartially, have a general impression that, if the hands are without excuse for their conduct, the masters have acted with undue precipitation and severity. They are blamed for countenancing the principle of combined action in questions of the rate of wages. They are blamed for a generally stern and unbending demeanour towards their operatives, which freezes their sympathy, and lays the groundwork for constant suspicion and occasional violent ruptures, like the present. During their recent prosperity they are accused of not behaving liberally to their hands; and they certainly taunt them with not having chosen the proper time for their strike, with trade bad and provisions rising. When they resolved to close their mills they gave a month's notice, but they accompanied the announcement with no word of warning or advice. They neither called their hands together nor expostulated with them singly, nor resorted to any of those expedients which might have counteracted the influence of the agitators. Perhaps the discipline of the mills (which, by the way, is complained of as oppressive in many minor points of order and regulation) rendered all this hauteur necessary; but, even on the necessity and prudence of a general lock-out, there are grounds for questioning their conduct

A meeting of the masters' association was held at Preston on Friday last, when the following resolutions were passed:—

That this meeting, on its rising, do adjourn to Thursday, the 1st of December next; but that the committee be requested to call a meeting at an earlier period, if they are of opinion that it will be conducive to the settlement of the question on the basis of the foregoing resolution, provided also they are satisfied that the general body of operatives are prepared to emancipate themselves from the dictation of parties who have an interest in prolonging the unfortunate dispute between the employers and the employed

That, whereas an advance of wages was offered to the operatives of Preston and the neighbourhood on the 19th day of August last, which offer was dictated more by a desire to preserve the harmony and general good feeling that then prevailed in the town, than by anything in the state of trade warranting such advance, and whereas the same has not been generally accepted by the operatives, through the interference of the same mischievous and irresponsible parties who have been the cause of all the distress brought upon the town; and whereas the prospects of the trade have materially altered for the worse:

It is therefore the unanimous opinion of this meeting, that whenever the time shall arrive for the re opening of the mills, the rate of wages shall be the same as was paid on or before the 1st of March last, subject, however, to such alterations as may be recommended by the committee in particular cases.

THE PRESTON STRIKE.—MR. COWELL ADDRESSING AN OPEN-AIR MEETING OF FACTORY OPERATIVES, IN THE ORCHARD.

The operatives, on their part, have not been idle. Delegates have been despatched to Birmingham, Manchester, the Potteries, Sheffield, and other manufacturing towns and places to arouse the trades there and obtain subscriptions.

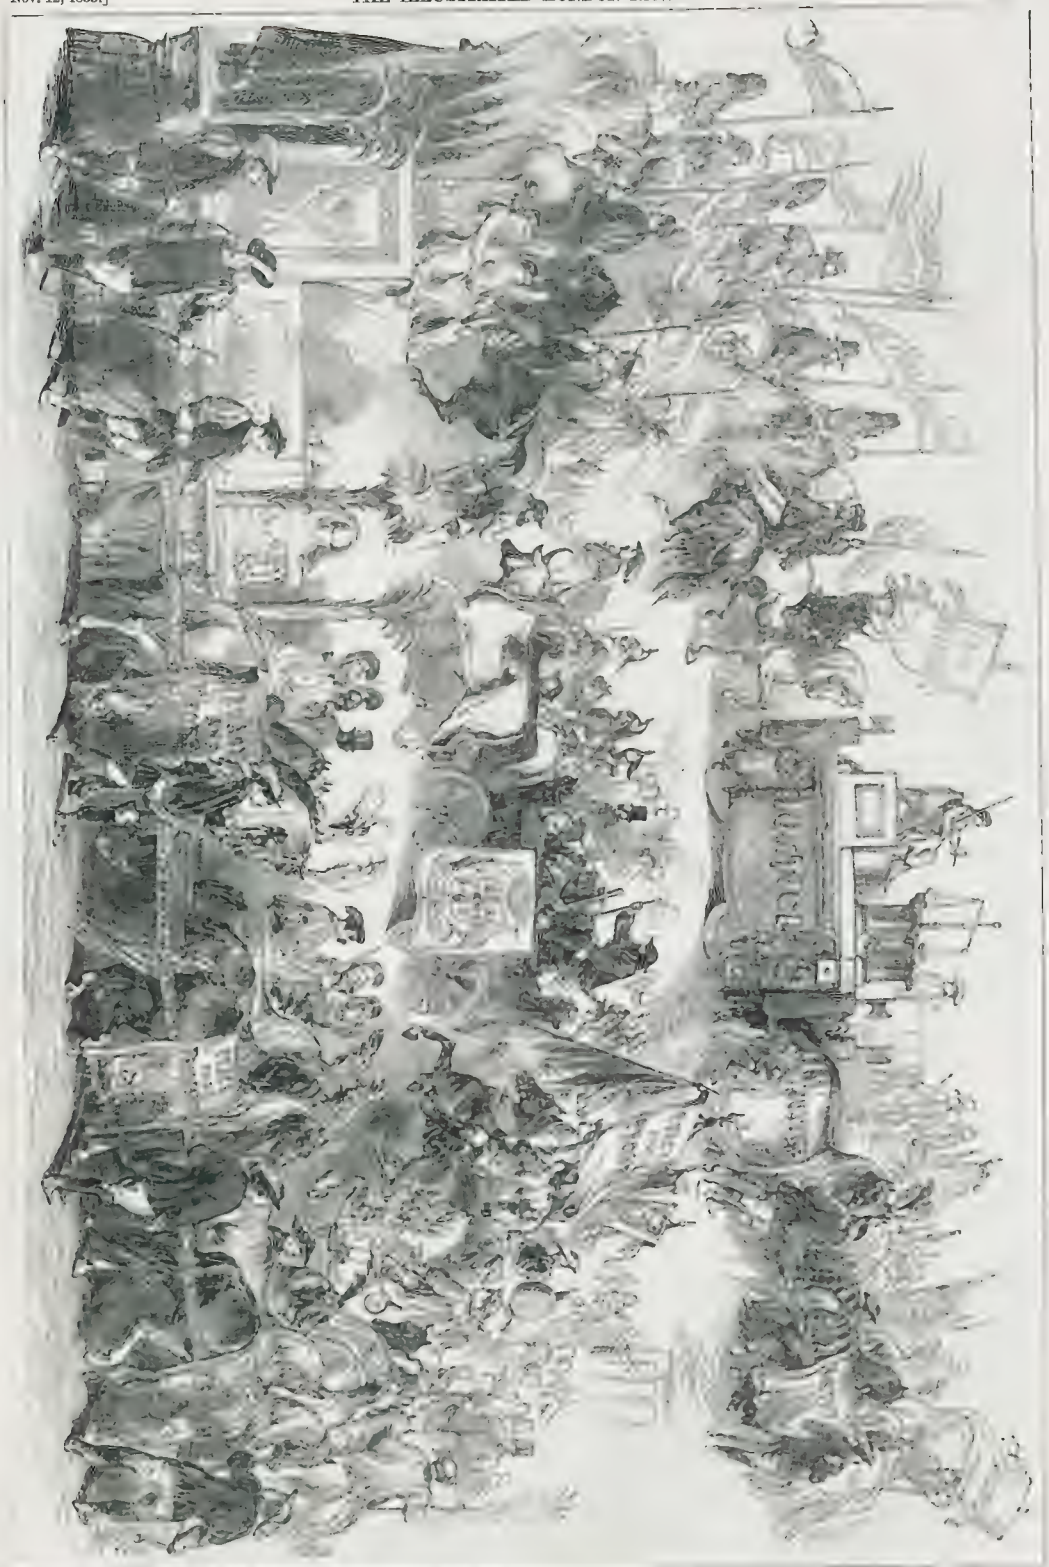
Numerous meetings have been held in the open air, of one of which we present an Engraving. The speaker is Mr. Cowell, who has taken a leading part in the strike, and whose portrait we give. A meeting was held in the Temperance-hall on Sunday, the 23rd ult. About 70 delegates were present. The amount received that day for the maintenance of the operatives was £1687, including the large sum of £613 contributed by Blackburn, and £110 by Preston On Monday, the 24th ult., the first payment was made to the operatives by the Amalgamated Committee. The payment took place in the Temperance-hall, formerly a cockpit, and situated in a narrow lane leading out of Fishergate, close to the old church. At the table on the right were arranged paper packets of money, counted out and brought from a small room, the door of which is seen a little to the left of the table (see Illustration). The chairman called over the names of hands from the various mills, who thereupon came up to the paymaster and received their money. The weavers, minders, beamers, and dressers were paid with 6s., and the tenters with 2s. The spinners, self-actor minders, &c., got 7s. each; the card-room hands from 1s. to 2d.; and the throstle-spinners from 3s. 6d. to 9d. The recipients seemed, on the whole, satisfied with the rate of allowance. The tenth report of the Preston power-loom weavers, dated November 2, shows an income for the last week of £1790 14s. 3d., and an expenditure of £1786 0s. 3½d.; leaving a balance in hand of £4 13s. 11½d.

The manufactures of Preston are chiefly of the coarser descriptions, being intended for exportation to the Indies, China, and foreign markets. Of this class of goods what has recently been remarked with regard to the cotton manufacture generally holds true, that the number of mills is not increasing in Manchester itself, and that they are now established in the surrounding towns, which are thus becoming great centres of population. The reasons assigned for this are, briefly, that in Manchester land is dear, rates are heavy, the hands little under control, and wages high; whereas in the neighbouring places the large area of ground required for mills is cheaply obtained, the local charges are still light, facilities exist for exercising a considerable amount of influence over the operatives, wages are low, and labour is abundant. Preston is one of these places. There the millowner gets the ground upon which his establishment stands upon favourable terms. He can build cottages for his hands, thus keeping them about him. The local rates have not yet been burdened by heavy charges for constabulary and other objects; there is a military force at hand to suppress disturbances; and, as it is a frontier town to the Manchester district in one direction, and near Liverpool and Fleetwood, it used to catch a large Irish immigration, and still receives from the agricultural districts to the north a considerable supply of hands wherewith to feed the labour market and keep down wages.

It has been stated by the speakers at the open-air meetings that the Preston factory operatives receive from 20 to 30 per cent lower wages than are given in other towns. The two largest sections of operatives here are spinners and weavers—the former usually spinning in the same mill the yarn which the latter convert into cotton cloth.

In 1836 the spinners combined to obtain an advance of wages from the masters; the result of which was that the masters combined also, closed their mills, and, after fifteen weeks' struggle, starved them into a surrender. The misery and suffering which that struggle entailed have not been obliterated by a lapse of seventeen years. Many of the small shopkeepers were ruined, hundreds of homes were completely broken up by it, and debts were incurred which, even now, remain unpaid. So strong was the impression produced by it that hardly any of those who were active on that occasion take part in the present strike, and some of the prime movers then do not hesitate to condemn the folly and rashness with which this crisis has been precipitated.

PAYMENT OF OPERATIVES, IN THE TEMPERANCE HALL, PRESTON.



ORD MAYOR'S SHOW, 1853.—(SEE NEXT PAGE.)

LORD MAYOR'S DAY.

WEDNESDAY was as bright and bracing a Ninth of November as ever illumed the civic calendar. To say that the accustomed show took place would not be altogether correct, since the pageant was, in great part, remodelled; and was a very near approximation of the tasteful example set by Sir John Musgrove, Lord Mayor in 1850. His show was a sort of antiquarian illustration of the glories of the Great Exhibition of the following year; and Lord Mayor Rumney's show on Wednesday, was an emblematic pageant of like national character. It was, indeed, a procession of All Nations. The promise of novelty drew forth crowds of citizens from dusty streets courts, and alleys; and these thousands were greatly augmented before seven o'clock from the metropolitan boroughs and suburban districts. The bridges were crowded by eager spectators, desirous of viewing the civic procession by water; the weather being unusually fine for this portion of the pageant. The river steamers were gaily decorated, the church towers and spires displayed their flags, and the bells rang merrily. Possibly, the crowd was greatly increased by the expectation that the days of Lord Mayor's Shows are numbered by the Corporation Commissioners.

There were three great points of attraction—viz., Guildhall, Fish-street-hill, and Billingsgate. In the neighbourhood of Guildhall the crowd was excessive, and the shouts of the populace gave a most welcome salute to the new Lord Mayor. The various commercial houses in the locality were decorated with flags, and the windows were graced with female beauty still more brilliant and inspiring.

The procession formed at Guildhall, and moved along King-street, through Gresham-street, Princes-street, Lombard street, Fenchurch-street, Mincing-lane, Tower-street, Eastcheap, to Fish-street-hill, in the order as given in the annexed programme. The crowd at this point was immense: the streets, windows, and house-tops were crowded with human beings; as were the houses in the neighbourhood of Fish-street-hill, which commanded a good view of the procession, as it diverged from Eastcheap in its way to Billingsgate-market. Here, the Lord Mayor and other civic authorities embarked in the state barges waiting for them.

Shortly before two o'clock, the firing of guns from the wharf of Messrs. Searle, the City barge-master, announced the arrival of the Lord Mayor and the civic functionaries at Westminster: long before that period Palace-yard, Westminster-hall, and the several courts, were filled with an assemblage of well-dressed persons, principally of the gentler sex. The Civic barge having drawn up at the landing-place at the east end of the Royal Palace of Westminster, the Lord Mayor and civic authorities proceeded in state to the Court of Exchequer, and took up their position within the bar. Lord Chief Baron wearing the gold collar, SS; Mr. Baron Park, Mr. Baron Alderson, and Mr. Baron Platt also appearing in their scarlet robes. The Recorder then in a brief address presented the Lord Mayor to the Barons. The Lord Chief Baron having expressed his satisfaction of the choice of the Livery in the appointment of their chief magistrate, the Lord Mayor took the usual oaths of allegiance and supremacy. The Recorder then, in the name of the Lord Mayor and Mr. Sheriff Wire, invited their Lordships to the banquet at Guildhall.

The Lord Chief Baron intimated that some of the Judges would attend. The civic authorities then proceeded to the Courts of Queen's Bench and Common Pleas. The Recorder having presented the Lord Mayor, invited the Judges to the Banquet. The Lord Mayor then re-embarked on board the City barge, and proceeded to Blackfriars-bridge; where, having joined the procession, it returned to Guildhall.

The following is the programme of the procession, from which it will be seen that the earlier portion consisted of the civic authorities, the Sheriffs the Aldermen who have not passed the chair, and the late Lord Mayor. Then commenced the new portion of the Show, which was arranged and carried out by Mr. F. Fenton, under the direction of Mr. Bunning, the City Clerk of the Works.

PROGRAMME OF THE LORD MAYOR'S PROCESSION.

First Division of Constables to clear the way.
The Boys belonging to the Royal Marine Society, with Banners.
City Marshal a Man.
Pensioners of the Royal Hospital, Greenwich.
Lowmen of the Guard.
Private Trumpeters.
Mace.
Bow Bearer.
Cockswains.
Beadle—at
Inspecting Boatswains.
Two Police Constables.
The Beadle of the Worshipful Company of Fishmongers
Watermen bearing the Company's Barge
and Streamers.
The Arms of the Right Hon. Benjamin Disraeli (Chancellor of the Exchequer).
The Arms of Sir Benjamin Hall, Bart. (First Commissioner of Works).
The Arms of Mr. Alexander Cockburn, Q.C. (Attorney-General).
The Arms of Mr. Richard Bethell, Q.C. (Solicitor-General).
The Arms of Mr. James Parker (Queen's Counsel).
The Arms of Mr. Thomas Chambers (Queen's Counsel).
The Arms of Mr. Thomas Phinn (Queen's Counsel).
The Arms of Mr. Thomas Pashley (Queen's Counsel).
The Arms of Mr. Thomas Piggott (Queen's Counsel).
The Arms of Mr. Thomas Hall (Queen's Counsel).
The Arms of Mr. Thomas Hall (Queen's Counsel).
The Arms of Mr. Thomas Hall

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The King of the Belgians has most generously given his consent for the fine pictures by the modern Belgian artists, belonging to him, late in the Dublin Exhibition to be exhibited in London for a month.

Glasgow, it is said, is to be supplied with water from Loch Katrine, at a cost of £1,200,000.

The oldest vessel in the French fleet is the *Océan*. She was launched in November, 1786, and is consequently sixty-three years old. Her last thorough repair took place in 1836.

It is not generally known that, under the recent alteration of the Assessed Taxes and Post horse Duties Acts, the taxing of tickets with horses let by the year, or month, or day, or by the mile, has been discontinued since the 5th of October.

The survey for a line of railway from Plymouth to Tavistock, part of a scheme for a central line through the country, in connection with the South Western, has been completed; estimated cost, £250 000.

During the heavy rain of Friday week, about ten o'clock, two or three large balls of fire fell near to the St. Giles' farm, on the Langworth-road, Lincoln, which exploded with a loud noise.

The Austrian Government has concluded a treaty with that of Sardinia, for the reciprocal transmission of telegraphic despatches.

Dr. Bull, an eminent surgeon of Cork, had been labouring under an aberration of intellect for some time past, and, last week, hanged himself to a tree in his garden.

The different societies of artists, musicians, and traders of Munich, gave a monster torchlight serenade to King Louis of Bavaria on the 25th ult., in honour of his Majesty, as founder of the Pinakothek.

The mode of rigging adopted in the Cunard steamer *Arabia*, that of a brig, main-deck-aw fashion, having proved so suitable for ocean steamers, the company are extending it to their other vessels.

The whalers arrived at Sandwich Islands report having seen the English ship *Pioneer*, of the Searching Expedition, in August, in the Arctic Sea. They also state that the Esquimaux had given up all hopes of Franklin's safety.

The Leipzic magistrates, in order to prevent bakers from selling wet bread or freshly baked, whereby the weight is increased, have forbidden all loaves to be sold that have not been baked at least 24 hours.

The Irish Master of the Rolls has intimated to the bar, that he would discharge every notice of motion, with costs, in which the counsel and attorney did not appear when called on; the costs in all such cases to be borne by the defaulting attorney, whose presence he held to be indispensable.

The French General, Arists, having recovered from his illness, proceeds to the Danube to witness the military operations between the Russian and Turkish armies.

Respecting the progress of literature in Australia, it is said, that "Bleak House" is extensively read; that the "Uncle Tom" mania is on the wane; and that a Catholic weekly newspaper, specially devoted to the discussion of Irish wrongs and grievances, has been established at Melbourne.

Mr. Birch, late of the Dublin *World* newspaper, has obtained a conditional order for a new trial of his action against the proprietors of the Dublin *Freeman*. The grounds for the order were the admission of illegal evidence at the last trial, and the verdict being against the weight of evidence.

Several of the English residents in Paris have it in contemplation to open a subscription for the purpose of contributing to the testimony of the brave Lieutenant Bellot.

J. D. Grant Duff, Esq., of Eden, has just purchased the estate of Blervie, near Forres, from the trustees of the late James, Earl of Fife. The purchase money amounted to £49,000.

The Duke and Duchess of Wellington will not occupy Apsley House until next season, owing to the extensive improvements in progress at that mansion.

The Hamburg newspapers of the 31st ult. state that several officers of the Schleswig-Holstein army, who have not been amnestied, intend to go to Turkey, to offer their services to the Sultan.

A commission of lunacy has been issued against Sir Hugh Palliser, Bart., now in a Dublin asylum.

Prince Frederick William of Hesse-Cassel, presumptive heir to the Electorate, and nephew to H.R.H. the Duchess of Cambridge, left Berlin on Saturday, with his young bride, Princess Anna of Prussia, for Copenhagen, where they will pass the winter.

Captain J. H. Tordiff, of Westbrook, county of Donegal, has been appointed by the Lord Chancellor of Ireland a magistrate for that county.

The colliers in the neighbourhood of Birmingham have generally returned to their work at the old scale of wages, and there does not appear to be any probability of a renewed strike.

From Cincinnati (U.S.) we learn that a very destructive fire had broken out near the centre of the block between Main, Sycamore, Front, and Second streets, which destroyed a large amount of property.

The losses caused by the great floods in Cork are estimated as high as £60,000. A subscription for the relief of the sufferers has been opened.

A little girl was last week accidentally hanged in a cow-house at Landilo. She had fastened a cord to the roof, and it is supposed that the chair on which she was standing slipped, and the cord tightened round her neck and so strangled her.

The Belgian Chargé d'Affaires in Washington has made an arrangement with the United States Government, whereby the latter grants a considerable subsidy for the establishing of a line of steamers between New York and Antwerp; to commence running within three months.

Her Majesty's Emigration Commissioners have given notice that they require two ships to carry emigrants to south Australia and Victoria (Port Phillip), to be ready to receive passengers for Adelaide on the 26th, and Melbourne the 28th, December.

Thomas Jonathan Woolen—well known, some thirty-five years since, by his periodical, the *Black Dwarf*—died on the 29th ult. From the passing of the Reform Bill he abstained from politics.

The erection of public baths and washhouses in the city of Durham will be commenced immediately.

The residence of Cooper, the novelist, at Albany, recently converted into an hotel, was burned down by the act of an incendiary, on the 31st ult.

The Malta mail of October 28th announces the death of Lieut.-General Francis Count Rivarols of the Royal Malta Fencibles.

The Peninsular and Oriental Company's new screw steam-ship *Nocna* took her official trial trip at Southampton on Monday. She averaged 12 statute miles per hour. The engines went at once commodiously to operations for India, for which destination she will leave on Monday next.

The entries for all descriptions of stock for the ensuing Birmingham Cattle Show, are unusually large, and promise most satisfactory manner.

Great success has attended of late the efforts making by the committee appointed to raise a company of Volunteer Rifles in Torquay, the number previously enrolled having been more than doubled.

Letters from Paris state that a council of Ministers was held on Saturday, to discuss the question of reducing the duties on iron. It was understood a decision has been adopted to considerably modify, and in some instances abolish, the present high rates of import duty on iron.

Arrangements are in progress for holding a great public meeting in Glasgow, under the auspices of the National Association, for "Justice to Scotland," at which the Earl of Eglinton is to preside.

The school at Erskine for the orphans of London firemen is just ready for occupation, the fittings and furniture in the dormitories and school rooms being in a forward state.

The South-Western Railway Company intend to be their own carriers in taking goods to and from their stations.

The American Government is steadily reducing its National Debt, and the following is the present state of the Debt of the United States:—Total Funded Debt, 63,117,836 dols. Old Obligations, U.S., 948,89) dols; 1856-65, to Texas, not issued, 5,000,000 dols. Whole Debt, 81,065,183 dols.

It is reported that the amalgamation of the Eastern Counties and Eastern Union line is already completed the terms being a compromise between the extreme demands hitherto made by either party.

The Municipal Council of Vienna lately wished to put the same tax on the residences of foreign ambassadors as is imposed on private houses; but they sent a protest to the Government, and it decided that they should not be liable to the tax.

The establishment of a National Gallery of Art in Ireland is proposed as a permanent memorial of the Exhibition.

Mr. Ruskin has been delivering lectures on Architecture to crowded audiences, at the Edinburgh Philosophical Institution Hall.

It is said that the Duke de la Victoria refuses to receive the money which the Spanish Government sent him an order for, on account of the arrears due to him when Regent of Spain.

There are so many applicants for admission to the Reformatory School, at Sandhurst, that an enlargement of the building has been decided upon.

The population of Prussia, in December, 1852, was 16,935,420 souls; giving an increase, during three years, from 1849, of 507,972 souls, or 3·8 per cent.

CHESS.

TO CORRESPONDENTS.

PERCIL, Cambridge.—Your Problem marked No. 1 admits of two solutions; but for this double solution the strategem would be a good one. No. 2 is very indifferent.

P. M. Medcraft.—Your comm. is highly valued, and shall receive early attention; but we do not wish to be committed to which Paper or Pawn is to offer to be Mat.

J. B., Bridport.—See the *Chess Player's Chronicle* for November.

SHAKO, Woolwich.—You have not yet hit on the Solution of No. 507. That and the last Problem again have sets in our nearly sharp correspondents.

F. T.—If No. 507 could be done as you suggest it were, indeed, be worthless; but you have not even approached (unless the only solution is) of it yet.

M. N. O.—What are our best good correspondents and it? Of either 507 nor 508 have we received half a dozen true solutions. They were or, want to be so easily solved.

JUVENIS.—Published games, to be of any use or service to non-players, require to be ably and duly annotated. You do not do it, therefore, not to waste your time in playing over games which are not accompanied by any explanatory remarks.

C. M. J.—If the games in the late Caledonian Society, Hyth and King-ish, of Birmingham, turn up well, as some of them can lay well we shall be glad to see them.

J. W. L.—White, in such a case, is stalemated and the game drawn.

A. C. T. M. W., Bath-Macaulay.—Letters to be replied to the same week, should be sent very early.

C. X.—We have not room to answer so many questions at once. Send your name and address, and any particulars we can fairly put with it, to be given.

BICKS, Clerkenwell.—F. F., G. M., S. S., Rhedycina.—Your solutions were received but the papers being in hall among the ground carrying boxes, were not observed in the time.

E. M.—The rule that ten moves (ten, three or four persons on each side) only shall be played during the play of a Chess match is an excellent one, and should be strictly enforced in future times, when Chess games have been adjourned. It is very unusual for people to be sure to witness the games played, but now the every game is limited to half a dozen moves, we cannot see players be unprovided a quarter of hour's time.

T. R. B., Woodford.—In Problem No. 45 of the November *Chess Player's Chronicle* the Queen at 5 sends K B 2nd should be *White* one. The problem stands very well in that place of change, and it is a pity it should have been changed up a balancing composition.

F. M., Thame.—I read a more correct table, and if all appear unsuccessful on leagues.

H. W. Wandsworth.—Nos. 2 and 3 afford of more than ordinary merit.

W. G., York.—A capital problem. It shall have an early place.

MEDICUS.—Of course Chess are should be made for the heart and liver of the nervous system in a long Chess match between great players; and relaxation, if needful ought to be obtainable at a reasonable cost.

J. A. C.—Communications so unusually addressed should at least contain the names of the parties. To whom, Private, or yours no you refer?

E. W. and E. C.—Yes! the game is drawn.

MARINE SUB.—We are very glad to hear the Oxford amateurs have come to so sensible a reason. Let them and the rest of our amateurs encourage by their example such Clubs, and so to treat the game in an elevated and honourable spirit, and the others will soon cease to exist.

A MEMBER, &c.—The present treasurer to the fund is R. D. Brien, Esq., of the St. George's Chess-club, a note to whom will enable you to get all the particulars which we cannot furnish, [illegible] of the Times Office.

SOLUTION OF PROBLEM NO. 508.

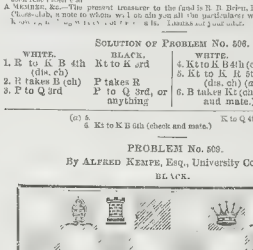
WHITE.	BLACK.	WHITE.	BLACK.
1. R to K 8th (dis. ch)	K to K 3rd	4. Kt to K 8th (ch)	K to his 4th
2. R takes B (ch)	P takes R	5. Kt to K 8th (dis. ch)	K to K 5th
3. P to Q 3rd	P to Q 3rd, or anything	6. B takes Kt (check and mate.)	

(a) 3. Kt to K 8th (check and mate.) K to Q 4th

PROBLEM No. 509.

By ALFRED KEMPE, Esq., University College.

BLACK.



WHITE.

White to mate in six moves.

MATCH BETWEEN MESSRS. HARRWITZ AND LOWENTHAL.

The score of this contest when we write stands—

Löwenthal	..	..	..	..	.. 9
Harrwitz	..	..	..	..	.. 3
Drawn Games	..	..	..	..	.. 6

The subjoined Game is the sixteenth played in this exciting contest.

(Queen's Gambit declined.)

BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)
1. P to Q 4th	P to Q 4th	17. P to Q Kt 5th (f)	P takes P
2. P to Q 5th	P to K 3rd	18. Kt takes Q Kt P	K takes Kt 5th
3. Kt to Q B 3rd	Kt to K B 3rd	19. K Kt to Q 2nd	Kt takes Kt
4. B to K B 4th (a)	P to Q R 3rd (b)	20. Q takes Kt	P to Q 5th (g)
5. P to K 3rd	P to Q B 4th	21. B to h B 3rd	Kt to q, R 4th
6. Kt to K 8 3rd	Kt to Q B 3rd	22. Q to Q Kt 4th	Kt to Q Kt 6th
7. P to Q R 3rd	B to K 2nd	23. Q R to Q Kt sq	Kt takes Q B P
8. P takes Q B P	B takes P	24. P takes P	P takes P
9. P to Q Kt 4th	B to Q 3rd	25. Q R to Q B sq	K R to Q B sq
10. B takes B	Q takes B	26. Kt takes Q P	R to Q R 5th (h)
11. Kt to Q B 5th	Q to K 2nd	27. Q takes Q	Kt takes Q
12. B to K 2nd	Castles	28. R takes R (ch)	K R 3rd
13. Castles	R to Q sq (c)	29. Kt takes B	P takes Kt
14. R to Q B sq	P to K 5th	30. R to K 5th (ch)	P to K Kt 3rd
15. K to K sq (d)	P to K R 3rd (e)	31. K R to Q B sq	
16. Q to her B 2nd	B to K 3rd		

The game was prolonged for a few moves, and then White surrendered.

(a) In these sort of openings it is not considered advisable for the first player to bring his Q Bishop over the King's side, but it is not as attended, however, that in the present match the success with which it has been done by Mr. Harrwitz goes far to disprove the received opinion on the subject.

(b) To prevent the adverse Kt being played to Q Kt 5th.

(c) Preparatory to advancing his K Pawn to liberate his Q Bishop.

(d) Well judged. Upon this move Mr. Black's subsequent combinations hinge.

(e) In this game Mr. Löwenthal falls much short of his customary vigour and decision of play. Many of his moves are feeble and part owes to his extreme. What, for example, could be more lame, or without object, than giving a forward the K R Pawn two?

(f) We played. (g) We should have preferred moving Kt to Q R 4th.

(h) A brilliant and one made after long reflection, confirming what the previous play indicated—that Mr. Löwenthal was ill armed for Chess on to-day's Harrwitz came off.

(i) Of course. We now see how all-important was Black's 15th move—of K to K sq.

CHESS ENIGMAS.

No. 851.—By Mr. PHŒNIX.

White: K at K R sq, Rs at Q sq and Q 7th, B at Q R 4th. Kts at K Kt 2nd and Q B 5th: Ps at K E 5th, K B 3rd, K 4th, Q B 2nd and 3rd, and Q Kt 6th.

Black:—K at K B 7th. Rs at K 8th and Q 4th; Ps at K R 3rd and 7th, K Kt 6th, K B 5th, K 3rd, Q Kt 3rd, and Q 4th.

White to play, and mate in seven moves.

No. 852.—By J. B., of Bridport

White: K at Q Kt 8th, Bs at K R 8th and Q B 8th, Kt at Q B 3rd, Ps at K 2nd and Q R 2nd.

Black: K at Q R 3rd, P at Q R 4th.

White to play, and mate in three moves.

No. 853.—A charming little End-game, by the same Author.

White: K at Q 7th, R at K Kt 7th, Bs at K R 8th and K Kt 4th, Kt at Q R 4th, P at Q 2nd.

Black: K at K R 4th, R at K Kt 7th, Bs at Q 8th and Q R 6th; Ps at K B 6th, Q B 3rd, and Q Kt 7th.

White, playing first, to mate in three moves.

THE Cossacks, as soldiers in action, are of comparatively little value. Its population of a country is against them, they would be massacred in detail. If the Cossacks take the Turkish dominions their real use will be lost, as they will be under the necessity of acting as a regular force, thus becoming an actual incumbrance.—*Sir C. Shaw.*

DESTRUCTIVE INUNDATIONS AT CORK AND MALLOW.

THE City of Cork has just been visited by a fearful inundation, stated to have been the greatest calamity of the kind which has taken place in Ireland for upwards of seventy years. The excessive rains with which that part of the country has been visited, added to the violent hurricane from S.E., which prevailed on Tuesday (last week), and both acting with an unusually high spring tide, produced the most serious floods.

The rains of Monday and Tuesday, as indicated by the gauge kept at the Cork Institution by Mr. Humphreys, amounting in the aggregate to two inches and a half; besides which, nearly five inches had fallen the preceding fortnight. New moon took place on the 1st instant, and the tide consequently would have risen to the height of 20 feet 4 inches; but this elevation was prodigiously increased by the hurricane which had blown from the S.E. for some days previously. The consequence was that on Tuesday evening, the water commenced rising at about four o'clock, and in the space of half an hour the whole flat of the city was inundated. The Western road to Mardyke, and all the adjacent fields at both sides, were one sheet of water; and the City Park, as well as many fields in the neighbourhood of the city, were completely flooded to the depth of some feet. The water continued rising higher and higher every moment, until the turn of the tide, which took place at five o'clock, when the flood slowly and gradually subsided, but not until considerable damage had been done.

Next morning the flooding of the fields near the Western-road, the Mardyke, and the upper portion of the river, had not subsided in the slightest degree, but had rather increased. At eight o'clock, though the tide had been three hours on the ebb, the rush of water from near Summer's Well commenced rapidly increasing, and soon it tore down the channel in turbid waves, inundating the Western-road and the Mardyke, which were speedily impassable. The baths on the Western-road were carried away by the torrent.

Soon after ten o'clock, the rush of water at North-gate bridge, the arches of which are narrow, became so great that the torrent speedily overflowed its banks, and bore down Great George's-street like a river, inundating the lower parts of the Grand Parade, George's-street, and all the streets and lanes in the vicinity.

The Parade and Patrick street, as well as the two Main-streets, were filled with water to the depth of some feet at eleven o'clock. Cars, carts, wheelbarrows, and vehicles of every sort, were in full requisition, and were dashing in every direction through the water. At twelve o'clock every shop was closed, and the streets ran like a river in every direction.

At the moment one of the houses in Fishamble-lane (which are some of the oldest buildings in the city), gave way, and fell in a heap of ruins, completely blocking up the passage, filling it with great beams of timber and masonry. Fortunately, the house was unoccupied, and no loss of life occurred.

At this time the flood was rushing furiously through every street in the city, bearing on its muddy and swollen surface evidences of the devastations which had marked its course, in the shape of beams of timber, trees, turn ture hay, straw, &c. Scarcely a house in the city was free from inundation; and the inhabitants had all betaken themselves to the upper stories.

The authorities had judged it prudent to take precautions to prevent any fatality taking place in case North-gate-bridge should be destroyed. The bridge being unequal to convey away the vast body of water, and, overflowing its banks, the water rushed rapidly along until coming to the New-street it parted, and sent a portion of its waters down the South Mall, and a portion down George's-street, from which it flowed with great rapidity until it poured into the river at Anglesey-bridge. Similar overflows took place at Parliament-bridge and other localities; and of George IV's bridge, not a vestige was to be seen. The entire country for miles around was a sea of water. But fears for being, as before stated, felt for the safety of North-gate-bridge; the police stationed chains at each end, and a number of men were stationed to keep the public from crossing. No fears at this time were felt for Patrick's-bridge, as the force of the water had considerably subsided before arriving there. The traffic of North-gate-bridge was thus completely thrown upon Patrick's bridge, and many persons were standing near the battlements watching the flood.

At the crisis a circumstance occurred which might have given warning to the authorities that Patrick's-bridge was not so secure as they imagined. Half way down Lavitt's-quay there stood a fountain, at the immediate edge of the river. Suddenly a loud crash was heard, and the fountain had disappeared, and about thirty feet of the quay wall had also been carried away. The torrent having thus secured another vent, rushed impetuously over the quay, deluging the houses with water to a depth of some feet. A rush of spectators was of course made in the direction of the accident; and after their arrival, the water tore down another portion of the quay wall, and a considerable portion of the quay was borne away. At the opposite side of the river, a portion of the sewer burst, and part of the quay fell in.

It was now about half-past twelve o'clock, and the flood, so far from diminishing, was every moment acquiring additional fury. The waters were dashing under the arches of Patrick's-bridge, carrying chairs, beams of timber, trees, &c. At this instant a terrific crash was heard, followed by a piercing shriek, and it was discovered that a great piece of the bridge had given way, carrying down, it is believed, eleven persons. They were borne down the tide, and all were drowned, with the exception of one, who was rescued. Barriers of timber were immediately placed across both ends of Patrick's-bridge, and the police were soon in attendance to warn persons not to attempt to cross it. A party of artillery soon after arrived, under Major General Manson, and formed themselves into a line at each end of the bridge. In a few moments another large mass of masonry gave way, and was carried into the tide.

Both the bridges leading to the north of the city being now barred to the public, the ferries were put in requisition for the conveyance of passengers.

A calamity of nearly as fearful a character as that which had occurred on Patrick's-bridge, took place in a different part of the city at about the same period of the day. A portion of the rear of the Messrs. Perrot's foundry was swept away, carrying with it five persons, three of whom were irrecoverably hurried away, and perished. The remaining two were borne down by the tide, but one was saved.

The house which fell down in Fishamble-lane was one in the occupation of a person named Hingston, opposite the centre of the Court-house. The inhabitants had, fortunately, perceived their danger, and had taken refuge in the adjoining house. Fears for the stability of the latter house were shortly afterwards entertained; and the occupants were breaking a hole in the wall in order to get into the next house. The officers of the Court-house, however, procured a boat, into which the parties got, and were conveyed to the Court house.

The Mayor was absent in Dublin, on official business. His secretary, Mr. Pierce Fitzgerald, was actively engaged through the city all day. Towards evening, many of the inhabitants of Nile street, and the more lowly-situated districts of the town, began to utter cries for bread, having been unable to procure any provisions all day. On hearing of the circumstance, Mr. Fitzgerald procured a boat, which he loaded with bread and distributed it to the people. This he continued to do during the entire night, up to twelve o'clock. The High-Sheriff, A. J. Wood, Esq., gave orders to the bakers that the police should be furnished with bread, on his responsibility, to any amount they might require. The accompanying illustration shows the condition of Patrick's-bridge, immediately after the giving way of the abutment.

Upon the same day as that of the calamity at Cork, the town of Mallow was visited by a similar inundation. The alarm was considerably augmented by the rise of the water commencing at a very early hour of the morning, when the majority of the inhabitants of the town were asleep. At about midnight the Blackwater began to flood the Long Meadow, from which the waters spread at both sides, and, rising rapidly, the lower portions of the town at both sides of Macroomb-bridge were soon laid under water to the depth of three or four feet. The rush of the inundation now assumed a terrific appearance, and the inhabitants of the town, awakened by the sound, speedily collected at the windows of the upper stories, but too late to save the most valuable portion of their property. At eleven o'clock a.m. the water rushed down along Bridge-street and all the lanes and streets of the town, bearing away on its surface chairs, tables, bedsteads, &c. At nine o'clock the water obtained so great an elevation that the houses in the lower portion of the town were submerged over the first floor, and the occupants had to clamber out through the garret windows on to the roofs.

At this period of the day (nine a.m.) the poorer residents being greatly in want of provisions, which they had been unable to procure, a raft was constructed of planks, on which constable Enright and sub-constable Wilson proceeded through the streets with a cargo of bread, with which they supplied the privations of those most in need of assistance. When this seasonable supply was exhausted, the raft was replenished by

PATRICK'S BRIDGE, CORK, AFTER THE ACCIDENT.

BOATS CONVEYING PROVISIONS DURING THE INUNDATION IN THE STREETS OF CORK.

several of the town bakers, and money was also contributed by the more comfortably-circumstanced residents, by which the necessities of their poorer neighbours were supplied. The inhabitants were all bivouacked on the roofs of the houses.

At about half an hour subsequently, Mr H. Rice, with acting constable M'Cluskey, procured a boat, and proceeded through the town to put in safety any persons who might be imperilled from the inundation. The water at this hour of the day had risen to an astonishing height, and was flowing down with terrific violence, submerging many of the smaller houses at the lower end of the town. Several persons had clambered up to the tops of the chimneys, from which they were calling loudly for assistance. They were conveyed on board the boat, and placed in safety at the upper part of Bridge street.

In Spa-walk, numbers of persons, consisting of the poorest residents of the town, were in extreme danger. Boats, rafts, and ladders were provided, and the sufferers were rescued and placed in a position of security.

An hotel, kept by a person named Stack, in Bridge-street, was completely submerged. The occupants were, however, fortunately rescued, having been carried away in one of the boats. The house itself was greatly shaken, and all the effects it contained were destroyed. During the entire day the stream was covered with furniture.

At about seven on Wednesday evening the waters subsided; and on Thursday morning the spectacle which the town presented was deplorable in the extreme. The houses were completely gutted, not a vestige of furniture, or even the stairs, in many cases remaining. The streets were strewn with large heaps of masonry, broken furniture, casks, and other property.

In the early part of Wednesday our Artist took the Sketch which we have engraved. He states that the Blackwater, which flows past the town, rose to an enormous height: in one part of the street it actually measured 15 feet. In the Sketch the figures on the raft are policemen distributing provisions to the poor people. Horses, cows, sheep, and pigs, with an immense quantity of corn and hay, were swept down the stream; and the loss of property of every description was prodigious.

REMAINS OF FALLEN HOUSE IN FISHAMBLE LANE, CORK.

MAIN-STREET, MALLOW, DURING THE RECENT FLOOD.

THE CABIN ON THE GRANDS MULETS, MONT BLANC.—SKETCHED BY MR. ALBERT SMITH.

THE CABIN ON THE GRANDS MULETS, MONT BLANC.

(We have been favoured by Mr. Albert Smith with the above Sketch, and the accompanying picturesque details.)

During the long, dreary months of the last winter, the guides of Chamouni employed themselves in making the frame-work of a hut, to be erected on one of the rocks on the side of Mont Blanc, known as the *Grands Mulets*, whereby travellers might be sheltered from the cold during the night bivouac. Hitherto blankets and railway rugs have formed the chief protection against the low temperature, and these under ordinary circumstances, were found sufficient in the majority of cases; but as the rocks themselves are situated at an elevation of 10,300 feet above the level of the sea, and consequently about 2000 feet above the Alpine line of perpetual snow, and, moreover, are frequently ex

AURORA BOREALIS, SEEN FROM THE PIER, AT BOULOGNE.—(VIDE NEXT PAGE.)

posed to fearful and unexpected storms, the want of some sort of refuge, however rudely contrived, has long been felt.

The present hut—by far the highest habitation if it may be called so, in the old world—is constructed after the manner of the dissected barns sold in the toy-shops, and kept together by wooden pegs and braces. Its external walls are formed of flat blocks and splinters of the rock, and these also serve to keep the roof in its position, during high winds, by their weight. It is fitted up with a few rough planks, forming tables and shelves. There are two sliding windows, glazed; a door, which closes tolerably well; and a small fireplace, the chimney of which passes out at one of the windows. Its size is about fourteen feet long by seven broad, and the roof of the lean-to slants towards the west so that the afternoon sun melts the snow thereon, and the water that drips from the eaves is carefully collected in bottles, as there is no other chance of getting any, except by the stove. As soon as the sun goes down, if there be the least puff of wind, the cold is very sharp and biting, and makes fires, almost immediately, at the edge of the roof.

In consequence of the erection of this hut, the Grands et Petits Mulets has become one of the excursions from Chamouni. Whilst it avoids the expense and risk of the actual ascent of Mont Blanc, it is a greater feat (or ambition) [illegible] than simply [illegible]. There is, besides, the [illegible] of sleeping [illegible] the eternal snows of the mountain, and the wonderful view of sunset and sunrise from so great an elevation; whilst the lover of dangerous enterprise will always find more than a sufficient number of precipices, [illegible] to rally amid the wild horrors of the upper part of the Glacier du Tacconay, to satisfy him. Towards the close of the present [illegible] was a worse omen than had been known for years. Those of our readers who may choose to hire [illegible] through telescopes from the Flégère, or the Brevent, will recall to mind the frightful crevices which split it in all directions. The top of the Glacier des Bossons, which lies in the deep valley descending from the Grand Plateau, to the left of the Mulets, and about three hundred feet below them, was so rent and intersected, that it looked very like a collection of huge basaltic columns, splitting away one from the other, and allowing enormous blocks to slip down between them. Some of these *seracs* (as they are termed) were of incredible magnitude.

On the 21st of September last I had the pleasure of forming one of the largest parties of travellers ever assembled on the Grands Mulets. We were nearly fifty in number, as well as I can recollect. The tourist-[illegible] of Lord Killeen, Captain de Bathe (of the Scots Fusilier Guards), Mr. Howard Russell, Mr. Macgregor, Mr. Fanshawe, Mr. Shuldham, Mr. Burrowes, and myself. We reached the rocks about four p.m., having left Chamouni at eight in the morning, and really encountering a great deal of trouble on the [illegible]. Just as it was getting dusk we were joined by the younger Kehrli (who keeps the Hazzari) from Chamouni, accompanied by Benoit, the *sommelier* of the Hôtel de Londres. They had marched bravely up after us, with their knapsacks on their backs, and in addition to their own weight as it was and cream from the hotel, together with a saucepan, which was very useful.

When the sun had gone down we were not sorry to creep into the hut; and the guides were equally anxious to avail themselves of the shelter. We were all blocked together like the inmates of a slave-ship. There was literally no moving; where any one took up his place there he was obliged to remain. The first detachment sat on the floor, in a row, with their backs against the wall; then another party sat down directly in front of them; and so on up to the door. Having closed the windows hermetically, and put some damp wood on the stove, the guides next shut the door, and then all took to smoking; so that, before long, the atmosphere of the cabin became so intolerable, we were compelled to issue orders that the windows should be kept open, under threats of break ng the glass. Of course anything like sleep was out of the question, so we amused ourselves as well as we could, and with tolerable success, if unceasing laughter can be taken as a proof. In fact our position altogether was so strange and ultra-comical, that a very little fun, once started, went a very great way, as though the jokes themselves—poor things, possibly, had we recalled them afterwards—were rarefied by the situation, and so became rather bright.

At two in the morning Mr. Macgregor and Mr Shuldham (who had come up to the Grands Mulets with the intention of trying the entire ascent) collected their respective caravans. Keh li and Benoit also got into marching order, and to encourage them, and to show the way, Mr. Fanshawe, who appeared even now not to have had enough of scrambling, beat up some more of the guides to go part of the way with the others, up the giant snow slopes of the Mulets, and carried their attentive complimentary [illegible] away to the Grand Plateau. The moon was now up, and shining brightly on the Glacier. We went out to see the start, giving them three good cheers as they left the rocks, and then watched them for some time, as they slowly toiled in single file, each with his rope attached to the waist of the man in front of the Dôme du Goûté. This scene was very solemn and impressive, and, in itself, worth all our trouble.

We got a little sleep—very little—when the departure of the others left us more room in the hut to stretch ourselves out at full length. But the floor at length proved to get harder every minute, and, after an hour, until we were painfully conscious of every projecting process of bone; and somehow or the other, whichever way we turned our knapsacks for pillows, the buckles always came under our heads. All these little annoyances, with the general amusement of the expedition, and [illegible] on the time until day-break, when a fresh excitement was provided, in watching the glorious sunrise. I had with me a view of Mont Blanc from Glacier—Jean Carrier and François Favre!—and, by some mysterious arrangement, they turned out a capital breakfast of tea, cold fowl, bread, wine, and brandy. Tea we all cut out our names, more or less elaborately, on the timbers; for the want of occupation, and the soft pine-wood offers great temptation to amateur carvers, and the walls of the Grands Mulets will soon resemble those of Shakspeare's birth place. The guides' names form the majority; but all the tourists who have been up have left some memorial. Some of the inscriptions consist of mineralogic local *patois* "chaff;" some record impressions; one very young traveler, only thirteen years old, describes the excursion as "a stiffish pull," and there is the motto, "Addeo e sempre," surrounding a monogram cypher.

We left the rocks about seven, to return; and, a little after nine, whilst crossing the Glacier des Bossons, we heard the guns at Chamouni announcing that our late companions had reached the summit of Mont Blanc in safety; and before noon we were on the village, Captain de Bathe reaching the Pelerins a good half-hour in advance of the others, in spite of a badly-sprained ancle.

Mr. Macgregor, Mr. Shuldham, Kehrli, and Benoit returned about three in the afternoon, after a successful ascent. It remains to be added, that, amongst so large a party, and in an undertaking always more or less hazardous, not the slightest *contretemps* occurred to cloud what was altogether a very capital day and a half of interesting and amusing venture.

En route, this season at Chamouni has been very propitious. There have been several attempts to ascend Mont Blanc, but only two successful—one by Captain Salmond and Mr Wal-ham, and the other just achieved by James Ravel (the guide to Carrier) keeps the inn at Servoz, opposite the church, and her sister, Sophie, takes her place at the Pelerins; but the cascade is quite spoiled, the water has carried away the stone which caused the peculiar shape of the fall, and it is now a simple torrent. If they cannot contrive to repair the artificially, nobody will go there [illegible].

By next year [illegible] one wing will be added to the Hôtel de Londres; [illegible] Kramer is going to open a station for an omnibus [illegible] which wanted to reunite the visitors at the different [illegible] Mont Blanc and the Kehrlis have started two very good shops for the sale of woodwork, umbrellas, shoes, mackintoshes, and toilet necessaries. A very pretty Bernese Oberland costume, in lieu of their present cumbrous [illegible] costume, is not the least attraction in the village. An exhibition was forming, when I left, to seek for the bones of Jacques Balmat, who first ascended Mont Blanc, and afterwards perished on the mountain [illegible] [illegible] [illegible]

The Song of the Danube

Words by Charles Mackay. Music by C. W. Glover.

I.

No! no! they shall not have it—
The proud triumphal flood;
Although, to gain the glorious prize,
They'd dye it red with blood.
They shall not have the Danube—
Though Czar or Kaiser fight
With ten times fifty thousand men
To steal it in our sight.
They shall not have the Danube—
Nor source, nor course, nor sea;
They shall not, shall not have it—
The broad, the strong, the free!

II.

If sunk in sloth, like cowards,
We let them arm, and take;
And yield them all they choose to ask,
For Peace or Mercy's sake.
What then? will *that* suffice them?
The Danube's fair and fine,
But so are Weser and the Elbe,
And so is Father Rhine.
They shall not have the Danube—
Nor source, nor course, nor sea;
They shall not, shall not have it—
The broad, the strong, the free!

III.

We'll stop them at the threshold—
'Tis better *now* than *then*;
And show them what a strength there lies
In arms of honest men.
We'll yield them not an acre
By Danube's rolling tide;
And call both Crescent and the Cross
To aid the rightful side.
No! no! they shall not have it—
Nor source, nor course, nor sea;
They shall not have the Danube—
The broad, the strong, the free!

THE NATIONAL GALLERY.

"A WARRIOR ADORING THE INFANT JESUS"—PAINTED BY GIORGIONE.

After the usual autumnal recess, the National Gallery was re-opened to the public on Monday last. In the interval the rooms have been subject to a thorough process of scrubbing, which they much stood in need of, and the walls have been hung with a maroon-coloured flock paper, which is decidedly an improvement upon the dirty and cold surface which they presented before. Add to this, that many of the pictures have been re-arranged, some few of them washed and varnished, and five new pictures added; and sufficient novelty attaches to the opening of the season, to call for a special notice in our columns.

We commence with the new pictures (two of which we engrave): they are of various, and also of the later and inferior, schools of art. We say this, not in disparagement, but as a simple matter of fact; and, so far from objecting to the introduction of a proper amount of works of this period and class, we rather approve of it, as they will afford opportunities for comparison with the works of the higher and purer schools, which cannot but prove instructive to the careful observer.

The easel pictures of Giorgione are rare; and it is matter of dispute whether the one attributed to him, and described as "A Warrior adoring the Infant Jesus," is really by his hand: some attributing it to Giovanni Bellini, others suggesting Palma Vecchio as the probable author. The latter supposition we do not think likely; on the contrary, we are induced to consider this picture to be one of the period and school to which it is referred, and that in all probability it is by Giorgione, the fellow pupil of Titian in the school of Bellini. We are induced to this belief from a consideration of the style, which is evidently that of early Venetian art, and the vigour of the treatment in parts—more particularly in the figure of the kneeling warrior, which denotes a freedom of hand which Bellini did not display. Nevertheless, it is by no means a first-class picture, being of uneven merit both as respects the designing and colouring. The figure of the kneeling warrior, we have already remarked upon, as being full of vigour and impressive action; the face, also, is expressive of veneration and native dignity of character. But the figure of the Virgin is stiff and formal in comparison; and the ex-

"THE CASTLE OF ST. ANGELO, AT ROME."—PAINTED BY VERNET.

pression of the face, looking down with conscious pride upon the prostrate worshipper, is not in the best taste. It bespeaks more of coquetry than of maternal devotedness, centring all its attention in the Divine infant in her lap, which was the character given to the representations of the Madonna in the earlier times of art. The face and attitude of Joseph are commonplace and undignified; the page or squire who holds the horse is painted with much spirit. The colouring of the drapery of Mary is of the true Venetian kind, chiefly pure blue, and crimson; that of the warrior, also, is genuine in tone—the painting of the chain armour and head-dress very careful and admirable; but the robes of Joseph are in secondary colours which spoil the focus of the picture; and the sky is, to appearance, faded in parts. This picture was purchased out of the collection of Mr. Woodburn last year. It was originally brought by him from Italy.

Giuseppe Ribera, known as "Lo Spagnoletto," may, by right of birth, be claimed by Spanish art; though, as he went to Italy when quite a boy, and studied and practised there till the end of his life, he is generally classed with the Italian school. He is of the period when the elements of original artistic excellence were scattered through many "schools," and much perverted and wasted in the hands of practitioners who followed in the shoes of Da Vinci, Michael Angelo, and Raffaelle; at a time when the theory of imitation was fiercely supported by the school of the Carracci against the daring doings of the "Naturalisti," with Caravaggio at their head; and no one looking at this picture, however he may admire the executive power displayed in it, can fail to be struck with the entire absence in it of the higher charms of sentiment, and grace, and the conventionalism (if you will) of the ideally beautiful, which warm and dignify the canvas of Anibale Carracci, Correggio, Guido, Carlo Dolce, and others of the more poetic schools of art—not to mention other much earlier schools wherein the feeling for the purposes of art was of much higher quality than poetry itself. Spagnoletto generally delighted in the painting of horrible or painful subjects as martyrdoms, violent deaths, and the sufferings of emaciated saints. In the work before us, he has chosen a subject not in itself repulsive, and which, in the hands of a painter of a higher order, has been made sublime and impressive (as, for instance, one by Francia, in the same gallery); but he has utterly failed of carrying the thoughts of the spectator beyond the painful actualities of the scene presented—that of a dead or dying man, supported in a half-recumbent position, with two females weeping over him. The attitudes of these two figures are poor in conception, wanting the true pathetic impulse of the occasion; whilst, at the same time, that of the Magdalene, at the feet, is extravagant and ungraceful. The colouring exhibits that peculiar command of chiaroscuro for which Spagnoletto was celebrated, and which he imitated Caravaggio. The painting of the anatomy of the principal figure is careful and masterly; though, it may be observed, the position of the right hand is artificial, not to say untruthful. The white sheet upon which it rests is very abrupt and hard in its folds—forced, angular, and capricious, like the general outline of the figures, and indicating the affectation and excesses which marked the decline of art in the seventeenth century. This picture was presented to the Nation by David Barclay, Esq.

The picture by Zurbaran—an original artist in his way, though close an imitator of Caravaggio—represents one of his favourite studies, a Franciscan Monk, in an attitude of devotion. His garment is coarse and patched; his head is nearly buried in the deep hood of his coat; and in his clasped hands rests a skull—fit emblem of morality—the only theme of the anchorite's study upon earth. This is, on many accounts, a valuable addition to our National Gallery. It was purchased at the sale of the Louis Philippe collection last year.

The "Castle of St. Angelo," by Vernet, may be accepted as one of the very best specimens of that artist: the atmosphere brilliant and clear, the water pellucid and full of motion; and all the minute and incidents of a joust on the Tiber rendered with uncommon spirit. The pavilion on the balcony on the left is of the lightest blue and white; and the whole of the colours, which have preserved all their original hue, are bright and gay. This picture was presented to the Nation by Lady Bimpkinson.

The other additional pictures exhibited is a Bassano, representing "Christ driving the Money-changers from the Temple;" which has been presented to the nation by L. Hind, Esq. It is not a fine specimen of this very ordinary artist, who painted hastily, and for gain—especially towards the latter part of his career, of which period this picture probably is. Neither is historical picture, it is almost beneath notice. The figures and attitude of Christ being outrageously vulgar, and unworthy of the subject. The cattle introduced are of Bassano's usual stock; so also the figure of the woman kneeling down counting her eggs in a basket, which, like all Bassano's, has the face nearly covered under the hat-brim. The colouring is coarse and badly balanced, and has, probably, got darker and dirtier with age. This picture, though acceptable as a specimen of what the artist could do, is, we consider, very much out of place when hung in the broad light, and in one of the places of honour in the large room, to the displacement of Claude's "Il Molino," which last year adorned this spot.

Amongst other pictures of the first class displaced—and, we must add, misplaced—under the new arrangement are the two large Guidos—"Venus attired by the Graces," and "Perseus and Andromeda"—which, instead of occupying one of the walls in the middle room, have been thrust into one of the closets at the ends of the gallery, where it is impossible to see them. From what we observed upon their surface, however—particularly the "Perseus and Andromeda" we are led to apprehend that this step has been adopted with a view to hide the damage which they have suffered from recent cleaning. The pictures of Guido, who painted so rapidly to supply his daily extravagances—would allow of no tampering with the vehicle which he used with his colours, and this we fear has been done. We regret also to see, thrust into this little compartment, in a dark corner where its depth of colouring is perfectly unappreciable—that gem of Correggio's, "Christ's Agonyin the Garden." In the opposite closet is now consigned Murillo's "Holy Family." The two Turners have been removed from the great room to one of the middle rooms, where they are placed one above the other, with the two Claudes (objects of his special mention and rivalry) on either side. The Claudes still hold their own though in an inferior light; but we cannot think that the Turners gain by the change.

"THE NEST," IN CHROMOLITHOGRAPHY, AFTER A DRAWING BY HUNT. The process of cromolitography, or printing in colours, in imitation of a water colour drawing, has been very successfully illustrated in the little work before us, published by Messrs. Day and Son, Lithographers and Co., of London, and Messrs Shaw, of Nottingham. The colours employed are numerous and varied, and are laid on with great decency and propriety, as we prefer to call it, a mechanical process being hardly discernible till after close inspection.

"KEEPER, A GOOD DOG IN OLD TIMES." By Sir E. Landseer.—Mr. Thomas Boys has just published a large engraving, by W. T. Davey, of one of Landseer's noblest works, which was exhibited by him at the age of nineteen, and entitled as above. It represents a fine Newfoundland dog, sitting as guard over his master's luggage—the scene being an inn-yard, where a mail-coach has just drawn up to change horses. It is therefore appropriately named "a good dog of old times," and is interesting alike as a piece of natural portraiture, and as illustrative of an order of things now long since passed away. It is a performance of great spirit, and has been done justice to by the engraver.

THE PICTURE GALLERY OF MR. THOMAS BARING, M.P., in Grosvenor-street, with its valuable treasures of art, narrowly escaped entire destruction a few days since. It appears that a servant having entered one of the drawing-rooms for the purpose of closing the shutters, placed his candle in such a position, near one of the couches as to cause its ignition after he left the apartment. The fire was soon discovered until some time subsequently, when the room in which it originated as well as two others of the same suite had attained the heat of a furnace; the pictures on the walls had become blist-red, and almost every article of furniture had been destroyed. Fortunately, the gallery and all the drawing-rooms of the suite had been dismantled only a few days previously, and the only pictures remaining on the walls were those of modern artists. The valuable ancient Italian and Spanish pictures had been removed from the walls, and, being stacked up close together in one corner of the gallery, they have scarcely suffered any damage from the heat. The same remark will apply to the Belgian and Dutch works. The pictures which have suffered most are, happily, the works of living artists, whose services may be obtained in their restoration. Even Sir Landseer's "Travelled Monkey" is among the few modern pictures that have escaped. The collection was insured for about £30,000—scarcely a tithe of its value—chiefly in the Globe Office Mr. Baring is stated to have borne his misfortune with remarkable composure. The finest specimen in England of Murillo's "Madona on the Crescent" is in this collection

GOVERNMENT APPOINTMENTS.—R. Handyside, Esq., her Majesty's Solicitor-General for Scotland, is appointed one of the Lords Justiciary of the Outer Court, in the room of Lord Anderson, deceased. James Craufurd, Esq., Sheriff Depute of Perthshire, is appointed Solicitor-General for Scotland, in the room of Mr. Handyside. W. T. Napier Champ, Esq., is appointed Colonial Secretary for Van Diemen's Land.

LORD MAYOR'S DAY

(Continued from page 406.)

THE BANQUET AT THE GUILDHALL.

The usual annual banquet took place on Wednesday evening in the Guildhall, which was fitted up with much taste and brilliancy for the occasion. The reception-rooms were decorated with groups of statuary, paintings, transparencies, and emblematical devices, and the banqueting-hall illuminated with star and jets of gas running round the roof, and depending in graceful scrolls along each side of the hall. Over the Lord Mayor's seat was a large plume of ostrich features, the Prince of Wales's crest in spun glass; and flags, banners, and military trophies were displayed on either side. The guests began to arrive shortly after five o'clock—the Earl of Aberdeen and Lord J. Russell being loudly cheered on their names being announced—and were received by the Lord Mayor and Lady Mayoress in the drawing-room. Shortly before seven the distinguished company proceeded to the banqueting-hall, preceded by the State trumpeters, the mace and sword bearers, and other City functionaries.

The Lord Mayor presided; and on his right hand were seated the late Lord Mayor, the Earl of Aberdeen, the Lord Chancellor, the Earl of Clarendon, Lord John Russell, Viscount Canning, Alderman and Sheriff Wire, Viscount Palmerston, Sir James Graham, Sir Charles Wood, Sir W. Molesworth, the American Minister, the Minister of Paraguay, the Danish Chargé d'Affaires, the Right Hon. W. Cardwell, M.P.; Lord Hatherton, Sir John Patteson, Sir John Dodson, Right Hon. M. T. Baines, M.P.; Sir John Pakington, M.P.; Mr. Justice Erle, Sir John Jervis, and nearly all the aldermen and leading members of the Corporation.

A military band, stationed in the gallery, a party of vocalists, and the Irish harpist with the celebrated Thorns, delighted the company with their performance during the intervals of the speeches. The quantity of turtle, and other good things provided, appeared, from the programme, to be enormous

After grace had been sung by the vocalists,

The Lord Mayor gave in succession "The Health of the Queen," and "The Health of his Royal Highness Prince Albert, and the rest of the Royal Family.

The Lord Mayor next gave "The Army and Navy."

Sir J. Graham, in returning thanks for the navy, said, he could only give that distinguished company the assurance—little but true—that, whether in peace or war, the British navy would be found ready to do its duty. If, unhappily, the occasion should arise, and that any insult should be offered to the British flag, he had no doubt that the navy would take care that the name of this country should be untarnished. He was satisfied that it would be always prepared to maintain the faith of existing treaties, and to protect the commerce of this country; and he was sure the approbation of that distinguished company would be received by the officers and men of the British navy as the greatest stimulant to the proper and efficient discharge of their duty.

Major-General Sir John Wilson returned thanks on behalf of the army.

The Lord Mayor said, from the days of Whittington downwards they had been always accustomed to give "Prosperity to the Trade and City of London" (Loud cheers). He had the satisfaction of knowing that the trade of the city of London was prospering and progressing; and he hoped they might long continue to boast of having the largest trade in the world (Loud cheering).

The Lord Mayor proposed, in highly complimentary terms, the health of his predecessor in the civic chair.

Mr. Alderman Challis having returned thanks,

The Lord Mayor next proposed "The Health of the Foreign Ministers" (Cheers), coupling with the toast the name of the American Minister.

Mr. Buchanan responded to the toast.

The Lord Mayor then proposed "The Health of the Lord Chancellor," who briefly returned thanks) said, they were on that occasion honoured with the presence of many of her Majesty's Ministers (Cheers), and among them the head of a Government which, it was well known, had exerted itself to the utmost to preserve the peace of the world (Loud cheers). The most unwearied endeavours had been made by the Cabinet to maintain the peace of Europe, and of the world at large, and he felt much pleasure in proposing "The Health of the Earl of Aberdeen and her Majesty's Ministers" (The toast was received with loud cheering).

The Earl of Aberdeen, in response, said—My Lord Mayor, my Lord, I am much gratified by this expression of your kindness which, I assure you, has excited itself to the utmost to preserve the peace of the world (Loud cheers). The most unwearied endeavours had been made by the Cabinet to maintain the peace of Europe, and of the world at large, and I felt much pleasure in proposing "The Health of the Earl of Aberdeen and her Majesty's Ministers" (The toast was received with loud cheering).

The Earl of Aberdeen, in response, said—My Lord Mayor, my Lord, I am much gratified by this expression of your kindness which, I assure you, has excited itself to the utmost to preserve the peace of the world (Loud cheers). The most unwearied endeavours had been made by the Cabinet to maintain the peace of Europe, and of the world at large, and I felt much pleasure in proposing "The Health of the Earl of Aberdeen and her Majesty's Ministers" (The toast was received with loud cheering).

The Earl of Aberdeen, in response, said—My Lord Mayor, my Lord: I am glad: My Lord Mayor, I have to return you my sincere thanks for the very flattering manner in which you have proposed, and in which the company have received, the health of my colleagues and myself. Perhaps it is not too much to hope that, with regard to persons in our situation, a favourable construction at least may be placed upon our motives and intentions in the discharge of our duty (Cheers). We are but the servants of the Crown; and happily, in these days, such service is not incompatible with the most sincere desire to promote the welfare, the happiness, and the prosperity of the people (Cheers). Notwithstanding the prosperous condition of this country in all its great interests, and the wonderful advances that have been made in every department of art, science, and industry, I am quite aware that much remains to be done in the success of which may be promoted by her Majesty's Ministers. Much improvement—much reform—in the condition of the people, whether social, moral, or political, is demanded. I know my Lord Mayor, that much is expected from us by the country, and I hope we shall be found ready and willing to answer to the call (Hear). In a country such as this, and in an age of civilisation like that in which we live, these are the real triumphs—these are the glories—to which any Government ought to aspire (Cheers). I trust that nothing will happen to impede or to check the progress of those improvements, and of that reform which I so ardently desire to see effected (Hear, hear). They can only be successfully carried out by the continuance of that tranquility which we have so long enjoyed (Loud Cheers), and in the absence of all disturbing causes, whether foreign or domesti (Renewed cheers). My Lord Mayor, some time ago, when I last had the honour of being the guest of your predecessor in office, I made a declaration, perhaps in the hearing of some now present, that the policy of her Majesty's Government was a policy of peace (Hear, and cheers). I desire, on this occasion, to repeat that declaration (Renewed cheering). I will go further, and I will say that no other principle of policy will ever be announced by me (Cheers). But, emphatic as these words may be, they are not to be understood as signifying the impossibility of war. On the contrary, we know full well that this cannot be the case; but they signify that, so far as I am concerned, war will never be undertaken by me except when just, and never but when demanded—plainly demanded by a due sense of the honour and the interests of this country (Hear, and cheers). This I believe to be the duty of English Ministers. I am certain it is the duty of a Christian man (Cheers).

The noble Earl immediately rose again, and proposed "The Health of the Lord Mayor;" who acknowledged the compliment, and gave "The Earl of Clarendon and the House of Peers."

The Earl of Clarendon returned thanks for the House of Lords. He believed that the House of Lords maintained its high position from the deference it showed to public opinion, and from its readiness to receive impulses from without on all questions affecting the general, as compared with what might be called the class interests of the country (Cheers).

The Lord Mayor then gave "The House of Commons," coupling with it the name of Lord John Russell (Cheers). They were all aware of his great integrity of purpose, and the manner in which he had advocated every measure of reform and improvement.

Lord John Russell, who was loudly cheered, said—Whatever views the House of Commons might at first take of a question, they might rest assured that in the end they would adopt those views which were most conducive to the public welfare, and he submitted this to the habit of free discussion which prevailed in that popular assembly (Hear). The Lord Mayor had alluded to the inquiry then going on into the constitution of the City, and he must say that, as the representative of the City of London, he was proud to find that when the inquiry was first proposed, instead of shrinking from it, the Corporation openly and manfully courted inquiry (Hear). He felt sure that they would in the same spirit contribute to carry on a full and complete prosecution of that inquiry; and if abuses were to be corrected, and if reforms were to be made, they would cheerfully carry them out on the principle on which the Corporation was founded a principle which belonged to an early period of their history, but which was still vigorous at the present time—the free election by the citizens of their chief magistrate, and the government of their own affairs (Applause).

Viscount Palmerston proposed "The Health of the Lady Mayoress and the Ladies."

The toast was drunk with much enthusiasm, and shortly after most of the ladies present left the hall and retired to the refreshment-rooms.

The Lord Mayor next proposed, and gave "The Chief Justice of the Court of Queen's Bench and the Judges."

Lord Campbell, in acknowledging the toast, said, that some persons had talked as if the result of the present commission of inquiry into the Corporation of London would be the abolition of that Corporation. He hoped, however, that no such result would ensue, but that, in the reign of Albert the Tenth, the monarch would be invited to receive the loyal hospitalities of the city of London (Cheers and laughter). If the Corporation were to be removed at one fell swoop, he thought a greater sensation would be created among the Courts of Europe than would be caused by any other political event (a laugh); for when they heard that the office of Lord Mayor was abolished, they would believe that a revolution had indeed commenced (Cheers and laughter). He would remind his noble friend (Lord J. Russell) that when the general measure of Corporation Reform was proposed, he (Lord Campbell) wished to include the Corporation of London; for he believed that to reform whatever abuses existed would be true Conservatism (Hear, and cheers). Such reform ought, however, to be cautious, safe, and gradual. He had been glad to learn that before the Commission of Inquiry was appointed, the Corporation had themselves offered every facility for the investigation (Cheers)—and he trusted the result would be, not to destroy the Corporation, but to place it upon a more firm and satisfactory basis (Cheers).

The Lord Mayor gave the health of

Mr. Alderman and Sheriff Wire, who, in returning thanks, expressed his determination, while upholding the privileges of the City of which he could, to advocate whatever reforms were requisite, and in conformity with the spirit of the age (Cheers).

Several other toasts were proposed, and the company then retired to the drawing-rooms, where coffee and other refreshments were provided.

THE NEW LORD MAYOR.—On Wednesday the Recorder introduced the new Lord Mayor to the Barons of the Court of Exchequer at Westminster, by stating that Mr. Sidney, after having been for some years engaged in commercial pursuits, and having obtained the esteem, regard, and respect of all with whom he had had transactions, and having realised a fortune with the happy fruits of successful undertakings, was willing to devote his services for the benefit of his fellow-citizens; and, accordingly, in the year 1849, that gentleman had been elected as one of the Common-Council-men for his own ward. He was next elected an Alderman—and, then, of course, became a magistrate; in which capa city he had distinguished himself by the observance of great patience, and the exercise of great integrity, and of large knowledge, and had dispensed due justice. Some short time after this, Mr. Alderman Sidney had been elected Sheriff, in which position he had fully maintained the dignity of the office; and in the year 1851 he had had the honour of being selected by the inhabitants of his native town, Stafford, to represent them in Parliament. Here, again, Mr. Alderman Sidney had let the most valuable and efficient officer and although he did not, in the present Parliament, hold a seat, yet he had been brought forward at the last election as a candidate by his friends, and had received no fewer than 1666 votes. After such a distinction it was no matter for wonder, then, that he should have been selected by the eminent men in the city of London to fill the proud and high office of their chief magistrate. It would be unbecoming in him to pronounce the eulogy of the Lord Mayor during the term of his mayoralty; but this much he might venture to say, that, looking to the antecedents of that gentleman, he had given abundant promise for the due performance of the duties of the office to which he had been appointed, as well as for possessing a spirit for carrying out all the honours, the hospitalities, and the privileges of his office. The Lord Chief Baron then congratulated the Lord Mayor upon his having attained the high office he had been elected to by his fellow-citizens. He desired to bear his testimony to what had been given by the learned Recorder of the successful manner in which the new Lord Mayor had fulfilled the many public offices to which he had been appointed; and he could himself bear strong testimony to the zeal, assiduity, talent, and perseverance that right hon. gentleman had brought to bear upon an inquiry, in which he had himself been engaged, in reference to the application of certain funds to the assistance of poor prisoners. Therefore, he could entertain no doubt that the Lord Mayor would bring to his office great talent, and support the position with liberality, justice, and hospitality. (Of Mr. Alderman Sidney a Portrait and Memoir appeared in the ILLUSTRATED LONDON NEWS No. 507.

IRELAND.

DEPUTATION TO THE LORD-LIEUTENANT.—On Monday a deputation of gentlemen from the county of Tipperary recently held at the Castle, waited upon the Lord-Lieutenant at the Viceregal Lodge, for the purpose of presenting an address, in which the decision of Mr. O'Callaghan, a police magistrate, in the case of Martin v. Ryan, the "approver" and "contributor," was denounced in the strongest and most unqualified language. In his reply, the Lord-Lieutenant rebuked the framers of the address in the strongest language—and justly—for their want of confidence in that with Christian charity." at the same time telling the deputation that if the charge against Mr. O'Callaghan were well-founded, the Court of Queen's Bench was the proper tribunal to deal with it.

THE SEE OF DERRY.—The Rev. Dr. Henry Griffin, ex fellow of Trinity College, Dublin, has been appointed to the bishopric of Derry.

THE SEATS FOR CLONMEL.—The death of Mr. Cecil Lawless has caused a vacancy for the borough; and the papers give a list of candidates—the Dublin Evening Post's Journal, as usual, putting up as a "Brigade" candidate, Mr. John Reynolds is mentioned on the same side; and a more "moderate" candidate is likely to start in the person of Mr. Pierce Meagher, Q.C., a respectable member of the Irish bar. Mr. Bagwell, of Marfield, is also to come forward, it is said, as a Conservative candidate.

PUBLIC DINNER TO MR. PETO, M.P.—On the 28th ult., this gentleman was entertained by the Inhabitants and Town-council of Leiston, at the Assembly Rooms, in testimony of their high esteem of the benefits Mr. Peto is conferring upon the town and neighbourhood by his liberal and spirited extension of Leiston Abbey and other local works and improvements. The large hall was splendidly decorated for the occasion. The Mayor presided Mr. Peto's health was drunk with great enthusiasm; and that gentleman, in returning thanks, warmly expressed his appreciation of Suffolk hospitality, adding: "Gentlemen—If ought I can do can contribute to your advancement, the welfare of your families, the well-being of your town, the health of your district, or the good of your friends or neighbours, you may command me" (Loud cheers). The health of the Mayor and other toasts followed, and the entertainment gave universal satisfaction.

HOW TO STOP A RAILWAY TRAIN.—This great end was the object of experiments on the East Lancashire line on Monday—Newall's Railway Break being the instrument tried. The result was satisfactory. Two trains at equal speed (40 miles an hour) were tried: the one was brought to a stand by a single person with the new apparatus in 138 yards: while the other, with the old break, ran 800 yards before it was stopped by the exertions of two persons. The scientific and practical men present expressed themselves highly gratified with the results The new break has one important feature: it can throw the whole weight of consumption of fuel on every carriage and every wheel of the train at once. We have now an instrument by which we can bring a train to a state of rest, at the entrance of a station, from a speed of 40 or 50 miles, in 50 yards, or in little more than one-third of the space that would be required by the ordinary means. A train with the new apparatus has been on this line from the 18th September, travelling 6874 miles, and making 1856 stoppages, without the machinery requiring repair; the wheels of the carriages in the time were little worn. The power of the breaks has been known, on level line, to bring the train to a stand, in spite of the certain power of the engine, with full steam on, in 400 yards. The stage observed is, that the new apparatus gives perfect communication between guard and driver, and the break need only be applied in a modified degree to attract the notice of either

SAILING OF THE "MARCO POLO."—This celebrated clipper-ship sailed from the Mersey on Wednesday, for Melbourne, with a very large number of emigrants on board. She is commanded by Captain M'Donnell, who was chief officer during her celebrated voyages

PANAMA RAILROAD.—The first accident since the opening of the Panama railroad occurred on the 1st ult, when a train of 600 passengers was thrown off a bridge, at Caborello into a ravine of sixteen feet deep, by running over an ox. Four men were killed and many severely wounded.

HIS GRACE the Archbishop of Canterbury has been pleased to confer upon James Pech, Esq. (pianist and composer to the Countess of Darnley) the degree of Doctor in Music.

THE MURDER AT BURNHAM.—The jury in this atrocious case (of which we gave an account last week), after adjourning from Friday till Tuesday last, have returned a verdict of "Wilful Murder" against Moses Haddo, the groom and he has been committed to Aylesbury Gaol to await his trial at the next assizes. Some strong circumstantial evidence was adduced during the inquiry. The prisoner showed no symptoms of feeling in any way.

THE YELLOW FEVER IN BERMUDA.—A private letter, dated St. George's, Bermuda, 10th October, gives the following list of officers who have died since the last published account: -Captain Wedderburne, R.A.; Lieut. Hon Agar Ellis, R.A.; Lieutenant Greatorex, R.E.; Lieutenant Sykes, 56th Regiment; Mr. Thompson, band-master, 56th; and Mr. Whitmore, 56th. Among those who have been attacked and are recovered are Lieutenant Twiss, R.A.; Major Oakley, 56th; Lieutenant Whitmore, R.E.; and Mr. Clutterbuck, Adjutant, 56th. The 56th Regiment were encamped at Ferry, three miles from St. George's; but they did not remove until they had lost over 160 men and five officers. Of the Sappers only about ten men are left; and the Artillery have suffered fearfully. More than sixty children of soldiers, all fatherless or motherless, and many, who have lost both parents, are waiting passage to England. This is in addition to a number distributed among the inhabitants of Bermuda. The deaths on board the *Thames* hulk were eight officers and 64 convicts. Up to the 8th of October the total number of deaths at St. George[illegible] of the [illegible] [illegible] [illegible]

CALENDAR FOR THE WEEK.

SUNDAY, November 13.—25th Sunday after Trinity.
MONDAY, 14.—Source of the Nile discovered, 1770.
TUESDAY, 15.—Westminster Bridge completed, 1750.
WEDNESDAY, 16.—Trial of Sir Walter Raleigh, 1504.
THURSDAY, 17.—Lotteries abolished, 1826.
FRIDAY, 18.—Cardinal Wolsey died, 1530.
SATURDAY, 19.—Hogg, the Ettrick Shepherd, died, 1816.

THE WAR ON THE DANUBE,

BETWEEN

THE TURKS AND THE RUSSIANS.

We have despatched another Artist direct to the Seat of War; from whom we expect immediately to receive Sketches of every incident of interest in this important contest. The series of Military and other Sketches will appear regularly in the ILLUSTRATED LONDON NEWS, as they are received from our Artist.

November 12, 1853.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 12, 1853

In this free country, where publicity is the life-blood of our social and political system, it sometimes happens that as much publicity is not given on matters of foreign interest as is given in other countries not so free as our own. When Parliament is not sitting, the Ministers of the Crown lack the opportunity of making known their sentiments to the nation. It is not the custom to publish diplomatic notes, except at the demand of the Lords or Commons; and, from August to February, the foreign politics of the country are judged rather by the positive acts than by the spoken or written opinions of the Minister. But in England it is the habit of men in office to maintain some kind of personal or social intercourse with the people, either by attending public meetings or municipal festivities. It was naturally expected that one at least of the many Cabinet Ministers who honoured the Lord Mayor's Banquet with their presence on the Ninth of November, would take the opportunity of saying a few words on the all-engrossing subject of the Eastern Question. Nor was the expectation disappointed; and although it could not have been anticipated that any positive information would have been given, enough was said by the Earl of Aberdeen and Sir James Graham, the only two Ministers who alluded to the Russian aggression upon Turkey—to show the spirit that animates the British Cabinet. The sentiments avowed by the Earl of Aberdeen will find an echo throughout the country. They are the sentiments of the whole people. Great Britain desires peace, because war is one of the greatest evils that can afflict humanity; because it retards civilisation, and because it is the parent of other wars that may desolate the world for ages to come. But so great a blessing as peace is not to be purchased at the price of honour. Such a peace is neither dignified nor safe; and we take the guarded yet emphatic expressions of Lord Aberdeen to signify that Great Britain is prepared for war if peace cannot be maintained without the spoliation of Turkey, or the disturbance of the ancient territorial limits of the kingdoms and empires of Europe. The speech of Sir James Graham is to the same effect; and his short but pithy description of the duties of the British navy in peace and in war, and under general as well as peculiar circumstances, will meet with a ready response throughout the nation. Efforts have been made by the friends of Russia to throw doubt on the intentions of the British Cabinet. But the little which the Ministers have as yet permitted themselves to say, is sufficiently indicative of the fact that they have never wavered in their determination to support Turkey by all the material as well as by all the moral aid which may be necessary to secure her independence, and, "in concert with the allies of this country, to uphold the observance of treaties as the best security for peace."

THERE seems little or no prospect of a speedy termination of the hostilities that Labour is waging against Capital in the manufacturing districts. Although the working classes are already beginning to feel severely that, in such conflicts, they are, and must necessarily be, greater sufferers than their employers; and although, as the days shorten and the cold increases, and the scanty pittance doled out to them by the Trades-unions grows weekly more scanty, there is no evidence of a disposition on their part to forego their unreasonable demands, and return to their avocations. The working classes, as a body, are by no means unintelligent; and though it is distressing that they should go so far wrong on a question of social economy which is as clear as the sun at noonday to every person conversant with science, it is no more surprising that operatives should imagine that the wages of labour should rise with the price of food, than that lords and gentlemen should have once imagined that England would be ruined unless corn could be artificially maintained at a price ranging at or above 54s. a quarter. One of the errors has been finally exploded, and sooner or later the other will follow it to the limbo of all the absurdities. In the meantime, that portion of the working-classes which is now out on strike, is paying a heavy penalty for its ignorance and obstinacy; and is, besides, inflicting much hardship upon innocent women and children, as well as running the risk of doing irreparable injury to the trades and manufactures of many once flourishing districts. It is probable that if masters and men could but meet together and talk the matter over in an amicable spirit no difference would, ere many days, be arranged to the mutual satisfaction. If masters could prove by plain facts and figures, as many of them can, that they would carry on their business at a loss if they agreed to give their workmen an advance of ten per cent upon their wages, the common sense and the love of fair play which are characteristic of English artisans would induce them to give up the contested point and resume their labour. If, on the other hand, working men could show that, irrespective of the price of food and the necessaries of life, their labour was worth four, or five, or ten per cent more in the labour-market than the manufacturers have hitherto been paying for it, the manufacturer, on his part, would listen to reason, and make the best terms he could with the men, in default of whose labour it would be impossible for him to carry on his business. Unfortunately, both for masters and for men, they are not allowed to confer amicably together; and many thousands of working men, already tired of the dispute, and pained with the privations which it entails, would long ago have returned to their work at the old rate of wages, if they had not been prevented from doing so by the extraneous interference of persons having no legal or natural call to meddle in the dispute. A manufacturer might have no objection to detail the exact state of his affairs to his own workpeople; but he will not condescend to parley with interlopers, such as delegates and executive committees holding their sittings in distant towns, or perhaps in the metropolis. It is these self-constituted bodies that organise and perpetuate strikes, and that prevent the disputes which from time may be expected to arise between the employers and the employed from receiving easy and natural adjustment. A dispute or a strike, in which the services of the paid secretaries and agents of these unions, associations, and committees must be called into requisition, seems to be a necessary condition of their existence. The more extensive the strike, the greater their power and importance; the more protracted the mischief, the more frequent the opportunities for the exercise of their authority and jurisdiction. No doubt the working classes have a perfect right to form themselves into societies or unions for the object of keeping up or increasing the wages of labour; but unless the delegates or other officials whom they employ to carry out this design be not only prudent and temperate, but well-informed and wise, they injure the cause which it is expected they should serve, and create dissension and ill-blood where amity and kindly feeling are the first of requisites. We believe that if all these self-constituted societies were to cease their interference to-morrow, the strikes would cease also;—that masters and men would make mutual sacrifices for the sake of peace, and that an equitable adjustment would not be delayed for three days longer. We are afraid that such a result is not probable, and that the working classes will yet suffer many hardships in their own persons, and in those of their families, before they discover that the old rate of wages is better than the diminishing dole which is wrung for their support out of the hard earnings of their fellow-workmen not yet on strike. But sooner or later the unequal contest must come to a close. The manufacturer may look with melancholy at his silent mill, and reflect with heavy heart at the weekly losses which the strike occasions him; but he can, nevertheless, go home to his dinner and indulge in his reflections at his fireside. But the working man is pinched by a harder extremity: a hungry belly is a bad companion, and a starving and shivering family are arguments against which no man can long contend. To this extremity the working classes are rapidly reducing themselves; and, when it has come to this, of what further use will be their delegates and committee-men? We earnestly hope that this will be the worst of it, and that the strikes will not have had the effect of driving away the trade from many towns, and of permanently diminishing the rate of wages. Such things have happened before, and, if the strikes be much longer protracted, they are likely to happen again.

It appears that we have not done full justice to Lord Eglinton and the Scottish agitators. Their grievances amount to more than the five we stated, and are not by any means so entirely heraldic as the hard-hearted English have been led to suppose. At the Edinburgh meeting held last week, Lord Eglinton and other speakers explained more fully what was meant by the phrase of "Justice for Scotland." Although we do not find, with the exception of Lord Eglinton himself, that any Scotch nobleman of wealth or influence has joined the cause; although we see in the list of its supporters, no great Scottish manufacturers or employers of labour; no literary celebrities, except Sir Archibald Alison, who may be considered as the last Protectionist left in that part of the country; and although the Scottish members have cautiously refrained from given any countenance or support to the movement, yet it must not be supposed that the cry of justice for Scotland, would not be heard with attention in England, if the agitators had in reality any case on which to rely. With all due respect for Scotland and Scotchmen, we must confess that a more unsubstantial and visionary catalogue of wrongs was never put before the world by any body of men who claim to be in earnest. In addition to the injuries said to be inflicted both upon the pride and upon the purse of the nation by the "English" Government, in consequence of the five insults and omissions which were specified in this journal on the 29th ultimo, Lord Eglinton, as the spokesman of the Association for the Vindication of Scottish Rights, has cited several others which, in his opinion, are still more galling and unjust. Scotland not only claims her own Lion and Unicorn, but desires a national mint for the perpetuation of these devices upon the coin of the realm. She requires a larger portion of the public money to be spent on Scottish ruins, and on Scottish policemen, than has hitherto been employed for those purposes. It is wrong, in the opinion of the agitators, that no more than a £5 note has been expended upon the Royal Palace of Linlithgow, while no one knows how much has been expended upon Hampton Court; and they think it a national insult to a sensitive and high-minded people, that, while Windsor Park is lovingly maintained at the general expense, the grounds of "Holyrood Palace" still bear but a market gardener. But a greater grievance is behind. In the first case, while Scotland contributes £6,000,000 per annum to the national exchequer, only £400,000 of that sum is devoted to keeping up the mansion of the Tweed. But the gravest grievance which do not bear quite so much of a pecuniary nature. There are no docks and harbours of refuge on the east coast of Scotland; and the Russians might swoop down from the Baltic, and sack Edinburgh and Glasgow, before any efficient means could be adopted to repel and punish the invader. When we add, that the Lord Advocate, who manages Scottish business in London, is not held to be an officer of sufficient respectability or dignity for the purpose, and that a Secretary of State for Scotland is needed to satisfy the leaders of the agitation; and that the notable fact is discovered that Scotland is not fairly nor fully represented in Parliament, and ought to have seventy-eight members instead of fifty-three, we have exhausted the catalogue of insults and injuries. We think Scotchmen themselves would laugh if the Welsh or the Manxmen resolved to agitate on similar pretences. As much might be said for the goat and the leek as for the unicorn and the thistle, and Wales is surely as much entitled to a mint as Scotland is. And, not only Wales, but Lancashire or Kent might put forward a plea as good—or as bad—as the one urged in behalf of Scotland for a greater share in the expenditure of public money. The parish of St. Pancras contributes a large annual sum to the national Exchequer, not one farthing of which is expended in St. Pancras for Pancrasian purposes, and Lancashire and Yorkshire together contribute even more than Scotland, without thinking themselves aggrieved that the money is expended on national, and not on local, objects. If it be a fact that the east coast of Scotland is not properly defended, the Scottish members and the Scottish newspapers have but to make it known in a proper manner, and a remedy will be applied in due time. But why all the hubbub of a popular, if not seditious, agitation should be raised on such a question, is difficult to imagine. The Lord Advocate may, or may not, be an inefficient officer for the discharge of Scottish duties; but as the Secretary of State for England, is also Secretary of State for Scotland, and as he is fully competent to the task of managing what is called the Home Department of both countries, there can be no reason for establishing any further division of government between England and Scotland, although there may be many reasons for abolishing the political functions at present exercised by the Lord Advocate. The question of the Parliamentary representation of Scotland might well have been left in abeyance until February next, when Lord John Russell will introduce his new Reform Bill. Yet, it might have struck even the Scottish agitators, that if the representation is to be based upon numbers alone, London has a far greater claim for additional members than Scotland can have. If Scotland, with 3,000,000 of people, sends fifty-three members to Parliament, the metropolitan districts, with their 2,250 000 inhabitants, ought at least to send forty. But the fact is, the grievances of Scotland are no grievances at all, and Lord Eglinton's agitation is a mistake. There may be oversights on the part of the Government as regards Scotland, as there may be with regard to Wales or the Isle of Wight. But such oversights can be repaired without appeals to the spirit of nationality, or attempted revivals of animosities and hostilities that went to sleep more than a century ago.

THE COURT.

The departure of the King of the Belgians, on his return to the Continent on Saturday last, occasioned a lull in the hospitalities of the more early part of this week. One brother of his Royal Highness the Prince of Wales, on Wednesday, and the coincidence left of the private dramatic representations at the Castle on the following day, have since led to their revival, and it is understood that a succession of Royal entertainments will be given during the sojourn of the Court at Windsor.

The Duke and Duchess de Brabant, who had accompanied the King of the Belgians and their youthful relatives, the Comte de Flandres and the Princess Charlotte of Belgium, to Ostend on Sunday, returned to Windsor Castle on Tuesday, and remain on a visit to her Majesty and the Prince Consort.

On Wednesday, being the birthday of the Prince of Wales, the Duchess of Kent arrived at the Castle at an early hour, and breakfasted with her Majesty. At ten o'clock the troops forming the garrison at Windsor paraded in the Home park. The Queen, accompanied by Prince Albert, the Duke and Duchess de Brabant, the Prince of Wales, Prince Alfred, the Princess Royal, and the younger branches of the Royal family, took up a position immediately under the East Terrace, when the Rifle prevented arms, fired a *feu de joie*, and gave three cheers for the Prince of Wales. The troops then marched past in slow and quick time, wheeled into line, and again presenting arms, returned to their barracks. In the afternoon of the same day, Captain Inglefield, R.N., had an audience of the Queen and Prince, and submitted for inspection his drawings connected with the Arctic Expedition. Mr. R. Townsend, R.A. also the honour of submitting a plaster cast of an equestrian statuette of her Majesty.

On Thursday the first dramatic representation ("Henry V.") of the season took place at the Castle. Her Majesty entered the Rubens-room at eight o'clock, accompanied by an illustrious circle, most of whom had had the honour of dining with her Majesty.

Lord Waterpark has succeeded Lord Camoys as Lord in Waiting to her Majesty. Lieut.-General Sir Frederick Stovin has been succeeded by Lieut.-Colonel the Hon. A. Hood, as Groom in Waiting to the Queen.

THE BELGIAN ROYAL FAMILY.

HIS Majesty the King of the Belgians, accompanied by the younger members of his family, and attended by some suite, left Windsor Castle on Saturday last, at two o'clock, for the Bricklayers' Arms station of the South-Eastern Railway, on his return to the Continent. The King had intended to cross the Channel the same evening; but, in consequence of the boisterous state of the weather, the Royal embarkation did not take place until noon the following day. The Duke and Duchess de Brabant accompanied their illustrious relatives to Ostend, and remained at Portsmouth on Monday, made an inspection of the dock and naval arsenal at that place, subsequently visiting Osborne, and arriving at Windsor Castle on Tuesday evening.

His Excellency the Ambassador of France and the Countess Walewski, and M. Jules de Sanx, returned on Tuesday from Broadlands, where they had been enjoying the hospitality of Viscount and Viscountess Palmerston.

The Duchess d'Alba, sister of the Empress of the French, has been delivered of a daughter, to whom her godfather and uncle, the Emperor, has given the name of Louise.

The Duke of Norfolk has accepted the office of President of the Surrey Archæological Society. The Earl of Ellesmere, the Bishop of Winchester, and Mr. Frederick Hill, M.P., have become vice-presidents. The inaugural meeting will take place in Southwark, in January next.

MONUMENT TO SIR ISAAC NEWTON.—"Two hundred years have all but passed away since the genius of Newton sought its proper nurture in Grantham School;" and the recurrence of the centenary period has very properly been taken advantage of by the Mayor and Town Council of Grantham to propose the erection of a Statue of the Great Philosopher, in an open space left unoccupied at the south entrance of the Borough. The Royal Society have expressed their warm sympathy in this national memorial of their illustrious President, and the Society" on list already includes many distinguished members of the Society. It is hoped that all classes will combine in this noble object; and we are happy to perceive that, should the funds permit, it is proposed not only to erect the Monument, but to found a Newtonian College for Mathematics and Natural Science in connexion therewith. In the Committee of the Royal Society, Sir Benjamin Brodie and the Rev. Robert Willis have been appointed to act with the Committee of Newton.

Mr. Dargan has contributed £100 towards the relief of the sufferers by the late flood in Mallow.

POSTSCRIPT.

HOSTILITIES IN WALLACHIA AND IN ASIA.

The following telegraphic despatch has been received, dated Vienna, Wednesday, Nov 9:—"Accounts from Bucharest report a battle, and 14 superior Russian officers killed. The Turks remained masters of the field, and the Russians were retreating on Bucharest."

Another despatch gives additional details of the position of the belligerent forces previous to the battle. Large bodies of Turkish troops were concentrated around Widdin. A bridge and *tête-de-pont* had been constructed at Kalafat, which served as the basis of the operations of the Turkish army. The Russian corps of Dannenberg opposed to the Turks at this point numbered from 30,000 to 40,000 men, and were spread *en échelon* between Krajova and Slatina.

The following telegraphic despatch has been received from Constantinople, dated Oct. 31:—

Another million of paper money has been issued. Namik Pacha has left for Paris. Tehirchan is disturbed. In Asia, Selim Pacha has crossed the Russian frontier. A conflict has taken place near Batoum which has caused much sensation. The Porte has resolved that Asiatic refugees shall not be employed in the army operations in Europe. Movements and levies of troops continue. The city is tranquil. Great dearness prevails.

The Turkish Embassy in Vienna have received an account of a conflict near Batoum, on the 26th; in all, 4,000 men were on the field. After fighting, the belligerents returned to their former respective positions.

The passage of the Turks at Widdin, as also the occupation of Kalafat, was only a diversion. The principal body of the Turkish army crossed the Danube at Oltenitza, between Silistria and Rustchuk; and, after a desperate action, which lasted four hours, the Turks remained masters of the position.

Giurgevo is a place of vast importance to the Russians. The passage of the river at Kalafat is an affair of inferior importance, as there is no strong position in Lesser Wallachia; but if Giurgevo should fall into the hands of the Turks they would have the key to Greater Wallachia.

It is announced that a number of young Wallachians have fled into the Carpathian Mountains, rather than take arms against the Turks, at the command of Prince Gortschakoff. Omer Pacha had supplied them with arms and ammunition; and their numbers are increasing daily.

A letter from Galatz of the 25th ult. states that fears are entertained there of the approach of the Turks, as there is no Russian garrison in the town. There are 12,000 of the Russian troops in hospital through the Principalities.

Accounts from Constantinople of the 27th October state that a courier had arrived at Constantinople, from Omer Pacha's head-quarters at Schumla, with the news that hostilities had commenced before the counter-order of the Porte had reached the General. The only thing that had occurred was an engagement with the Russian outposts, in which some men had been killed and made prisoners on both sides. A body of Cossacks, some hundred men strong, had advanced on the bank of the Danube, and appeared to threaten the Egyptians encamped on the opposite bank. The latter consequently seized upon some boats which were within their reach, and rowed across the Danube. The Cossacks, who were waiting for them, were not able to prevent them from disembarking, and an engagement took place.

RUSSIA.

An Imperial Russian Manifesto, bearing date the 21st ult., and of an unmistakeably warlike tendency, appears in the *Journal of St. Petersburg*. It concludes with the following words: "Russia is goaded on to war; nothing remains for her but to have recourse to arms, to compel the Ottoman Empire to respect treaties, to obtain reparation for the insults with which the latter has replied to our most moderate demands—to our legitimate solicitude for the maintenance of the orthodox faith in the East."

A Stockholm journal announces the arrival of a Russian squadron at Helsingfors, a seaport in Finland.

Accounts from St Petersburg of the 26th state that considerable reinforcements had been sent to Bessarabia and Volhynia, where the 3rd and 4th *corps d'armée* are stationed. The army of the Caucasus was also to be largely reinforced.

The Czar has informed the Vladika, of his wish to have the support of the Montenegrins. The war against the Turks, he said, was a sacred and patriotic war, and it was the duty of the Montenegrins to take part in it.

FRANCE.

A Council of Ministers was held on Wednesday at Saint Cloud, at which the Emperor presided. It is rumoured that the discussion was exclusively on the affairs of the East, and that it is proposed to send 25,000 French troops to Constantinople. Diplomacy is still at work to try to put a stop to bloodshed, but it is thought that no satisfactory result would be obtained until a pitched battle be fought which shall decide the campaign. The condition is, however, that the Russians shall not be the vanquished, as a serious reverse on their side would, in all probability, only incite the Emperor Nicholas to greater efforts and indefinitely prolong the campaign.

The telegraphic despatch announcing an obstinate engagement between the Russians and Turks at Oltenitza produced an unfavourable effect at the Bourse and Government securities declined on Wednesday. The Three per Cents opened at 70f. 80c., rose to 74f. 10c., and fell again to 73f. 80c., at which they closed for the end of the month. The Four-and-a-Half per Cents closed at 99f. 85c.

BELGIUM.

The Legislative Session was opened on Tuesday, by a speech from the Throne.

AUSTRIA.

There is an end for the present of notes and diplomatic conferences. Count Buol is said to have informed the conference that, for the present, there was nothing to be done but to wait and see what turn things would take on the Lower Danube. It is said that, in her attempt to obtain a pledge from Prussia, to remain neuter, Austria has been eminently unsuccessful. Russia is being paid an enormous price for the service rendered in 1849. The value of goods imported by land from Turkey into Austria, last year, was 18,000,000 florins; the exportation was for nearly 20,000,000 florins. The value of the sea trade was—import, 18,000,000 florins; export, 20,000,000 florins. At present there is no trade by land, and cannot be until the Russians have quitted the Principalities.

ITALY.

The ex-Queen of the French, Marie Amelie, with her sons, the Duke de Nemours, Prince de Joinville, and Duke d'Aumale, and their families, who have been staying at Turin a few days, have left for Genoa. During their stay the ex-Royal family were visited by all the members of the House of Savoy, and every mark of respect shown them compatible with their strict maintenance of privacy. They were about to leave Genoa for Spain on the Spanish steamer *Francisco de Assis*.

The case of Mr. Hamilton, who kept an English school at Nanles, in the villa Volpicelli, will probably form the subject of discussion in Parliament. About a year and a half since Mr. Hamilton was subjected to frequent visits from the police. The English Minister, Sir W. Temple, in October, 1850, in reply to one of Mr. Hamilton's applications, wrote as follows:—"I have to inform you that you have an undoubted right to keep in your house and educate English children, and that the police cannot interfere with you for so doing." Still, the persecution went on; and in July, 1852, Mr. Hamilton received notice from the police that his school must be closed within four days. He went to the British Embassy, and was assured that he need pay no attention to the notification. However, at the expiration of the time limited, the police entered his house, expelled the inmates, and closed the school. Lord Malmesbury was then in power, and when the occurrence was brought under his notice he pronounced it to be illegal and contrary to treaty. Mr. Hamilton subsequently had a dispute with the Neapolitan Government, and finally left Naples. Mr. Hamilton a present claims £2,500 from the Neapolitan Government. Mr. Hamilton represented that when he had entered into his affairs, after the dispersion of his school, he found himself involved to a much larger amount than so paltry a sum would cover. He trusted that Lord Malmesbury would exert himself at least to procure for him so much compensation as would liberate him from the difficulties in which he had been involved by the arbitrary and illegal act of the Neapolitan Government. His Neapolitan Excellency burst into a roar of laughter, and said:—

Why, you must be dreaming: You think, perhaps, that Milord Malmesbury is like Milord Palmerston, ready to listen to every complaint, and obtain redress for every grievance! but, thank God, he is not quite so Quixotic as that. Why, only look at this letter which we have just received from Prince Carini, our Ambassador at London; see what he says. "I had a long conversation with Lord Malmesbury. I did not fail to try to impress on his mind the necessity of his taking every opportunity to prove his sympathy with the Sovereigns of Italy and Austria, more especially by discouraging the complaints of British travellers, and other persons who might consider themselves aggrieved. His Lordship quite agreed with me that Lord Palmerston, in seeking to protect individuals, had almost ruined the nation. And when I adverted to the cold reception given to the case of Mr. Hamilton I had the satisfaction to hear his Lordship say, 'I can give him anything you like—it does not matter what it is, so long as I can say that you have given him much!'"

When his Excellency had finished reading this extract, he said, emphatically—

And remember, Sir, that this is a *private* letter from the Ambassador, and not an official one; and I suppose you know that the truth of any subject or sentiment is always contained in the *private* correspondence.

Lord Malmesbury was again appealed to, however, and ultimately accepted for Mr. Hamilton "£100 as a free gift from the King of Naples." Mr. Hamilton refused it over and over again. The English Ambassador pressed him, and finally told him it was "obligatory" upon him to accept it; and he at last yielded and did accept it. Mr. Hamilton asserts most absolutely that no one was ever religious instruction of any kind given in his school—he contented himself with ascertaining from the parents the names of the religious instructors to whom they wished their children to be consigned, and at what hours. At the times named the pupils were sent, as directed, to receive religious instruction, but not upon Mr. Hamilton's premises. The Director of Police stated that he acted in conformity with instruction received from the Cardinal Archbishop, and other clergymen connected with the Ministry of Public Instruction.

SPAIN.

The Cabinet expected to obtain a strong majority both in the Chamber of Deputies and the Senate. The railway question alone was considered likely to create opposition.

M. Pena Aguayo, formerly Minister of Finance, died at Madrid on the 3rd inst. M. Mendizabel also died at his residence in Madrid on the same day. The malady which carried him off was pulmonary catarrh. Whatever may be thought of M. Mendizabel's peculiar views on some questions of policy, he was throughout a sincere and consistent friend of England and the English.

The burial-ground question has been definitively, and so far satisfactorily, arranged between the English *Chargé d'Affaires* and the Spanish Government. The proposition which was considered by the Spanish Government the most obnoxious of all—namely, the celebration of funeral obsequies with a certain display of religious pomp—has been set aside; but the bodies of Protestants will be borne to the grave in the same manner as Roman Catholics are, in a hearse, with carriages following. There is no permission for religious processions, and no clergyman is to follow in the streets dressed in his canonicals; but once in the cemetery, which will be inclosed, the religious ceremony may be performed in any manner the attendants may think proper. It is but just to admit that the Sartorius Cabinet has in this respect at least shown itself far more liberal, more humane, and more tolerant, than the Lersundi Cabinet which preceded it.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories.* The Rev. D. Travers, to Swange, Dorsetshire. The Rev. C. V. H. Surtees, to Ringwould, near Deal. *Vicarages:* The Rev. S. J. Butler, to Penrith, Cumberland; Rev. H. T. Fletcher, to Bicker, Lincolnshire; Rev. C. Gilbert, to Hemsby, near Great Yarmouth. *Incumbencies:* The Rev. R. Bellis, to St. James's Chapel, Jersey; Rev. E. Hoare, to Trinity Church, Tunbridge Wells; Rev. H. G. Randall, to St. Peter's, Bishport, near Bristol, Rev. W. H. Wilson, to Birtley, near Bexham; Rev. T. H. Chase, to Lydbrook, Forest of Dean.

PREACHERS AT THE CHAPEL ROYAL, ST. JAMES'S.—Nov. 13, Rev. A. Cornwall; Nov. 20, Rev. H. Melville; Nov. 27, Archdeacon Tattam; December, Dr. Wesley, Rev. C. Moore, Rev. H. Bidell, Rev. H. Vane.

RESTORATION OF THE CHURCH AT EAST RETFORD.—In consequence of the dilapidated and dangerous state of the parish church of East Retford, it has been decided to discontinue public worship in it until the necessary work of restoration is completed.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem: The Rev. E. Hanson, by the parishioners of Ashton; the Rev. R. W. Gleadowe, late Head Master of King's School, Chester, by the scholars; the Rev. W. Angell, B.A., late assistant curate of St. Clement's, Rochdale, by a few friends and the teachers of the Sunday-school on his resignation. The Rev. J. Evans, B.D., Rector of Crickhowell, by the parishioners and members of his congregation.

CONSECRATION OF THE NEW AFRICAN BISHOPS.—St. Andrew's Day (Nov 30), has been appointed for the consecration of the Rev. Dr. J. W. Colenso, Bishop designate of Natal, and the Rev. John Armstrong, Bishop designate of Graham's Town. The consecrating Prelates will be the Archbishop of Canterbury, the Bishop of London, Oxford, and Norwich. The consecration will take place either in Lambeth Church or in Westminster Abbey.

CONSECRATION OF ST. MARY'S CHURCH, THUNDRIDGE, HERTFORDSHIRE.—This interesting ceremony took place on Wednesday, the 9th inst. The Bishop of Rochester officiated, attended by his chaplain and many of the neighbouring clergy. The service of the day was read by Rev. Newly-ordained Vicar, the Rev. Charles Clay, and the sermon was preached by the Rev. J. Bathhill, Rector of Stanford Rivers. The beautiful church, to which we intend giving an illustration next week, has been built from the designs of Mr. Ferrey, and endowed at the sole expense of Mr. Robert Hanbury, of Poles. The weather on Wednesday was most propitious; and, after the sermon, the several families of the county who were present took of a sumptuous déjeûné at Poles; and every poor family in the parish had an ample supply of beef, bread, and strong ale, at their own homes.

THE NEW CHURCH AT MONKTON, HANTS, was consecrated on Tuesday last, by the Lord Bishop of Winchester. The edifice is in the Middle Pointed or Decorated style, and has been erected from the design of Mr. Woodyer, of Guildford. The eastern end has a beautiful window of stained glass, by Powell, of Whitefriars. The church will accommodate about 200 persons; and the raising of funds for its erection has been a work of considerable difficulty, owing to the small extent of the parish.

GORSEDD CITURCH, Whitford, in Flintshire, one of the two churches erected by subscription, in lieu of that at Pantasa, alienated by Lord Spalding from the Church of England to the Roman Catholics, was consecrated by the Lord Bishop of St. Asaph, on the 25th ult. There were present at the ceremony the Bishop of Adelaide; the Dean of St. Asaph; and the Archdeacons of St. Asaph and Montgomery; the Vicars of Whitford and Holywell; the Rev. Rowland Williams, Canon of St. Asaph, and forty-five other clergymen; Sir Stephen R. Glynne, Lord-Lieutenant of the county; and the Hon. Mr. Mostyn, M.P., the giver of the site of the church. An excellent sermon was preached by the Bishop of St. Asaph. In the evening, prayers were read in Welsh; and the sermon was preached in Welsh, by the Rev. R. Richards, Vicar of Mellen. The sister church has been built at Brynford, in the parish of Holywell.

FRIERN BARNET CHURCH AND SCHOOLS.—On Thursday week the picturesque church of Friern Barnet, which has just been enlarged and restored by Messrs. Habershon, architects, was re-opened for Divine service, when the Lord Bishop of London preached an eloquent sermon, and a collection of £112 was made at the offertory. After the service, the Bishop visited the schools which have been built adjoining the church. His Lordship, with the clergy and others, then proceeded to the mansion of Mr. Miles, where they were most hospitably entertained.

THE LYARD TESTIMONIAL, engraved in the ILLUSTRATED LONDON NEWS of last week, was designed and manufactured by Mr. Turner, 58 and 59, New Bond-street.

DISCOVERY OF A NEW PLANET.—At 7h. 5m. mean time on Tuesday evening, I discovered a new planet in the constellation Taurus, about 20° south of the Ecliptic. It is rather brighter than stars of the ninth magnitude. This planet is the ninth which I have discovered since the commencement of a systematic search in 1846, and raises its number of that extraordinary group of worlds between Mars and Jupiter to twenty-seven.—*J. R. Hind.*

LAUNCH OF THE "JANE LEECH," AT BIDEFORD.—On Thursday, the 3rd, was launched from the building yard of Mr George Cox, Bideford, a fine clipper ship, *Jane Leech*, built for Mr. John Leech, of Manchester, and intended to be employed in the timber trade from Liverpool. In model, this vessel combines in an eminent degree, the properties of fast sailing with good stowage capacity, having a long floor with very fine ends. The frame of the ship is of British oak, throughout; her planking, beams, and knees, are of the best East India teak, and African oak, of extra thickness and scantling; she is fastened with yellow metal to the [illegible] of iron; and obtains the high class of [illegible] A 1, [illegible] Lloyd's. The [illegible] are [illegible] and [illegible] with [illegible] and [illegible] and [illegible] and [illegible] and probability, 1500 to 1600 tons. The launch was witnessed by a large concourse of spectators.

LATEST INTELLIGENCE.

MANIFESTO OF THE EMPEROR OF RUSSIA.

"By the grace of God, we, Nicholas I., Emperor and Autocrat of all the Russias, &c., make known as follow:—

By our manifesto of the 14th (26th) of June of the present year, we made known to our faithful and dearly beloved subjects the motives which had placed us under the obligation of demanding from the Ottoman Porte the inviolable guarantees in favour of the sacred rights of the Orthodox Church.

We also announced to them that all our efforts to recall the Porte, by means of amicable persuasion, to sentiments of equity, and to the faithful observance of treaties, had remained unfruitful, and that we had consequently deemed it indispensable to cause our troops to advance into the Danubian Principalities, but, in taking this step, we still entertained the hope that the Porte would acknowledge its wrong doings, and would decide on acceding to our just demands.

Our expectation has been deceived.

Even the chief powers of Europe have sought in vain by their exhortations to shake the blind obstinacy of the Ottoman Government. It is by a declaration of war, by a proclamation filled with lying accusations against Russia, that it has responded to the pacific efforts of Europe, as well as to our spirit of long suffering. At last, enrolling in the ranks of its army revolutionary exiles from all countries, the Porte has just commenced hostilities on the Danube. Russia is challenged to the combat, and she has no other course left her than, putting her trust in God, to have recourse to force of arms, and so to compel the Ottoman Government to respect treaties, and to obtain reparation for the insults with which it has responded to our most moderate demands, and to our legitimate solicitude for the defence of the Orthodox faith in the East, professed also by the people of Russia.

We are firmly convinced that our faithful subjects will join their prayers to those which we address to the Almighty, beseeching him to bless with His hand our arms in this just and holy cause, which unites [illegible] and ardent defenders in our ancestors. *In te Domine speravimus, non confundar in æternum.*

Done at Tzarskoe Selo, the 29th day of October (1st of November, in the year of Grace 1853, and the 28th of our reign.

NICHOLAS.

The following telegraphic despatch has arrived from Vienna:

CONSTANTINOPLE, Nov. 3.—The Turks have taken Chetatey, in Asia. Yesterday five Russians, war prisoners, arrived. Two English and two French officers of the late fleet remain here, are anchored in the Bosphorus. Twenty-five thousand Turks have crossed at Widdin.

Another telegraphic despatch from Vienna, dated Thursday evening, states that the following conditions are insisted on in an ultimatum presented by Omer Pacha to Prince Gortschakoff:—

At the strong places in the Principalities to be given into the hands of the Turks immediately; the complete evacuation of the Principalities as speedily as possible, and a guarantee of all the powers against further invasion.

It was expected at St. Petersburg that the Emperor would shortly leave for the south.

The *Morning Post* undertakes to "state with certainty that the force of Russians that has crossed the Pruth amounts, on paper, to 80,000 men, and in reality numbers 40,000, of whom many are ill."

The total available force amounts to upwards of 30,000 men, whose headquarters are at Bucharest. Of this force 9000 men have been defeated, with a loss of upwards 700 killed and wounded, at Oltenitza, and about 20,000 are with Prince Gortschakoff, somewhere about Krajova. We have yet to learn how Omer Pacha will deal, or is dealing by this time has dealt with these. His army far outnumber them, and are full of health and enthusiasm, in which their half starved opponents are miserably deficient. The series of skirmishes, and the battle in which the Turks have already been victorious, must give the former immense confidence, and we shall not be surprised to hear that the army of the Czar have been driven back into Moldavia.

OMER PACHA AND HIS ARMY.—After exercise one day Omer Pacha summoned the officers to his tent and ordered them to [illegible] by a frank confession whether there were any men in the [illegible] sions exhibiting symptoms of fear at the approaching conflict. [illegible] that he could see they knew [illegible] others or be employed. There were only six men to be found who manifested an unwillingness of courage, and they were instantly released from service. But all the rest of the army commanded in chief decided to protect them from insult; and they were spit upon and hooted out of the camp, covered with shame and ignominy.

NEW LIEUTENANT-GOVERNOR OF VICTORIA.—It has been stated in well-informed circles, that either Sir Charles Hotham, K.C.B, has been offered the important office of Lieutenant-Governor of the colony of Victoria, or that distinguished honour awaits him on the completion of those diplomatic services in which he has been so successfully engaged.—*Globe.*

THE ADMIRALTY COURT.—Henry Cadogan Rothery, Esq., has been appointed Registrar of the High Court of Admiralty, in the place of Henry Bucknill Sweby, Esq., who has resigned his office.

QUEEN'S COUNSEL.—It is said that Mr. Bagshaw, Mr. Shapter, and Mr. Goldsmith are to be among the earliest additions to the list of the Equity Queen's Counsel.

SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.—The annual report of the [illegible] appears to [illegible] of persons [illegible] for the [illegible] subscribers. The society has [illegible] publications, and other [illegible] Testaments, [illegible] and other [illegible].

MEMORIAL OF WELLINGTON AT MANCHESTER.—The committee have decided not to have an equestrian statue of the Duke, apparently because it would not match with the statue of Sir Robert Peel. They have selected a square pedestal and statue similar in style to Mr. Noble, the sculptor who produced the Peel statue in Salford. The Duke is attired as a civilian, and the greatest simplicity of treatment pervades the whole, both pedestal and statue.

THE CITY CORPORATION COMMISSION.—Yesterday (Friday) Mr. Pulling, who [illegible] the law officers of the Crown, was the only witness examined. After describing the principal [illegible] charters granted to the City at ancient times, which gave it the [illegible] control of trade in London, the learned gentleman said [illegible] corporation was at an early time invested by statutes [illegible] with the conservancy of the Thames [illegible] protection or preservation of the fish, and the [illegible] but there was nothing to [illegible] removal. There is now a case in Chancery between the City, involving the whole question of the conservancy. [illegible] to the Port of London the rights of the City are [illegible] but, because the City expended money in erecting [illegible] and so on. They had a right to levy tolls on coal and corn, and they assumed to themselves the right of regulating metage (which is compulsory) and [illegible] and hence the establishing of [illegible] powers.

NURSERY FOR INFANTS.—A novel and most useful institution was inaugurated on Thursday. It is designed for the care of the young children of those inhabitants of St. Martin-in-the-Fields whose [illegible] circumstances do not admit of their [illegible] upon them proper attention. Trained nurses of good character have been engaged, and every effort [illegible] to render the [illegible] character as will carry out the benevolent design [illegible].

THE IRISH TENANT LEAGUE.—A meeting of the Tenant League was held on Wednesday evening in Dublin. Mr. Lucas, Dr. Gray, and Mr. Sharman Crawford addressed the meeting, and [illegible] willingness to assist in carrying out the objects of the League.

A DESERVED PRESENT.—Mr. [illegible] of Lombard-street, has forwarded to Mr Frederick Semple, coachman of the *Shelduck*, who jumped overboard from the *Victory* last week, and saved a poor woman from drowning, a pair of epaulettes—a handsome testimonial to the brave young officer.

ROYAL GEOGRAPHICAL SOCIETY.—The opening meeting for the session 1853-4 will be held at the rooms, 21, Regent street, on Monday next, at half-past eight p.m., when Capt. Inglefield, R.N., will lay before the society the results of the late Arctic Expeditions, including the discovery of the North-West Passage by Capt. M'Clure. The paper will be illustrated by [illegible] maps, some of which have been [illegible] and by a [illegible] of the Arctic regions, by Mr. Arrowsmith.

A NEW PHASE IN THE CAB LAW.—Dr. Gray, of the British Workman, [illegible] with to the Chairman. On Dr. Gray and [illegible] action, Gorgeous [illegible] was [illegible] jected to; and the magistrate at Marlboro [illegible] was applied to; and he decided that the law [illegible] case a *third* party made up the fare. Here only [illegible] one time. The driver, who had behaved very civil [illegible] the extra sixpence, but not [illegible] ing of the [illegible]

Note.—The sign + denotes above the average, and the sign — below the average

The reading of the Barometer decreased from 29·99 inches at the beg ning of the week to 29·33 inches by 3 p.m. on the 5th; increased to 30·0 inches by 6 h. p.m. on the 7th; decreased to 29·29 inches by the afternoon of the 8th; increased to 30·58 inches by the morning of the 9th—nearly as higher than any since September 1852; and fell to 30·35 inches by the end of the week. The mean for the week, at the height of 82 feet, was 30.140 inches

The mean daily Temperatures have ranged from 8·8° above, to 3·3° below their average values. During the time they were above their average values—viz., from the 1st to the 8th—the average daily excess was 4·4°

The mean Temperature of the week was 47·6°; being 2·7° above the average of 38 years

The range of Temperature during the week was 26.8°; being the difference between the highest reading, on the 6th; and the lowest on the 10th.

The mean daily range of Temperature during the week was 12·3°. The smallest was 4·2°, on the 9th; and the greatest, 20·9°, on the 10th.

Rain fell on one day during the week to the depth of five hundredths of an inch.

The Weather during the week was dull and the sky mostly overcast, till Monday, and has been fine from that day. The air has generally been in a calm state, and mist and fog have been prevalent.

JAMES GLAISHER,
Lewisham, 11th November, 1853.

HEALTH OF LONDON.—During the week ending Nov 5, the births of 847 boys and 811 girls were registered within the metropolitan districts. The excess of boys was 119, and of girls was 111, over the average of the same week in the preceding eight years. The number of deaths in the same week, was 1115. In ten weeks corresponding to this week, in the years 1843 to 1852, the average number was 1001, which, increased in proportion to increase of population, becomes 1041: hence the mortality exceeded the average by 74. The excess of births over deaths was 546. The number of males who died in the week was 554, and of females 528. At ages less than fifteen years there were 329 deaths; at fifteen, and less than forty, there were 361; and at sixty, and upwards, 176. To zymotic diseases 381 deaths were referred (their average is 242): of these, small-pox caused 6; measles, 24; scarlatina, 51; hooping-cough, 33; diarrhœa, 32; cholera, 109; and typhus, 46. To dropsy, cancer, &c., 46 deaths. To tubercular diseases, 176 (their average is 164). To diseases of the brain, nerves and senses, 118 (their average is 113); to those of the heart, 38; to those of the lungs, and the other organs of respiration 158 (their average is 175); to those of the stomach, 52. To premature birth, 30; to age, 43; to sudden death, 5; to poison, 4; to burns, 2; to hang ng, 2; to drowning, 2; to fractures, 2; and to wounds, 2. The cholera continues to make progress, though its rate of increase is not rapid. The deaths referred to it last week were 102. In the last four weeks the numbers rose as follows:—45, 83, 99, and 102; in the same periods diarrhœa and dysentery were fatal in 55, 46, 43, and 42 cases; showing a constant decrease. Of the 102 deaths by cholera, 71 occurred in the West Districts, 9 in the North, 2 in the Central, 21 in the East, and 99 in the South Districts. London is situated in a basin, through the bottom of which the Thames flows; and it was discovered during the epidemic of 1848-9 that the rate of mortality by that disease was nearly in the inverse proportion of the elevation of the ground on which the dwellings of the inhabitants stand. The same relation between the rates of morta ity at different elevations, though the deaths have been comparatively few, has hitherto been observed in the present epidemic. The mortality from cholera in districts at an average elevation of more than 20 feet above Trinity high-water mark, has been 31 in 100,000 inhabitants; in the districts of an average elevation of 20 and below 40 feet (20—40 feet) the mortality has been 15 in 100,000; at an elevation of 40—60 feet, the mortality has been 11 in 100,000; at 60—80 feet, it has been only 4; at 80—100 feet, only 3. Marylebone, at an average elevation of 100 feet, is the only exception to the law; the mortality by it has been 13 in 100,000. At Hampstead, where the elevation may be put at 350 feet, there has hitherto been no death from cholera. Exceptional circumstances disturb the accuracy of the law; but it is a general truth that the danger of dying of cholera, and of all plagues, diminishes within certain limits, in proportion as the dwellings of the population are raised above the level of the Thames.

THE EXHIBITION OF 1851.—His Royal Highness Prince Albert presided, on Tuesday, at a committee of the Royal Commission. His Royal Highness arrived at the New Palace at Westminster at half-past ten o'clock, and took the chair in the absence of Sir Charles Eastlake, P.R.A., attending the Prince. The committee sat in the New Palace at eleven o'clock, and was attended by Earl Granville, the Right Hon. Sir Cardwell, M.P.; Sir Wm. C. Cubitt, and Mr. Coulson, Q.C. Mr. Edgar Bowring, the secretary, was in attendance. Prince Albert left at a quarter before two o'clock, on his return to Windsor Castle.

THE MANSION-HOUSE.—A Court of Common Council was held at two o'clock Tuesday, at the Foreign-Office. The Ministers present were the Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, the Marquis of Lansdowne, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon Sidney Herbert, and Sir William Molesworth. Viscount Palmerston arrived at four o'clock, and joined his colleagues. The Council broke up at six o'clock. A second meeting of the Cabinet was held on Thursday, at two o'clock

ARCTIC LETTERS.—Letters for the *Enterprize*, *Rattlesnake*, and *Grper*, in Behring Stra t, must be sent to the Admiralty on or before the 30th of December.

STREET-PAVING.—A specimen of the metallic compound paving —which appears to have given so much satisfaction in the United States, on account of its being free from mud, dust, noise, or danger to horses—is now being la d down in Threadneedle-street, a trial having, we understand, been already made at a coal-merchant's wharf at Greenwich, where it has been exposed to heavy traffic during the last summer, and where the reputation it acquired in America has been fully sustained.

THE TEMPLE-BAR QUESTION.—It having been stated in the report of the committee to which this subject was referred by the Court of Common Council, that the inhabitants of the parish of St. Bride were opposed to the removal of Temple-bar, and had signed a petition to that effect to the Court of Common Council; the subject was brought under the notice of the inhabitants at a vestry meeting held last week; when the Vicar, parochial authorities, and the parishioners disclaimed all knowledge of or participation in such a petition. A strong opinion was expressed against the continuance of Temple-bar in its present state; and it was understood that the subject would be shortly brought before the notice of the inhabitants, in order that they might have the opportunity of publicly expressing their opinions on the subject.

ACCIDENT AT THE COAL-EXCHANGE.—On Wednesday, a man ... Bright, with his daughter, had gone to the top of the Coal Ex... ge, Thames-street, for the purpose of seeing the Lord Mayor's pro... and in the act of looking over the glazed roof the glass broke, and ... and the child fell to the bottom. The unfortunate man was killed ... spot, and the child was very much injured.—Another accident befel a merchant's clerk, near the Globe Office, who was thrown down to the ground by the breaking down of a stand on which he was placed, and had his leg fractured.

THE CITY COMMISSIONERS.—The sittings of the Commission for inquiring into the Corporation of the City of London have been continued, and the inquiry is still proceeding. Mr. Acland has again been examined, and has given in his proposed scheme for the City government, which consists of thirty-six members. Mr. H. M. Fisher (of the firm of Fisher and Lucas, solicitors to Messrs Combe, Delafield, and Co.), Mr. Hubbart (Governor of the Bank of England), and Mr. John Dillon (of the firm of Morrison, Dillon, and Co.), have also been examined during the week.

THE "ALBERT PARK."—We learn that during one week the committee who are promoting the establishment of a park for the northern part of the metropolis, received upwards of 1300 signatures and testimonials from the physicians and surgeons of London to a memorial to Government, urging its necessity as a sanitary measure.

THE CUSTOM-HOUSE.—Some important additions are in course of being effected at the Custom-house at the London Docks, by direction of the Lords of the Treasury, in order to provide for the new Continental Customs establishment for that part of commerce, and the great increase which has taken place lately in the business at that vast establishment. When the additions and alterations in course of progress are completed greater convenience will be afforded for the conduct of the Customs business, and additional facilities provided for the public and parties attending there, in order to obtain the delivery of wines and spirits and other merchandise from the docks.

COURT OF ERROR.—On Thursday this Court decided that the Great Western Railway Company are bound by the act of Parliament to form a line of railway from Bradford to Bathampton, upon being required so to do. This was an appeal to this Court from the judgment of the Court of Queen's Bench, which had decided the same question in the same way

RECEIPT FOR MAKING CHEAP BREAD.—At the present time the following receipt, from the wife of a clergyman in the north, is of such practical importance to all classes, that we give it a place. Take a pound and a half of whole rice, boil it gently over a slow fire, in three quarts of water, about five hours, stirring it occasionally, and afterwards beat it up into a smooth paste. Mix this, while warm, into fourteen pounds of flour, adding to it, at the same time, the usual quantity of yeast. Allow the dough to work a certain time near the fire, after which divide it into loaves, and it will be found, when baked, to produce twenty-eight or thirty pounds of excellent white bread." A correspondent writes:—"It answers perfectly. The quantity is doubled, you will perceive. I have tried it several times for different families of four, but it has not once failed. The bread is remarkably light, and at this time especially, when cholera is much about, it is particularly wholesome. The poor are all delighted at the saving which it causes in their consumption of flour. *English Churchman.*

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

In the early part of the week the market for Consols was very active, and prices were rapidly on the advance: but the news from the East of hostilities having already commenced between the Russians and Turks, and the supply of stock having increased, the improvement in the quotations has not been maintained. The fall has operated favourably for many parties, whose balances on the Account have thus been considerably lessened. The stock-borrowers, on the other hand, have had to pay. has been reduced to 1.16.

The arrivals of bullion have been confined to about £2400 from Australia, and 760,000 dollars from New York. The shipments of gold to the Continent have exceeded £100,000; but we learn that the stock in the Bank of England is increasing. There has been an active demand for silver for shipment to the East by the next steamer. The value of that metal has advanced 3s. 6d. per ounce for bar, and 1d. per ounce for dollars. Bar silver is now worth 5s. 2d. ⅝ Mexican and South American dollars, 5s. 1½ per ounce. These are the highest rates paid for a considerable period

The Board of Trade returns for the month, and nine months ending the 10th of October, show very favourable results. The total declared value of the shipments for the nine months is £66,987,720, against £54,891,438 in 1852, and £50,054,978 in 1851. There has been a steady demand for money. Short-dated paper has been discounted at 4½ per cent per annum. The supply of surplus cash is still very large. On Monday, the Three per Cent Consols were done as high as 96¾, but they closed at 95¾ both for Money and Time. The Three Per Cents Reduced, were 94½ to 94¾; New Three-and-a-Quarter Per Cent, 95¾ to 96⅜; and Long Annuities, 1860, 5 1-16; Bank Stock, 212 to 214; Exchequer Bills, 5s. to 8s. prem.; India Bonds, par to 2s. prem. There was less activity in the market both on Tuesday and Wednesday; prices consequently gave way, the Three per Cents having been marked 95⅝. On Thursday, Consols were depressed in the early part of the day, owing to the fuller supply of stock The Three per Cents were quoted at 93⅝ 94; but closed at 94⅛ ⅜ for Transfer, and 94⅜ ½ for the Account. Reduced, were 94¼ ⅜; New Reduced, 94⅜ ½; New Three-and-a-Quarter per Cents were 94¾ to 95⅛; and the Three per Cents Reduced, 92⅝ to 93⅝. Bank Stock, 216 to 217½; Exchequer Bills, 2s. to 5s. prem.; India Bonds, par to 2s. prem.

Only a moderate business has been doing in Foreign Bonds. Mexican Three per Cents have been 20½ to ⅞; Peruvian Four-and-a-Half per Cents, 76; Spanish New Deferred, 19¾ to ⅞; Ditto New Deferred, 19¾ to 21¼; Ditto, Passive, 4⅝; Venezuela One per Cent Deferred, 12⅜; Dutch Two-and-a-Half per Cents, 63¾ to 64⅝.

Notwithstanding the severe weather, the accounts from the provinces in reference to trade in general are tolerably satisfactory.

Miscellaneous Shares have been tolerably firm. Australasia, Joint Stock Bank have been done at 43¾ to 44, and ditto, London Chartered of Australia, 16; Oriental, 43¾ ¼; Australian Agricultural have marked 42½ to 43; Australian Royal Mail, 3¾; British-American Land, 2½; Canada Company, 91 to 92; Colonial and West India Docks, 110¼ to 110; North-British Australian Loan, 1¾ ⅛; Peel River Land and Mineral, 1¾; Van Diemen's Land, 1¼; Hungerford-bridge, 15; Waterloo Bridge, 7; Vauxhall, 2; Albion Insurance, 98; County, 127; Crown, 20¾; Globe, 145; Imperial Fire, 375; Guardian, ... ex div., Law Fire, 42; Pelican, 66; Phœnix, 185; Royal Exchange, 342; Sun Life, 68; Universal, 4¾; Berlin Waterworks, 2; East London, 130; Southwark and Vauxhall, 80¾ ¾; West Middlesex, 113; Canada Bonds, 111; Ditto, 1134; General Screw Steam Shipping Company, 1¾; General Steam Navigation, 3¾ to 2⅞; Netherlands Land, 2¾; Royal Mail steam, 63 to 65; Peninsular and Oriental Steam, New, 20.

For Railway Shares there has been only a moderate demand; nevertheless, prices have been well supported. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 4½; Bristol and Exeter, 95; Caledonian, 54½; Chester and Holyhead, 16½; East Anglian, 4½; Eastern Counties, 1⅞; Eastern Union, 8 Stock, 22; Great Northern, 80⅝; Great South. and West. (Ireland), 103; Great Western, 82; Lancashire and Yorkshire, 65; Leeds Northern, 13; London and Blackwall, 8½; London and Brighton, 86½; London and North-Western, 103; Ditto, Fifths, 12; Ditto, 210 Shares, 14; London and South-Western, 75; Manchester, Sheffield, and Lincolnshire, 20½; Midland, 63⅛; Norfolk, 50; North British, 28⅝; North Staffordshire, 11½; Scottish Central, 89; Shrewsbury and Chester (Halves), 8½; Shropshire Union, 2⅝; South Devon, 16; South-Eastern, 6⅜; South Wales, 34⅜; York, Newcastle, and Berwick, 64½; York and North Midland 42⅝.

LINES LEASED AT FIXED RENTALS.—Midland Bradford, 100½; South Staffordshire, 7⅛; Wear Valley, 31½

PREFERENCE SHARES.—Eastern Counties, 1¾ prm; Ditto, New Six per Cent Stock, 13⅛; Great Northern Five per Cent, 119½; Great Western Four-and-a-Half per Cent, 100; Ditto, Four per Cent irredeemable, 90; Oxford and Rugby, Birmingham Six per Cent, 150; North British, 106; North Staffordshire, 23¾, Oxford, Worcester, and Wolverhampton, 104; Ditto, 15½; South Eastern, 24½; Ditto, Four-and-a-Half per Cent, 102; York, Newcastle, and Berwick, 27.

FOREIGN.—East Indian Extension, 2; Grand Trunk of Canada, 6⅜; Luxembourg, 9⅜; Ditto (railway), 6½; Namur and Liege (with interest), 5; Northern of France, 34; Paris and Strasbourg, 37½.

The Market for Mining Shares has been rather flat. Agua Fria, 14⅛; Australian, 2⅛; St. John del Rey, 39 to 38⅜; Cobre Copper, 44⅜; Linarca, 12⅜; United Mexican, 3⅜.

Friday Evening.

There has been less activity in the market for Consols to-day. The Three per Cents have been done at 94⅜ ⅝; the Three per Cents Reduced, 93⅜; and the New Three-and-a-Quarter per Cents, 94⅝ to 95. India Bonds, 2s. prem.; Exchequer Bills, 5s. to 2s. prem. Foreign Bonds and Railway Shares about stationary.

THE MARKETS.

CORN EXCHANGE (Friday) Fresh up to-day there was a slight increase in the arrivals of English wheat. Although the attendance of buyers was by no means extensive, there was a rather more firmness in the demand than on Monday, and that day's prices were supported. The imports of foreign wheat have amounted to 28,000 quarters. Good and qualities moved off steadily, at full prices; but all other kinds were dull, at late rates. Floating cargoes the arrivals of which continue small, were quite as dear as last week. Barley, the supply of which was but moderate, sold o... terms. We had a slow sale for malt, but no change took ... [illegible] ARRIVALS ... [illegible] ... qrs. flour, 1380. Irish: ... barley, 650; oats, 14,040.

... [illegible] ... ditto, white, 65s. to 67s.; Norfolk and ... rye, 38s. to 44s.; grinding barley, 23s. to ... distilling ditto, 25s. to 26s.; malting ditto 29s. to 30s.; Chevalier, 32s. to 34s.; Yorkshire ... brown ditto, 26s. to 26s.; Kingston and Ware, 35s. to 39s.; Chevalier, 39s. to 42s. Yorkshire ... old Lincolnshire feed oats, 23s. to 27s.; potato ditto, 27s. to 30s.; Youghal and Cork, ... to 25s.; ditto, wh ... 28s. to 28s.; tick beans, new, 41s. to 42s.; ditto, old, 45s. to ... peas, 42s. to 43s.; maple, 42s. to 45s.; white, 40s. to 44s.; boilers, 52s. to 55s. per ... Town made flour, 70s. to 75s.; Suffolk, 57s. to 62s.; Stockton and Yorkshire, ... per 280 lbs. *Foreign:* French flour, ... s. per sack; American, 32s. to 41s.

Seeds.—On the whole, a full average business is doing in this market, and prices are well ... Cakes are selling readily, at the late advance

Linseed, Eng lish, sowing ... to 50s.; Baltic crushing, 47s. to 52s.; Mediterranean and Odessa, 52s. to 54s.; hempseed, 33s. to 36s. per quarter; Coriander, 10s to 12s per cwt. Brown mustard-seed, 10s to 12s; white ditto, 10s to 11s.; rapeseed, 42s to 43s per bushel. English rapeseed, £20 to £21 per last of ten quarters. Linseed cakes, English, £9 5s to £10 10s.; ditto, foreign, £9 5s to £11 10s. per ton. Rapeseed cakes, £5 5s. to £6 10s. per ton. Canary, £3s. to 70s per quarter. Clover seed nominal.

Spices.—The prices of pepper, bread the metropolis are from 11d. to 11½d.; of household ditto, 9½d to 10½d per 4lb. loaf

Imperial Weekly Average.—Wheat, 71s. 8d; barley, 34s. 2d; oats, 25s. 2d; rye, 43s. 8d.; beans, 42s. 10d.; peas, 43s. 3d

Tea.—Six Weeks' Average.—Wheat, 66s. 11d.; barley, 32s. 8d., oats, 23s. 10d.; rye, 39s. 8d.; beans, 43s 11d., peas, 43s. 6d

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s

Teas.—Owing to the sales not having come to hand, the prices for the private contract market is limited, and, in some instances, prices have a downward tendency. Common secon Pouglon, 11½d to 1s. per lb. Up to Saturday last, duty was paid on 27,417,367 lbs., against 26,749,648 ditto in 1852.

Sugar.—The prices of refined sugars are still in progress. On the whole, the middings have been somewhat firmer this week; but no improvement can be noticed in prices

Provisions.—Mondaw hay, £3 5s. to £5 15s.; clover ditto, £4 0s. to £6 10s.; and straw, £1 14s. to £2 2s. per load.

Coffee.—The sales are still in progress. On the whole, the middings have been somewhat firmer this week; but no improvement can be noticed in prices

Potatoes.—The demand is less active. Kents, 130s. to 140s.; regents, 160s. to 180.; foreign, 140s to 160s per cwt.

Wool.—Hop Fair, Holywell, ... West Tanfield, 19s. 6d; Clark, 20s.; Clennell, 30s.; Hutton, 22s. 6d., Cowton, 20s.; Walney's Australian, 23s. per ton.

Hops.—Farnham, Alton, and Surrey Fairs have each experienced a good attendance. Low and inferior kinds are neglected The old duty has been declared at ... The week's imports are 469 bales from America, 375 from Belgium, 175 from ... and 10 from Germany. New Mid and East Pockets, 41s 0s to 42s 0s.; New Weald of Kent, 41s 0s to 42s 0s.; New Sussex, 41s 0s to 42s 0s.

Smithfield (Friday).—To-day's market was very moderately supplied with beasts, for which the demand ruled steady at the currencies of Monday of 2d. per 8lbs The supply of sheep was limited. All breeds were in good request at full currencies The best Downs were inquired for at 5s. per 8lbs. There was less inquiry for calves. In their quotations, however, no change took place. Pigs moved off steadily, at full prices. Much cows were dull, at from £14 to £19 each, including their small ca

Per 8lbs. by the offal—Coarse and inferior beasts, 3s. 8d. to 3s. 10d.; second quality ditto, 3s. 4d. to 3s. 6d.; prime large oxen, 3s. 10d. to 4s.; prime Scots, &c., 4s. 2d. to 4s. 4d.; coarse and inferior sheep, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 6d. to 4s. 8d.; prime coarse-woolled ditto, 4s. 4d. to 4s. 8d.; prime South Down ditto, 4s. 10d. to 5s. 2d.; large coarse calves, 3s. 6d. to 4s.; prime small ditto, 4s. 4d. to 4s. 8d.; large hogs, 3s. 4d. to 4s. 6d.; neat small porkers, 4s. 2d. to 4s. 10d.; sucking calves, 21s. to 26s., and quarter old store pigs, 20s. to 27s. each. Total supplies: Beasts, 864; cows, 121; sheep, 4,740; calves, 260; pigs, 420. Foreign: Beasts, 310; sheep, 590; calves, 292.

Newgate and Leadenhall (Friday).—The trade ruled steady, as follows

Per 8lbs. by the carcase:—Inferior beef, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 10d. to 3s. 4d.; prime large ditto, 3s 6d. to 4s.; prime small ditto, 3s 10d. to 4s. 2d.; large pork, 3s. 4d. to 4s. 6d.; small ditto, 4s. 8d. to 5s. 2d.; middling Lamb, 5s. 4d. to 5s. 6d.; prime ditto, 5s. 8d. to 6s. 8d.; veal, 3s. 6d. to 4s. 6d.; small pork, 4s. 2d. to 4s. 10d.

BIRTHS.

CAPE TOWN.—On the 27th ult., at 6, Bayswater-hill, the wife of the Lord Bishop of Cape Town, of a daughter.

CARBERRY.—On the 3rd inst., at Castle Freke, county of Cork, the Lady Carberry, of a daughter.

CARTER.—At Petersfield, the wife of J. Bonham-Carter, Esq., M.P., of a son.

FARQUHAR.—In Lowndes-square, the Hon. Mrs. H. Farquhar, of a son.

GRENFELL.—On the 6th inst., in Belgrave-square, the wife of C. W. Grenfell, Esq., M.P., of a son.

HEARN.—On the 6th, at Roxwell Vicarage, Essex, the wife of the Rev. T. J. Hearn, M.A., of a daughter.

HEARD.—On the 7th inst., at Prince's-gate, Hyde-park, the Lady Fanny Howard, of a son.

LEIGH.—On Sunday, the 6th inst., at High Leigh, Cheshire, the wife of Egerton Leigh, Jun., Esq., of a son.

MARRIAGES.

PARRY HOLDSWORTH.—On the 3rd inst., at St. Saviour's Church, Dartmouth, the Rev. C. E. Parry, Curate of St. Paul's, Knightsbridge, to Mary Hunt, eldest daughter of the late Rev. C. Holdsworth, Vicar of Stokenham, Devon.

SADLIER—BANKIN. On the 8th inst, at Clifton, the Rev. O. Sadler, Rector of Brancaster, Norfolk, to Lucy Ann, eldest daughter of the late R. B. Bankin, Esq., of Stratford.

SEAGER—CLODE.—On the 8th inst., at St. John's the Evangelist, by the Rector, the Rev. J. Jennings, Canon of Westminster, J. L. Seager, Esq., of South Lambeth, to Mary Ann, widow of the late J. Clode, Esq.

TAYLOR—CATTY.—On the 8th inst., at Stockbury Church, by the Rev. Henry Willoughby Taylor, Chaplain of H.M.S. *Impregnable* and brother of the bride, James Alexander Esterre Taylor, Esq., Royal Marines, son of the late Captain Henry Taylor, Royal Navy, and nephew of the late Richard Taylor, Esq., of Rock Abbey, county of Limerick, to Mary Anne, youngest daughter of the late Captain Catty, Royal Engineers, of Stockbury Park, Kent.

WHITE—POSTE.—At Maidstone, the Rev. J. White, Rector of Graysham, Hertfordshire, to Emily, daughter of the Rev. S. Poste, of Sydenham-place, near Maidstone.

WILSON—BRAINE.—On Wednesday, June 15, 1853, in the Church of the Ascension—On the 10th inst., at Thurleston Rectory, Hants, aged 21, Anthony Lambert, eldest surviving son of the Rev. A. L. Lambert.

MONTAGU.—On the 4th inst., in London, aged 57, John Montagu, Esq., Secretary to the Government of the Cape of Good Hope.

PHILLIPS.—On the 3rd inst., at Ninfield, Sussex, the Rev. John Phillips, Vicar of that parish, in his 64th year.

POWELL.—On the 8th inst., at Kilforne, Tipperary, the Dowager Lady Power, aged 7.

TOWNSHEND.—On the 8th inst., at St. Leonard's-on-Sea, Lord Charles Vere Townshend, aged 68. He was brother and heir-presumptive to the present Marquis Townshend; and, dying without issue, Captain Townshend, son of the late Lord John Townshend becomes the next heir to the title.

THE ILLUSTRATED LONDON NEWS

No. 654.—VOL. XXIII.] SATURDAY, NOVEMBER 19, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE NEW MANIFESTOS OF THE CZAR.

THE plague of Russia is upon us. It is singular enough, and we have not seen it remarked elsewhere, that this plague always breaks out in conjunction with another. Russia and the cholera go hand in hand in their invasions. The first time that Europe was startled by a visitation from the Asiatic Cholera, was in the year 1832, when the Czar had poured his merciless legions into Poland, and was crushing the spirit of that gallant nation. Cholera broke loose again in 1848 and 1849, and so did the Emperor Nicholas. In April, 1848, when cholera was making its way towards the west, the Emperor of Russia was fulminating his wrath against the German, French, and Hungarians, in a remarkable proclamation, half political and half religious, which was noticed in this journal at the time. The Emperor denounced the "devastating plague" of freedom, declared his intention to encounter it on whatever side it might present itself, and warned the nations that they had but to submit, for "God was on his side." In 1853, the cholera and the Emperor are again at work; and we have yet to learn which of the two shall cause the greater misery and desolation, or whether political science and the sense of right and justice—nerving the hands and inspiring the hearts of millions—will be able to cope as effectually with the one plague as sanitary science is likely to do with the other.

Two remarkable documents have recently been issued from St. Petersburg—the head-quarters of the Political Pestilence: the first, dated 31st October, bears the signature of the Count de Nesselrode; the second, dated 3rd November, is signed by the Emperor himself. One document is addressed to the diplomatic agents of Russia in all the Courts of Europe, to be communicated to the Governments to which they are severally attached. The other notifies to the Russian people—and, through them, to the world—that Russia is at war with Turkey. The tone of these two State papers is very different: the earlier is the more moderate, reasonable, and truthful of the two; though the remembrance of the Count de Nesselrode's egregious fiction—so satisfactorily disposed of by Lord Clarendon and M. Drouyn de l'Huys, that the Russian troops had only taken possession of Moldavia and Wallachia because the British and French fleet had sailed to Besika Bay—might have led the world to suspect a similar perversion of the truth in the Count's new diplomatic note. But the Russian Minister appears to have profited by the castigation and exposure which he received. Notwithstanding the declaration of war on the part of Turkey, his tone is more conciliatory than before to the rest of Europe. He expresses a wish that negotiations for peace may yet prove successful, and, if not, that the war may be "concentrated" between Russia and Turkey; concluding with a significant hint that the interference of Great Britain and France in the quarrel, will change the war from a local into a general one.

The Emperor's manifesto, issued three days after that of Count Nesselrode, is so extraordinary as to have diverted attention from its predecessor, and to have monopolised the surprise, if not the indignation, of every truth-loving and honest man in Europe. It is difficult to characterise the document as it deserves, without employing words which are too strong for the ears of polite society. But, whether we call the assertions of the Emperor mistakes, errors, perversions of the truth, inaccuracies, or fictions as gross as the famous Besika Bay romance of Count Nesselrode, does not greatly signify. The meaning is obvious; and the true epithet, if unspoken or unwritten, has presented itself long ere this to the mind of every one who has read the proclamation. When the Emperor states "that the Great Powers of Europe have in vain endeavoured by their exhortations to shake the blind obstinacy of the Ottoman Government"—that the Porte has issued a proclamation "replete with false accusations against Russia," and that it has "enrolled in the ranks of its army the revolutionists of all countries," he makes assertions which are simply and notoriously untrue. To attempt to disprove them by a recapitulation of the real facts would be a work of utter supererogation. But the question naturally arises, does the Emperor believe what he asserts? or,

A TURKISH SCRIBE.—FROM A PHOTOGRAPH TAKEN AT CONSTANTINOPLE.—(SEE NEXT PAGE.)

does he wilfully and consciously give currency to statements so perversely erroneous, with a view of influencing public opinion in his own dominions? It is possible that this last view of the case is the correct one—that the "orthodox Lord Emperor" thinks it essential to cast dust in the eyes of his ignorant subjects, to maintain his dignity and his character for infallibility, unassailed and unimpeached amongst them; to make them believe that any war into which he pleases to enter is not only a just but a holy one; and that his enemies must, of necessity be perfidious barbarians. His confident appeal for the assistance of the Most High, and his quotation from the Psalms of David, are characteristic of the semi-religious character which he is accustomed to assume as the head of the Greek Church, and the living embodiment of orthodoxy, and favour the supposition that the proclamation is intended for Russians alone. If it inspire them with reverence, and fill them with awe, it no doubt signifies little to the Emperor that it should fill the rest of Europe with disgust. The Czar speaks to France and England through the pen of Count Nesselrode. He speaks to the Russians in his own person, and employs a language which they are accustomed to respect, even if they do not entirely comprehend.

Yet it is possible that the Emperor of Russia conscientiously and piously believes what he has stated in his declaration of war against the Porte. In such case the world might respect his honesty, but it would only be at the expense of his sanity. If he really believe what he says, his fanaticism is as huge as it is intolerable. His pretensions are all the more dangerous, if based upon a conviction so deep and so erroneous. The greater his sincerity, the more hopeless become all appeals to his reason or his sense of justice. There remains only one argument available with such a mind, and that is the argument of terror. The exercise of a force superior to his own to repel and punish him, is the sole means that can be employed to restrain him within such bounds as may be consistent with the honour and safety of other states. To all else his high pretensions would render him callous.

The energy even of despair itself scarcely equals the energy of an intense and all-engrossing fanaticism. It might be better, therefore, for Europe that the Emperor should be a hypocrite than a bigot. The logic that prevails with the one has no effect upon the other. With the hypocrite it is possible to negociate, but with the religious fanatic, zealous for the propagation of his faith, it is in vain to parley. Physical coercion is the first of preliminaries in our intercourse with a maniac; and swords and guns are worth far more than conferences of Ambassadors with such a man as the Emperor Nicholas, if he really means what he says.

Public opinion in France, as well as in this country, has been unanimous in the expression of its wonder and indignation at this document. In France the opinions of a press that is not allowed to speak unless with the approbation of the Government and the Censor, have more significancy in indicating the intentions of the Executive Power than they can have in this country, where every man may speak his mind. We judge, therefore, from the tone of the French press that the French Emperor has finally resolved to employ all the resources of France in support of the Turkish cause. That he will be supported by Great Britain to the fullest extent there is no reason to doubt; unless, indeed—which is "a consummation most devoutly to be wished"—the Turks should spare them both the trouble, by driving the Russians across the Pruth. Such a victory as that which Omer Pacha has gained at Bucharest, would almost indicate that the Turks will yet be able to fight the battle single-handed.

A TURKISH SCRIBE—CONSTANTINOPLE.

In Turkey, where the art of writing is an accomplishment acquired by comparatively few, that of reading written documents must be almost equally rare. The consequence is, that the professional Scribe is a man of considerable importance, always in request, and tolerably well paid. In the highways of business, and, indeed, in all parts of the town, some grave old gentleman, with a particularly long beard, and "spectacles on nose," may be seen reading the contents of a letter from the country to some anxious friend, or deciphering his "correspondent's" account to some small merchant of the bazaar; or, maybap, inditing the fitting reply to some such communication. His writing implements are displayed with great care on the table before him. The narghilé and chibouque are freely plied by himself and his customers, who always form a very picturesque group.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The Court left Paris on Saturday last, and has taken up its residence at Fontainebleau. The previous evening (Friday) the Emperor and Empress were present at the first representation, at the Grand Opera, of the new ballet, "Les Bouemiers," in which the celebrated danseuse, Mdlle. Rosati, made her début. She was greatly applauded, and merited the applause bestowed. Nothing had been spared to render the *salle* brilliant; but the boxes were occupied entirely by officials—Marshals of France, Ministers of State, Préfets of Police, Director of Beaux Arts, &c. But the official world is but a poor company: always the same faces—every where the mark of servitude—the same air of restraint—the same dull physiognomy. It is at these great representations, where the Court assists solemnly, that one sees how great and how continued is the isolation which exists around it. The *grand monde*—those illustrious by the number of their ancestors, and those illustrious by the éclat of their personal worth—continue to keep aloof from the new *régime*, and remain in retirement.

This evening is fixed for the opening of the Italian Opera. Will the new director be more fortunate in this attempt at a musical re-surrection than was Mr. Lumley? The new director has one chance of safety: he has gained Madame Alboni, who (though married to the Comte P.) has consented to appear on the stage, and lend her incomparable voice. Incomparable is the word; for who can compare the voice of Mdlle. Cruvelli to that of Madame Alboni, although the former has just been engaged at the Grand Opera, and for a sum which exceeds 100,000 fr. per annum? Perhaps the struggle engaged in between Madame Alboni and Mdlle. Cruvelli may stimulate public curiosity, and be of service to both theatres, the rival houses of the French and the Italian Opera. It is this evening that the Gymnase will produce the piece of M. Alexandre Dumas, fils, kept back for more than a year by the Censor, who suspended it. The piece was accused of containing allusions to a situation in which M. Alexandre Dumas and Madame Nesselrode found themselves on the Russian frontier; which Madame Nesselrode was forced to pass by superior orders, and which M. Alexandre Dumas was forbidden to pass by the same authority. This piece was originally to have borne the title of "Le Dame aux Perles," but it has been changed for that of "Diane du Lys." It is expected it will have a great *succes de curiosité*. Mdlle. Rachel has arrived at St. Petersburg, and has been received with all the distinction due to her talent. At the time she wrote to her friends here, she had not yet appeared before the public, nor given any representation. Madame George Sand is expected in Paris, where she is to arrive to direct the last representation of her *drame* "Maupratt," which the Odéon is to represent on the 27th of this month. At the Théâtre Français, two pieces of Alexandre Dumas are preparing—"Regulus," in one act; and "La Jeunesse de Louis XV.," in five acts. Theatrical news is about the only news which a Correspondent can gather at this moment, unless he gives news of the theatre of war, where the actors on the scene are the Russians and Turks. How is this drama to end—where they begin fighting, to finish by explaining instead of beginning by an explanation and ending by fighting, if they found it impossible to come to an understanding? The cannon shots which are fired on the banks of the Danube re echo on the banks of the Seine and the Thames; where they hold every thing in suspense, and retard the preparations for the winter season, of balls, fêtes, and concerts.

Apropos of fêtes, a most brilliant one was given a few days ago by the Prince Stouzza, formerly Hospodar of Wallachia, at his charming hotel in the Quartier Beaujon, which M. Visconti, the celebrated architect had built for himself, and which he sold about two years ago.

Several marriages are talked of; and among the rest is that of M. Leopold Lehon to Mdlle. de Wagram, who the matrimonial chronicle has successively represented as being about, in the year 1849, to marry Louis Napoleon, President of the Republic, and, in 1852, as the future bride of Prince Napoleon, heir presumptive, in case of the Empress having no children. The *salon* of Madame Lehon is open on Saturdays to a small number of *habitués*—amongst whom may be seen the members of the *corps diplomatique*; they go there on quitting the Princesse de Lieven. There is but a little bit of the Avenue of the Champs Elysées which separates the Hôtel of the Rue St. Florentin, inhabited by the Princesse de Lieven, from the Hôtel in the *rond point* of the Champs Elysées, built and inhabited by Madame Lehon.

Formerly it was at the Hôtel of the Place St. Georges, inhabited by M. Thiers, that the *corps diplomatique*, in quest of news and eager for gossip, assembled; but sides and destinies change. Now the Hôtel of the Place St. George is only visited by the vendors of objects of art, who go to offer to M. Thiers one day what they purchased the day previously. M. Thiers has, alas! the same fate as M. Guizot and M. Molé; these three great statesmen are now merely three relics of a buried *politique*.

The Emperor and Empress are at the Palace of Fontainebleau. M. Rossilef and M. Hubner, the Russian and Austrian Ministers, have received invitations for the fêtes at Fontainebleau. But it is not believed that the former will accept the invitation.

An article in the *Moniteur*, in answer to the manifesto of the Czar, has made no little sensation in the diplomatic world. The official journal gravely convicts the Russian Government of gross "inexactitude"—which seems to be the diplomatic equivalent for falsehood—in the assertions of the manifesto. Every one concludes that the *Moniteur* would not have spoken so freely and the French Emperor not made up his mind to act with firm determination. No orders have yet been given at the Ministry of War, which would seem to indicate an intention of sending troops to Turkey; but every arrangement has been made for transporting 20,000 men, if General Baraguay d'Hilliers should inform the Government that this measure is necessary towards the security of the Ottoman territory. Immense quantities of ammunition are in course of being despatched from Lyons to Toulon. It is expected that the decree for the increase of the Chasseurs de Vincennes will appear in a day or two.

Count Eugène Dubois, ex-Director of Public Works in Algeria, has been appointed, by the Emperor, Director General of Railroads—an office newly established, for the better regulation of railways and the prevention of accidents.

The Emperor and Empress came to Paris the other day, and witnessed some experiments with an electro-magnetic machine, invented by Mr. Shepard, of Gallow-square, London, for the extraction of hydrogen gas from water. These experiments, which were also witnessed by Lord Cowley and the Minister of State, were in every instance successful, for on turning a wheel for one minute, sufficient gas was produced to supply seven gas-burners, all burning at the same time, and with a brilliant light. Their Majesties congratulated Mr. Shepard on the success of his discovery.

HOSTILITIES BETWEEN TURKEY AND RUSSIA.

THE WAR IN WALLACHIA.

The following startling despatch, announcing the defeat of the Russians, was received in London on Wednesday morning, where it caused much excitement:—

VIENNA, Wednesday Morning.

The Turks have already passed Bucharest, which is in flames in three places.

The Russians are retreating on Cronstadt.

Fifteen thousand Turks have been despatched to intercept them through the Principality of Servia.

The Austrian Government have ordered an army corps to be immediately concentrated in Croatia.

Cronstadt, in Transylvania, is situate in the direct line of retreat from Bucharest, supposing the Russians to have been cut off from their communications with Moldavia.

So far as the chief incidents of the campaign in Wallachia can be made out, it appears that the Turks crossed the Danube without serious molestation, excepting at two points—Oltenitza and Giurgevo, which are the points threatening the Russian head-quarters at Bucharest, and which, therefore, seem to have been more vigorously defended. At Giurgevo the Turks have not yet succeeded in effecting a lodgment, and they remain ensconced on an island of the Danube opposite that fort. At Oltenitza (a village not set down in the maps, but understood to be only forty miles from Bucharest), they have been twice attacked, and have twice maintained themselves against the Russian forces.

The reports transmitted of a lodgment of the Turks at Oltenitza, of a severe battle fought afterwards, and of the circumvallure and retreat of the Russians, appear to be substantially true, and they point not to a single engagement, variously related, but to a series of desperate encounters on the same spot. On the 3rd inst. the Turks crossed the Danube at Turtukai, and advanced to the Wallachian village of Oltenitza, a short distance from the river, where they entrenched themselves. In this position they were presently assailed by a Russian division, under General Perloff (or Parloff), which they repulsed. It then seems that the Russians, reinforced by the division of General Dannenberg, renewed the attack upon Oltenitza on the 4th, and that they were again defeated with still greater loss. It was probably to the latter of these conflicts that the report alludes, which says that officers killed as an item of the casualties—the first encountered having been described as less sanguinary. After this the Russians "retreated upon Bucharest," as reported; from which place, it is said, Prince Gortschakoff was about to advance with the main body of his army to attack Oltenitza once more. A telegraphic despatch announces that the Turks on the 11th repulsed the renewed Russian attack on their position at Oltenitza.

Great preparations were made by the Russians for the defence of Giurgevo, which is the key to the position in Wallachia. If the Russian pontoons were sent to Giurgevo; and General Schmopoff, crossing over with a large force of Russians, attacked the Turkish position upon the island opposite Giurgevo so fiercely, that the Turks were dislodged from the island. The affair, however, renewing the attack with great gallantry, retook the island, and compelled the Russians to retreat across the river. At the date of the latest advices, the Turks still held the island opposite Giurgevo, where they will be ready to fall upon the Russians in the event of any reverses which may compel the retreat of the other division of the Russian army. The main body of the Turks have crossed the Danube at different points, and between 90,000 and 100,000 Turks are believed to be now in Wallachia. Omer Pacha has crossed the Danube in person, and was at the head of 35,000 men, ready to receive Prince Gortschakoff, in the threatened attack upon the Turkish position—an attack in which the Russians appear to have been defeated, with great loss. It is believed that Omer Pacha's troops will also attempt to cross the Danube above Galatz, in order to get into Moldavia. Ismail Pacha commands 24,000 troops at Kalafat; and, as soon as reinforcements arrive, he will march upon Krajova. The Russians are said to be in full retreat along the road from Kalafat to Krajova, and the design of the Turkish General is evidently to take the Russians in the flank and rear, by the advance of troops from Kalafat and Galatz. Supposing the Turks to have reconquered the capital of Wallachia, that extent of country has still to be fought over. But it is a perfect level; has no stream of any breadth, nor any town of magnitude. It is probable, therefore, that retirement across the Pruth, immediately above Galatz, or a retreat upon Jassy, would be the result of a defeat at Bucharest. Reinforcements could not be despatched by way of Odessa without risking a sea-fight; and a rising of the country people in Moldavia would even embarrass the return to Jassy.

The *Moniteur* confirms the intelligence of the advantages obtained by the Turks in the affair of the 4th instant at Oltenitza. The *Moniteur* says:—

The Government has received the following details of the sanguinary affair of the 4th between the Turks and Russians at Oltenitza. It is on the triangle formed by the Argis, the Danube, and the village of Oltenitza, that the sanguinary combat of the 4th took place. The Turks were only 5000 strong; they occupied the quarantine building situate in the plain near the Danube and the village. This building and an old redoubt were fortified with materials brought from Turtukai. The Turks made use of the batteries of that fortress with great success: they threw across the Danube, which is here about 260 toises in width, shot and shells, which reached the Russians at the foot of the village situate on an elevation. General Dannenberg, who directed the operations, was at a short distance from the village with his staff. The loss of the Russians is estimated at 1200 men killed or wounded. Almost all the *chefs de bataillon* were wounded, as well as several colonels. The great majority of the wounds were made with conical balls. Prince Gortschakoff has left for Oltenitza. It is intended to attack the Turks with 24,000 men.

The *Siècle* gives the following additional particulars:—

On the 2nd and 3rd inst. the Russian General Panloff endeavoured in vain to prevent the Turks from establishing themselves in advance of Oltenitza, on the Wallachian side of the Danube. The Ottomans maintained their position and caused the Russians a loss of 600 men, among whom are eighteen officers. The position of Oltenitza, situate about thirty-eight miles from Bucharest, which is the base of their operations in Wallachia, appeared so important to the Russian Generals that they resolved to make a fresh effort to dislodge the Turks from it. The attack was recommenced on the 4th, and continued through part of the 5th. The Russians have had 1200 killed or wounded, and it is stated as certain that the Ottoman gunners, armed with the Vincennes carabines, made terrible havoc in the ranks of the officers. Almost all the commanders of corps have fallen. From the summons made to Prince Gortschakoff by Omer Pacha to deliver up all the forfeited places into the hands of the Turks, and to evacuate the Principalities as promptly as possible, there is reason to infer that the troops of the Sultan have assumed a real attitude of superiority.

The *Wanderer*, of Vienna, has the following, dated the 10th inst.:—

It was on the 2nd that the Turks concentrated themselves between Tschitschatschka and Turukai, to the number of 14,000 men, without reckoning the reserve. They were concealed by the wood. In the night of the 3rd the passage of the river was attempted near Oltenitza, and effected by force. As soon as 200 men had been landed, the boats returned to fetch others. The advanced posts of the Russians were attacked, and the crews within gun-shot of the place. The Russian forces amounted to 15,000 men. The combat began by both sides, and great bravery was exhibited on both sides. The cannonading lasted eighteen hours. The Russians received reinforcements from Kenarvra. The struggle terminated at noon by the retreat of the Turks, but was renewed in the evening. The Russians retired on Oltenitza, where they had an entrenched position, while the Turks remained on the banks of the Danube, and threw up entrenchments. On the following day the redoubt of cannon was again opened. The farms in the neighbourhood of Oltenitza fell a prey to the flames, but the town itself did no suffer. The combat was most sanguinary, and the loss on both sides was severe. The Russians made every effort to retain their power to refuse the superior forces of the enemy; but the Turks displayed the most extraordinary bravery, and gave proofs of their superiority. When the affair came to the bayonet, many drowned themselves up to their waists in the water, but would not give way. On the 5th, the Turks maintained themselves on the Wallachian side, and the Russians retired towards the position of their reserve at Oltenitza. On the 3rd, the Turks concentrated themselves at Silistria, and advanced as far as Kalarasdche.

A Vienna despatch of the 10th says:—

The Turkish forces at Oltenitza consist of 17,000 regular infantry, 3000 Bashi Bozouks, and 4000 artillerymen, commanded by Generals Prim. Report says that Klapka will supersede him.

The Russians have concentrated 35,000 men at Budeschti (between Bucharest and Oltenitza), and estab lished head-quarters there.

THE WAR IN ASIA.

Letters from Constantinople of the 31st mention that intelligence received from Asia Minor announced the capture, by the Turkish troops, of five forts on the frontiers of Georgia. The first of these forts is called Gartom, and was taken by the Kurds; the second, Futilee, by the contingent from Damascus; the third, Hermini; the fourth, Israt; and the fifth, Kuchat, were captured by the Bashi-Bozouks, or irregular troops. The intelligence was believed to be correct in Constantinople.

A private letter from Trebizonde, of the 22nd ult., states that Abdi Pacha marched from Erzeroum, through Kars, on the 12th October, at the head of 12,000 regular troops. Ten thousand regulars had arrived at his head-quarters from Kurdistan and Diarbekir. Fifteen thousand redifs are likewise encamped in the neighbourhood of Kars. The Government has called the Bashi-Bozouks into active service. They are irregular volunteers, armed with muskets without bayonets, with pistols, and a poignard with a broad blade. There are nearly 30,000 of them between Batoum and Kars. A Russian corps of 30,000 men had been encamped for the previous twenty days at the foot of the mountain which commands Alexandropol, distance twelve hours' march from Kars on the Georgian territory. Another corps of 15,000 men is encamped in the neighbourhood of Akhalzikh, which is situated on the road of Batoum by the mountains which command it, whilst it is to be bombarded on the sea side by ships of war: 1500 riflemen, armed like the Chasseurs of Vincennes, were landed at Trebizonde, on the 21st, from Turkish ships, together with 6000 infantry. These troops are well armed and equipped. Twenty-two steam-boats were expected with additional troops for Erzeroum and Kars. It was expected that the Turkish Government would despatch 8000 good troops from Constantinople to Batoum the following week. This was absolutely necessary, for Batoum was defended by only 2000 regular troops and 6000 Bashi-Bozouks, who could not resist the Russian troops preparing to attack it.

Another letter from Trebizonde announces that the Russian fortress of Daniel, situate in Circassia, on the right bank of the Teeck, between Mosdok and Tiflis, was surrounded by the insurgent Ossetes and by a large force of Circassians, and that it was on the point of falling into their power. The same letter announces that the authentic details had been received of the affair which took place some time back, when 20,000 Russians, lately arrived in the country, were overpowered by Schamyl's troops, and all that were not killed were made prisoners, and are now at Ardiunzki, in Circassia.

Private letters from Erzeroum, of the 25th ult., announce that the Turks had concluded an alliance offensive and defensive with Schamyl, and with the Musulman tribes of Mingrelia, Imeritia, Gouriel, and the other independent tribes of Asia. These countries can furnish 80,000 warriors, well practised in mountain warfare.

The garrison of Sebastopol had marched against the Caucasians. The garrison was replaced by 15,000 men from the camp of Odessa, which were replaced by troops from Voczesenk.

The combined Turkish and Egyptian squadron operating on the Asiatic coast on the Black Sea has driven a flotilla of the Russian gunboats into Sebastopol.

The communication by steam communication between Odessa and Galatz is broken off. The Russians appear to have resolved that the Sulina mouth of the Danube shall silt up, as they have brought the dredging-machine away.

Advices from Belgrade announce that the Austrian corps of observation on the frontiers of Servia consists of 40,000 men, and that the Prince of Servia has sent one of his aides-de-camp to Constantinople, to give information respecting the situation of that province, and to concert measures for its defence, in the event of an attack on Turkey in that direction.

The arrival at Shiraz of the deputation from Affghanistan, which came to induce the Shah of Persia to declare against Russia, has produced a powerful sensation at the Persian Court. The Shah did all in

his power to delay the decision, and to suppress an anti-Russian movement.

A letter from Constantinople of the 31st ult. says:—

I am just in time to give you the important intelligence that the Sultan in his speech, while at the Grand Council of Justice to-day, declared that in the spring he will join the army, and personally conduct military operations against Russia. The greatest enthusiasm reigned in the assembly, which was composed of all the Pachas, civil and military, and most of the influential members of the Ulema. A proclamation will be published containing the above important declaration. All attempts to bring about peace are now useless. The Sultan, who so far has been weak and undecided in his policy, has now crossed over to the war party, and placed himself forward as its leader. The people here are frantic in their joy, and declare that they will all follow the Sultan. His Majesty, by a few words, has made himself more popular than the greatest Sovereign who ever reigned over this people. Hostilities have commenced between Montenegro and Austria. Letters from Varna state that hostilities had occurred along the whole line of the Danube, and that the steamer running between Ismail and Odessa was fired at by the Turkish forces at Isaktcha, and her commander and fourteen men were killed, and one passenger and several seamen wounded. The celebrated Tossoun Pachs, who behaved with such daring courage during the last war with Russia, has been named General of Division, and will command the army of Sophia. The Porte has decided to form a foreign legion, to be employed in Asia. About forty Poles have already entered the service; but the majority here prefer to wait for anew turn of events, whereby they can serve their own country.

RUSSIA.

The *Journal of St. Petersburg* contains the following official declaration:—"No embargo will be put on Turkish ships in Russian ports until the 22nd of November; but after that date they will be declared fair prizes, if their cargoes be not wholly Turkish property. Neutral flags shall enjoy perfect liberty throughout the continuation of hostilities."

An English gentleman, holding a situation in the Russian dockyard at Cronstadt, who has arrived at Portsmouth, brings word that the whole of the British artisans employed in that and other Governmental establishments in Russia, of whom there are a large number, have been discharged. This step is supposed to have been taken in reference to the present relations between the Governments of the two countries.

A letter from Odessa of the 31st October, says, that from the 10th to that date 400 vessels had entered that port, and that double the number were expected. They were all taking in cargoes of corn, and the greatest activity prevailed. Great activity was also visible in the other Russian ports of the Black Sea and of the Sea of Azoff in the shipping of grain. The weather was magnificent, and most favourable to the exportation. The deposits of grain at Odessa were enormous—sufficient to fill all the vessels announced. The carters were earning 14s. a day per cart and pair of oxen.

The following official circular has been sent by the Count de Nesselrode to the representatives of Russia at the European Courts, in order to make known the disposition of the Emperor after the communication of the declaration of war by Turkey. It will be seen that the circular hints, on the part of the Emperor of Russia, that the intervention of England and France in the quarrel will have the effect of changing a local war into a general war:—

ST. PETERSBURG, Oct. 19.

Monsieur le ——. The efforts which we have not ceased to make for the last eight months for the arrangement *à l'amiable* of our differences with the Ottoman Porte, have, unfortunately been without effect to the present day. Nay, more, the situation seems to become more aggravated each day. While the Emperor offered, during his interview with his Britannic friend and ally, the Emperor Francis Joseph, fresh facilities to the Austrian Cabinet to explain the misunderstanding which existed, to it appeared useful to us for rejecting the modifications which the Porte desired to introduce in the note drawn up at Vienna, the Porte yielding notwithstanding the counsels of the European Representatives, to the warlike stamp(?), to the warlike ideas and the fanaticism of the Musulmans, like, as you will have learned, formally declared war against us. That rash step has, however, not frightened the Emperor, nor his intrepid ally the Emperor. We shall do not abandon, on that account, the resolutions announced from the beginning in our circular of the 20th of June. At that period the Imperial Majesty declared that, in occupying provisionally the Principalities as a material security for the satisfaction he demands, he was unwilling to carry any further the measures of coercion, but rather to avoid an effusive war. Such was, and such remains, our object. We permitted him to do so. At the present moment, and notwithstanding the fresh provocation offered to him, the intentions of my august master remain the same. The possession of the pledge which is in our hands, and the Principal ties gives us, though still ready, in fulfilment of our promise, to evacuate them the moment that we obtain satisfaction, we shall content ourselves with maintaining our position there, remamme on the defensive, as we are not forced to abandon the limits within which we desire to confine our action. We will await the attack of the Turks without taking the initiative of hostilities. We will then entirely depend on the Powers not to widen the limits of the war, if the Turks persist in waging it against us, and not to give to it any other character than that which we cause to leave to it. That situation of expectancy does not present any obstacle to the carrying on of negotiations. After the declaration of war it is not to Russia that it belongs to seek for new exposents, nor to take the initiative in overtures of conciliation. But if, when better informed as to its interests, the Porte will manifest a disposition to propose or to receive similar overtures, it is not the Emperor who will place any obstacles in the way of such an intervention. Such, Monsieur, is all that for the moment, it is permitted to me to inform you of, in the uncertainty we are as to whether the Ottoman Porte will give immediate heed to the warlike project it has just adopted. Inform the Cabinet to which you are accredited of our eventual intentions. They furnish an additional proof of the desire of our august master to limit as much as possible the circle of hostilities, if they should unhappily take place, and to spare the consequences of them to the rest of Europe.

Receive, &c., NESSELRODE.

It is rumoured in Paris that M. Kisseff, in presenting this note to the French Government, verbally informed M. Drouyn de Lhuys, in the name of the Czar, that if a single English or French ship should pass into the Black Sea he should consider it as a declaration of war

SPAIN

Marshal Narvaez has arrived in Madrid from Paris. He maintained the strictest reserve on his political views. On presenting his homage to the Queen, she told him that Her Majesty for her kindness in allowing him to return to Spain for the benefit of his health. The Queen is said to have replied to him

I perceive with pleasure that your health is good. I thought you were ill. Had I known that you enjoyed such good health I would have insisted on your going to Vienna.

The Marshal immediately took leave of her Majesty, and left on the 9th for Aranjuez

La Nacion, of the 3rd of November, has the following:—

In the *Epoca* is the following paragraph: "The Spanish correspondence published by the *Indépendance Belge* states that the present Minister of Finance has paid the Duke de la Victoria, in paper money, the [illegible] dol ars which were due to him for his allowance (sueldo) as Regent of the Kingdom, without any application whatever from General Espartero. With reference to the preceding article we have to state that, at a Cabinet Council presided over by her Majesty the Queen, it was, in fact, unanimously resolved, without any application, directly or indirectly from the illustrious Pacificator of Spain, that he should be paid the arrears which were due to him as Regent of the Kingdom; but the Duke de la Victoria, although he appreciated this mark of the value attached to his services, positively declined to accept any sum whatever: because neither now, nor at any period of his life, has he coveted riches; and also because, sacred as are his claims upon the State, he could not consent to deprive it of resources of which it stands so much in need in the present straitened condition of the Treasury.

EGYPT.

Abbas Pacha returned to Cairo on the 31st of October, from his journey to the coast of the Red Sea, after an absence of about six weeks

The present condition and prospects of Egypt are far from satisfactory. The exceedingly dear rate of the bile has damaged a large portion of the Indian corn crops, on which the natives depend for their sustenance at this season of the year. Prices of all articles are exceedingly high; and the constant seizure of men for the army depopulates the towns and villages, and only of those who are actually taken, but also of those who abandon their homes and conceal themselves, in order to escape being made into soldiers; so that the cultivation of the land is not attended to, and the next year's crops will be short.

Abbas Pacha has given the appointments of Minister of War and Commander-in-Chief of the army, to his son, El-Hamee Bey, who is only about sixteen years of age, who will no doubt draw the large salaries attached to his post, but can otherwise be but of little use.

The Viceroy is preparing about 18,000 troops to send to the Sultan, besides the 18,000 sent some time ago, to assist in fighting against the Russians, and he has ordered his steamers to come down from Constantinople to convey them. If his Highness succeeds besides, in inducing the Bedouins to send some irregular cavalry towards the Black Sea, the Sultan will have every reason to congratulate himself on having so devoted a tributary subject as Abbas Pacha.

Nearly fifty consecutive miles of railway, from Alexandria, are now in working condition; and, were it not for the troubles of the times, the works would get on much more rapidly.

SOUTH AMERICA.

By the *Severn* we have dates from Buenos Ayres, October 2nd; Monte Video, 5th; Rio Janeiro, 16th No events of importance had transpired either in the River Plate or in the Brazils. The internal condition of Buenos Ayres was rapidly improving, and a number of industrial enterprises were on the *tapis*. This packet brings a medium and private from the Government of Buenos Ayres addressed to all the European Powers against the treaty recently established for a Protectorate of the Island of Martin Garca.

INDIA.

Troops are being moved towards the north-western frontier with all despatch. In consequence of a rumour that the King of Persia is assembling a large army in the valley of Sultanieh in order to co-operate with Russia against the Turks. Reports have also reached Calcutta that an alliance has been concluded between Dost Mahmed, the ruler of Cabul, and the Emperor of Russia. There are said to be Russian emissaries in Affghanistan; and this rumour, together with the assassination of Colonel Mackeson, a false alarm of a combined Affghan attack on Peshawur, and the forced march of additional troops towards that part, occasioned a great deal of excitement on the frontier, and not a little Russophobia. It is stated that the presence of the Governor-General on the frontier has become a State necessity, and that he has consequently postponed his trip to Burmah. The rumours of intrigues between Cabul and St. Petersburg are, however, contradicted by intelligence which reaches us by way of Vienna, and which states that a deputation from Affghanistan has appeared at Teheran, and invited Persia, in case of war between Russia and Turkey, to espouse the cause of the latter. It is added, that the invitation was couched in language which made it very like an order.

Her Majesty's 8th (the King's) regiment, now stationed at Deesa, is ordered to march to Agra, there to fill the vacancy occasioned by one of her Majesty's regiments which has been ordered to the Punjaub.

The following circumstance connected with the assassination of Col. Mackeson by a Musulman fanatic, will be read with melancholy interest:—

The north-west has recently been startled by one of those great crimes which, in their character and circumstances, are almost peculiar to the East. Colonel Mackeson, the Commissioner of Peshawur, has been assassinated by a Mussulman of the Valley of Swat; instigated partly by the religious fanaticism which burns so fiercely in all those mountain clans, and part y by a wild idea, that the death of his victim would be the salvation of his native country. The man—a stalwart Mussulman, unusually fine, and with a face of singular determination—had heard that in the cold weather "twelve guns" (the new mountain train) were to be despatched into the valley. In the mind of an Oriental, everything depends upon the chief, and he appears immediately to have formed the design of murdering the "Burra Sahib," his deputy, and his assistant, and thus prevent the despatch of the dreaded artillery. With this view, he left Jelalabad, reached Peshawur, and for three days mixed with the crowd in the Commissioner's office, in order to observe the localities, watch the disposition of the guard, and ascertain the habits of his victim. On the evening of the third day, the 10th, the Commissioner had dismissed his attendants, and was reading a letter in the verandah. The assassin took advantage of the opportunity. The Colonel's eyes were bent upon the paper, and the murderer drew an enormous knife from his waist cloth, in a single spring stood by the side of his victim, and plunged the weapon into his breast. The knife had been sharpened like a razor; and the Commissioner, in the instinctive effort to wrest it from his chest mangled his right hand to a degree which rendered him, though a singularly powerful man, utterly unable to cope with his antagonist. He would have been slain upon the spot but for the exertions of an old Sirdar, who succeeded in keeping off the assassin until secured by the sepoys. The wound proved profusely, and it was found impossible for some time to ascertain the exact nature of it. On the following night the surgeons pronounced the case hopeless; but towards morning the unfortunate officer rallied, and some faint hopes of his recovery again entertained. They were, however, illusory. The right lung had been injured, he drew breath with difficulty and at long intervals, and at ten o'clock on the 14th instant he expired. Up to the last moment his mind was as unclouded as in perfect health; and the calm firmness with which he met his fate appears to have deeply impressed those who stood around. [illegible] before he expired he was warned that the end was near, and calmly and quietly gave instructions for drawing up his will; but his mind was full of the Kohat Pass, to which he had organised an expedition, and of which he spoke frequently and with earnestness.

A letter from Peshawur, dated October 2, says—

Considerable excitement has been felt here ever since the death of Colonel Mackeson. The assassin was kept in close confinement till yesterday morning, when he was executed. [illegible] was arranged on a hill in front of the city, just opposite the late Commissioner's house. A troop of horse-artillery was out, the guns unlimbered and ready for action, with the muzzles pointing along the broad road towards the city. The artillery was supported by irregular cavalry, and two regiments of infantry—one European, and the other native. There was a large crowd collected to witness the execution, but nothing occurred to disturb the solemnity, and the body had been hanging a short time, it was cut down and burnt. This was done to prevent the Mussulmans in the city and neighbourhood from carrying it with honour, and even with veneration in the estimation of the canonised murderer, though he would have been by no means the first shedder of innocent blood thus honoured. The city is overlooked by a fort, where the Government keep all their immense stores, and which is [illegible] guns, &c. It is a ricketty old place, and they say a salute could not be fired from the walls without bringing them down. However, we have put two 24-pounders into position on one of the bastions nearest the city, loaded with grape, and their muzzles pointing towards the crowded streets. The inhabitants did not like the look of them at all at first, though they have got a little better accustomed to them now; but there they are, ready to pour death and destruction into the city the moment any insurrectionary movement takes place. The garrison permanently located here is far too small. By returns recently called for, it seems that the average run of duty for the troops here is two nights in bed to five on duty. The Commander-in-Chief will not apply for more troops, lest he should embarass the Government while military operations are being carried on in Burmah. The cold weather is setting in; fever still very prevalent, and one native regiment completely *hors de combat* from it.

Major Herbert Edwardes is spoken of in India as the most likely successor to Colonel Mackeson.

Mr. Thomason, Lieutenant-Governor of the North-West Provinces, died at Bareilly on the 27th of September. He was appointed to the government of the Agra Presidency by Lord Ellenborough, and the selection was the happiest which Lord Ellenborough ever made, inasmuch as he was above all other Governors-General for selecting the best men for every vacancy, disregarding all rules of seniority and precedent. Mr. Thomason did for the north-west provinces almost as much as Peter the Great did for Russia; he made it to be known as "the model Presidency," in the extension to the masses of the benefit of vernacular education, in the establishment of engineering and other colleges for affording a professional education to natives of the higher and middle classes, and in the acceleration of mails and the construction of works of public utility, on a scale commensurate to the wants of the country. The Agra Presidency has, for the last ten years, been "first" in the race of progress, and the other presidencies "nowhere." Mr. Thomason's death is felt as a calamity throughout the great province he had so long governed; his life appears to have been shortened by his overdevotedness to the public service, which was such that he despatched official business to the day of his death by the official packets and papers about him, and almost with the pen in his hand."

Lord Dalhousie has planned, and is about to carry out, a magnificent military road, between Calcutta and Prome, which is to be so far ready as to be used by troops by the end of next rains. The whole distance thus traversed will be from Calcutta to the Aeng Pass, 570 miles; and from the Pass onward to Prome, 120 miles: total, 690 miles. The line selected is from Calcutta to Dacca, through Chittagong, thence to turn south to Ramoo, and thus through Mungdoo to the Aeng Pass. The road will traverse and open out a communication from Calcutta through the whole of Arracan to the south eastern coast. From the Pass to Prome there are few, if any, difficulties in the way of construction; and the distance to be traversed is only 120 miles. Should his Lordship remain in India long enough to complete this stupendous undertaking, it will cause his name to be long remembered.

CHINA.

It is still reported that Pekin has been taken, but no positive news has been received from the seat of war since the arrival at Pekin of Kwang's troops. It is said that the Emperor has at length accepted the assistance of the Tartar chiefs north of the wall. This may simply increase his present difficulty, for it is probable that the Tartars would not rest content with rendering assistance. We may expect soon to hear that the capital has fallen.

Shanghae has fallen into the hands of some men belonging to the Triad Society, but who have no connection with the insurgents under Tae-ping-wang. The city was captured on the morning of the 7th September, by a low band of Kwantung and Fokien men of the Triad Society, mixed with Singapore men, and with some of the low class of Shanghae. The place was taken by surprise, with little resistance—the Imperial troops, chiefly Triad men, deserting their authorities. The second magistrate was killed, and the prisons were thrown open. Two other Mandarins [illegible], and the Taoutae, Samqua, the well known Hong-merchant [illegible], deserted by his guards, presented himself unprotected in his official robes and honours to the multitude, who being at the moment chiefly Canton men, his life was spared, and he ultimately made his escape, and is now under the protection of the American Minister. There had been little loss of life, and the main object of the insurgents was plunder of the public money and demolition of the public offices

The insurgents were collecting a force wherewith to attack Soochow. The surrounding country was in a state of confusion, the villagers fighting with these piratical hordes, who levied forced contributions. There was a strong impression that the Imperialists would send a force to drive away this mob, and the thirty-two armed junks and boats, with about 2000 men, which passed through the harbour on the 12th instant, for Shanghae, may arrive at an opportune moment. The foreign settlement was undisturbed, but there was a good naval force at Shanghae, and great vigilance was kept up on shore. At first there were some signs of danger to foreigners, but a volunteer corps of British merchants, aided by some blue-jackets from the *Hermes* and *Salmander*, kept the visitors in awe. The Custom-house was destroyed, and immediately the traders in port made haste to depart without paying port duties. But the American and English Consuls stopped the attempt at levanting, and constituted themselves provisional Custom-house authorities. The Yankees grumbled, but were compelled to pay. The question of the payment of duties was still being agitated by the foreign Consuls and communities.

The Chinese authorities at Shanghae were still maintaining a species of offensive operations on the Yang-tse-kiang, and had appointed an Englishman to the commodorship of the various European modelled vessels recently purchased into the service of the Emperor.

At Ningpo all was quiet at latest advices. Her Majesty's sloop *Rapid* sailed hence for Foo-chow-foo on the 1st. On the 10th, a stray shot from a war junk took off the arm of the carpenter of Her Majesty's brig *Rapid*, or shattered it so as to require amputation.

We hear from Foo-chow-foo, to the 18th Sept., that the country around was in a very unsettled state. The American house, lately gone there, had succeeded in loading and despatching three vessels with teas thence, viz. the *Adams and Olga*, barque, and *Old Hickory*; destination kept secret, but probably for the colonies and America.

The news from Amoy is brought up to the 1st September. The long-threatened attack by the Imperialists commenced on the 25th Aug., but the rebels were still in possession of the town when the shipper schooner *Misseppe* left on the 2nd.

On the 12th August, the rebels, with an overwhelming force, attacked a body of the Government troops, and completely routed them, burning also a village, and returning with such spoil as they could lay their hands on—tents, baggage, and wreck of houses. The wind and tide prevented the naval force from assisting the Imperialist soldiers

Subsequently, the Imperialists, though far superior in numbers to the rebels, performed no exploit of consequence. Several attacks (so called) had been made by the fleet upon the forts, but care was taken to anchor beyond gun-shot, so that no injury could possibly be done on either side; and the only accident which happened was from the bursting of a gun on board a junk, by which eleven men were killed or wounded. In one instance, however, several of the Imperialist vessels penetrated in to the [illegible] harbour, and [illegible] [illegible] [illegible]

KYOOK PHYOO, ARRACAN—EMBARKATION OF THE ARRACAN BATTALION FOR RANGOON, IN THE STEAM-FRIGATES "ZENOBIA" AND "MOZUFFER."

brought from the northern provinces. It is even asserted that a river blockade has been actually set up against ourselves, and that no provisions were allowed to go down the Irawaddy from above Meaday.

Lord Dalhousie has not yet taken his departure for Rangoon, being detained at Calcutta by the very unsettled state of the north-west frontier. In the meantime a great portion of the 2nd Bengal Fusileers (Europeans) have been despatched from Fort William to Rangoon; and, as portions of her Majesty's 52nd Light Infantry and 81st Regiment have arrived at Calcutta, the remainder of the 52nd Fusileers is, no doubt, ere now, on its way to Rangoon. The whole of Pegu is, for the future, to constitute one military division, which Sir John Cheape has been nominated to command. When the latest news left Rangoon, an attack from Meeah Toon's followers was expected at Henzada, and a reinforcement of troops had been sent from Rangoon to that station.

We are indebted to a Correspondent, whose letter is dated "Kyook Phyoo, Arracan, Aug. 3, 1853," for an Illustration of the embarkation, at Kyook Phyoo, of the Arracan battalion in the steam-frigates *Zenobia* and *Mozuffer*, for Rangoon. It appears that half of the battalion proceeded in the latter vessel, a noble ship of 1400 tons, 600-horse power, and which, a few days after, met with a sad disaster, having struck on a shoal at the entrance of the Rangoon river, and become a total wreck. Assistance was near at hand at the time, and every soul on board saved: but the troops lost the whole of their arms, equipments, &c., and the officers every single thing they had. The *Mozuffer* was a heavily-armed frigate, with a crew of 300 picked British tars; and her loss will not easily be supplied to the Government.

In the harbour are seen the gun-boats and "flats" attached to the Arracan station for the transport of the troops wherever their services may be required, and upon which the men are embarking for the frigates, the last of which is the ill-fated *Mozuffer*. On the right foreground are seen some men of the 68th Bengal Native Infantry, the only corps of the line now in Arracan.

Kyook Phyoo is a pretty place; its climate milder than in Bengal, though not so healthy for the sepoys as the north-western provinces. The officers' houses are all situated on the beach, and open to the sea; and the sea-bathing is a luxury which is duly appreciated, for this is the only station in the Bengal Presidency where it can be enjoyed. Major Maling commands the 68th; and in the Arracan province much is owing to Major Maling for his able disposition of the troops under his command during the progress of the Burmese war; all the posts and passes having been most effectually guarded, and the most judicious arrangements made to repel any encroachment on the part of the Burmese. Two hundred men of the Arracan battalion are still in the Aeng Pass, garrisoning the fortified position at Naragan, which was so gallantly captured by a handful of these brave fellows last cold season.

ENTRY DOCK AND PUMP-HOUSE, KEYHAM STEAM-YARD.—(SEE NEXT PAGE.)

HER MAJESTY'S NEW STEAM-YARD, AT KEYHAM.

KEYHAM Steam-yard—a portion of which was brought into service about six weeks since, on docking her Majesty's ship *Queen*, of 110 guns—lies about half a mile north of Devonport, and nearly opposite to Thanks, the seat of Lord Graves.

The growing wants of the Navy, and the vast importance of possessing dry docks of superior capacity to those in her Majesty's Dockyard, Devonport, so that ships of every class could be docked irrespective of tides, induced the Lords Commissioners of the Admiralty, at whose head was Lord Haddington, to construct a dockyard at Keyham Point of such calibre as to allow from twelve to fourteen of the largest steam-ships to be docked or repaired at one time. This decision was arrived at in 1844, after much deliberation. The late Colonel Brandreth, R.E., who was the Director of Works at that period, and a powerful advocate for the scheme, immediately formed a staff of officers for putting their Lordships' views into operation. It was not until careful survey on both sides of the River Tamar had been made, that the site at Keyham, containing an area of 73 acres, was decided on. Its contiguity to the Gun-wharf and Dockyard was considered a strong argument in favour of this selection. Though opinion varied as to the most eligible spot for this magnificent scheme; nevertheless, it was found on the whole, that Keyham offered superior advantages to all others. Accordingly, plans were made out and a contract entered into with Messrs George Baker and Son, of Standgate wharf, London, on the 31st August, 1844; who first formed an extensive cofferdam, 1600 feet long by 26 feet wide, in a line running north and south—the south end resting on a private wharf, in Moon-cove, and the north forming a junction with the pier of the present Government Powder-magazine Basin—thus including, between the foreshore and high water mark, nearly fifty acres of mud, &c.

The width of the cofferdam afforded facilities to the contractor for unloading materials, and in fact it was, for several years, made use of as a wharf. The south end, from the great depth of mud above the rock on which all the masonry is founded, required banks of fir timber, of unusual length and scantling—these varied from forty-five to sixty-six feet in length, and were often driven by Nasmyth's steam pile-driving machine in from three to four minutes.

The dam being completed, and the water excluded from the river, the excavations were followed up with promptitude. A steam-engine, of 40-horse power, was constantly at work, night and day, to keep the foundations clear of water. Several miles of rails were laid down; travellers and cranes erected, for the better transit of stones and materials; two additional steam engines were put up for grinding mortar, hauling silt out of the foundations, &c.; and in the course of three years the value of the plant on the ground was not less than £15,000.

On the 12th September, 1846, the first stone was laid, with the usual ceremony, by the Right Hon the Earl of Auckland, First Lord of the Admiralty, in the presence of all the principal officers of each department, and a large assemblage of the *élite* of the neighbourhood. The progress of the works, though at first they were carried on with the greatest vigour, soon experienced a reverse—through the opposition of certain members of the House of Commons. It was at one time seriously contemplated to give up Keyham altogether, notwithstanding the large amount of money already expended, and its evident advantages to the country.

The indefatigable exertions of Mr. Corry, the late Secretary of the Admiralty, assisted by a few others, however, prevented, in a great measure, this abandonment of a work worthy of any time and any nation. This boast has been exemplified, in a marked manner, on a recent occasion, by the facilities afforded for docking and undocking a line-of-battle ship with all her stores, guns, masts, and crew on board in a few hours.

The work already perfected comprises about 3,800 feet run of sea-wall, three dry docks, entrance lock, south basin, three parts of the north basin, eight powerful cranes, seven caissons, thirty two large capstans, fifty-two large sluices, and all the underground culverts, two 50 horse power pumping-engines, one 20 horse power engine, for driving fans to supply air to forges, working turning machine for millwright, and pumping water into reservoir; an iron dock smithy, 140 feet long by 45 wide, with sixteen forges, two iron workshops, 150 feet long by 50 wide; officers' offices for the establishment, entrance gates and buildings for police and military guard, &c.

The South Basin is entered through the entrance lock, and is 630 feet long, 561 feet wide, with a depth of 28 feet water; at which depth it will generally remain.

The entrance lock is 80 feet wide, 275 feet long to outer stop floor, and formed so as to be used on an emergency as a dry dock. The depth of water in front and at the entrance, at low water, is 20 feet, average spring tide; and at high water, from 36 to 38 feet on the sill, thus affording the great advantage of docking at any time of tide. This unusual depth has been acquired by a system of dredging, which has much improved the run of the stream, and consequently but little deposit has yet been found. The entrance is protected by a large wrought-iron square, or rather rectangular-shaped caisson—42 feet high, 13 feet 6 in wide, and 84 feet long—which can be removed in fifteen minutes into a recess formed for its reception in the masonry on the south side of the lock, and as quickly replaced across the entrance, excluding the water from the river in the most perfect manner. It is the invention of Mr. W. Scamp, Assistant-director of Works at the Admiralty.

The head of the lock is also closed by an iron caisson of a ship-shaped form, raised or sunk in a groove in the masonry. The peculiarity of this vessel as well as of five other caissons, consists in the method of working. The whole of the bottom or hold of the caisson is formed into one large air chamber, a part of which is occupied by some 220 tons of ballast. Immediately above this chamber is what is called the tidal deck, into which the water has admission through two sluices fixed in the centre of the caisson. A second deck is also formed, above the tidal deck, at about high water mark of a spring tide, on which are provided three tanks, capable of holding some thirty tons of water. The caisson, when afloat, swims to a line on a level with the lower part of the tidal sluice. If it be required to sink the caisson, the *modus operandi* is as follows:—Close the tidal sluices, fill the tank from the main—the weight of water submerging the caisson about eighteen inches; then open the tidal sluices, which, admitting the water on this deck, soon completes the sinking. If to raise, run off the thirty tons of water from the ballast-tank: the caisson becomes buoyant, discharges the water through the lower sluices, and frees the tidal deck of water; after which she can be removed. A third or upper deck forms a good carriage way across the entrance.

On the eastern side of the south basin, three large dry docks are formed in the solid rock, and faced with Cornish granite: they are drained or filled by a complete set of sluices or culverts, which allow the water to run from one dock to the other with facility, or to the large 50-horse pumping engine, south side of the entrance lock; which engine has facilities for throwing the water back into the basin, if required.

The North, or Queen's Dock is, from mitre post to head, 318 feet long, 80 feet wide at the entrance, 98 feet wide at mid-ships, and 28 feet water on sill.

The Middle Dock is of similar dimensions but not so deep by five feet.

The South Dock is 536 feet long, and of similar width and depth to the middle dock. Iron caissons are fitted to all the docks.

Eastward, and immediately connected with these docks, is the dock smithy, provided with sixteen forges. South, and close to this building, is a steam-kiln for steaming oak planking.

On the north side of the Queen's Dock, two iron buildings are ready for the carpenters and millwrights, the machinery for the latter will be driven by the small engine at the east end.

In front of the Queen's Dock, and approached by a neat flight of granite steps, are the officers' offices—a building combining great taste with simplicity of design. The general level of the yard, though seven feet above high water mark of a spring-tide, is about twelve feet below the level of the street in front of the new entrance-gate, and is, consequently, approached from the yard side by an ascending road at the back of the dock smithy.

The gateway buildings are in keeping with the rest of the work, and have a most imposing frontage: that on the east side of the entrance is for the police-guard, and the south building for the military.

Underneath the latter is the mouth of the proposed tunnel to the Dockyard, which it is intended to construct as soon as an act can be passed in the next session.

Round the basin walls are three powerful iron cranes—one by Carmichael,

of Dundee, which has been tested to forty tons; the two smaller cranes, to twenty tons, and are by Fairbairn, of Manchester. The latter gentleman has just completed another sixty feet high, plumbing fifty feet over wharf, to carry sixty tons. The foregoing includes that part of the yard now nearly ready for immediate use. But this is only a moiety of the original scheme.

The North Basin, though far advanced towards completion, is yet some 300 feet short of its proper length, in consequence of the tardy progress making by the Ordnance department in constructing the new Powder Magazine at Bull Point. This basin is approachable from the river by an entrance of 80 feet wide and 27 feet water on sill at high water. Its length is to be 800 feet long, by 450 feet wide, and 28 feet depth water

On the east wall of North Basin it is proposed to erect factory buildings, with store house, foundry, engine, and boiler-houses, and all the requisite machinery for repairing the largest marine engine now in the fleet. The length from north to south is to be 800 feet long by 60 feet wide; and from east to west, 360 feet long by 60 feet wide; enclosing an area (six acres) which is to proceed to entirely cover with glass; so that work may progress at all times, without interruption from the weather

On the high ground, near the Saltash road, reservoirs are forming for fresh and salt water, as well as foundations for a neat row of dwellings for the executive officers

The cost of the work up to this time exceeds £900,000, including £27,000 for the purchase of the estate at Kinterbury for the new Powder Magazine.

The probable outlay, when completed, will not exceed £1,500,000. A work of this magnitude claims many parents; but the foundations of the river and basin walls, the entrance lock, and two docks, with all the culverts and sluices thereto, were designed and carried out by R Townshend, Esq. C.E.—that officer having succeeded Lieutenant-Colonel Williams in charge of the works from the commencement.

All the buildings and cassions are from the Director of Works department, designed by Mr. William Scamp; as is also the Long Dock.

The whole is founded on slate-stone rock, offering a guarantee of stability for ages to come.

PROVINCIAL INTELLIGENCE.

EASTERN AFFAIRS AT GLASGOW.—A requisition, signed by nearly a hundred of the electoral body, has been presented to the Lord Provost of Glasgow, to call a public meeting, to consider the aggressive policy of Russia in relation to Turkey and other European Powers. His lordship, in compliance with the requisition, has agreed to call the meeting for Wednesday, the 23rd instant.

EARL DURHAM'S STOCK.—The annual sale of fat cattle and sheep belonging to the Earl of Durham, took place last week, at Bowes House, on the York and Berwick Railway. The various lots were bought at prices about £2 6s higher than those paid last year for beasts, and 3s. to 4s. a head for sheep, and these prices, too, for animals in not nearly so good condition. Fifty-three half-bred ewes and lambs brought prices varying from £1 4s to £2 8s.; 14 short horned heifers, £17 to £24 10s; 19 Galloway heifers, £16 to £22 5s.; 20 West Highland heifers, £12 to £16; 20 West Highland steers, £14 15s. to £17 10s.; 8 short-horn bulls, £17 10s and £18. Sheep from £1 9s. to £1 10s. These prices would give an average of 7s. 6d. to 8s. 6d. per stone for beef, and 7d. to 7½d. per lb for mutton.

WHEAT SOWING.—In the home counties—in Essex, Suffolk, Norfolk Kent, and Surrey—wheat-sowing has been brought to a termination, and only upon the very wet lands has it gone in in an indifferent condition; in the more distant counties a few days will complete their sowing. In Kent and Surrey appears to be more favoured by the weather than some places. The *Sentinel* says:—"The land is in the best possible condition for wheat-sowing; a considerable breadth is already in. With other two weeks of the present weather, the usual quantity will be sown. The fine weather is proving highly favourable for the turnips."

SALISBURY ELECTION.—The polling took place on Tuesday. The city throughout the day has been a scene of continual excitement, and at one time borderers on riot. Captain Jones Roberts withdrew from the contest shortly after two o'clock, when the final state of the poll stood thus:—Buckley, 325; Roberts, 83; majority, 167

THE LATE REPRESENTATIVES OF HULL.—On Monday evening a numerous and influential meeting of the electors of the borough was held in the Music-hall, for the purpose of presenting a testimonial to Lord Goderich and Mr Clay, the late representatives of the town. The testimonials, which originated among the working men, consisted of two splendid silver tankards, which had been subscribed for by more than 1500 of that class, of the town. The gentlemen in which their late representatives were held, and a mark of sympathy on their having been unseated Mr. A cerman Bondell, esq. mayor, presided, and, the testimonials having been presented by a deputation, the late members severally expressed their acknowledgments.

LONDON AND NORTH-WESTERN RAILWAY.—Parliamentary Deposits.—Notice is hereby given, that application is intended to be made to Parliament in the present session for an Act for the London and North-Western Railway to make a new railway or railways from the Bletchley Station to Oxford, with a station and other accommodation and to alter the Bletchley, Rugby, and Coventry Stations; for provision as to Wolverhampton station; and for other purposes connected therewith.—And notice is hereby also given, that application is intended to be made to Parliament in the present session for an Act for the London and North-Western Railway Company to make a railway from the Bletchley Station to Oxford, with a station and other accommodation and to alter the Bletchley, Rugby, and Coventry Stations.

NON-LIABILITY OF RAILWAY COMPANIES.—Two cases, establishing the non liability of railway companies in certain cases where the carriage of goods is conveyed, have just been decided by the county court judges. In the first case, Messrs. Ibeson of Huddersfield, brought an action of £8 18s. 6d. against the London and North-Western Railway, for the alleged value of a quantity of cheeses consigned by a house in Manchester, and which were delivered, crushed, and damaged. But as it was not shown that the damage occurred upon the railway, or from wilful neglect, the plaintiffs were nonsuited. In the second case, the action was against the Edinburgh, Perth, and Dundee Railway Company, for £6, owing to detention in the delivery of goods in London, and booked by the company, the court holding that the company were not liable, unless it could be shown that the detention took place on their own line.

PERPETUAL MOTION AT IPSWICH.—An artisan, in very humble circumstances, residing in Ipswich, has, after three years labour, succeeded in constructing a model of a machine, 15 inches by 13, and 11½ deep, which is self-acting, after being put in motion by a screw. It is powerful enough to force a resistance against the power of one person who had an iron bar on the stone. It has kept in motion upwards of thirty-six hours, at the end of which time the speed was not diminished; and the contrivance, whose name is Thomas Stannard, contends that the machine will keep in motion as long as the materials will last. Three persons belonging to one of the first firms of engineers in London have brought the machine and the inventor to London to prosecute inquiry.

SHIPWRECK OF THE "CALIFORNIA" EMIGRANT SHIP.—A correspondent in Achnl gives the following particulars of this melancholy event:—"Achil: There has been a very sad scene here. The *California*, emigrant ship, which left Cork on the 1st September, was wrecked on one of the Inles from land, last week. The passengers, consisting of men, women, and children, and crew, left the vessel in three boats, two of which arrived here at Duiris, and the other at Dugort, with sixty persons, about fifteen of whom have died, some at sea, and some since landing. The survivors are in the hotel, hospital, and private houses, in a most pitiable condition. Nothing has been heard of the third boat; but it is likely she is safe, as her crew were well supplied. Those poor creatures in the colony had not a drop of fresh water on board, and suffered dreadfully from thirst. The vessel sprang a leak, and went down immediately."

ROD-FISHING.—Monday, the 7th inst., being the day on which salmon-fishing with the rod terminated in the Tweed and its tributaries, a number of gentlemen enjoyed the sport. The river was in better order than for some days previous, and several gentlemen killed from two to five salmon and grilses each. During the season the supply of fish in the upper reaches of the Tweed has been more abundant than for some years past. Mr. Dennistoun, of Dalnacleith, has captured since the middle of July last nearly 140 fish, many of them full-grown salmon. *Aberdeen Chronicle, abridged.*

THE BOMBAY AND ADEN MAIL.—The terms for the performance of a fortnightly mail service between Bombay and Aden have been arranged upon between the Government and the Peninsular and Oriental Company, the payment fixed upon being the same rate as that received by the company for the other branches of their mail contract with the East, namely, 6s. 2d. per mile

CONSUMPTION &c. DOGS IN PARIS.—The other day (says *Galignani*) some police agents in plain clothes being at an eating house in Montargis, heard two men at a table say one to the other, "Is he dead?" "Yes, but he will cost some trouble before he is buried hard, and I was afraid of being surprised." "The other must be killed, or we shall be betrayed. The other, thinking that a murder had been committed, took the man into custody; and, in order to remove from themselves the serious suspicions which their conversation had excited, they declared that they belonged to a gang who occupied themselves in selling eyes, which they killed and sold to the live saving-house keepers [illegible] for any deficiency they might have in the supply of lives and tubs. Several of the accomplices of these men have been taken into custody

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

Lord Aberdeen has already given away £710 of the fresh £1200 place by Parliament, "for each and every succeeding year," at the distribution of the Prime Minister for the time being—to be given, the Act sets forth, by way of pensions, to "such persons only as have just claims on the Royal beneficence, or who, by their personal services to the Crown, by the performance of duties to the public, or by their useful discoveries in science and attainments in literature and the arts, have merited the grateful consideration of their Sovereign and the gratitude of their country." He has, therefore, given away in five months, nearly half of what he has to give away. Let us see how he has distributed it. Here is the list:—

To Sir Francis Bond Head, in consideration of the contributions he has made to the Literature of his country..	100
To the Rev. William Hickey, in consideration of the services which his writings, published under the signature of Martin Doyle, have rendered to the cause of Agriculture, and Social Improvement among the people of Ireland	80
To Catherine E. Moir, widow of Mr David Moir (the "Delta" of *Blackwood*), in consideration of the literary and scientific works of her late husband in connexion with his profession, his poetical talents, and the destitute condition of herself and her eight children	100
To Charlotte Lang, widow of the late Oliver Lang, Master Shipwright at Woolwich Dockyard, in consideration of the eminent services rendered by her late husband for a period of upwards of fifty years, by his numerous valuable inventions and improvements for the advancement of naval architecture	100
To Margaret Scott Glen, widow of the late Dr Glen, missionary in the East for nearly thirty years, in consideration of the service rendered by her late husband to Biblical literature, by his translation of the Old Testament into Persian	50
To Lady Nicolas, widow of Sir Harris Nicolas, in consideration of the many valuable contributions made by him to the Historical and Antiquarian Literature of this Country, and the limited circumstances in which his family were left at his death	100
	£630

His Lordship has, therefore, £670 still to give away between this and the 30th of June next, and it will reflect little credit on his Lordship's taste for literature, or for his sympathy with becoming diffidence and good conduct, if he does not give at least £100 a year to the widow and daughters of the Ettrick Shepherd. Their cause has active and able friends, and the following memorial, in their behalf, has been most numerously and influentially signed:—

TO THE EARL OF ABERDEEN, FIRST LORD OF THE TREASURY.

My Lord, We, undersigned, beg leave to invite your Lordship's attention to the dependent circumstances of the relict and three surviving daughters of James Hogg, commonly known as the Ettrick Shepherd, and would respectfully express our opinion, that the eminent literary merits of the deceased Poet seem to entitle their names to a place on the Civil List. We cordially recommend the family to your Lordship's early and favourable notice, and should rejoice to learn that their claims were brought under the consideration of the Queen

We are, &c

We alluded, last week, it will be remembered, to the sale, in Belgrave-square, of the pictures belonging to Lord Ducie, and promised to chronicle some of the prices. They sold well. The Sir Joshuas—considering that they were no traits of nameless persons, painted in not a good *costume* period of our history—brought sums unexpected even by dealers—ranging from £30 to £84. No other portraits of unknown persons by an English artist, in his first style, would have sold for equally large prices. The Stanfield "Sea Shore, with Fishermen," brought £283 10s.; and Mr. Mulready's "Interior of a Barber's Shop," a composition of six figures, £750. The Mulready was bought by a dealer (Mr. Wallis); and probably by this time has found a purchaser at Manchester for an additional £250. Lord Ducie gave 70 guineas for the picture, at the British Institution, many years ago. Mr. Mulready—who is still alive, to enjoy such auction honour, though none of the profits of the sale—might supply a valuable item in his own accountbooks towards the history of prices of works of art.

Mr Layard has recently been at Naples, examining the remains of Roman Art. Mr. Charles Dickens, Mr. Wilkie Collins, and Mr Egg, were at Naples at the same time. All four gentlemen employing their eyes in useful, though in very different directions.

One of the leading features of our next Royal Academy Exhibition (we are rushing into May before November is well through) will be at least one large View of Rome, from the pencil of Mr. David Roberts. Mr. Roberts is at present in Rome, and for the first time. It is easy to contemplate what his first feelings must have been on coming in sight of the great city; and how soon, with the prophetic eye of taste, he rebuilt Rome upon paper, and, more lastingly still, upon canvas. No other painter—not Canaletti himself—has transferred architecture to canvas with a skill superior to Roberts.

We have been favoured with a sight of the selected models for the Guildhall Monument to the Duke of Wellington. They are six in number—by Bell, Foley, Adams, Noble, Smith, and Evan Thomas; and are of the regular Guildhall type—that is, pyramidical in character, to fit an arched recess. In each there is, of course, a full-length statue of Wellington, and each has got (equally, of course) the usual St. Paul's, Westminster Abbey, and Guildhall attendants, by way of Victory, Peace, &c.—designed too often allegorically enough. In our opinion, not one of the selected designs should be carried out; but the six artists should be called upon to compete among themselves—the five unsuccessful receiving something handsome in the shape of money for their pains. The prize (five thousand guineas) is worth contending for. The idea of a second competition is favourably received in the City, and will, we are assured, be carried out. Guildhall is sufficiently barren of good sculpture, and cannot afford to have a companion work of art in badness to the Nelson, which has too long encumbered its walls.

A sub-committee has been appointed to superintend the erection of the City colossal pedestrian statue of the late Sir Robert Peel. The site (immediately in front of Chantrey's equestrian Wellington) has been chosen rather with a view to do as much honour to Peel as possible than with any desire to study the demands of sculpture or the requirements of architecture. The true site would have been at the west-end of Cheapside, at the head of Paternoster-row—thus connecting Peel's name, as he himself loved to connect it, with merchandize and literature. The site at Paternoster-row is very good at present, and is, moreover, an improving one; whereas the selected site (one of honour, we admit) is one that every artist would instance as the very position that should not have been selected. Mr. Behnes's colossal pedestrian Peel is to stand immediately in front of Chantrey's colossal equestrian Wellington, as Chantrey's Wellington stands immediately in front of Mr. Tite's large portico. Chantrey already kills Tite, and now Behnes is to kill Chantrey. This seems an injustice to Chantrey, who should never have been suffered to destroy the effect of Mr. Tite's building; but it is, at the same time, a double injustice to Mr. Tite. A statue, if it is to do any honour to a man, should be a work of art; and, if it is a work of art, it deserves to be placed where it can best be seen. Now a bronze statue tells only in outline. To see it to any advantage, you must see it with a background of sky, not with a background of columns, pedestals, legs in bronze, and constantly-passing omnibuses. Mr. Behnes is desirous of placing his Peel as much in the sky as he can possibly put it, without losing the effect of his own artistic excellences. This was Chantrey's object—he was allowed to have his own way though it is now seen that too great a privilege was conceded to him at the time, and that the artistic character of the whole area in front of the Exchange demanded a different treatment. If Mr. Behnes is allowed, like Chantrey, to have his own way, his man on foot will overtop the man on horseback—and Wellington will look like a big tiger on Peel's horse, only waiting for his master's call to come up and devour him. We fear that the selected site is a final selection, for the position was carried by a very large majority in a committee composed of merchants, sheriffs, aldermen, and ex-mayors—with only one artist, we believe, on the whole committee. There was a struggle at the last meeting to get the decision reversed; but nothing was gained by it, save the nomination of a sub-committee, to see how the decision can best be carried out—without injustice to Mr. Behnes, Mr. Chantrey, or to Mr. Tite. The committee consists of Mr. Tite, Mr. Peter Cunningham, Mr. Behnes, and the representative of the City Sewers—for the Sewers can always interfere with the erection of any statue. Mr. Cunningham, it is supposed, will represent Sir Francis Chantrey.

MUSIC.

THE SACRED HARMONIC SOCIETY.

This Society commenced its concerts for the season at Exeter-hall, on Friday evening the 11th inst. The performances consisted of Handel's Coronation Anthem, "Zadok, the Priest;" the Dettingen "Te Deum;" and Mozart's Twelfth Mass.

This Society has existed for one-and-twenty years; and, when it is considered that it was originally, and still continues to be, merely a private association of amateurs, without any public character or official support, the magnitude and importance it has gained, and the amount of its effects on the state of music in this country, are indeed most surprising. In as far as our inquiries have enabled us to judge, there is not in Europe another musical establishment, public or private, comparable to it in the extent of its influence; and it well deserves to be classed among the national institutions of England. Time and success have not slackened its exertions; on the contrary, its present management appears to be more active and vigorous than ever. The wise step of selecting Mr. Costa to fill the all-important office of musical director has greatly contributed to its prosperity. He has not only raised the instrumental orchestra and chorus to a state of discipline and consequent efficiency which they never possessed before, but his judgment and experience have been of infinite use in the whole of the Society's musical arrangements.

The Society has issued a prospectus of the season now begun, which is of a very satisfactory character. From it we learn that, not content with the great improvements which, through the Society's means, have recently been made in the interior of the building, it contemplates further improvements, equally important. The Society is at present pressing upon the attention of the proprietors of Exeter-hall the expediency of adopting measures for remedying the present inconvenient, and even dangerous, means of entrance and egress into and from the great hall. Plans have been submitted to the committee of proprietors for the erection of a spacious additional fire-proof staircase, which would be an effectual remedy for the existing evil, and an immense accommodation to the crowds who frequent the concerts and public meetings held in Exeter Hall. We sincerely hope that this useful—we may, indeed, call it necessary—measure will be adopted.

The Society promises the production, during the ensuing season, of several works which it has not hitherto performed—particularly Handel's oratorio of "Deborah," with additional orchestral accompaniments, by Costa; and Beethoven's Grand Mass in D. This work, of colossal proportions and tremendous difficulty, has been several times attempted in London, though never with success; but, with the resources of the Sacred Harmonic Society, under Costa's able direction, we may hope to hear this last great effort of Beethoven's genius in all its majesty and grandeur.

With respect to the production of absolutely new works, the Society entertains views (in our humble opinion) so sound that we have pleasure in quoting the announcement:—

Several new works (says the prospectus) have been brought under the notice of the committee. Without pledging themselves specifically, they intend certainly to produce during the coming season at least one oratorio hitherto unheard in London. The practice of the Society being to perform in each year the more popular of its previous selections, it is precluded from such frequent production of new works as may be expected from other institutions, soliciting public patronage with the avowed object of performing new music, by whatever composer, living or otherwise, it may choose. The committee do not wish to be thought insensible to the necessity for occasional productions of new works of a high class, but they also desire to draw attention to the objects of the Society, which, as appears from their original prospectus, issued in November, 1832, stated it to be their desire to establish for the Society a reputation of being able to perform the highest compositions of Handel, and other eminent composers, with that degree of precision and effect which their worth entitles them to

Such assuredly is, and always ought to be, the legitimate object of this Society. It has often been accused, as well as another association of great excellence and importance—the Philharmonic Society—of not sufficiently encouraging the talent of our young native composers, by the production of their works. Such complaints, in either case, are altogether groundless. It is the duty of these two Societies—of the one to produce, with all possible completeness and effect, the oratorios and other sacred works of the greatest masters; and of the other to perform in a manner which cannot be heard elsewhere, the finest symphonies, and other orchestral pieces of the great secular composers. The fulfilment of these duties is a task quite sufficient for the power of either Society; and neither of them is called upon to interfere with this duty, by becoming a nursery for young musicians. Were they to do so, they would soon feel the consequences.

The pieces performed at the Society's first concert are so well known to the musical public, that any critical remarks upon them would be altogether superfluous. We may observe, however, that the "Coronation Anthem" and the "Dettingen Te Deum," though both of them bear the impress of Handel's mighty genius, yet, having been occasional pieces, written for particular solemnities, they necessarily lose much of their effect when divested of their original associations. To some extent a similar remark may be applied to Mozart's Twelfth Mass. To be thoroughly understood, it must be heard as part of the service of a great Roman Catholic Cathedral; but it cannot be so heard in England, and a work so divinely beautiful must not, on this account, be lost to us altogether. Even as performed at Exeter-hall, it is one of the richest banquets that can possibly be placed before the lover of music.

THE WEDNESDAY EVENING CONCERT of this week fell rather short of that which preceded it. The selection from Mozart's celebrated opera, "Idomeneo," announced as its most remarkable feature, failed to produce the effect which might have been expected, and was, indeed, very coldly received. This disappointment arose from two causes: the selection, in the first place, was not the most judicious that might have been made; and, in the second place, the performance was but indifferent. "Idomeneo" is especially remarkable for the grandeur and beauty of its choruses, yet not one of them was given. It is said that the performance of choruses would have led to too great an expense, the reply is, that there was no necessity, in that case, for meddling with "Idomeneo" at all. Another shortcoming in this, as compared with the previous concert, was the want of a great orchestral symphony. This want, however, was in some sort made up for by Beethoven's pianoforte concerto in E flat; a composition so large in its proportions and so powerful in its instrumentation, that it may almost be regarded as a symphony. The principal part was executed by Herr Pauer, who sustained his reputation as a pianist of the very highest class. The largest portion of the concert consisted, as usual, of a great variety of pieces, of a familiar and popular kind, in which many favourite singers displayed their talents. Among them were—Miss Birch, Miss Dolby, Miss Messent, Signor and Madame F. Lablache, and Mr. Benson. The Hall was well filled; and this portion of the concert went off in a satisfactory manner.

Miss Dolby, on Tuesday evening, began her usual series of Musical Soirées at her own residence, in Hinde-street. This year

lady—not only from her great professional talents, but from her estimable and amiable private character and manners—is deservedly one of the greatest favourites of the public. Her rooms, on this occasion, were filled by a fashionable assemblage, who enjoyed an elegant entertainment of vocal and instrumental music. She herself sang several airs with her accustomed grace and beauty, especially Meyerbeer's fine recitative and romance, "Parmi les Fleurs," from the "Huguenots," which she gave with great expression and dramatic effect. She was assisted by Miss Birch, Miss Cicely Nott, Mr. Land, Mr. Boddn, and Mr. Walter Bolton—the last a young bass singer of much promise. The principal instrumental pieces were—Beethoven's celebrated trio for the piano, violin, and violoncello, played by Mrs Thompson (late Miss Kate Loder), Mr. Blagrove, and Mr Lucas; and a solo on the violin, composed by Vieuxtemps, and played by Blagrove. Both were beautifully executed, and (as well as the vocal pieces) warmly applauded

A contemporary states that Grisi and Mario have entered into an engagement for next season at the Royal Italian Opera. We are exceedingly glad to hear that we are not, after all, to lose these great stars of the opera stage so soon as was supposed, and only hope that the news may be true. But these bright luminaries are something of the nature of comets—erratic and uncertain in their movements; and there can be no doubt that this renewed London engagement is contrary to their intentions not long ago.

Mdlle Sophia Cruvelli has signed an engagement with the Grand French Opera, for two years, at a salary of 100,000f. (£4000 sterling) a year. She is to choose her own characters, perform only twice a week, and have four months' vacation every season. She has, moreover, made a separate engagement for the period during the Great Exhibition of 1855, at the rate of 25,000f. a month; so that her salary for that year will amount to no less than £6000 sterling. After this, talk of the extravagance of English terms to singers, which, it is said, make this country the laughing-stock of the Continent! The remuneration of singers is, indeed, splendid and ruinously extravagant; but it does not appear that we are worse in this respect than our neighbours.

ENGLISH SONGS, AND THE PROGRESS OF ENGLISH VOCAL MELODY.—Sir Henry Bishop's lecture to the members of the Bury St. Edmunds Athenæum, on Tuesday evening week, on "the Progress of English Vocal Melody," was attended by one of the largest audiences ever assembled in the room, every seat and corner being occupied. The Rev. Lord Arthur Hervey presided. Sir Henry Bishop's lecture (says the *Bury Post*, "was not, as too many musical lectures have been, a mere "envoy," or means of introducing the songs by which it was illustrated; but a thoughtful and well composed essay, on the rise and character of English song, evincing the hand, not only of the musician, but of the scholar, the man of taste, and the gentleman." After glancing at the obscurity in which the history of music in the earliest ages was involved, and upon which none of the recent discoveries in Egypt and the East had thrown any light, Sir Henry Bishop acknowledged the greatness of our obligations to the troubadours, the poet-historians of the age of chivalry; but successfully vindicated our claims to a national music, the progress of which he detailed, and the genuine characteristics and beauties of which—melody and simplicity—he ably enforced. Whilst recommending to his hearers the cultivation of music, he deprecated, in the strongest terms, the sensuous-like union of the intellectual and the animal, by the alliance of music and intemperance; the examples of which, in the penny concerts of the taverns and gin-shops, he feelingly deplored; and he pointed out the high moral influence which the well directed use of the art was calculated to exert upon the tastes and habits of society. The illustrations of the various periods of our vocal history were well selected, and were most truthfully rendered by Miss Thompson—a lady gifted with very high musical talent, and peculiarly qualified, by her perfect enunciation and purity of style, to exemplify those excellencies upon which Sir Henry Bishop laid so much stress in his discourse. The series of songs —no fewer than nineteen in number—commenced with three early old English melodies—the two first with Charles Mackay's words, "The Chimney Corner," and "The Green Lanes of England" (part of the series of Engl eh Songs and Melodies now in course of publication in the ILLUSTRATED LONDON NEWS). In the second period, "O Nanny! wilt love," and to these succeeded four beautiful examples from Sir Henry's own prolific and imaginative pen, "My Mother's Bible," "Farewell," "Kuroline," "Tell Me, my Heart," and "Home, sweet Home." Arne's "Deep deep Sea," and Balfe's "Merry Zingara" closed the lecture, which, for nearly two hours and a half, riveted the attention of the audience.

THE THEATRES.

HAYMARKET

Mr. T. Morton has contributed to these boards an excellent *petite* comedy, under the singular title of "A Pretty Piece of Business." The materials on which it is constructed are slight, and not very novel; but the dialogue is written with uncommon elegance and *verve*. Much of its effect depends on Miss Reynolds, who, as *Mrs. Grandley*, is engaged to *Miss Charlotte Shee* (Mrs Buckingham) to flirt for a purpose with her bashful brother, *Dr Lancelot Shee* (Mr Buckstone); but, unfortunately, the lady mistakes a *Captain Felix Merryweather* (Mr Howe) for the modest gentleman; to wh m, accordingly, she suggests an accidental assignation in the aviary, and from whose freedom she is glad to escape as early as possible. The captain and the doctor meet, and, upon the same instinct, call themselves to their mutual surprise, by each other's names. The perplexity is further increased by the intermeddling of the maid-servant, *Dobson* (Mrs. Fitzwilliam); until, at its height, the solution is supplied by the re-appropriation of the right names to the right parties This comic plot is dashed with a slight mixture of romance in the circumstance of *Doctor Shee* having once nearly drowned himself to save the widow from drowning; and their recognition is touched with an interest, between the pathetic and ludicrous, which was well supported by both performers. The success of the piece was perfect.

On Monday "The Lady of Lyons" was performed. *Pauline* was pathetically acted by Miss Reynolds; and Mr. George Vandenhoff, in *Claude Melnotte*, again exemplified his skilful elocution and graceful manner. The house was well attended.

ADELPHI.

Mr. J. Maddison Morton has contributed the novelty to this house—a farce entitled "Whitebait at Greenwich." Its incidents are again derived from the French piece denominated, "Japhet à la Recherche d'un Père"—the Japhet here being a certain *John Small* (Mr. Keeley), the waiter at the Crown and Sceptre, who is recommended to the family of the *Buzzards*, as "man;" and thinks that the *Mrs. Buzzard* he has discovered is his lost parent. The proof, however, fails at the last moment, and he loses both his father and the situation; to which he had been named by an aunt of the parties—a brother and sister—who had threatened, in case of them married, to leave her property to the other. Both, unknown to each other, had married on the same day; both had celebrated the event at Whitebait, at Greenwich, in different apartments of the same tavern; and both, on the arrival of *John Small*, are fearful of being identified by him. *John*, however, had forgotten both the occasion and them: but, on being strangely offered a series of bribes for concealing something, he consents to be paid, and pretend acquaintance. All this, as noted by Mr. Keeley, was admirably managed. The delight of the incidents makes this little piece a string of surprises; but it, nevertheless, lacks variety of character. All shortcomings of this kind were, however, richly compensated by Mr. Keeley's excellent performance; and the piece was eminently successful.

LYCEUM.

A new comic drama, in one act, by Mr. Tom Taylor, was produced on Wednesday. It is entitled "A Nice Firm"—such firm being that of *Messrs. Messiter and Moon*, solicitors; impersonated by Mr Charles Mathews and Mr. Frank Matthews. We use the word "impersonated" advisedly: the conversation of the Messrs. Mathews, depending on the manner in which these two characters are individualized by *Mr. Moon* as an old lawyer, whose memory is sadly deficient; and *Mr. Messiter* a young one, who is exceedingly impetuous. Between them the business of the office is in the utmost possible confusion—not a paper is in the right place—and the firm is in a fix, because of a life policy being mislaid. The policy itself is a fraudulent one, and the assured is pretended to be dead; and in all this, the "nice firm" in question is about to be victimized. But one blunder, as usual in such cases, serves to negative another; and thus, at last, the firm manages to get out of all the scrapes that it had incurred. The business of the pieces is actively conducted, and the dialogue is so skilfully managed, that, acted, as it is, with remarkable brilliancy and point, the audience were kept throughout in a state of uncommon excitement. The success of the little drama was complete.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. John O'Connell is likely to be the successful candidate for Clonmel. The local Liberal party resist the dictation of the Tenant League, and the leading newspapers of the town support Mr. O'Connell's pretensions

The office of Ulster King at Arms has been conferred on the distinguished genealogist, topographer, antiquarian, and general scholar, John Bernard Burke, Esq. *Glo.*

Her Majesty has contracted for a screw-steamer for the Glasgow and Belfast trade, to ply in addition to their daily line of Royal Mail Steam Packets

A new line of railway is projected to run from Poole, Somerset, to the Wilts, Somerset, and Dorset main line at the Great Western, between Bruton and Castlecary, with connecting branches.

A match for 10,000 dollars recently came off, between two horses, over the Centreville course, near New York. The distance was ten miles, and the winning horse accomplished the last mile in two minutes and thirty-nine seconds.

Lord Elphinstone, the newly-appointed Governor of Bombay, has left St. George's-place for Paris, whence his Lordship proceeds by the Overland route to the seat of his Government in India.

The Archduke Albrecht has arrived at Vienna from Pesth. It is understood that consultations are to be held, under the presidency of his Royal Highness, with respect to certain military dislocations of the Imperial troops in Hungary.

Several of the railway companies have given notice at their stations, that all money tendered in payment of railway fares that is in the least defaced will be refused.

Letters from the Hautes Pyrennées state that snow has already begun to fall very heavily. M. A. Jubinal, deputy of that department, when out with a large party, narrowly escaped being buried alive from the effect of a mountain whirlwind.

The Bank of England have intimated that they will now discount the amounts of the various petty stocks due in January at the rate of three per cent, instead of at four per cent, as originally proposed in the notification of the 2nd inst.

A new club, called the Liverpool Yacht Club, has been established. The tonnage of the yachts is limited to twelve tons.

Dates from Bermuda to the 24th October, report the yellow fever as then abating.

The opening of the Sardinian Legislative Chambers took place on Monday last, at Turin.

The Colonial Secretary estimates the revenue of Ceylon for next year at £404,000, while he calculates that the expenditure will be considerably less.

Although the harbour of Glasgow contains at all times shipping and cargo, aground or afloat, to the value of millions sterling, the Clyde trustees have not yet provided a floating fire engine.

The Chinese in California have, it is said, subscribed more than 2000 dollars towards the erection of a Christian Protestant Church.

In consequence of the sewers now being carried through Russell-court, &c., into Brydges-street, that portion of Drury-lane from Blackmoor-street to beyond Russell-court, was closed on Saturday last to vehicles of every description.

Within the last eighteen months, no fewer than forty foxes have been found dead by the keepers and woodmen in the vicinities northward of Aberystwith. The foxes died of the mange, and the disease seems to be rapidly spreading

In the forenoon of the 30th ult, a destructive fire broke out in a grain store-house, on the North Pier of the Atlantic Dock, New York, destroying nearly 70,000 bushels of wheat and corn. The machinery was valued at nearly 30,000 dollars, two-thirds of which received damage.

At a large and influential meeting of licensed victuallers, held at Birmingham on Thursday week, it was resolved to cordially unite and legally agitate "against restrictive laws which operate against the trade."

A nobleman whose estates were lately sequestrated by the Austrian Government, has just been created a Senator in Piedmont.

A question as to the extension of bonding privileges to certain quays and warehouses on the river above London-bridge, and which is of great importance to the wharfingers of the port generally, is now pending before the Lords of the Treasury.

Lady Charlotte Guest, of Dowlais, has promised to be at the expense of supplying the whole of Dowlais with water, which will involve an outlay of £3000.

The whole line of the Genoa and Turin Railway is to be opened to the public on the 15th of December

The Irish export of potatoes to England is increasing, and it has now become a very important branch of traffic.

A fresh supply of 10,000 French carbines has been sent to Constantinople by the Ottoman Embassy at Paris.

The Diocesan Training College at Culham, near Oxford, which was opened by the Earl of Derby in June last, still requires a large sum to bring it to completion, and to place the establishment on a permanent footing.

The Protestant Episcopal Church is steadily increasing in the United States in its communicants, clergy, and parishes. In 1852 there were twenty-nine dioceses, 1630 clergy, 1636 parishes, and 100,000 communicants

As a trial was being made on Monday week, at Marseilles, of the steam-machinery on board the *Progresseur*, the boiler burst, with a loud explosion, the pieces wounding two men badly.

A sum of 4000f. has been sent by the Emperor and the Empress of the French to the Patriarch of Jerusalem for the French missionaries in Syria.

In Aylesbury, the sale of ducks realises £15,000 a year. In Norfolk and Cambridge the small farmers pay their rents with the produce of the poultry

A decree is at the present moment under the consideration of the Council of State in Paris, the object of which is to grant a supplementary credit of 8,000,000f. towards the completion of the Louvre.

The aggregate number of plaints entered during 1852, in all the County Courts was 674,149. Of this number 13,567 cases were for sums above £9 and not exceeding £20, and 7020 cases were above £20, and not exceeding £50.

An American paper says that Mrs. Emma R. Coe (of Cleveland) has been pursuing a course of legal studies, for the purpose of qualifying herself for the practice of that profession.

Several cases of incendiarism have recently occurred in Devonshire. Two occurred last week; and in each case an agricultural threshing machine was burnt—indicating that the perpetrators belong to the misguided class who view the introduction of machinery as opposed to their interests.

The King of Sardinia has signed a decree authorising the erection of vast buildings at Turin, to serve as dwellings for the working classes.

The King of Prussia has remitted certain penalties to which M. Wagner, ex-ed tor of the *Neue Gazette of Prussia*, was some time ago condemned for offences of the press

Commissioners will be appointed in a few days to inquire into the general state of the Post-office; and also to take evidence with a view of establishing a uniform rate of oceanic postage.

Letters from St. Petersburg, of the 3rd inst., speak of a fresh levy of recruits, to the extent of seven in the thousand, having commenced on the last instant throughout the eastern part of the empire

A deputation from the directors of the Hungerford-market Company had an interview with Sir William Molesworth on Tuesday, at the Office of Public Works and Buildings, on the subject of the proposed alterations of Charing-cross-bridge and the approaches thereto.

The *Civiltà Cattolica*, of Genoa, announces that a song by Dante hitherto unpublished, has been found in the library of Prince Barberini, at Rome.

The Earl of Powis, at his recent rent receipts in Shrewsbury and Montgomeryshire returns his tenantry ten per cent. He has also given orders to advance the workmen's wages on his estates, in consequence of the increased price of provis ons

It is stated that the French Senate is to be convoked for an early day, to receive the notification of the approaching marriage of Prince Napoleon (Jerome) Bonaparte with a Princess of Hohenzoller-Sigmaringen family.

By a recently-issued return, it appears that in the course of last year the increase in the number of persons in public departments was 1462, and the diminut on 30

At Geelong, which is infested with mice, cats are freely quoted at 5l. a head. A Mr. Hitchcock guarantees 21 per head.

It is shown that in the month ended the 10th ult. there were 5,218,864 lb. of manufactured tobacco imported.

Alexander Smith, the young Glasgow poet, has been on a visit for a few days to the Duke of Argyll, at Inveraray Castle.

The *Ann and Eliza*, of 100 tons, belonging to North Berwick, which sailed for that port from Newcastle on the 25th September, with coals has not since been heard of, and it is feared that she has been wrecked in the gales which occurred about that period.

MISSIRI'S HOTEL D'ANGLETERRE, AT CONSTANTINOPLE.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—A Constantinople letter from your Special Correspondent, which lately appeared in your columns, has given pain to the proprietor of the above Hotel; and, I may add, to me, for Missiri was my interpreter and travelling servant during the prolonged travels which I undertook in Eastern countries; and I can truly say that never was an English traveller more faithfully or more ably served than I was

[illegible] every respect in [illegible] Constantinople is [illegible] Missiri's establishment is the resort of the [illegible] who would not on the great square of the Hippodrome, but they [illegible] on a [illegible] and [illegible] It is true, also, that the [illegible] are [illegible] but [illegible] are very [illegible] at [illegible] for [illegible] at effecting economy of space; but I am sure your Corre-pondent, when his eye has become more used to the [illegible] unusual lavishness of Eastern furniture, will cease to regret that he has failed to find on the shores of the Bosphorus the snug compactness of Eatonplace. The Hotel is, however, upon the whole, so good in its structure, and it "struggles" over such an extent of costly ground, that it is held at a rent of more than £500 per annum

Your Correspondent was annoyed by a failure which seems to have occurred in the supply of water. Now the truth is, I believe, that the [illegible] sold at Constantinople is not (as with us) the hoarded result of air tight ice-houses, or a wholesale importation from America, but is condensed snow, patiently carried in pannier upon the backs of mules from the airy heights of the Bithynian Olympus; and a supply depending upon re courses of this kind is liable to be interrupted by the operation of natural causes. Accordingly, there are many days in the year when the Sultan, if he is sighing for ice, must sigh in vain

Your Correspondent was ruffled because smoking is not allowed in the general reception-room of the Hotel. Now Missiri is too sensible a man, and too old a traveller, to attempt to check smoking in a country where every man, from the slave to the Sultan, is accustomed to "drink the breath" of the weed, and, accordingly, every traveller in the Hotel is fully at liberty to smoke the chibook, or the Narguilè, in his own room; but Missiri knows like—that among English gentlemen there is a feeling that women should be suffered to breathe the pure air, and that for their sakes the drawing-room should be kept sacred from smoke. I know that this deference to women is falling on the Continent; but, thank heaven, it still exists here; and I are sure that Missiri, who knows so well the tastes and feelings of the English, does well in providing that there shall be at least one of the reception-rooms where a fair lady may pass her time without feeling that her lungs, and her dress, and her hair are absorbing the essential oils of tobacco

Pardon me for interposing. Missiri is a man of no ordinary accomplishments. He speaks with accuracy seven languages, and (what is much more wonderful than that) he speaks them sensibly, appropriately, and with truth. Besides, he stored with me so many of the toils and adventures of Eastern travel, and was ever so faithful to me in all his actions—so firm and calm in the hour of danger—that in my memory I regard him as the comrade of those days rather than a servant. During a portion of those travels I had the good fortune to have with me a companion who knows mankind profoundly. I regret that he is now abroad, for if he were here, I am sure he would join his testimony to mine in favour of Missiri.

The travels which Missiri undertook with Lord Lindsay were of a far more distant, and adventurous kind than mine; and all who have read Lord Lindsay's delightful work know how warmly the writer appreciated Missiri's qualities. In a like spirit Missiri was spoken of in the "Crescent and the Cross" by my dear, and friend, Eliot Warburton; and, in short, I think there is hardly a writer of modern Eastern travels who has not found some words of grateful praise for Missiri and his Hotel.

From years of travel, spent in company with English gentlemen, Missiri came to understand so thoroughly their simple and manly tastes, their yearning for alternate quiet and adventure, their love of cleanliness, and their contempt of outward show as compared with real comfort, that it would have been strange if his Hotel had failed to please them. But his own qualities are not all. He married an English woman—a most admirable person—and their joint energies are devoted to the great object of ensuring for their guests health, cleanliness, and comfort.

Would your Correspondent (instead of being tied as I am for the present to London) could be dating the letter from Missiri's "Hotel d'Angleterre," with a four-cared caique waiting for me on the shores of the Golden Horn!

I am, sir, faithfully yours, MEMOR.

Travellers' Club, Pall-mall, Nov. 14, 1853.

*** We publish the above letter, in compliment to the writer, who has favoured us with his real name, and in whom we recognise the author of a delightful work on Eastern Travel. It is highly to the credit of Mr Missiri to have such a warm friend and supporter in a former master, and we freely give him the benefit of all that is said in his favour. At the same time, in justice to our "Special Correspondent," whose statements are commented upon, we feel bound to say that they have not been fairly dealt with by Memor. There are three points only referred to, and we take them in order:—1st. Memor complains that our Special Correspondent described the Hotel d'Angleterre as "a straggling house situated in a 'lane' in Pera." Upon referring to the passage in our Special Correspondent's letter, we find the passage to be, "The Hotel d'Angleterre is a large, straggling, wooden building, approached by a long passage on a slight descent, *from the 'Grande Rue,' or principal 'Lane' of Pera*;" and this comes after a general description of the streets, which were allsaid to be no better than lanes; and after an observation that the Hotel d'Angleterre is "the customary resort of our countrymen, and *the best advised travellers from six ports*." 2. With respect to ice, or "condensed snow," our Special Correspondent complains of "a charge being in use at the hotel, at a time when it must have been "cheap," "as the itinerant dealers in penny lemonade carry about huge lumps of it to cool their cans." 3. Our Special Correspondent does not appear to write as if he were "ruffled because smoking is not allowed in the *General Reception-room* of the Hotel;" on the contrary, after stating that all the meals are served twice a day in the *salle a manger*, he says:—"No meals are supplied in the *private apartments; no smoking allowed there*." This is diametrically opposite to Memor's statement that every traveller in the Hotel is allowed to smoke "in his own room." There is, we submit, further, nothing in our Special Correspondent's statement to justify the innuendo that he would, for the sake of a selfish gratification, be wanting in proper respect for the curls, the dress, or the feelings of ladies.

MR. G. P. R. JAMES.—(*From a Correspondent.*)—In your Journal of October 8, you state that the dwelling-house of Mr. P. E. James, British Consul at Norfolk, Va., had been set on fire for the fifth time; owing to a poem written by him against slavery. Permit me to say that it is a mistake. Such proceedings would not be permitted in any state; and one must have a poor idea of Americans, to think so. The building referred to is, or rather was, an old smoke-house, not used, and half a mile from Mr. James's residence. Smoke-houses are merely, constructed sheds, with a place for a fire, in which hams are hung up and dried.

THE "MAID OF JUDAH" CLIPPER.—This fine vessel has been built by Messrs. Walter Hood and Co., of Aberdeen, and combines in a high degree all the qualifications of sailing and carrying so remarkably possessed by Aberdeen clippers. The *Maid of Judah* registers 756 old measurement, 685 new ditto, and will carry 1000 tons; and fully expected to surpass, in point of speed, any of the vessels hitherto built by the same firm; this, however, will be no easy accomplishment, if we may judge from the passage recently made by the ship *Lutter Hood* from the Downs to Sydney, which was accomplished in eighty days. The dimensions of the hull of the *Maid of Judah* are as follows: Length of keel, 150 feet; beam, 31 feet; depth of hold, 19 feet; length over all, 180 feet.

TIMBER IN VAN DIEMEN'S LAND.—Traffic in this valuable commodity has so rapidly increased, that orders have been sent to England for as many as fifty saw-mills. Cutting and splitting is a mode more remunerative than gold-mining. The success of the weekly carriage of diggers bear no comparison with an equal number of our Huon sawyers.

GALATZ.

GALATZ, a free port, and the only one in Moldavia, is situated on a small projecting strip of land between the Sereth and the Pruth, and about eighty-five miles from the Sulina mouth of the Danube. It is the station whence the steamers for Constantinople and Odessa, when running start. The neighbourhood is that of the soil a loose, sandy clay; intolerably muddy in wet, and dusty in dry weather: the streets (that is those of the old town—are of miserable order, chiefly constructed of wood; but a new and improved town is in course of erection in the higher ground in the rear. A recent traveller says:—"Picture to yourself, upon an eminence, sloping rapidly to the water-side, a confused clus er of wooden huts, intersected by irregular streets, unpaved—one alone being floored with logs of wood, beneath which the watery mud squashes and spirts out as you pass along. In fine weather the dust is unendurable: after rain it is converted into mud, through which foot passengers must wade knee-deep to pass from one house to another. All manner of unwholesome smells issue from the stagnant pools which at

RUSSIAN GUN-BOATS OFF GALATZ.

all times collect beneath the legs. Imagine these cabins, dark and sombre within, and without filthy with mud, surrounded with palisades, a sorry caravansera by way of inn, with apartments almost without furniture, and as full of dust as the streets; not the least appearance of any order, cleanliness, or a rangement; a town constructed like an encampment, and such an encampment as French soldiers would not put up with a week together; such is Galatz, that is to say Old Galatz, the Turkish town—the aspect of which made upon me the same unfavourable impression that other Turkish towns on the Danube had done. At a distance, the mixture of habitations and verdure seemed inviting and graceful—the view of the interior destroyed the delusion. Fortunately, by the side of Old Turkish Galatz a new town is rising, which will date its origin, like Brailow, from the regeneration of the Principalities. Upon the hill overlooking the Danube, a few buildings have already sprung up bearing a European aspect, and giving promise of what Galatz is likely to be in future."

THE HALL OF ASSEMBLY OF THE BOYARDS OF WALLACHIA.

THE Assembly House of the Boyards of Wallachia is situated on a small hill in the neighbourhood of Bucharest, and within the dependencies of the Metropolitan Church. The Hall is remarkably simple in its structure and appointments. The Bishop, who is the *ex-officio* President, sits at the upper end of the room, upon a raised seat, under a small canopy. The costume of most of the Boyards is that of modern European society; but some of them of more advanced age adhere still to the capacious and sumptuous-looking garments, and with them to the flowing beards, which they were accustomed to wear in the days of the Turkish rule. The Boyards who happen to be in the army take part in the deliberations in full uniform, with their swords by their sides. The members sit round a table, which is covered with a crimson cloth; and rise in their places when they speak. The Ministers have no particular seats assigned to them. Part of the Hall is partitioned off for the use of the public, who are allowed to attend the discussions, but are obliged to stand. The concession itself is one of comparatively recent date.

GALLIPOLI

GALLIPOLI—the *Calippolis* of the ancients, is an important place in the Chersonesus of Thrace, in European Turkey, situate on a small peninsula, on the European side of the Hellespont, about twenty-five miles north of the Dardanelles, and 108 miles south-west of Constantinople. It lies nearly opposite to Lampsaki, the ancient Lampsacus, on the Asiatic side of the Channel, which is here about two miles in breadth. It is a place of importance, historically, having been the first town on the European side of the Byzantine empire which fell into the hands of the Ottomans (A.D. 1357), and which gave them the key to Adrianople, and afterwards to Constantinople itself. The capture of this place, which was then of some considerable strength, was favoured by an earthquake, which knocked down a portion of the ramparts, making a breach, through which the invaders entered sword in hand. The Emperor John Palæologus—so pusillanimous had this race of princes become—treated the occurence with levity; observing, that "he had only lost a jar of wine, and a magazine of hogs," in allusion to the magazines and cellars which had been built by Justinian, and the animal produce of the district.

In 1391 Bajazet I., knowing the importance of the position, caused the fortifications of Gallipoli to be repaired; added a huge tower, and made a good port for his galleys. In little more than half a century after, this acquisition had been made good use of; Adrianople had been taken—the greater part of Roumelia conquered—and, lastly, the capital of the ancient Byzantine Empire itself.

Gallipoli has two harbours—one to the north, the other south—and is the chief station of the Ottoman fleets, and the residence or headquarters of the Capitan Pasha. The walls with which it was fortified have in lapse of ages gone to decay; the purpose for which they were erected being past, and the key to the Ottoman capital from the south being the Dardanelles. The town itself, though covering a considerable space, is but a collection of miserable dirty streets. Its aspect from the water, however, is cheerful and picturesque. It is, nevertheless, the seat of a considerable trade in corn, wine, and oil. The population—mixed up of Turks, Greeks, Armenians, and Jews—has much increased of late years. In 1810, the inhabitants were only 15,000 in number; in 1818, owing to the immigration from other parts of Turkey, they were reckoned at 88,000—though later accounts give them only as 60,000

THE ASSEMBLY OF THE BOYARDS OF WALLACHIA.

THE GREEK CHURCH.

In considering the present momentous conflict in the East, and the relative positions of Russia and Turkey—the ambitious views of the former and resisting force of the latter—it is not half so important to contrast extent of empire, population, military strength, or other material national element, as it is to calculate the influences of religion, and ascertain the nature and character of the means on which Russia has principally relied, and still relies, for the accomplishment of its aggrandising object—the virtual conquest of Turkey. From the time of Catherine to this date, the Russian Government has been quite aware that the other great states of Europe would not look on with indifference, nor permit the extension of its empire in the direction of Constantinople. It therefore covered its designs with mystery, and adopted the crooked policy it has so long pursued, in order to acquire, by fraudulent and false pretences, what it well knew could not be accomplished by physical aggression.

Under these circumstances, the state of the Greek Church, and of the people who belong to that persuasion throughout the world, becomes a subject of inquiry of the most interesting and essential description. It offers, indeed, the primary key to much that has been done in this quarter during the last eighty years (if not during a much longer period)—especially to what is now doing—and to the agitation which is distinctly chalked out as the ground for future divisions and revolutions. We have, for these reasons, thought it expedient to make a somewhat historical and comprehensive analysis of the case, and its bearings on the issues of peace or war, the balance of power, and the probable fate of millions of mankind.

The foundations of the Greek Church, and the modification of its doctrines, are more directly Apostolic than those of any other Christian communion; that is to say, the preaching of the Apostles, and especially of Paul the Apostle to the Gentiles, is more strictly interpreted into its canons, and forms a more prominent portion of its faith, than it does in the Romish or Protestant Churches. This originated in the general conversion of the Greeks by the earliest Apostles, inasmuch that within the first and second centuries of Christianity the terms Grecian and Christian were almost convertible. The spirit was farther fostered and established by the Grecian Emperors, even to the epoch when the Moslemim overthrew that gorgeous throne.

In process of time manifold corruptions and heresies crept into the Christian Church. The fiercest contentions raged upon the most trivial points—the definition of a mystery or the meaning of a word. In the midst of these Saint Basil, the great Patron Saint of the Eastern Christians, arose, and was the first author and founder of its monkish system. Mount Athos and its numerous monasteries belong to it, but maintain opinions differing from those of the orthodox believers. Many other splits of Sectarians distract the Greek in the same manner as they distract other religions. The Maronites hold dogmata peculiar to themselves. The Monophysites, or Jacobites, would dis or persuade for the principle that Christ had only one nature—the divine (into which Eutyches held the human to be absorbed); and not two—the human and divine. The Nestorians and Chaldeans, on the other hand, are equally stern to the persuasion that the Saviour was a being of two distinct persons or natures. Many other sects, such as Macrosians, &c., are dissenters on minor matters; and some of them adhere to heresies almost identical with those of the Chinese insurgents. Even Manicheans, Sabeans, and Jordeans, or Devil Worshippers, have been, and are to be found, scattered among these professed Christians.

PRIEST OF THE GREEK CHURCH.—(FROM A CALOTYPE BY FENTON.)

The great body of the Greek Christians, which we may class as the orthodox church, is divided into three separate governments—1st. Those who agree entirely in doctrine with the Patriarch of Constantinople, and submit implicitly to his authority, rejecting the supremacy of the Roman Pontiff—this is the main stem, and includes the population of the Danubian Principalities; 2nd. Those who differ in certain points, both from the Patriarch of Constantinople and the Pope of Rome, and live under the rule of their own bishops; 3rd. The smallest section, who acknowledge themselves subject to the Romish jurisdiction.

Belonging to the second of these divisions are the Russians (whose Bishops have, however, been superseded by their Emperors), Georgians, Mingrelians, and Servians.

The history of the Greek and Latin Churches for hundreds of years, exhibits nothing but obstinacy and violence; each construing the Scriptures according to its own will and pleasure, and branding the other with the foulest epitheta for rejecting what it chose to believe. Eight hundred years the disputes ran so high that the Western Christians excommunicated those of the East and their Church; whilst the Eastern Christians retorted, with genuine polemic fury, by excommunicating the Romanists! Once or twice attempts were made to bring about a union, but they failed; as did also a similar attempt of Melanethon to effect a conciliation between the Greeks and Lutherans. These facts are so far remarkable, as they prove that the diversity of tenets rests more in ideal than real differences; and that the mortal quarrels which led to final separation, in the former case were rather the result of inflamed passions, than of substantial contradictions. By this light the present mission of the Protestant Bishop of Jerusalem, Gobat, may be deemed more likely of success in the conversion of the Greeks; and it is, indeed, well ascertained that the progress of proselytism among the Greek Christians in the Turkish empire is so prevalent as to constitute the chief religious motive for the interference of the Russian zealots.

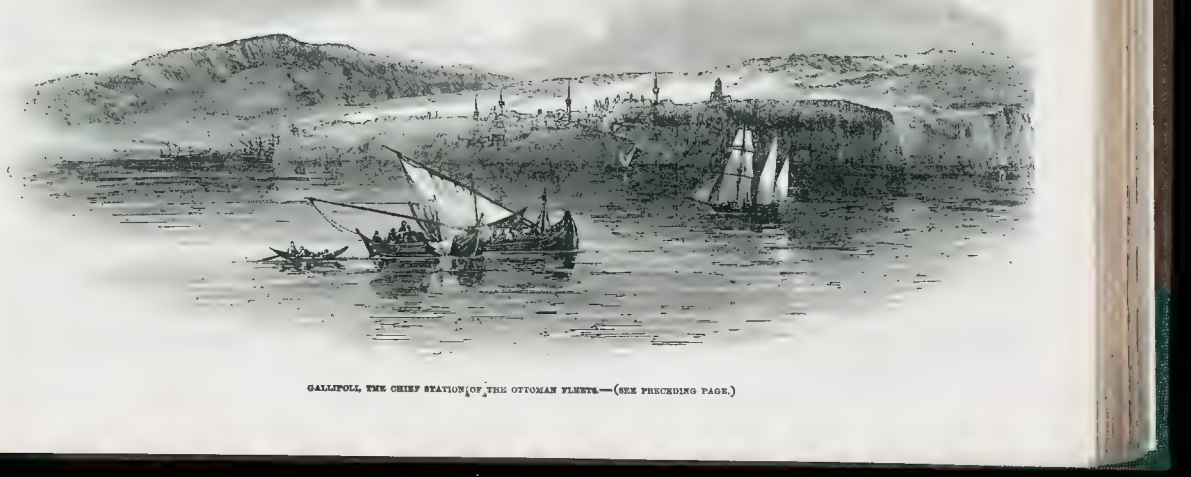
As for a union between the Greek and Latin Churches, it may now be set down as impossible; for persecution has widened the breach beyond repair; and argument, instead of convincing, has only confirmed every disputant more incorrigibly in his own opinion, and even exaggerated it—as is almost always the result of polemical controversies.

A brief retrospect of the causes which led to this great schism will be instructive in illustrating the existing condition of things, and, in particular, the rival pretensions in regard to the Holy Shrines in Palestine. In the olden times, in order to enlarge and consolidate their own power, the great Emperor Charlemagne, King Pepin, and their successors, lavished wealth and aid upon the Roman See, in a cordial alliance, and with the spiritual help of which they looked for the successful promotion of their mutually ambitious views. Jealous of this interest, the Greek Emperors naturally sought to check and counterbalance it, by raising the Greek Patriarchate into equal authority and influence. Leo, the Isaurian, and his son, Constantine Copronymus, incensed by the zeal which Gregory II. and III. displayed for the worship of images, not only confiscated the treasures and lands which the Church of Rome possessed in Sicily, Calabria, and Apulia, but withdrew the Bishops of these countries, and also the various provinces of Illyrium, from the jurisdiction of the Roman Pontiff, and subjected them to the dominion of the Bishop of Constantinople.

Hence arose the virulent contest between these Churches, which was lamentable in every way, and pernicious to the interests and advancement of true Christianity.

Image worship was the first grand source of defiant controversy. Council after council was convened to decide upon it; and the second Nicene Council, by determining in its favour, excited the fury of the combatants to the utmost pitch of hate and vengeance. In Constantinople the partisans of either tenet alternately triumphed. The perfidious Irene poisoned her husband, Leo IV., and the new Idolatrous cause, getting into power, abrogated the decree of the Council of Constantinople, enforced the worship of images and the cross, and inflicted the severest punishments on those who maintained that God was the only object of religious adoration! Anon this condition of things was reversed, and the Iconoclast principle of the Greek Church was not only re-established for ever, but even among the Latins, in several parts, the images and crosses were cast out of the churches and burnt.

On went the strife, and was augmented by such vital and amusing accusations of corrupt doctrine and heresy as Photius, a Constantinopolitan bishop, brought against the Church of Rome—viz, that the Romans fasted on the Sabbath or seventh day of the week—that they permitted the use of milk and cheese in the first week of Lent—that they maintained the right of the bishops alone to anoint baptised



GALLIPOLI, THE CHIEF STATION OF THE OTTOMAN FLEETS.—(SEE PRECEDING PAGE.)

persons with the holy chrism (an unguent of sacred character in the Greek ritual and practice)—and that they had adulterated the creed of Constantinople, by adding to it the word *filioque*, i.e *from the Son*, and were, therefore, of opinion, that the Holy Spirit did not proceed from the Father only (the Greek Christian belief), but also from the Son.

Our readers, probably, will not think that these were very important matters; but they and other new controversies, ever added to the old, served to confirm the total and irremediable separation between the Greek and Latin Churches; for which, however, the questions of idolatry, and the unnatural and socially pernicious prohibition of priests to marry,* were perfectly valid and quite sufficient grounds. We have seen, besides, that political inducements led to the religious rivalry, as Sovereigns sought support; and we may also add that the disputes for pre-eminence between the Bishops of Rome and Constantinople had no slight influence in determining the elements of creeds upon which millions of their fellow-creatures have been so taught that they have been ready to martyr others, or suffer martyrdom themselves, in defence of any shadowy particle of an incomprehensible dogma, or the form of a sacrament, or the costume of a ceremony.

True religion had but little place in either church, and incredible corruption tainted every part of either system, as it degenerated from perfect purity into a gulf of the grossest immorality—vice and crime. Torn to pieces by heresies, the fulness of time had come for a Mahomet to arise, and found a new faith in Arabia, whence to proceed, and, by the conquest achieved by himself and his successors, establish the Empire we now witness, commingling the Moslem with the Greek, under a despotic sceptre. And it is a remarkable fact that he, the Prophet, far more shrewd and successful than Manes the Persian, set the example of toleration which the Sultan has recently seemed bent on following; though, on the rulers between their founder and him, the lesson was unfortunately lost. But there is yet extant a *testamentary deplema of Mahomet*, in which he promises and begreaths to the Christians in his dominions, the quiet and undisturbed enjoyment of their religion, together with their temporal advantages and possessions. The genuineness of this testament has been questioned, but the arguments are more in its favour than against it; and it is certain that Mahomet, at his first setting out, prohibited in the strongest manner the commission of all sorts of injuries against the Christians, and especially the Nestorians. It is also observable that when the Turks took Constantinople, in 1453—one part of the city by force of arms, and the other upon terms of surrender—though the public profession of the Gospel was prohibited, and every vestige of Christianity effaced in the former, the inhabitants of the latter were permitted to retain their churches and monasteries, and to worship God according to the precepts of the Gospel, the Greek forms, and dictates of their conscience. From this it is but fair to infer that the Sultan will keep faith with every pledge given to his Christian subjects, as he has already done much to improve their conditions

Such as it was, the Greek Church flourished during centuries when the Sclavonians and Russians were immersed in paganism. It was about the end of the ninth century that the Sclavonians, Arentani, and certain provinces of Dalmatia sent a solemn embassy to Constantinople, to declare their resolution of submitting to the Emperor and embracing at the same time, the Christian religion; which caused great rejoicing, and missionaries were despatched to convert the people. A Bishop was also sent: and thus such was the beginning and first dawn of Christianity among the rude and warlike Russians who inhabited the Ukraine, and then, as now, threatened the peace and independence of the Grecian empire. Poland came next in the wake; and in 987, Wlodimir, Duke of Russia and Muscovy, who had six years before married Anne, the sister of the Grecian Emperor Basilius the Second, was persuaded by her to be baptized, and his subjects followed the example of their prince: and this is the true date of the establishment of Christianity among that people, who have sainted Wlodimir and his Duchess, and continue to worship them, particularly at Kiova, where they are interred.

From this date to 1589, the Russian-Greek Christian Church and people remained under the jurisdiction of the Patriarch of Constantinople, when Jeremiah, the ruling authority in a competition for the office against another candidate, Metrophanes (for it was usually carried by intrigue and bribery) in order to obtain the assistance and pecuniary succours of his Russian brethren, conceded the independence of the Patriarchate of Moscovy to Job, the Bishop of Rostow; still reserving a sort of paramount right to an initiatory suffrage, and a tribute of 500 gold ducats. Very shortly after, these obligations were annulled.

Here then was the first emancipation of the Russian from the superiority of the Turkish head, amounting indeed to all but an equality, but to nothing more; and we must see how the Emperor Nicholas soon found his claim to supremacy on such a ground, or any other afterwards seized by its civil rulers.

(To be concluded in our next.)

[The Engraving on the preceding page (from a salotype by Fenton) represents a Priest of the Great Lavra, or fortified monastery, at Kief, on the Dnieper. The individual Priest whose portrait is here given, is the Superior of one division of the brotherhood, which contains altogether the number of 700 persons. He is a man of distinguished ability, being the Pra Bartolomeo of his convent, and having, even more than his Florentine prototype, to find within himself the resources of his art. The range of his æsthetic occupation is more capacious than that of our English artist, including, in addition to the painting of "Holy Mothers," the gilding of the many cupolas of the city of Kief, which abounds in churches.]

* On this point of the Roman Catholic ecclesiastical discipline, so injurious to domestic security and happiness, Alvarus Delascina, a Bishop of Sylva, in Portugal, in his "Rus de Planctu Ecclesiæ," quaintly observes, "It were to be wished that the clergy had never vowed chastity—especially the clergy of Spain, where the sons of the laity are not much more numerous than the sons of the clergy!"

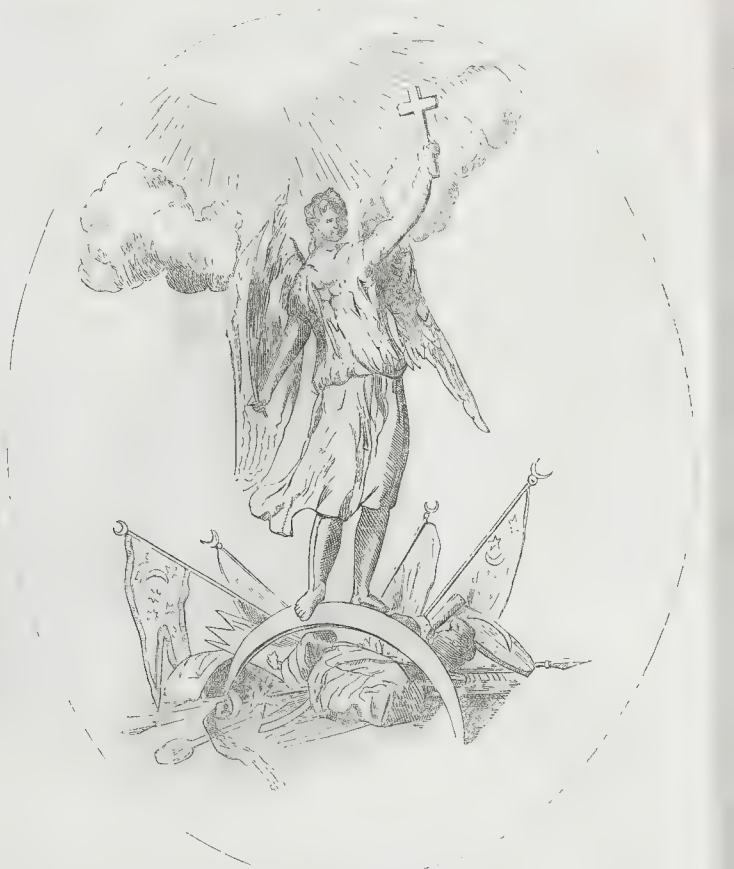
ENGLISH CHURCH IN PARIS.—The English constantly resident in Paris number nearly 10,000, and the English visitors are seldom fewer than 10,000 more, and sometimes reach 20,000. The present church accommodation does not exceed 2000, a considerable portion of which is occupied by Americans, who are very numerous, and have no place of worship in Paris. A movement is now being made to build a suitable church. It has been resolved that the institution be effectual y attached to the British Embassy, whose chaplain, appointed by the Secretary of State for Foreign Affairs, shall be the incumbent; that the church be made capable of comfortably accommodating not fewer than 1500 persons, whereof sittings to the number of 500 shall remain for ever free and unappropriated, and that under no circumstances shall money for sittings be taken at the door of the church, unless as voluntary alms and oblations.

A DOCKYARD DISCOVERY.—Not very long ago, a person well known for his accurate knowledge of the antiquities of English history was in one of our great dockyards. Here he noticed preparations for a bonfire, and ran to the scene. "What are these bundles?" he inquired. "Nothing but rubbish," said the man. The very tie of the parcels told the antiquary that they were letters, and of old date. "Where do they come from?" he asks. "Oh, they have been lying here no one knows how long; we wash the room, and we are going to burn them in a day or way." The antiquary took up a bundle, opened the first letter, and found that it was the original despatch announcing to the Government one of the most important events in the reign of Charles II. Telling the men not to set fire to the pile until orders could arrive, the antiquary posted to London, repaired to the Admiralty, stated the fact, and saved the papers. When carefully examined, they proved to be an interesting series of State documents as any in our national archives.

MATERIALS FOR GERMAN HISTORY.—Dr. Pertz, the head librarian of the Royal Library, at Berlin, has returned from his tour in England, undertaken for the purpose of examining if the principal libraries contained any materials that might assist him in the further prosecution of his great work, "Monumenta Germaniæ Historica." The most valuable result of Dr. Pertz's inquiries in England consists, we understand, in his having obtained a transcript of the "Chronicon Placentinum," which is of great importance for the times of the Emperors Frederick I. and II., and the original of which is in the British Museum.

ACCELERATED TRANSIT OF THE EAST INDIA MAILS.—The *Indus*, Peninsular and Oriental Company's steam-packet, which left Southampton on the afternoon of the 20th of October, reached Malta on the 26th, left on the 27th for Alexandria, which port she reached on the 3rd November, took a fresh departure on the 4th, got back to Malta on the 7th of November, and was to leave for Southampton on the same night. The *Valetta*, with the Overland India mail for *Bay* and (brought by the *Indus*), left Malta at seven p.m. on the 7th of November.

BALLOONING EXTRAORDINARY.—The Spanish journals state that the French aëronaut, M. Arban, who made an ascent from Barcelona more than two years ago, and had not since been heard of, and who was believed to have fallen into the sea and been drowned, has made his appearance again. An Alicant letter says that his balloon went over to Africa, and that he was seized and made a slave, and continued in that state for two years, when he effected his escape.



ETCHING OF PETER THE GREAT.

THE TRIUMPH OF RUSSIA OVER TURKEY,
FORETOLD BY CZAR PETER THE GREAT,
IN HIS ETCHING PRESERVED IN THE ROYAL MUSEUM OF AMSTERDAM

(From a Correspondent at Rotterdam.)

WITH what is termed the "Political Will" of Czar Peter the Great, the world is well acquainted. Not so generally, we have reason to believe, is known, the Print etched by the Czar during his stay at Zaardam and Amsterdam, in the year 1698. The only impression existing of the same is now preserved in the Royal Museum, at Amsterdam, of which it forms one of the most interesting curiosities. Although not a gem in point of art, still it has a right to be called the Emperor of etchings. The memorandum in Dutch at the foot of the Print, has been added by Adrian Schoonebeek, an engraver at Amsterdam, from whom the young Czar received lessons in drawing, and who afterwards settled himself in Russia, at the desire of his pupil (Vide Van Eynden and Van der Willigen, History of Painting, vol. I., folio 250). The following is a translation of the memorandum:—

Peter Alexewitz, the Great Czar of the Russians, has etched this with the needle, or copper, under the direction of Adrian Schoonebeek, at Amsterdam, on the . . . . . 1698, in his lodgings, at the East India Company's Dock-yard.

Curious as this production is on account of the artist; it is not less remarkable with regard to the subject. At a first glance, it would appear that we had to do with an emblem, simply intended to signify the ultimate triumph of Christianity over Mohamedanism. But, upon further reflection, we find there is something very material at the bottom of this spiritual interpretation. The figure holding the cross, is evidently intended to represent the archangel Michael, the guardian angel of Russia; consequently, the idea of the Czar was not to express the triumph of the Christian Church over the Crescent of Mecca, but of Christian Russia over the Ottoman Empire. The past has shown, and our own times, in particular, prove how faithfully the successors of Peter have followed the direction of his etching point.

LITERATURE.

THE RUSSIAN SHORES OF THE BLACK SEA IN THE AUTUMN OF 1852: WITH A VOYAGE DOWN THE VOLGA, AND A TOUR THROUGH THE COUNTRY OF THE DON COSSACKS. By LAURENCE OLIPHANT. Blackwood and Sons.

Considering the space which Russia occupies in the old world, and the wonderful noise and alarm her "policy" has excited throughout Europe, it is extraordinary how little has been written of her internal condition and resources; and it is to be regretted that so much of what has been written has been far from the truth. The few works which have appeared of late years upon the subject, have for the most part been under the suspicion of having been written by political partizans—either friendly or hostile, as the case may have been—and with special political objects in view; resulting in exaggerations and misstatements, from which nothing certain was to be gathered. Mr. Oliphant, whose "Journey to Nepaul" will be favourably remembered, made a tour through the southern part of Russia, in the autumn of 1852, and now publishes the result of his observations upon the moral, social, mercantile, and political condition of that portion of the huge Empire of the Czar. The volume comes very seasonably, and is well worth reading not only by all who are watching the solution of the Eastern question now so prominently before us, but by all who take an interest in the well being of society at large; a matter too often sacrificed to particular and personal objects. Sure we are that when the picture which the author, in his slight sketches, presents of the moral and political abasement and social misery prevailing in what ought to be some of the richest and most important provinces of the Russian Empire is considered, the reader will begin to suspect that both the power and the enlightenment of the Russian Government have been woefully over-rated by alarmists and flatterers alike.

It is only within the last sixty years that the provinces bordering upon the Black Sea have been obtained by conquest from the Turkish Empire; and, well employed, they might become the most valuable territories of the same dominions in the whole of the continent of Europe. They are in themselves an exhaustless granary, and possess a seaboard which would enable them to become the purveyors of Europe. Yet how improvidently have those rich lands been used; how miserably have their inhabitants been deceived as to the parental succour they were to have received from the "civilising" Government of St. Petersburg. We apprehend, it must be added, in justice to the authorities of the state, that their new acquisitions are no worse treated than the older dominions of the Czar; that the same system of serfdom or domestic slavery—the same prohibitive policy—the same shameless *bureaucracy*, which oppress the new states, oppress the old states also; and that the whole empire is so hollow and rotten at the core as to make its own cohesiveness a much more critical question than any external influence it can exercise upon the family of nations

The evils of serfdom are too well known to need enforcement here; but, perhaps, the worst feature in it is the "obrok" system, which insists on the payment by the serf to his lord of a certain rent for the privilege of working for himself. As this "obrok" is increased with the increased gains of the serf, the ardour of speculation and enterprise is naturally damped wi[illegible] [illegible] [illegible] is fatally discouraged. If agr[illegible] [illegible] [illegible] neglected, and the agricultural districts the seats o[illegible] equal misery, the towns do not show symptoms of increasing populousness or activity.

Russia (says Mr. Oliphant) is almost devoid of an urban population. St. Petersburg, Moscow, and Odessa, are the only cities whose populations exceed a hundred thousand; indeed, there is some doubt whether that of Odessa reaches this figure. There are only four towns containing more than fifty thousand inhabitants each, and eighteen or twenty with populations exceeding twenty-five thousand. In fact, it has been computed, from the official reports, that there is only one town with an average population of seven thousand, in an area of a hundred and thirty square miles. Now, the result of this is obvious. The absence of an intermediate class renders it unnecessary for the proprietor, who has no facilities for transporting his grain to a seaport, to grow more than is sufficient for his own consumption; and the peasant only cultivates land enough to yield the produce required to support his family. It may be said that, with so thin a population, it is unwise to congregate the inhabitants into towns, and leave large tracts of country uncultivated. In support of this theory, the Russian political economist points to those towns founded by the Empress Catharine, for the purpose of trying the remedy above mentioned; and complains that, with very few exceptions, they are in precisely the same condition as on the day when they were founded. This fact proves, says one of them, that "since the days of Peter the Great, it is the Government which has taken the lead in the progress of civilisation; and it is obliged to slacken its steps, in order not to advance too rapidly the wants, the ideas, and the manners of the people." A most ingenious way of solving the problem, truly! Whatever else may be laid to the charge of the Russian Government, to accuse it of being too rapidly progressive is, I think, barely to traduce its strictly Conservative character.

But the moral condition is as low as the physical: all schools are prohibited, except in a few large towns; and . . many villages there is not even a priest. "Here," says the author, "in a country which boasts of

the rapid advance it has recently made in civilisation, we saw a large and populous village in a state of utter heathenism, and apparently destined to remain so; though it is a question whether it might not be considered fortunate in having escaped the infection of some profligate priest." In another place he says:—"Whatever may be the morals of the peasantry in remote districts, those living in the towns and villages on the Volga are more degraded in their habits than any other people amongst whom I have travelled; and they can hardly be said to disregard, since they have never been acquainted with, the decencies of life. What better result can indeed be expected from a system by which the upper classes are wealthy in proportion to the number of serfs possessed by each proprietor? The rapid increase of the population is no less an object with the private serf-owner, than the extensive consumption of ardent spirits is desired by the Government. Thus each vice is privileged with especial patronage."

The agricultural country of the Don Cossacks has been so long drained of its able bodied inhabitants to serve in the wars against the Circassians, that at present the population of the whole province amounts to only 700,000, spread over an extent of three thousand square German miles; of this showing an exceedingly low average of about two hundred and forty inhabitants to the square mile, giving forty acres of excellent pasture land to each individual. The tallow which might be produced from the cattle of the Don Cossacks, and the corn which might be obtained all along the Volga might supply the world, and make the native population rich and thriving. But there are no means of transport. The navigation of the Volga is impeded throughout by sand-banks, and though a very short canal would suffice to connect it with the Don, and, through it, by means with the Baltic, this canal has not been made, and probably never will be under the existing regime. Add to this that the harbours at Taganrog and Kertsch, connecting the sea of Azof with the Black Sea, are daily filling up, through neglect; and we may form an opinion of the wanton manner in which the fine national advantages of this wide territory have been trifled with. Independently of the export trade thus sacrificed the internal trade from the East—which might have been carried through Tiflis to Redout-Kale, on the Black Sea, or, via Astrakhan and Tzaritzin, into the interior of Russia, which would thus command the carrying trade to a great portion of Central Europe, all which trade goes via Smyrna or Trebizond. But the paltry gains of honest industry are despised by the proud military Government of the Czar, and the transit of foreign goods through its dominions is positively prohibited. The same stagnation of trade pervades all other parts. The commercial importance of St Petersburg is crippled by the heavy tax demanded for the admission to the guilds; in Odessa, native enterprise is almost paralysed by the same exactions; and the consequence is, that the great proportion of the trade of Russia is in the hands of foreign merchants, about whom, of course, the Government would care very little in the event of a question of peace and war. Like the Don and the Volga, "the Pruth, the Dniepер, the Dniester, and the Bug, are all either navigable, or might easily be made so. At present, little else but wood-rafts float down their broad waters." Add to this the effectual blockade of the Sulina mouth of the Danube, and we have a fair notion of the systematic manner in which the Russian Government wars against the arts of peace and the interests of humanity. For we cannot help agreeing with Mr Oliphaut, that there is some deeper cause than idiotcy or moral indolence to account for such a state of things. "In spite of the anxiety of the Government to induce an opposite belief, we are constrained to suppose that it is only solicitous for the prosperity of the nation, so long as this prosperity can co-exist with the permanent state of gross ignorance and barbarism in which the people are kept; for it is evident that an extensive intercourse with European nations would open the eyes of this enslaved population, and introduce those principles of freedom which would soon prove utterly subversive to the Imperial power as it at present exists."

Mr. Oliphant, towards the end of his narrative, introduces us to the celebrated naval station of Sebastopol—prohibited so jealously guarded that foreigners are not allowed to enter them except upon rare occasions, and then only by a permit renewable every twenty-four hours. This formality was considered too troublesome by our author and his friend, and they accordingly determined to visit the place in a sort of *incog*, and without leave. There they picked up a few anecdotes illustrative of the system of peculation which pervades every grade of the service, being the only means by which the *employés* manage to live on their miserable pay. One of the most common methods is that of sub-contracting in the purchase of materials or stores; timber, for instance; each manœuvering for some connexion with the Government, and that of his neighbour. "Then the wood is produced before the Board appointed to inspect it, another bribe secures it, and the Government, after paying the price of well-seasoned oak, is surprised that the 120-gun ship, which has been four or five years in the building, is found rotten after lasting of this and other similar instances of ingenuity, was not surprised to hear, "that out of the imposing array before them (in Sebastopol) there were only two ships in a condition to undertake a voyage round the Cape." Detailing unseaworthy ships, "it would appear that the Black Sea fleet—that standing bugbear of the unfortunate Porte—will dwindle into a force more in proportion to its limited sphere of action, and to the enemy which, in the absence of any European power, it will encounter in battle array." In short, "*there is no reason to suppose that the navy forms an exception to the rule, that all the great national institutions of Russia are artificial*," to which we would add, in most points, *imaginary* also.

The story of training the Russian sailor boy, has been described by other writers; it is of the intermittent kind—a very small complement are kept on board the ships whilst in harbour, the majority of the crews being employed on shore. When the Emperor takes it into his head to have a grand naval review, of course all the men are dragged back to their ships, and allowed a day or two to get their sea legs. One of these displays took place at the time of Mr Oliphant's visit; but, not being so invited guest, he thought it prudent to retire. He heard afterwards, however, that "the Emperor did not accompany the fleet in their short cruise outside the port, but expressed himself much dissatisfied with their performances." And, as a moment of his visit, his Majesty consigned the Governor of Sebastopol to the galleys.

The following curious account of this imposing fortress will be read with interest at the present moment. It sounds very differently from what is put forth by the Russian authorities of this Gibraltar of the Black Sea; and, we may fairly add that we do not vouch for the accuracy of all the particulars:—

Nothing can be more formidable than the appearance of Sebastopol from the seaward. Upon a future occasion we visited it in a steamer, and found that at one point we were commanded by twelve hundred pieces of artillery. Fortunately for a hostile fleet, we afterwards learned that these could not be discharged without bringing down the rotten batteries upon which they are placed; and they are so badly constructed that they look as if they had been done by contract. Four of the forts consist of three tiers of batteries. We were, of course, unable to do more than take a very general survey of these celebrated fortifications, and therefore cannot vouch for the truth of the assertion, that the rooms in which the guns are worked are so narrow and ill-ventilated, that the artillerymen would be inevitably stifled in the attempt to discharge their guns and fit duty; but of one fact there was no doubt—that however well for their men by the approaches to Sebastopol by sea, there is nothing whatever to prevent any number of troops landing a few miles to the south of the town, in one of the six convenient bays with which the coast, as far as Cape Kherson, is indented, and marching down the main street, provided they were strong enough to defeat any military force that might be opposed to them in the open field), sack the town, and burn the fleet.

On his return route up the Danube Mr. Oliphant had an opportunity of contrasting the then prosperous state of the Danubian Principalities with the Russian province of Bessarabia, and observes:—"It is hardly to be wondered at that the inhabitants of Moldavia and Wallachia dread the day when the blighting influence of Russian administration will be extended along the shores of the Danube as far as the Austrian frontier; for, in the past history of Bessarabia, they see their own unhappy future."

This observation, with some details to the same end, were written a twelvemonth ago—before the recent audacious act of occupation. Since that period the aspect of affairs has a little changed in the East; and we have no reason to hope that the blighting and demoralising influences of Russia may, ere long—even on this scene of her ambitious operations—receive a check which she will not speedily forget.

In closing our notice of Mr. Oliphant's book, we can safely recommend it for the variety of interesting matter it contains, and the intelligent style in which treated. Further, the pages are enlivened by the introduction of numerous clever vignette sketches.

PRICES IN VAN DIEMEN'S LAND.—The prices here are enormous. Beef, 10d.; mutton, 7d.; butter, 3s. 6d. to 4s. per lb.; eggs have been 5d. each; firewood, 25s. per load (it was 8s. in May, 1852, and 8s in May, 1851), coals (more black stones), 63s. per ton, formerly 9s.; milk (more than half water), 1s. per quart; but clothing is getting cheaper, which is some compensation.—*New Zealand Gazette.*

CHESS.

*** The length to which the Match Games run compels us to postpone our answers to Correspondents.

PROBLEM No. 510.

A capital study, by Mr. W. GRIMSHAW.

BLACK.

WHITE.

White to play, and mate in five moves.

MATCH BETWEEN MESSRS. LOWENTHAL AND HARRWITZ.

Another change, no less remarkable than the former, has taken place in this contest, which now promises to be a much closer fight than could have been expected after the first nine or ten games. Up to the moment we write the match stands:—

Löwenthal	..	..	.. 9
Harrwitz	..	..	.. 7
Drawn	..	..	.. 4

Subjoined is a well-fought game played lately in this interesting contest.

(Philidor's Defence to the Knight's opening.)

WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK (Mr. H.)
1. P to K 4th	P to K 4th	23. Kt to Q 8 sq	Kt to K Bsq (g)
2. Kt to K B 3rd	P to Q 3rd	24. Q R to Q Kt sq	P to Q 3th
3. B to Q B 4th	B to K 2nd (a)	25. Q R to Q Kt 2nd	K to B 2nd
4. Kt to Q B 3rd	Kt to K B 3rd	26. P to Q B 5th (h, Q R to Q K 4th	
5. P to Q 3rd	Castles	27. P to Q Kt 4th	P takes Q Kt P
6. P to K R 3rd	Kt to Q B 3rd	28. Q R takes P	K to Q B sq
7. B to K Kt 5th	B to K R 3rd (b)	29. Kt to Q 3rd (i)	P takes P
8. B takes Kt (c)	B takes Q B	30. R takes Q Kt P	K to B 2nd
9. B to Q Kt 3rd	Kt to K 2nd	(ch)	
10. Kt to K 2nd	P to Q B 3rd	31. R to Q B 2nd	Q R to Q R 4th
11. B takes B	P takes B	32. Kt to Q Kt 2nd	Q R takes Q R P
12. P to Q B 3rd	P to Q 4th	(k)	
13. Q to Q Kt 3rd	Q to Q Kt 3rd	33. R takes Q B P	Q R takes Kt
14. Castles	Kt to K Kt 3rd	34. R takes K R	R takes R
15. Q takes Q	P takes Q	35. R takes Kt (ch)	K to A 2nd
16. P to K R 3rd	P takes K P	36. R to Q K sq (l)	R to Q K 8th
17. P takes P	Q Kt to R 5th (d)	37. P to B 5th	R to Kt 7th (m)
18. R to Q 2nd	B to K Kt 5th	38. R to Q R 7th (ch)	K to B 3rd
19. P to Q Kt 3rd (e)	Q R to the 3rd	39. P to K Kt 4th	P to K R 3rd
20. R to Q sq	P to Q Kt 4th (f)	40. P to K R 5th	P to K Kt 4th
21. P to K R 4th	B takes Kt	41. R to K R 7th	R to K Kt 7th
22. K R takes B	R to Q B sq		(ch)

And draws the game; because if White take his adversary's Rook, he is stalemated.

(a) Thus, or P to Q B 3rd, is the best move at the present moment. If Black play the latter, as we have usually seen him, White may obtain a tolerably free game, by advancing his Pawn to Q 4th at once.

(b) An offence adopted by Mr Harrwitz, gives him a constrained game for a long time, but under this disadvantage he fights very ably.

(c) This appears to give the unruly more freedom than is desirable, and yet we doubt if Mr. Löwenthal could have done better.

(d) The attack obtained by this move, compensates, in some degree, for the ugly doubled Pawn on Black's side.

(e) The position, it will be remarked, is very critical for White, and without great care he would certainly have suffered some loss at this point.

(f) B to Q sq would only have given a loss of time, as White could have replied at once with Kt to K B 4th, &c.

(g) As his K is badly posted, and the difficulty of bringing him into play is a more serious drawback to Black's game than even his crippled Pawns.

(h) At last Löwenthal, we hold that Mr Löwenthal had a winning game. Instead of the move made—an ingenious one, no doubt—he ought to have played Kt to Q 3rd; in which case the following is the most probable continuation:—

27. Kt to Q 3rd	Kt to Q 2nd
(We see no better or more likely move.)	
28. Kt to Q Kt 4th	P takes Kt

(Again, this seems the most fair-like mode of playing.)

29. R takes Kt (ch)	K to K sq
30. R takes Q Kt P	P takes R
31. Q takes Q R P	Q to Q 3rd

(If he play the Rook to Q 4th, White can safely take the King's Pawn.)

34. R takes R	P takes R

And White wins easily.

*35.	R takes Q R P
31. R takes R	R takes a

32. P takes P	R to Q Kt 7th

(If R to K 7th, then follows P to K B 3rd, &c.)

33. R takes P—winning without much trouble.

(i) Instead of this move, he ought, we think, to have played the Kt to Q Kt 3rd, in which case the game would, most likely, have been carried on as follows:—

30. Kt to Q Kt 3rd	Q R to the 5th
(If he take this P with the other Rook, White must win, we think, without much trouble.)	
31. Q R takes Q Kt P (ch)	K to K sq

And White has a Pawn more, and a better attack. But this is not the best move for White.

(k) Even here, we think, Löwenthal might have played Kt to Q 3rd, and we prefer, have won the game. He could, I believe, continue the attack as follows:—

33. Kt to K 4th (ch)	K to K sq
34. Kt to Q B 6th	Q R to Q B sq
35. Kt to Q Kt 4th	Q R to Q Kt sq
36. Kt to K 5th	Q R to Q B sq
37. Kt to Q 6th (ch)	K to K 2nd
38. Q to Q 3rd	Q R to Q Kt sq
39. Q to Q Kt 3rd	Q R to Q B sq
40. Q to Q 3rd	Q R to Q Kt sq

Black has now no move but to repeat, as he dare not play Kt to Q sq, on account of the fatal reply of Kt to K 4th, and threatening a mate at K B 6th, &c.

(l) Well played. Black might this can almost ensure a drawn game.

(m) We have here the same attack and the same defence as in the preceding game the position of the combatants, however, being reversed.

(n) Even this early in the game, Löwenthal has wrested the attack into his own hands, and quite the best of the match.

(o) Black had a bad position before, but this makes it worse. From the present moment he ought never to have had a chance of saving the day.

(p) Good move. If, instead of this hasty, move, he had only played Q to Q sq, Mr. Harrwitz would now have been just out of book as far as the game match is concerned. But pass, for example—

12.	Q Kt to Q sq
13.	Kt to K 4th

(If he play P to Q B 3rd, White replies equally with B to Q 3th.

13.	B to Q 5th

And Black must lose one of his best Pawns, and have a still more inferior position.

(q) Lost time again!

(r) Lost time once more! Such is the play often of the best and strongest, when worn out by a long contest. Mr. Harrwitz, it is plain, was not fresh. But such was not the play (on how dissimilar!) by which Mr. Löwenthal, without a break, scored five games running at the commencement.

(s) For the benefit of young players it may be well to remark that White could never play his other Rook to K Kt 5th, on account of his adversary capturing with Kt to K 4th, and threatening a mate at K B 6th, &c.

(t) Well played. Black might this can almost ensure a drawn game.

[Whatever may be the result of this contest, no one, we think, who has critically examined the games will venture to deny that in all the higher qualities of play Mr. Löwenthal has fairly vanquished his more showy opponent. Putting aside for a moment the earlier games in which, by sheer strategical superiority, he literally beat his adversary into hopelessness it is impossible for any one with a spark of judgment to analyse the present and the next game played without feeling convinced that in resource and in depth of caculation the Hungarian is the stronger player in these two games the opening is the same—Löwenthal having the attack in one, and Harrwitz in the other. In both games, whether conducting the attack or bearing the brunt of it, Löwenthal so completely out-plays his foe as to acquire a winning position. It is true that, owing to the exhaustion inseparable from many weeks' hard play, he fails to turn the advantage obtained to the account he would have done in an earlier stage of the conflict; and Mr. Harrwitz luckily escapes with two drawn games. But had these games occurred only ten days before, Löwenthal would have scored both to a certainty, and been proclaimed the winner of the match.]

NOMINATION OF SHERIFFS.

On Saturday last the Lords of the Privy Council assembled in the Court of Exchequer, in pursuance of ancient custom, to proceed to "the nomination of Sheriffs for the year ensuing for all the counties in England and Wales, with the exception of Cornwall and Lancashire." The Lords of the Council present were the Earl Granville, the Lord Chancellor, the Right Hon. Chancellor of the Exchequer, Lord Campbell, Sir John Jervis, Sir F. Pollock, Mr. Baron Parke, Mr. Baron Alderson, Mr. Justice Coleridge, Mr. Justice Wightman, Mr. Baron Platt, and Mr. Justice Talfourd. The list was settled in the following form:—

ENGLAND.

BEDFORDSHIRE.—Frederick Charles Polhill Turner, of Howbury-hall Esq.; John Shaw Leigh, of Luton Hoo, Esq., Sir George Robert Osborne of Chicksands, Bedfordshire.

BERKSHIRE.—James Joseph Wheble, of Bulmershe-court, Esq.; Henry Elwes, of Blachan-park, near Abingdon, Esq.; Sir Claudius Stephen Paul Hunter, of Mortimer hill, Bart.

BUCKS. Henry Banner, of Stockgrove, Esq.; Philip Duncombe Pauncefort Duncombe, of Great Brickhill, Esq.; William Frederick Farrer, of Brayfield House, Esq.

CAMBRIDGESHIRE AND HUNTINGDONSHIRE.—William Wells, of Holme, Esq.; George William Rowley, of St. Neot's, Esq.; Sir John Henry Peyton, of Wisbeach-park, Cambridgeshire, Bart.

CUMBERLAND.—George Saul, of Brunstock, Esq.; Thomas Alston Hoskins, of Higham, Esq.; Thomas Story Spedding, of Mirehouse, Esq.

CHESHIRE.—Francis Duncalfe Palmer Astley, of Duckinfield, Esq.; John Chapman, of Hill End, Mottram, Esq.; Richard Christopher Naylor, of Hooton Hall, Esq.

DERBYSHIRE.—William Drury Lowe, of Locko Park, Esq.; Peter Arkwright, of Willersley Castle, Esq.; the Right Hon. Henry Manners, Lord Waterpark, of Doveridge.

DEVONSHIRE.—Arthur Davie Bassett, of Watermouth, Esq. Edward Studd, of Oxton, Esq.; Richard Somners Gard, of Rougemont, Esq.

DORSETSHIRE. Sir Henry Oglander, of Painham, Bart.; Robert Williams, of Bridehead, Esq.; George Weedon, the younger, of Wyke House, Esq.

DURHAM.—Henry John Baker Baker, of Elemore Hall, Esq.; William Parish, of Usworth House, Esq.; Robert Barnes, of Redworth House, Esq.

ESSEX.—Thomas White, of Weathersfield, Esq.; John Wathington Perry Wellington, of Moor Hall, Esq.; Robert Hills, of Colne Engaine, Esq.

GLOUCESTERSHIRE. John Henry Lee Warner, Colonel, near Northleach, Esq., Cornet Holland Cornet, of Admington House, Esq.; Sir Charles Talbot Rusnout, of Sezincote House, Bart.

HEREFORDSHIRE.—Richard Hereford, of Taiton Court, Esq.; Elias Chadwick, of Pudd-estone, Esq.; Richard Francis Wegg-Prosser, of Belmont, Esq.

HERTFORDSHIRE.—Robert Hanbury, of the Poles in Kemridge, Esq.; Nathaniel Hibbert, of Munden in Watford, Esq.; William Joseph Myers, of Nasters in ebeney, Esq.

KENT.—Alexander Gardening, of Ashgrove, Sevenoaks, Esq.; John Angerstein, of Woodcuts, Blackheath, Esq.; Sir Walter Charles James; of Bee-hanger, Bart.

LEICESTERSHIRE.—Cosmo George Charles Kevill, of Holt, Esq., Henry Cores Bingham, of Wartnaby, Esq.; William Ward Jacoby, of Hummerstone, Esq.

LINCOLNSHIRE.—Anthony Wilson, of Rauceby Hall, Esq.; George Skipwerth, of Moorton House, Esq.; the Hon. Alexander Lesnie Melville, of Branston Hall.

MONMOUTHSHIRE. Thomas Brown, of Kobw Vale, Esq.; John Russell, of Ross, Esq.; William Case, of Penhow, Esq.

NORFOLK.—Brampton Gurdon, of Litton, Esq.; Robert Kellett Long, of Dunston, Esq.; Sir Robert John Harvey, of Thorpe, Knight.

NORTHAMPTONSHIRE.—The Right Hon Anthony Henley, Lord Henley, of Watford, Surrey sion, for Sir Francis Edmund Isham, Bart.

NORTHUMBERLAND.—Stamp Brookbank, of the Hermitage, Esq; Stuart Edward Widdington, of Newton Hall, Esq., Rowland Errington, of Sandhoe, Esq.

NOTTINGHAMSHIRE.—Samuel Bagnall Wild, of Costock, Esq.; Henry Bevercan Simpson, of Babworth, Esq.; Samuel William Whitt, of Lenwith Lodge, Esq.

OXFORDSHIRE.—John William Fane, of Wormsley, Esq; Benjamin John Waggy, of Les-place, Charlbury, Esq.; Edwin Guest, of Sandlord-park, Esq.

RUTLANDSHIRE.—Robert Lee Bradshaw, of Tinwell, Esq.; Charles Orlando Bridgeman, of Leyton Grange, Essex, and Bolton, Esq.

SHROPSHIRE.—Robert Aglionby Slaney, of Walford Manor, Esq.; Willoughby Hart Stiwell, of Buckenall, Esq.; Edward Lloyd Calmore, of Lydcot Hall, Esq.

SOMERSETSHIRE.—James Curtis Somerville, of Dunder, Esq.; William Phelips, of Montacute, Esq., George Barens Northcote, of Somerset-court, Esq.

STAFFORDSHIRE.—John Davenport Westwood, Esq.; Richard Dyott, of Bretford, Esq.; Thomas William Gresley, of Chilmington, Esq.

COUNTY OF SOUTHAMPTON.—Jermiah Robert Lee, of Bentworth Hall, Aston, Esq.; James Edward Bradshaw, of Fair Oak-park, near Winchester, Esq.; the Hon. Sir Edward Butler, of Harefield, Southampton.

SUSSEX.—Windsor Fraser, of Cowden Hall, Rathbeden, esq.; John Joseph, of St. Edmunds-hill, Bury St. Edmunds, Esq.; Andrew Arcedeacon, of Governg Hall, Hadlesham, Esq.

SURREY.—Robert Gosling, of Bokey-park, Esq.; Robert Wigram Crawford, of Stockleigh Hall, Dorking, Esq.; George Carew Gibson, of Brathside Wood, Guildford, Esq.

SUSSEX.—John Day, of Newick, Esq.; William Whitter, of Worthing, Esq.; William Crake, of Hastings, Esq.

WARWICKSHIRE.—William Charles Alson, of Elmdon, Esq.; Joseph Moore Soulibee, of Springfield, Esq.; Sir Theodor Wren Cradock Hartopp, of Four-oaks Hall, Sutton Coldfield, Bart.

WESTMORELAND.—Walter Charles Strickland, of Sizergh Hall, Kendal, Esq., John Wilson, of the Howe, Windermere, Esq.; John Ilis, of Bannerigg.

WILTSHIRE.—Edmund Lewis Chatterbuck, of Hazenbuish park, Esq.; Sir Francis Dugdale Astley, of Everleigh-park, Bart.; Simon Watson Taylor, of Dunsted, Esq.

WORCESTERSHIRE.—Edward Bearcroft, of Mere Hall, near Bromsgrove, Esq.; William Dowdeswell, of Pull-court, near Tewkesbury, Esq., Francis Howard Williams, of Duddenham, Esq.

YORKSHIRE.—Henry Hunsingley, of Birdsall, Esq.; James Brown, of Colgrove, Esq.; Sir George Wombwell, of Newburgh-park, Bart.

WALES.

ANGLESEY.—Robert Brisco Owen, of Beaumaris-park, Esq., John Williams, of Trefos, Esq.; Hugh Robert Hughes, of Bodwyn, Esq.

BRECONSHIRE.—Lucius Jones, of Bellas-place, Usnadno, Esq.; John Edward Maduoks, of Glan-y-vern, Esq.; Henry Robinson Bainbach, of Havod-mues, near Abergele.

CARMARTHENSHIRE.—Arthur Trevor Viscount Dungannon, of Brynllwat; Henry Raikes, of Llwynegrin, Esq.; Edmund Free, of Bryn-y-pys, Esq.

CARNARVONSHIRE.—Lewis Llewelyn Dilwyn, of Parkwern, near Swansea, Esq.; Richard Sassen, of Bonwissions House, Esq.; William Llewellyn, of Court-coman, Esq.

CARDIGANSHIRE.—Morgan Jones, of Punan, Esq.; William Banks, of Abergwel, Esq.; John Battersby Harford, of Peterwell, Esq.

DENBIGHSHIRE.—Richard Jones, of Bellas-place, Usnadno, Esq.; John Edward Maduoks, of Glan-y-vern, Esq.; Henry Robinson Bainbach, of Havod-mues, near Abergele.

FLINTSHIRE.—Arthur Trevor Viscount Dungannon, of Brynllwat; Henry Raikes, of Llywnegrin, Esq.; Edmund Free, of Bryn-y-pys, Esq.

GLAMORGANSHIRE.—Lewis Llewelyn Dilwyn, of Parkwern, near Swansea, Esq.; Richard Sassen, of Bonwissions House, Esq.; William Llewellyn, of Court-coman, Esq.

MERIONETHSHIRE. Hugh John Revely, of Brynygwin, Esq.; George Augustus Hudduri, of Penymenyrhyn, Esq.; Charles Fursonby Tottenham, of Carrogissk, Esq.

MONTGOMERYSHIRE.—Edmund Athelstane Peel, of Llandinio, Esq. Sir John Owen, of Orsiock, K.C.B.; and Michael Severne, of Walcot, Esq.

PEMBROKESHIRE.—The Hon. Robert Fulke Greville, of Castle Hall John Leach, of Ivy Tower, Esq.; Hamelins John Dunn, of Teasy, Esq.

RADNORSHIRE.—Walter de Winton, of Maesaigh-castle, Esq.; John Jones, of Celmiaes, Esq.; Robert Beaservile Mynors, of Evancoed, Esq.

PROVINCIAL LIBRARIES IN FRANCE.—Twenty-nine towns in France possess libraries, containing each from 10,000 to 15,000 volumes. Fifteen towns have libraries of from 20,000 to 30,000 volumes. Twenty-five towns possess from 30,000 to 50,000 volumes. Twelve towns possess from 50,000 to 60,000 volumes. Besançon possesses 80,000 volumes; Lyons 70,000; Aix and Strasbourg, 80,000; Bordeaux, 110,000.

THE WORDSWORTH MEMORIAL WINDOW, COCKERMOUTH CHURCH.

In the ILLUSTRATED LONDON NEWS for Nov 30, 1850, we illustrated the destruction of Cockermouth Church by fire; since which period, after considerable local difficulties, a new Church of large extent has been built by Mr. Clarke, F.S.A., architect, of Stratford-place, Oxford-street.

The new edifice forms a crowning point over the town, on the hill site of the old building; the spire rising above the landscape, and forming an interesting feature in the scenery from the Vale of Lorton, where terminates the usual lake tour from Buttermere. The rebuilding of the Church has afforded to the friends and admirers of the poet Wordsworth an interesting opportunity of raising a Memorial in his native place, and on the spot where he first received the rudiments of early education. His father and mother were buried at the east end of the new Church, and the school stands in the churchyard.

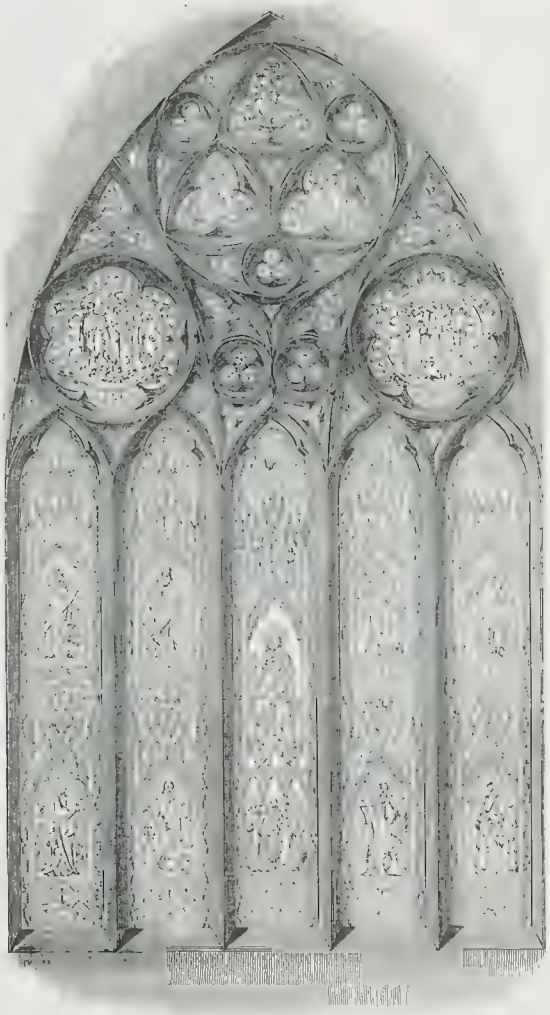
The poet is known to have expressed himself most feelingly on the subject of the old Church, which he was even then anxious to see rebuilt. With the view of perpetuating the interest thus taken by the deceased poet, it was resolved to fill one of the windows of the new Church with the richest stained glass to his memory. The commission was entrusted to Messrs. Hardman, of Birmingham, who have produced one of the finest specimens of colour and design yet seen.

The Window is composed of five lights; the head being filled with geometrical tracery. Each light contains two canopies and three circles. Beneath the canopies of the centre light are figures of the Saviour and St. John. Beneath the canopies on one side are figures of the Four Great Prophets; on the other side are figures of the Four Evangelists. The circles of the centre light contain figures of St. Joseph, St. Mary, and David. The circles of the four side lights contain figures of the Twelve Lesser Prophets. Those in the centre light, by Abraham, represent Melchisedek. Isaac, Jacob, Moses, and Aaron. The openings of the supermullioning are filled in with figures of Adam, Eve, Seth, and Noah: besides two groups of Saints—the one St. Mary Magdalen, &c.; the other St. Stephen, St. Alban, &c.

The following inscription, in old letters, recording the Memorial, on a brass plate and electro-gilded, has been cut, and will be let into the north east pier of the central tower:—

To the Glory of God, and the honoured Memory of William Wordsworth, Poet Laureate, the East Window of this Church is raised, in this his native place, by public subscription.

The cost of the Window will exceed £300.



THE WORDSWORTH MEMORIAL WINDOW.

SECKFORD HOSPITAL, WOODBRIDGE.

Among the many noble institutions founded by the benevolence of our ancestors, the Hospital at Woodbridge, in Suffolk, is entitled to special prominence. This noble charity was originally established in the year 1587, by Thomas Seckford, Esq., Master of the Requests, in the reign of Queen Elizabeth; it being intended for the reception of thirteen poor men, and three poor widows, as nurses to the alms-men. For the support thereof, Seckford endowed the foundation with an estate in the parish of St. James, Clerkenwell, Middlesex, where "Sekforde" and "Woodbridge" streets keep in memory the munificence of the "Master." The foundation also possesses Corporation-row, Islington; and certain property in and near Woodbridge: the entire value of the property exceeds £3700 per annum. A surplus of more than £3000 is invested in the Public Funds, so that the charity may be hereafter extended.

The original Hospital, erected in 1587, having been found inadequate to the purposes of the institution, a new edifice has been erected, and the old Almshouses are let at low rents to indigent tenants. The new Hospital stands on a piece of ground, called Copt Hall, belonging to the trust. The Elizabethan style has been appropriately chosen. The plan consists of two wings, with an elegant chapel in the centre; and open arcades at each end, due east and west. The materials are bricks, with zig-zag lozenge corners and pilasters, of intermixed red and white bricks. The roof has a loop-hole parapet, and ornamental ridge-tiles; and at each angle is a bell-turret. The extent of the frontage is 337 feet.

The chapel has oak fittings, including stalls for the governors and churchwardens; and there is accommodation for a certain number of the inhabitants of Woodbridge.

The massive iron entrance gates are richly emblazoned in bronze and gold with the arms of Mr. Seckford; of the late governors; and of the governors at the time of the rebuilding of the Hospital, viz., Lord Langdale and Sir Nicolas Tindal; the governors of the Charity being the Master of the Rolls and the Lord Chief Justice for the time.

At the eastern gate is the porter's lodge, with a bell-turret. The principal building is fronted by a terrace, 560 feet in length.

The new Hospital was planned by Mr. Cockerell, the architect, with a school at each end, and accommodation for the chaplain. The plan of the edifice, as now erected, was adopted by succeeding governors, under the direction of Mr. John Noble, of London. The premises were built by Mr. George Thompson, of Woodbridge. The inmates of the Hospital are elected by the Perpetual Curate of Woodbridge and the two churchwardens. The following are the stipends:—The Minister, £100 per annum; Principal, £80; two Churchwardens, each, £25; twenty-eight men, each, £28; four nurses, each, £20.

The expenditure in Woodbridge is about £1500 per annum, inclusive of clothing, coals, medical attendance, &c., to the inmates.

Adjoining the Hospital is a cemetery, with an ornamental brick and stone entrance; over which is inscribed "Blessed are the dead," &c.

The grounds in the front of the edifice are tastefully laid out, and form an agreeable promenade, which is open daily to the public.

The cost of rebuilding the Hospital has been about £27,000. Woodbridge rejoices in memorials of so munificent a benefactor as Thomas Seckford: among which is a portrait of the worthy Master, engraved in 1792: he wears the conical hat, ruff, and general costume of the period. A medal has also been struck, bearing on the obverse the effigies of Seckford; and, on the reverse, his arms, with this legend—ORATIONES. EV. ELEEMOS. ASCENDVNT. IN. MEMORIAM. CORAM. DEO.

NEW SECKFORD HOSPITAL, AT WOODBRIDGE.

MR. SHERIFF WIRE.

David Williams Wire, Alderman and Sheriff of London and Middlesex, has long been associated with the progressive party in the metropolis. Distinguished for his earnest and enthusiastic eloquence, he soon became prominent as the advocate of Catholic and Slave Emancipation, of Parliamentary, Law, and Financial Reforms, of the Repeal of the Corn-laws, and Reform of the Corporations of England. He has ever been a steady supporter of the principle that "religious opinions should never be a bar against the enjoyment of civil rights," while his devotion to the cause of education and his liberality in supporting charitable institutions, have made him a man of note among the Nonconformist body of Dissenters, of which he is a member. He was born at Colchester, and, we believe, is of Scottish descent, the family name being originally Weir. But, as his peculiar qualities have been very graphically described by the Recorder of London when presenting the Sheriffs to the Curator Baron at Westminster, we cannot better conclude this short notice than by adopting the language of the learned gentleman:—

"When, my Lord, I present to you, in the first place, Mr. Alderman Wire, as senior Sheriff, I believe I am presenting to your notice a gentleman who is not unknown to your Lordship, and who is and has been connected with the profession to which your Lordship and myself belong. Mr. Alderman Wire, by industry, intelligence, and professional ability, has raised himself to the proud position which he now occupies. At an early age he entered the profession of the law as a clerk in the city of London, and for more than thirty years has been connected with the firm of which he is now the head. For a long time he was a clerk in the office of the firm, but from his diligence and talent ultimately was articled, and became a partner, and subsequently head of the firm. In 1833, he was elected a member of the Common Council for the ward of Walbrook, in which position he remained for sixteen years, to the great satisfaction of his constituents; and in which, from his industry, his business habits, and his eloquence, he commanded the attention and admiration of the inhabitants. During this long period he was conspicuous in the promotion of everything which had for its aim the objects of charity and benevolence and the advancement of the happiness and comfort of his fellow-citizens. Mr. Alderman Wire, during the period I have mentioned, was six times elected to the office of Under Sheriff—an office which he has discharged with much ability. In 1840 he was selected, from amidst many competitors, by Sir Moses Montefiore, Bart., to accompany him on his benevolent mission to the East, undertaken with a view to inquire into the atrocious calumnies and persecutions to which the Jewish people resident in Damascus were subjected. That mission, through the perseverance and influence of

MR. SHERIFF WIRE.—FROM A DAGUERREOTYPE BY BEARD.

Sir Moses Montefiore, was eminently satisfactory; the calumnies were disproved; such of the prisoners as had survived the cruelties to which they had been exposed were liberated and accompanied to their homes with marks of honour; their persecutors were disgraced and punished; and Sir Moses Montefiore had the great satisfaction of obtaining from his late Highness Mohammed Ali, the Pacha of Egypt, and also from the Sultan, at Constantinople, a decree placing the Jewish people in the dominions of Egypt and Turkey upon a footing with the most favoured subjects of those countries. Subsequently, in 1851, he was nominated, at a meeting of the merchants, bankers, and traders of the City, held at the Mansion-house, joint secretary with his friend the Rev. S. H. Cattley, of the City Committee for the promotion of the Great Industrial Exhibition, and in that capacity he succeeded in gathering a large sum of money, and otherwise materially promoting the success of that national undertaking. In the same year, 1851, on the retirement of Mr. Alderman Gibbs from the ward of Walbrook, Mr. Wire was unanimously elected Alderman of that ward, and thus raised by the approbation of its inhabitants to the position of one of the magistrates of the City of London. And I have the pleasure to state to your Lordship that he has since performed the duties of his office to the satisfaction of his fellow-citizens, and he may fairly challenge a comparison with any magistrate who has discharged his duties with punctuality, fidelity, and impartiality. Under these circumstances, and after such repeated trials of his capacity, he has been elected by the livery to the responsible office of Sheriff, and it only remains for me to introduce him to you for the approbation of the Crown, to fill the office to which his brother citizens have appointed him."

NEW CHURCH OF ST. MARY, THUNDRIDGE, HERTS.

This Church, the consecration of which was recorded in our Journal of last week, is an interesting specimen of ecclesiastical architecture, with a most advantageous position.

The sacred edifice is designed in the Decorated style. In plan it consists of a nave, 57 feet long by 25 feet wide; a western tower, containing four bells, with solid parapet; and a stair-turret at one of the angles: The chancel is 27 feet long by 20 feet wide; and there is a vestry, separated from the chancel on the north side by a perforated ornamental screen. The south porch has some picturesque open-timber work. The roofs are of open timbers, stained; but the entire fittings are of wainscot. The nave and chancel are paved with Staffordshire red and black tiles and the Communion space is floored with appropriate encaustic tiles. The pews, or rather seats, are open—a rail being in the place of the incommodious door ordinarily seen in churches. The pulpit is of oak. The windows are wholly filled with Powell's ornamental quarries; and the east window is additionally enriched by medallions, representing the Birth, Dedication, Crucifixion, and Ascension of the Saviour. The walls are faced with Kentish rag-stone. The roofs are covered with plain tiles, with ornamental cresting.

The cost of erection was between £3000 and £4000; and the total cost, including building, endowment, and compensation to the Vicar of Ware, has been about £9000; the whole of which has been defrayed by Mr. Hanbury, of Poles, near Ware.

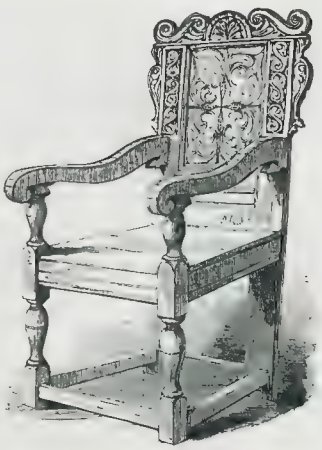
The architect of the Church is Mr. B. Ferrey, of London. The organ, which is a very fine instrument, and of considerable power, was built by Mr. Bishop, at a cost of £200.

THE ROYAL GEOGRAPHICAL SOCIETY.

FROBISHER'S CHAIR.—THE NORTH-WEST PASSAGE.

The present Session of the Royal Geographical Society commenced on Tuesday evening, in the rooms, Regent-street, and was attended by a larger company than ever witnessed before. Amongst the visitors were Sir H. Holland, Sir R. H. Dukenfield, Bart., Colonel Campbell, General Sandwith, Lieut General Sir Charles Pasley, G.C.B., Colonel Pattock, Colonel Steele, Sir B. Outram, Sir W. Parish, Sir Fred Nicholson, Bart., Sir L. N. Buxton, Bart., the Earl of Sheffield, Lieut Cresswell, Mr. B. Oliveira, M.P., Dr. Hodgkin, Admiral Bowles, Captains Beechey, Bennett, Fitzroy, and Inglefield, &c.

Sir Roderick Murchison, on taking the chair, apologised for the absence of Lord Ellesmere, who regretted his being unable to attend that evening. The President said that he had to announce that on their first meeting they had the unprecedented number of thirty candidates for admission. He was also gratified in stating that Lord Stanley had made a donation of a large portion of a library to this society. He then drew the attention of the society to a chair, formerly belonging to Admiral Sir Martin Frobisher, (see the Illustration) which had been sent to the society by Mr. Weld, accompanied by the following letter:—



CHAIR OF SIR MARTIN FROBISHER.

"Somerset-house, Nov. 14, 1853.

"My dear Sir Roderick,—I think that the members of the Geographical Society will probably like to see a relic of one of our old Arctic worthies, who devoted many years of his life in gallant though unsuccessful attempts to discover the North-West Passage. It is Admiral Sir Martin Frobisher's arm-chair, which has recently come into my possession by purchase, and which formed a portion of his furniture in Altoft's Hall, four miles from Wakefield, in Yorkshire. Sir Martin Frobisher was, as you will remember, warmly patronised by Queen Elizabeth, who assisted him in his Arctic explorations by a grant of £4000 from her privy purse; and on his return from his third Arctic voyage, in 1578, further testified her approval of his labours by bestowing upon him Altoft's Hall, with its manor and grounds, which before sequestration belonged to the Abbey of Newland. The estate remained in Frobisher's family until the time of Cromwell, when it came into the possession of the Ingrams, of Temple Newsome. The chair, the back of which is richly carved, bears the name of M. Frobisher, cut in antique characters, with the date 1580, at which period he was, according to his biographers, enjoying the repose of his newly-acquired estate in his native county, having been born at Doncaster. Thus the chair in question is nearly three centuries old, and had it no other interest than its great age, it would, as an example of the furniture of the period when it was made, be curious. But, bearing in mind that it belonged to Frobisher, one of our most enterprising and renowned navigators, who, when endeavours were made to dissuade him from engaging in the discovery of the North-West Passage, declared, 'It is the only thing in the world that is left yet undone, whereby a notable mind may be made famous

NEW CHURCH OF ST. MARY, THUNDRIDGE, HERTS.

RAILWAY UPON THE ROAD OF THE CHAMPS ELYSEES, AT PARIS.—(SEE NEXT PAGE.)

and fortunate'—this relic becomes peculiarly valuable, and cannot, I think, fail to be regarded with interest by the members of the Geographical Society. Believe me, my dear Sir Roderick, yours very sincerely, C. R. WELD."

The thanks of the Society were then awarded to Mr. Weld.

The chairman next alluded to the North-West Passage; and said he despised those who asked the question, "Of what use?" It was of great importance to the physics of the globe to have ascertained the fact, as the knowledge of it would throw great light on the nature and direction of oceanic currents, and the drift of the Polar ice. It was also most satisfactory to have proof that Sir John Franklin must be looked for neither to the westward nor the eastward, for every point of land in both quarters had been examined, but that he must have gone directly north through the Wellington Channel where all the practical geographers who had examined the subject supposed that he had gone.

Captain Inglefield, as the chief of the expedition, then rose to read a paper on the late important discovery of the North-West Passage by Captain M'Clure the details of which have been fully given at "first hand" in the despatches of that gallant officer, already published. He stated that his opinion was that Franklin's people were somewhere within the wide circle of Polynia, or the Polar region, that he had passed up Wellington Channel, perhaps with the view of returning through Lancaster Sound; that he had penetrated beyond the parallel of 80 degrees, and reached some land more moderate in its climate than regions that lay further south, and where, therefore, he might find an abundant supply of deer and musk oxen. If the ships had been lost, he thought some fragments must have drifted on the shores of Spitzbergen by the current that set continually in that direction. He could not renounce the hope that Captain Kennedy, in the *Isabel*, which was now at Valparaiso, about to go up Behring's Strait, might be enabled to come back by Spitzbergen and Nova Zembla. If he had such a mild season as Barentz met with in 1596, he might be enabled to do this, accomplishing also the examination of the Siberian coast in a single season (Cheers).

The President said he was anxious to hear what the gallant visitor, Lieut. Cresswell, had to offer on the subject.

Lieut. Cresswell, on rising, was received with much cheering. He said that, after the explanations that had been given by Captain Inglefield of the expedition, it had left him little to say; but he should be most happy to answer any questions that might be put to him. Were he to enter upon the subject, he could only go over the same ground that had already been trodden. He stated that in 1840 he sailed from England in the *Investigator*, in company with the *Enterprise*, in search of Sir John Franklin and his brave companions. He then very briefly related their progress from the Sandwich Islands, with frequent reference to a map explanatory of their course—without which his description would be unintelligible. He generally briefly repeated the despatches of Captain M'Clure.

The President congratulated the British geographers on the fact with which they had been made acquainted—of the practical development of the existence of the North-West Passage which had been accomplished; and he could not help thinking that the gallant Lieutenant who had just sat down was of that sort of men by which so great a discovery would be accomplished. With regard to Captain M'Clure, he believed that there had been no officer since the time of Captain Cook who had written despatches that would be more indelibly impressed on the minds of all true Englishmen. By the discovery of this North-West Passage, they had proofs that Sir John Franklin had not gone in a western direction, as some persons were inclined to believe that he had done. If he had not gone west, he had not gone east; but, obedient to the instructions he had received, he believed that Franklin had gone boldly through Wellington Channel to the northward; for it was his (Sir R. Murchison's) opinion—as it was that of all well-informed geographers—that it was in that direction, and in that direction only, he would eventually be found.

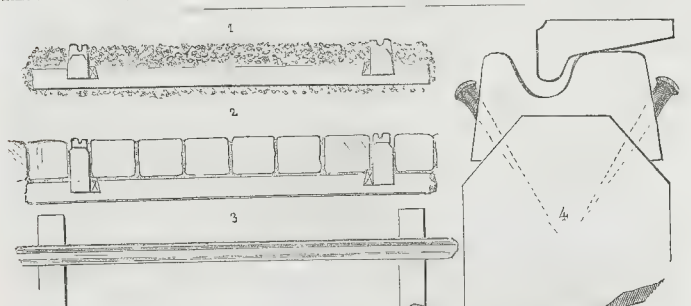
Mr Peterman dwelt on the fact of the animals having been seen by Captain M'Clure going to the northward in winter, as strong evidence of a mild climate round by a Polar Sea.

Captain Beechey said the sea between Spitzbergen and Nova Zembla had never yet been navigated, neither Barentz nor any one else having succeeded in the attempt. No great expectations could be entertained in that direction, though he did not wish to discourage any expedition that might be sent. Inasmuch as we had now screw vessels, which we never had before. No great quantity of driftwood was ever found on the shores of Spitzbergen, and the sea was always frozen over during winter about Sturmberg, though the water was excessively deep along the land. No doubt the Gulf Stream modified the climate to a certain degree, even in that high latitude, but, if this were the state of the coast of Spitzbergen, he thought there was little ground for expecting that the sea would not also be frozen at the Pole. With respect to the passage into the Polar Sea by Behring's Strait, the Russians, under Baron Wrangel, and others, had repeatedly tried to proceed from the coast of Siberia northward, but the difficulties has been found insurmountable.

Sir Roderick Murchison congratulated the society on the tone of the discussion, and expressed a hope that another expedition would be ordered to proceed for the purpose of exploring the seas round Spitzbergen, and thus settling this question.

In the course of the evening a letter, very picturesque and summary, from Captain M'Clure to his old shipmate, Captain Sir George Back, was read; but it contained no new fact.

This very interesting meeting (after thanking the chairman) broke up at eleven o'clock.



1 THE SYSTEM APPLIED TO MACADAMISED ROADS.
2. APPLICATION TO PAVED ROADS.
3. MODE OF FIXING THE SLEEPERS, ETC., OF THE RAIL.
4. SECTION OF THE RAIL AND IRON PLATE OF THE WHEELS.

RAILWAYS UPON PUBLIC ROADS.—THE NEW PARISIAN OMNIBUS.

A NEW system of rails, which permits the establishment of railways upon ordinary roads, has just been applied in Paris. No one can as yet comprehend the immense services which may be rendered by this new locomotive agency, whether in respect of celerity of communication or the economy of time and money, as well to the centres of population which do not happen to be placed upon the great lines of railway, as in facilitating the interior transactions and communications of great cities. This new system is extremely simple in its conception, is of easy application, and not expensive; and the first experiments, in which a Correspondent in Paris has himself assisted, leave no doubt of its practicability and of the advantages of the new mode of conveyance.

A rail constructed upon this principle has been opened at Paris, from the Place de la Concorde as far as the Barrière de Passy—a length of about two miles and a half. This short run, along one of the side walks of the promenade of the Champs Elysées, will be extended by a curve of small radius to the left side of the highway of the Quai de Billy. It will continue along the footway of this quay until near the Pont d'Jena, where it crosses the road anew, and continues its progress in a right line, until it reaches the terminus. The construction of this line has not necessitated any operation in the way of levelling or earth-work. The rail is placed upon the level of the public road, all the undulations of which it consequently follows.

The new rail is a band of iron, hollowed something like a cart rut upon the upper surface, and forming a true furrow which receives the iron plate of the wheels. The outer lip of the rail is slightly rounded, in such a manner that the friction of the wheel is confined to a limited portion of the iron band. Wooden sleepers are placed transversely in the soil, at a distance of two metres apart (about 6 feet 6 inches). Wooden piles of the same dimensions are placed longitudinally for their support, in which they are fixed half way up, at the exact distance which ought to be preserved by the two lines of rails. These pieces of wood are prepared according to the outline given in the accompanying Illustration (No. 3). The rails are fitted into these sleepers, by means of iron bolts of a particular shape. The interval between the rails is not filled up by ballast and earthwork, as in the railways. It is sufficient to re-establish the pavement in its primitive state, as seen in Figures No. 1 and 2. The appearance of the rail is represented in the general plan of which Figure No 4 represents a section.

It is to be remarked that the hollow of the rail can never be blocked up, either by stones, fragments of wood, or other materials, in consequence of its rounded form, which enables the iron guard (*chasse-pierre*) of the carriage easily to remove foreign bodies. The *chasse-pierre* is simple contrivance, which removes all delays the circulation in the streets or the passage of the carriages upon the ordinary road. One of the "points" is fixed; the other, which determines the shunting of the carriage, moves upon a pivot, and is not more than one metre and a half in length. Either the hand or a stick suffices to put the points in action.

The carriages used in this new mode of locomotion are of handsome design, and are provided with every means of luxury and comfort. They are composed of an interior containing sixteen arm-chairs, and of a gallery outside, in which 24 persons may be received in extremely commodious seats or stalls. This gallery is reached by steps placed along the exterior sides of the carriage and guarded by a hand-rail. Upon the two faces of the vehicle which has neither front nor behind, properly so called, are two platforms furnished with an elegant gallery, each of which will contain five passengers standing. Thus the number of persons who can find standing and sitting accommodation in the new vehicles is 60. There are carriages at fixed hours, and others which run at irregular periods according to the number of passengers who may present themselves. An excellent system of breaks enables the carriages to be stopped instantly, at whatever speed, without any risk of sending them off the line.

Our Illustration represents one of these carriages, drawn by two horses, driven tandem fashion. The first experiments were made in this manner; but experience proved that this system of traction left much to be desired, and it will probably be replaced by two horses driven abreast in the ordinary way.

From the speed obtained in the first experiments, it may be presumed that the system ought, in practice, to give an average speed of about 18 miles an hour, with sixty persons in the vehicle, and drawn by two horses. The cost of the establishment of the new roadway is about 30,000 francs (£1190) a mile. The first expense is amply compensated by the enormous reduction which the system effects in the current expenses of horses and men. For the line newly opened, two carriages, which only require four men (two coachmen and two conductors) and twelve horses, perform the same service which at the present moment requires seven omnibuses, fourteen men, and fifty-four horses.

The price of seats in these carriages will be 15 centimes (1½d.) for a "course" of five miles, when the line shall be carried out to its terminus at the Place de l'Hôtel de Ville. Intermediate stations will be provided at distances of a mile apart; and it is not doubted that the great advantages which this system of locomotion presents will bring it into general adoption in Paris, as well as in other great cities where the activity of the communication requires the utmost attainable speed. The new method, which bears the name of the inventor, M. Loubat, and which is carried out by two engineers, MM. Cassal and Martin, is patented in England and several other countries.

CAPTAIN M'CLURE, R.N.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

In the memoir of Captain M'Clure, in your Journal of Nov. 5th, a circumstance of his life was omitted, which, as his friend, I may venture to say he ever feels disposed to acknowledge with thankfulness. He was left without fortune, an orphan, at the early age of four years, and adopted by the late General Le Mesurier, Hereditary Governor of Alderney. The General was his godfather, and had him educated, and treated in every respect as a son. Captain M'Clure's home, until he entered the Navy, was the Government-house, Alderney; and his first education, up to the age of twelve years, was directed by the Rev. Philip Hayes, of Guernsey, a kind and efficient master.

I remain, &c., W. R.

SIMPLE REMEDY FOR CHOLERA.

(To the Editor.)

Tver, Russia, October 12th (Old Style), 1853.

I regret much to find by your very valuable journal that the dreadful scourge Cholera is making its appearance in England, and I here beg (with your kind permission) to offer to your numerous readers a cheap, simple, and what I have personally found to be, an efficacious remedy for what is generally considered to be the first symptoms of the above dreaded disease—viz., a glass of hot peppermint tea, with from half to a tea spoonful of capsicum (bird or Cayenne pepper). After taking the above, the patient should be placed in a warm bed; and, if in fifteen minutes the pains are not removed, repeat the dose.

I may here add, that, during the time the cholera was at its height here, I was suddenly attacked with violent pains in the bowels, which I succeeded in removing after taking (in about thirty minutes) three doses of the above.

This was not the only case that came under my immediate knowledge during the trying time the pestilence was here among us; for I, on four different occasions in my own family, and likewise with others, had proof of its effects. Your obedient servant, GEORGE WELLS

THE BELL RUNG BY THE SEA.—In the Southampton dock there are three patent bell buoys, which the Mexican Government have ordered for a part of the coast in the Gulf of Mexico. They are intended buoys which are to be used in those seas in thick and foggy weather when the buoys cannot be seen. The surging of the waves causes the bells to ring, which give information of the locality of the buoys. The apparatus is such as to answer the purpose of life buoys, where several persons can be sheltered until they are rescued. Their use in enabling ships to enter channels in foggy weather is invaluable. The under part of the bell buoy is cone-shaped, only solid, and is admirably formed to roll about in the water to ring the bell that is attached to it. From the upper surface of the buoy a circular and tapering palisading is raised several feet in height, inside of which, towards the top, the bell is hung so as to ring at the slightest movement.

OBITUARY OF EMINENT PERSONS.

LADY PANMURE.

MONTAGUE LADY PANMURE was the elder daughter of George, second Lord Abercromby, by his wife, the third daughter of the well known Minister, Henry Dundas, first Viscount Melville. Lady Panmure was the wife of the Right Hon. Fox Maule, second and present Lord Panmure, to whom she was married, 4th April, 1831. Her Ladyship died on the 11th inst., at Pitfour Castle,

Perthshire; she leaves no issue. In her own neighbourhood her Ladyship's demise will be felt as a public loss, so generally and thoroughly was she loved and respected for her charity, benevolence, and other social virtues.

HARRIET, LADY POWER.

THE death of this lady, in the 77th year of her age, occurred at Kilfane on the 1st inst. Lady Power was the relict of Sir John Power, Bart., of Kilfane, sister of Gervase Parker Bushe, Esq., and niece of the patriot, Henry Grattan. She herself was a star in the galaxy of beauty and fashion at the memorable period of the Kilkenny amateur theatricals. Lady Power leaves several sons and two daughters: of the former, the eldest is the present Sir John Power, Bart.; of the latter, the elder, Mary, is the wife of Wm. Fitzwilliam Burton, Esq.; and the younger, Frances, of John Power, Esq., of Gurteen.

ADMIRAL NESHAM.

ADMIRAL CHRISTOPHER JOHN WILLIAMS NESHAM died on the 5th instant, at Exmouth, at the advanced age of eighty five. The gallant Admiral had resided for the last twenty years, on his own property, in Devonshire, and was universally venerated for his many virtues, and especially for his benevolence to the humbler classes. Admiral Nesham entered the Royal Navy in January, 1782, as a first class volunteer, on board the *Juno* frigate; and in June in the following year was present, as midshipman, in the action fought between Sir Edward Hughes and M. de Suffren, off Cuddalore. During his early course, Nesham saved, in a remarkable manner, the life of a Frenchman. The gallant sailor, when a midshipman, was travelling in France, and happened to be at Vernon in 1789; a revolutionary *emeute* arose during his stay, and Nesham met in the streets a ferocious sans-culotte mob dragging a French gentleman, named Plauter, to a lamp-post, to hang him up. Middy, regardless of danger, flew at once to the rescue; he threw himself between the victim and the sanguinary crowd, and declared the murder, if done at all, should be a double one, for the man they were going to kill in so cowardly a way was as innocent as himself, and he would not quit him but with his life. The mob, struck with the chivalrous valour of the act, paused and relented. They cheered the Englishman, and thus M. Plauter got the opportunity of making an instantaneous and effectual escape. In reward for this piece of heroism, the Assembly-General of the Representatives of the Commune of Paris, on the 13th January, 1790, decreed a civic crown to him who had saved the life of a citizen: this, and a uniform sword of the National Guard were accordingly presented to Nesham; and the proceedings were ordered to be printed and distributed in the sixty districts.

Admiral Nesham's naval career was fully equal to his early promise: he rose with distinction through all the grades, and he received the war-medal in 1849, with two bars, for Camperdown and Martinique. In him we lose as bold and generous a British seaman as ever won honours in the service.

BICKHAM ESCOTT, ESQ.

MR. BICKHAM ESCOTT, a well-known politician, was the son of the late Rev. T. Sweet Escott, of Hartrow House, Somersetshire, and was born in the year 1800. He received his earlier education at Winchester-school, and thence proceeded to Christchurch, Oxford, where he took high honours. He was an enlightened patron of the arts, and himself a painter of no mean pretensions. He married, the 26th July, 1825, Anne, youngest daughter of the Rev. Walker Trevelyan, and by her, who survives him, has left an only child, a daughter.

From an early period of his life, Mr. Escott took an active part in politics, in connection with the party, and in conformity with the principles of the late Sir Robert Peel. On these principles he twice contested the representation of Somersetshire—once immediately before, and the second time after, the passing of the Reform Bill. In 1832, Mr. Escott unsuccessfully offered himself for the city of Westminster, in opposition to the present Lord Broughton, then Sir John Cam Hobhouse, and, in 1841, he was returned for Winchester. In Parliament, Mr. Escott was a fluent and clever speaker, and seldom failed to secure the marked attention of the House. His independence, too, and his position as a respectable English country gentleman, gave a weight to what he said. Mr. Escott was distinguished, in his own county, Somersetshire, as an active and efficient magistrate. Mr. Escott died recently at his family mansion, Harrow House.

WILLS.

THE WILL OF LIEUTENANT-GENERAL SIR CHARLES JAMES NAPIER, G.C.B., was administered to on the 4th inst. by John Pitt Kennedy, Esq., one of the residuary legatees in trust—there being no executor appointed in the will. The value of the personalty alone in England was sworn under £20,000 (the estimate before given being incorrectly stated). He devises his Oatland estate, on the decease of Lady Napier, to his daughter Emily and her issue, and his funds in the United Kingdom and Pennsylvania, also, to his wife for life. His numerous specific bequests are of a peculiarly descriptive character; among others, he leaves an Ameer sword, which had been presented to the conqueror of Scinde, to his daughter Emily, for her eldest son. Mc'Murdo's sword, with which the great Beelooch chief, Jan Mahomed, was slain; also the sword given to him by Lord Ellenborough. He leaves to Miss Marie His favourite arms were those he had of his father, which are to be divided among his brothers, and in respect to which he observes—"I have used my father's arms as his widow's, and so have all his children, I trust will rejoice in the fame of his sons." His white cornelian ring (Hercules), given to him by his mother in 1807, and which was never once off his finger, he leaves to his wife and daughter Emily. At the time he obtained it he was with him in every battle, and was only saved at Corunna, when made a prisoner, by his hand being so clotted with blood as to hide the ring." His father's cornelian ring, which he wore in battle, he bequeaths to his sisters and brothers, that it may be held by one who had seen it on the hand of their father, "whose rival in grandeur of body and mind, and virtue, neither they nor I have ever seen." He leaves his journals and letter books to his brother William, with the hope, if anything is published, his own words may be used, and not frittered away.—The will of his youngest brother, Capt. Henry Edward Napier, R.N., F.R.S., who died on the 14th ult., was proved in London at the same time: effects sworn under £2000.——Probate of the will of the Right Hon. Alexander George Baron Saltoun, G.C.B. and G.C.H., of Philorth House, Aberdeen, Auchinroath, N.B., and of London, has been granted to Sir John Bayley, Bart., one of the executors; power reserved to L. H. Bayley, Esq. Effects in England sworn under £10,000. His property he has bequeathed in legacies to his nieces and other relatives and friends, and in annuities to all his servants. The will of the Right Hon. Henry Richard Greville, Earl Brooke and Earl of Warwick, K.T., was proved by the present Earl, the son and only issue, and is the sole executor, to whom is devised Warwick Castle, the manors, and all other estates real and personal, the persons being valued at £40,000.——The will of the late Earl of Oxford and Mortimer, Baron Harley, has also been proved.——The late Admiral the Right Hon. Sir George Cockburn, G.C.B., Admiral of the Fleet, Rear-Admiral of the United Kingdom, and Major-General of the Royal Marines, by his will, dated 8th October, 1852, bequeaths the sword presented to him by his late Majesty King William IV., having on one side of the hilt the Royal Arms, and on the other, those of the Baronet; also the gold-hilted sword presented to him by Admiral Lord Nelson, as well as the three pieces of plate presented to his officers under his command, to be held, on the demise of Lady Cockburn, and daughter, as heir-loom with the Baronetcy; and has devised his real estate to Lady Cockburn, and daughter, during her issue, and, if not, to the heir-at-law in like manner.—The latter sworn under £10,000. The executors are Lady Cockburn, Major-General Sir Francis Cockburn, the brother, and Sir Alexander James E. Cockburn, the nephew, of her Majesty's late Attorney-General.

CHARITABLE BEQUESTS.—The late T. Barnard, Esq., of Bedford, banker, has required all the following legacies, viz.: £500 to the Society for the Relief of the Widows and Orphans of Clergymen.

NEW BOOKS, &c.

Now ready, price One Shilling, THE ILLUSTRATED LONDON ALMANACK FOR 1854.

CONTENTS

Twelve Splendid Engravings of Allegorical Incidents in the Life of Queen Victoria, by GEORGE THOMAS, Esq.; with accompanying Descriptions.

Twelve Humorous Illustrations of Sports of the Month, by B. HEADON, Esq.

36 Engravings of Anniversaries of the Months; with Explanatory Notes.

Astronomical Occurrence and Appearances; illustrated by 28 Engravings of the Dress of the Planets; of the Telescopic Appearances of Venus, Mercury, and Mars; and of the relative positions of Jupiter's Satellites to the face of that Planet at the time of Eclipse.

On the Astronomical Instruments used in an Observatory, illustrated by 9 Engravings.

Diplomatic Table of the Public Acts of Parliament passed in the last Session.

Lists of Persons of Note who have died within the last Twelve Months.

Lunar Occultations of the Calendar for 1854.

Meteorology and Jovian Phenomena for the Year.

Index of the Polar Star being on the Meridian

Civil Service Examinations.

On the most recently-discovered Planets, with Diagrams showing their places on the Heavens when first observed.

List of small Planets situated between the Orbits of Mars and Jupiter.

Forces, Navies, and Supplementary Matter, by JOHN CARMICHAEL, Esq.

Government and Law Offices in London, Dublin and Edinburgh.

Public Offices, &c., &c.

The Astronomical Department by J. GLAISHER, Esq., F.R.S., of the Royal Observatory, Greenwich

Edited and Published at the Office of the ILLUSTRATED LONDON NEWS, 198, Strand.

Price 3s. 6d.

DEFINITIONS in POLITICAL ECONOMY. By the Rev. R. J. L. MALTHUS. A new Edition, with a Preface, Notes, and Supplementary Matter, by JOHN CAZENOVE. SIMPKIN, MARSHALL, and CO., Stationers'-court.

EXMOOR RAM.

EXMOOR FARMING.

THREE days succeeding that of the Sale of Ponies at Simon's Bath (of which an account appeared in the ILLUSTRATED LONDON NEWS for October 22) were devoted by us to exploring the wild beauties and agricultural capabilities of Exmoor; and it may be as well to give a brief description of this interesting district, which is so little known out of its immediate neighbourhood.

Exmoor, previous to 1818, was the property of the Crown, and leased to Sir Thomas Dyke Acland, who has an estate of a similar character close adjoining. He only used its wild pasture (at that time it was without roads) for breeding ponies and feeding Exmoor sheep. There are no traces of any population having ever existed on this forest since Roman times. The Romans are believed to have worked iron mines on the moor, which there is some talk of again opening.

Exmoor consists of 20,000 acres, on an elevation varying from 1000 to 1200 feet above the sea, of undulating table-land, divided by valleys, or "combes," through which the river Exe—which rises in one of its valleys—with its tributary, the Barle, forces a devious way, in the form of pleasant trout-streams, rattling over and among huge stones, and creeping through deep pools—a very angler's paradise. Like many similar districts in the Scotch Highlands, the resort of the red deer, it is called a forest, although trees—with the exception of some very insignificant plantations—are as rare as men. After riding all day with a party of explorers, one of them suddenly exclaimed, "Look, there is a man!" A similar expression escaped me when we came in sight of the first tree—a gnarled thorn, standing alone on the side of a valley.

The sides of the steep valleys, of which some include an acre, and others extend for miles, are usually covered with coarse herbage, heather, and bilberry plants, springing from a deep black or red soil—at certain spots a greener hue marks the site of the bogs which impede, and at times almost engulph the incautious horseman. These bogs are formed by springs, which, having been intercepted by a pan of sediment, and prevented from percolating through the soil, stagnate, and cause, at the same time, decay and vicious vegetation. They are seldom deep, and can usually be reclaimed by subsoiling or otherwise breaking the pan, and so drying the upper layers of bog. Bog-turf is largely employed on Exmoor as fuel. On other precipitous descents, winter torrents have washed away all the earth, and left avalanches of bare loose stones, called in the western dialect "crees." To descend these crees at a slapping pace in the course of a stag hunt, requires no slight degree of nerve; but it is done, and is not so dangerous as it looks.

Exmoor may be nothing strange to those accustomed to the wild scenery of Scotland, or the vast plains of Hungary and Transylvania; but to one who has long known country scenes only in the best-cultivated regions of England, and who has but recently quitted the perpetual roar of London, there is something strangely solemn and impressive in the deep silence of a ride across the forest. Horses bred on the moors, if left to themselves, rapidly pick their way through pools and bogs, and canter smoothly over dry flats of natural meadow; creep safely down the precipitous descents, and climb with scarcely a puff of distress these steep ascents; splash through fords in the trout streams, swelled by rain, without a moment's hesitation; and trot along sheep-paths, bestrewed with rolling stones, without a stumble: so that you are perfectly at liberty to enjoy the luxury of excitement, and follow out the winding valleys, and study the rich brown and purple herbage.

It was while advancing over a great brown plain in the centre of the moor, with a deep valley on our left, that our young quick-eyed guide suddenly held up his hand, crying, "Don't stop—ride on, without seeming to take notice—there are the deer." A great red stag, lying on the brown grass, had sprung up, and was gazing on our party—too numerous and too brightly attired to be herdsmen, whom he would have allowed to pass without notice; behind him were clustered four does and a fawn: they stood still for some minutes watching our every movement, as we tried to approach them in a narrowing circle. Then the stag moved off slowly, with stately, easy, gliding steps, constantly turning back; the does preceded him: they reached the edge of the valley and disappeared. We galloped up and found that they had exchanged the slow retreat for a rapid flight, clearing every slight or suspicious obstacle with a grace, ease, and swiftness it was delightful to witness. In an incredibly short time they had disappeared, hidden by undulations, in the apparently flat moor.

These were one of the few herds still remaining on the forest. In a short time the wild deer of Exmoor will be a matter of tradition; and the hunt, which may be traced back to the time of Queen Elizabeth, will, if continued, descend to the "cart and calf" business. The efforts made, at great cost, by Mr. Knight for the preservation of the deer, do not seem to have been supported or appreciated by the gentlemen of the district.

A sight scarcely less interesting than the deer was afforded by a white pony mare, with her young stock (see Illustration)—consisting of a foal still sucking, a yearling, and a two-year-old which we met in a valley of the Barle. The two-year-old had strayed away feeding, until alarmed by the cracking of our whips and the neighing of its dam, when it came galloping down a steep combe, neighing loudly, at headlong speed. It is thus these ponies learn their action and sure-footedness.

It was a district such as we had traversed—entirely wild, without inclosures, or roads, or fences—that came into the hands of the father of the present proprietor. He built a fence of forty miles around it, made roads, reclaimed a farm for his own use at Simon's Bath, introduced Highland cattle on the hills, and set up a considerable stud for improving the indigenous race of ponies, and for rearing full-sized horses. These improvements, on which an immense sum was sunk, were not profitable; and it is very doubtful whether any considerable improvements could have been prosecuted successfully, if railways had not brought better markets within reach of the district, as well as rendered it possible for a more enterprising race than the native Devonians to explore them. All the present tenants are strangers, chiefly from the midland and northern counties.

Since 1841 the management of the estate has been chiefly in the hands of the present proprietor, Mr. F. Knight, M.P.; and in 1844 he obtained the services, as resident agent and tenant of a large farm, of Mr. Robert Smith, formerly a celebrated breeder of pure Leicesters at Barley, in Rutlandshire—one of the council of the Royal Agricultural Society, and author of prize essays on sheep and on grass, which are held in high estimation by practical men. His writings are the results of his experience, instead of his farming being the result of other people's writings. At Burley he carried the Leicester sheep to perfec-

EXMOOR PONY AND YOUNG STOCK.

tion, and at his sale, previous to removing to Exmoor, he realised twelve hundred guineas for sixty rams. He is in fact a farmer of the modern school, who, bred to agriculture from his earliest years among the Lincolnshire men, has found it worth while to study earnestly the science and theory of his profession. Thus prepared, he has not made the mistake of trying to transplant the Lincolnshire system wholesale to Exmoor, but only such parts of it as are suitable to the soil and climate. For instance, after careful observation and experiment, he has come to the conclusion that the indigenous horned Exmoor sheep is as good as any for the moor—perhaps better—but that it needs the improvement which is the result of careful selection of the best-shaped animals of both sexes. In a few years we shall see whether he can be as successful with Exmoors as with Leicesters. We like the man who deals with what is to hand instead of beginning by wholesale destruction.

We have engraved a very exact portrait of a ram, eighteen months old, considered by Mr. Smith the best of his lot up to the present time. The Exmoor sheep, in its unimproved state, is a compact, hardy animal, ranging from 12 lbs. to 15 lbs. a quarter. Hill-fed wethers yield from 8 lbs. to 8 lbs. of wool, not so fine as Cheviot, but rather heavier. Both meat and wool are increased in quantity when the flocks are brought from the wild hills to the cultivated ground, which is now steadily extending over the forest.

Under the old system, which has been in operation on the hills adjoining Exmoor for a period beyond the memory of living men, the wool of sheep raised at the least expense, as in Australia, was the chief object of the hill farmer, and the mutton was a secondary consideration. The increase of markets, and the extension of means of conveyance, have produced and are producing some changes in this respect. Each parish in the hill district is entitled to pasturage on the hills during the summer, in proportion to the extent of the occupation of each farmer, and the number he can keep during the winter. There was, therefore, every inducement to overstock land. There are certain mustering days, when each hill farmer's share of the common pasture is settled, and his sheep distinguished by a mark, and counted. At these periods many expedients are resorted to for the purpose of extending rights of pasturage. The result is, that sheep are during the winter deteriorated by over-stocking. These rights of pasturage on common land appertaining to the valley parishes have led to keeping wether sheep for the sake of their wool only, up to five, and even seven years old. As it was each farmer's interest to keep as many sheep as possible, he killed none when meat was cheap. But improved knowledge of mutural interests has led to measures for limiting this pastoral communism, and the high price of mutton has caused great slaughter among the five-year-old wethers, a delicacy rarely to be found in the other districts of England. These old wethers are kept on wild land all the year round, whilst ewes and young stock are fed on the enclosed improved land. The hill district may be considered chiefly a breeding district.

Under Mr. Robert Smith's management, the attempt to hold the Exmoor estate in hand has been discontinued. The Highland cattle which would not weather the winter without artificial food, have been superseded by the improved Exmoor ponies and sheep; while in summer cattle and sheep are taken on to feed from the neighbouring farmers at a poll rent; and in the most eligible situations, up to the present time, some fourteen farms have been carved out, provided with suitable buildings. Of these at present one only is unlet, and more are in contemplation, not only of 500 acres and upwards, but in narrow valleys of ten and twelve acres, with a right of pasturage. It is intended, too, that every cottage shall have a cow's grass. These farms, with the exception of two founded by the first proprietor, have been let in a completely wild state; and offer examples of what may be effected by a wise adoption of the principle of tenant-right.

The mode of reclaiming moor land, which has been found most efficacious, is to burn the turf, and apply two tons and a half of lime per acre. This lime is brought a distance of twelve miles, and costs £1 per ton. Lime of a less suitable quality, as ascertained by trial in the laboratory, can be had within three miles. Where the soil is peaty, and the bog not too deep, it is subsoiled. This operation breaks the crust or sediment; the moisture percolates through; and the peat becomes dry and cultivable.

Turnips usually form the first crop sown on the flat. The ashes are found to start the turnips sufficiently without other manure. The turnips are eaten off by sheep during the winter. In fine weather they are eaten off on the ground; in stormy weather the sheep are put on a grass field, and turnips are thrown to them.

The turnips are succeeded by seeds. The best mixture is found to be clover, Timothy-grass, and Italian rye-grass. Timothy and Italian rye grass flourish on all new soils; and the more recently broken-up is so full of vegetable matter, that clover is not found to obtain root too much. The Italian grass runs up early for the lambs; the Timothy-grass follows, takes up the running, and carries the feed through the summer. These artificial grasses afford good pasture for two, three, or four years, when the land is ploughed up, and a crop of oats sown for malting. It will turnips again, and then seeds. The second crop of turnips is supported by farm yard manure, manufactured by tying up beasts during the winter nights. Manure is also applied to seeds of the second year.

The seeds make a good preparation for the oat crop of the following year, by a certain extent exhausting the newly broken-up soil, which would otherwise be too rich, and, combined with the humid climate, would be liable to grow all straw and no grain. With these precautions, the oat crops are very satisfactory; but wheat rarely answers, and ought never to be attempted on the level of Exmoor in this latitude.

It is observed, in reclaiming, that the brown loam seldom requires draining. The black soil, when drained and limed, is the best for roots and grasses. Wherever the beautiful bilberry shrubs grow, there the best land is found.

All the farms on Exmoor are store-farms, with some dairies. The cattle most in favour, and deservedly, are the Devons, which can be fed to great advantage on the moor in summer, and on the reclaimed land in winter. These farms vary in extent from 500 acres to 2000 acres. The 2000 acre farm is occupied as a Scotch sheep farm, after the plan of the Highlands, with flocks of Cheviots and blackfaced sheep. It is well known that the Cheviots thrive best where the grass is green; the blackfaced will do where there is little but heather. This tenant, who has Scotch shepherds, Scotch collies, is endeavouring to introduce the Scotch system of selling off his lambs every year in the autumn. The total ignorance of the surrounding people of the existence of any sheep except their own native breeds is a great obstacle to this plan; but, if he succeed, it will be a satisfactory one for the county.

The other farms are held by farmers from Yorkshire, Lincolnshire, Leicestershire, Derbyshire, and Dorsetshire; and on them may be found the farming systems of all those counties.

These notes have extended so far that I cannot say what I wished; but I must not conclude without a word about the "catch meadows," which Mr. Robert Smith has contrived to carry out with an economy, perfection, and success before unknown. A report of these meadows will be found in the seventh part of the "Journal of the Royal Agricultural Society for 1851," vol. 12.

The improved water-meadow system has been copied by two of the tenants; one a Leicestershire man, whose farm was all rough when he took it; and the other who cultivates on the Dorset style, and occupies one of the two old farms of the present landord.

We had hoped to have a day's wild stag hunting, but the Hunt Committee had had the incredible barbarity to catch a wild deer, put him in a cart, and carry him to the other side of the county. However, we had a few runs with a scratch pack of harriers, kept by our host, after stout moorland hares. The dandy school, who revel in descriptions of coats and waistcoats, boots and breeches, and who pretend that there is no sport without an outfit which is only within the reach of a man with ten thousand a year, would no doubt have been extremely disgusted with the whole affair. For my part, I enjoyed rising at five o'clock in the morning and hunting pass up to herform (instead of paying a shilling to a boy to turn her out) with six couples, giving tongue most melodiously. Then viewing her away, and rattling across the crispy brown moor, splattering through bogs with a loose rein, in lunatic enjoyment, until we checked at the "coombe" or "combe," hardly jolly. So with yellow Southerner challenged, and our young host cheered him with "Hark to Reveller, hark!" to hear the challenge and the cheer re-echoed again from the opposite cliff; and as the little pack in full cry again took up the running, and scaled the steep ascent, to see our young huntsman, bred in these hills, go rattling down the valleys, and to follow by instinct under a vague idea, not unmixed with nervous apprehensions of the consequences of a slip, that what one could do, two could. All this was vastly exciting and amusing, and, in a word, decidedly jolly. So with many facts, some new ideas, and a fine stock of health from a week of open air, I bade farewell to my hospitable hosts and to romantic Exmoor.

S. S.

MUNIFICENT DONATION.—Her Majesty the Queen, hearing of the very heavy drain upon the funds of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, consequent upon the late disastrous gales, has, with her accustomed liberality, presented this valuable institution with the sum of 100 guineas.

CORPORATION MANAGEMENT IN THE CITY OF LONDON.

THE plot thickens. Independent members of the Corporation have been constrained to admit the general accuracy of the accusation made in the examination of Mr. Acland. Mr. Powles, of the London Docks, has satisfactorily shown that the management of the River by the Navigation Committee, is by no means worthy this great metropolis. He alleges that the men are unacquainted with the duties they have to perform, and are entirely ruled by the Harbour-Master; while Mr. Bennoch graphically describes their examination of a pile—the projection of a pier, or other comparatively insignificant matter; then, pleased with their day's work, gracefully gliding down the dirty river, stopping at Greenwich or Blackwall, and, with whitebait and champagne, endeavouring to overcome the wear and tear consequent on the performance of their arduous labours. He exposes the constitution of committees, and the appointment of chairman, as leading frequently to the selection of the least competent person to preside over their meetings, merely because his time is of no value to himself, and, probably, to nobody else. Thus, whatever may be the merits of the Corporation, as it now exists—and they have yet to be shown—it is evident that the responsible men occupy places to which neither education, merit, nor commercial position entitles them.

It is also manifest, from the evidence of Mr. Bennoch, that the allowances to committees "to make themselves comfortable," instead of attracting the men best qualified to undertake certain duties, have the contrary tendency, and prevent really respectable men having anything to do with a body so questionable. People have heard so frequently the bombastic toast of "PROSPERITY TO THE CORPORATION OF THE CITY OF LONDON"—the corporation of the greatest city of the greatest country on the face of the globe—that they begin to imagine there must be some truth in the often-repeated boast. But, it would now seem that the gentlemen of the Corporation, by their unwise appropriation of funds for purposes of feasting, have voluntarily brought upon themselves the reproach of the public, who never think of an Alderman, without having before their mind's eye the portrait of a turtle; nor of a Lord Mayor in his chains of office, without being reminded of a fatted turkey, garnished with links of sausages.

Mr. Elliott, another member of the Common Council, endeavoured to show that the greatest abuse of the Corporation existed in the combining magisterial with aldermanic functions. We cannot see that he proved his case, and shall abstain from any opinion until additional evidence is before the public. We have yet to learn that any complaint, beyond that of expense, has ever been made against the aldermen as magistrates. We are rather of opinion that a shrewd and intelligent man of business will, in the majority of cases, come nearer to the truth in regard to substantial justice than a man who looks at every case through the spectacles of law. Indeed, it is recorded of a merely legal magistrate, that his great difficulty in administering justice was that of forgetting naked, uncompromising law, and thinking only of justice and equity.

It is not our intention to follow in the train of those who are howling or barking at the heels of the Corporation; but to calmly look at the several matters as they arise, and while criticising fearlessly, we shall endeavour to suggest such amendments as may lead to a better and wiser system of municipal government.

THE CITY CORPORATION COMMISSION.

On Friday last, as stated in our late edition, Mr. Pulling, the barrister, was the only witness examined: his evidence bore chiefly upon the nature of the relations of the Corporation of London to the State and to the trade of the City, and upon the order and government of the Corporation.

On Tuesday, Mr. Alderman Thompson Hills, a manufacturer, gave evidence as to the election of Sheriff, and showed how he had been mulcted in £500 for refusing to serve. Since 1830, it was resolved that the fines should be devoted to improvements in charities and other purposes, but they have never been so applied.—Mr. Powles, merchant, and secretary of the London Dock Company, stated that those who were appointed to superintend the navigation of the river were not qualified to do so by their previous occupations.—Mr. Francis Bennoch, who was some time before the Commissioners, detailed various improvements to be made in corporate matters. He pointed out the mode of getting notices inserted in the newspapers by the corporate officers; and also said that many persons were appointed to committees who were quite unfit for their duties.—Mr. G. H. Elliott, a member of the Common Council for five years, said he thought the wants of the City had overgrown the Corporation, and an alteration, therefore, had become necessary. He was in favour of a paid magistracy.

On Wednesday, Mr. John Cattley, a merchant in the East India trade, and Chairman of the London Dock Company, gave evidence as to the valuable services of the Aldermen as magistrates: he would prefer them to a paid magistracy; was also in favour of a chamber of commerce.—Mr. James T. Gooding was examined on the subject of the conservatory of the Thames and the Medway.—Mr. Sheriff Wallis gave evidence, at some length, of the manner in which the election of Sheriffs was conducted, and of the expenses. He would abolish the magisterial duties of the Aldermen, but would appoint four stipendiary magistrates for the City police-courts; and he was for severing the connection between the City and the borough of Southwark.—Mr. Hyde (of Fleet-street) and Mr. Jones (of the Strand) were examined on matters relating to the liverymen and freemen.

On Thursday Mr. Acland presented a petition from Croydon, complaining of the heavy and unjust toll-dues levied by the City on coal.—Mr. Keeling (of the firm of Keeling and Hunt) here evidences of the unfairness of the meterage and the "Lord Mayor's Pile," which he ought not to be abolished.—Mr. Hales, largely engaged in the corn trade, explained the operation of the meterage system so far as it applied to corn, and stated that the Corn-Exchange had memorialised the Lord Mayor to render the mode of collecting the meterage uniform, if the impost could not be altogether abolished.—Mr. Thomas Hankey was next examined; and he wished the coal-duties laid out in making drainages over the Thames.—Mr. Alcock, a liveryman, objected to the Aldermen being magistrates, or elected for life. The Commissioners then adjourned.

On Friday, Mr. William Cotton, a Director of the Bank of England, was before the Commissioners; and, afterwards, Mr. Pulling was again examined; but his evidence was purely technical.

A MEDAL OF LORD GEORGE BENTINCK has just been ably executed by Mr. Wyon, and is now in course of distribution among the subscribers to the Bentinck Testimonial. The obverse of the medal bears the head of the distinguished statesman—an excellent likeness—with the legend, "Lord George Bentinck born 1802, died 1848." Upon the reverse is inscribed—"Brave, earnest, generous, unselfish, true, he won the confidence and riveted the attachment of a great party, which his patriotism had inspired with courage, and his self-devotion had animated with zeal."

SURREY ARCHÆOLOGICAL SOCIETY.—We are glad to learn that the formation of this society is progressing satisfactorily. Upwards of 170 members have already been enrolled; and several contributions of books have been received towards a proposed library; besides a collection of nearly 500 topographical prints relating to the county. The council are actively completing their plan, and propose holding an inaugural general meeting in Southwark, in January next. Applications for information are to be made to Mr. J. B. Webb, honorary secretary, 46, Addison-road, North, Notting-hill.

THE Surrey Magistrates have voted the sum of £50 to the London Reformatory Institution for Adult Male Criminals in Westminster; that admirable institution having hitherto voluntarily received prisoners from Wandsworth House of Correction at the expiration of their sentence.

IRELAND.

HIS Excellency the Lord Lieutenant and the Countess of St. Germans, have been on a visit to Woodstock, the seat of the Right Hon. William Tighe, in the county of Kilkenny; and on their return to Dublin, the people of the "faire cille" of Kilkenny, gave their favourites an extremely cordial reception. It having been known that the Viceregal party was to return via Kilkenny, the Corporation was called together, and presented an address to his Excellency, at the railway terminus.

BUSINESS affairs in Ireland present a more cheerful aspect this week, despite the increasingly warlike character of the foreign news. There has been a good business done in produce, and prices are more encouraging. The corn market has not further advanced, and shares have fairly held their ground. The bank returns are also highly gratifying, and the accounts from the country are good. Altogether, we can report a very marked improvement from last week.

IRISH LANDED PROPERTY CHANGING OWNERS.—It would seem as if the whole land of Ireland was changing owners. Property worth more than a quarter of a million of money was sold on Friday last by the Encumbered Estates Commissioners. The estate in Wexford, of Mr. Samuel R. Maxwell, and the Tipperary property of Lord Glengall, were sold: they brought entirely £279,075. The average rate obtained for the Tipperary estates was twenty-four years' purchase. And on Tuesday next another extensive estates of the Earl of Mornington, in the King's and Queen's Counties, and the counties of Meath, Dublin, Cavan, and Westmeath, were sold. This splendid property, yielding a net annual income of £6,685, was divided into sixty-four lots. There was much competition, and in some instances a few of the lots brought nearly thirty years' purchase. The gross sum realised by the sale was £254,835—equal to twenty-two and a half years' purchase on the net rental.

NEWS FOR BIBLIOPOLISTS.—The splendid library of the late F. W. Conway, Esq., proprietor of the *Dublin Evening Post*, is about to be sold by public auction. The collection thus about to be scattered consists of upwards of 26,000 volumes, and there are few works in it that are not worthy of a line in a catalogue in any public library. This library contains a great number of exceedingly rare books of all European languages, from the productions of Gutenburg and Caxton, from the "Nuremburg Chronicle" and the Boke of Cashell." to the richest illustrated works of the present year. Of Shakespeare alone this collection shows upwards of eighty editions! It will, of course, require some weeks to arrange for sale.

NATIONAL SPORTS.

SHREWSBURY RACES.—TUESDAY.

Abbey Stakes.—Romeo, 1. Sabra, 2.
Shrewsbury Handicap.—Jack Leaning, 2. Lough Bawn, 2.
Astley House Stakes—Middleborough, 1. The Gem, 2.
Column Handicap.—Catherine Parr, 1. Annie Sutherland, 2.
The Racing Plate was won, in three heats, by Eccentricity.

WEDNESDAY.

Copeland Handicap.—The Merry Monk, 1. Topsy, 2.
Monkmoor Stakes.—Tonic, 1. Grey Tommy, 2.
Severn Stakes.—Jujube, 1. Inder, 2.
Grand Annual Steeple-chase.—Bourton, 1. The General, 2.
Hurdle Race.—Star of England, 1. Timothy, 2.

THURSDAY.

Handicap Sweepstakes.—Alonzo, 1. Candlewick, 2.
Sherry Stakes.—Voucher, 1. Windsucker, 2.
Two-year-old Stakes.—Pope Joan, 1. Boddicot, 2.
Selling Steeple-chase.—Sir Philip, 1. Timothy, 2.
Shorty Stakes.—Hymettus, 1. Pope Joan, 2.
Match.—Warwick beat Lamarine.

CREWE RACES.—THURSDAY.

Edleston Steeple-chase.—Royal Blue, 1. Slashing Painter, 2.
Annual Steeple-chase.—Melton, 1. Topsy, 2.

TATTERSALL'S.—THURSDAY EVENING.

Only half-a-dozen members present: no business transacted.

LORD EGLINTON AND ALFRED TENNYSON.—The election of Lord Rector for Glasgow University took place on Tuesday. The Liberal Association had resolved to turn Lord Eglinton out before his term of office had expired, bringing forward Alfred Tennyson, the Poet Laureate, to oppose him. The result of the voting was as follows:—For Lord Eglinton—Faculties, 28; Londonians, 28; total, 56. For Tennyson—Faculties, 27; Rothesians, 78; total, 222. For Tennyson—Glottians, 21; Londonians, 26; Transforthans, 28; Rothesians, 22; total, 178. It will be seen that the votes were equal in the Londonians nation; but as the Procurator gave his casting vote in favour of Lord Eglinton, his Lordship was placed on an equality as to the number of "nations" with Mr. Tennyson. The Vice-Lieutenant, Mr. Rainny, gave his casting vote for his Lordship, giving him a majority of one nation. Lord Eglinton was accordingly re-elected.

NEW TELEGRAPH COMPANY.—A company has been formed called the Universal Telegraph Company, for the purpose of affording throughout the United Kingdom great increased advantages of telegraphic communication, at a much reduced charge. This company contemplates establishing district offices upon the principle of radiation. The message is written by the telegraph instrument itself, and simultaneous transmission of the message, with the greatest accuracy, to all or any number of the radiating stations. This is effected by the patent automaton repeater, by means of which an unlimited number of towns may be communicated with by the same electric touch. The proposed tariff of charge is a uniform rate of 6d. per message not exceeding twenty words to any of the company's stations, and one halfpenny for each additional word.

LEGAL EDUCATION.—At the public examination of the students of the Inns of Court, held at Lincoln's-inn-hall, last week, the studentship of fifty guineas per annum, to continue for a period of three years, was awarded to Mr. Charles Mathew, of Lincoln's-inn. The certificate of honour, as having passed the second best examination, was obtained by Mr. Herbert Coleridge, also a student of Lincoln's-inn.

SINGULAR ESCAPE.—An extraordinary escape happened at the Tiverton Junction of the Bristol and Exeter Railway last week. The horses of a gentleman's carriage were frightened by the whistle of an approaching train. In an instant they broke through the railing which protected the embankment of the railway, and horses, carriage, and driver were precipitated over a height of forty feet. The guard of the train, which had arrived, witnessed the accident, and at once concluded that both men and horses were killed on the spot; but, it was found that they had fallen to the bottom without sustaining the least injury—the only thing damaged being one of the traces.

TENANTS' TESTIMONIAL.—On Thursday week John Harvey, Esq., of Ickwellbury, Bedfordshire, and the owner of extensive estates in Finningley and Blaxton, was presented by his Finningley tenantry with a beautiful silver writing-stand; and his son, John Audley Harvey, infant son and heir, was at the same time presented with a handsome silver cup. After the presentation, the tenantry were entertained by Mr. Harvey at dinner, when several appropriate toasts were drunk.

M. EUGENE DE PLANARD, a well-known dramatic writer, has just died in Paris, aged upwards of seventy years. He has written for forty-six years for the great theatres of Paris, and has composed more than fifty dramatic works.

FOREIGN IRON FOR FRANCE.—The delay in the appearance of the expected decree of the Emperor with reference to the reduction or abolition of the duties on iron, is said to be caused by the Emperor's intention to reduce or abolish the duties on coal simultaneously with those on iron.

MR. HUDSON.—It is reported at Sunderland that on the meeting of Parliament Mr. Hudson will apply for the stewardship of the Chiltern Hundreds, with a view to retire from the representation of that borough. The Conservatives speak of Mr. Duncan Dunbar as his successor.—*Daily News.*

MECHANICS' INSTITUTION AT SALFORD.—The new building for this institution in its extended form—arising from the amalgamation of the old institution with a new one which was originated—was opened on Monday evening, with a tea-party and soiree. There were from 300 to 500 persons present; among the guests being Joseph Brotherton, Esq., M.P., and Charles Hindley, Esq., M.P.; together with Messrs. Hazley, Henry, Alderman Sir E. Armitage, and Sir Benjamin Potter. There is already a flourishing day-school in existence in the institution, under the management of Mr. J. Angel.

THE GREENWICH PHILHARMONIC SOCIETY commenced their annual series of winter concerts on Tuesday evening. The band is selected from the finest London orchestras, and includes Messrs. T. and C. Harper, Nicholson, E. and F. Pratten, Webb, Aylward, Maycock, Ras, Horton, Larkin, Schmidt, Zerbini, &c.; under the leadership of Mr. H. C. Cooper. Miss Milner was the vocalist. In order to carry out the object for which the society was formed—that of cultivating a more refined taste, especially amongst the people—serial subscription tickets have this season been issued, at an extremely moderate charge. Nearly 800 area tickets were taken up previous to the opening night. The President for the year is Sir Michael Shaw Stewart.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 20.—26th Sunday after Trinity.
MONDAY, 21.—Princess Royal born, 1840.
TUESDAY, 22.—St. Cecilia.
WEDNESDAY, 23.—St Clement. First Balloon Ascent, 1782.
THURSDAY, 24.—Archbishop Tillotson died, 1849.
FRIDAY, 25.—St. Catherine. Michaelmas Term ends.
SATURDAY, 26.—Dr. Watts died, 1748. Lord Lyttelton died, 1779.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING NOVEMBER 26.

TO CORRESPONDENTS.

W. H.—Grisi made her first appearance on our opera-stage in 1834. She was then eighteen, and must now, therefore, be thirty-seven. Mario's first appearance in London was in 1839. We have no record of the date of his birth; but his age cannot exceed forty.
T. S.—The extremes of cold experienced by Captain M'Clure and his party, at Mercy Bay, in January and February, 1853, were 62 and 65 degrees below zero (Fahrenheit), and not below freezing point.
A PASSENGER, Jersey, is thanked for the Sketch of the *Dispatch* steamer. The subject was engraved in our Journal of October 29th.
AMICUS.—Under the Corporation Acts the Mayor must be elected out of the Aldermen or Councillors of the borough, duly qualified to be such by estate. There appears no exception in the Corporation Statutes, allowing any parishioner to be elected.
J. R.—A statute was passed in the last Session of Parliament, "to consolidate and amend the laws, and to grant additional facilities in relation to the purchase of Government annuities, through the medium of savings banks, and to make other provisions in respect thereof." The Act is the 16 & 17 Vic., cap. 45.
M.—Apply at the Horse Guards.
A SUBSCRIBER.—The husband of an heiress bears his wife arms on an escutcheon of pretence. After her decease the children take their mother's arms as a quartering. The crest of the wife's family is not allowed to the husband or children.
AMICUS. A cadetship cannot be purchased.

THE WAR OF TURKISH INDEPENDENCE.

Having despatched our own Artists and Correspondents both to Constantinople and to the Seat of War in Wallachia and Moldavia, we are enabled to announce as in preparation

A GRAND DOUBLE NUMBER

OF THE

ILLUSTRATED LONDON NEWS,

Containing a full Account and exclusive

HISTORY OF THE PROGRESS OF EVENTS

ON

THE BANKS OF THE DANUBE.

Among other Illustrations will appear—

An Equestrian Portrait of the Seraskier, Omer Pacha.	Omer Pacha and his Staff.
Portrait of Prince Gortschakoff, the Russian Commander.	Views of Slatina, Kalafat, Turtukai, &c.
Portrait of Prince Menschikoff.	The Camp at Schumla.
The Attack on Oltenitza.	The Russian Head-quarters at Bucharest.
The Passage of the Danube at Widdin by the Turkish Troops (Page block).	The Retreat of the Russians.
	Omer Pacha's Camp at Night.
	Rejoicings at Constantinople.
The Battle of Bucharest (Page block).	Episodes of the War.
The Russians at Giurgevo.	Scenes in the Capital.
	&c., &c.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 19th, 1853.

THE intelligence which we receive from the seat of war continues to be imperfect and incoherent, if not contradictory. The electric wires at Vienna are under the control of the Austrian Government; and, whenever the news transmitted to that capital is vague or doubtful, the Austrian Government contrives to give it a character favourable to the Russians before it is allowed to reach Paris and London. But hitherto it has been impossible for the Austrian Government, or any other disguised or open friend of Russia, to conceal or distort the more important of the events that have taken place in Wallachia since the masterly and successful passage of the Danube by Omer Pacha. Not only in that great operation, but in every encounter which the Turkish commander has either sought, or been forced to accept, the gallant Seraskier has proved himself to be the superior General. Whether the Russians have been taken by surprise, or whether their army, originally not so strong as it was reported to have been, and since decimated by fever and cholera, and re-decimated by desertion, has been unable to cope with the Turks, the fact remains the same—that victory as yet has declared against the arms of the Czar. The Russian losses at Oltenitza show a desperate resistance; but the whole scheme of the campaign, as far as it has been developed, shows the inferiority of Prince Gortschakoff in strategy, as well as that of his army.

The tenor of all previous accounts leads us to attach credence to the announcement, which created as much astonishment as delight throughout London, on Wednesday last, that the forces of Omer Pacha and Prince Gortschakoff had fought a pitched battle before Bucharest; that the Russians had been defeated with great loss, and were in full retreat towards Kronstadt, and that 15,000 Turks had been despatched to intercept them through the principality of Servia. As this news was transmitted through Vienna, it is—if true at all—more likely to be under than over-stated as regards the Turkish victory. For the sake of Europe, as well as of Turkey, it is earnestly to be hoped that it may prove to be authentic, and to be the precursor of other victories yet more splendid. The Czar will then learn—for the first time, perhaps—that he has as grossly miscalculated the resources of his enemy, as he misjudged the patience and the amity of Great Britain and France, and the general feeling of Europe. He will also learn—or it will be the worse for him—that he has no friends, either in Europe or in Asia, out of his own dominions; and that every state and power which he or his predecessors have despoiled, for their own aggrandisement, is on the watch for the favourable moment to combine against him. The unexpected strength displayed by the Ottomans will decide the rulers and people of many a wavering province and border kingdom, to unite against a power which has made itself a nuisance alike to civilised Europe and to barbaric Asia. The Czar has chosen to become an aggressor in the name and alleged behalf of his own religion; but Turkey has not only her religion to defend, but her outraged honour to avenge, and her national independence to vindicate and to maintain. The soldiers of the Russian army, who are employed in this struggle, are mere serfs, slaves, and machines, compared with the Turks. The Russians under Prince Gortschakoff have no indomitable spirit of patriotism to animate them to endure hardships and privations, and to think and act as if the fate of an empire depended on each man's individual exertions. The public spirit of their country will make no sacrifices to uphold and to encourage them. The peasant will not leave his plough, nor the weaver his loom, to join their ranks and do battle against the Turks. Old men will not contribute their money, nor young men their strength, to aid the cause of the Czar, unless compelled to do so by a despotic ukase. Ladies will not despoil themselves of their gold or jewels to pay the expenses of the war; nor will churches, monasteries, or corporations pour out their hoarded treasures to pay the armies of the Emperor, unless the tax-gatherer comes to demand the unwilling tribute. But in Turkey the patriotic ardour of the people is such that the sacrifice both of blood and treasure will be cheerfully made. The Turks, even on ordinary occasions, are excellent soldiers; but, on an occasion like the present, they will endure the greatest hardships without a murmur, and each man will feel that individual responsibility which transforms the common soldier into the hero. The Turkish empire has shown that it is not effete. When unattacked from without, Pachas might rebel; but it only needed foreign insult and aggression to startle it into life and vigour, and to rally in its defence millions of devoted subjects in Europe, Asia, and Africa. We do not, of course, imagine that any successes which Omer Pacha may achieve in Wallachia and Moldavia, or Selim Pacha in Asia, will put an end to the war. On the contrary, it is probable that disaster and defeat will for a time increase the obstinacy of the Czar, and impel him to make more desperate efforts to retrieve his falling cause, and restore the ancient *prestige* of his name. The war may be a protracted one; but that its ultimate issue will be to secure the independence and integrity of the Ottoman dominions, and to open up the Black Sea and the Danube to the commerce of England and France, and of the whole world, we cannot permit ourselves to doubt. Russia can gain nothing by the enterprise in which she has involved herself; and if the Czar loses nothing but his own character, he will come out of the difficulty with more credit than he deserves. The Turks have already rendered an essential service to humanity. They have proved the Russian braggadocio to be, like all others of the same class, far bigger in words than in deeds.

LORD EGLINTON must yield his place as the leader of the Scottish patriots. There is another claimant for the post, with pretensions more lofty than those of his Lordship. The new patriot has been in the field since 1845, and speaks with disparagement of the title, if not of the objects, of the "National Association for the Vindication of Scottish Rights." Those relics of the Protectionist party—such men as Sir Archibald Alison and others—who have joined the movement, are but men of yesterday compared with this Nestor of the cause, thus suddenly introduced into the scene. Our readers will, doubtless, ask the name of the hero—especially when they learn that he aims at the total Repeal of the Union between England and Scotland, and the erection of Scotland into a free and independent Republic. The name has never yet been blown abroad by the trumpet of fame; but who knows what blasts may yet bear it to the remotest ends of the earth? In a letter addressed to ourselves, and accusing us of gross ignorance and presumption (in common, however, with all "Englishmen" and "gentlemen of the press," whom he "thoroughly despises"), the Scottish patriot avows his name to be "John Steill." John Steill considers the "John Bullishness" of the ILLUSTRATED LONDON NEWS to be pre-eminent. In order that he may lead us from the paths of error into which he considers we have strayed, and that he may enlighten our dark minds upon the affairs of Scotland, in which he avows his belief that we are "profoundly ignorant," and that he may shew us what he, and "at least a few" of the best men north of the Tweed really desire, and are determined to accomplish, he has forwarded us a printed letter, with corrections and emendations, entitled "Scottish Independence, or the necessity of dissolving the Union between England and Scotland, and of restoring Scotland to her ancient supremacy as an entire and distinct nation." The letter, it appears, reached a second edition so early as 1845, and is modestly asserted by its author to have laid the foundation of the present agitation, and to have made many Scotchmen "speak of the Union in not the most respectful of terms." John Steill, who doubts the sanity of those who laugh at what he considers the "wrongs of Scotland"—[we are not certain if he ranks the heraldic and other grievances of Lord Eglinton and Sir Archibald Alison among the number]—considers himself to be perfectly sane in his attacks upon England and Englishmen; and that our readers may be enabled to form an opinion of their own on the subject, we present a fair epitome of the patriot's pamphlet, as far as possible in his own words:—"The Union between England and Scotland," he says, "was one of the blackest transactions in history; and, like every other measure originating in selfishness, fraud, and injustice, that Union is producing its natural fruits, and promises very soon to realise the worst consequences that our Scottish ancestors anticipated from it—to become, in short, a positive practical nuisance." . . . "I see in it (the Union) the reduction of my country to a state of vassalage which no man ought to brook, and which is the more intolerable when one reflects on the treasure wasted, the blood spilt, and the heroism displayed by our forefathers, to guard their posterity against those very evils of which we have daily cause to complain. And, indeed, in thinking indignantly over these things, I often wonder whether I am treading on Scottish soil, and if it can be possible, that the people I am surrounded by, are the descendants of those who fought at Bannockburn and Stirling-bridge." . . . "The voice of our Scottish members in the mis-named British Senate, is drowned amidst the clamours of iron-hearted Tories, bloated corruptionists, and hordes of venal creatures who have been sent by the pure and enlightened constituencies of England to manage the business of the realm, and to bear down all opposition before them. Nay, such is the direful effect of the Union on the progress of Scotland, that (without stopping to enumerate the instances in which it has been manifested of late), though the aspirations of the Scotch after national regeneration were to be of the most magnificent description, and enforced in Parliament by the patriotic fire and fervid eloquence of another *Andrew Fletcher of Saltoun*, John Bull would laugh at such projects, just because he did not understand them, and was too much of an Englishman, and too little of a Scotchman, to have a soul to be moved by them." . . . "Enormous as these evils are, however, it is, I fear, hopeless for the people of Scotland to grapple with them while the Union with England continues. England is herself subject to the rod of an oligarchy, whose ancestors, in the days of William the Bastard, won her by the sword; and it is the interest of these men that the privileges of their order to pillage mankind should, in no corner of the British Empire be trenched on, or called into question. Hence, Highland misery; hence, such large ill-gotten estates as those of the Dukes of Sutherland and Buccleuch—estates which, instead of belonging to two men, ought to be broken up and parcelled out in property among tens of thousands of men." . . . But the question occurs to Mr Steill: "How are these animating prospects to be realised; and what mode of government would be best suited to promote the interests of Scotchmen, and secure to them the enjoyment of these prerogatives I am supposing to be within their reach? It seems to me that, for these purposes, the Union ought to be dissolved out and out; and that the same deed which annuls the Union ought to invest every sane man with the privilege of electing those who are to rule over him. But, as the right exercise of the suffrage would be incompatible with the existence of Monarchy and a hereditary aristocracy, these barbaric institutions would require to be swept away, and the nation declared a REPUBLIC, open to exchange commodities with the whole world without let or hindrance."

We do not suppose that Lord Eglinton—once Lord-Lieutenant of Ireland, and having peculiar opportunities of ascertaining the mischiefs that flow from popular agitations, whether for Repeal of a Legislative Union, or for Sectarian and Party objects—can be an adherent of "John Steill." Neither can we imagine that Sir Archibald Alison, Professor Aytoun, and the other Protectionist Lords, gentlemen, and Writers to the Signet, who have countenanced the National Association for the Vindication of Scottish Rights, share the views of this person, either as regards a Scottish Republic, or the re-appropriation of the estates of the Dukes of Sutherland and Buccleuch. But it is evident they have got into bad company; and the sooner they all get out of it, and disavow it, the better, we think, for their credit. People may laugh at the wrongs of the Scottish Lion and Unicorn; but John Steill's doctrines, if countenanced even to the slightest extent by men of influence and station, are no laughing matter.

THE COURT.

The Duke and Duchess de Brabant left the Castle on Monday, on a tour in the west of England, from whence they returned on Thursday; on the evening of which day the second dramatic performance—closing the first series—was given, before a large and distinguished party. The pieces selected upon this occasion were—a comedy, in three acts, by Mr. Sibsgeby Lawrence, entitled the "Game of Speculation;" and a comic drama, in one act, by Mr. Chas. Mathews, entitled "Little Toddlekins:" and the principal parts were filled by Messrs. C. Mathews, R. Roxby, J. F. Cathcart, F. Matthews, B. Baker, and Mr. Suter; Mesdames Meifort and F. Matthews, and Miss M. Oliver and Miss Ellis.

The Queen has taken equestrian exercise more than once during the past week. The Prince Consort has paid two official visits to the metropolis.

The Hon. Matilda Paget and the Hon. Mary Seymour have succeeded the Hon. Beatrice Byng and the Hon. Eleanor Stanley as Maids of Honour in Waiting to the Queen.

Her Majesty and the Prince Consort, accompanied by the Duke and Duchess de Brabant, are expected to leave Windsor Castle on Tuesday next for Osborne, where they will sojourn until the 8th proximo; when the Duke and Duchess de Brabant will take leave of their august relatives and return to Brussels. The Court will leave the Isle of Wight for Buckingham Palace on the same day, and proceed thence on the 23rd proximo to Windsor Castle for the Christmas holidays.

CABINET COUNCIL.—A Cabinet Council was held on Wednesday, at the Foreign-office. The Ministers present were:—The Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Marquis of Lansdowne, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir W. Molesworth. The Council sat two hours and a half.

BRITISH GUIANA.—It is said that the Government of British Guiana has been offered to Sir Edmund Walker Head, Bart., the present Lieutenant-Governor of New Brunswick, on a reduced salary of £4000 per annum.

NEW GOVERNOR OF BOMBAY.—On Saturday last the East India Company gave their customary farewell banquet to Lord Elphinstone, on his appointment as Governor of Bombay. The chair was taken by Russell Ellice, Esq; and among the hundred and thirty-seven guests present were—Lord Granville; Marquis of Lansdowne, K.G.; Viscount Canning; Viscount Hardinge, G.C.B.; Sir C. Wood, Sir James Graham, the Lord Mayor, the Right Hon. W. E. Gladstone, the Right Hon. Sidney Herbert, and a formidable array of old Indian officers. The speeches delivered on the occasion were all "neat and appropriate."

TAXES ON KNOWLEDGE.—The movement against the taxes on knowledge has not been extinguished by the repeal of the advertisement duty. On Monday, Mr. Dobson Collett attended a meeting at Birmingham, to aid in the removal of the newspaper stamp and paper duty. A local association was formed; and Mr. Scholefield, M.P., and the Mayor, were respectively appointed treasurer and president of the association.

STRIKES IN THE NORTH.—*Wigan.*—The strike of the Wigan colliers is probably at an end; and Lord Balcarras has sent home the Welsh miners, to prevent ill-blood. Mr. Eckersley's mill was opened on Monday morning, to give an opportunity of returning to work, and a few presented themselves, but not a sufficient number to enable the machinery to run to advantage, and the gates had to be closed again. The cavalry were withdrawn from Wigan, and returned to Manchester last week, but two companies of the 34th regiment are left in the borough. An address to the factory hands, earnestly recommending submission, has been issued by some gentlemen who interested themselves with a view to bringing about a reconciliation between employers and operatives.—*At Burnley*, there are symptoms which seem to presage a resumption of labour in the district, and that the unemployed will not continue foolishly to suffer the pinching and want which have been the lot of so many thousands for three weeks.

BLACKBURN.—There was a disturbance in this town on Thursday evening. The workpeople assembled in large numbers, and attacked the foreman of Mr. Catterall, of Preston, who escaped with a few bruises. They then searched the Bull Inn (where the Exchange is held every Wednesday), but found no one; and ultimately dispersed. It is the general opinion at Blackburn that some military force ought to be permanently stationed there.

THE PRESTON STRIKE.—A very lengthy memorial has been adopted at a delegate meeting of the workmen, and forwarded to the Home Secretary.

POSTSCRIPT.

RUSSIA AND TURKEY.

Advices from Constantinople to the 7th inst., state:—

"A new project of note arrived yesterday morning, with instructions to the Ambassadors of England and France to recommend it to the Porte; but there appears to be a decided objection on the part of the Porte to its being signed. The city is perfectly tranquil.

"Several Russian prisoners of war have arrived from Batoum, and more are expected.

"The fort of Chevkedy (in Asia) taken by the Turks on the 28th of October, contained 7000 muskets, four cannon, and 1000 men.

"A small Turkish squadron is cruising in the Black Sea.

"Two British and two French line-of-battle ships are lying off Therapia for the present.

"No further reinforcement is expected from the Dardanelles."

That General Osten-Sacken has received orders to march to the Danube in forced marches. After the Russian declaration of war, several officers belonging to the general staff at St. Petersburg were ordered to leave at once for the Principalities. Lieut.-General Lazareff-Stanischeff, the Commander of the Mobile Artillery, has received orders to forward such trains of heavy artillery to the Danube as may be necessary for bombarding the Turkish fortresses. The Russians pretend that they will be able to cross the Balkan before the severe weather sets in.

It was supposed that the Turks had bombarded Giurgevo from gunboats; but we now learn that they fired from 24-pounders placed on the island that they had previously secured and fortified. The Russians had nothing but 6 pounders to oppose to them, as the heavier artillery had been sent to Perlita, a place fifty English miles from the Danube.

A medical man writes from Bucharest, that both regular and temporary hospitals are over-filled with native and foreign patients:—

"We have wounded men from the affairs at Oltenitza, Kalarasch, Giurgevo, Kalafat, and before Kralova. A vast number of the wounds were inflicted with the sword and bayonet. It is not permitted to indulge even in conjecture; but we physicians, while extracting bullets, inquiring, and handaging, manage to learn what has happened. The cholera, which has visited us, the detachments, has assumed a milder form at Bucharest; but the 13th has ever commits sad ravages. The troops are so badly protected from the weather, and have such an insufficient supply of fuel, that the present state of things cannot long continue without leading to endemic and epidemic diseases—from which may Heaven preserve us, in whose memories the horrors of war and plague in the Balkan, in 1829, are still fresh.

According to private intelligence, the Russian commissariat is even more deplorable than it was during the Hungarian war. The men, as a rule, get nothing but oatmeal bread, groats, slops, and spirits.

The *Universe* publishes a letter from Bucharest, of the 21st ult., containing the following facts, the truth of which, it says, it guarantees:—

After the publication of the first manifesto of the Emperor Nicholas, conceding with, "We will march to defend the Orthodox faith," two Poles belonging to a regiment serving in Bessarabia having heard of the manifesto, waited on the Colonel, and said to him: "We have just read the Emperor's manifesto, and as we desire to act as good soldiers, we come to ask for our discharge, because as good Catholics, we cannot fight for the Greek religion." The Colonel wrote to St. Petersburg for instructions how to act, and was commanded to have the two soldiers shot. Four others, who made the same observation, met the same fate in Moldavia.

On the 8th inst. a feldjager left St. Petersburg with despatches for Vienna. The Emperor has spoken out plainly, that as long as the Turks are on the left bank of the Danube, and the Sultan has not retracted his declaration of war, any further negotiations in the way of arrangement as followed hitherto are out of the question.

Letters from St. Petersburg, of the 3rd inst., announce that a new levy of troops, in the proportion of seven men to every thousand inhabitants, had been commenced throughout the entire of the eastern part of the Russian empire.

Regarding the encounters on the Asiatic frontier of Turkey, we gather the following details from a letter from Constantinople, of the 3rd inst.:—

Yesterday morning Edhem Effendi arrived from Trebizond, bringing a despatch from Selim Pacha, Commander-in-Chief of the Turkish forces stationed at Chevkedy. The despatch contained the report of three Ministers of War an account of the following engagement:—On the 14th ult., Major Mussa Bey, having been sent forward to reconnoitre the fortifications near the Russians were making at the other side of the Tchoroukson, was received by a fire of musketry, which he immediately returned; and, on sending for a reinforcement, Selim Pacha despatched several battalions to his aid. The Russians having in the meantime also increased in number, an engagement ensued, which soon became general. Selim Pacha crossed the Tchoroukson at several points, and drove the Russians back, after encountering a very serious resistance. The Russians were obliged to retreat, pursued as far as Orelli by the Turkish General, Hassan Pacha. The bulk of the Russian forces receded to Chevkedy. In this first action the Turks took two pieces of artillery from the Russians, and made 144 prisoners—the Russians losing 690 men, killed and wounded. At Chevkedy a most determined fight has, however, taken place. The Russian had received reinforcements there, and then made a stout resistance. Selim Pacha took the town by storm, being obliged to attack the place twice. The Russians gave way at last, leaving a great number dead, three cannon, and upwards of one hundred prisoners—amongst whom was Colonel Dutt, a chief of the Cossacks. The Turks captured 5000 sacks of flour, a great deal of ammunition, and 1500 muskets. Selim Pacha concludes his despatch by announcing that he is about to march on Schoumla Kale, two regiments of cavalry and three batteries of field artillery having been sent in pursuit of the enemy. Before surrendering Chevkedy the Russians set fire to different quarters of the town, burning a great portion of it. The principal object of Hassan Pacha in pushing on is to keep open the communications between Selim Pacha and Akhi Pacha. The Turks state their loss at the passage of Tchouruok sou to have been 60 dead and 150 wounded, and at Chevkedy 150 dead and 300 wounded.

Letters have been received from Trebizond, which state the inhabitants of that place to be in some fermentation, in consequence of the taking of Chevkedy.

The English and French residents at Constantinople, on the morning of Tuesday the 1st inst., enjoyed the gratifying sight of the English and French naval divisions in the offing of Constantinople. At about nine a.m. Admiral Dundas, in the *Rodney Constitution*, passed the Seraglio Point, and shortly after Admiral Hamelin, in the *Gomer*, entered the port. The *Vengeance* entered at about mid-day; but the *Albion*, and the French ships of the line could not make head against the current, and they anchored outside the Seraglio Point. On Wednesday the *Albion* and *Henri IV.* came in; and early on Thursday morning the *Jupiter* managed to clear the Point, and proudly made her way up the Bosphorus. The Admirals paid their visits of ceremony to the Turkish officials of marine on the 3rd inst.

Admiral Slade, of the Turkish navy, has entered the Black Sea with six Turkish frigates and two war-steamers. It is not precisely known what the object of this expedition is. Four Russian men-of-war have been seen cruising in the Black Sea, and a collision between the two fleets may be shortly expected.

The Druses on the Lebanon have begun to annoy the Christians, and a French and Austrian ship of war have sailed to the coast of Syria.

FRANCE.

Vely Pacha, the Ottoman Ambassador in Paris, purchased, on Tuesday, 40,000 new muskets and carabines de Vincennes, for which he at once paid two millions of francs.

The verdict in the trial of the conspirators against the Emperor's life was pronounced on Wednesday. It is "not guilty" in the case of six of the prisoners; and 32 were found "guilty," with attenuating circumstances. Of the latter, seven have been sentenced to transportation, three to eight years' exile, and the rest to terms of imprisonment varying from five to ten years.

M. Secondi, who has been definitively decided on as Apostolical Nuncio at Paris, has already filled a similar post at the Court of Bavaria.

A meeting of the British residents in Paris, was held on Wednesday, at the Hôtel Meurice—Lord Howden in the chair—to consider the propriety of opening a subscription for the purpose of erecting a tablet to the memory of Lieutenant Bellot. About 5000 francs were collected in the room. It was resolved that a tablet or statue should be erected, and the surplus of the funds, if any, be placed at the disposal of the Minister of Marine, for the benefit of the brother of Lieutenant Bellot, who has entered, or is about to enter, the French navy.

AUSTRIA.

Count de Buol Schauenstein, the Austrian Minister for Foreign Affairs, is said to have resolved to resign. His portfolio has been offered to Count Thun, the Austrian Ambassador at Berlin. The candidate of the Russian party for the portfolio in question, is M. de Piqueilmont, but it was not believed he had any chance.

ITALY.

Lord Malmesbury has published a letter upon the subject of the treatment of Mr. Hamilton by the Neapolitan Government. His Lordship says:—

When I first heard from Sir William Temple of the brutal outrage committed by the Neapolitan police upon Mr. Hamilton's scholars, and of the breach of treaties against Mr. Hamilton himself, my first and paramount duty was to oblige this Italian State officially to acknowledge that British subjects residing at Naples possessed an indefeasible right to visit and receive one another in their houses, for all objects of social intercourse, and of religious and secular education. I did exact from the Neapolitan Government an official recognition of that right; and, more than this, I obtained from it, that a British school, which had hitherto existed, as they stated, by connivance and forbearance, should be hereafter publicly authorised and established under the protection of the British Mission.

The noble Earl says he considered £100 a due compensation for Mr. Hamilton's loss; and he adds, that the "ridiculous conversation" alleged to have taken place between Prince Carini and him is a gross invention. He concludes by saying:—"I leave it to the two Neapolitan Ministers and to Mr. Hamilton to determine who the author of such trash can be."

CUBA AND THE UNITED STATES.

A correspondence has taken place between Lord Howden, the English Ambassador at Madrid, and Mr. Corbin, of Virginia, relative to the supposed intrigue with Spain, attributed to Great Britain in the United States, in order to enable the British Government to effect the manumission of the slaves of Cuba. Lord Howden solemnly contradicts the assertions of the American newspapers, and thus describes the nature of the negotiations which he has really carried on with the Spanish Government relative to Cuba:—

First, I have been making unceasing representations at the number of slaves annually imported into the island, and complaints of the almost open manner in which the traffic was carried on under the very noses of the Captains-General, always excepting the excellent General Concha. Secondly, I have been making fruitless attempts to get the Spanish Government to declare the abominable traffic in men piracy—that is to say, to follow the example of the United States in this particular. Thirdly, I passed my time in anxious solicitations to obtain the ultimate and complete freedom of those negroes called "Emancipados," who have been fraudulently detained in bondage since the year 1817, in disregard of treaties. I rejoice to say that the Spanish Government has listened to the dictates of justice and humanity, and has granted me this boon. Fourthly, I have been endeavouring to procure the abrogation of that intolerant and immoral law, by which foreigners, wishing to settle in Cuba, are obliged to change their religion, on the somewhat startling principle (not understood elsewhere) that becoming bad men is a satisfactory preliminary to becoming good subjects. To these official negotiations I have added, at various times, friendly and officious exhortations to improve the internal system of the island, by facilitating the administration of justice, and by liberalising the nominations to office and employment among the natives of the island.

Lord Howden concludes by saying:—

Spain herself must feel that, in days like these, unless she executes her engagements and modifies her intolerance, she can never hope to enter again, and as she ought to do, into the hierarchy of nations.

THE BRITISH FLEET IN THE TURKISH WATERS.

At the present time, it will be satisfactory to know our strength in the Turkish waters. The following will be found a correct list of the Mediterranean Fleet at present in the Dardanelles:—

	Guns.	Horse Power.	Men.	
Britannia ..	120	—	970	Vice-Admiral J. W. D. Dundas. Captain T. G. Carter.
Trafalgar ..	120	—	870	Captain H. F. Greville.
Albion ..	90	—	850	Captain S. Lushington.
Rodney ..	90	—	850	Captain G. Graham.
Vengeance ..	84	—	750	Captain Lord E. Russell.
Bellerophon ..	78	—	670	Captain Lord G. Paulet.
Sanspareil ..	71	350	650	Captain S. C. Ducres.
Arethusa ..	50	—	500	Captain T. M. Symonds.
Leander ..	50	—	500	Captain G. St. V. King.
Retribution ..	28	300	320	Captain Hon. J. Drummond.
Furious ..	16	400	240	Captain W. Loring.
Tiger ..	16	400	240	Captain H. Giffard.
Firebrand ..	6	410	106	Captain G. Graham.
Sampson ..	6	467	196	Captain L. T. Jones.
Niger ..	14	400	160	Commander J. C. Keath.
Wasp ..	14	100	160	Commander Lord J. Hay.
Fury ..	6	513	160	Commander E. Tatham.
Infaxible ..	6	380	160	Commander Popplewell.
Ardent ..	4	200	60	Lieut.-Commander R. Smith.
Caradoc ..	4	350	60	Lieut.-Commander S. Derriman.
Sherwater ..	4	160	60	Lieut.-Commander H. Grylls (act.)
Spitfire ..	4	140	60	Commander T. Spratt.
Triton ..	4	240	60	Lieut.-Commander H. Lloyd.
Total ..	855	5333	8852	

The following are on their way to reinforce the fleet, viz.:—

Terrible ..	21	800	330	Rear-Admiral Sir E. Lyons. Captain J. M'Cleverty.
Queen ..	116	—	880	Captain F. T. Mitchell.
London ..	90	—	820	Captain C. Eden.
Agamemnon ..	91	550	850	Captain W. R. Mends.
Leopard ..	16	560	300	Captain G. Giffard.
Highflyer ..	21	250	230	Captain Moore.
Total	355	2160	3480	

Grand total, 29 ships, 1240 guns, 7492-horse power, 12,332 men.

The *Indus*—which arrived at Southampton on Thursday morning, with the heavy portion of the Overland Mail—spoke the *Leopard* (in the Mediterranean) on the 8th the *Terrible* (off Cape Trafalgar) on the 12th; and on the 11th, the *Queen* passed Gibralter, without anchoring.

NEW ARCTIC EXPEDITION.—Government have decided to send out a new Arctic expedition, which is to proceed in quite a contrary direction to any of the previous expeditions. The *Phœnix* screw-steam sloop will be again commissioned by Captain Inglefield, F.R.S.; and he will proceed to the Arctic regions in her, and endeavour to make a passage into the Polar Sea, to the north-east of Spitzbergen. The Admiralty have liberally granted £50 to each of the gun-room officers and £35 to each of the other officers of the *Phœnix*, as compensation for the expenses they incurred in providing for their mess for a longer period than their recent four months' voyage warranted. The Admiralty are also desirous to secure the services of several of the officers who served in the last voyage; and it is said that Mr. Stanton (the navigator), and Mr. Richards (clerk) will again accompany the *Phœnix* in her new voyage.

REAR-ADMIRAL PASCO, Nelson's Flag-Lieutenant at Trafalgar, died at Stonehouse, near Plymouth, on Tuesday, from an attack of English cholera, in his eightieth year.

SHIP LAUNCH.—A magnificent clipper ship—the finest vessel recently produced on the Wear—has been launched from the yard of Mr. John T. Reed, shipbuilder. She has been named the *Spirit of the Deep*; admeasures 785 tons O. M., and 734 N. M.; extreme length, 190 feet; is constructed throughout of English oak and teak; and will class 13 years A 1, at Lloyd's. She is beautifully modelled and polished, and her poop-cabins are fitted with polished teak-wood. Her managing owners are Messrs. D. and J. Macdonald, of Liverpool, and she is intended for the India and China trade.

MANCHESTER.—A public meeting was held in the Corn Exchange, on Wednesday evening—at which Sir Charles Napier and Mr. Urquhart were present—to "express the sympathy of the inhabitants of this city with the noble efforts of Turkey against Russian aggression."

AUSTRALIAN MAILS.—The ship *Matilda*, Wallenback, of 1058 tons, has been taken up by the Post-office authorities for the conveyance of the Australian mails from Liverpool, on the 4th December.

THE WINTER ASSIZES.—Mr. Baron Alderson and Mr. Baron Martin have appointed Tuesday, the 6th December, for the commission day at Liverpool. Mr. Justice Coleridge and Mr. Justice Wightman have also fixed Saturday, the 10th, for the commission-day at York. None but criminal business will be taken, and the calendars are said to be already heavy.

THE BURNHAM MURDER.—The evidence against Moses Hatto (sometimes spelled Haddo), now in Aylesbury gaol, on the charge of murdering Mary Ann Stungeon, at Burnham, and burning the body, is *indirect*. The police have searched every spot on and about the premises where it might be supposed likely for the rings, pencil-cases, and razors stolen from the dressing-room in Mr. Goodwin's room to have been placed; but as yet they have not succeeded in obtaining the missing articles. It is stated that an additional link in the evidence against Hatto has been supplied by the discovery of the missing shirt. He is described as of small stature, but well knit, and with a pleasing countenance. Upon his arrival at Aylesbury gaol, the same air of bravado which marked his demeanour before the jury was observable; but the next day it was changed to gloomy reserve.

LATEST INTELLIGENCE.

THE WAR ON THE DANUBE.

PARIS, Thursday Night.—The French Government has this day received a telegraphic despatch from its Consul at Bucharest; but the intelligence which he transmits *is*, he states, furnished by the Russian authorities, and, therefore, may not be altogether trustworthy.

He states that subsequent to the affair of the 11th, Prince Gortschakoff attacked the Turks with 40,000 men [certainly a great exaggeration], and succeeded in defeating them; and that the Turks retreated across the Danube without any molestation.

He further states that a series of combats had taken place at Giurgevo, and that a large island in the Danube, opposite to that place, had been the scene of sanguinary conflicts, having been lost and won several times.

The Consul adds, that as the despatch left Bucharest, a continuous cannonade was heard from the direction of the Danube.

Accounts from St. Petersburg of the 8th, state that orders had been given for the commissariat department, with provisions for the troops around that capital, to be ready to march at a moment's notice. The Emperor set out after the review on the 3rd.

The main features of the foregoing intelligence are confirmed by the following telegraphic despatches, dated Vienna, Thursday:—

The Turks have quitted all their positions on the left bank of the Danube, except Kalafat, without battle, simply on account of the concentration and development of the Russian forces.

The Turks quitted Oltenitzn on the 12th, destroying their own entrenchments.

The Turks attempted a passage near Kalarsch, and from an island opposite Giurgevo; but the Russians repulsed them at both places with considerable loss.

The Turks and Russians are both trying to get possession of the island of Mokanon, opposite Giurgevo.

Namik Pacha, who had arrived at Marseilles by the *Mentor*, left that city yesterday, for London.

The French Funds have undergone no change. At Vienna, yesterday, the Metalliques were at 91⅞; and Exchange on London, 11.18; and at Madrid, on the 14th, the Three per Cents were 42½; and the Deferred Stock, 23¾.

CONSTANTINOPLE, Nov. 3rd.—The Sultan has held a Grand Council, and his Majesty gave Redschid Pacha an Imperial "Hat," or declaration, in which he thanks his troops and subjects for their loyalty and devotion; and announces his intention of joining the army in the spring. The declaration concludes:—"As the first head-quarters of my guard will be fixed at Adrianople, it is urgent that everything necessary for the troops which will be under my command should be prepared there. . . . May the Most High, through his love for the Holy Prophet, render my empire in every circumstance victorious and triumphant: and may all those who contribute to the success of that task be able to obtain happiness both in this world and in the next."

THE COUNT WALEWSKI, the French Ambassador at this Court, has been summoned to France to attend his Imperial master, but will return in a few days.—*Times*.

THE EARL OF SEAFIELD has been elected a Scottish Representative Peer. The election was in room of the late Lord Saltoun, and took place in Holyrood Palace on Wednesday.

THE PRINCESS NICHOLAS ESTERHAZY.—We have to record the death of one of the amiable daughters of the Earl of Jersey—her Highness the Princess Nicholas Esterhazy; which melancholy event took place at Torquay, in Devonshire, on Monday morning, at five o'clock. The Princess was the eldest daughter of the Earl and Countess of Jersey; was born on the 12th of August, 1822; and married Prince Nicholas Esterhazy on the 8th February, 1847. She leaves two children—Prince Paul and Prince Rupert. Several noble families will be placed in mourning by this bereavement.

THE DUKE OF BEAUFORT, K.G.—The unexpected demise of his Grace the Duke of Beaufort, at his seat, Badminton House, on the 17th instant. The noble Duke's dissolution was caused by gout flying to the stomach. His son, the Marquis of Worcester (now the Duke of Beaufort), was in attendance on his deceased father, and there was not time sufficient to allow of his reaching the family seat in time to see his father alive. The late Duke was born 5th February, 1792, and was, consequently, in the nine of his years, at his decease. The Dukedoms of Sutherland, Norfolk, Argyll, Cholmondeley, Westminster, Harrewby, and several others, will be placed in mourning by this melancholy event.

THE CHANNEL FLEET.—The fleet at Spithead will most probably sail on a cruise on Monday next.

SOUTHAMPTON—FRIDAY.—The Royal Mail steam-ship, the *Solent*, arrived to-day from the West Indies, with the mails from thence and the Pacific.

RUSSIAN AGGRESSION.—A requisition is going the round for signatures, at Liverpool, calling on the Mayor to convene a meeting in order to urge the Ministry to give more efficient support to Turkey in her present struggle with Russia.

TONNAGE TO AUSTRALIA.—The demand for tonnage to Australia has, during the last few days, sensibly increased, and in consequence freights have risen from fifteen to twenty per cent. Goods which were shipped last week at 60s. per ton could not now be put on board for less than 70s. to 80s. for Melbourne and Sydney.

FIRES.—An extensive fire broke out on Friday morning, at four o'clock, on the premises of Messrs. Haynes and Co., St. Andrew's-road, Newington, Surrey. Nearly all the factory, warehouses, &c., with their contents, were destroyed before the fire was subdued.—A second fire occurred, about ten o'clock, on the premises of Messrs. Pilcher and Bargess, opposite the George and Blue Boar, Holborn; but, one of the Fire-Brigade stations being near, the fire was soon got under, though a good deal of damage was done.

FATAL ACCIDENT IN THE STRAND.—On Friday morning a fatal accident happened to Thomas Porter, cab-driver No. 6935, who was conveying two gentlemen into the City: when opposite the Adelphi Theatre, the horse fell down, and pitched the driver over his vehicle. He was picked up, bleeding profusely from the head, and taken to the Charing cross Hospital. The injuries he had received proved so severe, that death shortly terminated his sufferings. Deceased has left a wife and large family unprovided for. An inquest will be held.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonries*: The Rev. F. H. Freeth, and the Rev. G. C. White, have been appointed to Cumbrea, diocese of Argyll. *Rectories*: The Rev. W. Holls, to Bradfield, with the rectory of Ruishbrook annexed, near Bury St. Edmunds; Rev. G. Naylor, to Rougham, Bury St. Edmunds; Rev. F. Spurrell, to Faulkbourne, Essex; Rev. F. Borradaile, to Norton Episcopi, with Atterby annexed; Rev. H. Temple, to Thornton, near Buckingham; Rev. J. Husband, to Sclattyn, near Oswestry. *Vicarages*: The Rev. W. Keene, to Whitby. *Incumbencies*: The Rev. W. H. Hugall, to Taddington, Derbyshire; Rev. F. V. Mather, to St. Paul, Clifton; Rev. E. Wood, to Bradfield, near Sheffield; Rev. H. Farish, to Ecclesfall, Yorkshire; Rev. Dr. G. Aspinall, to Duffus, Morayshire; Rev. T. Barry, to St. Barnabas, Liverpool; Rev. T. H. Chase, to Lydbrook, in the Forest of Dean; Rev. J. C. Gregory, to Loithkirk, near Barnard Castle; Rev. H. S. Randall, to St. Peter's Bishport, near Bristol; Rev. W. H. Wilson, to Birtley, near Hexham; Rev. E. E. Jones to St. Paul, Goresedd, Flintshire.

HIS Majesty the King of Hanover has been most graciously pleased to appoint the Rev. D. C. Delafosse, A.M., Rector of Shere, Surrey, one of his domestic chaplains.

CHURCH-RATES.—Church-rates have been refused at Kettering by 291 to 191; at Barnard Castle, by a majority of 49; and at Langtoft, by a large majority.

EAST ARDSLEY CHURCH.—This church was re-opened on Tuesday, after having been closed for a short time for the purpose of cleaning it and introducing an organ. The day was one of rejoicing in the village.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—Rev. J. Partridge, master of the Yarmouth Proprietary School, by the pupils; Rev. J. Firmin, minister of Trinity Church, Odd Rode, from the members of his Bible class; Rev. N. W. Gibson and Mrs. Gibson, by the Rev. H. Newland, curate, the superintendents and teachers of St. Thomas's Sunday-schools, Ardwick.

Note.—The sign − denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is repres ted by 100

The reading of the barometer increased from 30.31 inches at the beginning of the week to 30.37 inches by 6h. p.m. on the 11th; decreased to 29.69 inches by the afternoon of the 13th; and increased to 29 87 inches by the end of the week. The mean reading for the week, at the height of 82 feet above the level of the sea, was 29.881 inches.

The mean temperature of the week was 39·6°, being 3 6° below the average of the corresponding week during 38 years.

The range of temperature during the week was 23·2°; being the difference between the highest reading, on the 12th, and the lowest reading, on the 17th.

The mean daily range of temperature during the week was 12·4°. The greatest was 17·5°, on the 11th, and the least 8·4°, on the 14th.

Rain fell during the week to the depth of one-tenth of an inch.

The Weather has been fine during the week; but the air has been misty, and fogs have been prevalent.

Lewisham, Nov. 18, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending Nov. 12, the births of 866 boys and 748 girls were registered in the Metropolitan districts The averages of the eight corresponding weeks in the previous eight years were [illegible]. THE ILLUSTRATED LONDON NEWS

No. 655.—VOL. XXIII.] SATURDAY, NOVEMBER 26, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

PARLIAMENTARY REFORM.

THE signs of the approaching reform of Parliament are becoming palpable. The quarterly and daily organs of the Ministry hav begun to discuss the subject. As yet there have been no public meetings to express the popular feeling. The reason is, probably, that the public take but little interest in the matter. They remember the abortive project introduced by Lord John Russell in the session of 1853, and are quite content to await his Lordship's time, in the session of 1854, for the introduction of a more maturely-considered scheme. But although there are at present but little curiosity and less anxiety to know in what manner the great Whig leader proposes to deal with that great question with which his name will be for ever associated in the pages of English history, it is probable that public excitement will warm by degrees, and that the New Reform Bill will be the principal, if not the only, work of the session of 1854.

The circumstances of the country were very different when the first Reform Bill was agitated. The successful French Revolution of 1830 fired the enthusiasm of Whigs, Liberals, and Radicals; and the unwise opposition which the measure excited from the ultra-Tory party created a dangerous ferment. Men who are still young, remember the perilous circumstances that then prevailed—when it seemed but too probable that England would have imitated the example of France, and have effected a violent revolution. But the Reform Bill was happily carried. It did not satisfy the extreme party: but it met the views of moderate politicians as a safe if not a perfect measure. The satisfaction of its author was complete. He wished the measure to be a final one, and declared that a country like this could not afford continual revolutions. As time wore on, many defects and deficiencies were discovered in the Reform Act. Although it secured a real, if not in all points a fair representation of the people, new and rising towns felt aggrieved that they should be unrepresented in the great councils of the nation, whilst stagnant mediæval boroughs, with not a twentieth part of their population, counted for as much in the legislative halls of St. Stephen's as the great and thriving cities of Manchester and Glasgow. The exposures that from time to time were made of the gross and systematic bribery prevalent in such boroughs as Harwich, St. Albans, and scores of other places that were absolutely purulent with rottenness, became a public scandal; and a new Reform Bill was demanded, if for no other reason than to purge the country of such corruption. There arose about the same time a cry for what was called the "People's Charter," chiefly confined, however, to the working-classes, demanding a complete and organic change in the British Constitution. The clamour for the six points, as all the world knows, led to serious consequences, and there was a time when it seemed as if a deadly and irreconcileable feud had arisen between the Chartists and the middle and upper classes.

Even that great social reform which was commenced, if not effected, when Sir Robert Peel untaxed the food of the nation, was long impeded and endangered by the agitation of the noisy demagogues who maintained that universal suffrage, annual Parliaments, electoral districts, the vote by ballot, the abolition of the property qualification, and the payment of members of Parliament, would cure all political evils, and sweep away the Corn-laws, along with many other grievances. But the French Revolution of 1848 had a benefical effect on the English people. It did not excite the masses as the Revolution of 1830 had done. The French went too suddenly and too far "a-head" for the comprehension, to say nothing of the imitation, of the soberer English multitude. The English working classes looked on with curiosity, while the upper and middle classes surveyed the doings of the French and their Provisional Government with wonder and alarm. Universal suffrage and the Ballot, came into full operation in France. The results were very different from those anticipated. Out of the electoral urn—into which every Frenchman, of sane mind, and unconvicted of felony, was allowed to drop his balloting ticket—emerged the gaunt, fierce figure of a Military Despotism. With all the points of the English Charter, and many more, it was discovered that not a particle of freedom remained to the French. They could neither speak, write, nor print their opinions. They were not allowed to meet in public in greater numbers than thirty, without being fired upon by foot soldiers, or sabred by dragoons. The constitutional liberties for which the more advanced spirits of the nation had struggled so gallantly for sixty years, were trampled into the dust under the iron heel of the new Napoleon—the idol of universal suffrage. The lesson was not thrown away upon the extreme party in the British Isles. With a Parliamentary system which was theoretically very erroneous and imperfect, it was apparent even to the most obstinate that real and practical liberty could exist. Though Birkenhead, Kensington, and the Gorbals of Glasgow, had no voice in the British Parliament, and the venal electors of countless disgraceful boroughs openly sold their votes to the highest bidder, the subjects of the British Crown were the freest people in the world. No liberty achieved by their ancestors was insecure; and year after year Parliament, though not elected by universal suffrage, devoted its most earnest care and attention to the emancipation of industry, to the repeal of injudicious enactments, and to the abolition of taxes that operated against the health, the comfort, or the enjoyments of the multitudes. Universal suffrage might or might not be a good thing;

HORSES OF THE CRIMEA IN A WINTER STORM ON THE BLACK SEA.—(SEE NEXT PAGE.)

but, to use a popular phrase, "the gilt had been taken off the gingerbread," and the French had proved that a very excellent Theory might be the parent of a very detestable Fact. The wholesome tendency of such experience was sufficient to cool the ardour of ultra-Reformers. The beneficial effects of Free-trade strengthened the kindly feeling which the unrepresented classes then began to entertain towards the British Constitution. When work is scarce, when the cold pinches, and when there is no beef nor bread in the artisan's cupboard, he turns his attention to politics, and thinks it would be a "capital thing if he had a vote." But when trade is flourishing, and wages are ample—when the wife can buy a new gown and bonnet, and the little children can be sent to school, the working man does not trouble his head about points of the Charter, or any universal panacea for miseries which he has ceased to feel. Such is the present aspect of the Reform question. The plague-spots of bribery are bad enough, and ought certainly to be remedied. As Lord John Russell has taken up the subject, it is well. If he had not so chosen, it would have been equally well, and all classes in the country would have waited his convenience.

Yet it is obvious to most people that the absence of all popular clamour and agitation upon the subject is an excellent reason for its introduction to Parliament in the approaching session. The first Reform Bill was extorted by fear, from an unwilling Legislature. The next will be calmly conceded: not because it has been violently demanded, but because it is just and reasonable that glaring abuses should be removed, and that palpable defects should be remedied. Lord John Russell has, to some extent, enlightened the public on his intentions; and it is generally supposed that the changes he will introduce will neither be many nor startling. There will be no electoral districts—no ballot—no shortening of the duration of Parliaments—no universal suffrage—and no payment of members. There will, however, be an extension of the suffrage, so as to include a greater number of the labouring classes both in town and country, and, possibly, of the professional classes in the metropolis and other large cities, now excluded from the exercise of political power by their residence in lodgings. There will, also, in all probability, be an extension of the franchise to large and growing towns, at the expense of some of the most notorious of the still remaining rotten boroughs. Many small boroughs now returning two members will be deprived of half their privilege, and allowed to return but one. Some alteration will be made in the law that compels the payment of parochial and other rates as an essential preliminary to the exercise of the right of voting. Beyond this, we do not anticipate that Lord John Russell's reforms will be carried. The country desires no organic changes. It is proud and grateful for the free constitution which has made it the example and the envy of the world, and will tolerate no rash experiments that might undermine the venerable and stately fabric. Better a few rotten boroughs, and a few anomalies, than a system of universal suffrage and electoral districts, which might substitute anarchy for liberty, and nurse the young giant of a future despotism. The question is safe in Lord John Russell's hands. We are quite certain he will not do too much; and there is equal reason to believe—judging from his past history and recent professions—that he will not do too little.

HORSES OF THE CRIMEA IN A WINTER STORM.

THE Illustration on our first page, which is copied from a picture by Feroglio, represents an extraordinary scene, which not unfrequently occurs on the southern coast of Russia. A whole herd of Horses overthrown in a snow storm, and scattered over the frozen surface of the Black Sea. The wild excitement of the event is ably realised, and fear fully illustrates the terrible incidents to which the country of the Don Cossacks is subject.

The Wild Horses of the Ukraine are a peculiar race; and are not only used by the dashing Cossack for riding, to carry him to the wars, but sometimes hunted down as food.

THE TURKISH ARMY.—The total number of regiments comprised in the whole regular force, is seventy-four, of which thirty-six are infantry and twenty-four cavalry. The gross strength of the effective force is 168,820 men, and that of the reserve 180,000; there are about 60,000 irregulars, and there is a nominal force of rather over 170,000, assigned as the contingencies of the tributary provinces: in all, half a million of men.—*Ottoman Empire and its Resources.*

LORD DERBY ON THE TURKISH QUESTION.—In a letter to the chairman of a meeting at Manchester, his Lordship says—"So far as I am informed as to the merits of the Eastern question, right appears to me to be altogether on the side of Turkey, and I believe that my opinions as to the utter futility of the pretexts put forward by Russia in justification of her acts of unprovoked aggression, are shared by the great mass of our countrymen."

"JUSTICE TO SCOTLAND."—Thursday, the 15th of December, has been fixed for the proposed demonstration in Glasgow in favour of the National Association for the Vindication of Scottish Rights. The City-hall has been engaged for the occasion, and the Earl of Eglinton, the President of the Association, is expected to take the chair.

DERIVATION OF THE WORD "CROWBAR."—In "Johnson's Dictionary" the explanation given of the word is "piece of iron used as a lever to force open doors, as the Latin called a hoac cornua." In Walters' "English and Welsh Dictionary," the first part of which was published about the year 1770, the word is printed "Crow-bar." Is it probable that the word *crow* has been derived from the Camb.-Brit. word *cro*, a curve? and that the name has been given from the circumstance of one end of a crow-bar being curved for the purpose of making it more efficient as a lever.—*N. & Q.—Notes and Queries.*

"MAINE LAW" FOR ENGLAND.—The Earl of Harrington approves of a Maine law for England. The following has been received in answer to a communication from the secretaries of the United Kingdom Alliance for the Legislative Suppression of Intoxicating Liquors as Beverages: "Elvaston Castle, Nov. 17, 1853. DEAR SIRS,—I thank you for your letter of the 10th inst., and its enclosures. I have read and approve of the masterly address of the 'United Kingdom Alliance,' and am willing to give it, provided there is no responsibility attached to the council. I remain, most truly yours, HARRINGTON."

ADVICE TO ENGLISH FARMERS.—There has been a large and sound crop of potatoes in Ireland. Follow the two simple rules by which this good result has been obtained in Ireland, viz.—Plant the potatoes in new ground, that has not been tilled for many years, and, if possible, in peat. To plant them in ground that has been tilled for years, and, above all, in grass, as for example in gardens is a certain way to lose both in sort and quantity. Peat soil cannot be found in all places, but there is hardly a borough ground in every farm, and besides the sound crop so gotten, the ground will be brought into good order. 2. Plant them early.

IRELAND NOT RICH IN FOOD.—The London papers from the country markets show that the prices of grain, and very recently nearly every article of food, are receding. The report in all larger markets of Ireland, of the state of the crops, and of all kinds of provisions, are also favourable, and Waterford are pretty much the same as the large.

LARGE CAPTURE OF HERRINGS.—The Dawlish fishermen, on the south coast of Devonshire, caught upwards of 200,000 herrings last Saturday: a great boon to the poor, who purchased them readily, in consequence of the high prices of all descriptions of animal food. The fishermen have not had such a piece of good luck for many weeks.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The cholera is in Paris; it is not generally known, and with the exception of the doctors, who can no longer have any doubt on the matter, people choose to consider it as very doubtful, as a report set about by alarmists. It is a mistake, this voluntary incredulity, which causes salutary precaution to be neglected. This incredulity shows that there are various kinds of fear. Sometimes fear exaggerates the danger; and sometimes, on the contrary, it denies its existence, believing that it suffices to shut your eyes in order to avoid the danger. This proves that in both cases fear is puerility which education should apply itself to combat and cause to disappear: it ought and it will.

The re-opening of the Italian Opera took place last Tuesday. The result of this event disappointed to a certain degree the anticipations which had been formed for it. And yet Alboni sung: But she was alone, or appeared to be alone. Tamburini was detestable. Gardoni mediocre; the *salle* was not sufficiently warmed; the fog had entered without paying for its place, and laughed at the *contrôle* and *contrôleur*. Then, also, the "Cenerentola" was the opera given—an opera of which every one is completely tired, and which did not appear newer because it had not been heard for a year. The boxes were not empty, but they were occupied by unknown faces and questionable toilettes—it was no longer the elegant assembly of 1829 and of 1847: then every one knew every one, and visits were made from one box to another, exchanging news and questions—it was less the hall of a theatre than a *salon* with compartments. Will these good times return this year for the Italian Theatre? We shall be able to judge of this better towards the end of next January, when the Court will have established its winter quarters at the Tuileries; when the *châtelaines* and the *châtelaines* will have quitted their châteaux in Normandie, Bourgogne, and Touraine, for their hotels in the Faubourg St. Honori, the Faubourg St. Germain, and the Chaussée d'Antin. The same evening (last Tuesday) was given the first representation at the Gymnase, of M. A. Dumas's (son) piece, "Diane de Lys." The success was immense and merited; the piece is full of interest, the dialogue sparkling with wit, and the parts are played by the actors with incomparable talent, both in detail and general effect. Mdme Rose Cherie is certainly, after Mdlle. Rachel, the first and most perfect actress of all the French theatres. There was an immense crowd to witness the first representation of this piece, of which it was known that the subject was the "Dame aux Perles." Every box had its *Dame au Camellia*, dressed most exquisitely, and holding the *bouquet de la reconnaissance* ready to throw to the author, over the head of the actress. Madame Doche, who had played the part of the *Dame au Camellia* with such distinguished success, applauded with both hands the *Dame aux Perles* (that is to say, Mdme. Rose Cherie—that is to say, M. Alexandre Dumas (fils). She occupied the stage box, facing the Imperial stage box, in which was the Prince Jerome, ex-King of Westphalia; and beneath his father, in a stage box on the ground floor, was the son, the Prince Napoleon. The Italian theatre was this decidedly neglected for the Gymnase; and Mdme. Rose Cheri triumphed over Mdme. Alboni (Comtesse Pepoli). How are we to explain this preference? Simply by the attraction of the crowd for the crowd.

In the shops nothing is heard but lamentations and groans. They complain of selling nothing: but to whom can they sell? The Parisians who buy are not yet in Paris; and the foreigners who come, but who do not remain, do not buy more than is no longer a journey. Formerly, when people went from Paris to London, they thought themselves obliged to bring back from London whatever they remarked as being exclusively English; and those going from London to Paris considered it incumbent on them to bring back from Paris whatever was exclusively Parisian. But now, between Paris and London there is no longer distance or difference. What is well made in Paris is equally well made in London; what is well made in London is equally well made in Paris. So, each buys what he or she wants at home—emulation has dimished in equality. Everywhere unity is established without one's being able clearly to explain how.

On Monday there was a *grande chasse* at Fontainebleau; but, do what they will, they find it impossible to drive away or kill *ennui*—which defies chasseurs on foot or on hor-back; men, women, dogs, and valets. In reality it is neither the stag, the golden pheasant, roebuck, the deer, partridges, or woodcocks, that they *chasse*; it is *ennui*, always *ennui*, and they never conquer it. They reach it, it does not stir; they take aim, but it never falls. It is a dumb and motionless phantom.

We hear from Vienna that on the 17th, the Duke of Nemours arrived on a visit to Frohsdorf, when the reconciliation between the head of the House of Bourbon and the sons of the late Louis Philippe was completed. The Duke of Nemours has since returned the visit of his Royal relative. A convention provides, it is said, that Count de Chambord is to be recognised as the legitimate heir to the Crown. In case of the Countess's death, he agrees not to marry again. If he dies childless, the Count de Paris is to be the successor to the present Pretender.

Count Walewski, the French Ambassador at the English Court, who has been absent a few days from his post on leave, is expected to bring back with him from Fontainebleau the proposals of Louis Napoleon, whether these be for increased activity on the part of the neutral fleets, a disembarkation of troops on one or other shore of the Black Sea, or the execution of a secret treaty between France and England on the Eastern question.

The reduction of the duties upon coals and iron is another and most important step towards Free-trade. The Imperial decree has caused some jealousy in Belgium, the iron manufacturers of which have hitherto been favoured to the prejudice of those of Great Britain.

The subject of the coronation of the Emperor is again mooted; and it is believed that the ceremony will be performed on the anniversary of the marriage, the 29th of January, by the Archbishop of Paris, who will have previously received a Cardinal's hat. The rumour also prevails in Paris of a projected marriage between the young King of Portugal and the daughter of the King of the Belgians, who is now in her fourteenth year.

It is considered probable the Bank of France will shortly raise their rate of discount to 5 per cent, owing to the drain of specie which is still going on.

The police have made a domiciliary visit at the house of M. Leon Faucher; but nothing was found to implicate him.

A great number of persons continue to be arrested in the provincial towns on charges of disaffection to the Government. The high price of provisions seems, however, to be the chief cause of the discontent, especially in the south of France.

The Superior Court has given its decision in the affair of the foreign correspondents. It confirms the decision of the Imperial Court of Rouen, which is to the effect that the Prefect of Police has the power of seizing and open letters which have been entrusted to the Post-office.

The Emperor has given 15,000f. to the Mayor of Fontainebleau, to aid the municipality of that town in reducing the price of bread in favour of the necessitous classes.

The Emperor has taken upon himself the entire cost of the monument to be erected at Fontainebleau in honour of Napoleon I.

His Imperial Highness Jerome Napoleon has purchased a piece of ground on the site called Le Perrey, at Havre, for the purpose of erecting a residence on it, his intention being to visit Havre every year.

The railway for omnibuses, from the Place de la Concorde to the Barrière de Passy (of which we gave Illustrations last week), was on Saturday formally opened by M. Magne, Minister of Public Works, after undergoing certain alterations. The ceremony was at ended by a number of eminent official dignitaries—among whom were M. Casabianca, ex-Minister of State; M. Romieu, Inspector-General of the Libraries of the Emperor; M. de St. Marsault, Prefect of Versailles; M. de Saulxure, Secretary-General of the Prefecture of Police; and M. Dupuis, civil engineer of Paris. It was represented to the Minister that the line would be better if the rails, instead of being on the side of the road, were in the middle, as the traction would be less; and his Excellency promised that the matter should be taken into consideration. There is a question of prolonging the railway to Sèvres, and by the quays to Bercy.

THE WAR BETWEEN RUSSIA AND TURKEY.

The telegraphic despatch purporting that Bucharest was in flames, and the Russian army in retreat, is proved to have been without foundation. Taking up the narrative of the campaign from its commencement, it appears that the Turks crossed the Danube in force at Widdin and Turnukai; that they threw detachments on to the left bank at two or three intermediate points, and pursued did the same at Hirova or Bratlow, lower down the stream. At Giurgevo their attempt failed. One only of their positions on the left bank was attacked by the Russians—that, namely, at Oltenitza. This position is now well ascertained—they repulsed assault after assault in a series of severe engagements to be won the 4th and 11th of this month; up to that date the Turks had been successful everywhere: had repulsed the enemy repeatedly at the island opposite Giurgevo, and with great slaughter at Oltenitza, and were believed to be in a condition to march upon Bucharest. In this emergency, however, Prince Gortschakoff was able, by concentrating his forces midway between Bucharest and the Danube, to outnumber the assailants immediately in his front. Their opportunity was then gone, and the Turks prudently repassed to their own side of the river, effecting a voluntary retreat in good order and without loss. The altered position of the two armies leaves Prince Gortschakoff without any assailant on his side the Danube immediately in front of him; secures at the same time the base of his operations; and clears his communications with Moldavia and Bessarabia, so that he can receive whatever amount of reinforcements the Czar may be able to send him. The left wing of the Ottomans, under Ismail Pacha, however, which was the first to cross the Danube at Widdin, still retains its position on the left bank at Kalafat, and may be said to occupy Little Wallachia. It was expected that the Russians would make an attack upon Kalafat as soon as Osten-Sacken's corps arrived, and the remainder of Liders could be brought up to guard the approaches to Bucharest. From the Prath to the Wallachian capital, however, is a long march, especially for an army corps, which cannot travel without an immense train of waggons.

It is stated that the French Government has proposed a bold and decided course of policy—nothing less than a treaty of pacific tion with this country, which would, of course, be open to the adhesion of the other Great Powers, for the purpose of imposing terms of peace upon the belligerents, and endeavouring to terminate the war. Two precedents are quoted in favour of this plan: the first, the Treaty of London, concluded on July 6th, 1827, between Great Britain, Russia, and France, for the pacification of Greece; and the second, the Quadruple Treaty of July, 1840, by which Great Britain, Austria, Russia, and Prussia agreed to impose terms of peace between the Sultan and the Pacha of Egypt. In each of these cases the intervention was successful, and it is contended that either by a direct arrangement between the parties concerned, or by a conference of the Great Powers to be held in London and Paris, means may be devised for terminating hostilities. Meanwhile, ships of war, both from the French and British fleets, are reported to have entered the Black Sea, where they will defend the Turkish coast from invasion.

The *Moniteur* gives the following information relative to the retreat of the Turks across the Danube:

News received from Vienna, dated the 19th, confirms the fact of the evacuation of Oltenitza, and of the movement in retreat of the Turks to the right bank of the Danube. That manœuvre had not been precluded by any fresh encounter between the two armies. The passage of the Danube was effected in good order, and without the Turks having been disturbed. Kalarach and Giurgevo were evacuated at the same time. The advanced posts of the division of Osten-Sacken had got beyond Jassy. On the left bank of the Danube the Ottoman troops continued to occupy Kralafat and its environs with 25,000 men: they were receiving reinforcements from Widdin and Sophia.

It is probable that the real reason which induced Omer Pacha to withdraw was, that the torrents of rain which had fallen on the previous two days made it impossible for him to attack the Russian entrenchments with any hope of success. This theory is confirmed by the *Patrie*:—

The last news from the theatre of war is of the highest interest. For some days past the account of a vigorous march of the Turks from Oltenitza on Bucharest has been expected, and already had a report been spread that their troops had invested that place. It appears that the torrential rains which took place after the battle of Oltenitza have been fatal to the natives of the Turks. Retarded by the inundations which, by swamping the ground, rendered the movement of artillery impossible—they have lost valuable time, the Russians have been thus able to concentrate the greater part of their forces round Bucharest; and the expedition of the Turks to that place has failed. General Gortschakoff will time to assemble from 45,000 to 50,000 men for the defence of that important strategic point. In this state of things he has decided on stopping their forward movement. After destroying the quarantine building and the works thrown up at Oltenitza, they succeeded in re-crossing the Danube in the greatest order, and without being at all disturbed by the enemy.

A Vienna paper has the following:—

On the 11th and 12th there must have been sharp fighting in the neighbourhood of Oltenitza, as waggon-loads of wounded men were brought in along that road. Some of the wounded men, to whom I spoke, told me that the Turks had been beaten; but here, people are not so sure that the victory was on the side of the Russians, as Prince Gortschakoff sends courier after courier to Osten-Sacken and Lüders to urge them to advance as speedily as possible. Several Russian staff officers, severely wounded, have just been brought in. The city is in considerable commotion.

Kalafat will now be the central point of interest. Letters from Krajova of the 10th instant state that the Russians have concentrated a large force in and around that town. Their outposts are close to Kalafat, where frequent skirmishes took place. Ismail Pacha's head quarters were at Kalafat, which Omer Pacha has been instructed to hold if possible; while, at the same time, he has been ordered to abstain from further operations during the winter. There are rumours of the taking of Krajova by the Ottoman troops, after a smart engagement between the troops of Ismail Pacha and the corps of the Russian General Puchkoff. Krajova is situated on the left bank of the Schyl, at a short distance from Kalafat. It has a fortified castle, in a most advantageous position; and which, though in bad condition, might be made available for defence. Omer Pacha was expected to establish his *échelon* along the left bank of the Danube in a corps of 40,000 men, and to fortify himself in the strongest possible manner in the triangle comprised between Kalafat, Krajova, and Narnosk, and thus secure his communications between both banks, and have a base of operations to act in Lesser Wallachia.

It is asserted that Prince Gortschakoff has received positive orders to assume the offensive, and that Russian pontoons have been sent to Oltenitza.

Fuad Effendi, former Minister of Foreign Affairs, was preparing to leave for the head quarters of Omer Pacha, where he was named Political Director, or Imperial Commissioner. Fuad Effendi was the Minister of Foreign Affairs whose dismissal Prince Menschikoff, on his first visit to Constantinople, insisted upon with such brutal arrogance; and his being now charged with the important duty of maintaining the connexion between the operations of the army and the policy of the Porte was held to prove that the Sultan was determined not to abandon the line of policy he has adopted. Fuad Effendi being the old and intimate friend of Omer Pacha, it was not considered as probable that any misunderstanding would arise between them. It is whispered, however, that the real object of Fuad Effendi's mission is for the purpose of restraining the martial ardour of Omer Pacha, who still exists among political persons a very confident hope that affairs will be arranged without recourse being had to further hostilities; and the Austrian Internuncio, M. de Bruck, received despatches on the 7th which were believed to contain a definite project for the settlement of the quarrel with Russia. M. de Bruck immediately afterwards had an interview with Redschid Pacha. The Prussian Government is also ready in its best efforts to induce the Russian and Turkish Governments to conclude an armistice.

The combined fleets have received orders to advance to Constantinople, and join the two divisions at anchor there for some days. On the 6th, the French, Prussian, and English Admirals held a conference on board the *Mahmoudie*. The naval officers of Turkey and the allied fleets met to consult and ascertain whether or not the Black Sea is navigable in winter. They came to the conclusion that the navigation, though difficult, is not impossible. The announcement of the adjudication for the supplies of the French fleet, which states that the contractor had engaged from the sea of Marmora to Odessa, produced considerable sensation at Constantinople; and it was considered as, in some sort, a contradiction to the assurance that the fleets would not enter the Black Sea. A part of the Turkish fleet will go to Batoum;

and, it is said, four French and English steamers will cruise off the Russian coast. It was believed in Constantinople that the English Ambassador will suffer the British fleet to enter the Black Sea, to protect the coast against any attack on the part of the Russians, and that he has offered vessels for the transport of troops to the Asiatic coast. It was even said, although the information is questionable, that the arrival of French and English auxiliary troops has been officially promised by the representatives of the Western Powers

The Turkish Government had sent to the Black Sea a naval division, consisting of two frigates, two corvettes, and a brig, in order to protect the coast against a *coup de main* on the part of the Russians. The Turco-Egyptian squadron keeps a strict watch on the coast of the Black Sea, from Trebizond to Redout-Kaleh, in which district the army of Abdi Pacha is operating. On the 7th, the whole of the Turco-Egyptian fleet was to enter the Black Sea, with orders to attack the Russians wherever they might be found. A private letter from Constantinople announces that news had been received of the Turco-Egyptian squadron, of whose operations Trebizond is the centre. It is stated that a division of that squadron had proceeded to Redout-Kaleh, and proceeding to land supplies at Poti. The Russian ships, inferior in number, had escaped in consequence of a thick fog; but a transport, laden with troops, had run aboard a Russian frigate, and went down.

Letters from Constantinople announce that the Ottoman Government had purchased 20,000 horses for the service of their cavalry and their artillery. Ten thousand had already been delivered, which are to be distributed amongst the new regiments of light cavalry about to be formed

Two new general officers have been attached to the Generals-in-Chief of the armies of Asia, to take their place in case of necessity; they are Sadyk Pacha and Said Pacha, both Major-generals. A steamer from Trebizond, on the 6th, brought three pieces of cannon and eighty-ninety prisoners, captured at the affair of the fort of Chevkedy, St Nicolas

A Turkish garrison had been stationed in Chevkedy, and it was placed in an excellent state of defence. It is ascertained that the Russians are inferior in number in that country. The strength of the Turkish army on the Asiatic-Russian frontier is about 70,000 men, of whom one-third are regular troops. 24,000 are at Batoum, and 46,000, under Abdi Pacha, on the frontiers of Grusia. As horses or oxen could not be procured to draw the artillery, the inhabitants of the different districts relieved each other, dragging 30 guns, weighing 1500 cwt., all the way from Trebizond to Kars.

We read in a letter from Constantinople of the 17th, in the *Journal des Débats*:—

One of the Russian prisoners captured by the Turks in the fort on the frontier of Asia Minor was taken the other day before the Seraskier, and there he underwent in presence of several persons, a short interrogatory. This is what one of the witnesses of the scene has related to me:—After having addressed to the prisoner several questions on the corps to which he belonged, and on the military organisation of Russia, the perspective was opened to him of passing some days at Constantinople, and then of being sent to Prince Gortschakoff, on condition that he would everywhere say what he had seen, and that he would tell his comrades that the Turks do not eat the Christians. The soldier refused, saying that he did not know what he stated him on his return; that the fact that could happen to him would no doubt be to be sent back to his regiment, but that he had had enough of it. "But," it was said to him, "you can see your family again" "My family," replied the soldier, "it is now eighteen years that I have been separated from it, and since the day that I was taken off from my village, I have had no news of my father, my mother, or any of my relatives! They are perhaps all dead, or they have forgotten me! Leave me here in the peace, there will always be time enough to give me up!" This declaration produced a strong impression on the auditors, and it was naturally related everywhere. Since the letters prepared for the Russian soldiers were taken in the same affair, and they were the disguising, black, sour, and detestable, that the captors placed them on board the steamer charged to bring here the wounded, the lives of the combatants have been exhibited, and do not produce less effect than they did on the frontiers of Asia Minor.

Advices from the Bosnian frontier, of the 5th inst., state that the contingent of that province, a corps of about 12,000 men, was preparing to join the Turkish army. The Porte had been applied to for orders to allow the corps to march through the Servian territories, the shortest route to the position assigned to the Bosnians in the Turkish lines on the Danube. As no answer had been given to this demand, the commander of the Bosnian contingent was preparing to cross the Servian frontier without leave. The new Russian Consul-General who arrived at Belgrade three weeks ago, has taken down his flag and left Belgrade. The Servian Government was supposed by this act to make a public acknowledgment of the Sovereignty of the Porte, and an announcement of their determination not to co-operate with Russia at present. The Servians, however, appear resolved to maintain a stern neutrality, and to guard their frontier against all invasion. A telegraphic despatch from Vienna says:—

The Turks have erected a camp near Urzitza (probably Wrbitza), on the Servian frontier. They have commenced throwing a bridge across the Drina (probably Zrna) and have sent out pickets. The Servians are greatly excited, having resolved as one man to defend the frontier. Cannon have been sent there from Kragujewatz. A conflict is expected.

RUSSIA.

From St. Petersburg we learn that the Czar has caused the alarm drilling, which takes place every year in autumn, or during the early winter, to be immediately taken in hand, and has expressed his perfect satisfaction with the ready appearance of the troops on the ground, fully accoutred for service. The Czar has ordered three large war-steamers of 84 guns each to be immediately built for the Baltic. The requisite engines, which will be of 500-horse power each, will be ordered of the home engine builders, by way of encouragement to this branch of trade

The *Journal de St. Petersburg* publishes a despatch from General Prince Woronzoff, which admits that the Russians have sustained reverses in Circassia

The present line of operations in the south, extending as it does through nearly twenty degrees of longitude, from Krajova, in the west, to Akhska in the east, is apportioned to three different commands: from Krajova to Fokschan, under Gortschakoff; from Ismail, along the coast of Bessarabia and Southern Russia, under Soldiers; and the Caucasian scene of operations under Woronzow; and besides these the Black Sea fleet, under the command of Menschikoff. Prince Paskiewitsch, though he may be incapacitated from taking an active part in field operations, will be entrusted with the supreme arrangement of the combination, whether he will find it necessary to take up his temporary abode at some point further south than Warsaw, and more contiguous to the scene of action, remains to be seen

We learn, from Odessa, that the 1st and 2nd infantry corps will advance towards the Pruth, and Poland be occupied by the guard and grenadier corps.

AUSTRIA.

That the successes of the Turks at so short a distance from the frontiers have raised the hopes of the malcontents in Austria is natural, and Government has begun to take most energetic precautionary measures. The troops in Transylvania, which a month since did not amount to more than 6000 men, are being reinforced, and the general observation, about 35 000 strong, will be posted between the fortresses of Temesvar and Arad, the men on furlough belonging to the regiments undermarching orders have been recalled, and the state of siege in the Hungarian provinces is even more rigorous than it was in 1850. Some of the troops in garrison here have received orders to march, and their place will be filled up by other regiments from Bohemia. Last week a kind of council of War was held, at which his Majesty presided, and it was then agreed that the corps of observation should be joined by the Banat. Letters from Vienna speak very confidently of the nomination of M. de Flequelmont to the direction of Foreign Affairs.

ITALY.

We hear from Turin that the Bank Bill having been rejected in the Senate by a majority of four votes, the King has closed the session, and dissolved the Chamber of Deputies. The elections will take place on the 8th of December, and the new Chambers are to meet on the 19th of that month. The Bank Bill proposed to entrust to the National Bank the management of the funds of the Treasury.

A letter from Naples, of the 14th inst., announces the discovery of the remains of an antique villa, between Acerno and Scafati, on the banks of the Sarno, at a depth of only three or four feet under the level of the earth. The architecture, with the exception of the arcades, bears no resemblance to the buildings of Herculaneum and Pompeii. The house is about the front wall is partly rotted by the oozing of the waters of the Sarno, some ten larger rooms. There were found in it a female skeleton, that of a child, and an agricultural implement of bronze. During the last excavations made at Pompeii several human skeletons, and one of a dog, were discovered, pressed one upon the other. Two gold rings, ornamented with cameos, were found on the fingers of the left hand of one of the skeletons. They have been deposited in the Bourbon Museum at Naples.

PORTUGAL.

We receive from Lisbon the melancholy intelligence that her Majesty the Queen of Portugal died in childbirth on the 15th, at noon. According to the laws of the kingdom, the King-Consort will be Regent until the majority of her eldest son, Don Pedro, who has barely completed the sixteenth year of his age. The deceased Queen Donna Maria II da Gloria was only in her thirty-fourth year, being born on the 4th of April, 1819—a month before her Majesty Queen Victoria. She was the daughter of Don Pedro I. Emperor of Brazil (IV. in the series of the Kings of Portugal)

UNITED STATES.

The Whigs had carried the New York State election, and the Democrats that of New Jersey.

It is stated that a decided step has been taken towards the annexation of the Sandwich Islands to the United States. The French and British Consuls had protested, and the American Commissioner had replied in firm manner. This movement had caused great excitement.

John Mitchell, the Irish exile, who had effected his escape from Van Diemen's Land, has arrived at New York, via the Sandwich Islands.

The managers of the New York Exhibition have at last announced that the Crystal Palace will be kept open through the winter.

The prospects of an extensive reduction in the duties on iron, as well as of those on the other principal articles of importation, are steadily increasing. The revenue receipts continue to augment. There are anticipations of an extraordinary trade with England, owing to the conjoint demand for breadstuffs and cotton. Hitherto, what a failure of the harvest has occurred in England, the advantage derived by the United States from their increased shipments of flour has been in a great degree counteracted by a lessened demand for cotton, consequent upon the impaired means of the population on this side; but at the present time, owing to the prosperity which, through the altered commercial system of Great Britain, has been rendered compatible even with a scarcity of food, the markets for cotton and breadstuffs are simultaneously active. Hence a more profitable export trade than has ever before been experienced is confidently looked for; and, as this is certain to be followed by a liberal expenditure on manufactured goods, the importations, it is contended, will be augmented in nearly the same degree, and the Customs receipts proportionally raised.

NAVAL AND MILITARY INTELLIGENCE.

PORTSMOUTH, NOV. 22.—Vice-Admiral of the Red Sir George Francis Seymour, K.C.B., G.C.H., the Commander-in-Chief on the North American and West India Station, is ordered to be relieved by Rear-Admiral of the White Arthur Fanshawe, C.B., superintendent of Portsmouth Dockyard. The Russian corvette, *Navarin*, 20, cleared out of Portsmouth harbour to-day, re-shipped her powder, &c., at Spithead, and sailed for Kamschatka.

PLYMOUTH, NOV. 22.—The *Impérieuse*, 50, screw, Captain Watson; *Fearless*, 16, paddle; *Desperate*, 8, screw, proceeded to sea at four o'clock this afternoon, under steam and sail. Her destination is not known, but it is supposed that she will proceed to the Dardanelles. The others are to rendezvous at Malta, but will, probably, join Admiral Cory's squadron shortly.

THANKS FROM LISBON.—Captain Scott, of her Majesty's ship *Odin*, now in the Tagus, has received a very handsome letter of thanks from the municipality of Lisbon, for the service rendered by the officers and seamen under his command in assisting to extinguish a fire which broke out on the 29th ult., and which at first threatened to spread to a wide extent. The party who landed from the *Odin* on the occasion was headed by the First Lieut. W. Mould.

SAIL IN THE ARCTIC SEAS.—It is now the opinion of many naval officers that it is use less to send sailing-vessels to the Arctic regions, even as store-ships only, as they prove a great incumbrance to the steamers having them in tow, and are liable to be nipped in the ice. It is the general opinion that, in the event of Captain M'Clure having been in command of a steamer, he would long before this time have brought her through the North-West Passage, as he was often known to have had the sight of open water as far as the eye could reach, if he could only have had the aid of steam-power to work into it.

THE GOVERNOR OF THE GOLD COAST.—A valuable service of plate has been presented by the King of Holland to his Excellency Major S. J. Hill, the Governor of the Gold Coast. Major Hill has also had presented to him a valuable rich gold-mounted scimeter, by the Governor, civil officers and merchants of the Gambia, in token of their high reverence in the field in 1849; and a gold medal from the South Holland Insurance Company, as from shipwreck

THE NEW YACHT FOR THE QUEEN.—Preparations have just been commenced at Pembroke Royal Dockyard for building a new steam yacht for the Queen.

THE FLEETS IN THE BOSPHORUS.—It appears that the accidents encountered by the French and English squadrons in their passage to Constantinople were not confined to our British ships alone. The *Jupiter*, French line-of-battle ship, went on shore; and, melancholy to relate, the boat of the *Semi* steamer in rendering assistance to her, was swamped, and twelve of her crew lost.

THE ROYAL NAVY OF GREAT BRITAIN.—The present naval force of Great Britain consists of 645 ships of war (either building, in ordinary, or in commission), carrying from 10 to 180 guns each. Also, 115 ships doing harbour duty, and 69 steam vessels of the Coast Guard service. Of this number, 180 are armed steamers, from 200 to 800 horse power (a any of them propelled by the screw), constructed on the most approved principles for active sea service. This immense fleet, the largest of any maritime power, employs in time of peace 40,000 to 45,000 embodied seamen, 40 d able lads, and 12 000 Royal Marines—to be increased to 15,000, consisting of 4 divisions, divided into 149 companies, viz.:—1st Division, head-quarters Chatham, 25 companies; 2nd Division, Portsmouth, 27 companies; 3rd Division, Plymouth, 24 companies; and 4th Division, Woolwich, 25 companies; total, 102; and 12 companies of Royal Marine Artillery, head-quarters Portsmouth. Also, the enrolled Dockyard Volunteer Brigades, viz., Deptford, Woolwich, Chatham, Sheerness, Portsmouth, Devonport, and Pembroke Brigades; and the Fencible Reserve, Royal William, and Breakwater Volunteering-yard Battalions all of which are well disciplined and exercised in gunnery, cutlass and fortification defences. In addition to these are the Coast Guard Brigades or Divisions round the different points of the coast, all well armed.

CARDINAL WISEMAN.—It is stated that Cardinal Wiseman is still at Rome, whither he went from Paris, after attending at the translation of the relics of St. Theodosia, at Amiens, and that it is more than probable that he will not return again to England. His health is said to have suffered considerably from the severity of his labours in England since the establishment of the Papal hierarchy; and a growing opinion is, we understand, prevalent in Roman Catholic circles, that the Pope will employ him in some high diplomatic post at Rome, instead of sending him back to superintend the affairs of the Roman Catholic Church in England.

AN INFANT NOMINATED TO BE SHERIFF.—Walter de Winton, Esq., of Maestrigh Castle, nominated by the Judges (the first on the list) to be Sheriff of Radnorshire, is an infant; and extensive preparations are being made to commemorate by attaining his majority at the end of the present month of November. There is, we believe, no former example of an infant being *nominated* to be Sheriff. Mr. de Winton will be of age before the "pricking" of the list of Sheriffs.

THE SPA GAMING ROOMS.—The general receipts of the company that carries on the gaming-house at Spa have this year amounted to 2,650,000 f., and the expenses of the establishment to 1,210,000 f.; leaving a net profit of 1,440,000 f., of which 525,000 goes to the Government, and 196,892f. to the shareholders after deducting from the profits the charges of the administration, the portion of the hospitals, and that of the charitable fund for the poor of the commune

HOW TO MAKE EXETER-HALL SAFE.—Carry round the building, at the level of the floor of the large hall, an iron balcony, and lead from the balcony four iron staircases; two staircases from the corners into the area on the north side of the building, and two from the corners of the south side; the two south staircases to debouche into the area from the Strand entrance, with two doors opening just outside the large hall, and two doors to the recessed south balconies. The means of egress would then be increased from the present three to nine.—*Correspondent of the Builder.*

THE DUKE OF BEAUFORT.—The present Duke (who is Captain of the 1st Life Guards) inherits a splendid unincumbered income of over £50,000 a year, having never joined in the extravagant mode of his late father. We understand he is not a very prudent speculator, and in his time the perquisite for uses of the house of Beaufort will doubtless wholly recover themselves. We may mention here that there is a sort of tradition among us that family, that none of the Dukes of Beaufort live to be 63 and we believe there is no instance of either of them having attained that age. —*Bristol Mercury.*

TOWN AND TABLE TALK, OR LITERATURE, ART, &c.

We detailed last week, it will be remembered, the expenditure of part of the present £1200 voted by Parliament from year to year in aid of persons (or their widows and children) who have rendered distinguished services to the country. We have now to add a further grant from the balance in hand, of £50, "to Mary Wilson, or Train, widow of the late Joseph Train, and unto Rosina Train, daughter of the aforesaid Joseph Train, or the survivor of them, in consideration of his personal services to literature, and the valuable aid derived by the late Sir Walter Scott from Mr. Train's antiquarian and literary researches, prosecuted under Sir Walter's directions." No Englishman, who has derived even one hour's delight from the 'Waverley Novels," will grudge this pension to the widow and daughter of Joseph Train. Scott, perhaps, over-rated the assistance he received from the inquiring, anxious, diligent "Joseph;" his kindheartedness made him do that; but Train's services unquestionably lightened the labours of the great novelist; and the pension is one which Lord Aberdeen was in every respect wise in recommending to her Majesty.

The Moustache movement has taken root among authors and artists. All the Crystal Palace employés are to wear the hairy-chin and upper-lip livery which Nature has given to man. Some are advancing favourably: Mr. Samuel Phillips has consulted Truefit to great advantage; Mr. Owen Jones has presented his Alhambra razors to a friend; and Mr. Digby Wyatt is designing a pair of mediæval scissors, to keep his beard and imperial in good order. If the epidemic rages, and beards come once more into fashion (thanks to Mr. Charley and Mr. Albert Smith), we shall be curious to see what shaped beard the new editor of the *Quarterly* will assume, and how the President of the Royal Academy will cultivate his imperial and moustache. The hair on the upper lip of Shakspeare's bust at Stratford might form a good model for some dramatic writer for the Surrey; and the whiskers which Vandyck wears might be copied with advantage by some high-laying contributor to the Gallery in Suffolk-street. The curiosity expressed in literary and artistic circles on this unexpected adornment of the face is great and general. We shall watch the movement, and report progress—perhaps call in an artist to depict the growth of three weeks with and without moustache.

While writing of the Crystal Palace, we may mention that Messrs. Bradbury and Evans have been appointed Printers Ordinary and Extraordinary to the Crystal Palace Company. Their contract with the Company contains a clause which affects literature and the rewards to literary men. They are to pay the authors of the books they print for the Company, and to pay such prices as the Company shall direct to be paid. In other words, the Company will draw cheques for their authors upon their printers, and Messrs. Bradbury and Evans must get their money back out of the profits of their printing. Their first payments will include sums, not too liberal or too large, to Sir Gardner Wilkinson and Mr. Layard. So unusual a contract elicits many speculative remarks among printers and in "the Row" generally. There is also some talk of the Company having a weekly paper on literature, art, science, &c.—in other words, a "Sydenham Athenæum."

Among the useful publications of the week we may safely include an admirable little book for the use of artists, sculptors, engravers, and printsellers. It is called "The Laws of Artistic Copyright, and their Defects," and is a author is a Mr. Blaine, Barrister-at-law. Artists (it was said by Sir Thomas Lawrence) are more ignorant of the laws appertaining to their own artistic wants than any other class of men usually named with them—such as authors and men of science. We can confirm the remark of Lawrence by our own experience, and can recommend Mr. Blaine's *brochure* to the study of all who design, and who want their works to be engraved. But a clear exposition of the laws affecting artists is not the only valuable feature of Mr. Blaine's publication. He has grappled with the laws themselves; and, in a concluding chapter, has stated modestly and sensibly such suggestions as have occurred to him for the amendment of the laws of copyright. He suggests, among his most material changes, that the present Acts should be repealed, and the laws now in force consolidated into one Act; that, to protect existing bona fide claims to copyright; that copyright should be extended to all parts of the British dominions; that the period of duration should be the same as for literary copyright; that the exhibition of a picture should not affect copyright; and that at the request of plaintiff or defendant, all courts should have the power to refer cases at once to arbitration. Let us hope that the Board of Trade will pay attention to Mr. Blaine, and embody his suggestions in a new and consolidated Act. Mr. Blaine would confer a second service were he to give us a similar digest of the laws affecting authors and publishers.

The Emperor of Russia is not wholly engrossed in war: he has an agent in Italy treating for the purchase of the choicer antiquities; and has all but secured the famous Campana collection. We have no agent in Italy or elsewhere—we have no kind of system in seeking to secure what may occur for sale. This should not be. Fresh discoveries are also being made in Italy. At Canosa a necropolis has been laid open, containing inscriptions in Latin, Greek, and Hebrew, relating to a Jewish colony of the fourth or fifth century. Some Italo Greek vases of unusual height have also been discovered; and a bronze statue, seven feet high, has been dug up in Pompeii during the present month. We have yet to relate, however, the most curious of very recent discoveries. In a lumber-room of the Museum at Naples has been found several boxes of the first excavations made, a hundred years ago, at Herculaneum. Our Correspondent (an excellent authority on all such matters) speaks of them in terms of equal delight and surprise.

Artists are asking, "When are we to see the evidence given before the Committee on the so called Cleanings in the National Gallery? We have had the Report, but not the Evidence." Can any Correspondent assist us to an answer?

No decision has yet been come to by the City Committee appointed to report on the site for Mr. Behnes's statue of Peel, and the height to which the pedestal should be allowed to rise. Mr. Behnes is, it is said, willing to meet the views of his fellow-committemen; and all are anxious to do their best for the due exhibition of the statue in the place of most honour. The difficulty seems to lie in their having a statue before they had a site. Now, when the statue was ordered, the artist should have been told to work for a certain site. Committemen who contend for the place of honour, and not the place for the statue to be seen the best in, are doing a lasting injustice to an artist. Mr. Behnes deserves a better fate at their hands. He is a favourite in the City; and, with this mention of his name, we may here take an opportunity of correcting an error in our Paper of last week. Mr. Noble was not a candidate for the Guildhall Wellington, but Mr. Behnes was. We remember Mr. Behnes's design: it was liked the best by the City connoisseurs; though the figure of the Duke, most duly prominent, was, to our taste, too much a working up of Chantrey's Gillespie in St. Paul's, and Chantrey's Sir John Malcolm in Westminster Abbey.

PRODUCTION OF COTTON IN PARAGUAY.—In the beginning of the present year Mr. Drabble went out to the South American States, carrying with him letters procured by the Manchester Committee from Ministers, and charged with the duty of ascertaining the capabilities of that part of [illegible] production of cotton, as specially [illegible] from Manchester. [illegible] were assured that [illegible] favourably. It seems by [illegible] that there is abundant facility for the [illegible] but that the want of labour will be a great obstacle in the way.

The Dublin Exhibition Building is to be opened as a promenade early in December.

CITY OF ST. JOHN'S.—FROM A DAGUERREOTYPE BY ELLISON.

COMMENCEMENT OF THE EUROPEAN AND NORTH AMERICAN RAILWAY.

THE spirit of railway enterprise, transferred from England to the other side of the Atlantic, is awakening the British provinces of North America from their comparative lethargy; and, aided by English capital, they promise to distinguish themselves equally with the people of the United States in those gigantic works which are calculated to develop their varied and magnificent resources. A crowd of energetic and experienced men, whose names have become famous in connection with the formation of railways in the old country, have crossed the Atlantic; and, by means of the same admirable organisation of capital and skill, and by indomitable perseverance, are laying the foundations of future prosperity by connecting vast fields of natural wealth—exhaustless forests, rich mines, invaluable fisheries, and the cleared lands of the most remote settlers. Coincident with this great movement, there is a constant stream of emigration from England, and the exodus of the people of Ireland, who have been tempted from their native soil by the facilities of acquiring landed property and independence. The population of Canada, especially, is increasing with a rapidity which would alone give an immense impetus to the progress of that province; but our own advancement by means of railways, sinks into comparative insignificance when we recollect that this natural growth of wealth and prosperity is accelerated by the construction of lines of railway hundreds of miles in length, which connect Canada with her sister provinces, and which again link them with the railway system of the United States—that huge network, which extends from the St. Lawrence and the Lakes, and comprises the tropical regions of the lower valley of the Mississippi, and the rich agricultural regions of the western states of the Union. The St. Lawrence, which is the great channel of communication between the Atlantic and the fertile districts of Canada, is icebound during several months of the year: hence it was necessary to provide a port of shipment on the Atlantic, which should at all seasons be open for exports and imports. This has been accomplished by the railway from Portland, in the State of Maine. From Montreal, the line of iron rails will extend into Western Canada by the Grand Trunk Railway. The day is perhaps not far distant when this great enterprise will be completed by carrying it through British territory to the shores of the Pacific—thus opening a new route to China and India. Eastward from Portland, in Maine, the British province of New Brunswick, will be included by a line to the city of St. John's, called the European and North-American Railway, the first turf of which was cut by Lady Head, the wife of Sir Edmund Head, the Lieutenant-Governor of New Brunswick, on the 14th of last September. This ceremony was regarded as an event of the highest importance, both in the British provinces and in the neighbouring states. Never before had the province of New Brunswick witnessed so universal a demonstration on the part of all classes of the people—executive and legislative councillors, representatives of the people, ministers of religion, civic bodies, trades, schools, naval and military men; and last, not least, railway contractors and projectors. Enlightened citizens of the United States—who regard the European and North-American Railway as calculated to cement the feelings of amity between the colonies of Great Britain and Great Britain itself with the Great Republic of the New World—were also present in considerable numbers; and the British and American flags were gracefully intertwined, as a sign of cordial alliance. The officers of the *Fulton* and *Princeton*, two men-of-war belonging to the United States navy, took part in the proceedings. The numbers in the procession alone were above 5000, and the line extended considerably more than a mile and a half in length: it was an hour in passing one point. The demonstration was of a character highly characteristic of the occasion. The ship-carpenters, in uniform, to the number of 1100, representing sixteen different shipyards, made the most conspicuous figure, with banners, and eight models of ships—some fully rigged, and others in various stages of construction; each model on wheels, drawn by four horses. The blacksmiths and founders had a car with model figures at work, a moulder's car, an engineer's car, and a steam-engine drawn by horses. The masons and stone-cutters had a representation of a brick press and stone-cutters' yard in operation; and the printers worked off and distributed a celebration song. The car of the millers exhibited a flour-mill at work. The fire-companies which constitute so prominent a part in all processions in the New World, each preceded their engines and horse-carts. There were two companies from Portland, and nine belonging to St. John's, each in a different uniform. Agriculture had its representatives. There were also the pilots, the band of H.M. 76th Regiment, and many other bands, with banners innumerable.

The great point in the ceremony of the day can only be adequately described in the language of one of our Transatlantic contemporaries, who says:—"Mr. Jardine, the president of the company, presented to Lady Head the shovel prepared for the occasion, and asked if her Ladyship would graciously please to begin this great work. With a graceful self-composure that won the admiration of all hearts, though with a flushed and thoughtful face, assisted by Mr. Jardine and Mr. Hazen, Lady Head turned the turf, and deposited it in the elaborately-wrought barrow. The signal which announced this consummation waved gracefully in sight of the assembled thousands, who sent up a shout that seemed to rend the skies; and the thunder of 70 guns from the surrounding eminence shook the earth beneath the feet. The next turf was deposited by the Lieut.-Governor; the next by Mr. Jardine; the next by Capt. Robinson; the next by Mr. Poor; the next by the Mayors of St. John and Fredricton, and the President of the Institute, according to the published order. Hon. John H. Gray then moved the President to invite a volunteer turf from Commodore Shubrick. The Commodore complied with the invitation, and gracefully discharged this duty, when the Lieutenant-Governor was requested to wheel off the load. His Excellency then rolled the barrow along the platform, and dumped his load, amidst the cheers of the spectators. The cry raised by the few who, in the pressure that then took place about this spot, witnessed the operation, was caught up by those around, and repeated by the crowd on the heights, the hills reverberating with the glad sounds, such as never woke their echoes before. The band played the old psalm tune, 'Praise God, from whom all blessings flow;' and the New Brunswick Regiment of Artillery, posted on the heights, fired a salute of 70 guns."

A luncheon, in a temporary pavilion (at which 700 persons sat down), with fire-works and a ball, concluded the festivities of the day.

The first Illustration is a View of St. John's; the second shows the proposed suspendeus Bridge of Suspension, across the Falls of the River St. John, at low water.

SUSPENSION-BRIDGE ACROSS THE FALLS OF THE RIVER ST. JOHN.—FROM A DAGUERREOTYPE BY ELLISON.

THE BURMESE WAR.

As circumstances seem to force upon us the renewal of the Burmese War and the conquest of Ava, we this week publish two spirited Sketches which have reached us by the last mail, illustrative of incidents in the war just ended, but which recent events have invested with something of present interest, since they show the military tact with which the Burmese select the strongest positions, and the undoubted gallantry with which they defend them. A brief recapitulation will be needed to recall to the readers' memory the scenes to which our Engravings refer.

The attack upon Martaban furnished the opening scene of the campaign of last year in Burmah. Martaban is a town of considerable strength and note, being a frontier station of the Burmese, from which, in former times, they invaded the territory of Siam, and where, in later days, they have been brought into immediate contact with ourselves. So near, indeed, is our own garrison of Moulmein, that it was feared the Burmese would anticipate an attack and advance upon us in force from Martaban. Since it was known that large numbers of Burmese troops had been poured into Martaban. The Madras division of the flotilla anchored off Moulmein, took the garrison on board, and conveyed them in a few hours to Martaban. Next morning (April 5, of last year) the troops were landed and led to the assault; before noon the whole place was in our possession, and the detachment returned to Moulmein the same evening to prepare for the movement on Rangoon. The Madras troops having here been joined by the Bengal force, the operations against Rangoon commenced. On the 11th of April (Easter Sunday), the entire squadron proceeded up the river; and a terrific cannonade was kept up from the steamers, which demolished the Rangoon batteries on both sides of the river—both at Rangoon and Dalla. On Monday, the 12th, the land operations commenced the troops effecting their embarkation under the protection of the ships' guns; and all the boats of the squadron being employed in effecting the landing. Here the brunt of the work commenced; as it was necessary, soon after landing, to attack and capture a strong stockade, called the White House Picket, which stood a short distance inshore.

The advance upon the stockade was headed by the light companies of the 51st Foot; following which came the 2nd company 5th brigade Bengal Artillery. On arriving within 350 yards of the stockade, Brevet Major Reid, with two 9-pounder guns and two 24-pounder howitzers, unlimbered and came into action, firing shrapnell and round shot. The practice was excellent, and most effective. It was instantly returned by a well-directed fire from the Burmese troops in the stockade. The enemy fired rather high at first; but, after a few rounds they obtained our distance exactly. Just as Major Reid's ammunition was expended, Bravet Major Oakes, of the Madras Artillery, brought up two 24-pounder howitzers, and continued the fire till the order for the storming party to advance was given. Before the advance of the storming party a gunner of the Bengal Artillery and one of the Madras Artillery were killed at their guns, and two wounded.

Our first Illustration represents the storming and capture of the White House Picket, by her Majesty's 51st K. O. L. I. The Sketch represents the moment when the leading company of the 51st emerged from the jungle, and were met by a heavy fire, by which Captain Blundell was mortally wounded. The late gallant and lamented Major Hare, her Majesty's 51st K. O. L. I., was one of the first who mounted the scaling ladder on this occasion; being immediately in the rear of Major Fraser, Bengal Engineers, who took the first ladder, and was first on the ramparts.

During this gallant action Major Oakes (Madras Artillery) and Major Griffiths (Madras Infantry) both died of *coup de soleil*. Colonel Bogle was wounded by a musket shot through the thigh. Lieut. Donaldson (Bengal Engineers) was mortally wounded; Lieut. Trevor (Engineers) and Lieut. Harris (Madras 38th Native Infantry) were severely wounded.

On the 13th the heavy guns were landed; and, on the 14th, the Pagoda Hill and stockade were stormed, when the enemy gave way, and retreated at all points, and the capture of Rangoon rewarded the intrepidity of our gallant troops.

STORMING AND CAPTURE OF MEEAH TOON'S STOCKADE, DONABEW.

MEEAH TOON'S STOCKADE.

After two unsuccessful attempts, made at intervals of some weeks, to capture the stronghold of the Burmese chief, Meeah Toon (in one of which the gallant Captain Loch, R.N., was killed) a combined attack was made upon the stockade, on the 19th of March, in the present year, by 1500 troops under Sir J. Cheape. In order to approach the Burmese position, it was necessary for the British troops to cut a road through a forest of the most dense description, intersected by lakes and deep water courses. After a most determined and protracted resistence on the part of the Burmese, and after our troops had sustained a loss of 102 rank and file killed and wounded (including 13 officers), Sir J. Cheape succeeded in carrying this strong position, and bayonetting its defenders. The two field-guns, rocket tubes and rockets, which unfortunately fell into the enemy's possession on the previous occasion, when the British were repulsed, were now re-captured. These guns were used against our troops, and it is to them mainly that the heavy loss on the side of the British is attributed. The operations commenced at nine a.m., and the stockade was not taken until after four hours of hard fighting. Meeah Toon, whose defence of this place shows him to be a warrior of great intrepidity, unfortunately escaped with 100 or 200 followers.

The second Sketch (drawn by one of the storming party) represents this final and successful assault upon Meeah Toon's stockade, by the detachment of her Majesty's 51st Regiment, who, after the troops of the right wing of the force had repeatedly failed in their gallant attempts to carry the position, were brought up from the left wing, for the express purpose of forming a storming party. The gallant Lieut. Taylor, 9th Regiment M. N. I., attached to her Majesty's 51st Regiment, commanded the company carrying the ladders, and led the storming party, at the head of which he fell mortally wounded.

STORMING AND CAPTURE OF WHITE HOUSE PICKET STOCKADE, RANGOON.

THE BOUNDARY OF OUR INDIAN POSSESSIONS.—That the Sutlej ought to bound our Indian possessions until they are better governed, has always been my opinion. The hostility of the Sikhs rendered that impossible; but there is no impossibility of taking the Indus as a boundary. It seems, however, a law of nature, that civilisation shall encroach upon barbarism. The American "Go-ahead" is not indeed our cry in India, we have a modulated sound, and meekly we borrow in jest, but decline repaying, and so creep on with humble expanding operations.—*Sir C. J. Napier.*

ROYALTY IN VALPARAISO.—We have (says the *Valparaiso Echo*, of Sept. 30) at present an august visitor amongst us; no less a personage than a brother of the King of Wirtemberg, cousin to the Queen of England and to the Emperor of Austria. His Royal Highness, we understand, is an eminent naturalist, and is visiting South America on a botanizing excursion. No great admirers of royalty in general, we should not have noticed his Highness' stay in our city, but for the circumstance of his being the first prince of blood Royal that has ever been on this coast, and eras are marked sometimes by events of far less importance.

THE CITY CORPORATION COMMISSION.—NEW MUNICIPAL SCHEME

It is difficult to keep pace with the evidence given by the various witnesses who appear before the Commissioners, each with his special grievance, representing a host of analogous grievances, equally oppressive and unjust. The several passages and chapters shift as quickly as the streamers of the aurora borealis or the figures of the kaleidoscope; deficient, however, in the grace of the one and the symmetrical beauty of the other. Who the Harlequin is whose magical wand effects the variety of startling changes, we care not to discover; but take them as they present themselves before us as indisputable facts. We had intended to devote this article to some matters of detail, very slightly touched by the evidence; but, so many matters have been disclosed during the week, that we are bound to postpone the consideration of minor points, and confine ourselves to the larger and more general question

Mr. Pulling, who, perhaps, has a better acquaintance with municipal law, ancient and modern, than any other person, has gone carefully into the legality of the customs and the sufficiency of the charters under which the Corporation has, from almost time immemorial, pretended to have the right to perform certain duties, and to insist upon certain privileges. It now appears that it possesses some 700 Acts of Parliament, and 200 charters, which it carefully conceals from the public eye, and yet enforces their clauses on all who come within their jurisdiction. We have no faith in secrecy. If the Corporation is accused improperly, let it show its charters in the face of day, and challenge inquiry. Honesty is always outspoken; and the fact that a Corporation, established for the expressed purpose of benefiting the people, should studiously conceal from public view the law by which that public must be ruled, is one of the most monstrous abuses of power ever perpetrated on a confiding people, and deserves our severest condemnation.

The exposure of this fact alone is sufficient to excite our gratitude to those who initiated the inquiry, as well as to those who have had the manliness to speak out unreservedly. Mr. Pulling may be accused of abusing the faith reposed in him as a barrister, but that feeling can only take possession of the brain of a corporator—the public will thank him cordially. Not only are the members of the Corporation accused of concealing their charters, but of abusing the trusts confided to their keeping; and, it is asserted, that much of the income of the Corporation is derived from encroachments on the Thames itself: while it was bound, by Act of Parliament, to embank the river, and to prevent encroachments from being built on the sides, it has not only not embanked the river, but has caused houses to be built there, the rents from which swell up its enormous income. Let the iniquitous transaction this breach of a solemn engagement should such ap beyond belief, we think it advisable to give the facts as stated by Mr Pulling

Can you obtain a correct knowledge of the rights and privileges of the City from the published charters?" Certainly not. I am of opinion that when the City makes its claims founded upon ancient charters, they should afford any information in respect to the charter upon which they claim; but I may say from my own experience that their policy is to withdraw their charters, and that their instructions to their officers are to deny the public access to them, although I contend that they ought to be accessible to every citizen of London.

Can you conceive any reason that the Corporation have for concealing their charters?—I can conceive a reason and a very strong one. I have reason to believe that the charters of London would show that the City has commuted forfeiture of many of its rights. The City, for example, claims to hold lands in Hornsey. They derived that right from Edward IV.; and I see that they have a large revenue from rents and quit-rents. The greater number of those rents and quit-rents are derived from property which I conceive they have clearly for the purposes of a trust, of which trust they have committed a breach. For instance, being the conservators of the Thames, they have been in the habit of granting leave to encroach upon the banks of the Thames, and to do that very thing which the office of conservators directed them to prevent others from doing. An act in the time of Charles II. directed that the river Thames should be embanked from London-bridge to Temple-bar, and that no houses should be built there. Hundreds of houses, however, have been built, as we all know, along Thames-street, and I believe, although I am not in their secrets, that a very considerable portion of the property of the Corporation is derived from the rents of that very property which has been obtained by encroachment upon the bed of the Thames, contrary to their trust. The same thing has occurred in other cases

Grave, important, and damnatory as these charges are—and we cannot see how they can be explained by the Corporation authorities—the facts disclosed by Mr. Bennoch in relation to the expenditure of the Corporation, will probably command a greater share of public attention, because pocket sympathy is frequently the strongest. To many of these points we shall have to recur from time to time, but it appears that, from all sources, as expressed in their Blue Book return, the City of London has a clear annual income of £355,000; and, without referring to the wisdom or folly of the improvements or alterations which swallow up the larger proportion of the income, Mr. Bennoch directed the attention of the Royal Commissioners to the fact that over £107,000 of this sum was absorbed in administering the other £255,000. Of the £107,000, more than £20,000 is spent in the salaries of legal officers and in law expenses. The Sword-bearer and Mace-bearer appear to receive about £1200 per annum, while the upper and under Marshals receive nearly £1000. As a contrast to this, the Mace-bearer of the city of Edinburgh rejoices in the payment of £10 10s. per annum; while the duties of the Marshals could be better performed by a couple of police sergeants, whose pay would not exceed one-eighth of the sum paid Although the abuse has been clearly demonstrated, we have felt some anxiety as to the plan that might be suggested for a complete system of municipal government—a system which should destroy the corruptions of the old and permit the establishment of a new, and yet be free from the evils declared to be inseparable from a system of centralisation

Mr. Waterton describes, in his "Wanderings," the poison which certain tribes among which he wandered believed to be an unfailing cure for hydrophobia. In killing the disease it killed the animal, or, more properly, suspended vital action, but, by adopting a system of artificial respiration, the man or animal was restored to life freed from the terrible disease. Now, Mr. Bennoch seems to desire to apply a similar course of treatment to the diseased Corporation of London. Unlike Mr. Acland, who confined his suggestions to the area of the city of London, Mr Bennoch's eye sweeps over the whole of the metropolis; and he believes that any system which does not embrace the entire area of the metropolis would be most imperfect. Mr. Bennoch proposes that the whole metropolitan districts should be divided into nine municipalities, of which the present city of London should form one. That each municipality should be divided into twelve wards; each ward to have an alderman and six councillors; together, eighty-four representatives of our whole deliberative body; a mayor should preside, and have an allowance of £5000 per annum. The only other officers required would be a town-clerk and treasurer, with their clerks, at a total cost of some £6000 a year. He then proposes that each municipality should appoint twelve councillors (one from each ward), the total being, from all the municipalities, 108. Then, in like manner, each municipality should appoint four aldermen, or thirty-six in all: making together, of aldermen and councillors, one hundred and forty-four—to form a CENTRAL COUNCIL, and, as this council would necessarily have among its members gentlemen from every district of every municipality, he expresses the belief that it would soon be the public thoroughly understood the system, there would be no difficulty to obtain a seat at the central board as to command a place in the Imperial Parliament. And be it remembered, that the Lord Mayor of the Metropolis would, in his civic capacity, rule over as many subjects as did Henry VIII. of England.

To avoid petty jealousies, it is proposed that the Lord Mayor should be nominated by each municipality in rotation. That all aldermen and councillors should be elected by the general constituency; but all mayors should be elected by the aldermen and councillors

As the City Corporation inquiry is the great home-question of the day, we have devoted more space to it than our limited room would usually warrant; but, after carefully examining the system recommended as calculated to meet the objects desired, we consider it worthy our earnest consideration. With the establishment of a central authority all those conflicting jurisdictions of special commissions for improvement, sewers, and sanitary matters, all boards and vestries for the surveying of lighting, paving, &c.—and of which there are hundreds within the limits of the metropolis—would become absorbed in the great Central Council, and in the several municipalities; and through them would be ensured harmony of design and unity of action in all matters of necessity or ornament. It would, in a word, be, as Mr. Bennoch emphatically shows, "a centralisation based upon a principle of representation, and not dependent upon individual caprice or arbitrary power."

The scheme is a bold one, and will no doubt be freely canvassed and discussed. In another point we agree with Mr. Bennoch—namely, that it is infinitely wiser to adhere to our old Saxon terms, and by prudent and wise legislation make them respected and honoured and worthy objects of ambition, than to introduce new titles, such as "Lord Lieutenant," as suggested by Mr. Sheriff Wallis, which seems to us exceedingly absurd. A Lord Lieutenant implies by his very title a superior the Lord Mayor, on the contrary, has in his civic capacity no superior; he is not only a Mayor, but the Lord of Mayors.

COUNTRY NEWS.

REPRESENTATION OF THE EASTERN DIVISION OF GLOUCESTERSHIRE.—By the death of the Duke of Beaufort, and the consequent elevation to the House of Peers of the Marquis of Worcester, the present representative of the Eastern Division, a vacancy is caused in that portion of the county. It is said that Mr. F. W. S. Miles, late M.P. for Bristol, will be invited by the Conservatives to offer himself for the vacant representation. Mr. Holland of Dumbleton, it is reported, intends offering himself on the Whig interest. The Hon. Mr. Ponsonby, son of Lord de Mauley, is also spoken of on the Liberal interest. A numerous meeting of Conservative electors, held at Gloucester on Monday the Hon James Du Pon in the chair, to take steps to supply the vacancy occasioned by the elevation of the Marquis of Worcester to the Peerage, it was unanimously resolved to get up a requisition to Sir Michael Hicks Beach, Bart., of Will, assuring Captain Berkeley, a gentleman so popular with his party that his return is looked upon as certain.

IMPROVEMENTS IN MANCHESTER.—Vast thoroughfares are opened in many parts; the streets, courts, and alleys are regularly flagged; pavements are almost everywhere laid down: the sewerage is in rapid course of abatement, public drains and sewers are cleansed, and the prospect that remains will, it is hoped, be speedily removed, and an abundant supply of good and soft water is so admirably distributed that, in a short time, the smallest tenement will enjoy an unlimited quantity, at an almost nominal price.—*Lord Shaftesbury.*

LONDON AND SOUTH-WESTERN RAILWAY.—The gathering on Saturday last of the shareholders was one of the most noisy even in the annals of railway meetings. Interruption and clamour were the most prominent features, and all sides shared in the offence. The main object of the meeting was to hear and debate the point on the question of the three-feet and Exeter extension. The votes in favour of the extension were 13,911, against 13,911, leaving a majority of three against the extension. (The proposition, before was for 760 for, to 749 against.) The chairman then finally declared the extension abandoned. Some disorderly scenes succeeded. A resolution of censure on the directors was proposed; but the chairman, Sir R. P. Scott, left the chair and dissolved the meeting. Afterwards, Serjeant Gaselee was called to the chair, and the resolution was passed amid great tumult.—*Globe*

BOOK READING IN MANCHESTER.—The following details of the Manchester Free Library will be interesting:—Shakespeare is the writer most in demand. His works, and books illustrating these works, have been read 321 times within the past year. The book next in popularity is "Lane's Arabian Nights"—which has found 294 readers. Scott and Lefoe come next in rank. "Ivanhoe" was issued 241 times; "Robinson Crusoe" 209 times. Swift's "Gulliver" was read 182 times. Fielder, Richardson, Goldsmith, Bunyan, and Cervantes have been very much read. In the history of England Mr. Macaulay is the favourite. His history has been read by 124; the "Pictorial" by 95; Lingard by 11, Hume by 7, and Smollett by 1. Of the periodicals, "Punch" has been in request 1 the "Illustrated London News" 1 and "Chambers's Journal" 1 the "Family Herald" 1 and "Cassell's Family Paper" 1 the "Penny Magazine" 1 and "Chambers's Edinburgh Journal" 1 the "Penny Cyclopædia" 1 and "Chambers's Information for the People" 1 the "Quarterly Review" 1 and "Blackwood's Magazine" 1 the "Edinburgh Review" 1 and "Fraser's Magazine" 1 the "Westminster Review" 1 and "Tait's Magazine" 1 the "Dublin Review" 1 and "Bentley's Miscellany" 1 the "Eclectic Review" 1 and "Hogg's Instructor" 1 the "Christian Observer" 1 and "Evangelical Magazine" 1 the "Wesleyan Methodist Magazine" 1 and "Sharpe's London Magazine" 1 the "Gentleman's Magazine" 1 and "Ainsworth's Magazine" 1 the "Dublin University Magazine" 1 and "Knight's Quarterly Magazine" 1 the "Art Journal" 1 and "Hood's Magazine" 1 the "Metropolitan Magazine" 1 and "Colburn's New Monthly" 1 the "Athenæum" 1 and "Literary Gazette" 1 the "Spectator" 1 and "Examiner" 1 the "Saturday Review" 1 and "Leader" 1 the "Economist" 1 and "Westminster Review" 1 the "Builder" 1 and "Civil Engineer and Architect's Journal" 1 the "Mechanic's Magazine" 1 and "Mechanic's Register" 1 the "Gardener's Chronicle" 1 and "Cottage Gardener" 1 the "Illustrated Exhibitor" 1 and "Illustrated Times" 1 the "Family Economist" 1 and "Family Friend" 1 the "Sunday Times" 1 and "Observer" 1 the "Weekly Dispatch" 1 and "Bell's Life in London" 1 the "Sporting Life" 1 and "Sporting Review" 1 the "Sporting Magazine" 1 and "Sporting Times" 1 the "Era" 1 and "Lloyd's Weekly Newspaper" 1 the "Illustrated London News" 1 and "Reynolds's Miscellany

LITERARY MISCELLANIES.—No. VIII.

A SPECULATIVE BISHOP.

WHAT boy has not dreamed of flying to the moon, or of catching her as she shaves the distant hill-tops; of walking to the world's edge, and dropping into the abyss where the old moons hide, of flying through the air, *à la Munchausen*, on the back of a bird, or of overstepping mountains with the magic boots of a Peter Schlemihl; of the perpetual motion; of ghosts and ministering angels; of the other world and the way to it? These fantastic flights of fancy in early life depend on our ignorance of the limits of the possible and attainable. In the light of knowledge the wings of fancy do not droop, but they carry us in new directions; in the darkness of ignorance she bears man and boy along over the same mystic tracts; in the twilight guided by the eye of genius, she shifts the region of her flights. Recurring to the time preceding the brilliant discoveries of Sir Isaac Newton, we find many instances illustrative of what we have just said; none, however, so striking as that presented to us in the writings of John Wilkins, Bishop of Chester—an acute theologian and man of science—learned and inventive. We shall find that he dwelt with amusing fondness and simplicity on many of the projects which engaged our childhood; a fact which would puzzle us if we did not remember that in his times the knowledge of nature which men possessed, was little more than a "rudis indigestaque moles," awaiting the illumination of the Newtonic genius.

John Wilkins was the son of an Oxford goldsmith. He was born in 1614, at Fawsley, near Daventry, in Northamptonshire, where he received the earlier part of his education: he afterwards studied at Magdalen Hall, Oxford, where he graduated. Having gone into holy orders, he became successively chaplain to Charles, Count Palatine of the Rhine; Warden of Wadham College; Master of Trinity College, Cambridge; and Bishop of Chester—which last office he did not long live to enjoy, as he died in 1672, within a year after his elevation to the see. Though his success mainly turned on his political opinions, his talents were of a very high order. Besides being a great writer on theological subjects, he was an amateur in science, and wrote several treatises on mechanics and astronomy. In his first work of this kind—"The Discovery of a New World"—which was published in 1638, he maintains the probability of there being inhabitants in the moon, and appends an amusing discourse "*concerning the possibility of a passage thither.*" In this discourse, we must say our Bishop is singularly absurd; the time to be occupied on the journey, the difficulty of carrying provisions, of going asleep on the way, and, above all, the *means* of conveyance, are the subjects of his consideration A quarter of a century later the Bishop would have been spared half his argument, and have to combat a new difficulty—how to prevent the voyageur's being smashed under the influence of lunar gravitation!

In his second treatise, published in 1640, "A Discourse concerning a New Planet," he asserts that the earth goes round the sun. It is indicative of the state of science in his day, that he has to "prepare himself for the world's jeers and mockery" because of this assertion. He does not, however, appear before the public as one anxious for "martyrdom," but says that he writes to please his "brother, the publisher," who meant to turn a penny over his counter, in Holywell-street, by means of the "audacious novelty!"

"Mercury; or, the Secret and Swift Messenger," was published in London in the year 1641. When we first took it up, we expected to find it contain some rude anticipation of our modern telegraph, but were disappointed. The "Secret and Swift Messenger" reaches no further than an ingenious set of letter puzzles, and a good system of beacon fires; it is, on the whole, fuller of amusing anecdote than of suggestive speculation. It opens very learnedly with a discourse on the difference between a man and an angel, and anticipates the convenience of spirit-rapping as a means of communication. An angel, according to the Bishop, hears and sees with his whole substance; a man, only with his ears and eyes: whence the great advantage over men possessed by angels. Unfortunately, angels are not easily pressed into human service; so that though they would be more "secret and swift" in taking messages than men, yet, as they *won't*, the Bishop considers it useless to dwell long on the subject. He then discusses the different means of obtaining secrecy and speed in the transmission of information; as, also, the means of combining the two. But, as respects the former, he can conceive no better way of securing it than that employed by the Jews to carry off their gold, described by Nantius; and as to the latter, an arrow with a note attached to it, a carrier pigeon, a preconcerted system of signals by guns and pistols, or by beacon fires, are the best means he can think of. It may easily be conceived that the semaphore telegraph was an immense advance on the best project contained in the *Mercury*.

Once only in the course of the work he alludes to magnetism or electricity as a means of communication, and it is to ridicule a notion which had got abroad, that two magnetic needles, which had been touched by the same loadstone, would, like the sympathetic snails eulogised by Dr. Gregory, always point in the same direction. If this sympathy did exist, it is easy to see how by the use of a circle with an alphabet a correspondence might be carried on at any distance. Wilkins, however, was aware that electricity might be made a means of communication, and was possessed of *alphabets* as perfect as those now in use; but then he believed that it was impossible to "discourse by magnetism at more than two or three feet at farthest." This belief is explicable when we consider that the difference between conductors and non-conductors of electricity was *discovered* by Mr. Stephen Grey, in 1729, nearly three-quarters of a century later than the Bishop's book. It was not till after more than a century that M. Lesarge, of Geneva, developed the first plans for transmitting messages by electricity.

A more interesting book is the "Mathematical Magic," being one of the most easie, pleasant, useful (and yet most neglected) parts of mathematics *not yet treated of in this language*." It consists of two parts, "Archimedes" and "Dædalus:" the former devoted to an account of the mechanical powers and their application; the latter to the theory of the diminution and multiplication of motion. In the former he describes the *lever*, the *wedge*, and the *wheel*, by the multiplication of which it is "easie to move any imaginable weight." He expects that "the reader" will be filled with delight and pleasure, when he learns that by multiplying the mechanical powers it is possible "to pull up any oak by the roots with a hair, lift it up with a straw, or blow it up with one's breath, or to perform the greatest labour with the least power;" all results obtained by neglecting the existence of friction! Wilkins had the greatest admiration for the mechanical ingenuity of the ancients—an admiration which led him to depreciate many of the inventions of his times. He devotes a chapter of the "Mathematicks" to a comparison of the Catapultæ of the Romans, with the Cannons of "recent introduction." Anything more amusing than the argument, or want of it, in the following, cannot well be imagined.

"*A Comparison between those Ancient Engines and the Gunpowder Instruments now in use.*

"It shall not be altogether impertinent to inquire somewhat concerning the advantages and disadvantages betwixt those military offensive engines and those of later days. In which inquiry there are two particulars to be chiefly examined:—

"1. The force of these several contrivances, or the utmost that can be done by them.

"2. Their price, or the greatness of the charges required unto them.

"As to the force of these ancient inventions it may sufficiently appear from those many credible relations mentioned before; to which may be added that in 'Josephus,' which he sets down from his own eye-sight, being himself a chief captain at the siege of Iotapata, where these events happened. He tells us that, besides the multitude of persons who were slain by these Roman engines, being not able to avoid their force, by reason they were placed so far off, and out of sight: besides this, they did also carry such great stones, with so great a violence, that they did therewith batter down their walls and towers. A soldier standing by his captain, Josephus, on the wall, had his head struck off by another stone sent from these Roman engines, and his brain carried three furlongs off (!)

"To this purpose Cardan relates out of Ammianus Marcellinus:—

"'Tanto impetu fertur lapis ut uno vico lapidis quamvis intacti barbari fuerint ab eo destituerunt a pugna et abierunt.' Many foreign people being so amazed at the strange force of these engines, that they durst not contest with those who were masters of such inventions. 'Tis frequently asserted that bullets have been melted in the air, by the extremity of violent motion imprest from these slings:—

"Fundaque contorto trans erberat æra plumbo
Et medius liquidæ glandes in nubibus errant.

Lucan, speaking of the same engines, says:—

"Inde faces et saxa volant, spatioque solutæ
Æthra et calidum liquefactæ pondere glandes.

Which relations, though they may seem *somewhat* poetical and improbable, yet Aristotle himself (De Cœlo, lib. 2, c. 7) doth suppose them as unquestionable. From whence it may be inferred, that the force of these engines does *rather* exceed than come short of our gunpowder inventions."

He next decides against our cannons on the ground of cost. Catapultæ were wooden, and could be put up and taken down, and brought along in waggons at a small expense; and, besides, they wanted no powder, and used stones for bullets. As for the cannons:—"1. A whole cannon weighs 8000 lb. It requires 40 lb. of powder to drive a bullet of 64 lb. 3. It requires 80 men or 16 horses to draw it." Supposing the Bishop correct, what must we think of the cannons of the seventeenth century!

In the "Dædalus," besides an interesting chapter on Automata, there is the plan of "An Ark for Sub-marine Navigation," a discourse on "Perpetual Motion," and on "Perpetual Lamps"—speculations amusing enough in the nineteenth century, though then matters of serious consideration. One chapter of this book is taken up with an account of "A Sailing Chariot that may be driven on the land by the wind, as ships on the sea." Such chariots, he says, were reported to be in common use in the Champion Plains of China. And, according to Boterus, had been successfully employed in Spain. In Holland there was, in his own time, a remarkable sailing chariot at Sceveling, the work of Stephinus. It would carry six or ten persons twenty or thirty German miles "in some few hours' space," and all this "with very little labour of him that sitteth at the stern." "That eminently inquisitive man, Peiresius," paid it a visit, and was mightily astonished by it. "I though the wind were in itself more swift and strong, yet to passengers in this charlot it would not be at all discernible, because they did go with an equal swiftness to the wind itself: men that ran before it seeming to go backwards; things which seemed at a great distance being presently overtaken and left behind. In two hours' space, it would pass from Scveleng to Putten, which are distant from one and the other, above two-and-forty miles."

Wilkins himself gives the design of a boat for travelling on land, which only wanted the idea of rails, to entitle him to the merit of one of our greatest modern inventions. He proposed to erect a sort of windmill in the boat, which would communicate motion to the fore-wheels, by the frictional action of which the boat could be made to move in the teeth of the wind, or in any desired direction. Here, we say, was the conception of a railway, minus the rails. The sailing chariot, however, was not lost sight of; and many of our readers may have seen it in use, a few years since, on the long wooden pier (about a mile long) at Herne Bay.

In Chapter 7, of the "Dædalus" he discusses the means of flying through the air, to which man might have recourse. He indicates several. One of his schemes is similar to that by which Mr. Pullock represents the celebrated Cornishman as being transported to the land of the grasshoppers *humani* from his solitude in the rocks. It is highly probable that we owe that charming story "Peter Wilkins" to this very chapter. We shall never recall that beautiful ideal creature Youwarkee, without blessing the memory of the speculative Bishop of Chester.

POETRY FROM THE DIGGINGS.

We copy the following from a Melbourne newspaper:—

THE GOOD TIME'S COME AT LAST.

Oh! who would doubt the time is come,
The time predicted long
By Charles Mackay, in every line
Of his impassioned song?
This land of gold is yielding up
Its buried treasures fast.
To fill the world with plenty's smile—
The good time's come at last!

From every quarter of the globe
What thousands seek our shore,
With anxious souls, and eager hands
To turn the nuggets o'er.
The poor will soon look down even to the dust
For ages that are past,
Will nobly now lift up their heads—
The good time's come at last!

Oh! what a change, a mighty change,
Our wondrous eyes behold;
Those who in England could not live,
Are rolling here in gold.
Their rags and tatters, worn so long,
Now on one side are cast;
While every day they richer grow—
The good time's come at last!

Their wives and helpless little ones,
That were so sad before,
Are neatly clad and duly fed
From wealth's abundant store!
The bleeding heart hath found a balm,
Its bitterest trials past,
Lank Poverty hath lost its prey—
The good time's come at last!

The cry for bread where there is none
For famished babes to eat
In Europe's over-crowded towns,
Our ears doth never meet.
But, in its stead, the sounds of mirth,
Are sweetly floating past,
On every breeze that's borne along—
The good time's come at last.

Oh! may we then, in gratitude,
Thank Heav'n for all this good,
For in this change we may behold
The deep designs of God!
'Tis He, in His wise providence,
Within our reach hath cast
These golden treasures, long concealed—
The good time's come at last! J. H.

Upper Hawthorne, May 28th, 1853.

The Lord-Lieutenant of Ireland has appointed Mr. Henry Arthur Herbert, M.P., to the Lord-Lieutenancy of the county of Kerry, vacated by the demise of the Earl of Kenmare.

THE RUSSIAN TROOPS.

THE Russian army is composed of very heterogeneous materials, drawn from the numerous tribes and provinces comprised under the wide-spread rule of the Czar. The principal supply is derived from Europe; Russians and Poles, both of the Sclavonic race, forming the bulk of it; but, at the same time, he hardy bands which come from the Asiatic base of the Ural Mountains are not the least esteemed of the Russian forces. There are also included in the Russian army a vast number of Germans, Swedes, and Danes, who have settled in Russia, or become recruits by conquest; Tartars from the Crimea and the southern districts on the banks of the Volga; Georgians and Circassians; people of the Mongol race; Nomadic tribes on the borders of the Frozen Ocean; and even Turks and Armenians from the provinces wrested from Turkey. Among these enormous masses recruiting was formerly very light, only one man out of 250 being taken every year; but since the French invasion of 1813 additional provision has been made against contingencies by the establishment of military colonies in the Crown villages. In these colonies the males above fifty years of age are chosen master colonists, to each of whom is allotted fifty acres of land, on the condition of his supporting a soldier and his family. The soldier, who assists him in his labour, is called an agricultural soldier. These troops form the effective force. There is besides, a soldier of reserve for each agricultural soldier, who, like the latter, works on the farm, or in other occupation; being at the same time instructed in his duties as a soldier. This reserve soldier supplies the place of the agricultural soldier when the latter dies, or has completed his term of service for twenty-five years; and forms one in an army of reserve when wanted. The sons of the master colonists, agricultural soldier, and reserve, called cantonists, are exercised as soldiers from the age of thirteen to seventeen; those between eight to thirteen go to school three days a week, and are trained in military duties on the alternate days. Under this system, which has been nearly forty years in operation, Russia now possesses a reserve of six millions; a force, numerically speaking, which, if it were adequately supplied in the commissariat department, might hold all Europe in awe. As it is, the simple reserve are so very far deficient, that the moving of the one-hundredth part of these troops to any intended field of operations, is a work requiring months of preparative arrangements, causing a heavy drain upon the resources of the Imperial treasury.

Amongst the armed hordes in the service of Russia, the Cossacks—those flying clouds of horsemen that haunted the imagination of the great Napoleon—have alone achieved a European reputation. They inhabit the steppes of the south of Russia—wide tracts of country which have never been tilled, being clothed simply with herbage and wild plants, and resembling much in their aspect the prairies of America. There are various tribes of Cossacks: the most numerous and celebrated are the Cossacks of the Don, the Malo-Russian Cossacks, or Cossacks of the Ukraine; the Cossacks of the Black Sea, of the Volga, of Grekenskoy, of Orenburgh, of the Ural Mountains, and of Siberia.

The history of the Cossacks is involved in some obscurity; it is certain, however, that, 900 years ago, they were represented by the Byzantine historians as a distinct people. The most probable account is, that they are a Sclavonic race, who originally inhabited the country near the Caucasus; and who, owing to circumstances, variously related, migrated to the districts at present inhabited by the Don Cossacks. Before the middle of the tenth century, they had certainly reached the frontiers of Poland. From the vicinity of the Don, they emigrated or were transplanted by the Russian sovereigns to the diff-rent countries from which they receive their respective appellations. The most powerful detachment from the original hive is established on the shores of the Caspian, having left the Don at the beginning of the fifteenth century. Another numerous detachment marched towards the East in the following century, crossed the Ural Mountains, and discovered and conquered Siberia. The Cossacks of the Don are the type of the whole tribe, only more cleanly in their habits. The men are tall and commanding in appearance; and when arrayed in their martial costume, with a tall helmet of black wool, terminated by a crimson sack, with its white plume, laced testoon, and white cockade, they look very imposing. A quiet life is quite unsuited to their disposition—war is their only element. They pay no taxes, but furnish a certain quota of troops, who are maintained at their own expense, except when they pass the frontiers of Russia. In no respect do they resemble the Russians, except in possessing the same religion and speaking the same language; they are free, open in their manners, hospitable, and brave. Their riches consist in their cattle and their horses; those who live near the Don are also great fishers. They cultivate the vine, from which they make excellent red and white wine.

A gentleman who has just returned to Paris from the Danubian Provinces (says the Paris correspondent of a morning paper), speaks of the Russian army of occupation by no means flatteringly. If the entire army be like what he has seen, he thinks there is not the slightest reason for alarm at the numerous hordes the Czar is said to have under arms. The regiments he saw were, with one exception (he had not seen the Guards), of the most wretched kind—most of them young lads, sickly-looking, haggard, feeble, badly clad, and badly fed. "They may stand to be killed," he says, "but it is astonishing to me how they can kill any one." The numbers the Emperor of Russia can draw upon are, to be sure, almost unlimited; and in a service where neither the comfort of the men is cared for, nor the slightest value set on their lives, there are always thousands upon thousands dragged to supply the places of those who perish by the neglect of their officers and the rapacity of their commissariat, who have more regard for brute beasts than for human beings. The corps of Cossacks are, according to the same authority, principally composed of young men about sixteen or seventeen, whom the hope of plunder animates. Otherwise the soldiers rob in all directions; and the gentleman I refer to states an instance of a sergeant-major who was flogged by order of his commanding officer, not precisely because he robbed, but because he robbed beyond what was permitted to his rank in the army.

THE TURKISH ARMY.

THE Turkish army, as now constituted, is a perfectly new creation, and a very different force to that hastily and arbitrarily collected after the destruction of the Janissaries, and which was so signally defeated by the Russians in 1829, and, some years afterwards, by the Egyptians in Syria. Indeed, it was those very defeats which impressed the Government of the Porte with the absolute necessity for establishing a force upon a very different footing, equal in efficiency with the best armies of Europe, if it would hope to maintain its position as a European state. In 1843 the ordonnance was issued for raising and equipping the Turkish army upon its present footing. Under this arrangement, the service consists of two distinct branches—the effective army, or *nizam*, and the reserve, or *redif*. The army consists of six divisions, or camps (called *ordou*); there being a general (*mushir*) at the head of each *ferik*—nearly 21,000.

The system of recruiting is very simple: every able-bodied man is liable to serve; but only one son out of every family can be enrolled; and an only son is exempt. This system, however, although much more equitable, and less burthensome upon the people, than that previously in use, has not yet become entirely reconciled to the feelings of the Turks, whose religious prejudices it shocks; and force has, upon occasions, been required to ensure compliance with it.

There is another change, or innovation, recently attempted to be carried into effect by the Porte, which has led to much more serious difficulties. Hitherto, the Turkish army was supplied only from the Mussulman population; the Rayas having been all along exempt from military service upon the payment of a small head-tax, called *kharadj*, amounting only to a few piasters yearly, by way of compensation. There is no doubt that this tax which originated in the haughty doctrines of Mahomedanism, and was looked upon, in early times, as a badge of servitude—in course of years, has operated to the advantage of the Christian. It has been considered a privilege, rather than a disability to be excluded from bearing arms in the ranks of the faithful. With the change of internal policy which sought to abolish all distinctions upon religious grounds between the subjects of the Porte, the longer continuance of this exemption was considered to be no longer expedient, no longer consistent either with reason, justice, or sound policy; and it was determined to abolish it. Accordingly, in 1847, the Greek sailors, subjects of the Porte, were called upon to join the naval service; and in 1850 the Council of State presented a project of law, by which all the Christian subjects of the Porte were to be permitted to form part of the land forces of the Sultan, upon an equal footing with Mussulman, and the *kharadj* tax was abolished. This proposition, however, which immediately received the sanction of the Porte, was received with very little favour by the Christian population of Turkey—whether on account of religious prejudices, or other more selfish motives, it is impossible to determine; and, in deference to their declared wishes, one of the most interesting projects of the present reforming age in Turkey was abandoned.

The grades in the Turkish service are arranged very much after the

COSSACKS OF THE DON.

model of the French army. The men of six *ordous* are recruited from amongst the population of as many districts into which the empire is divided, and after which they are respectively named. Each *ordou* has its *redif*, or reserve body, equal in number to the effective force: the men of which are called out for one month in every year, for the purpose of instruction and exercise in military duties. The full complement of officers are kept in pay attached to the *redif* of each *ordou*, and reside in the towns and villages to which the men belong; and the men themselves receive pay and rations during the month they are encamped for exercise

The period of active service is five years; after which term the men go back to their homes, to form the *redif*, in which they remain for seven years, during which time they are liable to be called into active service, when the exigencies of the State require it. At the present moment, in the expectation of war with Russia, the whole *redif* force is being called out, and are daily assembling at head-quarters.

Thus the Ottoman army contains an effective force of about 130,000 men, which may be almost instantaneously doubled, by mustering to its ranks the reserve militia. To this available force should be added the irregular troops, which could be, at a given time, put on the war footing, as well as the incidental reinforcements which the tributary provinces and certain districts not hitherto subjected to the law of recruitment, are bound to supply to the Porte in case of war.

The uniform of the Turkish troops is comfortable in appearance: with the exception of the head-dress—the eternal fez, a red cap, with a black silk tassel at the top—it is fashioned after the European style. In the infantry, the colour is dark blue, with red facings. In the cavalry and artillery, the colour is different for the different *ordous*—dark blue, red, purple brown, fawn-colour, and light-blue, for the six respectively. The trousers are the same in all. The various ranks in the service are indicated by *nichan*—a sort of *décoration* (as the French would call it), which is suspended from the neck, and from the sword-handle, varying in the design according to the occasion; but all have *nichans*—whether of copper, silver, or gold—from the *mushir* to the private soldier. The *nichans* is returned and exchanged for another appropriate one, upon each change of rank in the service.

TURKISH INFANTRY.

THE GREEK CHURCH.

(Continued from page 426.)

DESCENDING to more modern times, we find, accordingly, that the next great move in the Established Russian Church (the only one now worth mentioning as not being subject to the Patriarch of Constantinople, the others being sunk in ignorance and barbarity) was made by Peter the Great, who introduced many much-needed reforms, relaxed the cruel persecution of the severe schismatic sect the Roskolniki, and endeavoured to bring learning and information into the episcopal bench and among the rest of the clergy. Besides all this, a notable change was introduced into the manner of governing the Church. The splendid dignity of Patriarch, which approached too near the lustre and prerogatives of majesty not to be offensive to the Emperor, was suppressed, or rather assumed, by this politic monarch, *who declared himself the Supreme Pontiff and Head of the Russian Church.* To carry this out, a council was assembled at Petersburg, which was called the Holy Synod, over which one of the most eminent Archbishops presided. The other orders of the clergy continued in their respective ranks and offices, but both their revenues and authority were considerably diminished. It was resolved at first to abolish all monasteries and convents, as prejudical to the community; but this design was not put in execution: on the contrary, Peter himself erected the magnificent monastery at Moscow in honour of Alexander Newski, the mighty hero of Russian legend.

In spite of this great reformation, immense multitudes of this rugged people are still attached to the brutish superstitions of their ancestors, and their fanaticism knows no bounds. Nevertheless, the Revolution placed the Emperor, like our Henry VIII., on an independent height, as the supreme of his National Church: but there he stops, and the pretension of a right to be received as the head of all churches of Greek Christians in Turkey and throughout the world, is as baseless and lawless a claim as ever was set up by boundless ambition. It is an attempt without even the show of dexterous plausibility; and simply the betrayal of the secret means by which Russia hopes to accomplish her ends in the subjugation and possession of the enviable dominions of Turkey—a step to universal empire.

The Greek Church, properly in communion with the Patriarch of Constantinople, consists of the four extensive districts or provinces—Constantinople, Alexandria, Antioch, and Jerusalem—over every one of which a bishop presides with the title of Patriarch, whom the inferior bishops, abbots, and monastic orders unanimously respect as their common father: he of Constantinople being the supreme chief of all. His spiritual government is, indeed, wonderfully extensive; he is elected by a synod of bishops, with the privilege of confirmation vested in the Sultan. The ceremonial of approval used to be, and we believe is, the presentation of a white horse, a mantle or black cow, a pastoral staff, and a caftan or figured vest.

In no other Church are the laity so prostrate under the sway of the priesthood. Their dread of the keys, of excommunication, and of ecclesiastical censures is extreme—to use a common phrase, they literally dare not call their souls their own; and this we think is the reason that predisposes them to conversion, and offers a tempting field for Protestant missionary labours. As yet their perfect obedience and submission is hereditary and habitual. They never dream of questioning a priestly dictum, nor departing from a traditionary ceremony. They continue to be as superstitious as in the dark ages, and as subservient to their humble and ignorant Papas, raised from out the inferior ranks, as the most bigoted Irish peasant is to his teachers of similar extraction.

Among the mercantile and upper classes there is less blind truckling, and some infidelity; and the known Greek fondness for disputation is notoriously manifested by eternal theological contests, maintained with prodigious heat and fury. Greedy after gain, they can hardly find leisure for the ostentatious and everlasting rites, and would rather appropriate the enormous riches invested in garments, shrines, sacred vessels, and other adornments in their churches and monasteries, than go through all the tedious praying and posture-making which are enacted in the midst of these gorgeous paraphernalia.

The precepts and rules agreeably to the Oriental Confession are nine:—1st, Prayer at stated times; 2nd, observance of fasts and feasts; 3rd, obedience and honour towards their spiritual pastors and teachers; 4th, confession of sins four times a year to a priest lawfully constituted and ordained (the common people only once before Lent); 5th, prohibition to read the books of heretics; 6, prayers for Kings, Patriarchs, Metropolites, Bishops, and also for souls departed in the Catholic Faith, and heretics and schismatics, that they may return thereto before they die; 7th, unlimited obedience to the Church; 8th, reverence for Church properties; and, 9th, not to marry in Lent, frequent theatres, nor imitate the customs of barbarians or infidels.

There are four principal fasts, and a number of feasts. On the eighth day infants are presented at the church porch to receive the blessing of the priest, who signs them on the forehead, mouth, and breast with the sign of the cross, as a seal of divine grace, and a disposition to receive the holy baptism. Baptism is performed by thrice dipping or plunging into the water, with a prayer at every plunge, before which the priest blows three times on the child, to dispossess the devil of his seat. Oil is poured on the water, that it (the oil) may be the chrism against all filthiness, and the conversion of the body from all diabolical works; and at the same time conferring the equivalent to Protestant more mature confirmation. The sacrament is administered by the priest in a spoon, the bread and wine being mixed; and upon the efficacy of all these rites the efficacy of salvation through the priest is made to depend. Offertories for the dead and for the living are introduced with solemn formalities; and the invocation of the Virgin Mary, John the Baptist, Moses, Aaron, Elias; Peter, Paul, and the Twelve Apostles; St. Basil, Gregory the Divine, John Chrysostom, Cyril Athanasius, Archdeacon Stephen, and the Holy Martyrs; the Holy Confessors, Antonius, Euthymius, Sabba, and Onuphrius; and the miraculous Anargyri, Cosma, Damianus, Cyrus; and Joachim and Anna, the progenitors of the Holy Virgin, and many others from the bare enumeration of whom it may be conceived how vast a host of superstitions are embodied in the tenets and worship of the Greek Church. The power of the Keys for loosing or binding sins is the grand instrument, and almost equal to the Romish confessional, for subjecting the people to the absolute dominion of the priests, of whom there are various orders, with various appointments and duties. Penances are enjoined, as in the Romish Church; and, as in that, confession is made another potent engine, though not to the same extent, to keep the laity in due subjection. Their saint legends are also as numerous and as extraordinary as those of the Latins: and among others our famous St. George and the Dragon holds a dignified place; and St. John the Evangelist is held to have been taken up into heaven before death, and placed in the mansion of Enoch and Elias. There prevails also a strange idea, founded on ancient prophecies—that the Muscovites are designed by God for their avengers and deliverers from the Mahometan

THE VIRGIN AND CHILD (GREEK CHURCH).

CHURCH OF ST. GEORGE, AT BUCHAREST.

yoke. This is an element sedulously cultivated by the emissaries of Russia, who are spread over every province in Europe, Asia, and Africa.

The Greek dispute has ended in the recognition of equality; but we need not follow their faith and the modes adopted to sustain it, further into detail, and shall only add to the subject here by quoting their sentence of excommunication, which will show that they are not far behind Rome Itself in vehemence, as verbally reported in "Tristram Shandy":—

If they restore not to him that which is his own, and possess him peaceably of it, but suffer him to remain injured and damnified; let them be separated from the Lord God Creator, and be accursed and unpardoned, and indelible after death in this world, and in the other which is to come. Let wood, stones, and iron be dissolved, but not they; may they inherit the leprosy of Gehazi, and the confusion of Judas; may the earth be divided and devour them like Dathan and Abiram; may they sigh and tremble on earth like Cain, and the wrath of God be upon their heads and count nances; may they see no long of that for which they labour, and beg their bread all the days of their lives; may their works, possessions, labours, and services be accursed; always without effect or success, and bloan away like dust: may they have the curses of the holy and righteous Fa rarchs Abram, Isaac, and Jacob; of the 318 Saints who were the divine fathers of the Synod of Ni e, and of all other holy synods; and, being w thout be Church of Christ, le no man administer unto them the things of the Church, or bless them, or offer sacrifice for them, or give them the blessed bread, or eat, or drink, or work with them, or converse with them; and, after death, let no man bury them, in penalty of being under the same penalty of excommunication; and so let them remain until they have performed what is here written.

It is believed that the corpse cannot return to its first principles till the anat oms is taken off but is preserved uncorrupted by an evil spirit, as the soul animates the living body; that it feeds in the night like ghouls; and so many stories of the sort are credibly told by eye-wit nesses, that it is no wonder the ignorant population submit in terror to the authority which possesses such appalling power.

It is to a fain the wedding thereof that the Czar is straining every nerve and resorting to every fraud and falsehood. He is only working out the ambition of his race. The present crusade is but another method of endeavouring to effec. the same purpose which Ypsilanti was put forward to accomplish in 1821. He proclaimed the extinction of a Greek Empire, and was defeated in consequence of allowing the secret to transpire that "a great power was at the bottom of his enterprise, and was about to invade Turkey." True, the Emperor Alexander disavowed the assertion just as the Emperor Nicholas disclaims any desire to attack the independence of that empire. *Credat Judæus.* The game is precisely the same, only differently and now more openly played.

But in the pride of history we have demonstrated that Russia has not the shadow of a pretence for the protection (*i.e.* the Patriarchal authority) of the universal Greek Church. On the contrary, the Russ-Greek division was originally subordinate to the Patriarch of Constantinople obtained co-ordinate independence by a transaction of basin and sale—had its civil ruler invested with spiritual authority merely by his own s ords, and extending no farther than over his own subjects: and wherein, then, do we abridge the Czar to state, can he invent the g ost of a basis to support his infamous aggression upon the Turkish Empire!

There is no such thing; and, were he himself a true believer, he would recoil from the attempt, lest the curse we have recited should fall upon his guilty head.

THE VIRGIN AND CHILD

As an example of the decoration applied to representations of the Virgin and Infant Christ, in the Greek Church, that known as "La Sainte Vierge Marie dite de Kasan," is very remarkable. An engraving of it, printed in gold and colours, has recently been published by Dazaro, of Moscow and St. Petersburg, from which the illustration on the preceding page is copied. The original is studded with gold and jewellery, in the lavish manner of the Byzantine period. The execution is extremely careful, but the figures have all the stiff and formal character of mediæval art.

THE CHURCH OF ST. GEORGE, AT BUCHAREST.

The Church of St. George, at Bucharest, is a very fair example of the general plan adopted in religious edifices of any importance in Wallachia. More imposing for their massive character than for their finish in detail, these edifices are rarely built of stone. Brick, covered with plaster, is a the materials used; and, as a necessary consequence, the ornamental parts are not of a lasting character. The same observation, by the way, applies to the other buildings in Bucharest, and some other towns in Wallachia, which are very pretentious in style, but which are every succeeding winter despoiled of some of their most attractive features. The Church of St. George is adorned with a porch, which is filled with paintings in the Byzantine manner, which is a representation, now almost obliterated of the patron Saint. This Church stands in the midst of vari us extensive buildings, which formerly formed part of a convent, but which are now used as workshops used in various trades. Such the changes worked by time in the destinies of the most imposing foundations.

RAILWAY INTELLIGENCE.

The North Metropolitan Company has given notice of application to Parliament in the ensuing session for power to abandon the portion of the authorized line west of a point opposite St James's Church, Paddington, and in lieu thereof to extend the railway from St. James's Church to the south end of Eastbourne terrace. Also to make a branch near Tread-street and Shepherd-street. It is also intended to ask for power to change the name of the company to the "Metropolitan Railway Company."

Underground Railway in Westminster.—It is proposed to apply in the ensuing session for power to make a subterranean railway from the central line west of a point opposite St James's Church, Paddington, and in lieu thereof to extend the railway from St. James's Church to the south end of Eastbourne terrace. Also to make a branch near Tread-street and Shepherd-street. It is also intended to ask for power to change the name of the company to the "Metropolitan Railway Company."

The Thames Embankment.—Formal notice has been given that it is intended to apply in the ensuing session for author ty to make an embankment and railway on the north side of the river Thames. The embankment is to extend from the Broken-wharf, London, to Cremorne-lane, Chelsea, and the railway from Hamsbro'-wharf to a junction with the West London Railway, near Kensington.

The Crystal Palace Line.—It is proposed that this line shall be extended to Bromley and Farnborough, in Kent. Application is also to be made to Parliament to lease the line to the South-Eastern, London, Br. hton, and South Coast, and the London and South-Western Railway Companies.

The Law as to Return Tickets.—Some time since an action was brought against the Bristol and Exeter Company for the extra fare which they had demanded of a passenger, who was compelled to return by an express train after he had taken an ordinary return ticket. The Judge then ruled, that, as nothing was said, either on the placards distributed about the station, or on the ticket, that anything extra was to be paid for express trains, they were not justified in demanding it.

Railways in India.—In consequence of the amalgamation of the Upper India Railway with the East India Railway Company, the arrangement for paying off the stipulated deposit of £800,000 became imperative. But of this amount the directors of the amalgamated companies only paid £160,000; thereby, strictly speaking, forfeiting the advantages secured to them by agreement with the East India Company. We are happy to state, however, that the Court of Directors, in consideration of the state of the Money Market, have accepted the £160,000 as an instalment, and have given further and ample time to complete the payment of the deposit.

Poor-law Relief for the "Lock-outs."—With reference to relief by local guardians of the men locked out in Lancashire, the Poor-law Board thus lays down the law:—"Where the applicant has the pecuniary means of sub-sistence for himself and his family, from whatsoever funds those means may be derived or where he may, if he pleases, immediately obtain work, and so earn the means of subsistence, the Board are of opinion that he ought not to be considered as actually destitute. If, on the other hand, he has neither money nor work, and is really without the present means of obtaining either, so that aid from the poor rates is absolutely necessary for the subsistence of himself and his family, the guardians ought to relieve him."

MUSIC.

POPULAR INSTRUCTION IN VOCAL MUSIC.

It would be unnecessary, at this time of day, to say much in favour of bestowing instruction in music on the industrious classes. The advantages which all ranks and degrees of mankind derive from the cultivation of the taste are now universally admitted. The love of the pure and the beautiful in art, as well as in nature, is found to refine the manners and soften the feelings. It may be said of art, as well as of letters, "*emollit mores, nec sinit esse feros*:" while the process of acquiring this discernment and this love affords an exercise which quickens the intellect, and, at the same time, an interesting and delightful occupation. We would, therefore, encourage any attempt (if really calculated to effect its object) to diffuse, as widely as possible, some knowledge of those arts which minister to the sense of beauty—literature, even in its lighter branches of poetry and fiction; the rudiments of design, which, even setting aside its many practical uses, enables us to discover, in the material world around us, much that the untutored eye can never discern; and, especially, Music—an art which speaks with "most miraculous organ" to the whole human race, and, of all the arts which have the pleasures of taste for their immediate object, exercises the most powerful influence on the heart, the mind, and the whole character of man.

Of course the kind, as well as the degree, of musical instruction, must be adapted to the particular class on whom it is bestowed. To the great body of the people, vocal music, in its simpler forms, is the most suitable. the psalm, the hymn, the song, the ballad, the glee, the chorus; not only the music of piety and devotion, but the most gay and lively strains, calculated to inspire innocent mirth and cheerfulness. Let the people have abundance of secular music, as well as sacred; but let the one, as well as the other, be divested of everything vulgar, impure, and immoral. It is now found that the union of poetry and music, even in the simple form of a popular ballad, may cherish the noblest patriotism, as well as the softest domestic affections—the love of country as well as the love of home.

To strengthen this moral agency of music, it must be brought, as much as possible within the reach of every one. The people must be taught to read the language in which it is written, and to utter with tunable voices, the sounds which that written language conveys. For the purpose many methods have, at different times, been devised and put in practice, both on the Continent and in England. The system of instruction which, in this country, has come into the most extensive use, is that of Mr. Hullah, founded (as our musical readers are aware) on the French system of Wilhem. Mr Hullah's method is somewhat operose, and might be advantageously simplified; but its general efficiency has been abundantly proved, and, though not so much talked about as when in its novelty, it is in vigorous action in all parts of the kingdom. Other methods have recently been brought forward, with more or less claim to approbation; and some of them in comparatively limited localities, have been attended with considerable success. We are not disposed to place these different plans in attitudes of mutual hostility. The promoters of all of them are to be regarded as co-operating in the same good work; and each of them is entitled to favour in proportion to its peculiar merit, and to the amount of good which it is found to be actually doing.

Among these schemes of popular instruction, our attention, for some years back, has been particularly directed to that which has been propounded and put in action by the Rev. John Curwen, of Plaistow, in Essex, a clergyman of unbounded philanthropy, great zeal, and competent musical attainment. We have watched its progress, and have arrived, from its results, at a conviction of its utility and importance.

Mr. Curwen, personally, and by means of teachers trained in his method, gives instructions to young persons of both sexes assembled in numerous classes. His method possesses this peculiarity, that it embraces a new system of musical notation, of which he is the inventor. When his labours first attracted our attention, we looked upon this innovation with much suspicion; being aware that many attempts of this kind had been made, from the figure-writing of Jean Jacques Rousseau, to the "sequential system" of Wallbridge; and that all of them had proved abortive. Mr. Curwen's method is the only one that has been brought into extensive use; and its successful operation leaves no room to doubt its efficacy. He has succeeded because he has not attempted too much. His precursors, denouncing the old-established notation of music as unscientific in principle and absurdly complicated in practice, have aimed at its total abandonment, and the substitution of their own plans in its room. Such schemes, even had their intrinsic merits been greater than they really were, laboured under the obvious objection, that their adoption would soon render the whole existing written music an unknown tongue, and reduce all existing libraries, public and private, with their most precious treasures, to the value of waste paper—except, perhaps, to a few plodding black-letter antiquaries. Reform, in music as in politics, must be gradual, not revolutionary. We must amend, not destroy, present systems. We must preserve the written language of music, while we endeavour to amend its faults. But these faults (as is usual with innovators) have been excessively exaggerated. Our notation, gradually improved during several centuries, may doubtless admit of further improvement; but it is a beautiful system, most felicitously adapted to every description of music, from the simplest tune to the most profound and complex harmony, and the most rapid flights of instrumental execution. Mr. Curwen, accordingly, is far from contemplating the abolition of the existing notation; on the contrary, it is taught in all his schools. But he has devised a new method of writing vocal music of a simple kind; and to this sort of music its use is expressly confined. He is anxious that this shall be distinctly understood. His method, thus limited in its application, is easily learned by the youngest pupil, so that there is no hardship in learning to it and the ordinary notation; and, though the new method is employed to facilitate the pupil's progress, yet it can be used in connexion with the notation in general use; its object being to enable the pupil to sing simple music at sight more speedily than is done by the ordinary method—an object which ample experience has proved that it accomplishes.

It would carry us beyond our limits to enter into technical details respecting this method of notation; but we may enable the musical reader to understand its general nature. It is founded on the same principle with the method of Rousseau. The notation indicates, not the positive pitch of a sound, but its position in the scale to which it belongs, as being the tonic, or key-note—the second, third, fourth, &c. A melody, consequently, is always written in the same way, in whatever key it is sung; the singer being merely told at the beginning that it is to be sung in the key of C, of D, &c. Rousseau used the Arabic numerals, 1, 2, 3, 4, 5, 6, 7, to represent the notes of the scale. Mr. Curwen has followed the *solfeggio* method of Italian singing, according to which the syllables *do, re, mi, fa, sol, la, si*, are used in singing the notes of the scale in every key. Instead of the Arabic figures, Mr. Curwen uses the initial letter of those syllables in writing down the notes, with this single exception, that, as two of the syllables, *sol* and *si*, begin with the same letter, he uses, for the last of them, the letter *t*. Thus, he writes the notes of the scale, *d, r, m, f, s, l, t; d* being the tonic, *r* the second, *m* the third, *f* the fourth, *s* the fifth, *l* the sixth, and *t* the seventh. When the melody rises to a higher, or descends to a lower octave, this is shown by little marks added to the letters. The key in which the air is to be sung is indicated at the beginning. The melody is divided into bars in the ordinary way by perpendicular lines; and the relative length of each note is marked by plain and simple signs. A few additional arbitrary marks are also used when, in consequence of a transient modulation, a note is raised by a sharp or depressed by a flat. If the music consists of harmony in parts (as in a psalm or a glee), the parts are written (as in the ordinary notation) in parallel lines—the bass being undermost, and the treble uppermost. By this method a piece of simple vocal music whether in one part or in more, may be written on ordinary paper almost as quickly as it can be sung, and, with a very little practice, can be read with the utmost facility. The use of it has the same advantage as the practice of employing the *solfeggio* syllables in singing: it gives the pupil an idea of the character and effect of each degree of the scale in relation to its fundamental sound, and consequently gives great assistance in learning to sing at sight. We have heard whole classes of young persons sing melodies written down for them at the moment, with a promptitude and correctness which gave us as much surprise as pleasure.

It remains to give some account of the success of Mr. Curwen's labours. His objects are not confined to the improvement of congregational singing; he desires, also, to make musical instruction a means of innocent and wholesome recreation. He desires to promote those objects in various ways: by establishing congregational classes for the improvement of psalmody, by introducing into schools, both public and private, the daily use of vocal music, in connexion with poetry, of a cheerful and moral kind; and by forming people's concerts and people's singing classes, which may be the means of carrying good secular music into the homes of the industrious classes, so as to counterwork the baneful influence of musical entertainments in the public-house. To aid him in his exertions, a number of clergymen (both of the Church of England and of dissenting persuasions), and other gentlemen of respectability and influence, have formed themselves into an association which, from the peculiar feature of Mr. Curwen's method of instruction, has been called "the Tonic Sol fa Association." From the report read at the first annual meeting of this body in July last, we learn that two large meetings for the promotion and improvement of psalmody were held during the month of May, in the spacious amphitheatre of Finsbury Chapel. On the second occasion, fully 3000 persons were present. The choir consisted of 150 members of the classes, and the expenses were defrayed by the members of the committee and choir. This indicated at once the zeal of the supporters of the movement, and the publicity and importance it has already attained.

It further appears that fully 7000 persons have been under instruction on this method in London alone during the past year. At Bristol, seven classes have been originated by Mr. Matthews, and 900 persons have been under instruction, in addition to the school children. At Leeds, Mr. Richardson has carried on successfully a normal class, composed of school teachers and others, of all the denominations in the town; and this has been fruitful in preparing and planting not a few new teachers and new classes. Classes have been established in many other places, so that the number of country pupils equals those in London. Thus—sometimes with sacred and sometimes with secular music, sometimes in congregations and sometimes in temperance societies; sometimes in companies of young men and sometimes among ragged children; sometimes in the mansions of the rich and sometimes in the homes of the poor; sometimes by voluntary agency and sometimes by that which is paid—this society is sowing good seed, and waiting its harvest—not only in the improvement of psalmody, which is its chief aim, but in the diffusion among the people of a love for, and knowledge of, a beautiful and humanizing art.

The Wednesday Evening Concerts of this week suffered much from the state of the weather. A regular November fog, which made it both disagreeable and dangerous to pass along the streets, caused a very thin audience; which was the more unfortunate, as the concert was certainly the best of the series. The first part was a choice selection from the works of Mendelssohn, embracing some of his finest compositions, particularly his descriptive overture, the "Calm Sea and Prosperous Voyage," the grand pianoforte concerto in G minor, played by Mdlle. Clauss with her usual excellence; and the symphony in A major, distinguished by the title of the Italian symphony. Several of his songs and duets were very prettily sung by Miss Birch, Miss Stabbach, and Mr. Lawler. The remainder of the concert, as usual, was of a popular character. The only noticeable feature was the début of Madame Amedei, a lady newly arrived from Italy, who appeared for the first time before an English audience. She sang a cavatina of Mercadante, and the well-known Anacreontic from "Lucrezia Borgia." She had a very favourable reception, which she well deserved. She has one of the finest contralto voices we have heard, and her style is that of a highly-accomplished musician.

We have received several Edinburgh vocal publications of considerable interest.

The first is a song, entitled "Highland Rhymes. Song of the Absent Gaël." The words and music by John Gray. The verses are in a fine tone of national enthusiasm, to which Highland hearts will respond, and with which we Southrons can sympathise. The melody is what it ought to be: simple and Scottish.

"The Lay of Furgstall" is a song written by the Countess Furgstall, and composed by Mr. Gray. The Countess was a Scotch lady, sister of Lord Cranstoun, and sister-in-law of Professor Dugald Stewart. Captain Basil Hall's account of his visit to her château in Styria, and of her death during that visit, excited great and general interest. The poem is graceful, tender, and melancholy; and Mr. Gray has united it to music of a similar character.

There is a third piece—a song and chorus—by the same author. It is called "Staffa, or Uamh Fhinn" (Fingal's Cave). It is a fanciful description of the wild, romantic scene, peopled by its unearthly inhabitants fairies, elves, and mermaids. The music is flowing and melodious; and the simple but effective harmony of the chorus reminds us of Moore's "Canadian Boat-song."

THE THEATRES, &c.

ASTLEY'S

The management of this theatre have taken advantage of the state of Eastern affairs to revive the hippodramatic spectacle of "The Invasion of Russia; and the Burning of Moscow," the military effects of which afford evident delight to crowded audiences. "The Fate of Phaëton" is now played as an afterpiece, and continues to be popular.

CITY OF LONDON.

The engagement of Mr Davenport at this theatre has been the means of introducing a new American drama to the English stage. The play in question has been some time in existence; and we believe was performed by Mr. Forrest, in Manchester, on his first visit to England, and its hero is still, we understand, a great card with him in the United States. The title of the play is "Jack Cade," and its author, Judge Conrade, of Philadelphia. Premising that there is some good writing in the piece, we must take exception, at the outset, to the licence which the dramatist has allowed himself in regard to history. Shakspeare has not drawn, it is true, a very flattering portrait of the pseudo

Mortimer, but we see, in the scenes of our great bard, a true picture of the times in which he lived. Judge Conrade's is altogether a fairy piece of work—an imitation in Eidalani, not in the very best England of that or any other period. *Jack Cade* is, in the American drama, an eloquent gamblesman, with an Italian wife and a child, returned from his travels under the name of *Aylmere* Brewster, he had ill from his country, on account of having taken revenge on Lord Seys for the death of his father, and found refuge in Italy. Here his mind brooded on the wrongs of his native country, and during a storm in the Gulf even in at Rome, while the air "throbbed with the angry pulse of deity," he swore to undertake their deliverance. Full of this thought, he returns to his native land, and mingles again with the people By the course of events he is brought into contact with *Lord Saye* and a *Lord Clifford*—the latter of whom scheins his wife, as a "rustic Venus," and, on meeting with a repulse, proceeds to force; whereupon the disguised lady stabs him; but on the sight of his blood, becomes frantic. This character was effectively performed by Mrs Vining A follower of *Lord Saye* has also a similar adventure with the daughter of *Wat Mounkay* a blacksmith, who like *Wat Tyler*, brain s the gentleman with his hammer. It would appear, indeed, that Judge Conrade sought to blend in one place the characteristics of several periods, and thus to constitute a symbolical drama devoted to the cause of democracy, rather than an historical one representative of real scenes. *Jack Cade* in the end obtains the Royal signature to the people's charter; but, in an altercation with Lord Saye, is purposely excited to a state of ungovernable rage, in the excess of which he gives a mortal wound to his Lordship, but not before he has received one from the poisoned weapon of his enemy. Mr. Davenport, in his performance of this character, showed his usual intelligence, and more than his usual energy. The passionate scenes which he delivered the more stirring passages of the dialogue, and his fine appreciation of its poetical descriptions, were both worthy of high praise. The house was crowded; and this republican drama was received with vehement and repeated plaudits.

THE LATE MR. GARDINER, OF LEICESTER.

On Wednesday week, the 16 h instant, this distinguished musical amateur and composer died at his residence, in Leicester, in his 85 h year, after a few days' illness. Mr Gardiner's has been no ordinary career. In all the events in his life he seems to have kept pace with the progress of his race his experience has been varied, his observation wide, his activity unremitting, and his achievement almost enviable. He was the son of Mr John Gardiner, of Leicester, and was born in March, 770. His father having been the leader of the choir at the Great Meeting, young Gardiner was early familiar with musical performances and musical persons. His first recollection dated back to the performance of Handel's *Messiah*, he was puzzled with the chimes of a musical clock. It appears that his father's neighbour, Dr. Armold, had so fitted this old church-tower, and wished to have it tried on young Arnold Meanwhile, young Gardiner was stripped, and Mrs. Macaulay, (the elder to Mrs. Arnold, and afterwards the authoress) he put on her daughter, the 2nd guest boy was taken to her bed, and also had with the cows of the neighbourhood. The chimes so delighted the infant musician that Mr Gardiner always considered this an early first a memorable attention to the beauty of musical sounds In a few years after this, a grand music meeting took place for the benefit of the Leicester Infirmary, and on this occasion young Gardiner was taken into the orchestra in St. Martin's Church by his father; on the evening of the same day he heard the "full and prolonged tones of Gardini's violin" at a concert held in the Castle. At five or six years of age he was so much attracted by Handel's Meeting, and sang the solo in Knapp's Wedding Anthem, on the nuptials of some of his father's acquaintance, and, when very young, was a performer on the violin and the violoncello. As he continued to advance in years, and to mingle with the musicians of Leicester, he was delighted to hear the band play at the evening parade, and from his youthful ambition prompted him to make his first essay as musical composer, by writing a march and quick-step for them to perform these were presented to the master as the composition of another, and the juvenile's only reward was the gratification of standing in the centre of the group of performers, and of hearing the band in the market-place, to hear the performance of his own firs work.

About this time a stranger came to Leicester, who very soon drew round him the young spirits of the town. He was a boo master, and being conversant with the higher branches of mathematics, and possessing some knowledge of astronomy and electricity, he became the leader of a scientific coterie. The strangers was Mr., afterwards Sir Richard Phillips, and the high bank of young philosophers constituted themselves into the Adelphi Philosophical Society. Among these were, besides Gardiner and Phillips, Thos. Bosworth, the late Thos. Paget (a genius) John Ward, Jun., Samuel Collinson, and G. Harley Vaughan. Fourteen out of the seventeen members were young. Their meetings proceed ng commenced in the year 1789, when Mr Gardiner was nine even years old; and the names of Mr. Phillips and Mr. Paget, seem to have been the leading minds of this society, for they were the authors of its principal papers. One among their modes of prosecuting scientific inquiry, was the formation of an apparatus for electric conductors or Franklin's house, and it is attributed the attraction of the lightning. At the time the French Revolution broke out, and, whether it was that the mayor and magistrates suspected the young means of being Illuminati, or that there was treason in a cricket, we have never discovered but a record exists in a volume of their proceedings in which a written of the subject of this notice, that the society was dissolved in the year 1793. The "constituted authorities of Leicester having expressed their opinion that such an association was of a dangerous tendency."

Early in life Mr Gardiner, at Syllaby, became acquainted with a family name Franklin, of whom Sir William Franklin and Sir John Franklin are the last is now the greatest lion of conversation) were the youthful members. In their parts he made acquaintance and friends; and his visits to their meetings still further extended the circle. In the list may be included Thomas Ivan Winter, Gowan (he printed water). Perry (of the *Morning Chronicle*), Robert Hall, Hone, Jenner, and Dr. Parr.

The best qualifying of Mr. Gardiner's literary acquaintanceship was that with the poet Moore, whom he met while on a visit to Mr. Cosslyn, at Lambe Priory, in 1817; and the tests of the delightful meeting which the poet there sang is own beautiful songs, and accompanied himself. Two years subsequently Mr. Gardiner was a visitor at Moore's cottage, in Derbyshire, to a few days s

Mr Gardiner's literary labours may be said to have begun with his publication of the Sacred Melodies, in the year 1812, when his author was presented a Court to the Regent His "Lives of Haydn and Mozart" (translated by the Rev G Berry and Mr K. Breand), his "Organ of Melody," his "Music of Nature," his "Music and Friends" and his "Sights in Italy," followed each other at intervals between the years 18.2 and 1840 One of Mozart's best letters (not included in Lord J. Russell's large published volume), was written in reply to Mr. Gardiner's request to write some verses to his music it is in the playful and humorous vein so natural to Erin's Anacreon.

In Mr Gardiner's various works there are more than fifty songs of his own composition. A curious mistake occurred at York Festival, in 1814, when the solo "The Lord will comfort Zion" was performed, and attributed in the books to Handel. It was Mr Gardiner's.

In the year 1845, when the statue of Beethoven at Bonn was inaugurated, Mr. Gardiner was present. The performance of the flute and face of the ceremony was about to be so dered in a leaden case, and as it appeared in the foundation of the figure, when Professor Walker, of the University, observed that an English gentleman was present, who was born in the same year with Beethoven, and who was the person to furnish the leaden case that country, and, though country to all orders, he proposed that that gentleman should be honoured by affixing his name to the document. Mr. Gardiner ascended the pedestal, and with a trembling hand, by the unanimous call of the by standers, he recorded his name in the narrow space on the document, left below the names of "Victoria" and "Albert."

Abridged from the Leicester Chronicle.

NEW YORK THEATRES.

—New York still continues to be thronged by strangers. All the places of amusement are filled nightly, and the average receipts same day have been—Italian Opera, 1500 dols.; Broadway Theatre, 3000 dols.; Bowery ditto, 2000 dols; National ditto, 3000 dols; Wallack's ditto, 22 0 dols.; Burton's ditto, 2200 dols; Hippodrome, 2000 dols.; Barnum's Museum, 1500 dols.; Julien, 1500 dols.; and only amusements, 2000 dols.

MDLLE. RACHEL.—Mdlle. Rachel had commenced representations in St. Petersburg with her great character of *Phèdre*, but neither the Emperor nor the Imperial Family were present on the occasion. Some offence, it is stated, has been taken in the Russian metropolis at the utterly insufficient supporters whom the great actress has selected to accompany her; the cause, it is understood, as those who appeared with her in London and on her tour through the provinces and other parts of the continent [illegible]

"HEART" OR "HEIGHT."—It has long been a question whether tall or short men are the most courageous, he latter asserting that the courage of tall men is so dispersed over their large body that at first it is difficult to bring it into action; but the French settle the matter on the principle that Napoleon formed his Imperial Guard—"C'est le cœur qui fait le grenadier!"

CHESS.

THE LATE DONNA MARIA, QUEEN OF PORTUGAL.—FROM A PORTRAIT BY SIR THOMAS LAWRENCE.

17th inst. Her afflicted husband and relatives—the Countess of Jersey, the Lady Clementina Villiers, the Hon. Francis Villiers, and the Princess's two youthful sons—were present at her death.

THE QUEEN OF PORTUGAL.

DONNA MARIA II. DA GLORIA, Queen of Portugal and the Algarves, was the eldest child of Don Pedro de Alcantara IV., as King of Portugal, and I., as Emperor of Brazil. She was born on the 4th April, 1819, and ascended the Portuguese throne pursuant to the arranged abdication of her father, Don Pedro, the 2nd May, 1826. Her Majesty married, first, the 26th January, 1835, Augustus de Beauharnois, Duke of Leuchtenberg (son of Napoleon's step-son, the famous Prince Eugène); but by him (who died the 28th March, in the same year) she had no issue. The Queen wedded, secondly, the 9th April, 1836, Ferdinand Augustus, Prince of Saxe-Coburg and Gotha, born the 29th Oct., 1816, the eldest son of the late Duke Ferdinand, uncle of Prince Albert. By this second marriage with Prince Ferdinand Augustus, who, as Consort Royal, bears the title of King of Portugal, Donna Maria has had issue—

Don Pedro d'Alcantara, of Braganza and Bourbon, Prince Royal, born September 16, 1837, now PEDRO V., King of Portugal; Don Louis Philippe, Duke of Oporto, born October 31, 1838; Don John, Duke of Beja, born March 16, 1842; Don Ferdinand, born July 23, 1846; Don Augusto, born November 4, 1847; Donna Maria, born July 21, 1843; Donna Antonia, born February 17, 1845.

Her political career may be said to have begun in her infancy, for she was still at Rio Janeiro, the place of her birth, in 1826, when the death of King John IV., followed by the renunciation of the crown by her father, and the proclamation of the Constitutional Charter, raised her to the throne, and she was betrothed a few months afterwards to her uncle, Don Miguel, then made Regent of the kingdom. No sooner, however, had this Prince assumed the reins of government in the name of his niece, than he usurped the crown, and his first act was to forbid his Sovereign and his bride from landing in her own dominions. Donna Maria then came to England, where she was received by George IV. as lawful Queen of Portugal, and the leaders of the Constitutional party prepared for that struggle which they ultimately led to a successful issue, with the assistance of the other members of the Quadruple Alliance. During that contest the young Queen resided in Brazil or in Paris, and it was not till Don Pedro had captured Lisbon that she was enabled, in September, 1833, to enter her capital and ascend her throne. Her father, unhappily, survived this event but one year, and on the 18th September, 1834, the Cortes were induced unanimously to declare their sovereign, then only fifteen, to be of full age, and in complete possession of her Royal prerogative. A few months later she contracted a marriage with Prince Augustus of Leuchtenberg, the eldest son of Prince Eugène Beauharnais; but here again the singular ill-fortune of her life prevailed, and the Queen, married in January, 1835, was a widow before Easter. A second marriage was concluded in the following year with Prince Ferdinand, of the Catholic branch of the Coburg family, which has conferred upon the house of Braganza no less than eight lineal descendants.

The Queen of Portugal died, in childbirth, on the 15th instant. Her widowed husband, the titular King, is in consequence declared Regent of Portugal during the minority of her youthful successor, Pedro V.

The Portrait which accompanies this memoir, is taken from that painted by Sir Thomas Lawrence, at the time of the then young Queen's visit to this country. It was, at the time, recognised by all as a most happy and brilliant effort of that accomplished artist's pencil: all the fresh youthful beauty of the original marvellously realised; the hands finished with admirable grace and delicacy; and the colouring bright and glittering, as her life's promise was. The dress was white satin, upon which were displayed the riband, and various orders of Portugal. An engraving of this picture was published by Messrs. Hodgson and Graves (now Messrs. Graves and Co.), in Pall-mall; from which our Portrait has been copied.

THE DUKE OF BEAUFORT, K.G.

JOHN HENRY SOMERSET, seventh Duke of Beaufort, Marquis and Earl of Worcester, Earl of Glamorgan, Viscount Grosmoant, Baron Herbert of Chepstow, Ragland and Gower, Baron Beaufort of Caldecot Castle, and Baron de Bottetourt, K.G., was the eldest son of Henry Charles, the sixth Duke; and was born the 5th February, 1792. In early life, when Marquis of Worcester, he entered the army, and served in the 10th Hussars. He was on the staff towards the close of the Peninsular War; and, up to his latest existence, retained a love for the profession he had adopted when young. Shortly after attaining his majority, the Marquis of Worcester became a member of the House of Commons, as representative for the borough of Monmouth, for which he sat in several Parliaments, up to 1835, when he was elected for West Gloucestershire, in conjunction with the Hon. G. C. Berkeley and Mr. R. B. Hale. On the 23rd Nov. 1835, on the death of his father, the Marquis succeeded to the Dukedom.

In the House of Commons, and subsequently in the House of Lords, the Duke was a zealous supporter of Conservative principles. He was made a Knight of the Garter in 1842. As an English sportsman, few noblemen have acquired more celebrity than the Duke of Beaufort. He has been immortalised on canvas in the paintings of the "Royal Hunt," and the "Badminton Hunt;" while, upon paper, "Nimrod" has perpetuated his character in terms no more eulogistic than it deserved. In the Duke of Beaufort, music and the drama have sustained a severe loss. To the professors of those arts he was ever a warm patron, as evidenced by the interest he took in the sons of the lamented Tyrone Power; and the strenuous exertions he used to preserve the falling fortunes of Her Majesty's Theatre.

The Duke of Beaufort married, first, on the 25th July, 1814, Georgiana Frederica, second daughter of the Hon. Henry Fitzroy. This lady died on the 11th May, 1821. His Grace wedded, secondly, on the 29th June, 1822, Emily Frances, only daughter of Charles Culling Smith, Esq., by his wife, the Lady Anne Wellesley. The Duchess survives him. By her he leaves an only son, Henry Charles, now eighth Duke of Beaufort, and six daughters; he leaves also a daughter by his first marriage, Georgiana, wife of Sir William Christopher Codrington, Bart., M.P. The Duke of Beaufort died on the 17th inst., at his seat, Badminton House, Gloucestershire, in the presence of his Duchess and the daughters of his house. His demise is generally and sincerely lamented. Henry Charles, his successor (the present Duke) was born the 1st February, 1824; and was married, in 1845, to Lady Georgina Curzon, eldest daughter of the Earl Howe, by whom he has a youthful family.

The family of Somerset descends, illegitimately, from the Royal house of Plantagenet, John of Gaunt's eldest son by Catherine Swinford. Sir John Beaufort was legitimised to all intents but that of succession to the Throne, and was created Earl of Somerset. His descendant, Henry Beaufort, Duke of Somerset, K.G., beheaded after the battle of Hexham, in 1463, left an illegitimate son, Sir Charles Somerset, Knt. Banneret, who married Elizabeth, only daughter and heiress of William Herbert, Earl of Huntingdon, Lord Herbert of Ragland, Chepstow, and Gower, and in her right became Lord Herbert. He was subsequently

THE LATE DUKE OF BEAUFORT, K.G.

created Earl of Worcester in 1513-14. From this nobleman, the fourth in descent, was Henry, first Marquis of Worcester, the devoted Loyalist in the great Civil War, who held out for King Charles his Castle of Ragland with such determination that it was among the last fortresses, if not the very last, that surrendered to the "rebel Commons." The son of this stout cavalier, Edward, Earl of Glamorgan, afterwards second Marquis of Worcester, was the illustrious scientific discoverer. In his work, "A Century of Inventions," the power and application of the steam-engine are distinctly described. The Duke iom of Beaufort was conferred in 1612, on the eldest son of this eminent man, Henry, third Marquis of Worcester, and descended regularly to the nobleman whose death we record, and who was seventh in a direct line from the scientific Marquis.

LISMORE BRIDGE.—FROM A PHOTOGRAPH TAKEN DURING THE RECENT FLOODS.—(SEE PRECEDING PAGE.)

TESTIMONIAL TO THE HEAD-MASTER OF THE BIRMINGHAM SCHOOL OF DESIGN.

On Friday evening, the 18th instant, the students of the Government School of Design, Birmingham, presented a testimonial and an address to the Head-master, Mr. George Wallis, on the occasion of the second anniversary of the commencement of his official duties in that institution; and congratulatory of his return from the United States of America, as one of her Majesty's Commissioners to the New York Exhibition. The testimonial consists of a Silver Cup, modeled by the Chevalier Schlick, after an antique found at Pompeii, and has been executed by Messrs. Elkington, Birmingham. It is mounted upon a plinth, covered with crimson velvet, upon which is fixed a silver plate, bearing the inscription:—

Presented to GEORGE WALLIS, Esq., by the Students of the Birmingham School of Design, for his invaluable services as Head-master.—Nov. 18, 1853.

The address, neatly engrossed on parchment, expresses in appropriate terms, the feelings of respect entertained by the students for their

SILVER CUP PRESENTED, WITH AN ADDRESS, TO MR. GEORGE WALLIS.

teacher, both as an artist, and as a man; and who has succeeded by unremitting attention, in raising the school from a very low position, as regards order and discipline, to its present standard; there being upwards of 550 students attending the classes within its walls, and of these 250 are of the artizan class of society, whilst above 300 candidates of the same class are on the books seeking admission. Besides the students, male and female, who attended the meeting, Mr. H. Cole, C.B., one of the secretaries of the Department of Science and Art, Board of Trade, several members of the Committee of the School, and other influential gentlemen of Birmingham, were present. The business, however, was conducted with great tact and good sense, by the students themselves, in the great room of the School, the use of which had been granted by the Committee. Mr. James Rennie, one of the senior students, presided, another student read the Address; and a third handed the testimonial to Mr. Wallis, who replied in a suitable speech. Mr. Cole, and other gentlemen, addressed the students upon a matter so creditable to all concerned, and on the future prospects of an institution in which so much earnestness and unanimity prevailed.

J. E. MILLAIS, A.R.A.

JOHN EVERETT MILLAIS (who has recently been elected Associate of the Royal Academy) was born in Portland-street, Southampton, on the 8th of June, 1829. His earliest years were spent in France and the Channel Islands—chiefly, we believe, in Jersey—where, from childhood, his passion for art showed itself; and battles, troopers, desperate combats, and gorgeous, but impossible, knights, were the especial theme and delight of his pencil. So decided was this bias towards art, that his parents were induced to bring him to London; and, by Sir Martin Shee's advice, he entered the school of Mr. Sass (now kept by Mr. Carey, son of the translator of Dante), a school of art preparatory to the Royal Academy, and which has had amongst its pupils the majority of our younger eminent artists. After a few months at Sass's, Mr. Millais gained admission to the antique school of the Royal Academy, and thus at the unusually early age of eleven. In 1843 he carried away the antique medal, and in 1847 the gold medal for the best oil picture—"The Benjamites Seizing their Wives." In the preceding year, however, he had exhibited his first picture, "Pizarro Seizing the Incs of Peru." In 1847 appeared, also at the Royal Academy Exhibition, "Elgiva Branded;" and at Westminster-hall, "The Widow's Mite." Nothing met the public eye from Mr Millais's hand in 1848; but in 1849 an entirely new order of things began. In this year, the subject of our memoir, in conjunction with W. Holman Hunt and Dante G. Rossetti - under the name of "Pre-Raphaelite Brotherhood"—initiated the most important changes in the practice of art which it has experienced within several generations. Consummate genius - uniting the acutest perception of character with extraordinary technical skill—was manifested in his scene from Keats's "Isabella," a work in which he broke once and for ever out of artistic childhood, and the swaddling-bands of conventionalism.

From this original the following works have succeeded and continued Mr. Millais's career of progress: in 1850, "Ferdinand and Ariel," and a portrait composition; and another, still more prominent—a symbolic incident in connection with the Holy Family—which was very severely criticised at the time of its appearance; in 1851, "The Woodman's Daughter," "Mariana," and "The Return of the Dove to the Ark;" in 1852, "Ophelia," and "An Incident of St. Bartholomew's Eve;" and in 1853, "The Order of Release," and "The Proscribed Royalist." His last work, painted in autumn at the Trosachs, is "a little waterfall with a portrait of his friend Mr. Ruskin, contemplating on the depths of the whirlpool beneath."

Looking at this list of works, we may say that rarely has so much been done in so short a time; and they fully entitle Mr. Millais to the distinction which he has just received.

On Monday, the 7th of the present month, Mr. Millais was elected an Associate of the Royal Academy—an honour which, it is understood, the Academicians would have conferred upon him last year, had not his age then been below the prescribed standard. Art cannot hope too much from his efforts.

The accompanying Portrait is from a medallion, recently sculptured in marble, by Mr. A. Munro.

J. E. MILLAIS, A.R.A.—FROM THE MARBLE BY A. MUNRO.

THE COTTONIAN PUBLIC LIBRARY, PLYMOUTH.

THIS splendid addition to the public institutions of Plymouth is the gift of William Cotton, Esq., of Ivy-bridge, who, with a liberality and public spirit which cannot be too highly commended, proposed that the Library should be consigned to trustees for public use, provided means were procured for annexing it to the Plymouth Public Library. The offer of Mr. Cotton was most liberally responded to by the proprietors of the Public Library, who considerably enlarged their building for its reception; and, at a cost of nearly £1600, prepared a magnificent apartment, which they dedicated specially to its objects. The collection is now finally deposited in the new apartment, and is under the immediate care of Mr. Llewellynn Jewitt, F.S.A., the Librarian of the Public Library.

The room is lofty and well-proportioned, and is lighted by means of an elegantly-decorated lantern in the roof. Around the upper portion of the walls is a continuous frieze, selected from the Panathenaic frieze of the Elgin marbles, and specially cast at the British Museum for that purpose, has been introduced by the Trustees with good effect above this frieze is an elaborately foliated cornice of considerable projection. The ceiling is coved, the spaces between the intersecting lines being filled

THE COTTONIAN LIBRARY, RECENTLY ANNEXED TO THE PLYMOUTH PUBLIC LIBRARY.

with foliage in fresco. The collection consists of large ranges of book-cases, with plate glass doors; and is filled with one of the most extensive and unique collections of prints (about 5000 in number), arranged and classed under the different schools and masters, and rare and valuable books, principally relating to the fine arts, of which any public institution in this kingdom can boast. On the walls are displayed, with an extensive series of original sketches by celebrated masters; with three fine original portraits by Sir Joshua Reynolds, of himself, his father (formerly Head-Master of the Plympton Grammar School, near Plymouth), and his sister Frances; and by Gough's celebrated copies of the Cartoons of Raphael, Volpato's Farnese Gallery, and other gems of art. Amongst the sketches by celebrated masters, of which the collection contains upwards of 200 specimens, are interesting examples by Claude, Rembrandt, Nicholas Poussin, illuminated manuscripts of the fifteenth century, a curious Greek Diptych of the twelfth century, and several fine specimens of early typography, &c., are tastefully arranged in the portion

The arrangements made by the Trustees are of the most liberal character, and wholly in accordance with the spirit manifested by the donor; those arrangements allowing constant access to the apartment daily, from ten to four, to all persons who have right of admission to the Public Library; and to strangers and visitors to the town, gratuitously. Artists and students are admitted for the purposes of study and for copying the works of art, daily; and the public generally are admitted gratuitously every Saturday, by tickets from the librarian, on whom the entire arrangement and care of the collection has devolved.

The collection, although at present extensive, will, at the decease of the noble donor, receive the remainder of the library and works of art to be added to it—the deed of gift of the whole collection having been completed with such proviso.

THE DECIMAL SYSTEM.—COINAGE.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

NAPLES, November 12, 1853.

SIR,—I have read, with much interest, the article on the above subject in your Number of the 12th October last, and I am glad to see that our Government will soon give us the advantage of that long-wished-for decimal coinage. I agree pretty nearly with all you have said in your article, but I cannot help thinking it would much simplify matters if there were only four divisions in your monies of account, and two columns in your accounts—as in France. Without changing the *value* of the present gold and silver coinage (which is not needed), some additions should be made to assimilate them in value to the coins of France and other countries—much to be desired by travellers and others, now that the communication between England and the Continent is so rapidly increasing. Accounts should be kept in florins and cents (or grains, if that denomination is thought better than cents); the value of the florin to be the same as the present value—ten of which would make the sovereign or £1 sterling. The coins proposed, as under:—

				s. d.
Gold coins—	*Double sovereign	..	..	20 00 cents
	Sovereign ..	..	..	10 00 „
	*Twenty florin	..	..	5 00 „
	Half sovereign	..	..	2 50 „
Silver coins—	*Double florin	..	..	2 00 „
	Florin	..	..	1 00 „
	Shilling	..	..	50 „
	*Ten-cent piece	..	..	40 „
	Sixpence	..	..	25 „
	*Five-cent piece	..	..	20 „
	*Two cent piece	..	..	10 „

In the above list, the coins marked with *—say two gold coins and four silver coins—are all new, but would be found most useful. The double sovereign would be nearly similar to the gold piece of the U.S. of America, which is received in our West Indian Colonies and in Canada as *six* sterling. The golden coin of 8 florins would be the equivalent of the Napoleon, or 20-franc piece, calculating the par of exchange between France and England as 25 francs for the £1 sterling. In the silver coin, the double florin would represent the 5 franc piece of France, and also be within one penny of the value of the American dollar—of which there are 10 to the pound: 10 cent would represent the 2½ sous of the French franc; and the 20 and 10-cent piece, the half and quarter franc. The same monies are also current in Switzerland and Piedmont. The English cent would be one-half of the American cent, and 2½ cents of France, so that the facilities of calculation would be very great. With regard to the copper coinage, a total change of value must necessarily take place. There is no avoiding it. The present penny piece would be equal to one penny, and one-fifth of the present money: the 2 cent piece would be 4 per cent less than the present halfpenny, and the 1-cent piece 4 per cent less than the present farthing. Some trouble would necessarily occasioned; but the relative value of articles would soon assimilate themselves to the new coins. As to the penny postage, the newspaper and new receipt stamps, it would be for the consideration of Her Majesty's Government whether to adopt a 5-cent or a 4-cent stamp in lieu thereof. The former would be one fifth more than the present penny stamp, and therefore objectionable. The latter penny 4 per cent less than the penny, and would be a loss to the public, and not a serious loss to the Exchequer. I am not vain enough to suppose that the propositions in this letter are all free from objection, but I think some of the suggestions may be found useful.

I remain, in any case, one of your oldest foreign subscribers, G. I.

P.S.—Many persons suppose a smaller gold coin than the half-sovereign would be useful; but it is objected that a golden quarter sovereign would be so small, that the hard hand of a working man or labourer would be scarcely able to feel it. In America, there is the gold piece of 2½ dollars; the objection to which is there made of its smallness; and it is the intention of the American Government to make it larger, by having a large hole in the centre, so that the coins may be strung together upon a string: this plan would also be found useful for the small silver coin of 10 cents.

A LABOUR PARLIAMENT.—The operatives are about to form a new organisation. This new power is to be called the Labour Parliament, and is not to interfere in any way with the present trades' unions or combinations. It is to be composed of delegates to be elected in the different towns, and its comprehensive duties are stated in the resolutions passed at a meeting of working men, which has been held to inaugurate the new scheme. The meeting took place in the People's Institute, Manchester, on Sunday evening. The assembly was presided over by Mr. Cropper Clarke; and the principal resolution was as follows: "It is the opinion of this meeting that a Parliament should meet as soon as possible; that Parliament to consist of delegates elected by the working men of each town in public meeting assembled. That the duties of that Parliament shall be to regulate machinery, whereby support may be rendered to the people now on strike or locked out by the manufacturers, by raising a national subscription of the most extensive character." The meeting was addressed by Mr James Wilkins and by Mr Ernest Jones, of London, and their chief argument was, that the working classes are entitled to, and will now demand, a share in profits; that they have never received it in the past; that the profit is alone that which remains after the payment of all necessary expenses; and that the wages of the working man has hitherto been no more than barely sufficient to supply him with food, clothing, and the necessaries of life.

QUESTIONS AS TO THE CHOLERA.—The Epidemiological Society of London has instituted an inquiry, addressed to medical men. The following is the notice:—1. Questions relating to the general physical condition of ——— in 1853. 2. Questions relating to the general features of ——— connected with the origin and spread of cholera in 1853-4. 3. Question relating to the detail of individual attacks of cholera in the course of 1853. 4. Questions relating to the general features of ——— relating to the treatment of cholera in general. 5. Questions involving theoretical opinions on the subject of the origin and spread of cholera.

NEW-STREET.—It is intended by the Board of Works and Buildings to open new streets for the formation of the communications between the Strand and Fleet-street, so as to afford better access to the Courts of Justice in the City of London, and to relieve the present inconvenience and danger.

HOLYROOD PALACE, EDINBURGH.—Very shortly steps will be taken by the Commissioners of Woods and Forests to refit for the Picture Gallery in Holyrood Palace, being a present in so decayed and unseated condition that the great cartoons required to be removed on occasion of any great assemblage, such as at the election of a Representative Peer.

LITERATURE.

OLD ENGLAND AND NEW ENGLAND: in a Series of Views taken on the Spot. By ALFRED BUNN. 2 vols. Bentley

There is no rest on why every man who visits America for a few months should write a book about it when he comes back; but, at the same time, there is no law against it; and the avidity with which such publications are sought out and read by the public, is proof of the exhaustless character of the subject and the wide-spread interest attached to it. America is a world of itself: comprising countless nations, each displaying the antipathy of growth inherent to the youthful state, and which older communities have long outlived, and can never expect to exhibit again. Is it to be wondered at, that much should have been written, and should continue to be written, on such a subject; and that the book of yesterday should find itself partially, or, indeed, or its details supplied, by the publication of to-morrow? Basil Hall, Trollope, Mackay, Fanny Butler, Dickens, and last, not least, Archibald Alexander "Tours" and "Notes;" but there was yet room for the graphic "Views" of Alfred Bunn.

Mr. Bunn, who ruled the destinies of the drama for many years up to her final expulsion from her legitimate territory, still clung to Shakespeare and the stage, after they had lost their accustomed "local habitation," and like Jaques, went in "search of a master;" and embodied there result of his ramble, once in a very agreeable lecture, entitled "The Stage Before and Behind the Curtain." After delivering this entertainment with success and credit in all the principal towns of the United Kingdom, he was induced to proceed to the "States," to gratify new audiences, in a field in which a large portion of the American community are enthusiastic patrons. Under such circumstances was undertaken the tour which gave rise to the present entertaining volumes.

Byron, the poet and the dramatist, when he set sail from his fatherland, could not even in the midst of the cares of packing, lay aside his rhyming gossip-pill, but addressed his friend and brother poet in a sentimental strain, beginning—

> My boat is on the shore, and my bark is on the sea, &c.

And Mr. Bunn, a poet and dramatist of no ordinary kind, cannot all at once forget the smell of the lamps, and the exciting triumphs of the lyric stage; and he therefore, on the occasion of shipping into a lively semi dramatic sketch (which with playful *monchalance* he denominates "doggerel"), beginning—

> Hundreds rushing up the gangway,
> And as fore-and-hinding pour down,
> Swearing oaths in every slang way,
> Breaking one man's luggage, and another fellow's crown.

and which, after dealing with a variety of incidents, humorous and pathetic, appropriate to the occasion, concludes with a "touch of nature," hit off with a simplicity of style which Byron never attained:—

> Friends on shore once more appearing,
> Some gentle eye a tear in,
> At which hardened hearts wi l scoff;
> Some with hope and some with fear inspired—
> Hark! a brace of guns are fired—
> We are off!

We can fancy the whole scene set to music by Balfe—bustlingly descriptive then to cease the close merging into a tender movement; the latter suddenly interrupted by a *Rule, Britannia*, which would have brought down the curtain at Old Drury amidst a perfect hurricane of excitement.

Once fairly at sea, however, Mr. Bunn becomes suddenly impressed with those grand and solemn reflections, which, to well-constituted minds, the first view of the broad ocean and of life at sea, seldom fails to suggest; the poet expands into the philosopher; the manager, for the moment, is lost in the man. Yet, how differently are differently possessed individuals affected by the same prosaic simple moving causes. Dickens, so grand in the treatment of the brute incidents of life, filled up some score and a half pages at the outset of his "American Notes," with a humiliating description of the horrors of sea-sickness as experienced by himself. Other writers on the subject to this affliction, or disclaiming to acknowledge it, have amused their readers with peevish regrets at home, and dull complaints of the monotony of a sea-voyage. Mr Bunn indulges in no such weakness, but earnestly sets forth the various incidents and objects which strike upon his enjoyment, and afforded him, bodily and mentally, ample and endless occupation: he the daily duties and amusements of the crew, the meridian observations, the signalling of passing ships, "the sometime visit of the stormy petrel," the "pugnacious little sea-nuisance the turtle," ay, even the inspection and enjoyment of the gastronomic department, and, last, but not least, the solemn observance of divine worship. "For us," says Mr. Bunn, "there is no more imposing sight than the performance of divine service on ship-board, and the assembling of the whole of the ship's crew as can be spared, dressed in their best, and listening with modest devotion to the law of their Maker." And then he winds up the subject—

> Monotony! Can there be the slightest semblance of such a phrase as passing upon the beauties of the sea, exploring in their own mighty element, and sending up fountains of water from their mammoth nostrils, as they stream through the unfathomable depths they dwell in. The mind becomes very soon associated with scenes and subjects like these, and you at last begin to think more of a shoal of porpoises than you would of a shoal of mackerel. Monotony! Oh! it is nothing to one for the first time on a homeward voyage, with a brilliant sun shining upon it, and imparting to it all the appearance of a fairy palace
>
> "Set in the silver sea"
>
> We grant you, it is much better to see it at a distance (the one we saw was about three miles off); but it is astonishing what a change it affects in the mind, here during the period you are passing nearest to it. No, no! there is no mono ony with those who think, and feel, and marvel, and worship, where there is ample opportunity for the indulgence of every scope of human thought.

He betrays, however, no ambition to dwell upon such themes longer than necessary; and having delivered the sentiments which we have just quoted, he changes the subject and the scene, by exclaiming, "Well, that's over, and we are now in the United States of America." In short, from end to end, these volume, whatever the amount of their merits or demerits, and that is by no means small, are wholly free from the affectation and pretence besides coincides which too often disgust us in the *genus* tourist. Least of all does the writer fall into that lamentable weakness or romanticism, which indulges in the misrepresentation of objects; less still into that unless silly weakness of sentimental egotism, which invests with peculiar and surviving interest, every place, man, or thing the adventurer happens to come in contact with, and individualises to immortal fame, every seacaptain, steward, under-keeper, lacquet-de-chambre, every waiter, hotel-keeper, or waiter, to whose lot it has fallen to assist the wants of the weary travels, or minister to his comfort by the way. No! Mr. Bunn sees everything with the eye of a man of the world. Though having the special object of his mission always in view, he does not suffer it to devote attention to general considerations of the institutions and the state of society in the New World through which he travelled; and he lets down the result of his observations intelligibly, fearlessly, and, we may add, impartially. It cannot be pretended that in such passages he always breaks new ground—but he does so occasionally—and he unfrequently throws new light upon the most beaten path. Upon the subject of hotels and hotel charges his information is elaborate, and will be useful to travellers. His observations are by no means deficient in originality to those huge establishments—though he doubts whether they could ever be made to suit the habits of Englishmen, who are too domestic and luxurious, if we were going to say "independent") for the routine of a barrack-room, with fixed hours and common rooms for meals. He justly condemns the hasty and comfortless manner in which the Yankee gorges his dinner, the insatiable cause of dyspepsia; and the sadly habit of writing, to which dyspepsia and tobacco-smoking and chewing lead. Other American "notions" he has his digs at as well in great humour, and generally with truth on his side. But we shall, because our notice with reference to one or two incidents connected with the author's profession, postpone our writing Americans.

"Lecturing," says Mr. Bunn, "is the prevailing pursuit of the public at large, and has become so popular, that places of ordinary amusement are comparatively deserted." The observation applies only to the extent in the New England States, and not where the same process of study is very generally pursued. "Going to lecture" is the next important duty to going to church" indeed, in many places where there are no institution hall, the church is used for lecturing purposes, because general meetings, balls, &c. At this Mr. Bunn, at first, was naturally a little shocked.

It [illegible] (he observes) on the first blush of the thing—[illegible] Sunday that a climbing element for the [illegible] could be polluted by any other proceeding [illegible] but [illegible] soon [illegible] that [illegible] should be done [illegible] matter [illegible], however sacred, matter [illegible], however sacred, should be done.

But he was obliged, *per force*, to give up these "odd notions;" and at a place called Chelsea, delivered his lecture on "The Stage Before and Behind the Curtain," in the church

Mr. Bunn made a profitable tour, reaping a golden opinion wherever he went. On one occasion, however, he was led into a transaction of barter for a Joker, the history of which is given with the verve of Smollett. It should here be stated, when the reader, perhaps, has already discovered that Mr. Bunn, throughout his narrative, writes in the plural, using "we" and "us," instead of "I" and "me." His next-seat neighbour in a railway train, addresses him—

> "I think I see'd you at the depôt just now" (depôt being a synonimous expression with our one of station)
>
> "Probably so; we were there to procure a ticket" answered we.
>
> "Where did yer take it out for?"
>
> "Well—if you are desirous of knowing—for Portland," was our reply.
>
> "Gosh! down to Portland, hey? Pretty considerable town, that; a city is nearer the mark, for they are over 20,000 inhabitants, and I'm like it there ain't some smart chaps among 'em, I can tell yer. A Britisher, I guess, am I not, yer?"
>
> "Yes, we are English," was our rejoinder.
>
> "Well, our locomotives look yourn, don't they?"
>
> "I think not," said we.
>
> "Think they do; fifty or sixty in company is better than five or six; wood's better to burn than coal, an open car, with eight or ten windows to look out on each side, is far better than a ken of dusty box with two; and—" (here he hawked and deposited his saliva on the floor, and continued so to do during the journey).
>
> "We never allow spitting in our rail roads," observed we.
>
> "There we got yer agin. This is a land o' liberty; we do what we like, and wherever we like to do it. Got some business, I guess, in Portland?"
>
> "Yes," we replied.
>
> "Perhaps, then, we can swap; anything to turn a cent."
>
> "We don't exactly see how that can be brought about, because we are not dealers," we remarked
>
> "A factor, then, I guess?"
>
> "No, a lecturer," was answered.
>
> "Well, never mind; that's do; give us a ticket just to hear what yer've got to say, and I'll give yer half-a-dozen d—d good cigars to smoke afterwards."

Of course the Yankee went away flattering himself with the reflection that he had had the best of "the Britisher;" but Mr. Bunn had a different "notion" of the matter when the lecture over, in the solitude of his chamber he pulled out his well filled cigar case.

Mr. Bunn, though easy-going, frank-hearted, and tolerant of all things genuine, is relentless in the denunciation of anything partaking of hypocrisy or humbug. The absurdities of Young Americanism are let off comparatively mildly; but Teetotalism, Vegetarianism, the Rights-of Womanism, and pretended superhuman of all kinds, come in for withering exposure and ridicule; and usually broken with long dashes ———, with dreadful oh's at either end; which, perhaps, for the sake of the nerves of his readers, Mr. Bunn will *dele* in his second edition.

THE THREE PRESIDENCIES OF INDIA. By JOHN CAPPER, F.R.A.S. Cooke.

Two hundred years have elapsed since the gratitude of the Great Mogul—who was then a potentate second to few in the amount of his revenue, or the extent of his territories—to a skilful English physician enabled a few adventurous merchants to establish a petty factory at Hoogbly, on the banks of the Ganges. Those merchants became the East India Company, to whom Queen Elizabeth granted a charter. In the course of a hundred years the first "factors" extended their possession on three separate points of the coast of the peninsula of Hindostan: in Bengal they founded Calcutta; and lower down, to the south, Madras; on the west coast, the marriage of Charles II with a Portuguese Princess gave them Bombay, on the island of Salsette. But at the end of the first one hundred years of the existence of the East India Company, although their trade had been highly profitable, their political existence was far from being firmly established. Their servants and subjects had to contend perpetually with their neighbours Indian princes, and the rivalry of Europeans, their predecessors in the same seas and Indian acquisitions—the Portuguese, the Dutch, the French—lost no opportunity of impeding the progress of British power in the East. Had it not been for the mutual jealousies of the Europeans, as well as the constant wars and insurrections among our Indian enemies and allies, our power would have been extinguished very early.

In 1756 the army of the East India Company was insignificant; and its civil service consisted of a few commercial clerks, selected without regard to previous education, and paid at a very meagre rate. But it happened at a period when our united Indian possessions were threatened with destruction by a native Prince, whose army was disciplined and led by French officers, that among the "clerks" of the Company was Robert Clive, a scrap grace schoolboy, sent to India by his friends, just as we now send our vessels to Australia—to get rid of them. In the emergency of a threatened attack, when every white man was expected to take arms in defence of the goods of the British merchants, Clive, a subaltern in the East India Merchant Company, Clive became a soldier—discovered and displayed great military talents—took the command, on the retreat of a cowardly, incompetent commander—trained the sepoys to fight as they had never fought before—defeated the armies sent against him—and, in saving the British power, established a reputation which very rapidly placed him at the head of the Bengal Presidency. Clive displayed not less administrative and diplomatic skill than military talent. He not only defeated the enemy, but made rapid conquests. From his accession to command, the progress of British power in India may be said to date. What Clive conquered, Warren Hastings consolidated. From their day the East India Company has had the advantage of a succession of men of extraordinary abilities—Munro, Malcolm, Elphinstone, Metcalf, the two Wellesleys, Napier, and others of the like stamp. And now, looking over the map appended to the volume before us, we trace with amazement the series of events which have placed within our dominion so vast a territory. With the exception of two small settlement—Goa, on the west coast, once the seat of a Portuguese Inquisition, and still a Portuguese dependency, and Pondicherry on the east coast, the last remnant of the French power in the East, from Cape Comorin to beyond the Indus, and on to the confines of China, British power is paramount. The Indian Princes, who nominally reign over districts surrounded by our territory only retain the semblance of sovereignty. Nepaul is the one state in which internal affairs are administered and troops maintained without our interference. Yet a few years ago, there were many who told the tale of the Blackhole of Calcutta, as we tell of the Battle of Trafalgar; and scarcely a year has elapsed since the death of the great soldier, whose name first began to be talked of as an officer of promise, on the conquest by assault of Seringapatam.

After a century of warlike struggles, in which more than once the tenure of our Indian possessions has hung upon the skill and valour of a handful of Europeans, we are in possession of—or, at any rate, have under our dominion, not far short of a million square miles of territory—a territory inhabited by at least three distinct races—a territory varied in climate, varied in soil, in mineral and vegetable productions; yet scarcely more advanced in European arts, agriculture, and manufactures, than on the day when the merchant, sitting under the shadow of a huge banyan-tree, on the banks of the Ganges, decided that he would there fix the site of that factory, since the city of Calcutta; which, after many gifts and humble prostrations, he had obtained leave to found from the Sovereign, now only known by caricature on playing cards.

We trust that wars and rumours of wars in India are at an end. Steam and the electric wire will soon be brought to the three Presidencies within fewer weeks than it formerly took months to convey a bale of goods or a regiment of soldiers. Railroads long delayed and obstructed by the culpable indifference and clumsy governing machinery of the East India Company are now in progress in the peninsula itself, and may be expected to penetrate until the port of Bombay is united with the Bay of Bengal. A steam-ship is preparing which will convey some ten days and nine to India, by way of the Cape, in thirty days. Railroads in Egypt are in progress. Railroads in Turkey are projected, which will tend to shorten the ancient land route still more. In the mean time our cotton-manufacturing powers progress more rapidly than the growth of the raw material: a bad season, or any social disturbance in the slave states of America, would bring half the factories of Lancashire to a stand still. India is the only country capable of supplying a sufficient quantity of RAW MATERIAL. But not to be not the only vegetable production which it is important to extend the cultivation: our rivals in manufactures of naked skins are searching the world over for new fibrous material capable of being spun and woven. In such produce no other country is so rich as India;

there, too, a docile and laborious population prepared to raise and gather whatever our merchants are prepared to buy

For these on universal grounds and peculiar to all political persons, the history, the constitution, the resources of India offer an important and most interesting subject for study. It is, to say the least, discreditable that so little attention is paid to the education of the rising generation, to the study of our colonies and dependences.

Mr Clapperton's long residence in the East qualified him for the task, has in the work before us produced a very valuable contribution to our knowledge of Indian affairs and Indian resources. In a compact, concise shape, in a clear and interesting style, he has presented his readers with a complete view of Indian affairs. He commences with an introductory sketch of the natural history of British India. He then gives an historical view of the succeeding Hindoo and Mahomedan periods, followed by the European, which, after tracing the early settlements of the Portuguese, the Dutch, and the French as follows the British power from the treaty with the Great Mogul through the various vicissitudes in contests with Hyder Ali, Tippoo Sahib, the Mahratta wars, the first Burmese war, the annexation of Scinde, down to the war of the Punjaub, and consequent annexation of territory. In a second section, he describes the local governments of India past and present, with the details of the "covenanted and uncovenanted services" and the fiscal systems of India. The third section is devoted to Hindoo art, science, manufactures, and agriculture; including a view of the culture of cotton, indigo, sugar, rice, and tea. This section contains some very useful illustrative engravings.

The fourth section contains chapters on "The Language and Literature," "Religion and Castes," "Manners and Customs," "Education and Christianity."

We do not concur in all Mr Clapperton's opinions or suggestions, but can confidently recommend his volume as a very complete, careful, and interesting view of the past and present condition of British India.

CURIOSITIES OF LONDON LIFE. By CHARLES MAHBY SMITH. William and Frederick G. Cash.

In one sense, this volume belongs to the class of light literature; in another, it possesses far high pretensions, for it not only amuses but instructs. To those who merely wish to while away an idle hour, the variety, abundance and the fascinating colour of social pictures here given will render this book most welcome, while more reflective readers will find in the exhibition of the inner life of the toiling thousands of this great metropolis, materials for thinking which ought to stimulate the zeal of philanthropy to and weaken the sensitiveness of statesmen. The style is smart and witty, flowing and elegant, and every Londoner will appreciate the local knowledge brought to bear on the different topics considered, and the fidelity with which every scene is described. London is not a single city but rather a confederation of cities. In its multifarious districts there is not only a division of labour, but a classification of society—grade rising above grade, separate yet blended—a mighty mass, but not without a plan; and, were we not accustomed to the admirable order that prevails, we should wonder how it was preserved. The regular supply of the various food markets alone is a truly wonderful operation, including all the necessaries and all the luxuries of life; and it only ceases to astonish because it is familiar. How do the poor live, who rise in the morning without a penny in their pockets? How do they manage to sell their labour before they can earn the means of spreading hunger? What are the contrivances by which they try to carry on their humble traffic? These and similar questions are answered in this volume, and in detail. Thus we have ten divisions among the music-grinders, and seven among the crossing-sweepers. There are eight illustrations of the "Curiosities of Mendicity," and some score of miscellaneous articles devoted to special pursuits of obscure and scarcely conceivable industry. Cheap bargains, the tricks of auctioneers, and the devices by which modern pastry cooks are sold for the finest productions of the old masters, are graphically exposed. There are, too, sad sketches of struggling industry, and of the severe trials of virtue placed in contrast with the heartless tricks of the vilest impostors. Indeed, there is much to learn from this book, of which the London reader will have no desire. And a perusal of it may protect thousands from being swindled. As a specimen of the style we make the following extract from the

GRAND ARMY.

I wonder whether the world needs to be told that there is a great battle fought in London every day. Such is the case, whether they know it or not. Some battles, indeed, are fought on a larger scale, and followed by greater results, greater than most men have the wit to calculate. It is fought at considerable cost to, and tremendous shedding of, human blood. The forces engaged are tired and trusty men, and a dozen, or a score of miles away; and they come in crowded chariots, crammed within and crushed without with their resistless force; and they count any mass of marching foot, through highways and byways, broad straight ways and crooked ways, through wet ways and dry ways, and through long way and short way—as looking up to take their stand around the dispotment of commerce, the centre of which may be supposed to be the Bank of England. It may be remarked in this among the odd and fighting men that, are so savagely long waisted breeches, and that they have the look of a man for charging, are chiefly humbugs of black cutters, and with bobtail hair. They wield weapons prematurely hursty, and drop dead by long with gore, both back and red; yet they never go to Greenwich, because not unfrequently they are forced to go to Logarithms; and then they are cheered on by Napier not him of the Peninsula, but him of the pen and the rod, and the bones. They sometimes get a chance to show a little defence with a dash of their weapon—with one scratch of his sharp point a simple trooper shall shake down a proud house which has stood haughty for generations, and build in its room one to have and to hold more than ought it had been a target for all Napoleon's cannon. Another has but to point his weapon to the east or the west, and on a sight go a hundred men and a thousand tons of goods under a cloud of swelling canvas, on a twelve months' voyage, to circumnavigate the globe. A third wags for a moment his good sharp pen, and incontinently a thousand iron machines, which had stood idle for months, are in full activity, with a roar and a clatter, that never pause or relax for, it may be, half a year together. A four h, with point of pencil steel, makes a few calculations, and, behold! no sooner does Fob Sun-dog, the tea merchant of the Celestial empire, get an inkling of it which he does very soon—than he and his are in such a state of excitement and bustle, that their long tails are seen streaming hither and thither in the wind; and such a pressure of business is such, that all possibility of a miserable debauch with opium is imperatively postponed till that barbarian Bull has got his tea. Such are a few of the common doings of the great army of trade, who fight the fight of commerce every day in London, with the exception of some few other welcome days set apart for rest—the whole year through.

Those who are fond of rendering their loose cash on pictures, bronzes vases, and objects of vertu, would do well to read the articles on "Auction Gangs," and what is termed the "knock out." The sable gentlemen that smoke and others, of current respectability, belong to these swindling confederations, and that he has himself seen a valuable painting knocked down for much hardly covering the cost of the frame, which the present owner, one of the gang, would not part with for less than a thousand guineas. How the unlucky proprietor is persuaded to leave such a sacrifice to explain, but must send the amateur to the volume itself. In "Boxing Day" is a spirited sketch, and should win a Christmas box for the members of the fraternity from all who read it. "Bubble Companies" contains valuable hints for those who have the means of speculating in shares; and ladies fond of shopping and cheap bargains may save money by conning over "Puff and Push." The fact is that were we to point out all the articles in this lively volume, we should have to pause on each of the 638 pages of which the volume is composed. Of its kind and character it may take its stand with the search ing revelations of Mr Mayhew's labours; we give the book no higher praise; it would be unjust to accord it less.

THE AUSTRALIAN CAPTIVE. A Narrative of Fifteen Years in the Life of Will ... Simpson Low.

This work is of American manufacture, and a very clumsy production of the kind, quite unworthy of the countryman of the author of the admirable "Omoo" and "Typee." If a tale of adventure be well told we do not care to inquire too curiously whether it be true or not, wholly or in part. Defoe's "Robinson Crusoe" and "Voyage Round the World," Miss Porter's "Sir Edward Seaward," and Melville's "South Sea Adventure," are books which, although of different merit, will always find favour among a large class of readers. But this "Australian Captive" appears to have been got up by some very dull American penny-a-liner, in order to take advantage of the rage for Australian books created by the discovery of Australian gold. There may, certainly, have been such a person as William Jackman, and he may have visited Van Diemen's Land and been cast away on the north-west coast of Australia; but there is not a word in the narrative that might not have been composed by a person who had never travelled beyond the columns of a newspaper. The few statements which smack of personal verisimilitude and minuteness have been derived, we fear, from the papers of Flinders. For instance, Jackman pretends that, sleeping in the open air, he was attacked by a pack of dingoes; and during a flaming illustration represents him beating them off with a club. The dingo, or wild dog, is an animal so timid that it will fly from the voice of a child. We have no doubt that this stupid forgery will be speedily consigned to the waste paper merchant, since trunk makers have ceased to use paper spoiled by printing. But the United States, which can boast some of the most eloquent writers of the day, offer such extraordinary facilities for the publication of worthless books with attractive titles, that we feel bound to speak out plainly and to check the plague of stupidity whenever we have an opportunity.

COMMENTARIES ON THE SURGERY OF THE WAR IN PORTUGAL, SPAIN, FRANCE, AND THE NETHERLANDS, FROM THE BATTLE OF ROLICA, IN 1808, TO THAT OF WATERLOO, IN 1815, &c. Revised to 1853 By G. J. GUTHRIE, F.R.S. Fifth Edition. Renshaw

Stirred with the authority of so great a name is operative surgery as that of no time, this work certainly requires no encomium of ours to examine it to be read, and to take its place as a standard authority in every medical or surgical library. It would, indeed, be difficult to point to another man now living in the whole profession who has brought the experience of the great opportunities afforded by the Peninsular War to the improvements of this invaluable art of surgery; and in glancing at the contents of this volume, we can come to no conclusion than that they are worthy of the able hands of Mr. Guthrie, made vast strides in advance of our previous knowledge; and which he has introduced, for the last quarter of a century at least, into the practice of civil surgery with the most beneficial results

Before the Peninsular War, it was held to be impossible to remove the thigh without first tying the large or femoral artery; this practice Mr Guthrie has improved with the best results. The first man seen alive in this country after amputation at the hip joint was a soldier brought to Mr. Guthrie's. In an improved method of treating the wounds of arteries, he entirely superseded the theory and practice of the great John Hunter; and his method has had the satisfaction of saving many lives that must otherwise have inevitably been lost. He first introduced into our hospital practice the improved plan of treatment he had followed during the war—in erysipelatous inflammation of the limbs, hospital gangrene, injuries of the head, wounds of the chest, wounds by musket-balls, fractures generally, and a long list of other injuries we cannot enumerate. He has likewise availed himself of those modern means for minute investigation which have thrown so much light on structure, as bearing on the nature of disease; and therewith improved our physiological and pathological knowledge

This work must become pre-eminently useful, should the casualties of war again be witnessed in Europe. It is, therefore, gratifying to find that the distinguished author has liberally presented a copy of his book "to the library of every regiment in her Majesty's service, one to each naval hospital station, and one to the principal officer of the East India Company's Service in each of the Indian Presidencies."

As an evidence of the great enthusiasm which inspired our author in the prosecution of his noble investigations in the cause of humanity, and of his professional zeal, even to his own pecuniary disadvantage, we give an extract from his "Preface." He therein states:

On the termination of the war of 1815, I expressed in print my regret that we had not had another battle in the soil of France, to enable me to decide upon three important, but doubtful, points in surgery. The battle of Waterloo afforded the desired opportunity. Sir James M'Grigor, then first appointed Director-General, offered to place me on full pay for six months, which would have been destructive to my prospects in London; I, therefore, offered to serve for three, which would be called a job although the difference between half pay and full was under £200. My proposition was accepted, and I carried into effect every suggestion. The doubts on the points alluded to were dispelled, and the principles wanting were established. Three of the most important cases, after the battle, were brought under my care, and I never quitted the York Military Hospital, then at Chelsea. The rank I then held as inspector-general precluded my being employed. It was again a matter of money. I offered to do the duties for a staff-surgeon's *additional pay*, provided two wards were assigned to me in which the worst cases from Brussels and Antwerp might be collected. The offer was accepted, and the hospital was duly established, until the hospital was broken up, and the men transferred to Chatham

The words placed in italics by ourselves led us to this conclusion, that, had Guthrie attained the good fortune to serve in the army of Napoleon, instead of that of Wellington, with such opportunities as the profession, and merit of the highest order, he would have been now enjoying the greatest honours the state can bestow, instead of being abandoned to the reward of immortality only by the side of Hunter.

THE LITTLE PILGRIM A Periodical for Young People. Edited by GRACE GREENWOOD Philadelphia, U.S.A.

We seldom find works of this class; but, we have been so charmed with the elegance and simplicity of the language of the "Little Pilgrim" —the high aim and generous sentiments—that we cannot refrain from introducing it to our readers with a hearty recommends fon of its pages to all who may be able to obtain a perusal of them. The talented editor has just returned to America after a lengthened visit to Europe, and it would be well for both countries were exchange visits to be frequently so full of pleasant memories as those stored up by Grace Greenwood—not hoarded for selfish ends; but preserved for generous dispersion among the young intellects of America.

From some excellent verses entitled "Salutatory," we extract the following:—

He has crossed the ocean surges,	
He has known the tempest's roar,	He's not shy about discovering
But, his pilgrim way he urges	Of the wonders he has seen.
Till he paints at your door.	He was open all his budget
Tinsel knicknacks, and gay firelight,	If you chose to begin
Screening on its darkness cold,	He'll go tears and he has gay laughter,
Cheers him with its genuine welcome,	And some things that are between—
And its double heart grows cold.	Let the LITTLE PILGRIM—

* * * *

From a pleasing paper, "Countries I have seen," she unveils several localities with a delightful interest by turning historical incidents and facts into graphic stories. Here is a bit from "The Story of William Shakspeare."—

Years went by, and the little William or Will, as he was called, grew in beauty and in knowledge. He was not a ready and robust as most King's boys, but he was well-formed, active, and spirited. He had a broad, high brow, great deep, thoughtful eyes, and a mouth full of sweetness and pensiveness. But he was a quiet, gentle, wayward, wilful boy, who never took heartily to work of any kind, and was never tired of reading poetry, plays, romances, and history. He used to wander off alone in the fields and woods and listen to the winds and birds in the trees, and the ripple and laughter of brooks down rocks and glens; and he sometimes helped have been overheard talking to himself, and singing catches of wild songs. He would lie for hours on the banks of a river, watching the shadows and the clouds, or idly pucking up grass and daisies, and singing such as the little river, who, he dreamed out beautiful plays and wonderful fairy tales. And as misery is proverbially fond of company, he gave many curious turns, and to I strange, wild stories to his brothers and sisters, till he made them laugh and cry, and so entranced them all together, and himself too, that they would shiver and shudder at the wind and birds in the trees, and the ripple and laughter of brooks down rocks and glens; and he sometimes helped have been overheard talking to himself, and singing catches of wild songs. He would lie for hours on the banks of a river, watching the shadows and the clouds, or idly pucking up grass and daisies, and singing such as the little river, who, he dreamed out beautiful plays and wonderful fairy tales. And as misery is proverbially fond of company, he gave many curious turns, and to I strange, wild stories to his brothers and sisters, till he made them laugh and cry, and so entranced them all together, and himself too, that they would shiver and shudder at the wind and birds in the trees, and the ripple and laughter of brooks down rocks and glens; and he sometimes helped have been overheard talking to himself, and singing catches of wild songs. SKETCH ON THE DANUBE AT GIURGEVO, OPPOSITE RUSTCHUK.

great importance, which has recently been the scene of sanguinary contests between the Russians and the Turks. In our last Number we stated that this village was not set down in the maps; but Mr. John Phillips, the geographer, has kindly sent us a Sketch, showing the exact locality of the place, which we this week engrave. It will be seen that it forms the north-east point of a triangle having the river Danube for its base; the longest side being about forty miles—*i.e.*, from Giurgevo to Bucharest; which is situated on a tributary of the Argis, forming a drain from the dismal swamp on which the capital of Wallachia is situated.

The following is the Russian bulletin of the battle of Oltenitza, published at Bucharest by Prince Gortschakoff, as an order of the day:—

On the 1st inst. the Turkish troops in considerable numbers left the camp at Turtukai, and occupied an island at the mouth of the river Argis. On the following day they passed over to the left bank of the river, and occupied the stone building of the quarantine establishment. On the report made by our advanced posts of Cossacks, I ordered General Dannenberg to take up a position near the village of Nutreul Fundoui, and to attack the enemy from that point. In the afternoon of the 4th he marched against the enemy, who had had time to entrench themselves. The quarantine building, armed with six pieces of cannon, formed the centre of their position, which was supported on the left by the river Argus, and on their right by the Danube. The Turks were, besides, protected by works and palisades. The right flank of the enemy was also defended by three batteries established on the right bank of the Danube, which at this place is only 312 toises in width. The left flank was protected by batteries erected on the island of the Danube. On our troops reaching within the distance of cannon-shot, the enemy opened a fire from all his guns, and even from some mortars on the right bank. Two of our batteries advanced to within a distance of 450 toises from the Turkish entrenchments, and returned their fire with great energy.

After an hour's well-supported firing they were able to approach within the range. The infantry, protected by the artillery, advanced rapidly towards the enemy's entrenchments, and, in spite of a destructive fire, penetrated even into the ditches. This bold and sudden attack threw the enemy's ranks into disorder; the cavalry took to flight, and precipitated themselves into the Danube. As our shells had caused two explosions in the quarantine building, the Turks hastily withdrew their artillery, and retired in disorder towards the steep banks of the river. The troops also retired from their entrenchments, and a part of them gained their boats. General Dannenberg having attained the object he had in view, of preventing the Turks from taking up an advantageous position on the left bank of the Danube, thought it prudent not to follow up his advantage, fearing that the losses which would be occasioned by the fire from forty pieces of cannon posted on the right bank of the Danube would not be compensated for by any advantage he might gain. The loss had, besides, been already very considerable. He consequently decided on returning to his former position. The Turks did not attempt to disturb his movements. The alarm which had been inspired in the minds of the Turks by the bold conduct of our troops was so great, that we were able to erect temporary hospitals for the wounded close to the quarantine building, protected by merely a picket of cavalry, for the Turks did not attempt to disturb them.

THE BLACK SEA, WITH THE ENTRANCE TO THE BOSPHORUS.

OUR Engraving gives a spirited view of the southern part of the Black Sea, near the entrance to the Bosphorus, with the Lighthouses and Castle which mark the opening to the latter. The Black Sea is said to have received its present name from the Turks, who, having been accus-

THE BLACK SEA.—BATTERY AND LIGHTHOUSE.—ENTRANCE TO THE BOSPHORUS.

tomed only to the navigation of the Archipelago, where the numerous islands and their convenient ports afford many places of refuge in case of danger, found the traversing of such an open expanse of water—which is subject to heavy storms—very perilous; and accordingly they expressed their fears by the epithet "black." The ancient Greeks, also, called it *ἄξενος* (*axenos*, inhospitable). This sea, though subject to storms, and in the northern part frozen over in winter, is free from rocks; and the navigation in such times, though attended with some difficulty, is considered to be perfectly practicable. The Turkish fleet has recently been cruising here, both with a view to practising the crews, and to guard the shores against sudden attacks on the part of Russia.

THE NEW IRON CLIPPER-BUILT SHIP "TAYLEUR," FOR AUSTRALIA.

NEW IRON CLIPPER SHIP "TAYLEUR," FOR AUSTRALIA.

When the substitution of iron for timber as the material for shipbuilding was first successfully tried, it was justly regarded as tending to establish the supremacy of great Britain as a maritime power for ages to come. We have within our immediate reach ample stores of that material, which afford our builders the means of competing with those new countries, whose supplies of cheap timber it was feared would afford them an advantage over us. The extent, however, of the benefit conferred was not in the first instance sufficiently appreciated. The iron ship builder is comparatively independent of locality in the carrying on of his trade. Wherever water can be found to float a ship, when completed, the builder who adopts iron as his material may erect his stocks and his workshops, protected by his isolation from the annoyance of those strikes and combinations amongst the men whom he employs, which are so frequently interfering with his competitor, the wooden builder, who is bound inexorably to the dear accommodation afforded in our seaports—inasmuch as there alone he can have a sufficient stock of timber to select from. One instance of this is the noble ship now under our notice, which has recently been launched from the building-yard of the Bank-quay Foundry Company, at Warrington, an inland place on the river Mersey, distant by water about twenty miles from the port of Liverpool.

The *Tayleur* is the largest sailing merchantman ever built in this country, and has been designed expressly for the Australian passenger trade, to form one of Messrs. Pilkington and Wilson's celebrated White Star Line. She is 2500 tons new measurement, and will carry 4000 tons of cargo, on a draught of 21 feet. Her dimensions are:—Length of keel, 210 feet; rake forward, 15 feet 4 inches; stern-post rake, 5 feet; over all, with counter, 250 feet; breadth of beam, 40 feet.

Strength of construction, as well as model, has been especially attended to by her builder. Her frames are all of angle iron, five inches by three, and five-eighths of an inch thick, with reverse frames also of angle iron, three inches by three. They are fifteen inches apart amidships, and eighteen inches fore and aft. The girders which support her floorings are very massive. She has a tubular keelson two feet six by two feet, formed of half-inch plates; and two *outer* keelsons of the same dimensions. Her bilge is of angle iron; and her deck beams are nine inches deep, with bracket ends two feet in length. In a word, she is an amazingly strong vessel; and the workmanship in her is, throughout, of the very best description. With respect to her model, it is all that could be wished for in a vessel built to combine sailing qualities with large space for the accommodation of passengers. She is slightly hollow in her entrance, and sharp astern, with an ample floor, which will enable her to carry a large spread of canvas. There is thus every certainty that she will prove at once a fast sailer and a safe and comfortable vessel.

Although built as a three-decker, having a spar deck, the *Tayleur* is only intended to carry passengers on one—the main deck; and even on this she is only fitted up for about three-fourths of the number which she is capable of carrying, the remaining space being liberally given up by her owners to increase the accommodation afforded. That this is unusually great, is at once obvious, from the fact that her beam (40 feet) is 10 feet wider than that of the ordinary class of vessels engaged in the trade; thus allowing an increased space along the middle of the deck, between the rows of berths. She is also very lofty, and her ventilation is perfect. A shaft through her foretopgallant-deck; and four port-holes in her stern afford a constant current of air through the ship; and she has, besides, seven covered hatchways, with windows to open and close; and side-lights, about 8 feet apart, along her whole length, and opening into every berth. She is divided into five compartments, to accommodate different classes of passengers—the fittings and arrangements in each of which are of a very superior description. A few cabin-passengers will be carried in the saloon on deck, for whom the accommodations in which are in no respect inferior to those provided by our first-class steamers.

In every respect, the *Tayleur* is the perfect model of what an emigrant ship ought to be for such a voyage as that to Australia. No expense has been spared in her construction, or in her fitting-up; and it can scarcely be doubted that she will prove herself worthy of the great skill, pains, and liberal expense which have been bestowed upon her.

THE STEAM-SHIP "STAG."

This fine vessel is one of three magnificent new steam-vessels, respectively named the *Stag*, *Elk*, and *Lynx*, now fitting out for the Glasgow and Belfast Royal Mail Steam Packet service. The mails between Scotland and Ireland have been conveyed by this route since July, 1840, with regularity and convenience unknown before, when the mails between the two countries were carried in Government steam-vessels between Port Patrick and Donaghadee.

The service was undertaken by Messrs. Burns, of Glasgow, and been carried out by them, entirely free of charge to Government, y their steam-vessels employed for the conveyance of goods and passengers between these important districts of the two countries—thus conferring an important benefit on the community by their regularity and efficiency, and at the same time saving a large sum of money to the country every year by the withdrawal of the expensive and inefficient packet stations formerly maintained.

THE NEW STEAM-SHIP "STAG," FOR THE GLASGOW AND BELFAST ROYAL MAIL STEAM PACKET SERVICE.

CALENDAR FOR THE WEEK.

SUNDAY November 27.—Advent Sunday.
MONDAY, 28.—Revolution in Poland, 1830. Goldsmith born, 1713.
TUESDAY, 29.—Sir Philip Sidney born, 1554.
WEDNESDAY, 30.—St. Andrew. Duke of Gloucester died, 1834.
THURSDAY, December 1.—Alexander of Russia died, 1825.
FRIDAY, 2.—Battle of Austerlitz, 1807.
SATURDAY, 3.—Flaxman died, 1826. Belzoni died, 1823.

THE WAR OF TURKISH INDEPENDENCE.

Having despatched our own Artists and Correspondents both to Constantinople and to the Seat of War in Wallachia and Moldavia, we are enabled to announce as in preparation

A GRAND DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS:
Containing a full Account and exclusive
HISTORY OF THE PROGRESS OF EVENTS
ON
THE BANKS OF THE DANUBE.

Among other Illustrations will appear—

An Equestrian Portrait of Omer Pacha.
Portrait of Prince Gortschakoff, the Russian Commander.
Portrait of Prince Menschikoff.
The Attack on Oltenitza.
The Passage of the Danube at Widdin by the Turkish Troops (Page block).
The Russians at Giurgevo.
Omer Pacha and his Staff.
Views of Slatina, Kalafat, Turtukai, &c.
The Camp at Schumla.
The Russian Head-quarters at Bucharest.
The British and French Fleets in the Bosphorus.
Omer Pacha's Camp at Night.
Rejoicings at Constantinople.
Episodes of the War.
Scenes in the Capital, &c., &c.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 26, 1853.

THE aspect of the Eastern Question is considerably altered since we wrote last week on the subject. The news published last week in the morning papers, recording the supposed capture of Bucharest by the Turks, and the flight of the discomfited Russian army towards Cronstadt, turns out to be without foundation; and all hope of a speedy termination of hostilities, which such an event would have warranted, has vanished.

It appears by the various accounts from the seat of war, received in the course of the week—the principal points of which are given in another column—that the Turks, after blowing up their works at Olienitza, have recrossed the Danube from all the points they had occupied on the left bank of the Danube, except at Kalafat, where a considerable force remains strongly entrenched; whilst, on the other hand, the Russians have been concentrating their forces in Wallachia and Moldavia, with the view of resisting further attack. In a word, actual hostilities are for the moment suspended; and, possibly, may not be renewed upon any considerable scale till after the winter.

In this crisis—more critical than any into which this transaction has hitherto entered—it behoves the Western Powers seriously to consider how far it may be imperative upon them, in the interests of European commerce, and in the larger interest of humanity, to interpose authoritatively between the contending parties, and to bring this most unseemly and unholy contest to a close. Indeed, in the course of the week, the organ of the Aberdeen Ministry has thrown out a hint of a disposition on the part of France to join Great Britain in some such measure; "a Treaty of Pacification" between the two Governments, to which the other European Powers should afterwards be at liberty to give their adhesion, being suggested as the proper course to adopt. Admitting the propriety—indeed, the absolute importance—of France and England no longer hesitating to join in a solemn declaration of the view they take of the war between the Czar and the Porte, and of the nature and extent of the aid they may be prepared to give to the latter; we do not concur in the form under which the *Times* writer proposes that this should be done. The "two memorable precedents" which he refers to—that of the Treaty of 1827, for the pacification of Greece; and that of the Convention of 1840 (not "quadruple treaty," as he erroneously describes it), for the pacification of the Levant—are clearly inapplicable. In both these cases the question was one of civil war between the Sultan and his subjects or dependencies. In the case of Greece, the high contracting parties undertook "to offer to the Ottoman Porte their mediatory offices, with the object of bringing about a reconciliation between that power and the Greek people;" and in a secret article, agreed amongst themselves upon the measures of force to be adopted in case of their mediation being refused. In the case of the Convention of 1840, there was no mention of "mediation;" nor did Great Britain, Austria, Russia, and Prussia, "*determine* the terms" of accommodation between the Sultan and the Pacha of Egypt. On the contrary, it set out by declaring that "the Sultan (who was a party to the Convention) had agreed with (*s'était entendu avec*) the other high contracting parties upon the conditions of arrangement which *it was the intention of his Highness* to offer to Mehemet Ali;" and then specified the nature of the assistance which the four contracting parties of the first part should give the Sultan in case those conditions of arrangement were resisted by Mehemet Ali.

In the case now before us there is no question of mediation or of conditions between a Sovereign and a portion of his subjects, or a rebellious vassal, but one of war between two independent sovereign states; a position in which it is perfectly open to any other independent state to lend its assistance to either of the contending parties, either with or without conference and accord with any other state. Of course, under the existing circumstances, it would be extremely desirable—and, indeed, would follow as a necessary consequence of what has already occurred—that France and England should jointly offer their assistance to the Porte; and that they should agree with the latter as to the specific objects to be attained by aid of this co-operation, and the terms upon which peace with Russia should finally be agreed upon. But, to effect all this, there is no occasion for a conference of the Great Powers, either at Paris or London, as in the Greek question, or the Levant question; the precise rights of the contending parties being clearly defined by existing treaties.

But enough at present of points of etiquette and precedents. We can only express the sincere hope that the Governments of France and Great Britain may, without much longer delay, agree upon the terms upon which they shall propose to join Turkey in a treaty of defensive alliance; and that they will afterwards act upon it with vigour and success. There is a common Law of Nature far above diplomatic precedents and the etiquette of Courts; and by that Law, the State which obstinately engages in an unjust war, and perseveringly invades the rights and disturbes the peace of its neighbours, is denounced as a public wrong-doer, and a common pest.

"In the case of a nation," says Vatel, "which should make an open profession of trampling justice under foot, defying and violating the rights of others on every occasion she thinks proper, the interests of society would authorise all the other nations to unite together to repress and punish that state. In saying this, we do not at all forget the maxim already established, that it is not the business of nations to put themselves up as judges over one another. In particular cases—cases susceptible of the smallest doubt—we ought to presume that each of the contending parties may have some right on their side: the unjust conduct of the one which is in the wrong may be attributable to error of judgment, and not to a general contempt for the dictates of justice. But if, by its constantly declared policy, and a systematic course of conduct, a nation should show itself evidently in this evil disposition—if no right is held sacred by her—the safety of the human family demands that she should be repressed."

The annotator upon Vatel, in the edition before us (who subscribes himself with the letter D.), says, that with such an offending state, "repressing" is not enough; that it ought to be "destroyed" *(tuer)*—not physically, but morally—so far as to deprive it of the power of doing mischief in future; and we heartily agree with him.

WE have received the following from an officer in the British service; and, at this time, when wars and rumours of wars are prevalent, recommend the statements and arguments of the writer to the earnest consideration of the Government and the people. The days are gone when it was customary to consider the soldier as a mere machine. As the present time he is looked upon as a human being, and it is the interest no less than the duty of states to make all proper and necessary provision for his comfort.—

"When the condition of any class of human beings may be benefitted by deviating from objectionable custom, it may seem inexplicable why perseverance in error should be adhered to. In vindication of absence of reform in nearly every Government department, the expense incidental to change is generally thrust forward as the insurmountable barrier opposed to the achievement of what is right. Based as the British constitution is, adherence to wrong must not be attributed solely to those from whom a revision of long-tolerated evils might be expected. In many instances the supposed power to redress grievances is extremely limited. To propitiate parties, the annual estimates laid before Parliament are framed with one grand object—that of showing a decrease in the Budget. So poor a subterfuge is unworthy of a great nation; but, in pursuance of this economical practice, no branch of the State suffers more than the army.

"Attention to the men's cleanliness, and interior economy when in barracks, not alone promotes health; but, by enhancing the desirability of their position, engenders content, and thence arises cheerful obedience to orders, and willing observance of all duties. The soldier, when in the field, never expects comforts which the poorest artizan may command. But when in quarters, why should he not participate in those advantages which are available to civilians in his own grade? Simply from the *inexpediency* of incurring expense! Men can bear much, and to the honour of the British soldier he does not complain of his personal inconveniences, but many at this very moment, writhe under the degradation to which their wives and children are subjected.

"The inconvenience—without touching on the immorality—of married women sleeping in the same room with from fifteen to perhaps thirty single men, elicited a warrant, allowing commanding officers to permit soldiers, legally wedded, to lodge out of barracks. Towards effecting this object, the family was allowed one penny per diem. The insufficiency of this sum, wherewith to find shelter, light, and fuel, was so manifest, that in the following year that amount was doubled, thereby giving the soldier 14d. a week as a means of rescuing his wife and children from the impurities of the barrack-room. Although this regulation was unquestionably intended as a boon, those who embrace it, become, in a pecuniary sense, worse off than before; since, how is it possible to procure a decent shelter for a family, and purchase coal and candle, for one shilling and two-pence per week? Respecting the daily pay, a man, if in mess, cannot save more than four-pence out of his one and-a-penny; and with that pittance he must feed and clothe perhaps three or more children, exclusive of his wife. Nothing, therefore, can be gleaned from *that* source towards defraying the expense of his lodging.

"On the other hand, what is the woman's position if living *in* Barracks? The commonly-received impression, that the wife of a private soldier is in point of rectitude lower than others of her own class, may possibly be urged. But if such *be* the case, by what agency has she been perverted from a better course? Many a girl has entered a barrack-room pure in mind and strong in virtuous resolve; but what can these avail where decency is continually set at nought, and female delicacy openly disregarded? A thin curtain, partially enclosing a small space at the extremity of the apartment, alone separates her from the men. In the narrow space allotted, the soldier's wife must make her home. The only means whereby she can honestly add to her husband's pay, arises from the men's washing, averaging from 2s. to 2s. 9d. per week. Even that is bestowed as a favour. No fuel is allowed, and in bad weather she must dry the clothes as best she may. It frequently happens that the men subscribe out of their own pockets for firing, to enable the woman to fulfil her task. Taking in needle-work is out of the question; for who would employ a sempstress destitute, from circumstances, of the means of fulfilling an order?

"At no period of the twenty-four hours—except when the men are on parade—is the soldier's wife exempt from the pollution of coarse language and revolting jokes, such as never should profane the female ear. But even that brief period is not at her own disposal. It must be devoted to the drudgery of her calling. A more unhappy position than hers cannot well be imagined.

"It has been shown that, to escape the humiliating turpitude consequent on living in such unrestrained freedom with the men, the alternative of dwelling out of Barracks is resorted to. In that case, the outlay for shelter must be defrayed from what is absolutely required to purchase food. If, on the other hand, the debasing companionship is tolerated as an unavoidable adjunct to the blessing of resting under a roof, is it surprising that women so situated should, ere long, become equally, if not more, corrupt than those with whom they perpetually associate? Human nature must be more perfect, before a different result can be looked for.

"And this dread ruin is wrought on thousands of our fellow-creatures, rather than Government should expend the money requisite for eradicating so foul a blot.

"At Woolwich, the Ordnance have taken better care of their own people. There, cottages—or, as they are termed, "huts"—are built expressly for the accommodation of married men. Removed from the loathsome necessity of being herded with the other sex, like beasts of the field, a well-disposed woman finds ample time for attending to her husband's comforts, together with his children's wants. She probably may obtain some remunerative employment from the officers' families, or others, in the neighbourhood. The system having worked so well with the Royal Artillery, why should not the benefit be extended to the Line? At every military station at home, and in the colonies, dwellings might be erected apart from the general barrack; and permission to reside therein be made dependent upon continuance of good conduct: and that such arrangements are not even commenced, is truly a slur on humanity.

"Thousands upon thousands of pounds are annually bestowed in Great Britain on charitable institutions; and even the "repentant sinner" can seek refuge in some asylum where he may find solace for the past, and prospect of amendment in the future. But, in the case of the soldier's wife, by culpable indifference to her welfare, she is compulsorarily thrown amid never-ceasing temptation, and afterwards execrated and despised for becoming what a supine Government has made her.

"Is there not some member of the Legislature who would dedicate a portion of his time to a searching inquiry into this most notorious grievance? The recompense would amply repay the labour; and who, indeed, might not feel justly proud if, by perseverance and well-directed exertions, he ultimately succeeded in rescuing hundreds from misery and vice?

"So long as the control of the Barrack department is vested in persons who, neither by experience nor profession, *can* estimate the injury they inflict, so long must the abhorrent practices, now sanctioned, exist. They involve the total annihilation of all those attributes which Providence, for man's benefit, has so lavishly bestowed upon woman."

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Prebendary Stalls:* The Rev. E. Huxtable to Wells Cathedral; Rev. R. W. Barnes to Exeter Cathedral. *Honorary Canonry:* The Rev. E. H. Gifford to Worcester Cathedral. *Rectories:* The Rev. H. N. Barton to St. Eryan, Cornwall; Rev. N. A. Garland to Deal; Rev. G. Alston to Studland, Dorset; Rev. A. F. Sheppard to Lamplugh, Whitehaven; Rev. J. Nunn to Thordon, Suffolk. *Vicarages:* The Rev. C. R. Hay to Thundridge, Ware, Hertfordshire: Rev. S. Rashleigh to St. Wenn, Cornwall; Rev. J. S. Wasey to Compton, Berkshire; Rev. C. Taylor to Bramley-in-the-Willows, Nottingham. *Incumbencies:* The Rev. G. A. S. Powell to South Barcombe, Salisbury; Rev. A. E. Aldridge to Worton, Wiltshire; Rev. E. Neale to Rathmel, Yorkshire. Rev. F. Pigou to St. Mary's, Shrewsbury; Rev. M. W. Gregory to Roade, Northampton. *Perpetual Curacy:* Rev. G. Hales to Birch, in Middleton, Manchester.

TESTIMONIAL.—The Rev. John Baker, M.A., Master of Christchurch School, Oxford, has just been presented by his pupils with a copy of the Illustrated edition of Wordsworth's "Greece," as a mark of his pupils' esteem and gratitude for his great kindness and liberality.

CHURCH-RATES.—A Correspondent contradicts the announcement made last week, respecting the return for Kettering. He states the free polling to be—194 against the rate, and 187 for it; the majority being only 7.

THE NON-RESTRAINT SYSTEM IN LUNACY.—In the ILLUSTRATED LONDON NEWS of January 3rd, 1852, will be found a most graceful acknowledgment and record in the shape of a superb testimonial, of the valuable service rendered by Robert Gardiner Hill, Esq., of Lincoln, as the originator of the total abolition of restraint in the treatment of the insane, now commonly called the non-restraint system. Notwithstanding this public recognition, endorsed also by the words of Dr. Charlesworth and Dr. Conolly at the Hull medical meeting, most ungenerous attempts have recently been made by interested individuals to deprive Mr. Hill of his legitimate and hard-earned honours, by ascribing the merit of this grand discovery to men who, whilst living, were too high-minded to appropriate to themselves what they publicly acknowledged and well knew was the work of another. In addition to a large amount of documentary evidence, the declaration of Dr. Charlesworth and Dr. Conolly, that "The real merit belonged to Mr. Hill, of the Lincoln Asylum," must make any attempt to pluck a single leaf from Mr. Hill's laurels quite futile and ridiculous.

GILSTON HALL.—This interesting Elizabethan mansion (engraved in the ILLUSTRATED LONDON NEWS, No. 620) has recently been taken down, and the materials have been sold, including some richly-stained windows. The hall was once the property of Mr. Plumer Ward, author of "Tremaine," &c.

NEW MINING SCHOOL.—The important mining county of Cornwall, alive to the full importance of increasing the amount of scientific knowledge amongst those who are engaged in the direction of underground works, and in the construction of the pumping and other machinery (which becomes much more complicated with the increasing depth of the mines), has resolved on the foundation of a Mining School. A county meeting has been held at Truro, at which the members of Parliament and all the gentlemen of the county attended; when a committee was appointed to consider the organisation of the school upon a liberal plan, capable of gradual extension.

POSTSCRIPT.

RUSSIA AND TURKEY.

The news from the seat of war upon the Danube is contradictory. The retreat of the Turks across the Danube has left the two hostile armies in nearly the same position as that of last month, with the exception of Kalafat, in Lower Wallachia, where a strong Turkish detachment was left. Kalafat has been recently fortified with entrenchments and fieldworks: it possesses a secure communication with Widdin, and can be occupied at pleasure by as many additional troops as Omar Pacha may decide on throwing across the river.

A telegraphic despatch from Vienna, dated Wednesday evening, states that Omer Pacha has received orders to continue the war with energy; but the latest telegraphic despatches received, state that the Turks are withdrawing from Kalafat in obedience to superior orders from Constantinople. The advance of the Russians from Krajova on Kalafat is confirmed; and it is believed that the bulk of the Russian troops are marching into Lesser Wallachia. It is probable that, after having compelled the Turks to retire across the river at Oltenitza, Prince Gortschakoff may have resolved to direct his operations against Kalafat, either after the reinforcements from Jassy have reached him, or with the army which is now concentred between Oltenitza and Bucharest; and that his operations have been anticipated by the retirement of the Turks.

Up to the 14th no English or French ships of war had gone into the Black Sea. It is said that diplomacy is again at work, and that the Ambassadors having advised the Sultan that no hostilities of any serious kind be undertaken at present. Fuad Effendi has been sent to the army upon this mission. It is again asserted that Prince Gortschakoff intends attacking the Turks, and that he has been lately instructed by his Government to conduct the war with energy and perseverance; but if it be true that the Turks have retreated from Kalafat, he will probably be satisfied with holding military possession of the Principalities, and will not attempt to carry the war across the Danube.

It is said that the son of Prince Vogorides of Wallachia, has been arrested and sent in chains to St. Petersburg, for having carried on a correspondence with Omer Pacha, and for having informed the Turkish General of the movements of the Russian army. Six Boyards have also been sent to Siberia. They were found guilty of the same crime. The Wallachian Militia have been incorporated with the Russian regiments.

From Jassy we hear that the Russians have levied recruits from the inhabitants of the town and its environs. They captured and pressed into their service a number of Jews, who offered money for their discharge, and who were consequently released. In the Russian camp there are frequent executions of would-be deserters.

A letter from Constantinople of the 7th, speaking of the want of money in Turkey, says:—

Although the troops and the employés are always regularly paid, the scarcity of money is extreme; there is a total absence of small coin for the most ordinary wants of life; the exchange on the pound sterling has risen to 123 piasters (23f. 25c.), and it is feared that it will rise still further.

The medical men prove themselves to be the best correspondents, from the seat of war, as the following extract from a Bucharest letter of the 11th, which has appeared in a Vienna weekly medical journal:—

My letter of the 4th was written under the impression that we had 3000 sick, among whom were many wounded; and, unfortunately, my statement was correct. The conflicts of which mention was made has plied us with 1000 wounded men, and cost many staff-officers their lives. From Kalarasch, Oltenitza, and Giurgevo came most of our wounded: the camp and the marshes have supplied us with cases of cholera, intermittent fever, typhus, and inflammation of the lungs -all which complaints are on the increase. As at first there was a great want of the means of transport, wounded men are still brought in. Two waggons of the country are so infamously built that they often break down under the well bred of a "whole" soldier, and the transport carriages of the Russians were not in sufficient numbers. The wounded were brought from Giurgevo in large waggons, each of which contained six men, one lying on the other—head to feet, and feet to head a layer of maize straw forming the partition between them. The wounds were attached a so-called "talega," a carriage made of two ladders, in which reclined a seventa patient. The cold is increasing, and consequently the men are frequently brought in with torn fingers and toes, and gangrenous wounds. Typhus, the effect of the wounds, there must have been more cutting and stabbing at Kalarasch and Oltenitza, and more use of bre-arms at Giurgevo. The skirmishes and less severe conflicts must be unceasing, as the small garge of newly-wounded men come in continually. To-day, the 14th, all the materials for surgical field-stations have been brought in, which leads me to suppose that some more important strategic operation being about to take place. We see wounds enough to convince us that blood must have been freely flowing on the banks of the Danube. Numerous groups of soldiers in last night were Arabs and Turks—bronzed, haggard, half-starved looking fellows, clothed in rags, with their feet wrapped in strips of coarse hair and dirty beyond description. For the last month the high roads from Moldavia have been covered with advancing troops. The native militia and the native medical men have been mixed up with the Russians, with whom they are in the field. The wounded from Kalarasch went to Kalarasch, and the greatest supply of provisions to Giurgevo. Since the departure of the noble Hospodar Stirbey, the population have been much cast down, but the "Muskai" (Russians) are vivacious enough, and eager for war.

THE BATTLE OF OLTENITZA.

The special military correspondent of the *Chronicle*, writing from Turtukai on the night of the 4th, gives the following details of the battle which took place that day at Oltenitza:—

This day (Nov. 4), I hope, will be memorable, as on it was fought as gallant an action as history can record. During the morning not a soldier of the Russian force was to be seen. The whole country was scanned by eager eyes, assuming columns through every imaginable species of telescope, bioncle, lunaelle, &c. They, however, failed in detecting aught but an empty village, and an open plain. Later a cavalry picket was discovered, which led people to suppose that they were not quite aware of opposition most fully realised afterwards; for, at about twelve, or half-past, the Russians gradually led out their forces on the plain. Twelve guns were placed as a battery of position, at about 1200 or 1500 yards from the quarantine station. Two bodies of infantry it remains to be known whether they were regiments or battalions placed themselves under cover in a wood on the right of the guns—their right. Their left rear were two more bodies of infantry, and on their left two more. Supposing them to be of 1000 each, it would give 4000 men, which is not an improbable number.

On the Russian left were three regiments of cavalry echelloned out of range, each having two guns. There was likewise a body of Cossacks, to the amount, perhaps, of 600. The batteries were served by about 200 gunners, giving a total of—at the medium calculation of the infantry—8000 men in the field.

The Turks, if their report is to be trusted, had in the entrenchment three battalions and two companies, amounting to 2400 men, add the gunners, 160, and the irregular cavalry as many more—2700 men.

On looking at the above numbers, with the recollection of the troops as they were in the field, the Russian forces appears undervalued. Be that as it may, at 8 a.m. the Russian artillery opened its fire, and was replied to by the guns of the entrenchment, the guns of the battery at the eastern end of the entrenchment before described, and by the guns on the right bank of the river. The cannonade was kept up most vigorously on either side. The Russians had their battery of position accurately espaced, each gun being pieced at an equal distance from its fellow—the fruits of good drilling. Their practice, as far as one could be judged from the bank of the river, was most excellent, their shells bursting beautifully. They opened at a long distance, it is true; but the guns were no pounders to galley with cavalry, but 18-pounders, such as are usually employed in similar circumstances. The remainder of the artillery appeared to consist in the cavalry guns, or horse-artillery, but attached in pairs to regiments of cavalry, as was formerly the case in most European armies. Two of these guns took up as flanking a position as the Arglesh river would permit them, but could not have caused much damage as emplaced. On the Turkish right the other four guns opened on the entrenchment. At 2 10 p.m. the Russian artillery exploded one of the Turkish ammunition-waggons, or limber-boxes. At 2.15 p.m. the infantry made their appearance from the Turkish left, emerging from under cover of the wood, which they had most judiciously occupied. This attack was seconded by the advance of the infantry on the (Turkish) right of the battery of position, and by the other regiments from the village. The chief attack, the serious one rather, being on the left flank of the entrenchment where it met the river—the only portion not properly completed. Their advance was steady; the Turks piled the firelock vigorously; and after the enemy had got up to perhaps fifty yards, they turned, and beat a retreat to their rug little quarters in the wood. They must have suffered very severely handled, as they were close under the muzzles of the musketry, whose every bullet surely found its billet. Just as they advanced, a second and a similar explosion took place in the entrenchments—sadly inopportune, as was doubtless thought by the Turk. The Russian artillery redoubled its fire, and the cannonade recommenced fiercely. It should have been stated that the battery of position had come up to about 650 yards, their shot reaching occasionally to the hitherward side of the Danube. About 2.10 p.m. a second attack of infantry was launched at the unfortunate little entrenchment, encompassed on three sides, as it appeared, by its enemies. Skirmishers were duly thrown out; and, on a close approach, were recalled. Be it understood that the infantry advanced in columns on both occasions close to quarter-distance—very ridiculously, it is thought; though of course, the world must bow to the superior knowledge and experience of such a military nation as Russia. The columns had not advanced many paces when they appeared overwhelmed with the infantry fire of the entrenchment, and the artillery fire of a battery on the right bank. They were thrown into the most complete disorder, and retired utterly discomfited. Again their artillery opened, and drove tumults into the entrenchment, and continued firing for half an hour. On the retreat of the infantry, through the glass their dead could be seen in numbers strewing the ground. There could be no mistake about it, as there were hundreds of pairs of eyes that saw them, with or without the assistance of the telescope. A hearty cheer from the entrenchment gave vent to the good spirits of its gallant defenders. It was echoed by one from this side by the united voices of the chief's staff and *posse commitatus*. The Turkish force was commanded by Halil Pacha, as Lieutenant-Colonel in the service, who, upon his presenting himself to Omer Pacha, was made a full Colonel. One of General Prim's Aides d'Camp, Colonel Detente, was present in the action, and escaped unhurt. The Commander received a slight wound in the hand The report of the killed on the Turkish side is only 20; but this was an hour or two after the action, and many, who were then simply wounded, have since, poor fellows, left this scene of trouble.

This morning (8th) it is stated that 1000 stand of arms have been taken. One-half of the eleventh division of the *corps d'armée* contains the 21st Selimginski and 22nd Takut—they have four battalions, each active. The numbers in the calculations above are therefore below the reality.

The *Globe* says:—

According to private accounts, which we had previously received, the apparent rashness of the Russians was occasioned by a skilful *ruse* of the assailed party. Their first discharges of artillery and musketry were made without ball and with blank cartridges. This induced on the part of the Russians a miscalculation of the effective range of the Turkish artillery and musketry. But as soon as the enemy fairly ventured themselves within distance for doing full execution, the Turks opened a murderous fire upon them, their riflemen having previously been instructed not to waste their Minié bullets in indiscriminate volleys, but to aim at the officers, which they did accordingly, with the effect already known.

The *Cronstadt Zeitung* of the 11th has the following:—

The fighting goes on day and night, but the Turks have not succeeded in forcing the Russian lines. Every twelve hours, when the outpost lines have been changed on both sides, the work of fatigue is renewed with renewed vigour The front ranks of the Turks are mostly Arabs, with dark faces and eyes of fire, which, however, do not disturb the equanimity of the Russians.

FRANCE.

Count Walewski has left Paris, on his return to resume the duties of his post in London. The two Governments of France and England, remain, as formerly, in a complete unanimity of opinion respecting the interests of the Western Powers and of Europe in the dispute which is now convulsing the East.

It is announced that the reduction of the duties on wrought iron imported into France by the maritime zone about 10 per cent., and the duties on cast iron by about 30 to 40 per cent., from the former rate, has been resolved upon by the French Emperor, solely from a view to the national interests of that country, and not as the result of negociation with any foreign power. The effect of this measure seems to be to equalise the duties on flowing iron by reducing them to the rate previously levied on Belgian produce only. And a similar measure has been applied to coal, the duty having been lowered in the restricted zone from 5d. to 3d. per hundred kilos. The duty of five francs a ton levied on sea-coal in the French ports has long acted as a restriction on manufacturing prosperity, and a tax on social comfort. The duty, by the recent decree, will be reduced to three francs; and it is hoped that before long it will disappear altogether. The reduction of the duties on coal and iron is a new proof that in the Council of State, charged with the preparation of these measures, and in the mind of Louis Napoleon himself, there is a disposition to relax the prohibitive system of France. It appears, that all the exertions made by France up to this time have only secured one third of the quantity of corn required to make up her average consumption, and the Government has fairly told the country that it must look for relief in this emergency to no other source than to the unlimited importation of rice. The price of corn in France is about as high as it is in England; and the distress in many of the rural districts is augmented by the failure of the vintage, the disorganisation by the prevalent disease, and the great rise in the value of wines of all descriptions. In the wine districts the olive crop has not been favourable, and even the produce of the silk-growers is below the average. But work is abundant, and wages are high: and the general wealth of all classes is rapidly increasing, promoted in one way or another by the Imperial decrees which have given cheaper iron and cheaper fuel to the country.

Letters from Vienna state that, during the interview which the Duke of Nemours had at Frohsdorf with the Count de Chambord, he spoke to him not only as a cousin, but as his Sovereign; and, in addressing him, made use of the words "Sire" and "Roi." On seeing about him the chiefs of the Legitimist party, who have not quitted the Count de Chambord since 1830, the Duke de Nemours observed that he was not happy to see him surrounded by personages who had proved their devotedness and fidelity to the Royal House of France.

The Duchess of Orleans is said to have given her adhesion to the fusion, against the counsel of her adviser, M. Thiers. To facilitate the restoration of the Bourbons, an alliance between Russia, Austria, and Prussia, on the Eastern question, is earnestly desired by the Legitimists.

The Prince de Joinville was preparing to proceed to Lisbon to pass the winter, but has changed his mind in consequence of the death of the Queen Donna Maria.

It is said that several Miguelites have already left with the object of getting into Portugal. There is no chance of success in the event of such an attempt being made.

The Bourse was heavy on Wednesday, without any cause assigned, except that Consols had declined in London. The Three per Cents opened at 74f. 5c., fell to 73f. 90c., and closed at 73f. 95c. for the end of the month.

The Emperor and Empress remain at Fontainebleau, where they are entertaining the foreign Ministers and a brilliant party.

PORTUGAL.

By the *City of London* steamer we have advices from Lisbon to the 19th inst., which confirm the intelligence of the melancholy death of the Queen of Portugal, who died suddenly on the 15th inst., after the moon, after giving birth to a male infant, who did not live to see the light. Her Majesty had been in good spirits until eleven o'clock on the previous night. A Council of State was immediately held, and the King Consort, Don Fernando, sworn in as Regent for his son, Don Pedro V. The King Consort's assumption of the office of Regent was well received by the people. The Regent continued the Saldanha-Magalhaens Cabinet in power; and no fears were entertained for the tranquillity of the country.

The Queen's funeral procession was to commence two hours after the *City of London* left Lisbon, on the 19th inst. Her Majesty's sudden death has been deeply felt by all classes in the capital. The funeral would be generally attended by Portuguese, as well as English merchants.

The Princess of Joinville, the late Queen's favourite sister, had a severe shock upon hearing of her Majesty's sudden death, when she arrived in Tagus with the Prince, on board the *City of London*, twenty-four hours after it had taken place.

WEST INDIES.

We have advices from Bermuda to the 3rd inst. Since the last report, the following persons have been carried off by the Zidemic:—At St. George's Island: Lieutenant G. S. Anson, 56th Regiment; October 11th, Assistant Commissary-General, H. F. Oriel, aged 56; October 14th, Mr. Falconer, M.A., in charge of the Hamilton Academy; and October 27th, Margret, wife of Dr. Hunter, M.D., Mayor of St. George's, aged 23. At Boaz Island: October 28th, Martha Mary, eldest daughter of Captain Jervis, R.N., aged 18. A private letter says:—

We are still in a state of great excitement about the fever. It has reached Ireland Island (the most western of the group), and for the last fortnight has made severe ravages. The natives still escape, and the fever is chiefly confined to the soldiers and convicts. Every one agrees that this is the very worst type of yellow fever. The Receiver-General of Bermuda has lost his wife, Mrs. Smith, of consumption. This summer has been extremely hot, the warmest remembered, and is still very oppressive. The garrison is fearfully cut up; the 96th Regiment have lost six officers and twenty-one sergeants; the Artillery, three officers; the Engineers, two officers. As to the privates, they have lost some hundreds. We have had five Governors of this colony this year, and expect a sixth before the end of it.

We have letters from Kingston (Jamaica) to the 3rd inst. The question of import duties remained unsettled. The House of Assembly had deferred the passing of the bill until a Committee should make its report.

LATEST INTELLIGENCE.

RUSSIA AND TURKEY.

A Russian bulletin, dated the 11th inst., states that the Turks, who on the 5th occupied the island of Mokan, near Giurgevo, evacuated that position on the 8th, because they were smashed (*foudroyés*) by a Russian battery of 14 pieces. The Turks have retired to Turtukai. Their camp there, from the 16th to the 21st., has been almost deserted. Gen. Dannenberg, in consequence, left Budeschti on the 22nd, with the chief part of his force, leaving 1200 men and eight cannon behind. Unimportant skirmishes excepted, there is now a cessation of hostilities along the whole of the Molde-Wallachian line.

A despatch from Vienna says that the Emperor of Russia, in reply to an inquiry of Austria, states that he will still enter into negotiations if the Porte proposes a project of peace.

Advices from Constantinople of the 14th inst. state that the rumour that an ultimatum for three months had been concluded is officially contradicted. The combined fleets were still at Feycos. The weather was boisterous. The great powers were endeavouring to induce the belligerents to resume negotiations. The Porte had received from the English and French Ambassadors the assurance that it might, in case of need, count on the effective co-operation of France and England; and that it could send its fleet into the Black Sea without fearing to leave the capital exposed to a *coup de main*.

The firm of Baltazzi had advanced the sum of 7,000,000f. to the Porte. The loan is guaranteed by the tribute from Egypt.

FRANCE.

The *Patrie* states, on the authority of a letter from Vienna, of the 21st, that the Russian army in the Principalities had received orders to assume the offensive; and that it is to cross the Danube and march towards Adrianople. If this be true, the British and French fleets will, without doubt, enter the Black Sea, and French troops will be sent to assist the Sultan.

The reconciliation of the two branches of the House of Bourbon has given, it is said, annoyance at Fontainebleau, but the *mot d'ordre* has been to treat the matter with indifference.

It is reported that the French Government still contemplates a loan, as it will be very difficult to meet the enormous expenses incurred till spring.

The Council of State has voted eight million of francs to pay the legacies left by the Emperor Napoleon, by the will which he made at St. Helena.

SPAIN.

The Spanish Cortes were opened on the 19th by commission. The Government, by adopting Senor Martinez de la Rosa, and the Vice-Presidents, &c., of last year, evinced a desire to avoid a party contest on this occasion. Senor Martinez de la Rosa was elected President by a majority of 100.

INDIA AND CHINA.

The India mail has arrived with dates from Calcutta, October 20th; Madras, 24th; Hong-Kong, 11th; Bombay, 28th; Burmah, 8th of October.

Another war was fully expected at Burmah, and a report was current that the King of Burmah had been put to death.

More fighting had taken place in the Nizam's dominions.

Mr. J. R. Colvin had been appointed Governor of the North-West Provinces.

Shanghai is still in possession of the Trads. At Amoy there is still more fighting between the Government troops and the rebels. The country round Ning-Po was in a very disturbed state. Canton was tranquil. Exchange at Kong-Kong on London, 5s. 6d. Trade brisk.

The exportation of grain from Egypt is still permitted.

MUNICIPAL REFORM.—On Friday a public meeting of the inhabitants of Southwark, convened in pursuance of a requisition numerously signed, was held at the Town-hall, for the purpose of taking into consideration the important question of Corporate Reform, with a view to obtain not only the rights and privileges withheld from the Borough by the City of London, but also a just and proper share in the advantages of the corporate institutions. Among the leading gentlemen present were Apsley Pellatt, Esq., M.P.; A. Dorman and Sheriff Wire; John Masters, Esq.; Thomas Winsor Crook, Esq.; Benjamin Elkington; Mr. Thwaites; Dr. Challice, &c. The meeting, however, was very thinly attended. Resolutions to carry out that view, were passed and the meeting separated.

THE EASTERN QUESTION AT GLASGOW.—The Lord Provost presided over 2000 citizens in the City-hall on Wednesday, to express public opinion on the Eastern question. The persons present were chiefly of local celebrity, Mr. Urquhart being the only speaker of national notoriety. A long letter from the South was read; and the resolutions passed expressed a wish that the Government should aid Turkey, and abolish secret diplomacy. Mr. Buchanan, a local journalist, made a thorough Tory speech. He said: One great peace should be the resurrection of Poland (Cheers); the restoration of stolen lands to Turkey; and if these and other just demands be not made, revolutionise the territory of the Autocrat."

THE NEXT AUSTRALIAN MAILS will be forwarded by the *Matilda Wattenoach*, new clipper ship, on the morning of December 4; the mails to be made up in London on the evening of the 3rd, and Liverpool on the morning of the 4th. The packet rates of postage will be chargeable on letters, but no charge will be made upon newspapers.

OPENING OF THE BURY ATHENÆUM.—On Wednesday evening the Bury Athenæum was opened under the most gratifying circumstances. The Lord Bishop of Manchester, Mr. J. Cheetham, M.P., Mr. R. Fort, Rev. D. Vaughan, and many other gentlemen, took part in the proceedings, which were graced by the presence of a large number of ladies. Lord Ashley, M.P., and the Bishop of Manchester were the principal speakers; the meeting was also addressed by Mr. Cheetham, Mr. R. Fort, and Dr. Vaughan.

NEWCASTLE-ON-TYNE.—A numerously-signed requisition is to be presented to the Mayor, begging him to convene a meeting of the inhabitants, to consider the propriety of petitioning the Queen to cooperate with France in defending the Ottoman empire. The first meeting in England, on the Turkish question, was held in April last at Newcastle

POST-OFFICE.—The names of the members of the Committee appointed to inquire into the establishment of the Post-office are Lord Elcho, M.P., one of the Lords of the Treasury; Sir Stafford Northcote, Bart.; Sir Charles Trevelyan, K.C.B., Assistant Secretary to the Treasury; and E. A. Hoffy, Esq., Inspector of Naval and Military Accounts at the Audit Office.

SYDENHAM PALACE.—Workmen are now busily engaged in Westminster Abbey in taking a plaster cast of the tomb of Mary Queen of Scots, to be placed among the statues of the Crystal Palace at Sydenham.

BILLINGSGATE NEW FISH MARKET.—This extensive building is now completed, and the whole of the arcades were on Friday morning thrown open. The space between the houses on the west side of the market and the quay-side has been covered in with immense squares of rough plate glass, and the whole of the vast area, comprising 60,000 superficial feet, is well lighted with innumerable jets of gas.

THE LONDON TRADES.—Thursday night a meeting of delegates from the trades of London assembled at the Bell Inn, Old Bailey, to hear a report from a Preston deputation, and to consider the best means of rendering aid to the "Preston lock-out." A long discussion took place, which ended in a resolution to put into effect that strenuous efforts should be made amongst the trades of London, to render substantial assistance to the Preston lock outs during the struggle.

THE FUNERAL OF THE DUKE OF BEAUFORT took place at Badminton, on Thursday. We shall next week illustrate the mournful scene

COMMON COUNCIL.—A meeting was held on Friday, of the City Common Council, at which a motion was carried to examine into the want of a new bridge between London and Southwark bridges; also to improve the landing places at the Surrey side of London-bridge. Petitions were, at this meeting, presented against the pulling down of Temple-bar.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—A sermon will be preached on Sunday morning, in the church of St. Paul, Covent-garden, by the Rev. Henry Mackenzie, M.A., in aid of the funds of this useful charity. We regret to hear that many cases are weekly precluded admission from the want of adequate means for their support.

SHOCKING ACCIDENT.—On Thursday morning, about ten o'clock, two old houses in Southside-street, Plymouth, that were empty, and had been bought by the Improvement Commissioners, and good part of the materials sold and taken away—suddenly fell to the ground, leaving nothing but the side walls standing, and buried several children: six, from nine to eighteen years old, were dug out dead, and four more are more or less injured—one is not expected to recover.

THE CHETHAM MEMORIAL, AT MANCHESTER.

STATUE OF HUMPHREY CHETHAM.

HUMPHREY CHETHAM was the greatest benefactor of his time to the town of Manchester. He was born in 1580, being the third son of Henry Chetham, of Crumpsall, gentleman, and is described by Fuller in his "History of the Worthies of England," as "dealing in Manchester commodities sent up to London, and signally improving himself in piety and outward prosperity. He was a diligent reader of the Scriptures, and of the works of sound divines, and a respecter of such ministers which he accounted truly godly, upright, sober, discreet, and sincere. He was made High Sheriff of the county of Lancaster in 1636, and discharged the place with so great honour that very good gentlemen of birth and estate did wear his cloth at the assize to testify their unfeigned affection to him."

A Few persons can be found who are fit to be compared with Humphrey Chetham in the exercise of benevolent regard tow r the poor. In his life-time he took up and maintained twenty-two boys to be educated and apprenticed to trades, so as to be able to support themselves by their learning, skill, and industry. By his will he raised the number to forty, bequeathing £7000 for the purchase of an estate, the profits of which were to be applied to the support of his newly-formed charity. The conditions of election to the privilege of his benefaction were, that all be children of poor but honest parents, not illegitimate, nor diseased, lame, or blind when chosen; and the age of admission was not to be under six years, and at the age of 14 they were to be apprenticed.

He bequeathed, also, £1000 for the purchase of books for a library, for the use of all who wished to improve themselves by reading; and £100 for a suitable building to receive them. And, for the augmentation of such library, he left the residue of his personal estate (after the payment of certain legacies) amounting to more than £2000.

The value of this property has now so much increased as to be sufficient to educate, maintain, and clothe 100 boys: and the library which was thus begun contains, at the present time, more than 28,000 volumes of the best works in theology, history, Greek and Latin classics, natural history, and miscellaneous literature.

The charge of this institution is in the hands of 24 feoffees, under a charter of incorporation dated 10th November, 1665.

The will of Humphrey Chetham is dated 16th December, 1651. He died at the place of his abode, Clayton, near Manchester, 20th September, 1653, in the 73rd year of his age, and was embalmed; and on the 12th of October buried in the chapel at the east end of the Collegiate Church, in Manchester.

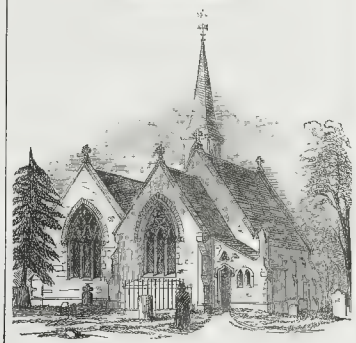
In Dr. Hibbert Ware's "History of the Foundations in Manchester," we find the following observations:—

It is very much to be regretted—and, indeed, not very creditable to the towns which have obtained such singular advantages from his charities—that there is so monumental inscription not even the smallest memorial—to point out the place wherein his remains have been deposited. Standing in the dining-hall, amongst the poor children, or contemplating his bounty and munificence from the desk of his extensive library, one might exclaim, as in the instance of the illustrious architect of St. Paul's Cathedral, "Si monumentum quæris, circumspice!" but it savours somewhat of ingratitude to the individual himself, as well as negligence of the proper force of example to future generations, that the virtues of such a charitable mind should not be set in their proper light, and held forward for imitation. Memorials of this kind are not designed to exalt the virtues of the *dead*, but to evidence the piety of the *living*.

This reproach has just been removed; for the magnificent Statue represented in our Engraving is the pious gift of one who, in early life, was a recipient of Chetham's bounty: and who, after vainly endeavouring to enlist others who had been in like manner benefited, in the work of erecting a suitable memorial in honour of their benefactor, at length determined to undertake the whole himself.

It would be but justice to the high-minded motives of this gentleman, as well as gratifying to the public, if more were known respecting him than we are able to communicate: but his name is kept secret, and must remain so for some length of time. It would be painful to him if it were disclosed.

The Statue has been very ably executed by Mr. Theed, of Henrietta-street, Cavendish-square; and has been placed in the cathedral at Manchester. The figure of Chetham is in an easy sitting attitude, with a scroll of paper in the right hand; and the head, which is characterised by considerable expression, has been copied from a well-authenticated portrait on panel. The costume is that of the seventeenth century; and, at the foot of the pedestal is a boy in the dress worn by those who receive their education in the school. The group is a graceful composition, and a very interesting memorial of the munificent benefactor of Manchester.



FRIERN BARNET CHURCH.—(SEE NEXT PAGE.)

MONUMENT TO "THE SCOTCH POLITICAL MARTYRS," IN NUNHEAD CEMETERY.

MONUMENT TO THE SCOTCH POLITICAL MARTYRS.

ON entering the Nunhead Cemetery, the attention of every visitor is fixed on a granite obelisk, beautifully and conspicuously situated at the confluence of two gravel walks, and backed by shrubbery. Our Sketch of this Monument is as much a memento of Joseph Hume's resolute and untiring perseverance, as of the courage of those patriots who, sixty years ago, endured sufferings and degradation in furtherance of that reform in Parliament which we have since obtained, and now enjoy.

The Monument is of solid granite, 35 feet high, and weighs about forty tons. The inscriptions inform us that it was raised, by public subscription, to the memory of Thomas Muir (barrister); the Rev. Thomas Fyshe Palmer, M.A., and B.D.; Joseph Gerrald (barrister); William Skirving (farmer, and author of works on agriculture); and Maurice Margaret (a literary man of some repute); "who were condemned in Scotland, in 1793-94, for advocating, with fearless energy, the principles of Parliamentary Reform, and sentenced to transportation"—a punishment beyond the severity of the law.

This stretch of authority, and the degradation inflicted on respectable men for advocating public rights, excited general indignation and sympathy. In the House of Commons, Fox, Sheridan, Mr (the late Earl) Grey; and in the Lords, the Marquis of Lansdowne, Lord Lauderdale, and others, warmly advocated their cause, and condemned the sentences; and, more significant still, Counsellor Adams, though he entertained different opinions from the patriots, in his place in the House of Commons forcibly denounced the punishment as cruel and illegal.

In Edinburgh and throughout the kingdom a strong and lasting impression was created, and especially on the minds of young men congregating as students in the Scotch capital Henry Brougham, Thomas Campbell, Dr. Birkbeck, and Joseph Hume, were at the time studying at the Edinburgh University, and partook of the excitement. The latter named, Joseph Hume, though the son of a poor widow, without means or influence, even then resolved to never abandon the idea of raising a public monument to those ill-used men. Years passed away, eight of which he spent as surgeon in active service in India, and twenty-five years of unparalleled industry in Parliament, before the opportunity occurred. In the meantime the object of the political martyrs had been obtained by the Reform Bill in 1831, and the consequent excitement began to subside. The martyrs themselves had long since departed this life. Muir had escaped from the penal colony on board an American vessel; after travelling across the continent of America, he proceeded to Spain, but the ship in which he embarked was attacked and taken by an English cruiser, but he and the other wounded prisoners were put on shore, whence

he made his way from Spain to Paris, where, his wound proving incurable, he retured to Chantilli, where he died on the 27th September, 1798. Mr. Palmer died of fever on his way home, in 1801. Gerald and Skirving expired within three days of each other, at Port Jackson, in the spring of 1796 Margaret alone returned at the end of fourteen years, ruined and infirm, and died in London in 1817.

On the 20th February, 1837, a public meeting was held at the Crown and Anchor, Joseph Hume, Esq., M.P., in the chair, when it was resolved that, "in gratitude to the patriots, who in days less happy than our own, were advocates of the rights, and martyrs in the cause of the people, public monuments should be raised to commemorate their deeds and sufferings in the capitals of Scotland and England." Thus, after a lapse of forty-three years, through the persevering determination of one man, public opinion confirmed the judgment of Fox, Sheridan, Whitbread, Grey, Lansdowne, &c., and reversed the degrading sentence that buried so many victims on distant shores.

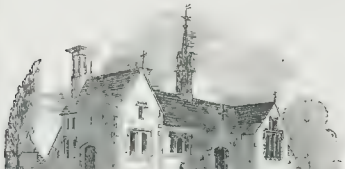
Subscriptions were received from Reformers of all shades and degrees—from distinguished peers down to the humblest mechanic; but a deep and rancorous opposition was met, that long thwarted even Mr. Hume's energy and patience. Some difficulty was raised with respect to every site that was selected; the impediments and disappointments, even after sites had actually been purchased, appeared interminable. But at length perseverance triumphed, and a better feeling prevails.

An obelisk in Orsiglieth, more than ninety feet high, was, as our readers were informed at the time, erected on the Calton-hill, Edinburgh, in 1846; and, after some assistance rendered to relatives of the martyred patriots, the remainder of the subscription fund has been expended on the Numbead Cemetery Monument now before us.

Such instances of public recollection of historical events and individual sacrifices and sufferings under an idea (even if it were erroneous) of doing good to mankind, ought to teach us patience, humility, and good-will towards each other; and it is to be hoped that all who contemplate this Monument will feel grateful for the freedom and security which we now enjoy under improved and, we trust, improving Government, beyond what revolutions and violence have ever secured to less steady and persevering nations.

FRIERN BARNET CHURCH AND SCHOOLS.

In our Journal of last week we recorded the opening of the restored Church and the newly-erected Schools, in the village of Friern Barnet. The Church was originally very small, with overhanging galleries and high square pews, and had long been found utterly inadequate to accommodate the parishioners. Again, the school was held in one of the



NEW SCHOOL, AT FRIERN BARNET.

rooms of the almshouses, and there was no facility for receiving the children, or teaching those who might be assembled. To remedy both these very pressing wants has been the constant aim of the Rector, the Rev. Robert Morris, Rural Dean, who became the Incumbent in 1850. By great liberality on his own part, and that of his parishioners (especially Mr. Miles and Mr. Smith), aided by many friends, he succeeded in raising an amount which, with grants from the Church Building and National Societies, and the Privy Council, have enabled him (under the direction of Messrs W. G. and E. Habershon, as architects) to enlarge his Church in the very best taste, so that it now forms one of the most picturesque little churches in Middlesex; and, further, to erect two School-rooms, in the Early English style, in excellent keeping with the Church, and at some small distance from it.

The Church consists of an entirely new nave, chancel, tower, vestry, and porch: the ancient portion now forming the south aisle of the new Church. The nave is 62 feet in length by 23 feet 9 inches in width, and is divided from the aisle by four stone arches and piers. The aisle is 52 feet in length by 17 feet in width, and has a separate gable roof. The chancel is 24 feet in length by 16 feet in width. The tower is about 80 feet high, and occupies the south-west angle of the building. The material employed is stone and flint, triangularly pointed. The whole of the timbers of the roofs are exposed to view; and are stained, ceiled, and whitened between the rafters. The seats are commodious, the aisle paved with black and red; and within the communion-rails is laid with figured encaustic tiles.

On the day of re opening the Church, the Bishop of London expressed his cordial approbation of the manner in which the Church had been enlarged, and of the taste which had been displayed by the architects, the Messrs. Habershon, in preserving the character of the building; as well as in the Schools which they have erected.

THE NEW SPORTING YACHT, "RIFLEMAN."

THE NEW SPORTING YACHT "RIFLEMAN."

This graceful craft has lately been built at the ship-yard of Mr. Madams, at Whitstable, for that distinguished sportsman, William Lantour, Esq., Uckie House, Kent-shire. The *Rifleman* is a yacht of 25 tons O.M.; length over all, 40ft.; beam, 13ft.; mast, 64ft.; boom, 38ft.; gaff, 14ft.; bowsprit, without stem, 10ft. Being intended more immediately for wild-fowl shooting on the northern shallows and rivers, her draught of water does not exceed three feet and a half; so that her build, though much after the plan of the *America*, is not, perhaps, exactly the best adapted for fast sailing. Nevertheless, the *Rifleman* is judiciously provided with a most important auxiliary to a vessel of her description, the American centre-board in the keel, which, when required for deep-water sailing, can be lowered to the depth of five feet, and be wound up again at pleasure. Of Kentish oak of unusual strength, copper-fastened, and sheathed with Muntz' metals, with comfortable cabins and other conveniences, with eight tons of cast-iron ballast, patent blocks, galvanised chain cables, &c., this unique specimen of naval architecture, is withal corky and elegant in appearance—reflecting great credit on both the projector and the builder. Her sails, which are also after the American fashion—jib and foresail in one—were furnished by Graves, sailmaker of Whitstable; and in point of shape, make, and quality, leave nothing to desire.

The *Rifleman*, which we Engrave, with the town of Whitstable in the background, is now on her voyage to Cromarty.

MARSHES ON THE BANKS OF THE THAMES.

The inhabitants of London are far from being sufficiently alive to the injury they sustain from the neighbourhood of swamps, such as Rome, in her days of vigour, would not and did not tolerate. A wealthy brewer is brought before a police court to answer to the charge of not consuming his smoke, and professes his willingness to expend £10,000 for the purpose. But we forget that it is, in a great measure, the vapour of our marshes which gives the smoke its offensive and poisonous character; and that a comparatively small sum would, if expended in an efficient system of drainage, to a great extent remove that dreaded fog which brings the darkness of night into the midst of the business of the day suspends the traffic of the Thames—causes so great an expenditure of gas, and so many injuries to persons and property—blackens and destroys all sorts of commodities, and the irreplaceable works of art—and exercises so baneful an influence on health and spirits.

The Marshes around Woolwich are a great alluvial district containing many thousand acres of land, the part known as the Plumstead Marshes being about five miles long, and, at its extreme part, 1½ broad. They are intersected with some hundreds of miles of open ditches: and contain, besides, many extensive swamps of stagnant water. No provision whatever is made for drainage as an element of health; and many of the ditches have not been cleaned out within the memory of man. It appears from the newly-published report of the Registrar-General, that, in the eastern district of London—which lies nearest to the Marshes, and not much above their level—26 persons die annually in every 1000, or 1 in every 38; while the rate of mortality in the west district is only 22 in 1000, or 1 in 44. The inhabitants of Woolwich suffer fearfully from unnecessary sickness. Dr. Lyon Playfair's calculation was, that to every case of death there were 26 cases of sickness; but, in the case of Woolwich, there are 40 cases of sickness to every death. The great cause of sickness is the presence of the Marsh Lands which gird Woolwich, more particularly the Plumstead Marshes, which are the hot-bed of malaria. In the spring of 1848 its ravages were frightful: about 4000 persons were laid up at that time; and, including relapses, there could not be less than 8000 cases. They occurred, not only in Plumstead, but throughout all Woolwich, and entailed a vast amount of sickness and suffering.

The highest medical authorities in the kingdom give their unqualified

THE MARSHES EAST OF LONDON.—VIEW OVER PLUMSTEAD CHURCH.

testimony to its injurious effects, not merely on the district, but on the metropolis. The Rev. W. Acworth, Vicar of Plumstead, has recently published an irrefragable body of evidence, proving the deleterious effect exercised by the Plumstead Marshes upon the health of the metropolis. It can hardly be doubted, indeed, that when the wind blows thence towards London, the atmosphere of the metropolis is in no inconsiderable degree vitiated. In addition to Dr. Paris, President of the Royal College of Physicians, Dr. Addison, senior physician to Guy's Hospital, may be cited.

Dr. Little, physician to the London Hospital, who writes as follows to Mr. Acworth:—

In reply to your letter, requesting from me information respecting my experience of the influence of the marshes in the neighbourhood of Woolwich on the health of the metropolis, I beg to state that I am every year, at the London Hospital, called to treat many cases of fever and ague induced by exposure to the influence of marsh emanations, from residence in the most exposed (the eastern) parts of the metropolis. I can also state that continuously, during the last twenty years, although in some years more numerously than in others, I have witnessed cases of ague, neuralgia, and other forms of disease allied to these, in the more favourably situated parts of the metropolis, which, according to the medical experience of ages, can only be referred to the proximity of marsh lands. I consider that an incalculable benefit to the general health of all parts of London would accrue from the proper drainage of the marsh lands upon the Kentish and Essex banks of the Thames, from the mouth of the river Lea to that of the Blackwater. Mariners who have been patients of the London Hospital have informed me that the crews of ships, when detained longer than three weeks at the usual stopping-place of colliers, near the Plumstead Marshes, invariably suffer from ague and allied disorders.

Dr. Hughes, physician to Guy's Hospital, writes:—

I can have no hesitation in stating that, in my experience in Guy's Hospital, very many cases in excess of the out-patients affected with ague or intermittent fever have come from Woolwich and Plumstead.

We are happy to find that a body of gentlemen are now devoting their energies to a consideration of the best and quickest mode of draining the 14,000 acres of marsh land on either side of the Thames. It is to be hoped they will receive all possible facilities from the Government, since it appears that the worst part of the whole district is the property of the Board of Ordnance.

Our Illustration contains a view of Plumstead Church, in the foreground. A new church for the destitute poor is stated by the Rev. Vicar (to whose letters we are indebted for many of the foregoing facts) to be much required. Mr. Acworth has nobly offered two years' income of the living, viz., £600, to a church, schools, and parsonage; but, as the smallest amount required is £6000, great exertion is necessary to raise the remainder. The population of the parish is about 10,000, mostly poor. The parish church is a mile and a half distant from the mass of the population, and will only accommodate 400 out of the 10,000 parishioners; other places of worship about 400 more. Mr. Acworth says—

I cannot but hope great things for my own parish, and others similarly situated, if the gentlemen, now engaged for the purpose, shall succeed in cutting completion the drainage of the marsh lands on either side of the Thames. In Woolwich and Plumstead, and the surrounding district, the effect of the drainage would be to prevent every year thousands of cases of intermittent fever, and hundreds of premature deaths; and these, too, among the very class of persons to whom they bring the greatest train of misfortunes.

THE AUSTRALIAN GOLD DIGGINGS.

The following extracts from letters dated Sydney, June 25 and June 29, will be read with interest:—

Society has recovered its tone, and the general pursuits of industry are followed just as they were before our great discovery. Prosperity attends every man who knows how to work, whether he be capitalist or labourer. The "working-classes," as they are erroneously termed, are indeed, some what independent; but as far as my observation extends and I have opportunities of mixing with every class of people—there is nothing unwholesome in that independence. What we chiefly require, is greater facilities for settling down; which, under the present land-laws, is very difficult. The monopoly which the squatters have of the best land in the country operates in a way which may turn out very dangerously. The towns are deserted, and the labouring population are flocking to the interior, and would be so scattered if opportunity were afforded for the investment of golden gains in real estate. But this being next to impossible, the money is squandered by the labouring population in the most ridiculous sums are in some instances given for articles which, when sold to regular customers, only fetch a moderate percentage on invoice price, but which the successful diggers insist upon having at any price. The willing crager is not backward in humouring his fancy, and a snawl or silk dress worth £5 is charged £15, the purchaser being thoroughly convinced that the former article will not long be in his wardrobe.

Our domestic arrangements are certainly in an unsatisfactory state. It is almost impossible to obtain good servants; and the idle and unprincipled maiden who condescend to accept situations, only do so for their own temporary convenience, having no idea in the world that, in taking wages, they are subjecting themselves to control. Not they, indeed; and the slightest word from the mistress of the house does not square with their notions of personal dignity, is met by an immediate warning; so that those who are sensible enough to handle their own weapons and ply their own broome, very generally dispense with housemaids.

Turning from domestic matters to gold, I may report that our mines continue to yield freely in proportion to the number of diggers congregated at the various golden fields. We hear, however, of no extraordinary instances of luck; steady and experienced diggers turn out their ounce of gold per man per week; and, now and then, a particular claim yields twenty or thirty ounces to the party working it during the same period. We consider, however, that, pending the new arrangements which are in contemplation for the future management of the gold-fields, matters are in stagnancy; and the winter floods, which have commenced on the Turon, have effectually put a stop to all mining operations on a great scale. Favourable reports have been received from the Rev. Mr. Clarke respecting the gold-bearing qualities of the northern gold-fields of our own colony; and towards the south more attention is being paid to the Adelong country and the Braidwood diggings. Our escort for the month now at £4,727,640 10s.; being 1,350,757 ounces, at 70s. The price has been very steady at £3 17s. to £3 17s. 6d. for Mount Alexander gold; the produce of our own colony is quoted at £3 os.

The arrival at Melbourne of large consignments of American flour has reduced the price to £20 a ton for the finest qualities. The probability is, that this article will considerably lower during the next month. Dairy produce and fruits, vegetables, &c., are still very high. Butter sells at from 2s. 6d. to 3s. per lb.; milk, 1s. per quart; meat, 4d. to 8d. per lb.; sugar, refined, is 1s. 3d.; raw brown, 6d. to 8d. Rents continue enormous, and are likely to rise. Land within the boundaries of the city fetches very high prices, and is sold and resold at an advance from week to week. For many years to come, available land within ten miles of Sydney must inevitably be in demand, and the best way of making a rapid fortune is to buy allotments, which are being offered at auction from time to time. At Melbourne, the rage for land speculations is at its height. A curious instance occurred the other day. Mr. Wentworth had some property in the heart of the town of Melbourne, which was valued two years ago at £30,000. It was a month's task for £20,000, payable in instalments over a length of time. The other day the identical lot was again put up, and realised £63,000. Similar instances might be adduced of *half-yearly returns*; and it cannot be long before we partake a collapse, though the time must come when the top will be reached.

THE MINISTERS.—A Cabinet Council was held on Wednesday afternoon, at the Foreign-office, Downing-street. The Ministers present were the Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, the Marquis of Lansdowne, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, Mr. Gladstone, Sir James Graham, Sir Charles Wood, Mr. Sidney Herbert, and Sir William Molesworth. The Council sat three hours.——Her Majesty held a Privy Council, on Friday last, at Windsor Castle.

Mr. Richardson, the sculptor, has just erected, in Richmond Churchyard, a handsome cross memorial to the late gallant Lieut.-Col. *Sir* Harry Darrell Colville Darell, Bart., formerly of the 18th Regiment and the 5th Dragoon Guards, by order of his brother, the Rev. Sir Lionel Darell, Bart., from the Rev. William Stone, D.D., one of the St. Paul's Cathedral. In the centre of the cross is the shield of arms of the deceased, hung from a medieval double-handled sword, with the crest, motto, and other details; and, under the shield, on a scroll, are raised letters, in the following legend:—"Thy brother shall rise again." The inscription is placed in a panel at the base. The cross stands 7 feet 6 inches in height, and presents an imposing and chaste appearance.

LARGE SPOT ON THE SUN.—(From a Correspondent.)—The sun has lately presented a very remarkable spot. It first appeared, through a telescope of moderate power, on Nov. 18. The magnitude of this spot, or system of spots, was very great, its longer diameter being about 30,000 miles; the rapidity of its changes was, therefore, very striking. On the 21st, for instance, the whole form, which resembled the Hebrew Aleph, had sensibly altered from twelve to two o'clock, the black open spot having closed up—a motion greater than if the shores of the Mediterranean were to close up in a couple of hours.

THE COURT.

The Queen has been pursuing the quiet round of her usual avocations during the past week. The celebration of the Princess Royal's birthday, on Tuesday, was suddenly postponed, in consequence of the death of the Queen of Portugal—cousin of her Majesty and of Prince Albert. On the first intelligence of this sad event reaching Windsor, the invitations that had been issued were countermanded, and the military bands have not since attended at the Castle.

His Royal Highness Prince Albert and the Duke de Brabant visited Cambridge on Tuesday and Wednesday.

On Wednesday her Majesty and the Duchess de Brabant visited the New Houses of Parliament and Westminster Abbey.

The Duke and Duchess de Brabant visited Madame Tussaud's Exhibition on Thursday.

Lord de Tabley and the Hon. Mortimer Sackville West have succeeded Lord Waterpark and Lieut.-Col. the Hon. N. Hood as Lord and Groom in Waiting.

The departure of the Court for Osborne has been delayed. The Queen, it is now said, will not leave Windsor until Saturday the 26th, or Monday the 28th. The Court will return from Osborne, to Windsor, on the 23rd December, for Christmas holidays. The Duke and Duchess de Brabant take their departure on the 8th of December.

VISIT OF PRINCE ALBERT AND THE DUKE OF BRABANT TO CAMBRIDGE UNIVERSITY.

CAMBRIDGE, TUESDAY.—Their Royal Highnesses Prince Albert and the Duke de Brabant arrived here at eleven o'clock this morning. The Prince and suite proceeded to Trinity College-lodge, where he occupies the royal apartments. At half-past eleven the Royal party proceeded to the chapel of Trinity College, where the chief object of attraction is the statue of Sir Isaac Newton, by Roubilliac; thence to the Library, where the statue of Lord Byron, by Thorwaldsen, commands universal admiration. It being then twelve o'clock, the party proceeded to Professor Sedgwick's geological lecture, where the Professor, in one of his happiest moods, proceeded to exhume the monsters of former ages—the mastodon and the megatherium; and concluded a brilliant lecture by some appropriate compliments to the Chancellor and the Duke de Brabant. The Prince and the Duke then proceeded to visit the various Colleges. The reception took place at Trinity College, where the chief object of attraction is the noblemen and members of the Senate were present. The dinner at the Vice-Chancellor's at half-past seven, besides the Royal party, comprised the Heads of Colleges, Professor Sedgwick, the Registrar, the Esquire Bedells, &c.

WEDNESDAY.—Notwithstanding the inclement state of the weather his Royal Highness the Chancellor was out early this morning. At ten o'clock he visited King's College, where the magnificent chapel and the library were inspected. The Senate-house began to fill by half past ten, and before eleven o'clock the galleries were crowded with undergraduates. Punctually at eleven o'clock the Royal carriages arrived; and the Prince, in his robes of office, accompanied by the Vice-Chancellor, with the Duke de Brabant, Count Lennoy, &c., &c., entered the Senate-house, amid the deafening cheers of the undergraduates. The Duke de Brabant, who was on the Prince's right hand, seemed fairly taken by surprise, both at the vehemence of the cheering and the brilliancy of the scene before him. The robes of the Prince Chancellor, stiff with gold, the military uniforms of the suite, harmonising with the scarlet gowns of the doctors and the light and flowing dresses of the ladies, were set off to great advantage by the black gowns of the great body present; while the flushed and excited appearance of the students, as they continued cheering during the whole progress of the Royal party to the hall, gave extraordinary effect and animation to the whole scene. Silence having been restored, the Prince took his seat on the chair of state, attended by the Vice-Chancellor, &c. The initiatory proceedings for conferring the degree of a Doctor in Civil Law upon the Duke were then commenced; and the grace authorising the degree having passed the Senate and both houses, the Duke was attended to the robing-room by the Vice-Chancellor, and speedily re-appeared in the scarlet and ermine gown of a Doctor, when the cheers of the gallery occupants were loudly renewed. The Duke was presented to the Prince Chancellor by his Public Orator (the Rev. Mr. Beeson, of St. John's), who, in a neat Latin oration, stating that he was only interpreting the general wishes of the University in thanking the Prince Chancellor for the interest he had always taken in its welfare. His Royal Highness left his seat as the Duke was led up to him, took his hands between his, and in a few words gave his formal assent, and the Duke completed his academical costume by putting on his cap, when he was saluted by the students with deafening cheers for the Duke de Brabant and for the Duchess. Cheers for the Queen, for the different members of the Royal Family, and for King Leopold, followed in rapid succession. This ceremony finished, the Royal party retired amid the same deafening cheers with which they entered. After visiting several colleges, the Royal party left Cambridge by special train, about a quarter past four in the afternoon.

The Duchess of Sutherland arrived at Stafford House, on Friday evening from Trentham. The Duke of Argyll met his noble relative at the Euston station, and accompanied her to Stafford House. The Duke of Sutherland and the youthful Lords Albert and Ronald Leveson Gower proceeded to Trentham. The Duchess of Argyll remains at Trentham with her father.

On Saturday last, Mr. Bernard Burke had the honour of receiving in person the badge of Knight Grand Cross of the Bath, from Viscount Canning, Governor-General of India, and Viceregal Lord-Lieutenant, at the Viceregal Lodge, Phœnix-park, Dublin.

TURIN, NOV. 19.—The Royal Family has lately been thrown into great affliction by the serious illness of the King's children. Prince Charles Emanuel, duke de Chablais, who is suffering from the effects of a fall; and it is said the brain has been so much injured that his physicians have given up all hope of his recovery.

REPORTED APPROACHING MARRIAGE OF THE PRINCESS MARY OF CAMBRIDGE.—The *Gazetta di Genova* of the 19th inst., copying from the *Parlamento* of Turin, announces the approaching marriage of her Royal Highness Princess Mary of Cambridge with Prince Napoleon, son of Prince Jerome Bonaparte. We cannot, of course, certify the correctness of this report, nor should we insert it had it not gained ground among the highest circles of Berlin, Vienna, and Paris. It would, indeed, be a singular instance of the vicissitudes of fortune, and the short-sighted speculations of our greatest men if a Bonaparte should be united to a "fille d'Angleterre."—*Morning Herald*, Nov. 21, 1853.

COLONIAL BISHOPS.—On Wednesday the Right Rev. the Lord Bishop of Cape Town resigned his see, in order that the diocese might be divided into three bishoprics—Cape Town, Natal, and Graham's Town. The Rev. Dr. Gray, Dean of Ely, and the Rev. Archdeacon Merriman, the see of Natal and Graham's Town, in the parish church Lambeth, Surrey, on Wednesday, the 30th inst.

LYCEUM THEATRE.—A two-act comedy, under the title of "The Bachelor of Arts," was produced on Wednesday. It is a work apparently by a new hand. The scene is laid in Germany, and the time is Prince Metternich, evidently a *soubriquet*. To detail the story of this new piece is a somewhat difficult task, on account of its originality and the complex nature of the plot. Mr. C. Mathews is the hero—a certain *Jasper*, who seeks to redeem his character by taking proper advantage of an entirely new and fortunate train of circumstances, arising out of an advertisement for a "Bachelor of Arts, as tutor to a boy of eighteen:" to which he replies in person. Being disappointed in finding that *Mr. Thornton*, the advertiser (Mr. Basil Baker) is a sensible man, he repents of his intended deception, and proceeds to give such a description of himself as will ensure his rejection. A gambler on the turf, a horse-jockey, a boxer, a duellist—these are the qualifications which entitle him according to his own account, to the degree assumed. To his surprise, *Mr. Thornton* insists on engaging him. *Mr. Thornton* has, in fact more uses than one for just such a person; and, to his still greater astonishment, invests him with authority over his household generally. One of these uses is the exposure of a bill-discounter, one *Mr. Wylie* (Mr Frank Matthews), who had once constituted in himself the firm of "Jones and Co." and who is well known as a swindler to *Jasper*. There is also a *Mr. Osborne* (Mr. Gladstone), who boasts of his purpose to seduce *Mrs. Thornton*, and plots to entrap the son into a misalliance with a woman of bad character; but, as *Jasper* discovered in rapid succession. This ceremony finished, the Royal underlikes to initiate the boy into the world, instead of into Greek and Latin, the prey is delivered from the hands of the sharper. *Wylie* is more difficult to dealt with, as he holds a forged bill of *Mr. Thornton's* father—which *Jasper*, however, contrives to purchase for four thousand pounds, in a promissory note payable on the day after his pretended marriage with *Miss Thornton*. His proceedings, meantime, with *Adderley* give rise to a challenge; but this, and also the marriage aforesaid, are prevented by *Jasper* feigning drunkenness, which leads to *Mr. Thornton* offering to pay the four thousand pounds, and for which he gives the notes of the firm. Jones and Co. in exchange for those of his own. *Wylie* at this wits' end, and frantic with rage, attempts vengeance; but is again baffled by the exhibition of another note on the same firm. *Jasper*, thus finding things settled, soon recovers his sobriety, and is rewarded for his services with the hand of *Mr. Thornton's* daughter, who has really conceived a strong love for the now fully reformed and repentant adventurer. Mr. C. Mathews acted the part with a delicacy in the requisite distributions of light and shade that was really admirable. Mr. Frank Matthews was also great in the peculiar character, which was extremely well suited to his special talents. The piece was greatly successful.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, NOV 24

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature for the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the complete saturation of the air is represented by 100.

The reading of the Barometer has varied but little during the week, the highest reading being 30.36 inches, during the afternoon of the 21st, and the lowest, 29.97 inches, during the morning of the 20th. The mean for the week, at the height of 82 feet above the level of the sea, was 30.115 inches.

The mean daily Temperature of the 21st is the lowest mean daily temperature recorded on that day since the year 1838, when it was 36°5°; and those of the 22nd and 23rd are the lowest since the year 1827, when they were 28°3° and 24°6° respectively.

The mean Temperature of the week was 35·6°; being 6·3° below the average of the corresponding week during 38 years.

The range of Temperature during the week was 24.6°; being the difference between the lowest reading, on the 16th; and the highest on the 19th.

The mean daily range of Temperature during the week was 16·9°. The greatest was 22°, on the 18th; and the least, 9·1°, on the 23rd.

Rain fell on three days during the week to the depth of four-tenths of an inch.

The Weather was fine on the 18th and 19th. It was very dull, the air was saturated, and rain was falling a day on the 20th, the 21st and 22nd were remarkable for dense fog, and it was fine during the week. When not fine, the prevalent wind was from the south-west.

The fog on Monday and on Wednesday was more dense than any which has happened for many years: it occurred for the most part, the Police authorities inform us, while clouds were floating over their heads; and the tops of the masts of the steamers and the flagstaffs on the Houses of Parliament were visible above the fog, while the streets of London were enveloped in so dense a fog that it was almost impossible to proceed along the streets. At times the fog increased in density to higher levels, as at Blackheath, at an elevation of about 160 feet above the level of the sea, it was so dense that it was dangerous to leave a well-lighted room. [A fog is a cloud on the ground.]

Lee Observatory, 25th November, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 814 boys and of 747 girls were registered within the metropolitan districts within the week ending November 19th; these numbers exceed the average in the corresponding week of the preceding eight years by 119 and 86 respectively. The number of deaths in the week was 1162, being greater than in any corresponding week in the year since 1849; the average number for the week, as found from the ten preceding years, is 1023. The population in London in 1841 was 1,948,417, and in 1851 was 2,362,236; thus increasing at about 40,000 yearly; and if the average number be increased in like proportion it becomes 1725. The mortality, therefore, is in excess. The population in 1851 in the West Districts was 376,417, the deaths last week were 168; in the North Districts, population 460,326, and deaths 226; in the Central Districts, population 393,356, deaths 158; in the East Districts, population 485,522, deaths, 278; and in the South Districts, population 676,615, deaths 350. The number of deaths at three different periods of life were as follows: At less than 15 years, 609 (average 491); at 15, and less than 60, there were 339 (average 327); at 60 and upwards, 214 (average 204). The numbers in different classes of diseases were as follows: To zymotic diseases, 291 (average 235); of these deaths, small-pox caused 4; measles, 27; scarlatina, 50; hooping cough, 24; diarrhœa, 36. In the twelve preceding weeks the numbers were 144, 167, 187, 180, 184, 71, 75, 55, 48, 43, 42, and 50: this disease appears, therefore, on the decline. To cholera there were 72 deaths. The numbers in the preceding four weeks were 89, 102, and 98; therefore, the mortality is not to great as in the previous weeks. Of last week's deaths from cholera, 5 occurred in the West Districts, 11 in the North, 3 in the Central, 20 in the East, and 33 in the South Districts. Of deaths due to zymotic diseases, typhus carried off 51. To dropsy, &c., there were 52 deaths (average, 47), to tubercular diseases, 184 (average, 163); to those of the brain, 126 (average, 113); to those of the heart, 47 (average, 39); to those of the lungs, 158 (average, 208); to those of the stomach, 63 (average, 57); to rheumatism, 11 (average, 8); to old age, 42 (average, 61); to poison, 1; burns, 4; hanging, 2; drowning, 4; fractures, 17; and wounds, 1.

IMPROVEMENTS AT THE HOUSES OF PARLIAMENT.—The ventilating shaft is to be raised twelve feet higher. It now presents a light and ornamental appearance, quite in keeping with the elegant octagonal tower originally built by Sir Charles Barry, while the central and clock towers, are proceeding rapidly. On the area called the Star Chamber Court, which is adjacent to the octagonal tower, considerable progress has been made with the excavations, carrying down and the laying down the patent elastic pavement. The Lords' front appears to keep pace with the rest of the works, and will very shortly be visible above the hoarding from the west side of Abingdon-street. At the end of this front, and adjoining the Victoria Tower, the Peers' entrance is being constructed, and will be ready for the use of their Lordships at the ensuing session of Parliament.

EAST INDIA APPOINTMENTS.—The new Indian appointment continues that series which testifies the desire of the Indian Government to promote practical improvements. Mr. Thomason is succeeded in the government of the North-West Provinces by Mr. J. R. Colvin, one of the judges of the Bengal Sudder Adawlut. Mr. Colvin is not an unknown man; he was Mr. Thomason's junior by two years, and he has served with distinction. It is said of him, that not one of his decisions has ever been reversed. All the services in India will look upon this selection with pleasure, and those who have compared the successive appointments since the passing of the "Government of India Bill," will recognise in this important addition to the series a new proof of the spirit by which the Government is actuated.—*Globe.*

ROYAL GEOGRAPHICAL SOCIETY.—On Monday next the papers to be read are—"A Journey into the Balkan, or Mount Hæmus, with a description of the defiles through this celebrated mountain range; and a comparison of the routes pursued by Darius, Alexander the Great, and Marshal Diebitch," by Major-General Sir Alexander Yschmet, communicated through Sir Roderick Murchison; with diagrams, made by Mr. Petermann, of—first, a map of the Great Balkan, from Varna to Burgas, on the Black Sea; second, sketch of the ground near Varna, showing the lakes, tumuli, and scenes of battles; third, Sketch of the marches of Darius and of Alexander to the Danube, and of the passage of the Balkan by Diebitch.

THE IRISH ORPHAN ASYLUM, WANSTEAD.—On Tuesday a general court of the governors and subscribers to this charity, which was instituted in 1827, was held at the London Tavern, for the purpose of electing into the asylum, from a list of 177 candidates, and upon other business. The report stated that at the date of the last meeting the number of orphans on the books was 340; there have been since admitted 56, and by the operation of the rule, 31; making a total of 425. The total receipts from all sources (including the special appeal) had amounted during the past year to £19,161 8s. 11d. The election having been proceeded with the meeting separated.

MR. APSLEY PELLATT, M.P.—On Tuesday evening a public meeting of the electors and non-electors of Southwark was held at the Literary Institution, in the Borough-road, pursuant to an invitation issued by Mr. Apsley Pellatt, to afford him the opportunity of giving an explanation of his parliamentary conduct since his return as member for the borough. A vote of confidence in Mr. Pellatt, and one of thanks to the chairman, concluded the proceedings.

THE CHRISTMAS LOTTERIES AND THE GOVERNMENT.—In consequence of the great increase of lotteries announced to be drawn at Christmas next, and the subject having been brought under the notice of the law officers of the Crown, notices will shortly be issued, through the Commissioners of Police, to all persons promoting such gambling, that if persevered in, they will render themselves liable to prosecution, and will be proceeded against for penalties, under the provisions of the act for the suppression of lotteries and other gaming.

SMITHFIELD CLUB CATTLE-SHOW.—The show of fat cattle, under the auspices of the Smithfield Club, is appointed to commence at the King-street Bazaar, on the 6th of December. In making their awards, the judges are to keep strictly in view the great object for which the Smithfield Club was originally instituted, viz. the supply of the cattle markets of Smithfield and other places with the cheapest and best meat.

THE NATIONAL BENEVOLENT INSTITUTION.—On Thursday the annual meeting of the friends of the National Benevolent Institution was held at the Freemasons' Tavern, to receive the annual report, and to elect 22 pensioners from a list of 132 candidates, for pensions from the charity. B. B. Cabbell, Esq., M.P., presided. The report congratulated the subscribers upon the prosperous state of the institution. The amount received by them was £2146 12s.; the grace sum amount disbursed since the establishment of the institution in 1812, was £140,644 17s. 7d.; and the total number relieved was 832. The income for the past year reached £11,292 8s. 10d.; among the items being £4318 3s. 6d. annual donations, £1804 3s. 9d. dividends on stock; and, after paying all necessary expenses, there remained a balance in hand of £1716 13s. 9d.

CITY CORPORATION COMMISSION.—The Commissioners adjourned from Friday week to Tuesday last, when they met, as usual, at the Privy Council Chamber, Downing-street. The first witness examined was the Mayor of Yarmouth, whom principal complaint was, that the shipping to the port of London, be ng taxed, could not compete with the railways, which were untaxed, in bringing goods to London. Mr. Belton, coal-merchant, of King-street, Portman square, complained of the coal-tax, and also of the taxing carts, &c., on entering the City. Mr. Bennoch, the next witness, was examined at very great length on many points connected with the Corporation. Mr. R. read to the Commissioners "a scheme" on the subject of municipal reform, on which we have not room to enter in another column.

On Wednesday, Mr. Bennoch was the first witness, and gave more information; also, full details of the "fine black cloth" given to the principal Judges and some of the Ministers and Lords of the Household.—Mr. Samuel Mowley, a warehouseman, and Mr. Charles Rickford Corbett, a solicitor, of Southwark, were also examined during the day.

Thursday brought a deputation from Billingsgate before the Commissioners, and Mr. Gibbs as the principal witness. The statement of grievances were—metage, portersage, and measuring—half the expenses of which ought to be saved, by proper management, to the consumers. A deputation from the Marylebone Vestry recapitulated the grievances complained of yesterday by Mr. Belton—the tax on coals, and on carts entering the City.

On Friday the Commissioners sat shortly after twelve o'clock, in the Privy Council Chamber. The evidence was of the same character as that given on the previous days

THE COURT OF ALDERMEN.—At a court held on Tuesday, the following resolution was unanimously passed:—"That this court are desirous to assist the inquiry now proceeding before the Commissioners appointed by the Crown, and that gentlemen who wish to be heard by the Commissioners all the documents and information in their power, in order that the Commissioners may have every information which can be supplied to them for this court, or any of its officers, and that it be referred to the Privileges Committee to act accordingly;" and, at the same court, Alderman Copeland said—"I read in the public journals that a person had given evidence before the Commissioners, in the course of which he stated that it would be a breach of confidence to mention his authority for the statement, that nineteen aldermen had subscribed £1900 towards Sir John Key's election to the office of Chamberlain. As one of the aldermen who voted for Mr. Carter, I denounce the statement to be a vile aspersion upon myself. I never subscribed a farthing, and have yet to learn that any one of my brethren ever subscribed a single farthing on any such purpose." Denials to the same effect were made by other members of the Court.

GOLD IN ENGLAND.—This matter was much discussed on Wednesday evening, at the meeting of the Society of Arts. Professor Tennant cautioned the meeting against being led away by the opinion that we were on the eve of finding another California in England. Every attempt which had hitherto been made to work auriferous quartz had resulted in the fact that it cost from 30s. to 40s. to obtain £1 worth of gold (Laurher). Mr. Mogford, of the Pollmore Gold Mining Company, said his company had sent forty tons of gossan to Liverpool, for the purpose of reduction, and that gold had been obtained from the ores at an expense, including conveyance, of £3 per ton. Professor Tennant explained that the gossan was a soft and porous substance, more easily crushed than quartz: it was found in small threads and veins; and, probably, in Australia, it would be found to be the richest and most productive description of ore. Mr. Coleman stated that gold had just been discovered in the quartz rock of the Cwmesain mines, in Wales, which yielded from 1½ to 2 ounces per ton; a quantity exceeding that obtained by the Brazilian Mining Companies. Mr. Calvert stated that he had examined upwards of 300 specimens of gold obtained in England, and he was satisfied that they were equally rich with those found in any other part of the world.

ACCOMMODATION IN THE BRITISH MUSEUM.—The Museum is full of very beautiful objects, and they are such, especially the sculptures, as require to be looked at for some time before the visitor can be able to see down quietly before the object you wish to see, and examine it at your leisure. Any one, in many of the rooms, is obstructed by a crowd. In the first gallery that you enter, where there are a number of small figures and busts of great interest and beauty, there is no seat. Nor is there near the larger Townley statues, nor in the Assyrian gallery, nor indeed in the long Egyptian saloon, except two benches near the "Young Memnon." The arrangements of the Museum, generally, seem good; the attendants are civil; it is a pity that such a little matter as this should mar the advantages.—*The Builder.*

THE CHRISTMAS HOLIDAY.—In consequence of Christmas day falling this year on Sunday, there is a danger that our industrial population, of the middle, as well as the working classes, may be deprived of their holiday. Their case is all the harder, inasmuch as Christmas-day is one of the only days in the twelve months, when, besides Sunday, there is a legal cessation from labour. Knowing this, we cannot but regret, propriety worthy of the season for all employers to resolve on proc aiming a holiday on Monday, December 26. If all ceased from work, none would suffer. Masters as well as clerks and workmen ought to enjoy the accustomed day of rest and recreation, and not suffer a septem al occurrence to deprive them of a holiday with which are associated so many hallowed thoughts, family pleasures, and social reunions.

THE FOG OF TUESDAY AND WEDNESDAY.—The densest fog known for many years came over London on Tuesday evening, and lasted till ten on Wednesday night. During part of the time, nearly all traffic was stopped in the streets and on the river. Many accidents occurred, and much damage was done. At the railway stations a rich harvest was reaped by men and boys, who obtained it as much as a shilling a piece for links, or for their escort, for a short distance. On the North Kent and South-Eastern lines the various trains were considerably delayed; and to prevent any accident, each of them was additionally telegraphed. On the Tuesday evening a woman named Eliza Frow, about thirty years old, was knocked down in Serle-street, Lincoln's-inn, by a waggon, which passed over her body, and she died before reaching the hospital close at hand, in Portugal-street. A lad named Field was admitted in the London Hospital in the same evening, with his right thigh-bone fractured and the ankle smashed; caused by being run over by a waggon driven by his father, near Bow Common.—At St. Thomas's Hospital, two cases were received: one—William Reddle, of Bexley, whose waggon was drawn off the road and ran against a post, which threw him off the shafts, and the wheels passed over his thighs, causing a compound fracture; the other case was that of Mrs. Smith, of Chesham, who lost her way on Blackheath, and fell down a deep gravel pit, and fractured her right thigh-bone, besides receiving other injuries.—In some parts of the country the fatal effects of the fog were severely felt. The *Hickenbampton Chronicle* states that "the fog was so dense at Wordsley, on Monday night, that it was the cause of many persons walking into the Nine Locks and Sixteen Locks; we regret to add that five persons lost their lives—three females, a man, and a boy. The greatest consternation prevailed in this neighbourhood, and hundreds of people were seen about the highways, with lantern, seeking their children and relatives."

NINE FIRES IN THE METROPOLIS.—The London Fire-brigade were actively engaged from Saturday night up to noon on Sunday, these having been no less than nine fires in and near the metropolis, No. 1, Mr. J. Gaze, tobacconist, Great Windmill-street, Haymarket. Considerable damage was done.—2. At Mr. Summers's, coach-builder's works, Glasshouse-yard.—3. Mr. H. Warwick's, Homer-street, Newroad. A little girl was most seriously burnt; she was conveyed to the hospital.—4. In Green Arbour court, Shoreditch, on the premises of Mr. J. Ritter.—5. Mr. J. F. Hoome's, organ-pipe manufacturer. The damage was not serious.—6. Mr. A. Phillips's shell-fish shop, High Holborn, near Chancery-lane. Damage trifling.—7. Mr. G. Jacks's, Tottenham-court road, zinc-manufacturer.—8. Mr. F. Clark's, Park-side, Knightsbridge, which communicated to Mr. Phillips's, watchmaker, and did very considerable damage.—9. Mr. S. Larkham's, Edward street, Wardour-street, through an escape of gas.

ROYAL SEA-BATHING INFIRMARY.—On Thursday, the half-yearly court of the governors of this charity was held at the London Tavern. It appeared from the report that the charity was recovering its place in public estimation under its new management. During the past year the annual subscriptions had increased to £300. The bequests amounted to £600. The in-door patients numbered 338; and the out-door, 260. Among the former there had been seven deaths, and among the latter only one.

EXTRA-MURAL INTERMENTS.—On Thursday the Rev. Canon Dale, vicar of St. Pancras, in the presence of a large concourse of vestrymen and ratepayers, laid the first stone of the new parochial cemetery at Finchley, on which occasion the Rev. gentleman made an able speech upon the progress of sanitary reform.

THE EARLY CLOSING MOVEMENT.—In consequence of the exertions made in the City of London and other places of the metropolis relative to the closing of shops in the evening at an earlier hour than hitherto, notices have been printed and circulated in Kensington, that from the 5th of this month to the 1st day of March, the shops of that district will be closed at the hour of eight, with the exception of Saturday, when no time has been as yet specified.

THE ENLARGEMENT OF THE GENERAL POST-OFFICE.—The works in the hall of the General Post-office for the enlargement of the inland and letter-carriers' offices are advancing rapidly to completion, in addition to which workmen are engaged in throwing the galleries and lobbies in the south wing into offices; but, notwithstanding, sufficient space will not be attained, and it is intended to enclose the space between the pillars on the south side of the hall, and the windows in the district post-office, in the same manner as has been done on the north side, thus gaining an area of 1800 superficial feet. The branch office in Lombard-street, being also inconveniently small for the business that has to be transacted there, is to be enlarged, or a more suitable building obtained for the purpose.

NATIONAL SPORTS.

NEWTON RACES.—THURSDAY.

Steeplechase—Labyrinth, 1 Royal Blue, 2.
Colliers' Handicap.—Maid of Monton filly, 1. Thalia filly 2.
Handicap Plate.—Jim Crow, 1. Gilded by Ugly Buck, 2.

Nothing else done.

AUSTRALIAN RAILWAYS.—On Thursday a deputation waited on the Duke of Newcastle, at the Colonial-office, to lay before him the outline of a project for the construction of a great direct railway from Sydney to Melbourne. The proposed railway would be 500 miles in length, and the estimated cost about £1,250,000; or under £3000 a mile. The noble Duke said he would be very happy to receive any proposition of the kind, and charts to the Colonial Legislature, who must take the initiative in promoting the project before the Colonial Department in England would feel itself at liberty to interfere.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although there has been a much larger supply of stock in the market than for some time previously, Consols have ruled tolerably firm during the whole of the week, the same occasions, prices have shown a tendency to decline; but the great abundance of unemployed capital has tended to check any decided fall in them. The Unfunded Debt has been firm, and the value has generally increased.

The imports of the precious metals have been very extensive, viz.—£75,000 from Australia, £200,000 from New York, and £300,000 from other quarters. We learn that nearly £160,000, in silver, has recently arrived at Hull, from Gothenburg.

The quantity of paper afloat at this time is comparatively small. Money is quite as easy as last week, notwithstanding that the shipments of bullion to the Continent have been very large, viz.—£140,000. The Stock in the Bank of France is still rapidly declining, the supply being about £5,200,000 silver, the same gold. No doubt the drain will continue for several months, to pay for foreign corn.

There was a good business doing in Consols on Monday. The Three per Cents were done at 85¾ ⅞; the Three per Cents Reduced, 94¼ ⅜; and the New Three-and-a-Quarter per Cents, 96 to 96½. Bank Stock was 217 to 218. Exchequer Bills marked 6s. to 8s.; and India Bonds, 1s. to 4s. prem. On Tuesday and Wednesday very little change worthy of notice took place in the quotations. On Thursday the demand for money stock was by no means active. The fluctuations in prices were by no means very large. The Three per Cents Reduced and the Annuities were done at ⅝; the Three per Cents Reduced, 94¼ ⅜; and the New Three-and-a-Quarter per Cents, 96¾ ⅞. India Bonds were 2s. to 4s.; and Exchequer Bills, 8s. to 9s. prem.

Foreign Securities have been well maintained, but the transactions in them have not been extensive. Buenos Ayres Six per Cents have been done at 62¾ to 64, Chilian Six per Cents, 109; Mexican Three per Cents, 25½ ex div.; Peruvian Four-and-a-Half per Cents, 72½; Peruvian Three per Cents, 50; Sardinian Five per Cents, 91¾ to 92; Dutch Two-and-a-Half per Cents, 63¼; Dutch Four per Cents, 103 to 104; Portuguese Four per Cents, 41¼ to 41; Russian Five per Cents, 111 to 111¼; Ditto Four-and-a-Half per Cents, 97¾ to 97½; Spanish Three per Cents, 40¾; the New Deferred, 22¾ and 22½; Passive (Converted), 5¾; Swedish, 92 to 93; and Belgian Four-and-a-Half per Cents, 98.

Most of the South Sea holders of stock have expressed their dissatisfaction at their present position. It would appear that the amount to be paid in January next (£3,667,784) cannot be distributed amongst them, owing to the failure of the Directors to obtain a Bill for that purpose in the last session.

In Miscellaneous securities about an average business has been transacted. Australian Bank, 27 to 28; British Australian Ten-ean, 6¾ to 6¾; Canterbury Associations, 1 to 1¼; English, Scottish, and Australian, 20½ to 20¾; London Chartered of Australia, 1¾ to 1¾; London Joint Stock, 11¾ to 12; New South Wales, 1¾ to 1¾; Oriental, 6¾ to 6¾; Provincials of Australia, 3¾; South Australian, 11 to 11¼; Union of Australia, 19¼ to 19½; Universal Bank of Australia, 3¾; Western Australian Agricultural, 1¾; Ditto Land, 1¾; Australasia, 49½ to 50; Australian Agricultural, 2¾ to 2¾; Ditto Land, 1¾; Australian Steam Navigation, 1¾ to 1¾; Ditto, New, 1¾; Royal Mail Steam, 10¾ to 10¾.

There has been less doing in the market for Railway Shares, and prices have given way. The following are the official closing quotations on Thursday:

ORDINARY SHARES AND STOCKS.—Aberdeen, 20½; Ambergate, Nottingham, and Boston Junction, 5½; Caledonian, 56¾; East Anglian, 6¾; Eastern Counties, 13¾; East Lancashire, 64¾; Edinburgh and Glasgow, 62; Great Northern, 85¾; Ditto, A Stock, 75¾; Southern and Western (Ireland), 102; Great Western, 83; Lancashire and Yorkshire, 97¾; Ditto, Halifax, 11¾; Leeds Northern, 20; London and Blackwall, 8¾; London and Brighton, 86¾; London and North-Western, 101¾; Ditto, Eighths, 2¾; London and South-Western, 76¾; Ditto, £50 Shares, 50¾; Manchester, Sheffield, and Lincolnshire, 30¾; Midland, 63¾; Newmarket (Bury Extension), 5; Norfolk, 58; Northern Counties Union, 4; North British, 20; Oxford, Worcester, and Wolverhampton, 39; Shrewsbury and Birmingham, 61¾; Ditto, Guaranteed Stock, 60; South Eastern, 62¾; Thames Haven Dock and Railway, 22; York, Newcastle, and Berwick, 63¾; York and North Midland 49¾.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 103; London and Greenwich, 19¾; Manchester, Buxton, and Matlock, 2¾; Northern and Eastern, 61¾; Wear Valley, 31

PREFERENCE SHARES.—Caledonian, 100¾; Eastern Counties, No. 2, 1¾ pm.; Ditto, New Six per Cent Stock, 14; Great Nort ern, 122; Ditto, Five per Cent, 110¾; Ditto, Four and-a-Half per Cent, 109; Great Southern and Western (Ireland), 23; Lancashire and Yorkshire, Six per Cent, 141; Norfolk Five per Cent Extension, 107; North British, 107¾; Oxford, Worcester, and Wolverhampton, 105; York, Newcastle, and Berwick, Four per Cent, 98; York and North Midland, 11 and 9 Parchase, 9¾.

FOREIGN.—Bombay, Baroda, and Central India Scrip, ¼ premium; Dutch Rhenish, 4¾; Great Indian Peninsula, 6¾; Grand Trunk of Canada Shares and Bonds, 5¾ ex. int.; Luxembourg, 11; Ditto, Railway, 7¾; Ditto, Preference, 2; Ditto, Canal, 2; Ditto, Guaranteed, 5; Namur and Liege (with interest), 8¾; Northern of France, 34¾; Quebec and Richmond, 9¾; Sambre and Meuse, 9¾.

In Mining Shares, very few transactions have been quoted. On Thursday, Agua Frias were 2 to 1¼; Australian, 3¾; Imperial Brazilian, 6; Colonial Gold, 1¾; Great Nugget Vein Scrip, 2¾; Liberty, 3 to 3¼; Nouveau Monde, 1¾; Quartz Rock, 1¾; Santiago de Cuba, 5¾ ⅞; and United Mexican, 5¾ to ⅞.

Friday Evening.

There has been more doing in the Consol-market, to-day, and prices have steadily advanced. The Three per Cents, both for Money and the Account, have been done at 85¾ ⅞; the Three per Cents Reduced, 94¼ ⅜; and the New Three-and-a-Quarter per Cents, 96¾ ⅞. Foreign Bonds and Railway Shares have continued firm. India Bonds, 1s.; Exchequer Bills, 6s., 8s., 5s. prem.

THE MARKETS.

CORN EXCHANGE (Friday). About an average supply of English wheat was received fresh up to this morning's market from Essex and Kent; but the show of samples was very moderate. For all kinds the demand ruled steady, and fine qualities were quickly sold, supported. From abroad, over 32,000 quarters of wheat have come to hand. Owing to the import of grain from Egypt having ceased, charters were rather more inquired for, and for Baltic parcels a more lively feeling for money. In floating cargoes, only a moderate business was transacted, at Monday's decline. Malt moved off slowly, on former terms. Barley met a slow sale, at the late reduction in the quotations. The supply of oats was moderate, and the demand steady, on former terms. Beans and peas were unaltered in value. The imports of the latter are large.

ARRIVALS.—English: wheat, 1070; barley, 2110; malt, 3280; oats, 810; flour, 1320. Irish: barley, 650; oats, 12,610. Foreign: wheat, 32,160; barley, 9300; oats, 1200; flour, 2100; peas, 7750 barrels.

English. Wheat, Essex and Kent red, new, 40s. to 44s.; ditto white, new, 42s. to 46s.; Norfolk and Suffolk red, new, 40s. to 44s.; ditto white, new, 42s. to 46s.; rye, 30s. to 32s.; grinding barley, 22s. to 24s.; malting ditto, 28s. to 30s.; distilling ditto, 26s. to 28s.; Chevalier, 28s. to 30s.; Yorkshire ditto, 28s. to 30s.; Lincoln and Norfolk ditto, 28s. to 30s.; Scotch ditto, 27s. to 28s.; Peterborough ditto, 28s. to 30s.; Kingston and Ware ditto, 28s. to 30

DRURY-LANE THEATRE.

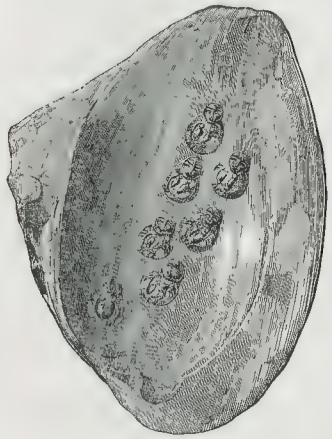
The performances of the American equestrians at Drury-lane Theatre continue to be very popular. Our Illustration represents one of the most attractive feats—the intrepid little *equestrienne* Mdlle. Ella, taking her surprising leap over a flag nine feet in width. Mademoiselle Ella was born of French parents, at Louisiana, in the United States, and displayed from her earliest years an extreme fondness for horsemanship. Her feats, extraordinary as they appear, are all performed with an ease and confidence which relieve the mind of the spectator from the idea of their perilous nature, and of the physical exertion necessary to their accomplishment.

In the foreground of the Engraving is introduced Barry, the famous Clown, who revives at Drury-lane all that genial fun which rendered him so popular at Astley's.

MDLLE. ELLA, AT DRURY-LANE THEATRE.

ARTIFICIAL PEARLS.

In a recent Number of the *Journal of the Society of Arts* it was stated that "an oyster, or rather a mussel, of the species known to naturalists as the *mya-margaritifera*, in which the artificial pearls are formed by the Chinese, had recently been sent to this country. These pearls are only obtained near Ning-po, and until lately very little was known of the manner in which they were formed; and the account first published by Sir Joseph Banks was generally questioned. The *Hermes* steamer, however, on a late visit to that place, was able to obtain several live ones, in which, on being opened, several pearls, as many as eighteen or twenty, were found in the course of formation. The one sent only contains simple pearls adhering to the shell. It appears they are formed by introducing some pieces of wood or baked earth into the animal while alive, which, irritating it, causes it to cover the extraneous substance with a pearly deposit. Little figures made of metal are frequently introduced, and, when covered with the deposit, are valued by the Chinese as charms. These figures generally represent Buddha in the sitting position in which that image is most frequently portrayed. Several specimens have been preserved in spirits,



ARTIFICIAL PEARLS IN THE MUSSEL (MYA-MARGARATIFERA).

some slightly opened, so as to show the pearls. Mr. Rawson, who has lately brought a pair of these shells from China, has kindly placed them at our disposal, and from one of these specimens is engraved the accompanying illustration of the above interesting fact.

Colonel Pennant and the Eisteddfodd.—The Hon. Colonel Douglas Pennant declines the proposed honour of the Presidency of the coming Eisteddfodd, as he is not a Welshman. He also strongly objects to the holding of an Eisteddfodd, alleging that he thought no practical good resulted from such ephemeral gatherings. If, however, he can advance the interests of the northern part of the principality by the establishment of schools, or in any other way, his purse and earnest personal exertions are offered in aid.

High Prices in Devonshire.—A quantity of wheat, for seed, has in several cases been sold at 10s. per bushel; barley and oats are proportionately dear; animal food fetches equally high prices. At the Ash burton great cattle fair, last week, there were from 1500 to 1600 sheep driven in, all of which sold readily; fat sheep obtained fully 8½d. per lb. For beef, 9s. to 10s. per score is about the ruling price in most of the Devonshire markets. Pork is from 9s. 6d. to 10s. per score.

An Opera Princess.—Madame Petrovich Walter, whose name may now be seen in the bills of the Italian Opera as *prima donna assoluta*, is the grand-daughter of the celebrated Prince Kara George, Hospodar of Servia.

Gas Grievance in Manchester.—The Corporation of Manchester are now in possession of both gas-works and water-works. The former have cost nearly £400,000, and the latter about £1,300,000. The gas-works are a monopoly, under which the prices charged have for many years past been much higher than in other towns of great magnitude supplied by incorporated companies; and, at the same time, the quality of the article delivered has been much inferior. The profits thus made from the pockets of the gas consumers have been exceedingly large, and now amount to about £40,000 per annum. These profits, thus obtained, have been applied partly to the extinction of the debt on the gas-works, partly to the payment of interest on loans, and partly in the reduction of the improvement rates; so that, at the present time, the whole cost of constructing the gas-works has been redeemed—not by the town, but by the gas consumer—with the exception of something less than a sum of £100,000.—*Times Correspondent.*

Col. Unett and the officers of the 10th Foot, stationed at Walmer, have projected and carried out amateur theatricals, for the amusement of their regiment, and to the equal pleasure of the inhabitants of Walmer and its neighbourhood.

PARIS FASHIONS FOR DECEMBER.

The silk-mercers' shops now denote the materials which will be henceforth fashionable, together with the colours and patterns for morning visiting dresses.

Dresses are still made very plain; that is, high up to the neck; still, they admit of much elegance when they are made to open in front of the body, and showing collars, kerchiefs, or habit-shirts, trimmed with rich lace; in addition to which a rich display is made of bows of ribbon. The bodies of dresses—having short open pieces added, which cover the tops of the petticoats, or *à Basques*—are trimmed with guipure; and above the basque bows of ribbon are placed, and similar bows are employed to ornament the sleeves, which produces a very pretty effect. Another novelty consists in ornamenting all kinds of dresses with feather trimming, put on flat. This will also be used in ball-dresses, as trimming to the *volants*. It will be of very good taste, and it will be too expensive to become common. Last year no one ventured to wear this trimming of any other colour than black; and for bordering cloaks, this year, they are made of all colours, moreover plain or mixed colours, or in different-coloured stripes, more or less wide according to the place which the trimming should occupy. Thus, we have seen a dress of red currant colour, which is fashionable this winter. The petticoat is trimmed with four *volants*, the body is *à Basquine*, and is terminated by a small *volant*, which forms the fifth of the petticoat. These *volants* are trimmed with a band of black and red-currant-colour feathers mixed, of the width of three fingers; the body is open, and is trimmed on the edge with a similar band, of the width of two fingers; then a second row, starting from the waistband or girdle, quite close to the first, runs along, growing wider (*en essaim*) passes near the seam which holds the sleeve at the elbow, and extends behind to the girdle, following the seam of the small side. The sleeves are also ornamented above and below, and on the two seams. This kind of ornament is made in all shades or colours, and it is placed on all kinds of material: thus—a dress of black watered silk, of the old-fashioned style, has five bands of black feathers put flat upon the petticoat, and which diminish in width as they mount up to the waist; the bodies of black velvet, which are worn with coloured petticoats, are trimmed also with the same band as the *basque*, and with two bands which lose themselves in the point of the body.

PARIS FASHIONS FOR DECEMBER.

The most *recherché* materials for dresses are still taffetas, watered silks (old style), reps, and lampas; satins, with large velvet patterns woven in; the droguet (Louis XV.), with a pattern of small flowers, of bright colours on a plain ground. Also brocatelle, of large patterns, for morning visiting dresses; poplin, plaid patterns, or with very large squares, black on a chestnut ground, or on dark green, or on dark blue.

The bonnets are worn, if possible, still smaller than hitherto, and lowered from the top (*baissés du haut*), so that they resemble, completely, caps, which, when trimmed, pass underneath the chin. The edges have very much trimming outside and inside, with ruches of ribbon, or of blonde, or of feathers or flowers; and even all mixed together. Feathers are also used for trimming the edges of the poke of bonnets; and are worn also in tufts on the crown of the bonnet. When this feather-trimming is not used, a half-veil is worn: this style is extremely pretty and graceful.

THE ILLUSTRATIONS.

Bonnet of velvet and lace, with a feather in the form of a cabbage-rose, on the side. Dress of taffetas, chestnut, or French blue, with ornaments of velvet galoon upon the four volants.

Girl's Dress: Bonnet of white satin. Dress of *Gros de Tours*, plain; body *à Basque* trimmed with black velvet, cut in form of teeth, and ornamented with five rows of ribbon—one in front, two on the side, and two behind.

Boy's Dress: Of Scotch plaid poplin, with pardessus of black velvet, embroidered with plumeter in front and on the sleeves. Trousers ornamented with English open embroidery-work, and high gaiters of brown-coloured cloth.

THE ILLUSTRATED LONDON NEWS

No. 656.—VOL. XXIII.] SATURDAY, DECEMBER 3, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

STATE AND PROSPECTS OF THE WAR.

THE political weathercocks of Europe are all on the move. Some are turning uneasily from side to side, creaking or croaking as they go; while others have veered right round, and no longer point to St. Petersburg, but to Constantinople. *Il n'y a rien que réussit comme le succès.* Success is the test of merit among nations as well as among individuals. Turkey having proved that she can defend her own cause and her own honour, finds plenty of friends among those who did nothing but vilify her in the days of her discouragement and peril. In all this there is nothing extraordinary. It is the experience of every day. Not only heaven, but all mankind, helps those who help themselves.

The victories of the Turks on the banks of the Danube, and in a still greater degree the defeat of Prince Woronzow in Asia, have wrought a great change in the relative positions of the belligerents. Not only is Bessarabia threatened; but Georgia is in danger. The Circassians, long deprived of the means of procuring arms and ammunition, by the rigorous blockade maintained against them by the Russians, have every prospect of being abundantly supplied with both by the Turkish, if not by the British and French, fleets. The Czar in this case will have his hands more than full, and will have to look well to Russia Proper if he would avoid the disgrace of a defeat upon his own territory. It is not probable, under such circumstances, that the Sultan will allow any persuasion on the part of the European Powers to deter him from prosecuting the advantages which his army has gained. The elements are the only impediments he will allow to stand in his way. There may be a cessation of hostilities in consequence of the weather, or the state of the roads; but Turkey will be ill-advised if she consent to any formal truce, unless Russia be the suppliant for it. Certainly it is not the interest of Great Britain, or of France, or even of Austria and Prussia, to offer any such advice. The civilised world has had such a vague terror of Russia ever since Napoleon's fatal retreat across the Beresina in 1812, and Russia herself, in the interval, has assumed so many airs of domination, and committed so many acts of aggression, that every European State is interested in ascertaining how baseless is the fear that has been inculcated—how weak, after all, is the colossal barbarian of the North. To interfere between the combatants at such a moment, and to impose terms upon Turkey less favourable than she herself might be in a position to dictate, were the war to be continued—either with or without the assistance of her allies—would but minister to Russian vanity and insolence, and purchase tranquillity at the heavy price of a future and perhaps not very distant war. We believe that such is the opinion entertained by the Governments of England and France, and that the terms which not many weeks ago they recommended for the adoption of the Sultan are not now considered, either in London or in Paris, to be sufficiently favourable to the Ottomans to meet the justice of the case. Turkey is the best judge of the satisfaction for the past and the security for the future which she requires. If she have enrolled a larger army than she could have expected—if that army have achieved successes which two months ago it would have been idle to anticipate; and if the patriotic ardour of the people of all ranks and classes have been excited to such a degree as to have infused new life and vigour into every department of the state, and to have converted weakness into strength, and poverty into riches; it would be short-sighted policy on the part of the Sultan to accept in December the proposals of adjustment which would have satisfied him in July. The Turks have a right to demand, not only the immediate evacuation of Moldavia and Wallachia, but a fair indemnity for all the expense to which they have been subjected by the unjustifiable aggression of their opponent. They are justified in demanding even more than this. Russia having based her preposterous demand for a right of interference in the domestic government of the Turkish Empire upon doubtful passages in doubtful treaties, it is of the utmost importance to Turkey that all these treaties should be considered as annulled by the mere fact of the war, and that the future relations between the two Empires should be formally restated and specified by a new treaty without dubiety or vagueness; and while it is the undoubted interest of Turkey to push her successes so as to be able to dictate her own terms of pacification to the Czar, it is the obvious policy of the great Powers of Europe to support her in bringing matters to this issue. The last seems the most important consideration of all. To take away from the Emperor of Russia every pretext for appealing to the faith of treaties for the assaults which, in pursuance of the ancient and traditional policy of his race, he may hereafter feel inclined to make upon the independence of his neighbour, would be an additional safeguard for Europe. It is true that the Emperor, if he saw a favourable opportunity for "annexing" Moldavia and Wallachia, or even Bulgaria and Roumelia, might set all treaties as well as all justice and decency at defiance. But in such a case the moral sentiment of Europe would be still more completely against him than it is now. And the moral sentiment is quite as strong in politics as in the ordinary concerns of life. The Emperor of Russia has already felt how bad and how paralyzing a thing it is to be in the wrong. He could not afford to make a second experiment of the same kind. If determined upon a new war, the ingenuity of some obsequious and hardy Nesselrode would have to invent a new pretext for it.

The friends as well as the foes of Turkey are, of course, prepared to expect that the late successes of Omer Pacha, on the Danube, and of Selim Pacha, at St. Nicholas, may be followed by reverses; and that the Czar will not quietly, and without an effort, submit to the damaging defeat which his

MILITARY POST ON THE DANUBE, FROM AN ORIGINAL SKETCH.—(SEE NEXT PAGE.)

arms have sustained. But no reverses that Turkey may experience will alter the real position of affairs. Unaided, she *may* cope with Russia; but, aided by the active support of Great Britain and France, and by the passive sympathy of all Europe, she *must* conquer. No victories which it is possible for the Czar to gain will place him in a position very different from that which he now occupies. Turkey will not permit him to violate her territories with impunity, or to take from her a square acre of them; and if Turkey could or would permit such an infraction of the public law of the civilised world, the other Powers of Europe are bound by their interest, as well as pledged by their duty, to prevent or punish it. The punishment for the past, and the prevention for the future, will doubtless be more difficult in proportion to the strength which Russia, and the weakness which Turkey, may display; but we may rest assured that neither the one object nor the other can be abandoned without danger to greater nations than Turkey. There is nothing in the character of the statesmen who are at the head of affairs in Great Britain and France to excite the least fear that the cause in which they have united will be imperilled by their apathy; or that, happen what may, Russia will be allowed to extend her territory at the expense of any State in Europe.

GUARD-HOUSES ON THE DANUBE.

The Guard-houses on the Danube, abounding along both banks of the middle and lower part of the river, form a singular exhibition, strangely indicative of the savage border warfare, which used to be carried on between Christian Europe and the Turks. Most miserable, also, are they in appearance; being nothing more than small wooden huts, which, owing to the swampy which abound around the Danube, but more particularly on the northern bank, are very often perched on the top of piles, with a narrow wooden balcony in front. Here stands the poor sentinel the live-long day, inhaling miasma, and looking upon a monotonous waste, the prospect of which is only occasionally enlivened by some craft passing up or down the stream. The appearance of the weekly steam-boat occasions an evident "sensation," and it is a real relief to the poor fellow to have an opportunity of presenting arms.

Some account of the Austrian frontier colonies, so critically adjacent to the present seat of war, may here be interesting; and we borrow the following particulars from the recently-published work on the "Frontier Lands of the Christian and the Turk":—"These frontier colonies of Austria form a belt of country extending from Dalmatia to Moldavia (where the Russian system of military outposts commences, and extends to the Black Sea), and includes the southernmost parts of Croatia, Sclavonia, Hungary, and Transylvania. They measure 900 miles in length, covering an area of between three and four thousand square miles. In this territory every peasant is a soldier; the administration of civil affairs is conducted by the officers of the Frontier corps; and the divisions of the country are not by provinces, districts, or parishes, but by regiments, battalions, and companies, as indicated by sign-posts at their respective boundaries. The Empress Maria Theresa was the founder of this singular system, and her object was the establishment of a military *cordon*, to protect her provinces from the hostile attacks of her Turkish neighbours, and from the plague, which occasionally appeared in Bosnia and Servia at that time. The principle is still maintained in full vigour, although the troops, thus enrolled, are now employed elsewhere when required for other purposes, as they have been for the last two years, when different parts of the empire were disturbed by insurrections. Two hundred thousand men are, therefore, added by this means to the standing force of Austria, and they constitute the Imperial Treasury merely the outlay for arming them, as they receive neither pay nor rations, except when removed from their regular quarters for the purposes of war; and they are then fed, but never paid nor clothed, as the public purse, being allowed to seek compensation in plunder—as much from their fellow-subjects as from the enemy. Their ordinary routine of service is to mount guard in the watch-towers of the *cordon*, where they remain a week; they are then relieved, and go to the head-quarters of their company, to be drilled, for another week; after this they are again on duty at their post for a week; and they are allowed to return to their homes, to pass the last week of each month in agricultural labour. Their wretched condition may easily be conceived, as their families are supported on the produce of one quarter of their work; and the neglected state of husbandry which we soon remarked was a necessary consequence of the life which they are obliged to lead. We saw a great many of these peasant soldiers, and they certainly looked more like beggars than either peasants or soldiers. Clothed in rags, with rude sandals on their stockingless feet, they wore their cross-belts, bayonets, and pouches, apparently never thinking of cleaning them; and over their shoulders a filthy bag was generally thrown, for the purpose of conveying their bread and vegetables to their posts, for they have no other food. Some of them were mere boys of thirteen or fourteen years of age, dragged from their families and their work to idle away their time in a guard-house, and to learn the hardships and vices of their older comrades. It cannot be expected that a population so situated can have much intrinsic worth, or should be attached to the Government; and, from all I could learn, it appears certain that, if Austria should again be plunged into internal difficulties, which it seems hardly possible for her to avoid, not only will the inhabitants of the military frontiers decline repeating the part they have played of late for the repression of civil disorders, but they will also take advantage of the first favourable opportunity to turn those arms, of which they have been taught the use, against the power which confines them to such intolerable evils. If they make no attempt to better their condition by violence, when the greatest part of the empire was at war with the Emperor, it was chiefly because they had always been kept in a state of such complete ignorance, that they were taken by surprise when they heard of the rising of the Italians, Viennese, and Hungarians, and did not understand the movement; but now that they have become acquainted with the existence of a spirit of independence, and have seen the possibility of resistance, even in the field of battle, the opposition is no longer that of abject submission and blind obedience to their ruler."

PICTURE OF THE ALLIED FLEETS.—A letter from Turkey says:—"I rode to Therapia the other day, and, on reaching the summit of the hill that commands the Bosphorus and the Black Sea, looked down upon three magnificent lines of ships of war, which covered the surface of the dark blue waters. They seemed to be at my feet, though really at some distance from where I was. It was a panoramic view, and seemed too beautiful to be real; and, if it had not been for the steamers moving about, and the Turkish caïques rowing up and down, the clear and delicate colour of the water and sky, and the green banks of the Bosphorus, had more the appearance of a picture than a real landscape."

NEW TESTAMENTS FOR THE CHINESE.—In furtherance of the object proposed by some philanthropic persons to take advantage of recent events in China, and distribute among the inhabitants of that interesting country 1,000,000 copies of the New Testament, the matter has been brought under the notice of the various Independent congregations in Liverpool and other towns.

REWARDS.—The Emperor of the French has caused a gold medal of honour, 1st class, to be presented to Mr. Lamport, master of the English vessel *Acacia*, for having taken on board and treated kindly the crew of the *Robert Surcouf*, who were wrecked, on the 1st of June last, near Cape Race. His Majesty has also ordered a similar medal to be given to M. Florio, master of the Austrian vessel *Macedonia*, for similar conduct towards the crew of the French brig *Jeune Polidore*, which was burnt at sea on the 22nd of July. M. Florio, although he had the crew on board for fifty-two days, refused to accept any pecuniary indemnity.

LECTURES ON BOOKS.—Any man who is really anxious to study can do so tolerably well by himself, with the help of books, than he can possibly do by attending any lectures that may be delivered. It is hardly possible for any man, unless he attends a long course of lectures, which a thousand unforeseen accidents may prevent him from being able to do well; it is hardly possible for any man to study in that manner any subject systematically and consecutively; and moreover, inasmuch as the lecturer has to address himself to a very large number at once, and of different capacities, he must address himself in such a manner as to be understood by all. But a man who studies and reads for himself, can pick out for himself that class of information which, if I may be allowed to use the phrase, he is most capable of assimilating and digesting.—*Lord Stanley of Bury.*

FOREIGN AND COLONIAL NEWS.

(*From our own Correspondent.*)

PARIS, Thursday.

Ennui has disappeared from the Court of Fontainebleau but to give place to uneasiness; this uneasiness, which no pains are taken to conceal, has been caused by the reports which have come from Frohsdorff, and from Vienna, announcing that the fusion between the two branches of the house of Bourbon was at length a thing accomplished, after having passed for so long as a chimera. The fusion is due to the *entente cordiale* of the Comtesse de Chambord with the Princesse Clementine, daughter of Louis Philippe, married to the Prince of Saxe-Cobourg. These two Princesses having established a good understanding between each other, the Duc de Nemours left Vienna for Frohsdorff, where he was received by the Duc de Levis; but scarcely had he appeared, when the Comte de Chambord, traversing three *salons*, came forward to meet the Duc de Nemours, and embracing him, asked, "How is the *Queen* Amelie?" To this the Duc de Nemours answered: "The Queen is well, *Sire*: how is your *Majesty*?" These preliminaries being at once settled, and being perfectly observed on both sides, the best understanding and most perfect intimacy was immediately established between the two Princes. The Duc de Nemours asked to be presented to the Queen, but the Queen being absent the presentation was put off till another day. The day succeeding that of the first meeting, the Comte de Chambord hastened to return the visit of the Duc de Nemours; and after the visit the Comte de Chambord and the Duc de Nemours went together to his Majesty the Emperor of Austria, who received them with the most cordial affection. All these details are known at Fontainebleau, where they give rise to reflections on the proverbial uncertainty of human destinies. How many of those who proscribe have been proscribed, and *vice versâ*? The fusion is a great act, inasmuch as it renders more and more insecure and tottering devotion already doubtful and uncertain. It will tend to cool still more the magistrature, already cold; and, perhaps, cause division in the army—and the French army divided, the Imperial throne is shaken. The Legitimists are in great joy, imagining that already the sceptre and crown of France are in their hands. But they count without the people, who are beyond all things anti-Legitimist.

This Eastern Question continues still the subject of all conversations. People who pretend to be well-informed, believe in the war in spring. M. Brenier, *ancien* Minister of Foreign Affairs, sets out on Monday from Paris, with a mission, the object of which is to explain the degree of support which France might give in case Austria and Russia make common cause against Turkey, and afterwards against England and France.

The cholera continues to carry off its victims

The cousin-german of the Empress, M. Adolphe Cabarrus, Vice-Consul at Parma, and son of the celebrated homœopathic doctor, Edouard Cabarrus, has just married the niece of the Archbishop of Paris.

The Fête des Ecoles, instituted by this prelate, and which took place on Sunday for the first time, at the Church St. Geneviève, was most brilliant. In the evening there was a grand reception at the Archbishop's.

The Palais de Cristal, destined for the Universal Exhibition of 1855, advances rapidly. The works at the Louvre and the Elysée advance with equal rapidity. A few more years of peace, and Paris will have an altered aspect.

On Saturday, the first representation of "Mauprat," by Mdme. George Sand, was to have taken place, but was postponed. It is expected that it will have a great success. On Tuesday the Italian Opera gave "Lucrezia Borgia." Mdme. Parodi, pupil of Mdme. Pasta, made her debut—a poor début. She is no longer young; she is not good-looking, and she sings falsely. Mario was received with immense applause. Mdme. Alboni has still the purest, sweetest, and most correct of voices. She was encored in the famous drinking couplet of the last act. At this representation, as at the former one, the audience was composed of people quite unknown, dressed out as if by commission. It has been decided that the Italian Opera in Paris is dead; but will the efforts made to achieve this end succeed? The Grand Opera is always full; which proves that foreigners and the people from the provinces prefer the French Opera to the Italian, which is easily explained: the French opera speaks to two senses, that of hearing and that of sight; while the Italian opera addresses itself only to that of hearing, which it often wounds. At the Variétés, Mdlle. Virginie Dejazet made her re-appearance in "Les Trois Gamins." Mdlle. Dejazet is in vaudeville what Mdlle. Rachel is in tragedy, "perfection in her line." Apropos of Mdlle. Rachel, there remains no longer any doubt of her success at St Petersburg: she has been called to play at the Court before the Autocrat.

Some new books have appeared. "The Memoirs of a Bourgeois de Paris" by M. Véron, have caused much disappointment; and it is thought that the second volume, which will appear the day after to-morrow, will find few purchasers. The parody of these Memoirs, the "Memoires de Bilboquet," is worth still less. The Memoirs of M. de Villemain are announced, the *ancien* Ministre de l'Instruction Publique in 1840, and Secrétaire Perpetuel de l'Académie Française. His flight from the Ministère, by the window, in an attack of fever, is well known. To-day has appeared a work, entitled "Solutions de la Question d'Orient," by M. Emile de Girardin. It criticises and compares all the solutions which have been presented; but it will appear in London almost at the same time as in Paris, for the right of translation was bought before the publication.

The Emperor has ordered the formation of ten new battalions of Chasseurs de Vincennes. An order for the withdrawal of a sufficient number of men from the regiments of the line is given, so that the general effective strength of the army may not be added to. Each battalion of Chasseurs will contain 1283 men. The increase of the force consists, therefore, of upwards of 13,000 men.

The trial of the railway officers, before the Police Court of Poictiers, on a charge of having by their neglect caused the catastrophe which occurred some time since on the Orleans and Bordeaux Railway, is concluded. M. de Bussenay was sentenced to imprisonment for two years, and to pay a fine of 1,500f.; M. de Crevecœur, to imprisonment for one year, and a fine of 1000f.; M. Landre, imprisonment for one year, and a fine of 200f.; M. Leroy, imprisonment for six months, and a fine of 300f. M. Didion, the director, was declared to be civilly responsible.

ITALY.

The opening of the remaining portion of the Turin and Genoa Railway is to take place about the middle of this month. The experiments already made on the incline near Gioni, where there is an ascent of 1 in 28½, have been most satisfactory. With two locomotives attached together, drawing a train of six carriages loaded with sand, which weighed altogether about fifty-six tons, and each locomotive weighing about twenty-two tons, including the coal and water which is carried on the engine itself, a speed of nineteen English miles an hour was easily accomplished, although, from the length of the tunnels, and the dampness of the atmosphere, the rails were excessively greasy and slippery. The engines used were built by Messrs. Stephenson, after plans sent by the Piedmontese engineers; and as this is at present the steepest ascent on any railway in Europe the result reflects the highest praise on all concerned, particularly considering the signal failure of the former engine "La Bavaria," for which the Austrian Government paid so highly for crossing the Semmering, and which can hardly force its own crushing weight of sixty tons up an incline of 1 in 40. When this last piece of railway is open between Turin and Genoa, and the Susa Railway finished to the foot of the Mount Cenis pass, which it will be in a few months, it may be expected that this will become the high road to Italy for English travellers.

THE WAR BETWEEN TURKEY AND RUSSIA.

We hear of no new movements on the Danube. The Turks still occupy their entrenched camp at Kalafat; but the expectation of a pitched battle in that neighbourhood has not yet been realised. This is now the only place in which the Turks command the passage of the Danube. Up to a recent period the Turks continued to occupy the island of Mokanon, opposite Giurgevo, which they had fortified. The Russians, after having invested Giurgevo, were not at first sufficiently strong to attack Mokanon; but we now hear that the Turks have evacuated the island of Mokanon. The Turks have not only retreated across the Danube—at this and all the other points, except Kalafat—but they have also marched their troops to some distance from the river. The Russians, too, have fallen back upon the interior of Wallachia. The cause of the retirement of the two armies is said to be the inundations of the river; the Danube having overflown its banks between Giurgevo and Oltenitza.

In a Cabinet Council held at Constantinople on the 14th ult., it was resolved to reject the note proposed by France and Great Britain. The Turkish Government appear decided not to renew, by any sort of convention whatever, the ancient treaties which Russia extorted from Turkey. The Sultan, it is said, replies to all demands for a suspension of hostilities, that he would thereby surrender the advantages of his position, and give Russia time to concentrate its masses of troops to overwhelm Turkey.

It is stated that a treaty between France and England for imposing terms of peace between the belligerents, or, as it has been phrased, "for guaranteeing Turkey against any aggression on the part of Russia," has been actually arranged.

The recal of the Austrian and Prussian Ministers from the Turkish capital is regarded as an act strongly condemnatory of the hostilities commenced by Omer Pacha; but these two powers will be invited to become parties to the treaty concluded between France and England. The bold tone of the Vienna press in speaking of Russian aggression, and the language of the Berlin Cabinet in opening the session of the Chambers, are held to indicate greater independence on the part of those Powers. On the other hand, all the intelligence from St. Petersburg indicates the determination of the Czar to persevere in his unprovoked aggression on Turkey; and few people will believe that the Court of Austria will join in any measure which is likely to be really distasteful to Russia.

On the shores of the Euxine, the Turks still act on the offensive, with their accustomed success; and, unless Russia is able to despatch considerable reinforcement across its stormy waters, the position of Prince Woronzoff will be very precarious. With an army said to be considerably disaffected, a population embittered by a long course of Russian cruelty, encompassed by active foes, and the forces of Schamyl and Abdi Pacha, it is not unlikely that the aggressions of the Czar upon the Circassian country, which have continued for more than a quarter of a century, will be finally put an end to.

The Emperor of Russia soon ped by the defeat at Oltenitza, is said to have ordered Gortschakoff to take the offensive, and drive the Turks out of Wallachia. His head-quarters are reported to have advanced towards Krajova, where he is concentrating his forces, receiving supplies, and awaiting troops now on their way by forced marches, preparatory to a vigorous attack on Kalafat. Should the winter be severe, a prolonged campaign is anticipated. The generalship of Omer Pacha has, hitherto, given satisfaction to his Government. It is stated by the Turks that the passages at Turkutai, Rustchuk, and other points, were not made with an intention to retain a permanent footing on the left bank, but merely to distract the attention of the Russian Commandant till Kalafat could be securely occupied.

General Baraguay d'Hilliers paid his first official visit to the Divan on the 16th.

A letter of Nov. 16 reports the departure of four English steamers of war for the Black Sea—they are the *Sampson*, the *Tiger*, the *Ajax*, and the *Retribution*. The first three left on the 16th, the other the 16th. It is believed the expedition was decided on after the news reached the English Embassy of the Russian destruction of the Sulina having completely stopped up the mouth of the river, so that the English merchantmen were unable to get out. Lord Redcliffe, on hearing of the fact, went instantly to Admiral Dundas, and concerted measures with him for the protection of English commerce in these waters. The orders of the Admira. were very precise on the point

The Turkish fleet, in two divisions, is now cruising in the Black Sea—the three-deckers remain in the Bosphorus. The Russians are also on the alert. A Russian war steamer, with troops on board, has been lost at Chevkedy (or St. Nicholas, as the Russians term the place); it was intended to co-operate with a Russian land force, which attempted to retake the fortress unsuccessfully. Five different times the Russians tried to take it, and each time were beaten off with loss. The last attack took place on the 9th ult. The Russian steamer having advanced within cannon shot of the fort, was fired into by the guns of the batteries only just thrown up on the coast. The machinery of the steamer was disabled by the guns from the batteries. To avoid falling into the hands of the Turks it tried to move out at all speed, but could not do so; and, after driving about for some time, struck on a rock close to Batoum, where it went down. It had on board 800 Russian troops, besides a large crew. With the exception of twenty-five, every soul perished. The twenty-five were picked up by the Egyptian frigate the Nile, which had hastened to the spot. The same frigate afterwards conveyed the prisoners to Constantinople

In addition to the steamer lost on the coast of Batoum, the Russians have met with another disaster of a similar kind in the loss of one of the finest vessels of their navy, the *Vera Said*. The ship had left Odessa for Constantipol and Yalta, and, having struck on the rocks, in a few minutes filled and went down. Owing to the calmness of the weather, the crew escaped in the boats. The Turks appear to have had a narrow escape on the Black Sea. A Russian division composed of four sailing-vessels and two larger vessels, and a Turkish steam-frigate towing a merchant vessel laden with arms and ammunition for the army of Asia, and gave it chase. The frigate, finding itself hard pressed, let go the ship it had in tow, and escaped; and the other vessel had time to get under cover of the shore before the Russians thought of pursuing her. This lucky escape was all the more fortunate, as the arms and ammunition it bore were destined for the mountaineers of the Caucasus.

A Marseilles journal has the following from Constantinople —

The English Admiral Slade, called Mushawer Pacha (the foreign Pacha), has left for the Crimea to embark the Turkish troops. He has taken with him the ship of the line the *Mesjedieh*, five frigates, and a steamer. His object is to drive the Russian cruisers from before Anapa, the only port of the Caucasus of any importance that they still occupy. If the Turks succeed in this, the garrison of Circassia will be cut off from all supplies, and must either surrender at discretion, or retire into the Caucasus, they will put an end to a commemoration of the Crimea. Russia and the Transcaucasian provinces acquired by the treaty of Gulistan. Numerous Russian and Polish deserters from the army of Woronzoff have reached the Turkish advanced posts in Asia. Aides-de-camp of Bem and Dembinski have undertaken to organise them. Two thousand men have, it is stated, already been collected, but the number is probably exaggerated. Desertions, however, are very probable, as the army of the Caucasus has received all the soldiers condemned, and the officers and even the generals who were dismissed and ordered to serve in the ranks.

Ten thousand auxiliaries had been embarked at Alexandria for Constantinople.

A Turkish line-of battle ship of 82 guns, which is building at Sinope, and is to be launched at the end of the month, has received the name of the *Osteritza*, in memory of the victory obtained there by the Ottoman troops in Wallachia.

About 6000 Bosnian and Albanian Catholics have formed a free corps, and are about to join the Ottoman army. Another corps of Christians, Cossacks, is forming at Constantinople, from the descendants of the Greek refugees in the days of the Czarina Catherine.

It is reported that a serious conflict has taken place between the Servians and the Turks near Ushitza, on the Servo-Bosnian frontier. The Turks were repulsed. The loss of both parties is estimated at 500 men. While the Servians have dismissed the Russian consul as not being legally recognised by their suzerain, the Porte, they have risen in arms to oppose the passage through the country of the Bosnian contingent which wishes to join Omer Pacha at Widdin. The difference between the relations of the Principalities to Turkey is, that Servia is almost independent, only paying a fixed tribute, but not bound to furnish any contingent, while Bosnia is a Turkish province, and is governed by a pacha.

It is stated in several letters from the East that the greatest agitation exists among the Afghans, that Dost Mahommed had declared to the Court of Persia that the Afghans were at war with Russia; and that if they should decide on attacking that Power the Sohah would be expected to grant them a passage through his dominions. The same

letters add that in Bokhara, in consequence of a popular movement got up by the Afghans, the Schah was assassinated, and that the Grand Vizier, an Afghan Prince, had been proclaimed in his place, under the title of Hidherim Schah. It appears he is the bitter enemy of Persia and Russia.

RUSSIA

It is believed that the Emperor of Russia has withdrawn the whole of his funds from the Bank of England, and closed his account with that establishment, and also with the Bank of France. The Bank of England had acted as his bankers since the failure of Messrs. Harman and Co., in 1846.

Baron Budberg, the recently-appointed Commander-in Chief of the Russian army on the Danube, is still in St Petersburg.

The Russian Government is now showing great activity in the Baltic. An immense mass of forage has been collected by Finnish and other Baltic merchantmen under the Imperial decree allowing its import at a nominal duty. Revel and Riga have received a garrison of twelve battalions of the Grenadier corps. The force in Finland has been raised from 12,000 men to 28,000, of whom 8000 have been sent to Aland and a regiment to Åbo and Tavastehus. Communications, whose cannon can be heard in Stockholm! To Helsingfors have been despatched 10 000 seamen, and a squadron of nine ships of the line has arrived in its harbour, where it will winter, for the purpose of sailing out early in the spring—Cronstadt being blocked up by ice almost down to the summer months. At the same time a great number of screw steam-engines have been ordered in England for the men-of-war, and are daily expected. The Russian display of force during the summer has been also very considerable in these seas, large fleets having cruised between St. Petersburg and Bornholm for the last six months So much for material means Its moral weapons have not been less unsparingly employed. The Russian diplomatic "pressure" in the Cabinets of Stockholm and Copenhagen remains unabated.

Some curious utterances of a Russian nobleman of distinction, appear in the Vienna correspondence of the *Morning Chronicle*, and are not undeserving of notice, as they may be taken to represent pretty accurately the opinion of a "fine old country gentleman," of the good old Russian kind. It is but seldom that the sentiments of the Russian nobility find public expression; and it is curious to find them characterised by the same inflated notions of the power of Russia which distinguish the manifesto of the Czar. The opinions in question were uttered in a recent conversation on the Eastern question:—

If the English want to have a war, depend upon it their wish shall be gratified. If Russia is put to it, she will carry on a war for seven years. You English may go and burn our seaport towns in the Black Sea, and even in the Baltic; but in so doing you will burn property which, to an enormous amount, has already been paid for by English capital. You may destroy our fleets also; and what do we care? Our ships have never been of much use to us; and better, perhaps, if we had never had any. Make the account with the Russian who will hold out the longest. But, do what you may, you will find out to your cost that Europe at large, and English commerce in particular, will suffer more severely by a long Continental war than Russia. The preponderating influence of Russia at Constantinople is well worth fighting for. . . . . The policy of the English Cabinet is no conger what it used to be: that is, straightforward. A more honourable statesman than the Earl of Aberdeen does not exist, but he is goaded on by other members of her Majesty's Ministry to acts which must necessarily cause a European war. If the English Parliament were to meet at this moment, the irresolute policy of the Cabinet would probably be condemned by the majority of the representatives of the nation, and Ministers would be in the minority. By sending the English and French vessels of war into the Black Sea, Russian vessels of war may easily come into a conflict with them; and what would be the consequence? Nevertheless, the project of a French Congress at London is proposed by the Western Powers to the Emperor Nicholas How can the latter have any confidence in the impartiality of their judgment of his demands on Turkey? If it be thought that Russia will allow herself to be bullied out of her rights, it is a grand mistake. Russia will know how to maintain her position; she will accept the challenge whenever the Western Powers throw down the gauntlet to her. The sooner, therefore, the Western Powers show their true colours, the better. The Earl of Aberdeen will probably resign, if it comes to be a European war. Lord John Russell will try hard for the Premiership, that we know. But, of all men, we Russians would be glad, in that case, to see Palmerston at the head of affairs Lord Palmerston is the only statesman to have to do with the bold, resolute, and manly policy of that statesman On the other hand, if Turkey be so much more vigorous, and possess so much more vitality, than it is supposed we gave her credit for—well, then, what need of a European war, and all the incalculable and horrifying calamities it must entail? Why not let Russia fight it out with Turkey alone?

The Superior Government of Odessa had rejected the demand of Prince Menschikoff to prohibit the exportation of grain. On the contrary, orders are given to continue as heretofore, to send grain to the foreign ships, without any impediment. Four hundred ships were taking cargo at Odessa.

GERMANY

We hear from Vienna that Count Buol-Schauenstein will positively retain office as Minister for Foreign Affairs.

On Monday the Prussian Chambers were opened by a speech read by the President of the Ministry. The first portion of this address had reference to the internal affairs of the Monarchy, such as the scarcity of grain, and the necessity of facilitating the means of transport from one part of Germany to the other. At the close of his speech the President called the attention of the Chambers to the fact that their deliberations commenced at a period of great anxiety as regarded external affairs, and at a time when the peace of Europe might be disturbed by complications in the East. The Government neither could nor would conceal the fact that this anxiety was founded on facts, but still it was prepared to look with confidence on the future. Prussia, supported by her strength, and fully conscious of her own power, would continue, as heretofore, her efforts in every direction to maintain peace, and would hold in the cause of peace and moderation an independent and impartial tone throughout the whole of this difficult question. But, whatever turn events might take, Providence had given to Prussia and its King at the head of a united, valiant, and patriotic people; and the Chambers might rest assured that the Government, on every occasion on which it might be called to act, would be solely guided by the true interests of the nation, which were inseparable from those of the Crown.

A religious conflict has just broken out in the Grand Duchy of Baden. The Archbishop of Freiburg (a city of the Grand Duchy) having quarrelled with the Government, issued an encyclical letter, in which it is set down that a people are enjoined only to obey Governments when they demand or ordain lawful things; and it is left to the conscience of individuals to decide whether a Government has ordained or demanded a lawful thing or not. The two ecclesiastics who proclaimed this document in the cathedral of Freiburg have been arrested and imprisoned. The Vicar-General and the head of the Archbishop's Chancellerie have been fined for distributing the decrees of their superior. The Archbishop himself openly declares that the Government ought to make him alone responsible, as he assumed alone the full responsibility of his acts. Unhappily, the conflict will not be confined to the Duchy of Baden The Bishops of Mayence and of Limburg have warmly espoused the cause of the Archbishop, and have issued circulars to their dioceses of a nature to arouse public opinion against the Governments. The Government of Wurtemberg has found it advisable to concert measures with that of Baden to oppose a serious resistance to the outbreaks of Ultramontanism. Collisions have taken place in the valley of the Tauber and the neighbouring villages, between the inhabitants and the gendarmes, who had been sent to arrest the parish priests.

The Archbishop of Posen has placed a sum of 30,000f. at the disposal of the Archbishop of Freiburg. A princess had sent him 40,000f., the revenue of one of her estates. All the Austrian bishops have likewise come to his assistance, and it is supposed that the conflict will terminate in the defeat of the Governments.

AMERICA.

Advices from New York to the 16th ult by the *Baltic* steamer, state that the money pressure in the money market had not passed away. Confidence was coming back, and money was growing more plentiful.

The Washington Government organ continues its inflammatory attacks on the scheme for Africanising Cuba, although that alleged scheme is denied.

The idea of annexing the Sandwich Islands meets with general favour.

The new Congress will be more democratic in its political complexion, and will contain more new members than any previous one. Nearly two-thirds of the whole number of members elected are men who have never before sat in the councils of the nation. The Democrats have 159 of the whole number of members, the Whigs 71, and the Abolitionists 4; but the split in the Democratic party into national and free-soil Democrats will, no doubt, be followed by a sub-division in Congress.

Advices from Cuba mention an attack by insurgents on a fort at Barocoa. The assailants were repulsed, and many prisoners captured. At Havanna a revolutionary journal had been seized, and many persons of good family arrested.

INDIA AND BURMAH.

When the last intelligence left Burmah on the 8th October, the atrocities by the dacoits had not diminished. It is supposed that as soon as the waters of the Irrawaddy fall, the Burmese will attack us in force. The real ruler at Ava is the Prime Minister, the brother of the King; and neither he nor his party make, it is said, any disguise of their hostile intentions One of the causes alleged for the immense increase of the dacoits in the neighbourhood of Pegu is, that the last harvest of the ryots was not gathered in in consequence of our presence, and that, therefore, these poor people have been driven *ex necessitate* to plunder. The two Jesuits, who were associated with the Burmese Commissioner in the preliminaries before Prome for the signing of the treaty, have arrived at Rangoon. They state that the King is surrounded with a war party, so powerful as to deprive him of independent action, and a tacit consent has been wrung from him to permit hostilities to be renewed with us; consequently, warlike preparations are being carried on extensively at Ava, and December or January next is the period fixed upon to attack us The Burmese think that by that time the Irrawaddy will be too low to admit of large steamers navigating it, and that without their aid the British forces cannot cope with them. Sir John Cheape will evidently soon have an opportunity of distinguishing himself. The French Captain d'Oorgany is still employed drilling the Burmese. A serious disturbance had broken out in the gaol at Rangoon, but particulars have not yet been received

Mr. Colvin, Judge of the Calcutta Sudder, at present employed on the special duty of revising the Code of Civil and Criminal Procedure in the Company's Courts in Bengal, has been nominated to succeed the late Mr. Thomason, as Lieutenant-Governor of the North West Provinces. The Governor-General's selection is generally approved of. The death of Mr. Thomason has caused genuine disappointment at Madras, for no sooner had tidings reached the inhabitants of his lamented demise than the mail arrived in Madras roads with the news of Mr. Thomason's appointment to the Governorship of Madras, vice Sir H. Pottinger, retired. Mr. Thomason was felt to be almost the only man who had it in his power to retrieve the broken fortunes of the Madras Presidency, and the regret expressed at his premature death was deep and universal.

The intelligence of the death of Sir Charles Napier has been received with general sorrow in India A special meeting has been held in Kurrachee, presided over by Mr. Frère, the Commissioner in Scinde, for the purpose of taking into consideration the best means of recording the estimation in which the late General was held.

The expected advent of Lord Elphinstone as Governor in Bombay is hailed with delight; any change in the presidentship of the Bombay Council would at the present moment prove regretful, but the name of Elphinstone has many charms for the inhabitants of Western India.

The death by drowning of the family of Mr. Arthur Malet, the chief secretary to the Bombay Government, has cast a deep gloom over society in Bombay. Mr. Malet had proceeded to join the Governor at Mahabuleshwur, in the Peninsular and Oriental Company's steamer *Achilles*, which conveyed him *en route* as far as the entrance of the River Mhar, where he re-embarked in a native boat, manned with the syrang and a part of the crew of the commander's barge, and left for the same destination. It was supposed that these men were well acquainted with the navigation of the river; but, unfortunately, the boat struck on a rock at the entrance of the bar, at seven in the evening, and became a total wreck. Mrs. Malet, the only lady passenger, and two native girls, were drowned, together with most of the crew; Mr. Malet being washed to the shore with one of the planks of the wrecked boat, to which he had clung

Matters on our north-west frontier still continue portentous, and troops have been moved to Peshawur; there has, however, been as yet no open demonstration; and it will probably be found that the rumours of an outbreak on the part of the hill tribes has no foundation. The force at Peshawur is to be largely augmented. Colonel Outram and Major Herbert Edwardes are both spoken of as likely to succeed Colonel Mackeson.

CHINA.

The China news is important The insurgents became masters of Shanghai almost without resistance on the 7th of September, and organised plans were said to be in existence for a simultaneous rise in Soukiang, Soo-chow, Tae-Tsang, and other places. The natives say "that Shanghai was the soul of Keang-nan, and that being lost, the whole province may be considered as gone" The insurrection at Shanghai was almost unresisted; only two of the Imperialists lost their lives. The authorities took refuge with the foreign shipping, the Taoutae (or Governor) on board the United States' steamer *Saratoga*. The Shanghai rebels are, it seems, rebels on their own account, not countenanced by the general body of revolutionists. The insurgent rulers at Nanking will not promise to support their new possession of Shanghai any kind of support; and have intimated that, as they have acted hitherto on their own responsibility, they must continue to do so, and be prepared to give up possession (if able to keep it) to whatever the Tae-ping Wang resolves on in the matter. This is serious. This having become known to the general commanding the large body of Imperialist troops encamped between Chun-keang-foo and Nanking, he has valiantly resolved on doing his best to regain Shanghai. Already there have been several encounters, in one of which, at last a short distance from the walls, the rebels were worsted and driven in. This took place within sight of several foreigners, who had an opportunity of observing the total want of faith exercised by the Imperialists. After firing away at one another for some time, the chief of the rebel party was seen to give his sword to his followers and to walk forward, making gestures indicative of desire for a parley. But his good intention met no similar response; a party of the Imperialists rushing on, seizing, and cutting him in pieces before the eyes of his comrades who did their utmost to revenge his death, but with little effect. Up to the 27th of September there was no change in the state of affairs, the rebels holding the city, dissagreeing among themselves, and no Government formed. Skirmishes had taken place with the neighbouring villagers, who had combined to protect themselves.

From Ningpo, the next consular port south of Shanghai, the news is very threatening; the country all around, by date to the 30th Sept., being in a disturbed state, and a rising daily expected.

The rebels in Amoy still hold the island against the Imperialist fleet, and appear likely to do so. The naval forces of the Imperialists now seem to be concentrated around the island of Amoy. One-tenth of them, it is said, would be sufficient to overpower the rebel fleet in the inner harbour. Only once such an attempt has been made, and on that occasion, one of the Imperialist Admirals is said to have displayed considerable pluck, but to have been altogether unsupported." The land forces do not even pretend to approach within shot of the rebel troops, and the principal sufferers from the three weeks' fighting before Amoy have been the nonbombatants. It is not probable that any attempt will be made by the rebels may be destroyed in detail by the Imperialists. The possession of the water frontage, however, is not possession of the town, and there are but few prospects of an early resumption of the usual trade of the place.

Canton was threatened, and there was little doubt that the city would have changed masters before the despatch of the next mail. There was great stagnation of trade. Sir G. Bonham has paid a visit to Canton.

The Mantchoo dynasty is evidently doomed; but by what it is to be followed, no one can predict: the heterogeneous elements of which the insurrectionary party is composed are, just at present, united by one common object—the expulsion of the Tartars; but, that accomplished, the rebels will probably fall out among themselves. They will all, probably, advocate the restoration of the Ming dynasty; but the descendants of that race are said to be very numerous, and it is very doubtful whether Tien-Teh belongs to it at all. Of the hero of the rebellion and his army, excepting now and then a report of some point having been reached, or some town taken, we are in total ignorance; and the same has to be said of the Imperialist Court at Peking, from which there has not been any reliable information for a considerable period.

A Tartar invasion of China is beginning to be talked of; the Mantchoo dynasty have nothing to hope for in such an event, for they are said to be extremely unpopular. In Chinese Tartary and Thibet there appears to be no immediate cause for apprehending such a movement, and we hear of no Tartar force; yet it remains to be seen whether some of the bravest and most conquering races of Asia will tamely submit to the wholesale massacre of its fellow-countrymen by a race so feeble, and inhabiting so rich a country, as the Chinese.

Her Majesty's steamer *Hermes* had arrived from Shanghai and the Madjicosemah Islands—ordered to call there by the Admiral, to bring down the survivors of the *Lady Euphemia*, bound to California, and wrecked there, being twenty-six Chinese and six Europeans. About 240 perished. The island of Formosa is also the theatre of an insurrection. The *Hermes*, *en route* from the Madjicosemahs to Amoy, called at Taiwan-fu, and found the inhabitants battling the soldiery, Captain Fishbourne being begged most earnestly to supply some gunpowder. This request was refused; but only on handing them eighteen cartridges was he allowed to take some coals he had requested might be furnished to him.

At Whampoa the British Vice-Consul Bird is in some trouble. A Chinese female whom he had in confinement jumped overboard in the night, and was found in the morning hanging on to a rope [illegible] dead. The friends of the deceased having sent threats to Mr. Bird that [illegible] said pay the forfeit, he has been constrained, in consequence, it is reported, to apply for removal to some other post in her Majesty's service.

The American corvette *Macedonian* was in port at Hong-Kong. She carries the heavy armament of twenty-two 68-pounders on one deck, and heavy pivot-guns forward and aft.

There is a rumour of the flight of the Emperor. A New York paper gives the following as the copy of a letter from Dr. Parker, Secretary to the United States Legation:—

I hear, what I am assured is contained in a private letter from Peking, that Heen Fung, the present Emperor, on the 2nd of August, fled to Gehol, in Tartary, and that Prince Wei Shin, fifth brother of Thou Kwang, was left in charge of the Empire, and that the insurgent troops were within six days of Peking at that date. This news bears marks of probability, and the source of my information is as reliable as any we can ordinarily get in Chiua.

AUSTRALIA.

The *Indian Queen* has arrived at Liverpool, with advices from Melbourne to the 30th August. She brought 35,592 oz. of gold dust on freight, besides a large quantity in the hands of passengers. Two persons, said to have been concerned in the robbery of the gold escort, have been arrested, and lodged in gaol in Portland. Two Government escorts had arrived at Melbourne on the 30th—one from M'Ivor and Goulburn, with 1408 oz.; and one from Castlemain, with 35,360 ounces. Great dissatisfaction had been manifested by the "diggers," owing to having to obtain a license to dig gold. Several meetings had been held for the purpose of obtaining a reduction from 30s. to 10s. per month. The Executive had despatched some soldiers for the purpose of suppressing an attempted rescue of diggers, who had avowed their intention of not paying the September license. A feeling was prevalent in the colony that the present Governor (Sir William Denison) was quite incapable of performing satisfactorily the duties of his office. The total amount of gold exported from the colony of Victoria alone is 87 tons 7 cwt. 3 qrs. 15lbs., amounting in value to £3,166,870. The average number of persons who have arrived every week in Melbourne during the winter has been 2000, which will be much exceeded as the spring approaches. The markets for all kinds of merchandise—with very few exceptions, such as building materials—are much depressed, and sales are being made at auction at a great sacrifice. The large shipments, the bad state of the roads to the diggings, and the want of store-room, are the causes of the gloomy state of trade.

GENERAL ARISTA.

At the present time, when Mexico is threatened with new political convulsions, and when even the conversion of the Republic into an Empire is the *coup d'état* said to be contemplated by the ruling party, it becomes interesting to acquire such knowledge as we can of her public men. It is, therefore, with pleasure, that we this day present our readers with a striking and spirited likeness of General Arista, the Ex-President of the State.* His Excellency, after a residence of three months in London, has lately removed to spend the winter in Paris

General Arista's father, Don Pedro Arista, was born in Spain, and went to Mexico while yet a youth. Of only humble birth, but his capacity and acquirements ensured him there a distinguished reception; and, as Lieutenant-Colonel in the Spanish army, as well as secretary to its general-in-chief commanders, he rendered essential services to Spain during the first struggle of the Mexicans for their independence. Don Pedro married a lady of Puebla, daughter of a Spaniard of [illegible].

The subject of our memoir was born under the paternal roof at San Luis de Potosi, in 1802. At early [illegible], he was admitted [illegible] in the active militia, at eleven years of age. In the year 1821 he joined the cause of Independence as a cavalry officer, and was not long in presenting himself in the field as leader of his squadron. In the army of Iturbide, he was known by the badge of military talents, and by his bravery, while, through the actions in which he distinguished himself, he rapidly ascended the grades; and was a General of Brigade in 1832. Up to that time, carried away by the political passions which distracted his country, he took part in its Civil Wars, in which he sometimes made a conspicuous figure.

Banished in 1834, through the failure of a rising which he himself had headed, General Arista profited in the United States by the aspect of happiness which that great country wore, under a legal and settled government. He saw that public progress was the result of individual security, and that social order sprung from obedience to the law. From that time he laid down as his principle, subordination and obedience to legally-constituted authorities.

As Inspector of the Active Militia, under General Barasmante, General Arista distinguished himself by the reforms he effected. Removed from the command, he next find him heading a chosen division of the army, and ordered to Vera Cruz to defend it against the maritime attacks of the French General Baudin (1838). Here he became prisoner of war, and was sent on board the frigate *La Gloire*.

After his liberation he was employed in various important expeditions. As General commanding on the northern frontier (1840 and 1841), he led public opinion so well that, after defeating the partisans of Annexation, he converted them into staunch auxiliaries of Mexican Independence. His efforts tended greatly to repress the Larbarous character which, in its commencement, characterised the war with the United States. He combated the enemy with enthusiasm in Palo-Alto, on the 8th of May, 1847, and was praised for his able management by General Taylor—the triumph of the day remaining undecided between the contending forces. On the 9th, at Resaca, the Mexicans suffered a dispersion. In eight days our General re-organised his division in Matamoros, and by short marches made good his retreat. He lost only eight pieces of artillery in Resaca, where, with an empty money chest, he was 300 miles from his reinforcements. General Arista having made some North American prisoners, he exchanged them after the affair of Resaca. At the close of the war, he demanded a judicial investigation of his military conduct, and the award was the most flattering which a man of honour could desire.

When named Minister of War (in 1848), he reorganised the army, providing it with an ample *matériel*. In this work he continued as President. He put down the war of castes, decreed the formation of military colonies, repressed insurrection among both troops and civilians, and impressed on all a respect for the Government; so that no one at last was bold enough to head a rising.

When constitutionally called on to fill the Presidential chair, General Arista gave every possible example of respect for the law, and he declared for the "Federal Progresista" party. He was the only President who grappled fairly with the public debt, and who financial administration—till then unheeded by the governors and the governed. And it must not be forgotten that, as Minister, he warmly supported the Convention which gave three millions and a half of dollars from the American indemnity money, and 3½ per cent annual interest on the capital of the foreign debt.

Assiduous in his habits, General Arista gave a great impulse to the Society of Statistics and Geography; and he obtained, as one reward of his labours, the only great and correct ecclesiastical map of Mexico which exists at the present time. It is greatly to be desired that, ere long, it may be given to the world, as it has been sent to Europe for publication.

Such is a hasty sketch of General Arista's career. When he rose to the Presidential chair, his rule was in point of fact, too constitutional to meet the views of many powerful and interested parties. He was pressed to meet the factious opposition offered to him, by a *coup d'état*. But he resolutely refused to violate the oath he had taken to govern according to the laws and the constitution; and, rather than do so, he gracefully deposited in the hands of the Legislature that power which he felt he could no longer exercise for the benefit of his country.

It has been most erroneously supposed that General Arista abdicated his power to make way for General Santa Anna. Such is not the case. Four months before the advent of the latter, revolution had been rife, and suddenly ended by the bold movement of General Santa Anna's adherents in calling him to return to Mexico.

After Gen. Arista had sailed from Vera Cruz, by order of the new Government, a clumsy attempt, by means of a forgery was made to im[illegible] a crime him as an open advocate of Annexation—a calumny which he triumphantly exposed and refuted, through the medium of our own free [illegible] department and [illegible]

* The original is painted on ivory, with a very high [illegible], by A. Laird, No. 22, Brunswick crescent, Camberwell.

GENERAL ARISTA.—FROM A PAINTING BY MISS A. LAIRD.

has won him the good opinion, and entitled him to the respect, of every one who knows him, and of all parties connected with Mexico. Our Government has shown to him, as a private individual, all the consideration and politeness due to his character and his station; and her Majesty, in testimony of her appreciation of the merits of General Arista, has been graciously pleased to present him with a magnificent box, enriched with brilliants, accompanied by a kind letter from her Majesty's principal Secretary of State for Foreign Affairs, Lord Clarendon. Such a gift, having no reference to official affairs, or public position, could not fail to be eminently gratifying to the feelings of the amiable subject of this memoir.

THE EAST INDIAN RAILWAY

The affairs of India having lately occupied so much public attention, and the various schemes for her advancement and development having been so much discussed, it may not be uninteresting to describe some of the works upon the Indian Railways.

The importance of these undertakings, in every point of view, cannot be too highly estimated, particularly in a country where travelling is anything but comfortable or expeditious, and the transit of goods is tedious and insecure: the latter resulting not so much from the lawlessness of the natives, as from the natural dangers of the rivers, and the exposure to all weathers upon the roads.

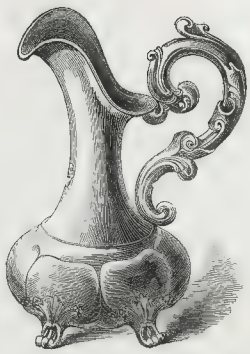
Railways are at present in progress in all the Presidencies—Bengal, Madras, and Bombay. In the former is the East Indian Railway, undertaken by a private Company, and guaranteed by the East India Company; its main object being to connect the North-Western provinces with the city of Calcutta. The first section of this railway has been commenced at Howrah, on the opposite bank of the river Hooghly to Calcutta; and proceeds into the coal district at Ranneegunge, a distance of about 120 miles. This portion of the line is in a forward state, and the accompanying Sketch represents one of its important works.

The railway at this place crosses the Sursuttee valley and river, at a point where formerly ships of considerable burden approached the large town of Satgong, formerly the capital of Lower Bengal, but not a vestige of which now remains; and the poor ryot cultivates his paddy and mussoorr where once large vessels sailed.

The river Sursuttee communicates with one of the large rivers of Bengal, the Damoodah, which is subject to immense floods; to restrain the devastations of which the Government have constructed, and keep in repair, large bunds, or embankments; but, in the event of an extraordinary flood, or the Damoodah bursting its bunds, a vast body of water rushes down the Sursuttee valley, covering the fields several feet in depth. Across this valley, therefore, was built a viaduct, consisting of 15 twenty-eight feet span openings, with teak-wood trussed girders; and across the river itself a bridge of three eighty-feet spans (Warren's patent), which was sent out from England it. The work has been constructed by Messrs. Burn and Co., contractors, Calcutta. Mr. George Turnbull is the engineer-in-chief; Mr. Charles Goldsmid, resident engineer; and the artist of the accompanying Sketch is the assistant-engineer upon the works.

NORWEGIAN RAILWAY TESTIMONIAL.

Mr. Jarvis Kershaw, the English sub-contractor for this railway, has recently been presented by his Norwegian workmen with the accompanying piece of Plate, in testimony of their attachment and gratitude. Mr. Kershaw has for two years and a quarter had the most extensive and heaviest piece of work of all the sub-contractors, and he may be said to have trained up a staff of efficient labourers. As Mr. Kershaw has now nearly finished his contract, and is about to leave the country, his people purchased by subscription this very tasteful Silver Jug; on which, in raised work, are a spade, a drill, a mining hammer, and a pick; beneath is an appropriate inscription. The gift was presented by the men, who, in their working-clothes, with their spades on their shoulders, proceeded to Mr. Kershaw's house, where Pastor Hailing acted as interpreter for the workmen, and expressed their attachment and gratitude to their upright and faithful master, and thanked him also in the name of the numerous sick and poor people of the neighbourhood. Kershaw's surprise was as great as the workmen's joy. The entire party then partook of refreshments, and several songs were sung on the occasion.



NORWEGIAN RAILWAY TESTIMONIAL PRESENTED TO MR. KERSHAW.

THE HUME TESTIMONIAL.

This elegant group of Plate has been presented, by the Agricultural and Horticultural Society of Calcutta, to James Hume, Esq., in testimony of that gentleman's seven years' services as Honorary Secretary of the Society. The Plate consists of a Tea and Coffee Service, the several pieces of which bear designs of the following plants:—1. *Careya herbacea*—called after the late Rev. William Carey, D.D., Founder of the Society. 2. *Leycesteria formosa*—called after the late William Leycester, Esq., a civilian, very high in the East India Company's Bengal Service, the Society's first President. *Roxburghia viridiflora*, *Dischidia Rafflesiana*—two plants named after two very celebrated authors: the late Dr. William Roxburgh and Sir Thomas Stamford Raffles. Also, tea and coffee, in flower as well as fruit; the pitcher-plant, cotton-plant, cocoa-nut, and melon. The Plate has been beautifully manufactured by Messrs. Lambert and Rawlings, of Coventry-street.

TESTIMONIAL PRESENTED TO JAMES HUME, ESQ., OF CALCUTTA.

THE EAST INDIAN RAILWAY: SURSUTTEE BRIDGE AND VIADUCT.

GOLD IN NEW ZEALAND.

CONFERENCE OF LIEUTENANT-GOVERNOR WYNYARD AND NATIVE CHIEFS, IN COROMANDEL HARBOUR.

THE NEW ZEALAND GOLD FIELD.

The New Zealand settlers were first led to search for gold in their country by an opinion of the Rev. W. B. Clarke, the Government mineralogist, in New South Wales, expressed in the Geological Report of that gentleman, on the Australian Gold Fields; and which was to the effect that a similar geological formation to that of the auriferous mountains of California, and of Bathurst, N.S.W., might be expected to exist in the principal mountain ranges, extending in a direction north and south in New Caledonia and New Zealand.

About the month of June, 1852, some specimens of quartz from the vicinity of Wellington, Cook's Strait, were transmitted to Mr. Clarke, and were found by him to contain gold.

In October, 1852, the passengers of a vessel bound from California to Port Phillip, and wrecked upon the Feegees, arrived in Auckland. A reward of about £1000 being at this time advertised at that settlement, by public subscription, for the discovery of an available gold field in the district; several of the Californian passengers commenced "prospecting" through the country.

Mr. Charles King, who had formerly been a settler in Auckland, and more recently a digger in California, was attracted to the vicinity of Coromandel Harbour, on the eastern side of the Frith of the Thames, by the peculiar craggy and bold character of the mountain summits there, and by the report of the quantity of quartz which existed in the beds of the streams. Upon washing a few dishfulls of earth, Mr. King at once discovered gold; and a subsequent examination convinced him and his brother, also from California, that the deposit was extensively spread over the country. They at once, on the 18th October, preferred their claim to the reward.

The gold field they reported to be on the western side of the dividing ridge between the Frith of the Thames and the Bay of Plenty. The spot on which they first found it, was near the source of the Kapanga stream, flowing into Coromandel Harbour, and about forty miles by sea from Auckland.

The gold-field was shortly afterwards visited by his Excellency Lieutenant-Governor Wynyard, and by a deputation of the Reward Committee: the latter reporting, on their return, that the gold actually existed in the bed of the Kapanga stream.

Active measures were immediately taken by the Lieutenant-Governor to allay the excitement created in the minds of the local natives by the circumstance of the discovery of gold on their lands; and they were

THE NEW ZEALAND GOLD FIELD.—DISCOVERY OF GOLD NEAR THE SOURCE OF THE KAPANGA STREAM, ABOUT FORTY MILES FROM AUCKLAND.

happily induced to agree to leave the digging to the Europeans, and to employ themselves in extending their cultivations for the production of food for the diggers.

On the 9th of November Mr. Charles Heaphy crossed the mountain range to Aratauga Valley on the opposite coast, and found gold to beagreat over the eastern slopes of the great range. The summit of the dividing range—an elevation of 3000 feet—Mr Heaphy found to consist of a crest of quartz rock, which subsequent analysis proved to contain gold. Several parties of diggers from Auckland now commenced operations in the Kapanga Valley, meeting with various success. None, however, of these parties were properly equipped with necessary implements, and only two or three of them had ever seen gold washed: the maximum steady yield being half an ounce per diem to a party of four men.

The Kapanga is a brook about five yards broad, flowing in a rocky bed through a mountain ravine, densely wooded with tall kauri timber (See the Illustration). The diggings are two miles from Coromandel Harbour—a port accessible to the largest shipping.

Such is the imperfect means of gold washing possessed by the diggers, and from the height of the water in the streams, the present yield of gold may not be considered a criterion of the richness of the deposit. When mechanical aid is brought to the assistance of the miner, and the work becomes systematised, there is every reason for the belief that the goldfields will prove highly remunerative.

The gold is in dust and nuggets. The largest of the latter yet found weighs 14 ounces, and consists of about equal weights of quartz and gold. Many nuggets of the size of a hazel-nut and of a French bean have been washed. The gold is found in nearly all the tributaries of the Kapanga, and has been traced over a district fifteen miles long by ten broad.

On the 15th November, as soon as it appeared that gold was in such qu antity as to warrant the belief that it could be profitably worked, the Lieutenant-Governor again visited the spot; and the native chiefs having, at their own suggestion, met his Excellency and the Bishop of New Zealand in conference, measures for the registration of native boundaries, the maintenance of order, &c., were agreed to; as also others securing to the local natives an income from the profits of the gold working (See the Illustration).

At this conference the firmest advocate for the adoption of the plan recommended by the Lieutenant-Governor was the chief Tamewha, an old man who remembers Captain Cook on his visit to Mercury Bay. Although upwards of ninety years old, this chief is not yet infirm; and he so retains his intellect as to possess unimpaired his influence over his tribe.

The sudden discovery of an extensive gold field is, in any place, a cause of excitement and change; and the more so in New Zealand, a country occupied by a powerful and warlike race of aborigines, on whose lands, and almost in whose settlements it was found. The discovery has, however, now transpired without the demonstration of even a warlike passion on the part of the half-savages who assembled to discuss in what manner they should cede the right of working the gold which existed around them; but who, nevertheless, expressed in forcible and determined words, their acquaintance with their rights and interest in the gold, and their expectation of a reasonable share in the revenue arising from its working. On such an arrangement, and with assurances of the protection of the law in their persons and property, they individually signified the agreement of cession, and resumed their occupation of the season's planting.

CALIFORNIA.

(From our own Correspondent.)

San Francisco, October 15th, 1853.

A short time since an expedition was privately fitted out here by about two hundred men to proceed to Guymas, and take forcible or "filibustering" possession of the Mexican state of Sonora. The affair was kept as quiet as possible; but it leaked out, and many were aware of what was going forward. Curiosities, however, took no notice till the vessel was nearly ready for sea; when, without any previous warning, she was seized by a detachment of the U.S. troops, acting under orders from General Hitchcock, the Commander of the Forces on the Pacific, who had received private advises from the Washington authorities to prevent any armed force leaving this port. The vessel that the "filibusters" had chartered was the British brig *Arrow*; she was found to have on board a large supply of arms and muniments of war, and stores for a long period. These apprehensions have come to nothing, but, without doubt, the point is not given up by them; the rich unworked mines and the fertile lands of Sonora offer to their grasping and dishonest wishes too desirable a booty; but they will have warm work before they come into power. The Mexicans are well prepared for them; and the hate of old quarrels will stimulate them to exterminate, if possible, these American marauders.

From the Sandwich Islands we have information that the political agitators among the American residents have succeeded in influencing the King to dismiss his, to them, obnoxious Minister, Dr. Judd, and to choose one of their own partisans in his stead. The new Minister enters office pledged to do all in his power to secure the annexation of the kingdom to the United States, and so mischief and trouble may also be looked for in that quarter. In this state of affairs, and seeing the spirit which is actuating the Americans residing in the kingdom, the English and French Consuls have united, and filed a joint protest to this Majesty, against his entering into any proceedings or negotiations for the annexation of his kingdom to any foreign power.

There has been a most disastrous fire at Sonora, an inland mining town of considerable size, property to the amount of 300,000 dollars having been destroyed. These fires cause a shudder of alarm to us who have suffered so severely in San Francisco; but now every day our risk of any extensive conflagration becomes less. Since the last large fire 600 brick buildings have been erected, and at this time so many more are in progress; and every building, with its thick walls, iron shutters, and reserves of water, is a complete fortress against any extensive fire. In the inland towns, too, wooden buildings are daily giving place to brick; and there these are the more necessary, for the excessive heat of the summer renders every inflammable substance ready to light with the smallest spark.

Copper and other ships come to us so fast, that we have an immense influx of all kinds of goods. Store ships and warehouses are full to overflowing; and the streets and fronts of the stores receive the surplus. The consequence is that scarcely an article of commerce is selling at prime cost, and serious fears begin to be generally entained by the mercantile community that a panic is at hand. We have, however, at this time, a more than usual number of English ships in the harbour; and, as they lie moored by the side of the graceful clippers, they contrast most unfavourably, and present anything but a gratifying spectacle to our national pride. The clipper ships discharge their cargoes in good condition and every package as clean as if just delivered from the warehouse; while the large majority of English ships that are sent to this port are the vilest tubs afloat, and positively a disgrace to our country. They discharge their freight in such a wretched condition—so dirty and so damaged by salt-water, that the merchant to whom it is consigned is often ashamed to offer it for sale.

The *Julia Ann* arrived here from Sydney three days since, having on board the Irish convict and rebel, Mitchel, and his wife and family. He had escaped from Van Diemen's land to Tahiti, and was brought on from that place in the *Julia Ann*. They are making a fuss with him here; and a grand complimentary dinner is to be given to him, at which John Bigler, the Governor of the State, is, with [illegible] to preside. Mitchel does not intend to remain in California, but will shortly leave with his wife for New York.

The *Julia Ann* brings back a number of Californians from Australia, who are filling our city papers with abuse of the Australian colonies, and the sufferings and privations they have undergone in them. They say that Americans, and especially Californians, are badly treated; that indignities are constantly offered them; that the mines are far less productive than those of California; that the tone of moral society is infinitely worse than in the country; and that the merchants, upon the arrival of a cargo of American flour, conspired with the millers so to put down the price, that the flour was driven from the market back to the States.

The people of California are determined to "put through" the Great Pacific Railroad, which is to connect us with the Eastern states. Meeting after meeting is held in this city; and last week we had a large convention of delegates from all parts of the State. They were in session for two days; but nothing of importance was accomplished beyond sending out several parties of surveyors to ascertain the most practicable pass of the Sierra Nevada. This road we certainly shall have; but whether the Congress at Washington will appropriate any of the surplus national fund, or whether the gigantic undertaking is to be the result of associated companies independent of the States, remains to be seen.

The mines continue to yield well; and the shipment of gold by this mail will be very heavy. As an example of the mining items in the provincial papers, I send you the following from the *Marysville Express* of yesterday:—

Mining Intelligence.—A Mr. Chamberlain from Texas Bar, on the Yuba river, informs us that the Allegheny company, consisting of ten men, took out in three days last week the following sums:—First day, 15 lb; second day, 18 lb; third day, 17 lb. He also informs us that the same claim has yielded heretofore more than fifty thousand dollars since it was first opened. The other claims on the bar are not paying anything extra.

That you may see what they are doing in quartz-mining, I clip the following from the *Grass Valley Telegraph* of this week:—

We enjoyed the pleasure of visiting the Empire Quartz Crushing Mill a few days ago, and, while there, were informed by one of the gentlemen associated with the company that out of 110 tons of quartz they received [illegible] of amalgam; value 8980 dollars.

Also, we have been informed that the Helvetia Mining Company have realised in two days' crushing the neat little sum of 2683 dollars.

The gold at both these mills is well amalgamated, and beautifully retorted.

IRELAND.

Viceregal Court.—The Countess of St. Germans has, with her accustomed charitable feelings, ordered a large supply of winter clothing for the Christmas distribution among the poor of Castleknock and the surrounding neighbourhood.

Election at Clonmel.—The election for Clonmel will probably take place on the 20th of December. Mr. John O'Connell is the only candidate as yet, and the Leaguers have abandoned all idea of further opposition, it is not at all likely that any party will start a candidate.

More Sales of Irish Land.—Portions of the fee-simple estates of the Earl of Bantry, in the county of Cork, were sold last week. The total sum realised for those estates, which embraced Bere Island, on the north side of Bantry Bay, was £82,310; and the aggregate amount of the sales was £94,380. The rates of purchase were considered very high.

—The residue of the Knox estates, in the county of Mayo, comprising 26,000 statute acres, and yielding £2382 per annum, has also been sold, for the large sum of £75,485, or at the rate of twenty-nine years' purchase.

Royal Flax Society of Ireland.—The annual meeting of this society has been held in Belfast. The proceedings were highly satisfactory and encouraging, especially in regard to the evidence of the progress of flax cultivation in the southern districts, from whence some fine specimens were exhibited in the room.

Irish Electric Telegraph Company.—This Company have succeeded in laying down from Ballycopeland Bay upwards of three miles of submarine wire, which is securely "buoyed," and intend to connect this line with the twenty-eight miles of iron wire on board the *Albert*, and run across to Port-o'-Spital the first favourable opportunity.

Run upon a Bank.—There has been a complete "run" upon one of the savings banks in Dublin. The calls have amounted to the enormous sum of £40,000. The establishment is known to be solvent.

A Convent in Belfast.—The *News-Letter* says:—"It is stated that a house in Donegal-square is being fitted up for the reception of a Romish sisterhood. If this rumour prove correct, the spectacle of a convent established in Belfast will be for the first time witnessed."

The Disturbed Districts.—Mr. Warburton, R.M., in an official communication from the Castle, has had conveyed to himself, and the magistrates connected with the disturbed districts of the counties of Down and Armagh, the strong expression of the Lord-Lieutenant's high approval and appreciation of the prompt manner in which the late meeting of magistrates was convened, and for the measures suggested for the future preservation of the peace in the disturbed districts.

The North and the South of Ireland.—The magistrates of the north are calling upon the Executive for additional powers to repress crime and outrage in their district; and the Cork magistrates are asking for the withdrawal of the extra police force. The Lord-lieutenants suggested for consideration whether it might not be advisable to withdraw one half of the extra police now, and postpone the withdrawal of the remaining half until spring.

Conspiracy to Shoot Lord Clements.—The *Roscommon Gazette* reports:—"A warrant was issued three months ago against a person named Dillon, who is said to be the man who fired at the intended assassin selected by a party to commit the horrid deed of murder. He was arrested on Wednesday week.

Fatal Affray.—A correspondent of the *Evening Mail*, in a letter dated Monday, Nov. 21, gives an account of an affray which took place in the neighbourhood of that town on Thursday, in which one man lost his life, and another was seriously wounded. The parties engaged were principally tenants of Mr. Hagan, M.P.

Royal Geographical Society.—A meeting of the fellows and others of the Royal Geographical Society was held on Monday evening, in the rooms of the Horticultural Society, Regent-street; the Right Hon. Lord Colchester in the chair. The meeting was again very numerously attended, and amongst those present were Professor Herman Abich, of St. Petersburg; Sir Woodbine Parish, Lieut.-General Sir George Pollock, the Right Hon. Thomas Bateman, the Hon. H. Spencer Law, the Earl of Sheffield, the Right Hon. Edward Cardwell, M.P., Mr. Brookedon, Mr. Arrowsmith, &c. Some thirty-two noblemen and gentlemen were elected fellows of the Society, and Dr. Shaw read a paper, by Lieut.-Gen. Jochmus, being a description of "A Journey into the Balkan, or Mount Hæmus; with a description of the Defiles through this celebrated Mountain Range, and a Comparison of the Routes pursued by Darius, Hystaspes, Alexander the Great, and Marshal Diebitsch." After some introductory observations the paper went on to describe the journey from Constantinople, noticing the summer Camp of the Sultan at the European Sweet Waters, and the abandoned redoubts thrown up in 1829, when Marshal Diebitsch was advancing from Adrianople on Stamboul. In the course of his journey he visited the celebrated Bunarbarsar, which he found decidedly anti-reformist, and under the influence of the old Cafedehs, under whose standard many of the older men had made various campaigns against the revolted Bayahs of Mora and Scutari. Sultan Mahmoud's memory was abhorred by some of the Turks, as he was accused of unjustly taxing them, and for which they believed he would be called to account in the next world! With respect to the Taurus, he adopted the following description given of it by Herodotus:—"The sources of the Tearus afford us best and most abundant waters in the world. In prosecuting an expedition against Scythia, Darius, son of Hystaspes, the best and most amiable of men, Sovereign of Persia, and of all continents, arrived here with his force." Pallas, who in many parts of the waters of the Taurus, whose crystal sources certainly are amongst the "best and clearest waters in the world," were still affirmed "to be an excellent remedy for cutaneous diseases, particularly for ulcers, both in men and horses;" but "its sources, thirty-eight in number, issuing from the same rock, part of which are cold, and part warm," certainly exist in Bunarbarsar and in the village of Kema. He then went on to describe the accuracy of the Austrian maps, and the course of the Aquanis, which was incorrectly laid down. He found that in those parts of the country which have been temporarily occupied by the Russian troops, the name and nation of "Moscof" has given way to the less hostile appellation of "Russ," and was used both by Turks and Christians. After some other description of the journey, and which, from the paper not being illustrated that he had been able to discover fifteen different passes through the Balkan, although not more than five are laid down in the maps of the most modern date; but the details on the subject, with the great political advantages, especially at the present time, to be derived from them, were reserved for the continuation of the paper at a future meeting. Mr. Hogg believed, at the present time, this was a paper of considerable importance, inasmuch as the several Jochmus had discovered several passes through the Balkan, never known before. The thanks of the society were then awarded to the author. Lord Colchester directed the attention of the meeting to a number of very beautiful paintings of scenes in Southern Africa, by Mr. Baines, who has recently returned from that country, and which have already been exhibited before her Majesty and Prince Albert. The meeting then adjourned.

Cab-Drivers' Tickets.—A notice has been issued from the Metropolitan Police-office, requiring every driver of a hackney carriage to give a card with his number in the particular form and pattern inserted in the notice. The card is about an inch square, with the number printed in large figures, and the back of the card is so arranged that the proprietor may write his name and address thereon; so that he may be able to check the driver, to whom cards are given, and prevent the improper use of them. Persons with the number of his carriage. Proprietors of hackney carriages are requested to enforce upon the drivers the necessity of a strict compliance with the law, requiring a ticket to be given in every case to the hirer of the carriage when getting in, as this practice would give the public a facility in tracing carriages, and prevent drivers from being unjustly charged or suspected, in cases of complaint by hirers.

Newgate Prison.—It is a complete quarry of stone, without any order or possibility of order in it. There are a vast number of rooms in it, over which there is no inspection whatever, and nothing as a prison can remedy it. It has a most imposing exterior, which is perhaps its greatest use as a deterrer from crime, and the worst possible interior. It was built in 1780, just after the riots.—*Captain Williams.*

PROROGATION OF PARLIAMENT.

Tuesday being the day to which Parliament stood prorogued, an assemblage of officials and other persons attended in the House of Lords.

The Lords Commissioners were the Lord Chancellor, the Duke of Newcastle, and Lord Campbell.

The Royal Commission having been read by the Clerk of the Crown, and the officers of the House of Commons having appeared to represent the Commons,

The Lord Chancellor declared the Parliament prorogued till the 3rd of January next.

The Parliament was prorogued accordingly.

OFFICIAL EXPLANATIONS ABOUT THE NEW PENNY STAMPS.

The following is abridged from the "Popular Explanation of the Statute requiring a Stamp-duty of One Penny on Receipts and Orders for Money," issued by authority of the Commissioners of the Inland Revenue. It well deserves general and attentive perusal:—

The public are requested to take notice that distinct stamps are prepared, having thereon respectively the words "Postage," "Receipt," "Draft." And that no stamp can be legally used except for the purpose so expressed.

RECEIPTS.

The stamp-duty payable upon a receipt given for any sum of money amounting to 40s. or upwards is 1d, to be paid by the person giving the receipt. The receipt may either be written upon stamped paper, or an adhesive stamp may be fixed to the paper upon which it is written; but in the latter case the person giving the receipt must himself cancel the stamp by writing his initials, or some portion of his signature, over it, before he delivers it, under a penalty of £10. A receipt cannot be made valid afterwards by affixing a stamp.

A person giving a receipt for money amounting to 40s. or upwards without a stamp, subjects himself to a penalty of £10; and if, when 40s. or upwards is paid, a less sum than the amount specified in the receipt, with the view to avoid the duty, or any other contrivance or device be used for the like purpose, a penalty of £50 will be incurred.

A party refusing to give a receipt incurs a penalty of £10.

Any note, memorandum, or writing *whatsoever*, given upon the payment of money, signifying that an account has been discharged, or that money has been paid, or credit given, is a receipt liable to stamp duty

Entries made by persons receiving money in pass books kept by the persons paying the money, are receipts; and for every such entry made without affixing a stamp, and writing over the stamp as hereinbefore stated, where the payments amount to 40s. or upwards, a penalty of £10 is incurred

On every occasion when money amounting to 40s. or upwards is paid, whether it be on a sale by auction or other ready money dealing, or the payment of wages, or on a transaction of any other kind or description, if any receipt be given, it must be on a stamp; and so, likewise, must a receipt for money paid on account

RECEIPTS UPON BILLS OR NOTES.

Receipts written upon promissory notes, bills of exchange, drafts or orders for the payment of money, duly stamped, or upon bills of exchange drawn out of but payable in the United Kingdom, are exempt from duty.

In the case of bills drawn abroad, an unstamped receipt indorsed is valid only where the bill or note is duly stamped. A receipt, therefore, on an unstamped cheque, for the contents, is not valid without a receipt stamp.

LETTERS BY THE POST.

Letters by the post, acknowledging the safe arrival of any bills of exchange, bank notes, or other promissory notes, or other securities for money, are exempt from receipt duty; but if the receipt of money be acknowledged, a stamp is required

The exemption is confined to the mere acknowledgment of the safe arrival of such bills of exchange, bank notes, or other promissory notes or securities. It is not intended to extend the letter the effect of a discharge for money; but simply to authorise the receiver of the securities to convey to the sender the information that they have reached the hands of the person intended.

The documents, the save arrival of which may thus be acknowledged by post without a receipt-stamp, are bank post bills, Bank of England and country dollar notes, letters of credit, post-office orders, cheques, (stamped or unstamped) bills, drafts, and orders for payment of money of every description, whether due or not.

RECEIPT FOR TAXES

By the recent act, receipts for land-tax, assessed taxes, and property and income-tax, are exempted from stamp-duty; but there is no exemption in any of the above cases from receipts for any other rates or taxes

Special exemptions from receipt-duty contained in acts of Parliament are not affected by the recent act

DRAFTS OR ORDERS

A bill of exchange, draft, or order for the payment to the bearer, or to order on demand, of any sum of money, of whatever amount, is chargeable with the stamp-duty of one penny, and may be written on stamped paper, or an adhesive stamp may be used.

All other bills of exchange, drafts, or orders at or after sight or after date, for the payment of money amounting to 40s. or upwards, are chargeable with stamp-duty as heretofore

PROMISSORY NOTES

No alteration has been made in the duties of promissory notes, except now that bankers' deposit notes or accountable receipts are not chargeable with duty, notwithstanding they import that interest is to be paid.

LETTERS OF CREDIT

All documents or writings usually termed letters of credit are declared by law to be bills, drafts, or orders for the payment of money, and chargeable with stamp duty, as bills of exchange, drafts, or orders.

A letter of credit payable on demand must be on a penny stamp; but if the credit be not given until a specified day, or until advised, it is a bill of exchange, payable after date, and must be stamped accordingly.

CHEQUES ON BANKERS

A cheque on a banker payable to bearer on demand is not liable to stamp duty provided that it be issued within fifteen miles of the place where the banker carries on his business. That the place of issuing be duly specified in it, that it be dated on or before the day on which it is issued, and not after; and that it do not direct the payment to be made by a bill or note

The place at which a cheque is to be considered as issued is that where the drawer parts with possession of it; and, if it be transmitted by hand through the post, the place of posting is that where it is posted.

An unstamped cheque drawn and issued as above may be circulated at any distance from the place of issue without affecting its validity. Thus, a cheque drawn in London upon a London banker may be sent by post from London to Glasgow, or elsewhere, and negotiated there for any person.

Persons residing beyond the distance of fifteen miles from their bankers, whether such residence be occasional or permanent, ought to be at all times provided with stamps, as any infraction of the law subjects them to a penalty.

A draft irregularly issued cannot be afterwards made valid by affixing a stamp to it.

The object and effect of crossing a cheque with the names of a banker seem to be much misunderstood, inquiries being frequently made of the Board respecting the practice referring to the receipt stamp duties. A cheque is not in any way affected by being thus crossed; the crossing merely amounts to a request to the banker not to pay the cheque, except through a banker; but this request he may altogether disregard, it does not, and is not intended to import a receipt, and neither creates a necessity for a stamp, nor makes a stamped receipt unnecessary.

The Manufacturing Districts.—The accounts received from the manufacturing districts are far from satisfactory. Throughout Lancashire there has been a continued tendency to diminished activity; and in several districts the manufacturers have come to a resolution to work only four days a week, instead of six. According to the notices already given, about 60,000 operatives will be affected by the measure, irrespective of the 80,000, who have so long suffered from the strike. The general wages movement, we regret to find, continues in operation to the prejudice of all concerned. Although on the whole the accounts of the industrial state of the entire kingdom are better than could possibly have been hoped under existing circumstances, the high prices of food and fuel are beginning to be severely felt amongst the labouring class.

Arrival of the "Challenger."—The *Challenger*, a Thames-built clipper, has arrived in the Downs, from China, with a further supply of new teas. The *Challenger* sailed from Shanghae in company with the Yankee clipper ship *Nightingale*, which she fairly beat in the run home, but her passage is not equal to that of the *Cairngorm*. The *Challenger* has brought [illegible] but, as the [illegible] are not to be landed in the Downs, they will be forwarded to the Pool by steamer.

Forgery on a Life-boat Bill.—The theft of one of last a bill of £1540, drawn by Mr. M'Clure, and purporting to be accepted by Sir David Roche, of Limerick, who is extensively engaged in flour and corn operations in the south of Ireland, was cashed at the Borough Bank. The bank officials had not the slightest suspicion that the acceptance was a forgery until, on the presentation of the bill, Sir David Roche repudiated it, and denied having any knowledge of the party by whom it was drawn. It was accordingly returned protested, and then the fact that a forgery had been committed by Mr. M'Clure was clearly established. Up to the present, the forger has succeeded in eluding the vigilance of the police.

RUSKIN ON ARCHITECTURE.*

We noticed the first volume of Mr. Ruskin's "Stones of Venice," containing "The Foundations," at the time of its appearance, two years ago; we did so in but a casual manner, however, and with reference more to the author's descriptive style, and the powerful episodes in which his pages abound, than to any doctrines they were intended to inculcate. Indeed, to say the truth, we did not gather enough from that first portion of Mr. Ruskin's labours to satisfy us as to the specific doctrinal points which he had in view; or, indeed, that he had any comprehensive theory to establish. The title certainly was as mystical as anything in the range of romance; and the author's intention to say many things in his preface which perhaps might have thrown a light upon his subject, was abandoned at the last moment. It was hardly for us to suppose that, in the course of a critical examination of the details of the "Stones of Venice," the result of general observations during a long course of years, the author intended to frame a general treatise upon the history and principles of architecture, and to fix the relative merits of its various styles and periods. We say this advisedly, and more especially in regard to the stones of Venice, than those of many other places which might have been chosen, because of the accidental and peculiar circumstances under which the buildings of Venice were reared, and, we may add, the absence of distinct and original character in the architecture of Venice at any period. The stones of Venice, though their massive grandeur is very imposing when reflected in the dark surface of the Laguna, and their sculptured details very rich, beautiful, and interesting, are of no particular age or style, but rather a mixture of all the styles prevailing in the darker period of the middle ages, down to the darkest hour just before the dawning of the revival. At the beginning, indeed, some of the identical blocks themselves were brought from the ruins of more ancient buildings on the main land: buildings erected when there was a style, or the remains of certain styles; and the innumerable changes of fashion which, from the subsequently exhibited, came to her generally at second hand from the Continent also, and were arbitrarily applied in patching up existing buildings, without regard to fitness in the result, or the inherent virtues and principles of the several styles themselves.

Whilst we can go a long way with Mr. Ruskin in his admiration of the barbaric and confused—we must add, the prodigal, and sometimes tawdry, magnificence of Byzantine art—many curious specimens of which exist at Venice—we cannot help recollecting that the remains of Byzantine architecture in Venice are of a date not much earlier (the twelfth century) than when, in all the rest of Europe, that style was about to be superseded by the Pointed, or Gothic; that these remains are to a great extent factitious, and mixed up with additions of later date; whilst fine buildings of pure Byzantine architecture, of various dates from the sixth to the twelfth century, are to be found in Constantinople, in Asia Minor, in Italy, in Germany, in short, wherever the arts of civilisation had made themselves felt. And if the buildings of Venice be but of very inferior importance as samples of the Byzantine, much less are they even noticeable as types of the Gothic school; it being precisely at Venice that Gothic architecture in its purity and completeness was less known and less employed than in almost any other part of Europe. Indeed, little more than some of the decorative forms were adopted of Gothic—the structural principles never attempted—and these, are seen for the most part, strangely placed between Byzantine remains and Renaissance additions, the latter abounding everywhere. If, then, by "The Stones of Venice," we are to understand the architecture of Venice, as a definite and recognizable style, that architecture dates from the end of the fifteenth century, and its characteristics are as different from Byzantine and Gothic, as those two are from one another; the principal masters it being San Michele, Sansovino, and Palladio; whose well-known printed works have found a succession of imitators in this country, beginning with Inigo Jones, and ending with—no, our list of lath-and-plaster decorators is not yet closed.

The object of Mr. Ruskin, however, in producing these three very portly tomes, is—1st, to assert the superiority of Byzantine over Classic architecture; 2ndly, the superiority of Gothic architecture over both; and, 3rdly, to denounce the Classic, or, as he calls it, the Renaissance school, as an abomination in itself, to be execrated and outlawed by all sane and honest men; and, with singular perverseness, he selects Venice as the field for examples of these three positions.

In his third volume, and in his concluding observations, he thus lays down the steps to be taken, as preliminary even to the attempt to establish a healthy school of architecture in this country:—

First, let us cast out, utterly, whatever is connected with the Greek, Roman, or Renaissance architecture, in principle or in form. We have seen above, that the whole mass of the architecture founded on Greek or Roman models, which we have been in the habit of building for the last three centuries, is utterly devoid of all life, virtue, honourableness, or power of doing good. It is base, unnatural, unfruitful, unenjoyable, and impious. Pagan in its origin, proud and unholy in its revival, paralysed in its old age; yet making prey, in its dotage, of all the good and living things that were springing around it in their youth, as the dying and desperate King, who had long fenced himself so strongly with the towers of it, is said to have filled his failing veins with the blood of children; an architecture invented, as it seems, to make plagiarists of its architects, slaves of its workmen, and sybarites of its inhabitants; an architecture in which intellect is idle, invention impossible, but in which all luxury is gratified, and all insolence fortified; the first thing we have to do is to cast it out, and shake the dust of it from our feet for ever. Whatever has any connection with the five orders, or with any one of the orders, whatever is Doric, or Ionic, or Tuscan, or Corinthian, or Composite, or in anywise Greecel or Romanized, whatever betrays the smallest respect for Vitruvian laws, or conformity with Palladian work, that we are to endure no more: to cleanse ourselves of these "cast-clouts and rotten rags," is the first thing to be done in the court of our prison. Then, to turn our prison into a palace is an easy thing. We have seen above, that, exactly in the degree in which Greek or Roman architecture is lifeless, unprofitable, and unchristian, in the same degree our own ancient Gothic is animated, serviceable, and faithful. We see that it is flexible to all duty, enduring to all time, instructive to all hearts, and holy in all its offices. It is capable alike of all lowliness and all dignity; fit alike for cottage porch or castle gateway; in domestic service, familiar; in religious, sublime, simple and playful, so that childhood may read it: yet clothed with a power that can awe the mightiest and exalt the loftiest of human spirits: an architecture that kindles every faculty in its workmen, and addresses every emotion in its beholders; which with every stone that is laid on its solemn walls, raises some human heart a step nearer heaven, and which, from its birth, has been incorporated with the existence, and in all its form a symbolical of the faith, of Christianity. In its architecture let us henceforward build—alike the church, the palace, and the cottage; but oh, ally let us use it for our civil and domestic buildings. These, once ennobled, our ancient and noble works will be exalted together with them; but churches are not the proper scenes for experiments in untried architecture, nor for exhibitions of unaccustomed beauty.

We reprint this passage, though rather long for extract, instead of making a selection of shorter passages to make up a general summary of our author's position. In taking the liberty to examine that position we beg to observe that we shall confine ourselves to the subject as an architectural question, declining to discuss abstract fancies of moral or religious import, which Mr. Ruskin seeks to mix up with it, but which we consider far too serious for such an association.

Before proceeding to criticism of Mr. Ruskin's numerous assertions, we would impress the reader with a notion of the manner and light in which, in our opinion, the subject of architecture, both historically and critically, should be considered. In architecture, as in all the other arts of life, there has been no absolute period of beginning, no absolute dates of change; it being the result of the growth of ages, and the changing requirements of successive generations: one style or school has followed upon those which preceded it, borrowing more or less from all, until it becomes impossible to fix the line of demarcation between one style and another, by which all that is respectively due to each may be certainly allotted, leaving the elements of the others complete.

Mr. Ruskin, in his earliest references, goes only back so far as to Greek art; but Greek art itself grew out of Egyptian, Indian, Assyrian, whence all the types were formed, variously modified. These materials, however, the Greeks reduced to order and proportion, and in their hands they became what have since been acknowledged as the models of excellence. Transformed to Rome in the time of her greatness, the architecture of the Greeks received some modifications and additions, amongst the latter notably the arch. In the days of Rome's decline, Romanised Greek art was carried back to Greece, and became Byzantine: a magnificent example of which exists to this day, after a lapse of twelve centuries, in the Mosque of St. Sophia. Upon the final destruction of Rome, and afterwards of the Byzantine Empire, their art examples and art practitioners were scattered over the face of the earth; the old elements of art were thrown together in new combinations, receiving new accessions from the north of Europe, and from the plains of the Saracen until, at last, from the resolution of the conflicting tendencies of all, uprose the sublime, the richly-varied, the elaborate, and eminently scientific Gothic; in which the principles of the arch and of vaulting were carried out to their extremest limits in the groined ceiling of the cathedral nave, and the decorative resources of the chisel lavished upon the cathedral porch, the cathedral altar and choir, and the monastic cloister. Each of these styles served its particular purpose, and lived its time: there was a family affinity between them all; and he who cannot see points of interest and of beauty in them all, must have a limited capacity for poetic enjoyment—if, indeed, he can pretend to any taste for what concerns Art beyond its surface. And if it be true of architecture, as of other arts, that the demand regulates the supply; that the changes in its structural arrangement and outward forms have all been in obedience to the particular requirements of successive ages; it follows that, to attempt to forcibly resuscitate a dead style, and to thrust it into the place of a legitimate successor, must be an absurd and thankless battling against the natural order of events. To apply this remark simply to the Gothic style. That style lived to a ripe age: fostered by wealth and religious fervour, it achieved the highest perfection in structural contrivance and decorative taste. Like all favoured arts, towards the end of its career it began to betray extravaganoies, eccentric conceits of form, and meretricious ornamentation, which too clearly foretold its fall; when, contemporaneously, the public mind also took a sudden turn. Religious fervour was lost in intellectual and selfish enjoyment; the hoarded wealth was no longer applied to build and decorate the cathedral and the monastery; and Gothic architecture—the architecture *par excellence* of the Christian temple—was, under our Tudors, modified and humiliated to the requirements of the Palatial hall; and, in the mercantile era of the last of that family, became entirely lost in the stunted outline, the purely domestic architecture known as Elizabethan. It was under these circumstances, so humiliating to art, that the applicable virtues of Greek, or Greek-Roman architecture, already largely brought into use on the Continent, made their way into this country also, under Jones, Wren, and others. That they have not been so fairly handled or richly endowed with us as in Italy and France, is no fault of the style, but of ourselves; and whilst we may denounce the lath-and-plaster tawdriness of the Renaissance villa, as well as the lath-and-plaster absurdities of modern or "carpenter's" Gothic, we cannot consent, with Mr. Ruskin, to "cast out utterly whatever is connected with the Greek, Roman, or Renaissance architecture in principle or in form;" being imbued with deep-rooted reverence for the Parthenon and St. Peter's, and forced to the acknowledgment of appropriate stateliness and the merit of the convenient arrangement in the Roman and Florentine Palazzi.

We will not enter upon a war of words upon the subject; reserving for a future occasion to examine the grounds upon which Mr. Ruskin levels such serious charges as those of "baseness, lifelessness, impiety, uselessness, unfruitfulness, &c.," against all architecture that "has any connection with the five orders, or any one of the five orders." But we will conclude our present notice by suggesting to Mr. Ruskin that he is in error as to the convertibility of the Gothic to domestic purposes: that neither the dimensions, nor the materials usually found in the secular buildings of the humbler class are equal to the requirements of that style; and that it is a desecration of its lofty resources to attempt to accommodate them to the palace and the cottage; besides, that, when so accommodated, the resulting work is not so convenient as if all the fetishism had been left out.

Mr. Ruskin's error arises from a misconception of the essential characteristics—a want of acquaintance with the very genius, of Gothic architecture, as we are prepared to prove in a subsequent paper. In the meantime, we conclude our present notice by remarking that Mr. Ruskin is strangely in error, historically, as to the extent to which Gothic architecture was applied, when he exclaims, "We have destroyed the goodly architecture of our cities; we have substituted one wholly devoid of beauty and meaning," in place of Gothic; and again—"It needs but little inquiry into the spirit of the past to ascertain what, once for all, I would desire here clearly and forcibly to assert—*that, wherever Christian church architecture has been good and lovely, it has been merely the perfect development of the common dwelling-house architecture of the period.*" If he will examine the records of the domestic architecture of the past in England, France, Germany—Europe in general, he will find abundant grounds to re-consider this hasty and sweeping assertion: he will find that Gothic church architecture was a speciality, being completely distinct from every other structural arrangement—very distinct, even, from the style used in the palace of the monarch, and the castellated mansion of the proud noble; and still more widely distinct from the "common dwelling-house architecture of the period" during which Gothic architecture was in vogue—the materials of which were mud and wattles (occasionally wood) for the walls, and thatch for the roofs. The use of brick in dwelling-houses, was a rare novelty, even in the fourteenth and fifteenth centuries—so much so, that the few instances of it are recorded as marvels by the historians of the time; and the stately piles of Westminster, of York, of Salisbury, and of Cologne, were as much matters of pride and wonderment to the burgesses of the day in which they were reared, as they have been to succeeding generations.

(To be continued.)

* The "Stones of Venice." By John Ruskin. Vol. II. "The Sea-stories." Vol. III. "The Fall." Smith, Elder, and Co.

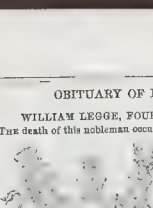
WHAT THE MASON HAS DONE.—Centuries before the dawn of civilisation in the Empires of the West, he constructed those monuments of rude but magnificent grandeur which could now on the banks of the Ganges and the Nile. It was he who reared the stately temples to Minerva and Jupiter, which are so inseparably associated with all that is noble in Grecian philosophy—all that is beautiful in Grecian art. And in the dark ages which followed the downfall of western civilisation, when the temples of Rome were ruined, the palaces of the Cæsars plundered, the Pantheon despoiled, the amphitheatres laid waste, it was he who reared up the noble piles of Christian architecture which ushered in a new era in the history of the world, and another and a more beneficent period of human existence.—*The Builder.*

CAUTION TO THE BENEVOLENT.—Many charitable persons, and particularly naval officers, have of late been extensively defrauded by an impostor who sends letters in the names of various naval officers professing to have formerly served with the person to whom he applies. The handwriting is the same in all cases seen, though many different names have been assumed; and a copy of a "distress warrant" is usually enclosed, with a request that the answer may be directed to a post-office named—the whole case being an entire fiction.

OBITUARY OF EMINENT PERSONS.

WILLIAM LEGGE, FOURTH EARL OF DARTMOUTH.

The death of this nobleman occurred on the 22nd ult., at Patshull, his family seat, in Staffordshire. His Lordship was born Nov. 29, 1784, the eldest son of George, third Earl, K.G., by Frances, his wife, daughter of Heneage, Earl of Aylesford. He married first, April 25, 1821, Frances-Charlotte, daughter of Charles Chetwynd, second Earl Talbot; and, secondly, October 25, 1826, Frances, second daughter of George, fifth Viscount Barrington. By the former, who died October 3, 1824, he had an only



son, William Walter, Viscount Lewisham, now fifth Earl of Dartmouth, and by the latter, who died Aug. 12, 1849, he has left a numerous issue.

The first Peer of the Legge family (originally enriched by commerce in London) was George Legge, a naval and military officer of eminence, who was created Baron Dartmouth in 1682. His Lordship was sent, as Admiral of the whole English fleet, to demolish Tangier; and subsequently enjoyed, in an especial degree, the favour of King James II. His son, William, first Earl of Dartmouth, was one of the Lords Justices of Great Britain on the demise of Queen Anne. From him the nobleman whose death we record was fourth in descent.

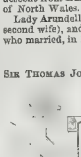
MARY, DOWAGER LADY ARUNDELL, OF WARDOUR.

This excellent and much-respected lady, widow of James Everard, ninth Lord Arundell of Wardour, died recently at Argyll-street, Regent-street, aged 73. Her Ladyship was third daughter of Robert Burnett Jones, Esq., of Ades, in Sussex, Attorney-General of Barbadoes, Jamaica (by Mary, his wife, only daughter and heir of Robert Burnett, Esq., of Bishop Burnett's family) of Henry Jones, Esq., who derived his descent from Edmowain Bendew, founder of the Thirteenth Noble Tribe of North Wales.

Lady Arundell's marriage took place in 1806 (she was Lord Arundell's second wife), and its issue consisted of two sons and a daughter, Mary, who married, in 1828, Sir Richard Digby Neave, Bart., and died in 1849.

SIR T. J. CLAVERING, BART.

Sir Thomas John Clavering, Bart., of Axwell, in the county of Durham, was the representative of one of the oldest baronetcies in the north of England, its creation dating as far back as 1661. Sir Thomas was the eighth baronet: he was the eldest son of George Clavering, Esq., of Greencroft, the sixth baronet's second son, and he succeeded his uncle, the seventh baronet, the 14th October, 1794. Sir Thomas John Clavering, in 1793, raised, at his own expense, a troop of yeomanry; he was High Sheriff of Northumberland in 1817. He married, the 21st August, 1791, Clara, daughter of John de



Gallais, Count de la Sable, of Anjou, by whom he has had issue, an only son, his successor, and two daughters, both married to foreign barons of family and distinction. Sir Thomas died at Clifton on the 11th ult., in the eighty-second year of his age.

LADY CAROLINE SANFORD.

Lady Caroline Anne Sanford was the second daughter of Charles, third Earl of Harrington, and the sister of the late and the present Earls. She was married, the 21st June, 1841, to Edward Ayshford Sanford, Esq., of Nynehead, Somersetshire. Lady Caroline expired at Brighton, after a long illness, on the 26th ult. Her deceased lord surBrighton (by her husband and several members of her Ladyship's attached family; among whom were her brother-in-law and sister, the Duke and Duchess of Leinster.

GENERAL SIR THOMAS BRADFORD, G.C.B.

This gallant veteran, who served with honour in some of the most glorious battles of the Peninsula, died on the 28th ult., in Eaton-square. Sir Thomas Bradford was the son of Thomas Bradford, Esq., of Ansdown, Sussex, by his wife, a daughter of William Otter, Esq., of Wickham, Sussex, by his wife, a daughter of William Otter, Esq., of Wickham, Notts. He entered the army, as Ensign, on the 20th of October, 1793, and served in Ireland during the rebellion in 1798. He was employed as an Assistant Adjutant-General with the army in Hanover, under Lord Cathcart, in 1805; and, during the campaign in South America, was present at the attack and siege of Monte Video, and at the attack on Buenos Ayres. In June, 1808, he was appointed to the Adjutant-General's department of the army in Portugal, and was at the battles of Vimeira and Corunna. He commanded a brigade of the Portuguese army from the end of 1811 to the general peace of 1814; and was engaged in most of the great actions of that period. Sir Thomas had received a cross and one clasp for Corunna, Salamanca, Victoria, San Sebastian, and Nive. He was made a General on the 23rd November, 1841; and Colonel of the 4th (the King's Own) Regiment of Foot on the 7th February, 1846—which post he held at his death. Sir Thomas was twice married; and leaves, by his first marriage, two sons and three daughters. Sir Thomas, at the time of his death, was in his seventy-six years old. He was brother of the late Sir Henry Rolles Bradford, K.C.B., of the Grenadier Guards, who died in 1816, from a wound received at Waterloo.

THE REV. H. B. WILSON.

The Rev Dr. Harry Bristow Wilson, Rector of the united parishes of St. Mary and St. Thomas the Apostle, the eldest clergyman in the metropolis, died some days since, in the eighteith year of his age. The deceased gentleman was born on the 23rd of August, 1774, and was for many rev. gentleman was born on the 23rd of August, 1774, and was for many years a master of the Merchant Tailors' School. On the 2nd of August, 1816, he was collated by Archbishop Sutton to the Rectory of the united parishes of St. Mary and St. Thomas the Apostle, which he held till the day of his death, a period of thirty-seven years. He was, shortly prior to his demise, about retiring from the active duties of his profession, and had obtained the permission of the Bishop of London to appoint a curate, who should take the sole charge of the parish. In a letter enclosing a address to his parishioners, Dr. Wilson, however, expressed a hope that he might die in the reading-desk, or at the communion-table, and that he might be interred in the church without being taken home, adding, that a London incumbent, whom he had for years esteemed as a friend, had promised to read the burial-service over him.

Munificent Bequests.—The late W. Parsons, Esq., of Miltonnext Gravesend, Kent, who died in December, 1852, bequeathed to the following public institutions these handsome legacies: British and Foreign Bible Society, £500; Religious Tract Society, £300; London Missionary Society, £500; Surrey Chapel Benevolent Society, £100; Southwark Sunday School Society, £100; Mare pond Sunday Schools, £100; Infant School of Zion Chapel, Gravesend, £50. The above legacies are by the will directed to be paid free of legacy duty, and are now in course of payment by the executors.

The Late Fogs.—The dense fogs which have prevailed lately have caused considerable detention to the steamers plying between Bristol, Newport, and Cardiff. The *Swift*, for Cardiff, did not start from Monday to Wednesday. The *Dart* missed one tide on every tide from Newport to Bristol. The *Avon*, screw steamer, was, however, the most unfortunate, as on her voyage from Newport to Bristol she went ashore at the second point in the Bristol river, in endeavouring to avoid the *Lamp Jones*. No injury was sustained by the vessel or passengers, the latter having safely landed just after she struck. The fog was so dense at the time that steamers passing were not observed by each other.

Art among the People.—A circular to the masters of schools throughout the kingdom, in connection with the department of Science and Art, has been issued with a view to collect evidence as to the best mode now practised of giving elementary instruction in drawing. The masters are desired to express their opinion—1. As to the extent to which they consider drawing can be taught to a child in one hour a week, or, considering vacations, &c., about forty hours a year. 2. The process in detail, by which such instruction can best be given. 3. The character of the examples to be used, and some definition of the stages in which they should be used.

Belle Sauvage.—A Philadelphian Correspondent asks whether Blue Bell, Blue Anchor, &c., are corruptions of some other emblem, such as that which in London transformed *La Belle Sauvage* into the Bell Savage. This is not the fact. The Bell Savage on Ludgate-hill was originally kept by one Isabella Savage. A contemporary has-onian, writing of one of the leaders in a rebellion in the days of Queen Mary, says, "He then sat down upon a stone, opposite to Bell Savage's Inn."—*Notes and Queries.*

TURKISH COFFEE-HOUSE.

TURKISH COFFEE-HOUSE.

The Coffee-houses in all the Oriental towns are great places of resort; they are a sort of clubs, where the miscellaneous population resort to while away the forenoon, and talk over the gossip of the day. The seats are a sort of benches, cushioned, placed along three sides of the apartment; and there sit men of various ages and all nations, cross-legged, looking very grave, interchanging occasional observations; now smoking the *tchibouk* or *narghile*; now sipping the tiny cup of coffee. This coffee of Turkey, by the way, is an abominable compound, and very much overrated in the estimation of those who have not tasted it. It is generally made fresh for each customer; the coffee provided being poured into a small pot holding about half a gill, then boiled, and poured, grounds and all, into a tiny cup about as big as an egg-cup. The coffee then has to be carefully sipped; the grounds remaining, and standing nearly half-way up the cup. Many of the Coffee-houses are barbers' shops also; so that the miscellaneous character of the assemblies which take place in them may be imagined.

HIRSOVA.

Hirsova, the ancient Carsium, is a small town in Bulgaria, on the right bank of the Danube, between Czernawoda and Ibrail, which are a short distance above Galatz, in Moldavia, and on the left bank of the river. It is picturesquely situated at the opening of a defile between two eminences, from one of which frown the ruins of a Turkish castle. The town was long ago destroyed, in the war with the Russians, and now consists of a small collection of mud huts. The Danube, at this point is very broad, being split into several channels by numerous small islands, which continue nearly all the way to Galatz, and render the navigation intricate.

TRAVELLING IN WALLACHIA.

Our Engraving gives a fair, and not exaggerated idea, of the fatigues and dangers of travelling in Wallachia, particularly in bad weather. The particular scene is in the passage of the Bouzeo, in the neighbourhood of Bucharest. The horses are strong and good, but the roads are very bad. The postilions use all their energies, shouting, flogging to get their teams along; and, rolling fearfully about from side to side, the carriage at length reaches the top of an ascent, or the end of a rut or hole. On arriving at the post-house for a relay, the postilions call out their horses by name, who come out very docilely, and submit to be harnessed.

The western part of Wallachia is generally mountainous, and the hills reach to the banks of the Danube. A great part of the country, especially in the north, is covered with forests—firs, oaks, and beeches. In the elevated part of the country there are extensive pastures. In the level and marshy parts there is excellent pasture for cattle, of which great numbers are annually fattened. The tributaries of the Danube have their sources in the Carpathians, and their direction is south in the western part of the country, south-east in the middle part, and east in the eastern parts. Of these the Jaroulitza, or Yanolitza, comes from the Carpathians, near the Tomost Pass: at first it runs south for thirty miles, and afterwards south-east, east, and north-east, till it reaches the Danube, a little below Hirsova. The Boza comes from Transylvania, flows through the pass of Bozan, or Buza, and joins the Sereth twelve miles above the junction of this river with the Danube, after an easterly course of 120 mi. s. All these rivers are navigable for barges; but the navigation is rendered impracticable in many places by rocks, shallows, and other obstacles. Besides the larger rivers, there are many smaller streams which traverse the country. In the marshy districts there are several large lakes, formed by branches of the Danube; and in the rainy season, or when the snow on the Carpathians melts, the low tracts along the Danube are inundated for many miles in breadth.

Bucharest, or more correctly Bukaresht, is the capital of Wallachia. The road from thence into Kronstadt, in Transylvania, leads through Targovist, on the Jalomitza. Giurgevo, on the Danube, opposite Rustchuk, we have already described. Krajova, or Krayova, a fine town, has considerable commerce: it is situated on the Shyl, in the centre of Little Wallachia; or the western part of Wallachia, between the Alata in the east, and Hungary and the Danube on the west. Krajova is generally called the capital of Little Wallachia.

HIRSOVA, ON THE DANUBE.

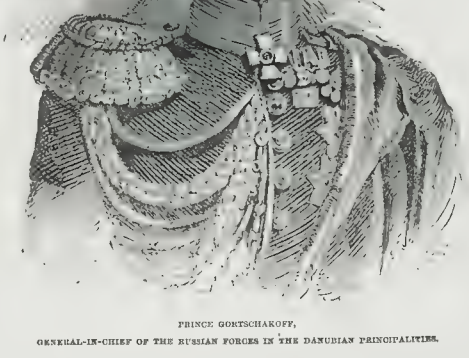
PRINCE GORTSCHAKOFF,

GENERAL-IN-CHIEF OF THE RUSSIAN FORCES IN THE DANUBIAN PRINCIPALITIES.

The participation by comparatively unknown men in great enterprises renders, for the time, their names as notorious as the deeds in which they take a part. Some warriors make opportunities for themselves; others have to wait until distinction is thrust upon them. If the occasion had not called them into action, it is probable that their previous deeds—whether in diplomacy or in the routine of home service—would have remained unrecorded; and we need only refer to our own Army or Navy Lists for proofs of the capriciousness of fortune, in leaving military or naval men at the zero of distinction, or raising them to the zenith. The names of Prince Menschikoff and Prince Gortschakoff stand out at this moment in bold relief in Russian contemporary history; and yet it is doubtful whether the British public would ever have had the hard necessity of pronouncing them, if the battalions of the Russian empire had not been arrayed against Turkey. Certainly, the name of Menschikoff has its *souvenirs*. The reader of Russian history could not fail to have his attention arrested by the exploits of the first Prince Menschikoff, in the reign of Peter the Great; or to be struck by the great talents to which he owed his rise, or by the ignominy of his fall. In tracing the career of Prince Gortschakoff, there is an absence of that ancestral fame which renders the deeds of the present Russian Plenipotentiary more memorable; and our sketch of the Commander-in-Chief of the Russian armies will, therefore, necessarily be confined within smaller limits.

Of the actual date of the birth of Prince Gortschakoff we have not a record; but we believe it to have been later than the year 1792, and before the year 1796. In the year 1828, we find him serving in the artillery of the Imperial Guards; in 1829, he was nominated to the staff of the Kratcowski Corps, and he served with it in Silistria and at Schumla in that year. Of course we do not pretend to enter into a history of the war as it raged at that time between the Russians and the Turks. We confine ourselves to that portion with which Prince Gortschakoff was connected. Redschid Pacha, the Grand Vizier, being at that time in force at Schumla, the Governor of Silistria, menaced by the Russians, applied to him for assistance. Redschid created a division by an attack elsewhere, in the course of which the Turks showed a bravery quite equal to that which has lately excited so much surprise. General Diebitsch was compelled to march from Silistria on the 8th of June, with Count Pahlen's corps, to reinforce General Roth, while General Krassofsky was left to continue the beleaguerment of Silistria. Prince Gortschakoff was with his corps, and took part in the artillery operations. It was not until the 30th of June that, breaches having been made, the commander of the fortress offered a capitulation, and at last the Pacha and his garrison surrendered as prisoners of war. The siege had lasted six weeks, and the Russians had 1200 men killed and wounded. No sooner was the reduction of Silistria accomplished, than General Krassofsky's corps was ordered to Schumla; but he could not bring up his last men till the 15th July. Of Gortschakoff we find no special mention in the despatches; but he was actively engaged in all these operations, the object of which was to occupy the attention of Redschid Pacha while Diebitsch passed with the strength of his army across the Balkan. We find one engagement, when the Turks attacked Krassofsky's corps, near Marasch, unsuccessfully. The last-named General had accomplished the object of his chief, in having engaged the attention of the Vizier, and yet kept up his communication with the main Russian army. Very shortly after, the treaty of Adrianople put an end to the war.

Prince Gortschakoff remained on the staff of the artillery, and in connection with Krassofsky's corps, until 1831, when he was called upon to take part in the war in Poland. He was at this time one of the chief staff-officers of Count Pahlen. For his services during the campaign, he was made Lieutenant-General. As Commander-in-Chief of the Concentrated Artillery, he distinguished himself at various places during the campaign. At Grochow, the artillery were called more into play than they had hitherto been. Count Pahlen had been compelled to retreat before the Polish troops, when, by the concentration of a tremendous artillery force, the battle was turned once more in favour of the Russians. The artillery were under the command of Prince Gortschakoff. In the subsequent operations, during the advance on Warsaw, Prince Gortschakoff distinguished himself in an affair at



PRINCE GORTSCHAKOFF,
GENERAL-IN-CHIEF OF THE RUSSIAN FORCES IN THE DANUBIAN PRINCIPALITIES.

Ostrolenka, which sustained for a long time the fire of his artillery, till the Poles were compelled to abandon it, in flames. While the Russians subsequently crossed the river, Prince Gortschakoff protected the bridge with his artillery. Ultimately, he succeeded in maintaining the bridge, although the Poles claimed the victory on the day's whole operations. Diebitsch was suddenly taken off by the cholera, and was succeeded by Marshal Paskewitsch, who continued the movements on Warsaw.

That capital was at length invested, and on the 7th September capitulated to the Russian General. Prince Gortschakoff distinguished himself during the siege, in which his office as commander of artillery rendered him a most important agent of the General-in-Chief. After the retreat of Count Soll, he was put on the staff of the active army. In 1843 he was promoted to the rank of General of Artillery; and in 1846 was made Military Governor of Warsaw, which post he still continues to hold. He served in the Hungarian War of 1849, in which he took an important part, in the same branch of the service as in Poland and the Danubian provinces. In 1852 he represented Russia at the funeral of the Duke of Wellington.

On the occupation of the Danubian provinces during the present year, Prince Gortschakoff was appointed to the chief command of the Imperial forces. When he entered Wallachia, he published, under superior orders, a proclamation, to the effect that his Royal master had no design of conquest; and that the inhabitants would be in every way protected in their independence. Whether this was believed by him at the time we know not; but events soon showed that the Russian commander either had never intended to fulfil his promises, or that the power to do so had been taken from him by the necessities of war. The next act of Prince Gortschakoff, that in any way denoted his character, was his celebrated appeal to the fanaticism of the Russians, ending with the memorable words, "Mort aux Payens!" The reader will not have forgotten, either, his reply to Omer Pacha, when desired by that chief to evacuate the Principalities. "I have no orders," said he, "either to commence hostilities, to conclude peace, or to evacuate the Principalities."

Prince Gortschakoff has gradually risen from a comparatively subordinate rank in the artillery to very high posts. He is Aide de-Camp General, General of Artillery, and Chief d'Etat Major of the active army. Besides being Military Governor of Warsaw, he is also the foremost member of the Council of Administration of the kingdom of Poland; and, in the absence of Prince Paskewitsch of Erivan, as the Namiestnik, or Lieutenant-General of the Kingdom, it is his privilege to preside at the deliberations of the Council.

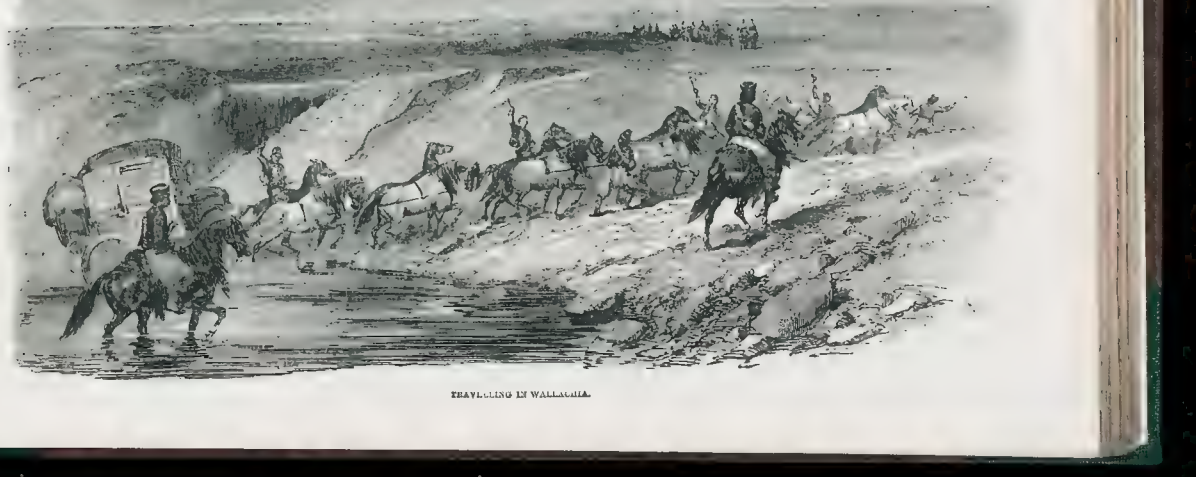
An elder brother of Prince Gortschakoff served in Germany and France, held a command in Diebitsch's army which went to Adrianople, and was, in 1839, named Governor-General of Western Siberia. A younger brother has distinguished himself in the diplomatic service. He was Chief Secretary of Legation in London in 1824; and was afterwards at Florence, Vienna, and Stuttgard. At the latter place he negotiated the marriage between the Grand Duchess Olga and the Crown Prince of Wurtemburg.

THE RUSSIAN ARMY.

The following interesting information relative to the Russian army (abridged from the *Morning Chronicle*) appears in a letter from Sir C. Shaw, who is now at the seat of war on the Danube:—

The officers of the infantry, cavalry, artillery, and engineers of the Imperial Guard have the same impedimenta and unfair privileges as the officers of the British Foot Guards, an ensign having the rank of lieutenant, a lieutenant that of captain, and a captain the rank of lieutenant-colonel, of the line. All the officers of the Imperial Guard must be nobles. The Emperor of Russia, with the desire and hope that the Imperial Guard officers may be kept on a level, as to military character, with those of the line, obliges each officer of the Imperial Guard to serve three years in the army of the Caucasus, where they are daily engaged in actual harassing warfare. The privates of all the Imperial Guard are chosen for their height; and the officers must also be tall, in order not to disfigure the appearance of a regiment by the officers being about one half of the size of the men on their right and left, and having helmets or grenadier caps larger than their bodies. We have our Scots Greys, and the Life Guards on black horses; but the Russians have whole battalions of Guards, not only of the same size, but all the men with light hair and blue eyes; and other battalions with brown hair and black eyes, all having a similar expression —producing the same effect on the superficial observer as the Elgin marbles did on the famous Ayrshire sculptor Thom, who, being asked by the celebrated Chantrey his opinion of these farfamed statues, answered:—"Faith, no muckle; they hae an gat yas nose" (Anglice—"Faith, not very much; they have all got the same sort of nose"). The barracks of the Imperial Guards are beautifully arranged, and have attached to them kitchen-gardens, which the men are encouraged to cultivate. They do this to such perfection that their messes are not only abundantly supplied with the best of vegetables, but selling the surplus allows them to add a large sum to their regimental fund.

I believe there has been no change in the Russian pay since 1830. A Russian private receives the yearly pay of £1 12s. 6d.; a Prussian soldier, £4 15s.; and a French, from £5 8s. to £9 4s.; a lieutenant-general in the Russian service receives £180 per annum, being equal to a first captain in Prussia. An ensign in the British service (the worst paid man in it) receives as much pay as the best paid colonel in Russia; a Russian captain gets £60 per annum, while a British lieutenant receives about double the sum. Other Russian officers connected with the staff of the army are paid in similar proportion, and this miserable pay of the officers may account for much of the sufferings of the Russian soldiers, and for the comparatively few bayonets and sabres brought into the field. Although the Russian soldier's pay is bad, if his rations were served out to him according to the "Regulation List," they would be nearly as well off as the British soldier. Besides, another great confusion arises from the number of different nations in the same regiment, as for instance, flour to make 1½lb. of bread may be sufficient for the men from the south of Russia, while those who come from the far north and vicinity of Archangel are scarcely contented with 7 lbs. of bread, the northern inhabitants eating more than the southern. When troops are quartered in villages, a month's rations are drawn at a time, and given to the peasants in whose houses the troops are quartered, and they are then obliged to feed the soldiers well. On the borders of the Black Sea, and towards the



TRAVELLING IN WALLACHIA.

Caucasus, the climate is an unhealthy, that, at certain seasons of the year, coffee, tea, wine, and spirits are served out to the troops. All accounts state that the pay of the Russian functionaries is by no means sufficient for their luxurious style of living. The bodies of troops are cantoned at great distances; that the difficulty to find out the truth is very great, and it is not to be wondered at that they give in false returns, and draw pay and rations for more men than are actually in the quarters. The Emperor Nicholas is well aware of this system; and he is continually on the move, so as to come unexpectedly and suddenly upon the authorities, and to judge from personal observation; but it is impossible for any one man to prevent great abuses occurring over such an immense extent of country.

I still maintain that though the army of Russia may be formidable in numbers, yet, on account of the discontented subjects and her extensive frontier, ill shifted by hostile tribes, she dare not bring a force of 150,000 men out of Russia without exposing herself to immense risk. But what is the character of these 150,000 men? Napoleon, and all the French officers of his day, said that the Russian infantry were nearly as good as the British. All officers agree as to the excellence of their artillery. What say you, Charles X., of France of their cavalry? After the peace of 1814 the Emperor Alexander had a review at Versailles, and two French regiments of infantry were on the ground. The Russian Cuirassiers made a charge, and Charles X., then Count of Artois, called out, "Splendid! no troops in the world could withstand such cavalry." "Pardon, pardon, your Royal Highness. Look at these two regiments of infantry," said Alexander: "these have successfully opposed my Cuirassiers." Both remarks were heard by all around, my informant being an officer of one of those regiments on the ground.

Captain Nolan, of the 15th British Hussars, speaks, in his excellent work on "Cavalry Tactics," of the Russian and British cavalry. Of the former he says, "I had heard of fine horses in Russia, but I conspicuously said to myself: 'Whatever they are, they cannot be equal to English.' However, I went to Russia, and seeing is believing. Their horse artillery and cavalry are far better mounted than ours, and their horses are immeasurably superior in those qualities which constitute the fine warhorse, namely—courage, constitution, vigour, strength of limb, and great power of endurance under fatigue and privation." Of English cavalry he says, "Decked out in showy trappings, their riders decorated with feathers and plumes, they look well to the superficial observer; but the English cavalry are not what they should be. If brought fresh into the field of battle, the spirit of the British soldier, the pluck of the men would doubtless achieve great things for the moment; but they could not endure, they could not follow up, they could not come again."

The elite of the Russian army is the detached army of the Caucasus, consisting of a force, always ready to march, of 115,000 men of all arms, regular and irregular, and with a reserve which makes a total of 150,000. There is great sickness also here, and the loss of officers is very great, as the warlike tribes have been so badly off for ammunition that their chiefs order them to aim solely on the officers. As many Poles were sent to this army after being subsidised by the Emperor Nicholas in 1831, it may be expected that they will not be very enthusiastic against the Turks. To the Russian army of operation must be added the regular regiments for the service of the interior of Russia, so organised that in case of great necessity they might be moved to the frontier. They amount (of all arms) to 210,000 men, with a reserve of 106,000—a total of 317,000 men. When a Russian soldier is drawn for the conscription, in five years he is considered legally dead; as if a wife does not mourn her husband for five years, she may marry again. The military force of Russia is formidable cannot be denied; but in leaving the front or their strength evaporates. They had great difficulty in overpowering the Poles in 1831, even although many traitors among those Poles. But the Turks are staunch to a man; and when the Russ are are in an unfriendly country they must expect to be treated as the French were in Spain. Besides the great physical force which will meet the Emperor Nicholas in the field, the moral feeling of all the world is against him.

NAVAL AND MILITARY INTELLIGENCE.

Royal Arsenal, Woolwich, Nov. 29.—Lieut.-General Lord Raglan, G.C.B., Master General of the Ordnance, arrived at the Royal Arsenal at eleven o'clock a.m.; and was accompanied by Lieut.-General Sir Hew D. Ross, G.C.B., Deputy-Adjutant-General of Artillery, and Major-General G. C. Wetherall, C.B., Lieut.-Governor of the Royal Military Academy, during a short visit to the Dial-square; and afterwards to an inspection of the Gentlemen Cadets' barracks—a part of the buildings in which they have for some time past conducted their studies, when advanced to the practical class, being in a state which require that they should be rebuilt, and the other portion improved for their accommodation.

Sir E. Parry.—The public will learn with much satisfaction that Sir Edward Parry, the veteran voyager of the Arctic Seas, has been appointed Deputy-Governor of Greenwich Hospital.

Military News.—The General Commanding-in-Chief has issued an order, that the habit of allowing men to appear, throughout the day, in the towns where they are quartered, dressed in their fatigue clothing, may be discontinued; and that all non-commissioned officers and men going beyond their barrack-gates between the hours of seven evening roll-call be henceforth required to appear in their full uniforms, with their sword or bayonets, belts, or forage caps. By the death of Major-General James Campbell, a Good Service Pension of £200 lapses to the Commander-in-Chief for disposal.—Lieut.-Colonel Cobbe, of the 2nd West Indies Regiment, is about to retire upon half-pay; and, it is said, he may be appointed to the Home Staff.—The Ceylon Rifles are to be reduced next year. The ancient kingdom of Kandy is so entirely reconciled to British rule, that the prospect of military employment is extremely remote. The presence of two European regiments is deemed sufficient for the protection of the colony.

Ship-building.—The *Orion* and *Repulse*, designed as 80-gun sailing ships, have been lengthened, and are to mount 90 guns, the same as the *Agamemnon*, and have 600-horse engines. The *Pigmies* and *Curacoa*, 50-gun frigates, are to have 350-horse engines. The *Harrier* and *Pulam*, sloops of-war, are to be fitted with engines of 100-horse power. The *Hornet*, *Growler*, and *Spiteful* are to have each 200-horse power engines. The engines of the above vessels are all adapted for screw propellers, and as they will all be ready by the end of the next financial year, the Royal Navy of 1854 will have an addition to its strength of two 90-gun screw steam-ships, two 50-gun frigates, equal to the *Impérieuse*, three steam-sloops of 16 guns, and two steam sloops of 8 guns each, besides the vessels at present in a more advanced state.

The New Royal Yacht.—Preparations have just been commenced at Pembroke for building the new steam-yacht for the Queen. She is to be called the *Windsor Castle*, and will be about 340 feet long over all. The blocks are being laid on the extensive slip from which the *Duke of Wellington* was launched, and the keel will be laid in a few days. Moulds showing her stem and stern have already been erected, and a great number of workmen are employed cutting out materials. She is to be built almost entirely of mahogany, and, like the *Victoria and Albert*, constructed upon that peculiar principle, the diagonal planking system.

Portsmouth, Nov. 30.—The *St. Jean d'Acre*, 101, Captain the Hon. H. Keppel, got up steam yesterday to try her engines, and will be ready to leave the harbour in two or three days.—The Russian frigate *Aurora*, 46, hauled out of the fitting-basin on Tuesday, into the harbour, and commenced receiving her ammunition. When ready for sea she proceeds to the Pacific. The Russian corvette *Nevarin*, 22, which put back to St. Helen's on Saturday afternoon, was towed into this harbour to-day, leaky.

Wholesale Desertions from the Navy.—It is stated that no less than 500 seamen and marines have deserted from her Majesty's ships at the home ports within the last two or three months.—*Plymouth Mail.*

New Anchor for the Navy.—The principal dimensions of Mr. Cursell's anchor are nearly the same as the Admiralty anchor; the shank and arms are flattened, which gives more strength in the line of the strain; and the inner surfaces of the palms are kept straight to the proper angle, which will cause the anchor to nip the ground readily, and to hold firmly when once inserted, which is very essential; and, for the purpose of weighing or tripping, the external curvature of the arms of the anchor is preserved. It is very simple and strong; and, in case of accident, easily repaired; it can be forged, cast, &c., with facility; it possesses all the properties of the ordinary anchor, with the advantages of portability, under excessive strains, it will be less liable to be broken at the clutch than the ordinary anchor.

Trade and War.—It is calculated that the European merchants have suffered a loss amounting to several millions in consequence of the aggression of the Emperor of Russia. The Paris manufacturers who work for the Continent are scarcely any more employed than several months. The Russian merchants, who continued their ordinary purchases until the month of September last, have now ceased altogether, and the only orders received in Paris are from the south of Europe and America.

Fish Manufactory.—At the "fish-manufactory," as it is called, at Huninguen the establishment for producing fish on the artificial system, there are now 200,000 young fish in the reservoirs, and all the large trout of the Swiss lakes duly fecundated; and there are 100 000 of the same description of eggs, also fecundated at the College de France in Paris. These eggs are destined for distribution amongst the departments in which money has been voted for the application of the artificial system *Galgnani*

Leicester Trade.—The severity of the weather has slightly improved the home demand for worsted and woollen goods. The mills continue to work short time, and the production is further considerably reduced by the stoppage of machinery. The wool market is without change in price; and there has been rather more doing the last week.

THE CITY CORPORATION.

Charity is said to cover sins manifold. Sins, whether personal or political, cannot long be hid from public view. When seen and understood, however attractive, punishment follows quickly. When unseen and only guessed at, they sap the foundations on which the great structure of society is built, and sooner or later will tell on the fabric itself. For many years the fame of the charity and good works of the Corporation of London has done her essential service. Her assumed munificence, liberality, and general attention to the call of the needy and oppressed, have met us at every turn, and covered many of the sins of that venerable municipality. Her sins have been so ruthlessly exposed during the last few weeks, that we have endeavoured to discover the exact amount of charity really necessary to hide her defects and conceal her blemishes from the public eye. Her sins have been sins of general, unchecked, and heedless extravagance, reported to amount to the enormous sum of £30,000 or £60,000 per annum; while her charities, during the year 1852, amounted, in the aggregate, to the heighmost sum of £116,—about one per cent of her *legitimate* revenue, and not quite a quarter per cent of her gross expenditure. Among those who appear as pensioners we find a lineal descendant of Sir Hugh Myddelton, with £18 a year; while Anne Holloway, the widow of a stamper of beer measures, receives an annual allowance of £40. We presume that this may fairly be taken as the opinion of the doughty citizens as to the relative value of an abundance of fresh water, and the accurate measurement of beer.

We have attended the meetings of the Royal Commissioners inquiring into the affairs and management of the Corporation of the City of London, and hoped, day by day, to find the stream of voluntary evidence run itself out. Instead of this being the case, "the cry is still — they come!" It really appears as if the supply would only cease with the patience of the Commissioners. We have so long been accustomed to look with reverence on the fathers of the City, and from our earliest childhood have so bound up with the history of our very existence the traditions of London, that it is with no small amount of suffering we witness our cherished idol broken and abused. The gigantic form which we believed to indicate power, and the glowing colour which we took for health, are now shown to be the overgrowth of corruption, and the hectic flush of disease. Driven from one point to another, she must now quickly make the operations of her enemies, or seek refuge within the citadel of her treasure-chest. On more occasions than one she has found money more powerful than argument. Among her present defenders are ranked those who, in former days, were her chief assailants. And who can tell but the same arguments, judiciously disposed, may be as potential now as they ever have been. In story-books we are informed that those who wield supernatural power are proof against the ordinary bullet; but, lead the rifle carefully, and insert a coin of value, and there is no mail so strong that it will not pierce, and no virtue so perfect as to show no vulnerable point. "Every man has his price," says a great authority: the blue ribbon for the Duke, place for the demagogue, and direct pay for the patriot. Fighting on the defensive, snugly entrenched behind her money-bags, the City may transmute the host of her opponents into troops of friends. The attack of enemies, pressing her so closely, may change into the embrace of friends. But how can this be done? Too many eyes are upon her—every step is marked and every word noted. The Secret Service account is closed, and the audit called for.

Alas! poor City, "deserted in her utmost need;" not by those who were fed by her bounty, but by those who entered her camp only to destroy her. Her children have become too numerous. Her walls are no longer able to contain her progeny. They have resolved to set up for themselves, to become independent, and to have establishments of their own. Who can blame them? Not we. We only trust, that in their generation they will prove to be as strong in the defence of right, as potent in the denouncement of wrong, as she has ever been.

The genuine Corporator is blind to the events approaching rapidly. He is Roman Catholic in his municipal faith. His allegiance to the Crown is undoubted; but his first duty is to serve the Corporation. The Lord Mayor is his Pope, and he would willingly kiss his toe. Two classes of men only can see the approaching crisis—those who have nothing right, the other acknowledges nothing wrong. Public opinion must become the great arbitrator, and the chances are that it will decide against them both. The City municipality is doomed to undergo a great change. The old rags of early habits with which she is annually bedizened, must be flung away; abuses, the growth of ages, must be swept out; the cobwebs and sophistries of custom must be pulled down; the corrupting secretions, arising from a sluggish circulation, must be purified by abundant ventilation and the infusion of healthy blood. Filled with new life, supported by sturdy municipal children, she may be hited to a position of greater power, and greater advantage to the people, than she has ever before enjoyed.

Next week we shall direct attention to things that have been neglected, things that must be considered, and others that demand immediate attention; and, first of all, the streets, which, from whatever cause, are so choked with traffic, as to reflect discredit on the authorities.

India Law Commission.—The Master of the Rolls, the Chief Justice of the Common Pleas, Right Hon. Sir Edward Ryan, formerly Chief Justice of the Supreme Court of Calcutta; Charles Hay Cameron, Esq., who succeeded Mr. Macaulay and Mr. Amos in the Supreme Council of India; John M'Pherson Grant, Esq., have been appointed Commissioners to consider and report upon the reform of the judicial establishments, judicial procedure, and laws of India, under the 16th sec. of the Government of India Act. Frederick Mouat, Esq., has been appointed Secretary to the Commissioners; and Neil B. E. Baillie, Esq., who has practised for many years in the Sudder Court, at Calcutta, as vakeel, is to be Assistant-Secretary.

Coals by Rail.—The Great Northern Railway, on the very day on which I paid Messrs. Cockerell 22s. per ton cash for their best Durham coals, took my order for their best Durham at 22s. per ton. Now it, according to "Veritas," they pay 9s 8d. per ton for it delivered into their cars, 1s 10d. City dues, and 3s. 6d. screening, filling, and carting charges in all, 14s. 8d.—so it flowed that, per freight and coal merchant's profit, they only charge 7s. 4d. at the very time when sea coal is burdened with a charge of 10s. 6d. freight and 6s. 9d. coal-merchant's profit. These figures would show a difference in favour of rail-borne coal of 10s. per ton.

Our Coal Fields.—The following is the extent of the workable area of the coal-fields of the United Kingdom:—Northumberland and Durham, 500,000 acres; Cumberland, Westmoreland, and West Riding, 29,500; Lancashire, Flintshire, and North Staffordshire, 350,000; Shropshire and Worcestershire, 79,360; South Staffordshire, 68,000; Warwickshire and Leicestershire, 80,000; Somersetshire and Gloucestershire, 107,500; South Wales, 60,000; Scottish coal fields, 1,015,000; Irish coal fields,—Ulster, 350,000; Connaught, 200,000; Leinster, 150,000; and Munster, 1,050,000.

Inferior Gold Coins.—The public should be made aware of the existence of three Polish Victoria sovereigns. They are the usual size of the genuine, but are made of inferior gold. Being well executed, they can only be detected by the weight. Upon weighing them, they are found to be what is called "eighteen-penny-weight gold;" the weight, 4 dwts. 4 grains; consequently, their intrinsic value is 15s 7½d. They are composed of red gold, and coloured to represent the regular issue; the readiest way of detecting them is to weigh them against genuine ones.

The Cholera in the North.—No new cases of cholera have been reported to the parochial authorities of this city since our last; but the deaths from the epidemic still occur throughout Scotland. At Dalmeny there have been three fatal cases; and in Liff and Benvie, three. In Glasgow, two had been reported up to Wednesday. At Arbroath, it is said, the progress of the disease seems to be checked: there have been upwards of twenty cases, three-fourths of which have terminated fatally. In Dundee the disease is on the decline. At Cupar-Fife one person had been attacked, but the case does not appear to have proved fatal.—*Scotsman.*

MUSIC.

The Sacred Harmonic Society performed Handel's "Samson" at Exeter-hall on Friday, the 25th. This great work is so well known to the musical world, and has been so frequently performed by this society, that it would be superfluous at present to make it the subject of critical remark. The only remarkable feature of the performance on the occasion was the appearance of Madame Vardot Garcia, who, for the first time, sang the music belonging to the part of *Micah*, to which she gave an effect far exceeding that which we have ever heard produced by any other singer. The two great airs, "Return, O God of Hosts," and "Ye Sons of Israel," were sung by her with a mournful and pathetic expression, which must have deeply moved every one who heard her. But she showed, if possible, a still higher degree of artistic genius in her manner of delivering the recitatives, of which the music of this part chiefly consists. They are very short, and several of them seem to be little more than connecting links of the dialogue; for which reason they are deemed of inferior importance, and ordinary singers omit some of them altogether. But Madame Garcia gave them their true character and effect;—her pure, beautiful, emphatic, and (when necessary) impassioned elocution, rendered them the most striking portions of the whole performance. The other solo parts were sung by Miss Birch, Mr. Lockey, Mr. Weiss, and Mr. Lawler: all of them acquitted themselves well; but all of them, except Mr. Weiss, were deficient in animation and dramatic force. The choruses were powerfully performed; and the effect of the whole was greatly enhanced by Mr. Costa's masterly additional accompaniments.

The Harmonic Union began its second season on Monday evening, at Exeter-hall. This society, it will be remembered, was set on foot last year, with the view of performing great choral compositions—secular as well as sacred. This was certainly a *desideratum*; for the limited scope of the Sacred Harmonic Society prevents its performances of many grand and beautiful compositions which cannot be produced unless there is not only a chorus, but an orchestra, on a large scale. The choral and orchestral strength of the Harmonic Union is not nearly so great as that of the Sacred Harmonic Society; but still it is sufficient for every purpose, if a due number of vocal and instrumental performers is stated to be five hundred; and, supposing them to be individually efficient, we, for our part, would never wish to hear a larger number. Mr. Benedict performs the to the conductor and an abler conductor could not possibly be found. His performance of Monday evening consisted of the "Messiah," and was, on the whole, very satisfactory. We remarked that Mr Benedict is not quite at one with Mr. Costa in the reading of some of the movements. In the chorus "For unto us a Child is born," Mr. Costa sets out with a whispering *pianissimo*, increasing by degrees, so as to give the greatest possible effect of contrast to the grand burst, "Wonderful! Counsellor!" Benedict begins *mezzoforte*, trusting to Handel's introduction of the drums and trumpets for giving effect to the *fortissimo*. We have heard both ways advocated by sound musicians; but we believe that Benedict's is the more consonant to Handelian tradition. "Who shall decide when doctors disagree?" Generally speaking, Benedict takes the movements, both of the choruses and airs, somewhat slower than is done by Costa. In this, Benedict's way is the more traditional; though Costa's acceleration of the time sometimes produces great force and vigour. The solo parts were rather feebly sung. Much disappointment was caused by the absence of Madame Vardot Garcia, in consequence of severe indisposition. Her place was supplied, on very short notice, by Miss Birch and Miss Lascelles; and the other singers were Mr. Benson, Mr. Lawler, and Mr. Weiss.

The Hungarian Promenade Concerts continue to be carried on very successfully at the Marionnette Theatre. The merits of the fine band are already well known to the musical public. The precision, delicacy, and beauty of tone, with which the wind-instruments are played, are above all praise: and the effect of the whole is as unique as it is charming. The very spirited selections from the "Somnambula," "Guillaume Tell," "Lucia di Lammermoor," and other favourite operas; together with Hungarian and other national airs, full of originality and character. The strength of the band is greatly increased by the admirable family of the Distins, and the entertainment is pleasantly varied by Miss O'Connor's Irish ballads and the clever pianoforte playing of Miss Julia Warman.

This week's Wednesday Evening Concert, though destitute of novelty, was by no means destitute of interest. Madame Viardot Garcia—entirely recovered from her indisposition, and singing several of her finest *morceaux* as she alone can sing them—made this, in some respects, the most remarkable concert of the series. The pieces which she sang were, the beautiful and pathetic air, "Ah! non fiis!" in the "Prophète" the grand scena in Weber's "Freyschütz;" and the brilliant finale of the "Cenerentola." She took a part, likewise, along with Miss Alleyne and Mr. Weiss, in Mozart's quartet trio, "Soave sia il vento," from "Così fan tutte." In these various pieces she exerted herself to the utmost; and we have never heard her sing more exquisitely, nor with greater effect. Her reception, it is scarcely necessary to add, was enthusiastic in the extreme. The instrumental music at this concert was of less importance than at any of the preceding. There were only the overture to the "Freyschütz"—admirable, doubtless, but somewhat hackneyed: the same composer's Jubilee Overture, universally set down as the least praiseworthy of his orchestral works; and one of M. Leopold de Meyer's pianoforte Fantasias, a mere string of showy difficulties, executed by Mdlle. St. Mare, a clever and promising young player. These were but poor substitutes for the great symphonies and concertos we enjoyed at the previous concerts.

THE THEATRES, &c.

MARYLEBONE.

The tragedy of "Hamlet" was revived on Monday—Mr. Wallack performing the melancholy *Prince of Denmark* with consummate skill, princely grace, and high tragic power. Mrs. Wallack performed *Ophelia*, and very artfully contrived to subdue the majesty of her person, and simulate the Danish maiden, so hapless in her love and doom. The fourth act was most artistically played, and the frenzied snatches of song executed with much feeling and effect. Mr. Vandenhoff's intonation of the *Ghost* was remarkably fine and touching; and Mr. Wallis, as *Claudius*, is, perhaps, the best representative of the wily King that we ever witnessed. His emphasis is admirable; and uniformly brought out, not only the full meaning of the text, but also the shades of meaning and character. The whole performance gave great satisfaction to a fashionable audience.

SADLERS' WELLS.

—"The Fatal Dowry" of Massinger has been revived at this theatre.

Miss Glyn at Glasgow.—The *Glasgow Sentinel* gives an elaborate and eloquent criticism on the performance of this actress in the part of *Constance* in "King John," which tragedy, according to the account, Mr. Glover, the manager, has got up in a very costly style. The decorative plan of reviving Shakespeare is thus extending, we find, to the provinces. But the paper before us says, and doubtless with justice, that, notwithstanding the gorgeous getting-up, the chief attraction was Miss Glyn's *Constance*—a great part grandly executed."

Rapid Execution of Music.—Dr. Lardner, when recently commenting upon the speed of express trains, mentioned that on the Great Western Railroad of England, remarked that, at that rate of speed, the engine coughed twenty times in a second, a number impossible for the ear to separate and distinguish. Now, under the direction of a great leader, we have heard forty violins in the coda of an overture firmly attack a passage of groups of eight notes, and with lightning-like rapidity, play them perfectly together, as if but one instrument, each note being distinctly appreciable to the ear. The effect on the audience was electrical, exciting to the last degree. Happening to have a watch in hand that moment, we measured the speed of these players, and found it twenty seconds, three groups or twenty-four notes a second we e played by each. Thus, in each second, they played 960 notes, and in the twenty seconds, one-third of a minute, 320 notes; and had a single one of these notes been misplaced, a highly-cultivated and naturally acute, if not musical ear would have discovered and been displeased by it.

Cathedral Music.—Our cathedrals seem to be waking up, one by one, to a resumption of something like their old musical air. We are now informed that, for the first time these two centuries past, the full musical cathedra service is daily intoned by a competent and powerful choir in Peterborough Cathedral.—*Athenæum.*

Memorial of Nell Gwynne.—The Ludgate prisoners, now included in the Holloway prison, receive, on the last day of every month thirty twopenny loaves—a bequest from Nell Gwynne.

LITERATURE.

1. THE OLIVEIRA PRIZE ESSAY ON PORTUGAL. By JOSEPH JAMES FORRESTER. John Neale. 2. AN ESSAY ON THE RESOURCES OF PORTUGAL. James Ridgway.—3. ENSAIO SOBRE PORTUGAL, EM RELAÇAO AOS OBJECTOS DA GRANDE EXPOSIÇAO. Ridgway.

The Great Exhibition of the Industry of all Nations, held in the Crystal Palace, has called into existence these several publications. Mr. Benjamin Oliveira, M.P. for Pontefract, offered a premium of fifty guineas for an essay on Portugal, "to promote commercial and agricultural enterprise, in connection with the design of the Great Exhibition, with reference to Portugal, a country abounding in riches of various kinds so little known, to direct the attention of enterprising individuals to that country, and thus invite the Government of Her Most Faithful Majesty to open negotiations for a treaty based upon the principles of free-trade." No successful candidate for the prize was Mr. Forrester, but the judges recommended Mr Oliveira to give a medal to the three other competitors, in commemoration of their labours, and as a testimony of their appreciation of the merits of their essays. The book of Mr Forrester is a very valuable contribution to the statistics of the wine trade in particular, and is also replete with general information. This gentleman has been intimately connected with Portugal during twenty two years as an extensive grower of wines in the Alto Douro and other districts of the north of Portugal, and is the author of several publications on the capabilities of that country. His map of the wine district of the Alto Douro is considered by the Portuguese to be a model of topography, and his plans for the improved navigation of the river Douro have received the highest commendation. Perhaps no living author could have brought more practical knowledge to bear on the subject, which he has discussed fully in all its bearings and details. Appended to this volume is the evidence given by Mr. Forrester before a Select Committee of the House of Commons on the Import Duties on wines, and several other documents connected with the Municipal Chamber of Oporto, and with the Douro Agricultural Society.

"Portugal," writes Mr. Forrester, "may be compared to the enclosures of a vast prison, where free ingress and egress are prohibited. The inmates, long accustomed to see but a glimmering light in their confinement, and having become indifferent to their fetters, appear to have quietly settled down, contented with their present lot, and regardless of the future." In former ages, when the old nobility of Portugal were styled the knights of chivalry, they were prohibited from engaging in commercial pursuits as degrading to their illustrious order; and indeed this was the rule wherever feudal monarchy was established; but in Portugal this folly was carried to such an extreme that, according to an ancient decree on aristocratic etiquette, quoted by Mr. Forrester, "No person of rank who might visit these (trading) cities should be allowed to remain in them more than three days, under pain of being ejected therefrom by the officers of the law." As chivalry declined, trade became more respected. The decree was repealed, and the nobility resided in the ports and cities, but still they did not engage in commerce; but since the disputed succession to the Throne between Don Pedro and Don Miguel, and more particularly since the reign of Donna Maria II., the new nobility, offspring of the civil wars, have been and now are extensively connected with the Stock Exchanges and the wine trade of Lisbon and Oporto. However, the old nobility still stand aloof; and though the two classes mingle, they never amalgamate. The middle classes are described as deep and earnest politicians, adhering tenaciously to their respective parties. They rise early and drink wine, which never exceeds 2d. per pint. "Fine old bottled wine (such as we can acquaintance with is altogether unknown in Portugal, and it would be almost as easy to find in any house a couple of dozen bottles of port, as it would be to discover as many books." The working classes are spoken of in the most favourable terms, though poor and miserably fed. Their dietary is indeed of the meanest kind. Under a burning sun they work bareheaded and half naked, while they are only sheltered from rain and cold by a straw thatch or a cloak. When a family is numerous, they never taste meat; salt fish is a luxury; bread and a raw onion, or raw cabbage with a little salt, gathered from the rocks on the seashore, is the usual fare.

The Portuguese Parliament is the determined foe to Portuguese industry. The doctrine of vested rights is paramount and sacred, and to interfere with them is to repudiate true patriotism. The bar of a river must be removed, lest it might deprive pilots of their bread. All foreigners are looked upon with suspicion and jealousy. It is not surprising, then, that the country has retrograded, with all its natural advantages of climate, riches, soil, and agricultural and mineral wealth. It appears that Portugal only possesses 1600 factories of all kinds, affording employment to about 20,000 workmen. The Portuguese velvet is superior to all others, being wholly made of silk; and the snuff is excellent, and this seems to be the extent of her manufacturing merits. The roads are execrable; and the mails between Lisbon and Oporto are carried on horseback, at the rate of three miles an hour. "There is neither coach, omnibus, nor diligence, nor even a carrier's cart, in communication between the capital and the second city in the kingdom; no public conveyance of any kind throughout the whole country, except in Lisbon and Oporto; and travellers can only move from place to place on mules or on horseback, or in *liteiras* (sedan-chairs suspended between mules)." In the interval there are no roads, and the quickest, and, indeed, the only, mode of conveying heavy goods from one part to another is on bullock-carts; and, for light goods, on mules, or on the backs of Gallegos." There are no canals. Rivers overflow their banks, and, depositing sand, render the naturally-fruitful soil sterile. From the Tagus to Vigo there is not a single harbour. Such is the country to which British capitalists have lent millions; and hopeless must be the expectation of dividends so long as this mal-administration exists. Nevertheless, Portugal is able to pay her debts, and become an opulent and prosperous country, if she would abandon Protection and adopt the principle of Free-trade—England at the same time repealing the wine-duties.

The statistics of the wine trade are fully and minutely examined by Mr. Forrester, and if we do not transfer his figures to our columns, it is not because we are insensible to their value. We will, however, state from him, that, "since 1826, our consumption of wines of all sorts has experienced little variation, the annual average being little more than the total consumption of last year, or 6,330,658 gallons; but, in the last half century, or between the years 1801 and 1851, the decrease per head has been equal to forty-eight per cent; in the same period the consumption of malt has increased 22½ per cent, and of spirits 48 per cent; so that, curiously enough, the increase in spirits has been exactly equal to the deficiency in wine. Here, then, the fiscal problem immediately touches the moral and sanitary problem, and we leave ingenious casuists to decide whether a Government is justified in raising any portion of its revenue by corrupting the minds and injuring the health of the people. Mr Forrester, however, has no fear that the Chancellor of the Exchequer would be out of pocket by reducing the wine duties; for he says, "Should the duties in the United Kingdom be finally reduced even to 2s. per gallon, then, as was shown by Mr. Charles White, before the Select Committee of the House of Commons, in May, 1852, the British consumer might be able to drink excellent port at 1s. per bottle. This statement is most interesting, coming as it does from one of the oldest and most important distributors in the trade of the wines of all countries, and may be hailed by the public with peculiar satisfaction."

We hope not to offend any reader who considers himself a connoisseur in beeswing, crusts, or colours, when we state on the authority of Mr. Forrester, that after the arrival of the genuine article in this country, it is made at three to five company with Madeira, Bercelona, red cheltam, and red Cape—all of which emerge from the meeting under the pseudonym of port."

There is an interesting chapter in this book on the cultivation of the vine, and on the qualities produced from various soils, and on the method of making wine. Vines are transplanted from the finest situations in Germany to the more southernly climate of Estremadura produce excellent hock, still or sparkling, while the Bordeaux vine, removed to the Alto Douro districts, yield wines "full of flavour, of more body than Burgundy, of rich ruby colour, and with far less acidity than claret of the finest growth." Portugal produces, and could produce to any extent, various wines of the most delicious quality, the names even of which are unknown in England, and there is one description most grateful and wholesome (Colares), which is sold in the country for three-half-pence per bottle; and all these, which would vend over our middle and upper classes under Free trade, are shut out by the enormous duty of £24 per pipe. Portugal has a population of 3,814,771 souls, according to the census of 1850, occupying a territory of 35,000 square miles. She may grow rich by her vines, and employ thousands of our people in manufactures, if the ports of both countries were open to their respective produce. So long as they are closed, each impoverishes the other. Mr. Forrester's book will do much to enlighten the legislature on this subject, and we hope it may be extensively read as it deserves to be; but sound policy will not confine free admission to the wines of Portugal, but extend it to the vintages of every country.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

The London season of English authors and English publishers commences in December, and continues till the following June. The London season was formerly regulated by "term-time," and booksellers, instead of advertising, as now, "Books for the season," or "Books recently published," our Tonsons and Lintots advertised "Books printed *this* term." Now, however, the lawyers cease to affect society as formerly; and people come to London in shoals, in vacant—happily ignorant—whether the Courts are sitting in West inster-hall or Lincoln's-inn. Our authors represented by our Longmans and Murrays address themselves, not to London alone, or persons just arrived in the great Babel, but to every city, and town, and village, with a post-office and a newspaper, in Great Britain and Ireland and our colonies; not forgetting, much to the delight of Scotchmen, the once independent Berwick-upon Tweed.

There is a full promise of a good season: but the first reflection, as we run through the announcements of forthcoming works, is the silence of our elder authors. Mr. Rogers, who began to sing in public in 1786 (in the same year that Burns began to sing), is still in health, telling stories with his usual point and vivacity, and suggesting to his many listeners what Waller must have been like in his old age. Yet he is not in song this season. There is no advertisement of an "Ode to Winter" from his pen. Equally silent is James Montgomery, the Bard of Sheffield, who still lives to enjoy all his early enthusiasm for liberty and song. Barry Cornwall is not to favour us with the results of his autumn wooing of the Muses. Dean Milman is silent amidst the rookery of Deans'-yard. We are to have no more Spanish ballads from Mr. Lockhart. Mrs. Southey (once better known as Caroline Bowles) is silent in her widowhood, forgetting that elegiac poetry has charms for all listeners. If we turn to the north, there is little prospect (we are sorry to say) of any fresh contribution to verse (what Mr. Landor would call the last fruits of an old tree) from the muse of Professor Wilson. While, when we turn to the younger ions of song, there is no prospect. Mr. Moxon informs us, of "An Ode to the New Year," from the pen of the Poet Laureate, or a Lara and Jacqueline contribution from the Italian retreat of Mr. and Mrs. Browning.

Taking poetry and prose together (as Grey took them, much, he tells us, like bread and cheese), we find that the veterans are alike silent. Mr. Hallam, it is true, has made some important additions to his literary History, of which Mr. Murray announces a new edition as "just ready;" but there is no truth whatever in the announcement of a contemporary print that Mr. Macaulay is anything like ready with a second instalment of his History. Mr. Yeadley has not been idle, but has he not been unnecessarily dazzled with the blaze of reputation kindled, and still maintained, by the brilliant success of his first instalment? Some one remarked, and not untruly, that it is easy to gain a reputation, but not easy to sustain one. Mr Macaulay must not be afraid of his own shadow; a fear of what will be said, and a desire for further knowledge, have been the ruin of many otherwise successful undertakings. Let him be warned by the fragment of his Whig idol, Mr. Fox; and the fragment of Whig-friend, Sir James Mackintosh. We would not hurry him into premature publication; but as his mind is made up on all the essential points of the period he is to treat about, —to such a pen as his, composition should not be difficult. It was not difficult to Hume, whose inimitable ease will sustain the practical value of his history with every student of English prose.

In fiction there is little promise beyond a reduction of price. Mrs. Thackeray forestalled the season, and is in his third month when the season opens. He has gone to Rome to renew his knowledge of the Eternal City, so that we may in some future number of the "Newcomes" look for one scene, at least, as laid among artists or among priests. Mr Dickens is on his way to England without a Christmas-book, and with (if we are not misinformed) some fleeting notions in his own mind of what his next story shall be like. But Mr. James is silent, so is Lady Morgan; and there is no announcement of a novel from the Marquis of Normanby, or from Lord William Lennox. Mr. Bentley, however, proclaims in the public prints that our circulating libraries shall not be unrenewed with good books, and promises good and cheap stories from the pens of Mr. Shirley Brooks and Mr. Wilkie Collins.

There has been a reaction of late years in favour of the Queen Anne writers. Pope and Swift, and their great contemporaries, were not over-rated when alive, but they were certainly under-estimated when dead. Then a new school began—the school of Cowper and Burns, of Wordsworth, Southey, and Coleridge, of Scott and Byron, with a wild enthusiasm at times of every writer who lived in or about the age of Shakspeare. It is wonderful what bad old poetry was admired, and even reprinted in an expensive manner, some thirty years ago, while our Queen Anne writers were all but neglected. We have outlived this folly; and Pope and Goldsmith are admired in spite of the feeble imitations of them by Hayley and Darwin. A great author may have an injustice done to him in his lifetime, he may suffer after his death, but the posthumous injury is temporary, not lasting. It is a good sign of the times when people call for careful and cheap reprints of Pope and Swift.

It was the well-founded observation of one of the best-known collectors of pictures in the present day, that no collector started at once into an experienced judge of works of art—but that he must necessarily acquire experience by purchasing much in early life, that his after knowledge will at once induce him to reject. "Look," was this great collector's continuation of his remark, "how many people you see who are always weeding their collections by changing or selling. I confess that I am but describing my own case; but your own experience will confirm the justice of my observation." We nodded assent; and the remark—though applied solely to the collectors of works or art—is equally applicable to the purchasers of books. Remembering this, we are not sorry to see, we confess, the simultaneous issue of very cheap reprints of favourite authors, while cheap—but, necessarily, dearer—library editions of their works. The very cheap edition, published at very little more than the expense of paper and print, will be the means of inducing its owner to possess library editions of the same author, who're, as there is more room, and as a larger sum is paid by the buyer, there will, or ought to be found, more illustrations of the hidden meaning of the author than can, of course, be given when a small sum is asked, and the proprietors are unable to pay for the best assistance. It is no easy task to edit an author well, who is full of allusions rendered obscure by time; and, in this belief, we shall await with anxiety the appearance of some editions of eminent authors, with and without the names of their editors.

Among the works in hand, some of which are, and others are not thus announced by their publishers—we may mention a greatly enlarged edition of the "Life of Goldsmith," by Mr. John Forster. The original edition was in one post 8vo volume: this will be in two library volumes —will contain much new information of moment, and will have all the original authorities quoted with scrupulous accuracy. Uniform with Mr. Forster's life, though published by a different house, will appear an edition of Goldsmith, edited by Mr. Peter Cunningham, in four volumes octavo, in which, we are told, the author's text will be for the first time printed in his collected works as it was left by its author. What does Mr. Prior say to the new life and to the new editor? Mr. Prior, it will be remembered, made himself unexpectedly conspicuous in a controversy of his own raising, about the right which he urged he possessed to a monopoly in "The Life of Goldsmith." We shall see.

Lord John Russell has been at work upon the fifth and sixth volumes of the Journal of Tom Moore than he is known to have taken with the preceding volumes. The lovers of gossip will lose, however, by his Lordship's diligence. His neglect of his duties as an editor added many bits of scandal to see the light which, but for such neglect, would never have seen the light in our times. Now he has been cutting with a merciless hand; and the volumes will be much tamer in scandal, though kinder (but not truer) to the fame of Tom Moore.

Connected with literature, we may mention the closing, this month, of the Chapter Coffee-house, in St. Paul's Churchyard—for a century, and more, the resort of authors, actors, and booksellers. This famous house is often referred to in the correspondence of Chatterton. Authors in former times lived almost wholly in taverns and coffee houses. They had, it is true, their Pope and his their "godless garrets," where they now and then wrote; but their time was chiefly spent in taverns and coffee houses, where they directed their letters to be sent, and where, on clean shirt days, they would see such visitors as could only be received in clean linen. Garrick, when his reputation was at the highest, had his City house of call, where he could see and be seen. It was in this way he maintained, if he did not air, his reputation east of Temple bar.

A new and clever publication, called "The National Miscellany," confirms a rumour which we ourselves have heard, that Prince Albert will appear as an author in the forthcoming evidence on the cleaning of the pictures in the National Gallery. His Royal Highness has, it is said, sent in a paper stating his notions of what a National Gallery should be like. They are, we understand, comprehensive; and, as was to be expected, to the point. The Prince recommends a classification in schools and the removal of the cartoons from Hampton Court. The paper will appear in an Appendix, and is sure to attract attention.

DISCOVERY OF ANCIENT REMAINS.—Several interesting remains have been dug from Saxon street, Dover, during the past week. This street, which has been completed of late years, is built upon a portion of the grounds formerly belonging to the ancient priory of St. Martin; and the excavations now going on are for the purpose of laying down drainage, pipes under the Public Health Act. The antiquities thrown up comprise a quantity of coins, bones, &c.

EGYPTIAN WHEAT.—A private letter from Alexandria announces that M. Sabatier, the French Consul-General, had obtained an important diplomatic success in inducing the Viceroy to withdraw his decree forbidding the export of grain from Egypt after a specified period.

OBJECTS OF THE POST-OFFICE INQUIRY.—A committee is now sitting at the Treasury for the purpose of inquiring into certain matters connected with the establishment of the General Post-office. The objects of this committee are analogous to those of the other committees which have been appointed in the course of this year for reporting upon the establishments of the Board of Trade, the Privy Council Office, the Poor Law Board, &c. They are engaged upon a revision of the system of appointments and promotions, the scales of salary, the numbers of officers, and the distribution of business in the Post-office; but they do not enter into questions connected with the general postal system of the country.

TOWN-HALL IN COURSE OF ERECTION AT LEEDS.

THE foundation-stone of this important structure was laid with appropriate ceremony in August last. The site of the building is a large plot of ground adjoining Park-lane on the south, Great George-street on the north, Calverley-street on the east, and Oxford-street on the west. The front of the building will be towards Park lane; and, being placed as far back as possible, there will be a fine open space leading to the main entrance and portico, which will give to the whole a noble and imposing effect. The building itself is to be in the Roman Corinthian style of architecture, in the form of a parallelogram of 230 feet by 200, and will be built on a raised platform, and surrounded by Corinthian columns and pilasters, surmounted by an entablature and cornice—altogether about 65 feet high. The principal façade, which will be to the south, will have a deeply-recessed portico of ten columns. Leading to this recessed portico will be a flight of 25 steps, 135 feet in length; and having at each corner, and in the centre, large pedestals for groupings of sculpture, or single figures. The inter-columniations at the sides will be divided into two ranges of semicircular headed windows. In addition to the principal southern entrance, there are to be separate entrances on this north front on each side, which will rise from the centre of the structure to a height of 92 feet; and on each side there will be suites of dressing, retiring, and refreshment-rooms. The interior of the large room will be 72 feet in height, 150 feet in width, and 72 feet in height. The sides are to be divided into five bays, by coupled Corinthian columns and pilaster, 50 feet high; and in each bay there is to be a window. The orchestra will be placed at the north end, which is to be semicircular; and at the south end there will be a large gallery, extending over the vestibule, 40 feet deep. In the end wall of the gallery there will be a semicircular window, 30 feet wide. Some idea may be formed of the dimensions of this hall, when we state that it is anticipated to accommodate at one time 8000 persons, or more than the number which can be accommodated in the Music hall, the largest public building at Leeds. The following are stated to be the dimensions of the principal metropolitan and provincial public rooms:—

	Length.	Width.	Height.
Westminster Hall	238	66	92
Leeds New Town Hall	191	72	72
St. George's Hall, Bradford	132	72	72
St. George's Hall, Liverpool	169	74	75
Town Hall, Birmingham	145	65	65
Durham Castle	109	74	50
Concert Hall, Liverpool	148	102	68
Guildhall, London	153	53	55
Exeter Hall, Do.	120	72	..
Station Hall at Euston-square, Do. ..	125	61	60

From this statement it will be seen that the main hall of the proposed structure, will only be inferior in size to Westminster Hall, whilst it exceeds that of any other public room in the country.

It is also proposed to construct on the ground floor, three large lawcourts, and a council-room—one at each corner of the building. Immediately around these several courts, and occupying the remainder of the ground floor, are to be the Town Clerk's offices, rate offices, judges', barristers', magistrates', jury, and waiting rooms, connected by a corridor ten feet wide, running round the large hall, and connecting the various entrances and vestibules together.

The approach to the first floor will be by four stone staircases, leading to the two West Riding Magistrates' Court, Committee-rooms, Mayor's parlour, Town Clerk's private offices, the offices of the Borough Treasurer, Surveyor, and Engineer, the Waterworks offices, and other offices, in connection with the Board of Works. Telegraphic and gas establishments will be on the basement floor, together with other unappropriated rooms. At present the building is denuded of the tower which formed part of the original design; but there is a strong feeling that the height will be lost in the immense length and breadth of the structure, unless there be some projection in the form of a tower or dome rising from the room. It is, therefore, not improbable that the designs will be reconsidered, with the view of re-adopting the original plan.

NOOKS AND CORNERS OF OLD ENGLAND.

CHALK FARM AND ITS NEIGHBOURHOOD.

THIS Town—once a farm-house, on the estate of Chalcotts, itself called Lower Chalcotte, its name abbreviated to Chalcot's, then Chale's, latterly corrupted to "Chalk" Farm—has, with the country in its vicinity, a reputation sufficient to justify a few parting words. A portion of Chalk Farm has recently been reduced to old bricks, the old bricks promoted to places in the new walls of villas or streets of shops; and the whole will soon disappear with an expiring lease. A new Chalk Farm tavern may arise on the site of the old to perpetuate the name; but the country is going, and will soon be gone, never to be country more—unless it again become forest or pasture when that New Zealander, of whom we have heard, rests in his travels on a broken pier of London-bridge to paint the mouldering ruins of St. Paul's for the Welsh Royal Academy.

Those who do not know the charming scenery which environ the circles London may require to be told that there is delightful retirement between Chalk Farm and Hampstead; as there is delightful retirement between Chalk Farm and Hampstead; as there is delightful retirement between Chalk Farm and Hampstead; as

TOWN-HALL, IN COURSE OF ERECTION, AT LEEDS.—(SEE PRECEDING PAGE.)

tion, sacred to history, poetry, and the affections of all the generations of London born, since the first Roman tile was moulded—all those fields and woodlands are now marked for streets, squares, crescents, terraces, and mansions. Already the turf is in heaps, and the sewers are being made. A few months ago it was suggested in the *Builder* that a grand promenade or boulevard a hundred yards wide, with rows of trees, and villas of elegant figure behind the trees, should extend from Primrose-hill, through the estates here named, to Hampstead Heath. If done, it would have been the grandest section of street scenery in the kingdom. But it is now too late. Eton College has lined out its fields nearly to the back of Chalk Farm. A street—a busy one it will doubtless be—will pass here from the north-east corner of Regent's-park and Camden-town to the new towns of Chalcotts and Belsize. Chalcotts is lined out, and some portion of its hay-fields in process of being built on. The Dean and Chapter of Westminster, through their stewards, have planned their magnificent villa town of Belsize, and in several places the builders have broken ground for foundations, intersecting the proposed boulevards of a hundred yards wide at right angles.

Before the margin of the fields and points of interest are wholly lost, let us pay them a visit.

CHALK FARM TAVERN.

Passing to the back of Chalk Farm Tavern, through that mud which is now ankle deep, we climb over the gate (they have no right to close it, this is a public way), and observe a row of trees stretching on both sides of us. Some of the new-comers—for there is no old inhabitant here—tell that in the shelter of this row of trees the duellists used to retire with their pistols, after ordering breakfast in the Tavern. Not so. You must turn your eyes westward three or four hundred yards, where two stumps and four age-worn pollards stand upon an old ditch bank. On that bank was once a hedgerow, and several more trees. Beyond that hedgerow, hidden from the Tavern by it, and shaded by those trees, Francis Jeffrey and Thomas Moore met on that morning which, while the pistols were being loaded, Moore said was beautiful, and Jeffrey, that it was given for better purposes. From behind the hedgerow, now gone, issued the constables who made them prisoners. That was the duel field common to Chalk Farm. A street will presently be carried across that bank occupied by the aged stumps. The London and North-Western Company possess that section of the field paled off at bottom, and are ground landlords of yonder showy villas and gardens on the north-east bank of the railway, called Adelaide-road. On this side their land will probably be reserved for some future enlargement of their great Camden Town carriage-factory and goods station.

Let us move southward to Primrose-hill. On the south side of the hill, during a summer drought, we may trace a green line, not distinguishable now, which was once a ditch extending from east to the ground westward, now occupied by the reservoir. In that ditch near to where the ornamental chimney for the Water Company's steam engine has just been built, was found the body of Sir Edmundbury Godfrey. No murder, if murder it was, ever disturbed public opinion in London like that. It was at the period of the alleged Popish plot. He was an active magistrate, engaged in unravelling that affair. Protestants charged Papists, and Papists retorted the charge of his death on Protestants. Others thought he might have been killed in a duel in town, and his body carried there. This beautiful green hill, sloping to the Regent's-park and the Zoological Gardens, must have been trimmed and smoothed since then. Yet then it was famed for its primroses—the abundance of which led to its name being changed from Barrow-hill to Primrose-hill.

A letter, written in 1681, describing the finding of Sir Edmundbury Godfrey's body, says:—

As to the place, it was in a ditch on the south side of Primrose-hill, surrounded with divers closes, fenced in with high mounds and ditches; no road near, only some deep, dirty lanes, made only for the convenience of driving cows in and out of the ground; and those very lanes not coming near five hundred yards of the place, and impassable for any man on horseback with a dead corpse before him at midnight to approach, unless gaps were made in the mounds, as the constables and his assistants found by experience when they came on horseback thither.

That sylvan country which rises before us, towards Hampstead and Highgate, and that new town on the ridge to our left (St. John's-wood, where, only thirty years ago, was St. John's Farm), was anciently a portion of the Forest of Middlesex. Chalcotts, a plain structure, stands by the first group of trees north-east of the railway tunnel. "Sundry devout men of London," says Stow, "gave to the Hospital of Saint James, at Charing-cross, eighty acres of land" (eight in Strype's edition; but we think Stow correct, as eighty acres agree more nearly with the size of the estate), "and wood out of Chalcote Hamsted." St. James's Hospital of lepers was under the government of a master till Henry VI. granted its property to Eton College. It was surrendered to Henry VIII., but was again restored to the College. Primrose-hill was a portion of it, and would have been now a building site but for Mr. Hume, M.P., and an association of persons who induced the Government some years back to transfer that delightful spot to the public. Eton College obtained, in exchange, a piece of Crown land, near Windsor. Primrose-hill and the duelling field behind Chalk Farm Tavern were proposed as a site for a Grand National Exposition of the Industrial Arts in 1845, four years before the Exhibition in Hyde-park was proposed. The success attending the bazaar of the Anti-Corn-law League in Covent-garden Theatre in that year, suggested that there should be an exhibition, national and permanent, in design. But no persons of influence could be found to give the project support, until the illustrious Prince Consort gave it a passport to success and fame. The late Dr. Cocke Taylor and other persons the present writer one of them—surveyed Primrose-hill for the site of such a structure in 1845

So long ago as 1778, a proposal was made in the *Public Advertiser* to the inhabitants of Marylebone, for forming a spacious roadway from Portman-square, through Marylebone-fields (now Regent's-park), passing by the west side of Primrose-hill, crossing a little beyond the London

CHALK FARM TAVERN.—BACK VIEW.

end of the railway tunnel, and cutting through a part of the Belsize estate, and so into Hampstead. This is nearly the line of the grand promenade lately proposed. But Belsize was leased and sub-leased to several tenants, which may have prevented the intersection of that estate until now. This property has a history of some public interest.

SCENE FROM "A PRETTY PIECE OF BUSINESS," AT THE HAYMARKET THEATRE.

HAYMARKET THEATRE.

We this week give an Illustration of the closing scene of the very clever little comedy at the Haymarket, entitled, "A Pretty Piece of Business." The situation is by no means novel in the drama, but it is always effective. The reader will see what it is at a glance without the aid of words. There are the fair widow, *Mrs. Grantley* (Miss Reynolds), and *Captain Felix Merescoather* (Mr. Howe), explaining the errors away which have made the staple of the comedy, and, having served their purposes are now to be exploded. There are, also, the bashful *Dr. Launcelot Shee* (Mr. Buckstone), and *Miss Charlotte Shee* (Mrs. L. S. Buckingham), overhearing, by the most perfect premeditated accident in the world, all that the two are saying, each ready to claim the appropriate "he" and "she," who, in the two central figures, have got misappropriated, but who are ready now to be claimed by their proper mates, and borne off accordingly to the dove-cot of matrimony. The comparison fits the subject, for the chain of amorous mistakes had commenced in the aviary, and the mispaired lovers had been already described by the figurative doctor, as specimens of the carrier-tribe; as two pretty pigeons, in fact, whom he lavishly invests with whimsical ornithological attributes. This lively, as well as "Pretty Piece of Business," continues to be attractive.

TESTIMONIAL TO MRS. THOMAS LITTLEDALE.

In our metropolis there is an old piece of City gossip—that, should a son be born to the Lord Mayor during his year of office, it is customary for the Corporation to present to the Lady Mayoress a silver cradle. A few years ago the course of events at the Mansion-house led to the searching of the City records for a precedent after this congratulatory gift, when, "the silver cradle" proved to be a myth; and, as the report says, "the subject dropped." In Liverpool, however, a similar custom flourishes, upon a sort of legendary authority; and the piece of plate here engraved records its latest observance.

It forms a handsome massive table ornament, 24 in. high, recording the birth, cradle, and progress of maritime commerce. This is represented by an ancient Briton and his wife, who, having crossed the broad and rapid Pool of the Sea (Mere-sea), in their coracle (the earliest form of boat, made of the branches of the withy tree plaited together, and then covered with the raw hide of a bull), are laying down the precious freight, their first offspring, on the shore of their future settlement. The child they dedicate to the genius of the place, who sits anxiously surveying their actions. In her hand she holds a wreath of laurel, in earnest of the eminence their children shall attain in commercial greatness, when the now wild shores of the Mersey shall be covered with stupendous docks, and ships shall resort thither from all parts of the world, and Liverpool be called the "mistress of commerce," "the great city of ships."

The group of figures is placed on an equilaterally-formed base, having three sides, with the acute angles cut off, and forming an accommodating space for the cameos, which carry on the story of progress. The first is in front, the chasing in relief showing the new settlers preparing for their sustenance, by the husband going out along the marshy ground, with his bow and arrows, to shoot the fowls which resorted to the banks of the Leverpool, whilst his helpmate was in the coracle ready to paddle after those birds which, being killed or wounded, might happen to drop into the water; and thus, and with the fish taken by the spear and dart, their daily food was procured.

In the second panel is given a view of a Phœnician ship. The crew, having come to trade with the Islanders, and barter the manufactures of their own country, are seen loading their ship with tin.

The third division represents the native ships, greatly improved under the Roman dominion in Britain, and under the direction of the Romano-British Admiral Allectus, paved the way for a secure step under the guidance of King Alfred the Great.

With the fourth relievo comes the encouragement of maritime discovery which, in the reign of Elizabeth, gave the country an unparalleled extension of commerce with whole regions of the world hitherto unexplored by British ships, and founded that lasting greatness of English enterprise until the present time, when, as shown in the fifth and last panel, the wonderful elasticity of British energy, and the power of British genius, by the improvements made in naval architecture, exemplified in the yacht, the clipper ship, and the steam-boat.

The minor details consist of marine emblems joined with commercial, as indicated by the trident, caduceus, dolphin, and coralines, which are introduced in pure white silver, as a contrast to the highly-polished and massy sides of the pedestal; and the ships, costumes, &c., are depicted with as much truthfulness as the best authorities could furnish.

On the base, just under the group of figures, is engraved, in old English characters, the ancient legend on which the presentation of the cradle is founded:—

YE SPIRIT OF YE LEGENDE.

Gif Leverpooles good maior sd everre bee
Made fa cherre inne hys yerre of maraltee
Thenne sal bee gifften bye ye townemenne free
Ane sllverre cradle too hys faire ladye.

And underneath the first sculptured panel follows this dedication:—"To Julia, wife of Thomas Littledale, Esq., Mayor of Liverpool, this work of art, emblematical of the cradle and the growth of Commerce, is presented by a number of the inhabitants of the borough, to commemorate, in fulfilment of an ancient legend, the birth of Clement St. George Royds, on the 8th of December, 1851, during his father's mayoralty, and on the day on which his worship opened St. George's Hall for judicial business. With the gift is also offered to the happy wife and

TESTIMONIAL PRESENTED TO MRS. THOMAS LITTLEDALE, OF LIVERPOOL.

mother this record of the universal esteem in which her husband is held for his character as a man and a British merchant; his example for promoting manly pursuits as commodore of the Royal Mersey Yacht Club; his triumphant humanity and bravery in rescuing numbers of valuable lives from the burning wreck of the *Ocean Monarch*, at sea, on the 24th August, 1848; and his courteous dignity, hospitality, and benevolence, as chief magistrate of this great community, in a year which will ever be historically distinguished by his inauguration of the great assize courts and the free public library."

This elegant work has been executed by Mr. Joseph Mayer, Lord-street.

AGRICULTURAL DRAINING MATCH.

On Wednesday week, the 23rd ult., an extensive Agricultural Draining Match was held on the Burtonwood Estate, the property of Samuel Brooks, Esq., banker, of Manchester, situate near the Warrington Junction station of the Liverpool and Manchester Railway. The field selected was well adapted for the purpose, and beautifully situated, commanding a magnificent view of the Sankey viaduct. The soil con-

GREAT DRAINING-MATCH, ON THE BURTONWOOD ESTATE, NEAR WARRINGTON.

sists of friable loam, on a marly substratum, with occasional beds of clay and sand. The attendance of drainers and gentlemen interested in such works was very large there being 1000 persons present The first event of the day was a match for the second drains for the class of workmen, three prizes were offered for 2 ft. and 2½ respectively; the conditions being that three labourers should work at each drain, and the prizes should be awarded to those who should cut by eight hours' work the least number of cubic yards of earth and who should complete the drains in a more than four inches in the centre, superior work to be the first consideration in awarding the prizes. For these, thirty-five sets of candidates, from various parts of the kingdom, had entered, and twenty-eight started, being started at ten o'clock by the firing of a gun. The prizes were awarded as follows, viz —

Prizes.	Leader of Gang.	Where.	Time.	Top width.
1st Prize.....	J. Cubbin	Ormskirk..	3 48	12 inches.
2nd Prize.....	— Lucas	Wrigley..	3 51	13 "
3rd Prize.....	J. Brisket	Preston ..	3 58	13½ "
Highly commended	R Shattocks	Garstang..	4 3	13 "
	H. Conway	Newton ..	3 39	12½ "
	— Galley	Tatton ..	3 45	12½ "
Commended.....	G. Gee	Worsley ..	4 0	13½ "
	E. Orrell	Ormskirk..	4 0	12½ "

* The bottom was scooped so as to receive 2-inch pipes.

The execution of the work was generally good, and elicited unusual praise, several of the candidates who were disqualified through not having performed their work within the time specified, displayed much merit The work of H Winnington set, being the first completed, and very fairly done, attracted much attention; and the men were liberally rewarded by voluntary donations from several of the gentlemen present. For the pipe-laying, two prizes were offered, of £2 and £1 respectively; thirteen candidates entered, and six competed. Owing to the lateness of the hour, the number of pipes to be laid was reduced from 300 to 144, for the 48 lineal yards cut by the drainers. The conditions were that the prizes should be awarded to those who should lay their pipes in the most workmanlike and expeditious manner, placing each end to end, so as to form one continuous pipe; the execution of the work to be the chief consideration. This work was commenced by signal, as before, and the prizes were awarded as follows, viz: -

Prizes.	Name.	Time.
1st Prize.....	James Hodges	Garstang.... 16 minutes
2nd Prize	John Quaintaine ..	Burtonwood 12½ "

The following was commended on account of quickness of execution :-

J. Barton..... Tatton..... 10 minutes

Additional interest was excited by the field being situated near to Bradley Hall—a farmhouse standing upon the site of an old mansion bearing that name, and built in the 15th century. The remains of the entrance gateway with grooves for portcullis, drawbridge, &c., and the moat, still in good preservation, were very interesting to the lovers of antiquity. About £6 was collected by John Williams, Esq. for distribution amongst the unsuccessful workmen, in addition to which each one was paid for the work done. The judges were Messrs. G. Thompson, engineer of the Landowner's Draining Company, Exeter, and 30, Parliament-street, London; William Mercer, of Newton, agent to Thomas Leigh, Esq.; and H. White, Secretary to the South Lancashire Agricultural Society. The steward of the match was Mr. Thomas Suttle, sub-agent to Samuel Brooks, Esq., of Whalley House

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. C. W. Doherty, to Pilham, Lincoln; the Rev. R. M. Bingley, to Brasewerthy, Suffolk; the Rev. W. A. Ormsby, to Scoulton, Norfolk; the Rev. J. S. Green, to Wilton and Brundall, Norwich; the Rev. W. Bousfield, to Cubington, Aylesbury; the Rev. C. J. Cartwright, to St. Mary-at-Steps, Exeter; the Rev. W. Oulton, to Ballyrashine. *Vicarages:* The Rev. C. M. Turner, to Horndon-on-the-Hill, Essex; the Rev P. Male, to Rathmel, Yorkshire; the Rev. A. H. Baker, to Rickmansworth, Herfordshire. *Incumbencies:* The Rev. F. G. Blunt, to Ballinaclash, Ireland; the Rev. W. L. Rolleston, to Kirby Bellars, near Melton Mowbray; the Rev. J. Fox, to Scrapiolt, near Leicester; the Rev. C. T. Rust, to St. Michael's Church. *Perpetual Curacies:* The Rev. the Hon. H. R. Hussey, to Withecombe, Raleigh; the Rev. R. H. Kirby, to Haverthwaite, in the parish of Colton, Lancashire.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. P. Benn, M.A., testimonial consisting of a valuable silver inkstand, two silver candlesticks, and a gold pencil case, as a mark of respect from his former pupils, on his retirement from the curacy of St. Paul's Deptford—which appointment he held nearly forty years; Rev. W. G. Harker, after a ministration of ten years at Trinity Church, Matlock Bath, on his removal, Rev. J. Richardson, late Master of Appleby Grammar School, by his present and former pupils; Rev. W. Wilson, on his resigning the spiritual charge of Deddington, by his parishioners

TITHES NOT LIABLE TO THE SEWERS' RATES.—The Commissioners of Sewers have decided to resist the sewers' rates on the tithes of the Rev. Mr. Baker, the Vicar of Fulham; Rev. Mr. Jackson, the Vicar of Battersea, Rev Mr. Sketchley, Vicar of St. Paul's, Deptford; and those of St. Olave, Southwark, of which the Rev. A. Kenny is the Incumbent; and many others. The decision will govern similar cases.

CONSECRATION OF THE BISHOPS OF NATAL AND GRAHAM'S TOWN.—On Wednesday morning the ceremony of consecrating the newly-appointed bishops of Natal and Graham's Town took place at St. Mary's, Lambeth. The officiating prelates were the Archbishop of Canterbury, the Bishop of London, and the Bishop of Oxford. The reverend divines elevated were the Rev. Dr. John William Colenso, of St. John's Cambridge, and the Rev Dr. John Armstrong, of Lincoln College, Oxford; the former nominated to the Bishopric of Natal, and the latter to the Bishopric of Graham's Town. After the service, the new Bishops were duly admitted to their sacred office by the imposition of hands.

THE SMITHFIELD CLUB CATTLE-SHOW.—Thursday was the last day appointed for the reception of the agricultural implements to be exhibited at the ensuing show of the Smithfield Club, to take place at the Bazaar in Baker street during next week; and, from the immense number which arrived, the wonder is where space is to be found for their accommodation. The number of novel inventions, among which may be enumerated the automaton reaping-machine, the American threshing-machine; the cycloidal, and other newly-invented digging-machines; together with several sawing models; indicating an appearance which justifies the belief that, before many years, the agricultural labourer will be relieved of much of his toil, and that he must be a man of some education and intelligence to manage the machines which are to effect that object. His Royal Highness Prince Albert will, as usual, be an extensive competitor in the cattle and pig classes; and it is stated that Sir Harry Verney, Bart., M.P., has entered for competition an ox of Brobdignagian proportions; while some of the finest specimens of Earl Dacie's remaining stock have been selected for competition Saturday night, at ten o'clock, will be the last hour at which any of the specimens entered will be permitted to be received at the show-yard, in accordance with the rules of the club; and, under the direction of Mr Ernest Gobbs, the secretary, the regulations will be rigidly enforced. The judges will make their awards on Monday; and in the evening the private view will take place, prior to the opening of the show to the public on Tuesday. (We shall illustrate the Prize Cattle in our Journal of next week.)

FREE-TRADE IN SWEDEN.—The members of the Commercial Union of Stockholm have unanimously agreed upon sending in a petition to the King for a thorough revision of the Customs-laws. The petitioners point out the desirability of a very low tariff on all raw materials and all articles of food; of the repeal of all prohibitory laws; and of the introduction of duties according to measurement and weight, instead of *ad valorem*.

GREAT LOSS OF LIFE BY SHIPWRECK.—The ship *Lady Evelyn*, Captain M'Clellan, from Hong-Kong to San Francisco, left the Lintin place on the 26th June, with a cargo of merchandise, with 230 Chinese emigrants, and some other passengers. Soon after leaving port she encountered bad weather, and was compelled to put into Amoy to refit. She left Amoy on the 10th July. On the 19th a violent storm came on, and, notwithstanding all the efforts of her crew, she struck on a reef known as Richards's Rocks, on the south-east end of the island of Typarlow. It was the first time with which she struck, that she passed immediately over the reef, and the after part of the ship fell off from the fore rigging. There they remained until twelve o'clock the following day, when they made an attempt to reach the shore. Amongst those who so succeeded were Mr. M'Kee, the steward M'Gee, three able seamen, one of the passengers (a Portuguese), two females, and twenty-two Chinamen. One of the Chinese women was also safely carried ashore on a spar. The survivors of this fearful catastrophe were most kindly treated by the natives, and returned on the island over two months, when they were taken off by her Majesty's steamer *Hermes*.

MATCH BETWEEN MESSRS. LOWENTHAL AND HARRWITZ.

Since our last report Mr Lowenthal has again lost ground, and in a way that excites the astonishment of everybody. In fourteen games, he has not scored a single one; and yet, in nearly all, he has obtained advantages sufficient to ensure him victory over and over again, had he only exercised common discretion and ability. The result up to Wednesday evening is—

19. K Kt to K B sq	P to K R 4th	42. Q takes Q B P	Q to K 6th (ch)
20. K to Kt sq	P to K R sq	43. K to R sq	Q Kt to K sq
21. Q Kt to K 2nd	P to K Kt 6th	44. Q to Q 4th (ch)	K to R 2nd
22. P to R 3rd	K Kt take Kt (ch)	45. Q to Q 7th (ch)	K to R 3rd
23. Q takes Kt	Q Kt to K Kt 3rd	46. Q to K 6th (ch)	K to K 2nd
24. Kt to Q 5th	Q to Q sq	47. Q to Q 7th (ch)	K to Q 3rd
25. Q to K 3rd	Q B to K 3rd (b)	48. Q to Q 6th (ch)	

And the Game was given up as drawn.

(a) In this, as in nearly every one of the last ten or twelve games, Löwenthal plays the beginning admirably. He takes all attack out of his opponent's hands, apparently with the greatest ease, gets a winning position; and then, with a fatality unexampled, he suffers his pieces again to a great, his enemy to recover himself, and, at the last, is heartily glad to [illegible] with a drawn battle! Let any one examine the games of this match attentively, as we have done, and he will see that, in nine cases out of ten, it is not Harrwitz who beats Löwenthal but the latter who defeats himself

(b) We have here one of those surprising instances of the Hungarian's sheltering-ups at the moment when every means within his grasp. To instead of moving the Bishop thus, he had played as follows, it is not easy to see how Black could have saved his game —

25.	P to Q B 3rd	27. Kt takes Q R	B takes K Kt P
26.	Kt to Q Kt 6th	B takes K R P	28. K takes B	

(If he play Q to her Kt 6th, White may take the Kt or Q, and ought to win; and if he play Kt to a B 7th (ch), White can move his King to Q 2nd, and have a winning game.)

26.	Kt to K B 5th (ch)	30. Kt to Kt sq	P to K R 6th

And here it was no use for Mr Harrwitz to escape

(c) What was the objection to taking this Pawn with Kt? That line of play seems less open to objection than taking with the Pawn.

(d) Very well played. From this moment Mr Harrwitz ought certainly to have won without difficulty

(e) We should rather have played R to K B sq

CHESS IN GERMANY

For the following beautiful game we are indebted to the courtesy of Mr von Heydebrand. It was played lately between that distinguished master and one of the most eminent players of Germany.

(Allgaier Gambit)

WHITE (Mr von H.)	BLACK (Mr.—)	WHITE (Mr. von H.)	BLACK (Mr.)
1. P to K 4th	P to h 4th	19. Q to her 3rd	Q to K 4th
2. P to h. B 4th	P takes P	20 K R to K Kt sq	Q to K 6th (ch)
3 Kt to K B 3rd	P to K Kt 4th	21 K to the 2nd	Q takes K B P (ch)
4. P to K B 4th	P to K Kt 5th	22 h takes P	Q to K R 4th (ch)
5 Kt to K 5th	Kt to K B 3rd (a)	23. K to B 2nd	R Kt to K B sq
6. P to Q B 4th	Q to h. 3rd (b)	24. B to K 4th (ch)	Kt to Q 3rd
7 B takes K B P (ch)	K to Q sq	25. Q R to K sq	K to Q sq
8. P to Q 4th	P to Q 3rd	26 K R to K B 8th	K to h 2nd
9. B to Q Kt 3rd	P takes Kt	27 K to Q 2nd (ch)	K takes B
10. P takes P (dis ch)	Q B to Q 2nd	28. K to Kt 6th	K takes P
11. P takes Kt	Q takes K P (ch)	(ch)	
12. K to B sq	K B to Q 3rd	29. K to his sq (dis ch)	K to his sq
13. Kt to Q B 3rd	Q to K B 4th	30. R takes Q B P (ch)	K to Q sq
14. P to K B 5th	P to K B 6th	31. Kt to K 6th (ch)	K to Q B sq
15. P takes P	P takes P	(c)	
16 Q R to K Kt 5th (ch)	K to B sq	32. R takes R (ch)	B takes R
17. B to Q 4th	P to K R 3rd	33 R to K Kt 5th	Q to K 5th (ch)
18. B to K 3rd	Q B to Q B 3rd	34. K to Q 2nd	Q to Q Kt 5th (ch)
	And White abandoned the game.	35. K to K 2nd	B to Q Kt 4th

Notes by Mr. von Heydebrand

(a) This move, now much in vogue, was analysed by Polerio as far back as 1777

(b) The following variations, at this point, may be worth consideration —

6.	P to Q 4th	10. Kt to K B 3rd	Q takes P
7 B takes P	Kt takes B	11. Q to K 2nd	Q takes Q
8. P takes Kt	B to K 2nd	12 P takes Q	Kt to Q B 3rd
9. Kt take K Kt P	B to K Kt sq		

The most [illegible]

[illegible]	Kt to Q 5th	13 Kt [illegible] Q sq	Q to K h 4th
11 B [illegible]	Q takes Q B P (ch)		

A [illegible] Black [illegible]

12.	Kt to K 4th	16 B takes P	R to K Kt 5th (ch)
13 P to Q 4th	Kt takes K B P (ch)	17 Kt takes B	B takes Kt
14 K [illegible]	[illegible] K B P		

(c) Black appears to have the better game

[illegible] the Bishop with [illegible] White might have drawn the game in all [illegible]

* The principle of sacrificing with the Pawn is exemplified in a Game we recently published between Mr. von Heydebrand and Mr Staunton

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Her Majesty the Queen has commissioned Mr. M. Angelo Hayes to paint a small picture for her of the interior of the Great Exhibition of 1851

The quantity of coal required for consumption in London was, in 1851, 3 740,000 tons; the consumption of coal in Paris for all purposes, was, in the same year, but 362,500 tons.

The Belgian Court has gone into mourning for six weeks on the occasion of the death of the Queen of Portugal, whose widower is a nephew of King Leopold.

The price of wheat at the present time is about double what it was at a corresponding period of the years 1834-5; and for the past twenty-one years when has not ranged so high at the season of the year as it does now

The Rev. Mr. Millar, has received a magnificent donation from the Queen of 250 guineas to the Edinburgh Blind School.

The Bank of France have resolved to adopt the plan of making all their pay ments in gold, instead of allowing their silver to be drained from them for exportation.

The Emigration Commissioners have given notice that they require two more vessels to carry emigrants to South Australia and Victoria, to be ready to receive passengers for Adelaide on the 17th, and Geelong on Jan. 20 next.

A vein of iron ore, which is expected to prove of a valuable character, has been discovered at Car Keattle, near Ulverston.

The Queen has signified her gracious intention to bestow the vacant Garter upon the Earl of Carlisle.

The agriculturists of Devonshire continue to obtain extremely high prices for every description of farm produce, so much so that, in many instances, the farmers themselves declare that "it is a good bit too high!"

The Ottoman Porte has demanded the dismissal of a Professor of the University of Athens, who has published a very offensive attack on Turkey in the *Aion*. The Government deemed the article, but declined to displace the writer.

As a fact showing the practical good of the Orphan Working School, we learn that last year upwards of 4000 articles were made and marked by the girls, besides mending.

Mr. Joseph Robertson, the present editor of the *Edinburgh Courant*, has been appointed to an office in the Register House, Edinburgh, as searcher of records for literature.

The *Giornale di Roma* of the 15th ult. states that Pius IX. has left the Palace of the Quirinal, and removed to the Vatican.

Mr. Oliveira, M.P., accompanied by several influential friends, has gone to Paris. Their object is to confer with the best-informed persons in the French capital upon the wine-trade; and then to go to Bordeaux for a similar object.

The Rev. G. Fletcher, who has just completed his 106th year, preached a sermon on Sunday at a chapel in Buzhill-row, St. Luke's. Although of such an advanced age, his faculties are still good.

Women are still wanting at Victoria, in Australia, as an excess of 56,000 men appears in the population.

Shakspeare's "Hamlet" has just been performed, with immense applause, for the first time, in an almost unaltered dress, in Stockholm. The translation adopted is that of Professor Hagberg.

The Lord Chancellor has been pleased to appoint Francis Evans Bennett, Esq., of Bennett's-grove, to the Commission of the Peace for the county of Cork.

There are sixty-three homeward-bound vessels laden with Peruvian guano, to the extent of, probably, 30,000 to 60,tons. The fleet at the Chincha Islands, counting only the English ships, is estimated at 40,000 tons more

A prisoner, while in Newgate Gaol, casts the State, in the year, £39 2s. 8½d.

There is no truth in the rumour that the French Government intends to establish public gaming-houses in Paris. Such an intention has never been entertained.

The *New York Herald* records the performance of an extraordinary feat, namely, the trotting of 100 miles in 8 hours, 55 minutes, and 59 seconds

Several Belfast grocers have been fined £25 each for frauds in adulterating coffee, pepper, &c.; and one trader has been committed to prison in default of payment.

On the 17th ult. the Duke of Parma performed the ceremony of inaugurating the works of the Parma and Colorno railway line, by turning the first sod and wheeling it away. The line is granted to Messrs. Gandell, of London.

The ship *Medway* left Southampton on Saturday last, with about 240 Government emigrants, for Melbourne. This is her fifth voyage to Australia.

The municipal council of Orleans has unanimously voted a sum of 40,000 fr. for the fêtes for the inauguration of the statue of Joan of Arc, in 1854, and a sum of 2000 fr. for the expenses of the carriage of the statue from Rome.

The steam-ship *Golden Age*, in proceeding into the Mersey on Monday, for her voyage to Australia, ran into the north wall of the Birkenhead Docks, and severely damaged her cutwater. The accident will delay her departure for some days.

France intends to establish consulates at the more important towns of Albania, the Herzegovina, and Bosnia.

On Friday, during the dense fog, a plate-layer on the York and Berwick Railway, at the time the express train was coming up, stepped on one side to get out of the way; but, being deceived by the fog, he walked in front of the engine, was knocked down, and killed on the spot.

Colonel Huguet, departmental commissary of police of the Bas Rhin, committed suicide at Strasbourg, on the 24th ult

The French Emperor has given 5000 fr. to a fund which is being raised for erecting an asylum for blind young workmen at Versailles.

During a gale, last week, a French schooner went on shore, near Penzance, and was totally destroyed. All the crew, except one, were drowned.

The Grand Council of Neufchatel has voted the concession of a railway from Col des Roches, near Locle, passing through the industrial districts of Jura, to Bienne, where it is to communicate with the railways of Central Switzerland.

The University of Breslau has just conferred, for the first time, the rank of doctor on a Jew, M. Sejdmond Freund. The promotion has taken place in the Faculty of Philosophy.

The *Gazette* contains several Orders in Council, commanding the closing of a great number of the metropolitan graveyards. There is an order that only one body should be interred in each grave of the Mile-end Cemetery.

Sir James Anderson, M.P. for the Stirling burghs, addressed his constituents at the Corn Exchange, Stirling, last week, when he gave an account of his stewardship. The meeting expressed their confidence by a unanimous vote.

According to Dr. Bowring, the Imperial census, taken forty years ago, of the population of China is of no correct That census gave an aggregate of 360,000,000 of human beings, all subject to the same sway.

The population of Prussia last December was 16,935,420 souls —giving an increase, during three years (from 1849) of 537,972 souls, or 3.28 per cent.

A new wheelbarrow has been invented. The wheel is placed under the centre, so that none of the weight of the load rests upon the hands. A man can wheel twice the usual weight.—*American Paper*

The Duke of Bedford has bought £40,000 worth of property in the county Galway, in the Encumbered Estates Court.

On application in the Bail Court, and with the consent of both parties, the indictment against Major Beresford for conspiracy in the matter of the Derby election, has been postponed until after Hilary term.

The great peace meeting at Glasgow has been postponed, in consequence of the death of Mr. Bright's brother, and the inability of Mr. Cobden to attend.

The *Mining Journal* states that our exports of iron in 1851 exceeded those of 1850 by 200 000 tons; 1852 gave an excess of 150,000 tons; and the excess of 1853 will not fall short of 450,000 tons

The *Australian and New Zealand Gazette* announces the arrival of Lord Henry Scott and Lord Schomberg Ker in the former colony, who, with their chaplain, the Rev. Mr. Stoebart, have taken up their quarters in Brisbane.

At a sitting on Thursday week, the Town Council of Dundee resolved that an address should be presented to the Queen, praying that all ad- [illegible] business connected with Scotland should be "intrusted to the management of [illegible] of Scots."

Constantinople has [illegible] newspapers, Smyrna six, and Alexandria one; Servia eight, Wallachia and Moldavia four between them.

A very unusual sale by auction—namely of "church-rate exemption" took place last week, at Stalbridge, when Mr. Shrubsole, of Shaftesbury, sold 24 quarters of oats "being the goods and chattels" of Mr J. Marsh, on [illegible] assistance for church-rates The lots were sold for £4 1s., the amount of rates saved for being 14s. 7d.

NOTICE.—THE PEERAGE FOR 1854, Just ready.

MR. LODGE'S PEERAGE for 1854. A new and thoroughly revised Edition.

The prompt and kind manner in which the various members of the Nobility have furnished information for the forthcoming edition justifies the Editor to state that he believes the volume for this year to be found to have attained a degree of accuracy beyond all precedent. The most sedulous attention has been given, also, to the collateral branches of the Peerage; the names of many thousand individuals having been introduced which do not appear in any other record of the Nobility.

SAUNDERS and OTLEY, Publishers, Conduit-street

[illegible] Fellow of the Royal College of Physicians, London, &c. &c

FUNERAL OF THE DUKE OF BEAUFORT, AT BADMINTON.

SHENSTONE NEW PARISH CHURCH.

This handsome edifice, dedicated to St. John the Baptist, has just been erected from the designs of Mr. John Gibson, of Westminster.

The Church is situated about two miles from Lichfield, upon the summit of a hill adjoining the present churchyard, and upon land the gift of the Rev. R. Essington, the Vicar; to whose munificent contributions and exertions, coupled with those of Mr. J. S. Manley, Mr. Neville, &c., the erection of the new edifice is mainly due.

The style is Gothic, of the fourteenth century; the exterior is of sandstone; the quoins, internal arches, columns, and mouldings, being rubbed, and the sabbaring hammer-dressed.

The Church is 120 feet long, and consists of nave, aisles, chancel, and vestry; the latter being in the tower, which is situated at the east angle of the north aisle, and is twenty feet square, exclusive of its bold projecting buttresses; and, when finished, it will rise to a height of more than 100 feet. The aisle for organ and seventy children is situated on the opposite side, on the south-east angle, in which there is some stained glass. The entrances have porches on the south side of aisle, and the west end of nave; over the latter is a fine circular window, eleven feet diameter. On each side of the chancel are stall-seats. The windows generally have three lights, cusped, varied, and well considered in detail; those in the chancel being elaborately worked. The roofs are open and of deal, stained; that of the chancel is arch-ribbed and boarded. The pulpit, reading-desk, altar-railing, and table, are of solid oak, paneled and carved. The reredos has the Commandments inserted. The organ was built by Mr. Holditch, of London, and presented by John S. Manley, Esq. The windows are fitted with cathedral glass, and stained borders. The floors are parti-coloured Staffordshire tiles; and the Church is heated by an apparatus placed under the tower. The font is the gift of Mrs. Grove, and the altar-cloth was presented by Mrs. Wayte. The Church will accommodate, on the ground-floor, in open seats, 600 persons; 226 being set apart for the humbler inhabitants.

The contract for the building and fittings was somewhat above £2800. The building was commenced in May of last year, when foundation-stones were laid by the chairman, John S. Manley, Esq., and the Hon. Mrs. Jervis. The whole of the works have been admirably executed by the contractors, Messrs. Locke and Nesham, under the direction of the architect.

NEW CHURCH OF ST. JOHN THE BAPTIST, AT SHENSTONE, NEAR LICHFIELD.

ELECTRIC TIME-BALL AT EDINBURGH.

An Electric Time-ball has recently been erected on the top of the Nelson Monument, on the Calton-hill, Edinburgh, and is now in operation. The ball rises about five minutes to one o'clock p.m., and falls at the hour. It is placed under the charge of Professor Piazzi Smyth, the Astronomer Royal, at the Observatory.

A general desire exists, however, that the presence of the machine should not prevent the public from access to the top of Nelson's Monument; and to do so with safety requires a protecting casing, which Messrs. Maudsley (the engineers who provided the machinery) had not anticipated, but which the Lord Provost has generously undertaken to supply. "If the public (says the *Scotsman*) look to the Monument, at five minutes before one o'clock p.m., Greenwich time (now Edinburgh time also), they will see the ball raised half-mast high; at two minutes before, full mast high, or in contact with the cross bars; and, at one o'clock, exact to a tenth of a second, it will fall—the instant to be observed being the commencement of the fall, as shown by the formation of a line of light between the ball and the bars. Those who, on the Monument, have witnessed the fall of the ball, describe the effect as extremely interesting. The huge mass is first of all seen rushing downward with terrific velocity, as if likely to carry all before it; when, suddenly, at about three-fourths down, it is brought, by some invisible agent, almost to a stand-still; and then, with two or three slight movements up and down, it rests on its bed-block as quietly as if nothing had happened."

FUNERAL OF THE DUKE OF BEAUFORT.

The mortal remains of this deeply-lamented nobleman were, on Thursday week, deposited in the family vault in Badminton Church. The body lay in state on the morning of the funeral in the great hall of the family mansion.

For nearly three hours a continuous succession of the inhabitants of the district passed through the hall, which was lined with a picked detachment of Gloucestershire Yeomanry Cavalry, of which regiment the late Duke was Colonel. Daylight was wholly excluded, and the apartment was illuminated by a number of wax-lights.

Badminton Church is beautifully situated in the gardens attached to the mansion, from which there is a private entrance into the sacred edifice. It contains several monuments to the members of the Beaufort family.

ELECTRIC TIME-BALL JUST ERECTED ON THE NELSON MONUMENT, EDINBURGH.

The ashes of all the Dukes—except the first, who is buried in St George's Chapel, at Windsor—repose here.

The route taken by the funeral cortège was marked by a double line of Yeomanry Cavalry on foot, with crape round their left arms.

The procession, having been formed, left the mansion in the following order:—

Two Mutes.

The Clerk of the Works.
Rev. Joseph Buckley (Incumbent of Badminton, and Chaplain to the deceased Duke).
Rev. E. J. Everard (Rector of Didmarton, and Assistant-Chaplain to the deceased Duke).
Mr. Wickman and Mr. White (Medical attendants of the deceased Duke).

Two Mutes

Supporters. A Plume of Feathers, borne by a Page. Supporters.
The Consul and Cushion.

THE COFFIN,
containing the Body of the deceased Duke, surmounted by a Black Velvet Pall, and borne by Twelve Labourers, followed by

Pall Bearers—
Rev. J. S. M. Anderson, Rector of Tormarton.
Rev. G. Lawson, Vicar of Littleton Drew.
Rev. J. H. Morris, Incumbent of Acton Turville.

Pall Bearers—
Rev. M. J. Townsend, Vicar of Thornbury.
Rev. H. Ayding, Rector of Frampton Cotterell.
Rev. W. H. Woothey, Vicar of Hawkesbury.

The Duke of Beaufort (Chief Mourner).

The Marquis of Worcester (a bearer by his tutor, Mr. Boyle).
Viscount Dupplin.
Mr. Lowe.

Earl Howe.
Earl of Galloway
Mr. Granville Ryder
Lord Raglan
Mr Granville Somerset.
Mr J. Ord.
Hon. S. Calthorpe.
Rev. Granville.
Capt. H. Somerset.
Rev. W. Somerset.
Rev. Henry Talbot.
Mr Arthur Talbot.
Lieut. Colonel Mitchell.
Earl Bathurst.

Marquis of Chelmondsley.
Lord Calthorpe.
Sir W. Stanpitor.
Colonel Somerset.
Mr. Raglan Somerset.
Mr. Poyntz.
Mr. Nigel Kingscote.
Capt. R. Somerset.
Mr. Fitzroy Somerset.
Mr. Somerset Beaumont.
Mr. Edward Fitzroy Talbot.
Mr. Alfred Somerset
Mr. H. Lyon.
Mr. Hoey.

The procession closed with about thirty domestics and old retainers of the family.

The rain fell heavily as the mournful cortège passed across the garden to the church. The Duke of Beaufort walked uncovered, and appeared deeply affected.

On entering the church, the officiating clergymen, the Rev. Mr. Buckley and the Rev. Mr. Everard, received the body, and preceded it up the central aisle. The Rev. Mr. Buckley read the prayers, and the lessons were read by the Rev. Mr. Everard in a very impressive manner. At the proper period the coffin was lowered into the vault. The widowed Duchess now left the pew she had hitherto occupied, and was supported by her son (the present Duke) and Sir William Codrington (her son-in-law) to the edge of the vault, over which she stood during the remainder of the service. The scene was exceedingly affecting at this time. The Duchess was much agitated; and every one present appeared deeply impressed with the solemnity of an event which deprived them at once and for ever of a beloved patron and friend. The service concluded amid the scarcely-suppressed sobs of the multitude.

The young Marquis of Worcester behaved manfully—was the subject of much interest among the spectators of the sad ceremonial.

PROVINCIAL INTELLIGENCE.

REPRESENTATION OF SOUTH STAFFORDSHIRE.—In consequence of the death of the Earl of Dartmouth, a vacancy occurs in the representation of South Staffordshire. Viscount Lewisham, one of the members, succeeding to the title and estates. At the meeting of the Conservatives it was determined that a requisition to Viscount Ingestre (who is now in America), should be immediately signed.

SIR E. B. LYTTON, BART.—We understand that Sir Edward Bulwer Lytton, who was, during last session, unanimously elected to the office of Honorary President of the Associated Societies of our University, will deliver his inaugural address about the middle of January.—*Edinburgh Witness.*

THE EDUCATION QUESTION.—The Executive Committee of the National Public School Association have resolved to take steps for the introduction of a measure for National Education like that based on these principles, early in the ensuing session of Parliament. The Committee have also resolved to hold, in Manchester, an aggregate meeting of the friends of the association, during the present month.

THE BANGOR EISTEDDFOD.—Mr. Bulkeley Hughes, M.P., of Plas Coch, having followed the example of Colonel Douglas Pennant, and declined to accept the presidency of the intended Bangor Eisteddfod, it has been decided by a general meeting of the committee, to postpone the Festival until the year 1855.

DESIGN OF THE MANCHESTER MEMORIAL TO WELLINGTON.—The figure of Wellington occupies the centre, and around are grouped statues of Lord Hill, Sir E. Pakenham, General Crauford, Lord Lynedoch, and Lord Fitzroy Somerset. The pedestal is supported at the angles by groups of flags, representing those of English, Scottish, Irish, and Welsh regiments. The body of the monument is surrounded with triumphal garlands, and the frieze is decorated with wreaths of laurel. In the spaces which intervene are panels, in which the sculptor intends to introduce medallion portraits of Gough, Hardinge, Outram, Napier, Beckwith, and William Napier, the historian of all the great deeds of the Peninsula.

THE LATE DR. BEXFIELD.—The places for the concert about to be given, for the benefit of the widow and family of the late Dr. Bexfield, in St. Andrew's-hall, Norwich, have been nearly all taken; and it is anticipated that a very large sum will be realised by the entertainment.

A STARTLING TESTIMONIAL of respect and regard was presented on Wednesday, the 23rd inst., to William S. Tootell, Esq., of Edgware, by his friends and neighbours. The gift consists of a splendid Salver, Tea kettle and Stand, and Four Candlesticks, all of silver, and furnished by Messrs. Hunt and Roskill, of Bond-street. The presentation took place at a dinner at the Chandos Arms, Edgware, William Phillimore, Esq., of Dennis-hill, in the chair.

THE QUEEN'S HOTEL, CHELTENHAM.—On Thursday week, a dinner was given to Mr W. S. Davis, congratulatory of his re-embellishment of the splendid establishment, when about 150 of the leading inhabitants of Cheltenham sat down to a *recherché* repast, under the able presidency of the member for the borough, the Hon. Craven Fitzhardinge Berkeley. The ensuing topic of the evening was the success of the proprietor of this hotel, in having combined the requirements of a first-class establishment with an economical tariff.

NORWICH POULTRY SHOW.—An exhibition of poultry on quite an extensive scale has been held during the week, in the Corn-exchange, Norwich. About 2600 Cochin-China fowls were exhibited, and £100 distributed in prizes. The show was very extensively patronised. The Norwich Poultry Association also held a very successful meeting last week.

TRINITY COLLEGE CHURCH, EDINBURGH.—An effort is now being made to rescue this edifice, the finest example of Gothic architecture, the site of which was purchased in 1846 by the North British Railway Company. A memorial signed by the most influential men in the city has just been presented to the Town-council with this view.

THE EARL OF LONSDALE.—A numerous meeting of the political friends of the Earl of Lonsdale took place at Whitehaven, on Thursday week, for the purpose of entering into a subscription in order to procure a full-length portrait of the noble Earl. A considerable sum was subscribed in the room.

FREE LIBRARY.—The suggestion for a free library in Norwich has been again agitated within the last few weeks. The consent of the required number of inhabitants has been already obtained; but the Town-council have taken no steps, beyond the appointment of a committee, to carry out Mr. Ewarts' exc[illegible]

ANTI-SLAVERY AT MANCHESTER.—A meeting was held at the Friends' Meeting-house, Manchester, last week, to establish a local Anti-Slavery Union. Mr. Joseph Sturge, of Birmingham, Mr. Geo Thompson, the Rev. Mr. Ward, and other gentlemen, addressed a numerous, but not (probably owing to the inclemency of the weather) crowded meeting, and resolutions were adopted favourable to its objects—which contemplate a universal extinction of slavery and the slave-trade

INFRINGEMENT OF "EXCURSION" RAILWAY TRAVELLERS.—In the Manchester County Court on Wednesday last, an action was brought by a Mr. Whalley against the Directors of the London and North-Western Railway, to recover the value of certain luggage lost by the plaintiff during his journey from Birmingham to Manchester in one of Marcus's excursion trains, in the month of October in last year. The purchase of the excursion ticket "by the plaintiff, and the loss of his luggage while upon his journey over the London and North-Western Railway, was satisfactorily proved; but Mr. Etty, solicitor, of Liverpool, disputed the Company's liability, and in support of his view of the case, produced a printed bill, announcing the terms upon which Mr. Marcus undertook to convey passengers from place to place. The learned judge, after perusing the bill, held that the Railway Company were not liable for property lost on their line belonging to passengers by excursion trains; and a verdict accordingly passed for the defendants.

ACCIDENT ON THE LONDON AND NORTH-WESTERN RAILWAY.—On Thursday a serious accident occurred on the line near Berkhampstead, owing to the breaking of the axle of the engine of the train leaving the Euston station at nine o'clock, when the up-train from Birmingham struck the guard's van, and killed the guard, William Blaney. Several of the passengers suffered contusions, but not of serious account.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, DEC. 1.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 30.13 inches at the beginning of the week to 29.81 inches by 9h. a.m. on the 26th; increased to 30.23 inches by 3h. p.m. on the 28th; decreased to 30.04 inches by 9h. p.m. on the 29th; increased to 30.15 inches by 7h. p.m. on the 30th; and decreased to 30 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.061 inches.

The mean daily temperatures have varied from 4·5° below, to 5·2° above, their average values. During the time they were below their averages, viz., from the 14th to the 29th, the mean daily defect was 5·9°.

The mean temperature of the week was 42·9°, being 1·4° below the average of the same week during 38 years.

The range of temperature during the week was 21·9°.

The mean daily range of temperature during the week was 11·1°.

The Weather during the week, till December 1, was very dull; the sky was overcast, the air misty; and rain fell on four days. The depth of 1.1 inch (one inch and one tenth). The air has been either in a calm state or with gentle motion only during the week

For the month of November, the mean reading of the barometer, at the level of the sea, was 30.132 inches.

The highest temperature during the month was 61·2° on the 1st, and the *lowest* 24·8° on the 18th. *The range of temperature during the month*, was, therefore, 36·4°. The mean of all the highest temperatures by day was 48·8°, and of all the lowest by night was 36·3°. *The mean daily range of temperature during the* was 12·5°.

The mean temperature of the month was 41·8°, being *below the average* of thirty-eight Novembers by 1·4°.

The mean temperature of evaporation was 40·8°.

The mean temperature of the dew point was 39·7°.

The mean degree of humidity of the air was 90; complete saturation being represented by 100.

The fall of rain during the month was 1.6 inch; making a fall of 29 inches since January 1.

Lewisham, Dec. 2, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending November 26, the number of births within the Metropolitan districts was 1442: of males, the number was 777, and of females, 665. In the eight corresponding weeks of the years 1845 to 1852, the average number of boys was 713, and of girls 674. The number of deaths within the same period was 1329: in the preceding week the deaths registered were 1162. In the ten corresponding weeks of the preceding ten years the average number of deaths was 1093; which, raised in proportion the increase of population, becomes 1262; therefore, there is an excess in last week's return of 137. Of the deaths, 624 were males (their average is 551), and 705 were females (their average is 642); therefore, the cold weather has been more fatal to females than to males. The following are the numbers at three different periods of life:—At less than 15 years, 605 (their average is 514); at 15 and less than 60, there were 609 deaths (average 585); and at 60 and upwards, 228 (average 222). The number of deaths to each case of disease is as follows:—To zymotic diseases, 311 (their average is 276); of these, 7 were caused by small-pox; 21, by measles; 89, by scarlatina; 59, by hooping-cough (its average is 32); 30, by diarrhœa; 46, by cholera; and 50, by typhus fever. To tubercular cancer, &c., 69 (their average is 59). To tubercular diseases, 215 (their average is 175); of these consumption numbered 166 (exceeding its average by 37). To diseases of the brain, 155 (their average is 132). To those of the heart, &c., 59 (their average is 39). To those of the lungs, and of the other organs of digestion, 287 (their average is 234); of these bronchitis numbered 105, and pneumonia, 128. To diseases of the stomach, &c., 31 (their average is 56). To premature birth and debility, 42 (their average is 21). To old age 76 (its average is 52). To sudden death, 17. To privation of food, 1. To burns and scalds, 2. To hanging, 4. To drowning, 5; and to fractures, 7. From the preceding it will be seen that diseases of the respiratory organs have suddenly become more fatal; they rose from 161 in the preceding to 287 in the last week. In this class bronchitis rose from 68 to 134; pneumonia from 62 to 124. Phthisis was fatal in the two weeks respectively in 135 and 166 cases. Cholera, 1 person dying to each serve, subside, and last week was fatal to only 46 persons. From our weekly meteorological tables it will be seen that the weekly temperature has suffered a great fall: it was, at the end of October, 49°; and the week ending this day, was 40½°. The mean temperature of the period from November 14th to November 29th was 37°.

ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday, a meeting of the general committee of this institution was held, when the silver medal of the institution was voted respectively to two coastguardmen, named Bonner and Stock, of Collen-on, Aberdeenshire, as remembrancers of their services in saving, with a small skiff, a portion of the crew of the Russian schooner *Elise*, which was wrecked near that place on the night of the 20th ult. The new life-boat, recently placed by the Duke of Northumberland at Boulmer, and presented by him, as president, to the society, was reported to have saved the crew, consisting of seven persons, from the brig *Robert Nicol*, of Perth, which was wrecked near that place on Thursday, the 24th November. Since the establishment of this institution, it was said that nearly 8500 lives of shipwrecked persons had been saved by the use of life-boats, and other means; and that it had granted rewards for services rendered on such occasions amounting to nearly £9000. In addition to four life-boats, on Peake's design, now building for the institution, six life-boats on the same plan had been placed on various parts of the coast during the present year.

NEW INDIAN COUNCILLOR.—On Wednesday a Court of Directors was held at the East India House, when Mr James Grant Lumsden was appointed provisionally a Member of Council at Bombay.

SOCIETY OF ARTS.—THE SMOKE NUISANCE.—A paper on the consumption of smoke at Truman, Hanbury, and Buxton's, was read on Wednesday evening at the Society of Arts. The consumption of coals in the establishment was about 6000 tons per annum. The saving in the coal account, since the introduction of the patent to July 1 of the present year, was £3838; from which was to be deducted, for casualties and sundries, say £350. The above economy had not arisen from the adulteration of fuel consumed, but owing to the screenings or dust of coal only being required for the furnaces.

ANNIVERSARY OF THE POLISH REVOLUTION.—A public meeting of the friends of Poland was held in the Hanover-square Rooms on Wednesday night, to celebrate the anniversary of the breaking out of the Polish revolution of 1830; Mr. Worsnell, a Pole, in the chair. The meeting was numerously attended, the large room being quite filled. After a few words, in English, from the chairman, an address from the Polish Democratic Association was read, in English, by Mr. Linton. The same address was afterwards read in Polish and French. It was drawn up in a very belated style. It congratulated the oppressed nations of Europe on the hopes of freedom that were presented to them through the war that had now begun on the Danube. The meeting was then addressed in English, French, German, and Polish. The principal speakers were Dr. Arnold Ronge, M. Ledru Rollin, and Count Sidani. A letter to Kossuth was also read from Mazzini, who was too ill to attend the meeting—as who declared that, heart, mind, and affection, he was all theirs. The meeting, though at times greatly excited by the vehemence of the different speakers, was throughout conducted with great order and propriety.

THE EARL OF SHAFTESBURY, on Tuesday, presided over a numerously-attended meeting of the members and friends of the Protestant Alliance, at Freemasons'-hall, Great Queen-street, for the purpose of memorialising her Majesty's Government on the aspect of Popery abroad towards British subjects. There was a numerous attendance, the proportion of ladies present was much smaller than usual on the case at meetings of a similar description. The principal speakers, besides the chairman, were Sir Culling Eardley, the Rev. G. H. Davis, of Bristol, and the Rev. W. Arthur.

WATERLOO-BRIDGE.—On Thursday the half-yearly meeting of this company was held at the Freemason's Tavern; J. Smith, Esq., in the chair. The report stated that the tolls for the last half-year had amounted to £8893 7s. 7d., being an excess of £583 19s. 6d. over the corresponding half of last year. Out of the sum a dividend of 4s in the pound on the annuities of the company was declared, leaving a balance in hand of £2694

A NEW BURIAL-GROUND FOR HOLBORN.—At the usual weekly meeting of the BOARD of Guardians of the Holborn Union, a letter from the Rev J. J. Toogood, the Rector of St Andrew's, Holborn, was read, suggesting that measures be adopted for providing a new burial-ground for the parish, the churchyard being ordered to be closed in July, 1854. The board resolved to appoint a committee to confer with other parochial bodies on providing a new burial-ground.

IRISH CHURCH MISSIONS.—On Thursday the friends and supporters of this society met at Exeter-hall "to explain the present important position of the missionary work among the Roman Catholics in Ireland, and the circumstances in which the society is placed." The Duke of Manchester, occupied the chair. The Rev. Mr. Dalles, the Rev. Mr. Aurial, and several other gentlemen addressed the meeting, and described the operations of the society, and the progress it had made in the work of reformation. A memorial to the Government, complaining of the persecutions to which the agents of the society were subjected, was agreed to; as also were a series of resolutions approving of the objects the society had in view.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—On Tuesday the third lecture of the ninth annual series in connection with this association, was delivered in Exeter-hall, by the Rev Robert Bickersteth, M.A., Rector of St. Giles'-in-the-Fields, who selected for his subject "The Realisation of Humanism to the Second Coming of Christ."

SCOTTISH HOSPITAL.—The 188th anniversary of this corporation was held on Wednesday, according to "ancient custom," it being St. Andrew's-day, at the London Tavern; the Lord Mayor in the chair; when about 500 gentlemen sat down to dinner. The charity of the Scottish Hospital is applicable to the poor natives of Scotland and their children, resident in the metropolis and its immediate neighbourhood, who, not being in receipt of any parochial relief in this country, would in a state of poverty, in sickness or distress, or when in want of employment, be exposed to the utmost wretchedness, or to discreditable beggary, but for the fostering relief afforded to them by this institution. The usual loyal and complimentary toasts were given; and the principal speech of the evening was that of Mr. Sickles, in reply to "the health of the American Minister." The subscription collected during the evening amounted to about £390.

THE FRIEND OF THE CLERGY.—On Tuesday a special general meeting of the friends of this institution was held at the London Tavern, for the purpose of electing ten pensioners. The Rev. M. W. Lustigman presided. The report stated that during the past year the committee had granted annuities as follows:—To 98 necessitous clergymen, £980; to 55 widows of ditto, £468 8s.; and to 69 daughters of ditto, £460—making a total of £1899 8s. There were 39 pensioners on the funds: of whom 13 received £30; 1 £25; and 25, £40 per annum. The total amount invested amounted to £4530 1s. The total income in the past year had been £7322 18s. 10d.; and, after the expenses had been met, there was left a balance in hand of £240 10s. 5d. The election having been proceeded with, the meeting separated.

BOTANICAL SOCIETY OF LONDON.—The seventeenth anniversary meeting was held on Tuesday evening, at the society's rooms, Bedford-street, Strand; J. Reynolds, Esq., in the chair. From the report of the council, it appeared that the society consisted of 312 members. Many thousands of British and foreign specimens had been distributed to the members, and numerous Continental botanists and horticulturists and botanists had been this year made to render this important department of the society's operations more efficient, and already numerous valuable specimens had been received in distribution to the members.

INSTITUTE OF BRITISH ARCHITECTS.—The second meeting for the season of the above society took place, Tuesday evening, at the society's rooms, Grosvenor-street. The chair was taken by Mr. T. H. Wyatt. In the course of the preliminary business, M. Benoignat, architect, of Lille, was elected a corresponding member; and Professor Donaldson announced several handsome donations of drawings, &c., from foreign artists; at the same time complaining of the backwardness of the English section of the profession in similar matters.

THE ROYAL SOCIETY.—The anniversary of this society was held on Wednesday; the Earl of Rosse, President, in the chair. His Lordship delivered his annual address; after which the Copley medal was presented to M. Dove, of Berlin, for his work on the distribution of heat over the surface of the earth; and the Royal medal to Mr. Charles Darwin, the eminent naturalist, for his work on natural history and geology. After the meeting the Fellows of the society and their friends dined together, at the Freemasons' Tavern; the Earl of Rosse, President, in the chair.

ST. MARTIN'S HALL.—the noble building in Long-acre, which the metropolis owes to the spirit and enterprise of Mr. Hullah being now completed, it was opened on Thursday evening with a great performance of vocal and instrumental music, under that gentleman's direction. Next week we shall give some particulars of this concert, and also respecting the hall itself; merely saying, for the present, that the concert was worthy of the occasion; that the building is admirably arranged for the purpose including our most distinguished musicians and amateurs; and that the opinion was unanimous that this building is, in every respect, the finest in the metropolis in London.

STRIKES IN THE NORTH.—The working-men of the metropolis are taking steps to realise a fellow-feeling with the locked-out men of Preston. On Wednesday night a public meeting was held at the British School-room, Lower-street, Islington, to support the Preston operatives during their struggle with the mill-owners, and to consider the question of inaugurating a Labour Parliament. The following resolution was carried:—"That the success which has attended the numerous strikes that have been consequent upon sectional and isolated struggles of the people to maintain a proper scale of wages, and to achieve the emancipation of labour, is of opinion that only by the combined efforts—moral and mass-movement of the working-classes—based upon a national organisation, and guided by one directing body—can alone secure a status superior to the present low condition of operatives, and on strike, and enable workmen in the future to free labour from the thraldom of capital." A resolution in support of a labour parliament, similar to that recently resolved upon by a Manchester meeting, was also agreed to.

AN OPEN COURT OF CUSTOMS.—The Board of Customs have issued a notice, announcing an open court for the purpose of hearing and deciding complaints, and for investigating matters relating to the business of the port. A room in the Custom-house has been set apart for the purpose; and the new court is to sit on Tuesdays and Fridays, every week, when necessary.

BETTING-HOUSES.—On Thursday (Dec. 1) the new Act on betting houses came into operation, and it is understood to be the intention of the Government to enforce the new law. Some projects have been started to commute betting-lists, such as selling pictures or forming clubs; but as one half of the penalties will go to the informers, persons attempting to evade the statute will run great risks. The object of the act is not to interfere with horse-racing, but only to abolish bettingoffices, of which more than 200 have been opened in the metropolis. Suspected houses may be searched

"SWEEPS" IN PUBLIC-HOUSES.—Viscount Palmerston has consented to allow the usual "sweeps" in the houses of licensed victuallers to take place this year, provided that they be not attempted in future.

NATIONAL SPORTS.

WALTHAM ABBEY STEEPLECHASES.—WEDNESDAY.
Selling Hurdle-race.—Theodine, 1. Maria Monk, 2.
Handicap Steeplechase.—Needwood, 1. The General, 2.
Selling Steeplechase.—Tulip, 1. Sulky Cob.
The stakes for beaten horses did not fill.

	1000 to 12 agst Defiance (t)
	1000 to 10 —— King Pepin (t)

CARDINAL WISEMAN.—The Catholic papers deny a statement which has been made in some of the daily journals, that Cardinal Wiseman is expected to remain in Rome. It is said he will return to England before Christmas, when he will resume the active duties of his Archbishopric.

SIR GEORGE ARTHUR.—We regret to hear of the severe illness of Major-General the right Hon. Sir George Arthur, Bart. There are, we are sorry to learn, but slight hopes entertained of his recovery a fact which will be much regretted, especially in the colonies, where he has for a long time served. Extreme ill-health obliged Sir George Arthur to retire from high military command in England in 1846.

THE PROPOSED NEW RAILWAYS.—There has been published a classified list of all the railway companies that, up to eight o'clock on Wednesday night—the period limited for that purpose by the standing orders of the Houses of Lords and Commons—have deposited their plans and sections with the proper officers of the Railway Commission, at the Board of Trade and at the Private Bill Office; up to which period there were plans and sections deposited for railways, 158; miscellaneous (docks, bridges, harbours, water and gas, and improvement bills), 98: total, 233. Last session there was a total of 249 bills; so that the bills for the ensuing session will be 16 below those of its predecessor

LUMLEY AND GYE.—Mdlle. Wagner's quarrel with Mr. Lumley is becoming an affair of diplomacy. The commission now at Berlin wish to obtain the evidence of Miss Wagner as to whether she signed a certain document; but the Prussian judge, whose services were only called in for the purpose of administering the oath to the lady, insists upon preventing this, and having the control of the examination. It is said that, if a commission is issued to the Royal Court of Berlin to take examination, the presence of the judge can be dispensed with; and, in the Court of Queen's Bench, Sir F. Thesiger obtained a rule to show cause why such a commission should not issue.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 4.—2nd Sunday in Advent. Cardinal Richelieu died, 1642.
MONDAY, 5.—Mozart died, 1792.
TUESDAY, 6.—St. Nicholas.
WEDNESDAY, 7.—Algernon Sidney beheaded, 1683.
THURSDAY, 8.—Conn. B. V. Mary. Mary Queen of Scots born, 1542.
FRIDAY, 9.—Colley Cibber died, 1732. Gay died, 1732.
SATURDAY, 10.—Grouse Shooting ends. Charles XII. killed, 1718.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING DECEMBER 10.

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.
4 10 4 33	5 5 5 30	5 55 6 24	6 50 7 20	7 55 8 30	9 10 9 45	10 30 10 45

TO CORRESPONDENTS.

A. B.—The duty for a carriage during the twelve months, from April 1852 to 1853, will be according to the former scale. The duty as altered will not commence until from and after April 5, 1854, in England; and May 24, 1854 in Scotland. See the Statute 16 and 17 Vic., c. 90, s. 1.

A CONSTANT SUBSCRIBER.—There does seem to be something peculiar about knighthood, and that throughout all Christendom its rank and precedence remain the same, while other titles and dignities are confined to the country of their creation. According to D. "Coke's Institute," p. 667, though a foreign nobleman is merely to have the addition of cognire, a knight is to be named as such in all English law proceedings. Still it is very doubtful whether precedence is really claimable by a foreign knight in this country; certainly, without Royal permission, he never bears our title of "Sir."

ICNARUS.—If the arms, crest, and motto you bear, belong legally to you you are perfectly justified in bearing them, although they may be identical with the bearings of some nobleman.

WILLIAM.—The subject is one for the opinion and guidance of a solicitor.

ERRATUM.—The use of a crest on a letter-seal comes within the tax on armorial bearings. Whether or not "a deer's head" be an armorial bearing as a crest, depends on its bonâ fide appearance; the absence of the heraldic wreath is in favour of its not being armorial

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 3, 1853.

ALTHOUGH we have no positive intelligence of fresh acts of hostility between the Russian and Turkish armies, there is every reason to apprehend the existence of a determination on both sides to pursue the war with ardour. The latest telegraphic despatch from the Danube, dated the 26th ultimo, informs us that the Russians have commenced the construction of a bridge across the river at Giurgevo; which would indicate an intention to retaliate upon the Turks for their previous successful advances, by attacking Rustchuk—the very centre of the Turkish frontier, and the key to the head-quarters at Schumla. The practicability of carrying this projected movement into effect will depend very much upon the weather; but the very indication of it, after what has already passed, must, we consider, be taken as a formal announcement on the part of the Czar, that he has no intention, at present, of retiring from the contest which he has so long, and we believe so advisedly, provoked. Indeed, we do not see how, with any regard to his character, both at home and abroad, to say nothing of his personal feeling, the proud Autocrat of the North, could show signs of retiring from the position he has taken up, at the first reverse. The defeats he has already suffered, both in Europe and in Asia, have been just serious enough to add to his previous exasperation, and to harden his heart against the peaceful admonitions of his neighbours. The first "hazard of the die" has been against him; but he will risk another, and another stake, before he will put up with his loss, and confess himself beaten. To a war begun without the shadow of an honest or justifiable pretence, there can be no honourable nor safe conclusion but success.

With these convictions on our mind, as to the practical import of the actual position of affairs in the East, we adhere to the opinion expressed last week, that it is a mere self-delusion and waste of time to persevere with diplomatic negotiations, in the hope of bringing the contending parties to a reconciliation. If the united wisdom of Europe, during protracted labours, could not effect this whilst the parties were yet at peace, how less is now the chance of success, when they are flushed and excited with the heat of a first encounter? That the social interests of Europe demand that this unnecessary and wicked war should be put a stop to, and the misunderstandings which led to it adjusted, there can be no question; nor can be questioned the right of Europe so to interpose, for the defence of her own peace, and the large interests which peace has in its keeping. Unfortunately, however, whilst the two powerful nations of the West—whose interests are more deeply involved in the result than all the rest of Europe put together—are well agreed upon the rights and requirements of the case, most of the other states of Europe are in that anomalous position, with reference to one of the contending parties, cramounost themselves, as almost to incapacitate them to adopt an independent and authoritative line of policy in the matter. The position of Austria—with regard to Russia on the one hand, and to her own subjects on the other—is at once so humiliating and precarious, that all she has to do is to consider her individual safety, and to purchase it by adherence to the stronger side; and as for Prussia, her predilections, notwithstanding the pacific declarations of the King at the recent opening of the Chambers, are pretty well known to be on the side of Russia. There is already a strong suspicion existing in many minds that the "friendly offices" of these two Powers have in past negotiations been used mainly with a view of complicating and protracting matters—delay being from the first an object of importance to Russia. Certainly all the blundering, to which the present state of active hostilities is immediately due, originated in Vienna, after the negotiations were removed from their legitimate seat, Constantinople; and if we call Austria and Prussia again to our counsels, they may succeed in committing us to more blunders, and will certainly manage to impede our progress along as delay and uncertainty may suit the views of Russia. But, even apart from these considerations, the case itself is not, in its present phase, one for negotiation, but for action; and, supposing a conference of the Great Powers to be held at Paris or London to discuss the merits and eventualities of that Russo-Turkish quarrel—which they would be at perfect liberty to do—we do not see upon what precedent, or under what rational pretence, they could invite the contending parties to send representatives to assist at the proceedings. If they did, we are very certain that the reply of one, at least, of them would be a refusal, accompanied, perhaps, with a curt suggestion about people minding their own business.

On the other hand, if England and France are of accord in the matter, their course is clear and irresistible. Let them sign a treaty of defensive alliance with the Porte with a view to the recovery of its legitimate position; let them declare to Russia that her wrong can no longer be endured; let them follow up their word manifestations with a little show of material strength, and the whole question will be settled. Russia will recall her savage hordes to their benighted homes; and, for the first time since her admission into the family of European nations, will learn to respect the laws which regulate civilised communities. By this first rebuke, the *prestige* and the terror of her name will doubtless suffer diminution; her overweening pride will be humbled, and her propensity for insolent interference in the most distant concerns of European polity effectually subdued. It is to be hoped that the lesson so taught may be useful to her; and that, turning her regards homewards, she may employ her new-found leisure in improving the condition of her wretched subjects, and her natural resources of wealth, now so shamefully neglected and abused.

But we anticipate a little. Returning to the proposal for a joint alliance of England and France for the defence of the Porte, the specific terms upon which this assistance should be given will go mainly to the objects to be attained by the combined operation, and the conditions upon which a peace should be eventually agreed to. The principal object would be to secure the independence of the Empire of the Porte, by a guarantee against future aggression from its unscrupulous neighbour; details depending upon circumstances. It will be absolutely necessary, also, to place under new guarantees the lives, the liberty, and the property of the unfortunate inhabitants of Wallachia and Moldavia; who surely cannot be left any longer to the tender mercies of Russian "protection."

THE Emperor of the French, who has studied the principles of Free-trade, not only in the pages of Adam Smith, and in the speeches of Mr. Huskisson, Sir Robert Peel, and Mr. Cobden; but in the works of Say, Chevalier, and Bastiat, has made a Free-trade movement. He has introduced the narrow end of the wedge, and sooner or later the thick block of French Protection will yield and split. The reduction of the duties on *fonte-brute* (pig-iron) and on coal, though by no means extensive, or calculated to give much impetus to the trade between Great Britain and France, is a measure of great importance, and will be hailed in England as a proof that right commercial principles, so long misunderstood and decried in France, have at length found friends in high places. It is difficult to ascertain with what degree of favour or disfavour the measure has really been received by the French people. Opinion is not free to express itself. The Opposition journals dare not criticise, except in the gentlest terms, any measure which emanates from the Government; and those journals which uphold in all things the policy of the Emperor are but too apt to give vent to undue enthusiasm, in small things as well as in great, to enable any correct estimate of their real opinions to be formed from the published sentiments of their venal and place-hunting writers. It would seem, however, that Free-trade is a subject on which the French journals, as a body, do not much care to discourse. The bulk of the French people, with the sole exception of the grape-growers of the great wine districts of Bordeaux, Champagne, and Burgundy, are densely Protectionist. The most hopeless squire in Lincolnshire and Essex, in the days of the Derby-Disraelite Administration, had more correct notions of the true principles which should regulate the commercial intercourse of nations than the manufacturers of France, and the educated classes in general. Protection, among our neighbours, is not so much an agricultural as an industrial question. There are no great Lords and country gentlemen, no extensive farmers, to imagine that dear bread is essential to the happiness and security of the nation; but an influential class of manufacturers, who dread the competition of English goods as fraught with utter ruin to their interests. Still, the monopoly enjoyed by the iron-masters has become so injurious as to cause many manufacturers of other articles of necessity to inquire whether the system which has enhanced so greatly the price of machinery, of tools, of ships, and of implements of husbandry, could be said to work well for the general interests of the nation. Upwards of twelve years ago, an official report was submitted to the Government of Louis Philippe, in which the injury inflicted by the high tariff upon ship-builders and shipowners, as well as upon agriculturists, was especially insisted upon. But nothing was done to remedy the evil; and the French iron-masters continued to demand and to receive enormous prices for their iron—thereby diminishing the amount of their own business—and inflicting mischief upon other branches of trade, without any real benefit to themselves. The Emperor, wiser in this respect than Louis Philippe, and infinitely more powerful, has read the iron-masters, as well as the coal-owners, a lesson. He has warned them that Free-trade, so successful in England, cannot be confined to that country; and that France must look alert, if she will not allow all the advantages of right principles of commercial economy to be reaped by one nation. The Emperor has made a wise beginning. Iron and coal were the most vulnerable articles to attack, and it is to be hoped that the advantages which will result from the present relaxation of the Tariff, will become so evident to the people, as to induce the Emperor to make another movement in the same direction, whenever time and opportunity shall again serve him.

THE DUKE AND THE SAILORS' HOME.—A pleasant fact is recorded in the northern papers. The Duke of Northumberland is about to make a princely donation to the seamen visiting the Tyne. Notwithstanding 25,000 vessels enter that port during a year, no "Home" has been provided for their crews. The Duke, however, is about to present to the port a handsome Sailors' Home at North Shields, the cost of which will be £4000. The land, also given by his Grace, is worth £1000 more. The building will have accommodation for above 100 seamen, and will be furnished with a library, savings bank, baths and washhouses, nautical school, &c. All that the Duke requested of the shipowners of the port, before commencing with the building, was, that they should raise £3000 for its endowment. £1800 have been subscribed, and the other £1200 have just been guaranteed by several gentlemen belonging to Shields. His Grace has also promised to erect and endow a chapel for the use of sailors

LATEST INTELLIGENCE.

RUSSIA AND TURKEY.

The Turks have resumed operations upon the Danube. On the 25th they advanced from Kalafat twelve English miles towards Krajova, and formed an intrenched camp for 8000 men. Large bodies of Turks at the same time passed up and down the Danube. The next day the Turks constructed a bridge between Rustchuk and the island of Moknan. The advance inland from Kalafat appears once more to foreshadow an approaching combat at Krajova. Omer Pasha is supposed to be desirous of engaging the Russians before any fresh troops arrive to their support. Prince Gortschakoff is said to be completely puzzled at the tact of the Turkish commander.

The Turks had been bombarding the Russian position at Giurgevo from Rustchuk for some days previous to the 26th, with their long-range artillery; among which there is one of such calibre, that the balls it projects fall not only into Giurgevo, but even beyond the barrier situated on the road to Bucharest.

The Russians have been making furious attempts to expel the Turks from their position at Four Fetes, near Rusova, at the confluence of the Tulonitza and the Danube; there, however, they had uniformly failed, the Turks having successfully resisted all their efforts.

All accounts from Wallachia concur in representing the exasperation of the people at the conduct of the Russians. The Administrative Council has entered a protest against the incorporation of the Wallachian militia with the Russian regiments.

Letters from St. Petersburg say that the late affairs in the East have greatly irritated the Emperor Nicholas, and that he will not, now, enter into any negotiations, or listen to any propositions for a compromise. Letters from Galatz announce that the 4th and 5th corps of the reserve have quitted Bessarabia to enter the Principalities. Before they could arrive, however, it is said that Omer Pasha may be able to deal another effective blow at Prince Gortschakoff.

The latest accounts from the Danube announce that a large body of Cossacks, having passed the river above Turtukai during the night to reconnoitre, were surprised by the Turks and cut to pieces.

From the Black Sea we learn that the Rus-ian war steamer *Wladimir*, on a cruise in the Black Sea, had returned to Sebastopol with two prizes—a Turkish passenger-steamer, with a cargo of pepper, and the Egyptian 10-gun steamer *Pervaze-Bahri*. The latter offered a desperate resistance. The Russians had two killed and two wounded.

The intelligence from Sweden shows that the concentration of troops in Russian Finland, and the naval squadron stationed at Helsingfors, have excited the anxiety and apprehension of the Swedes. The King opened the Diet on the 24th in person. His Majesty's speech contained the following passage:—

Agreeably to the demands of my Royal duty and the present political position of Europe, I will cause to be laid before you a statement of a complete system of defence. Such a system is imperatively called for, in order to place the country in a position to preserve its independence.

There was an improvement on Tuesday in the Paris Money market. The Three per Cents closed for cash at 74f. 50c.; and the Four-and-a-Half per Cents, at 100f.

It was said in the diplomatic circles that there is no foundation for the rumour of a convention having been signed between England and France on the Eastern question. What has been done has been to lay down the basis of joint action for every contemplated eventuality; instead of making each event as it occurs, as has hitherto been done, the result of distinct negotiations. The French Government has received the answer of the Emperor Nicholas to the last of the pacific propositions which have emanated from Austria. The Czar declares that he cannot accept of any project of arrangement that does not issue direct from Turkey, and that henceforth the fate of arms must decide the question.

The *Frankfort Gazette* assures its readers that it is empowered to state that the engagements or acknowledgments made at Frohsdorff by the Duke de Nemours were not made by the authority or on account of the Duchess d'Orleans, who has not acknowledged the transaction in any way.

ST. PAUL'S CATHEDRAL.—The Bishop of London has appointed the following gentlemen to be special preachers at the metropolitan cathedral during the present month:—Sunday, Dec 4, the Rev. G. R. Gleig, M.A., Chaplain General to the Forces; Sunday, Dec 11, the Rev. R. Shutte, M.A., Rector of High Halden, Kent; Sunday, Dec 18, the Rev. Dr. M'Caul, Rector of St. Magnus the Martyr, London-bridge. On the morning of Christmas day the sermon will be preached by the Rev. Dr. H. H. Milman, Dean of St. Paul's.

A RICH GIFT.—The Rev. Dr. Warneford has consigned thirty acres upon St. Thomas's hill, Canterbury, to the Corporation as a site for a new school for the Clergy Orphan boys, and with it two gifts of money, one of £4000 towards the building fund, and the other of £3000 to found six scholarships.

THE STATUE TO MARSHAL NEY, raised by order of the French Emperor, will be inaugurated on the 7th inst., the anniversary of his death. This monument, which is placed in the grand alley of the Observatory, stands on the spot where the Marshal was executed.

HOMEWARD AFRICAN MAILS.—We understand that, in future, the homeward mails from the west coast of Africa will be due at Plymouth on the 4th of each month, instead of the 26th, as at present; it having been found necessary to allow an additional ten days for the voyage.

LAUNCH AT CHATHAM.—Another fine screw ship of 80 guns, the *Majestic* was launched from Chatham Dockyard on Thursday. She is over 250 feet, and is to have engines of 400 horse power. She was named by Captain Peter Richards's sister; and, when the workmen had knocked out the dog-shores, Miss Richards cut the cord with a chisel and mallet placed in her hands by Mr. Lake; but the *Majestic* having rested twelve years on the slip, would not move; and the expression in the countenances of the assembled spectators during the suspense, which existed between two and three minutes, was beyond description. At last the vessel began to move, but as slow, steady, and dignified as Majesty itself, whilst the then enlivened spectators repeatedly cheered her entry into the Medway, where she now lies moored up at a chor. She appears a fine ship, although of the old school, with a round stern.

SHIPWRECK.—The barque *Meridian*, which sailed from Gravesend on the 6th June last, has been totally lost on the desolate island of Amsterdam: the captain and two others were drowned. (We shall give, in a future number, full details, with illustrations, of this extraordinary wreck, the island, and the dreadful sufferings of the crew and passengers.)

FIRE AT MILE-END.—On Friday morning, a most destructive fire broke out on the premises of Mr. R. Davis, oil and colourman, Cambridge road. The flames were discovered by the police on duty, who rescued the inmates; but they had great trouble in effecting a safe retreat, the inflammable nature of the stock spreading frightful havoc. The fire was at length subdued; but not until considerable damage was done to Mr. J. Dobson's, boot and shoe-maker, and the adjoining houses. All the parties are said to be insured.

PIGS AND POULTRY IN THE NORTH.—The second exhibition of the Great Northern Pig and Poultry Association, open to all England, was held at Doncaster on Wednesday and Thursday. Of the poultry, the best classes exhibited were the game fowls which the judges declared to be the best collection of that species they had ever seen; the Shanghaes or Cochin-Chinas, of the cinnamon or buff varieties, of which nearly 100 specimens were exhibited; and the spangled Hamburg, of which there was a splendid show.

THE ZOOLOGICAL SOCIETY.—The Right Hon. Earl Granville, Earl Bruce, the Rev. W. Fallofield, and Messrs. J. M. Stanley, C. H. La ouche, J. S. Willes, W. Mossop, and T. Jackson have been elected fellows of the society.——This year's report from the Council says that the total number of visitors to the gardens during the year had been 286,663, being an increase over the same period of 1852 of 103,410 persons.

POPULAR APPRECIATION OF ART.—The numbers attending the Museum of Ornamental Art at Marlborough-house during the month of November were as follows:—12,345 persons on the public days, admitted free; 770 persons on the students' days, and admitted as students on the payment of 6d. each, besides the registered students of the classes and schools.

THE EARL OF DERBY.—His Lordship is suffering from a severe attack of his old enemy—the gout. We are sorry to hear that his friends of this last visitation have been more serious upon the probable Earl's general health than those of any previous attack.—*Post.*

SULPHUR ORE IN WICKLOW.—An extraordinary discovery has been made in Wicklow, within the last few weeks, of sulphur ore, which is likely to lead to the most important results. It appears (says a country paper) the yield is so enormous, that it is with an ease difficulty labourers can be got to discharge the duty of taking it from the pits.

THE BATTLE OF OLTENITZA.

We are indebted to the courtesy of the editor of the *Daily News* for a copy of the accompanying Plan of the field of Oltenitza, which has been forwarded to London by the Special Correspondent of that Journal, now at the seat of war on the Danube. We are not permitted to indicate the high military authority from whom the plan has been obtained, but our readers may depend upon its perfect authenticity and reliableness; and, by comparing it with the despatch of Omer Pacha, they may form an accurate conception of the relative position and movements of the two armies during this sanguinary and obstinately-contested engagement. We subjoin a copy of Omer Pacha's official despatch to the Turkish Government, narrating the events of the 2nd, 3rd, and 4th ult., at Oltenitza, which appeared exclusively in the *Daily News* of Wednesday last:—

The possession of the island situate in front of Turtukai having been considered indispensable, I had effected the passage of the troops; and, in the space of the night of the 1st, managed to raise tolerably strong fortifications. On the following day, the 2nd, two battalions of infantry, three pieces of cannon, and 1/5 of the mounted police, were conveyed in large boats to the locality, with ammunition, provisions, and great-coats.

They had scarcely landed, when, from the batteries of Turtukai, we opened a fire on the lazaretto situate on the left bank. After the first discharge, the Russians quitted this position, and the Imperial troops took possession of the building, which is of solid construction, with vaulted chambers. Without loss of time, 400 workmen, under the direction of staff officers, commenced raising fortifications, and for which purpose two thousand patrons had been already prepared. On the 3rd, again, other troops were sent to fortify the *tête du pont*.

As soon as the Imperial troops had landed on the left bank of the river, the Russians quartered in a large village at about an hour's distance, turned round, and began to retreat. A body of cavalry was despatched to reconnoitre, and having encountered at Oltenitza an outpost of Cossack cavalry, they killed five, and reioined our lines with a loss of three men. We found at Touzla, on the left bank, a great number of boats, which were sent to Turtukai.

The number of boats at our disposal having facilitated the construction of the bridge, we were enabled, without delay, to place in the fortifications twelve large guns, which were brought from Schumla.

On the 3rd, at four p.m., three battalions of Russian infantry, with eight cannons, a regiment of cavalry, and party of Cossacks, entered the village of Oltenitza. Our troops, posted within the works constructed on the left bank, waited them *de pied ferme*. The same night I caused to be constructed a bridge at the conflux of the Argish and Danube, and flanked it with redoubts.

Yesterday (Nov. 4), at 6 a.m., we began to perceive the movement of the Russian forces. As soon as their march was well defined, I caused to be embarked and conveyed to the lazaretto a reinforcement of one battalion. The evening before I had placed on an open ground a battery of guns calculated to face *en front* any attack which might be made. The Russian forces amounted to twenty battalions, three regiments of cavalry, one of Cossacks, sixteen mounted batteries, and sixteen on foot. They formed in order of battle, with fourteen pieces of cannon in the rear of twelve battalions, and the regiment of Cossacks in lines beyond the reach of our guns, and fronting the centre of our works. They advanced, supported by the fire of their artillery, and at the same time, two battalions, with two cannons, came on threatening our left flank. Having commenced the assault, another stronger division—consisting of six battalions with four cannons, having in the rear three regiments of cavalry supporting and outstripping their left flank—took its position and formed in two lines, with artillery, horse and foot, into *echelons*, attacking our right flank.

After an exchange of some cannon shots, the centre gave the assault, whereon they charged both our wings. The centre attacked three different times, and each with a fresh battalion twice on the left, and once on the right.

A well directed fire from our fortress at Turtukai soon dispersed their right column—and the centre gradually fell back after having suffered severely and half its numbers *hors de combat*. The battery of the island, also mounted with powerful guns, *a mezzi top*, and commanded by Khalil Pacha, did admirable execution on the enemy's right wing. The Russians advanced with coolness and resolution almost to the brink of the trench, and on this account their loss was considerable, amounting to a thousand men killed and double the number wounded.

The engagement lasted four hours, from noon till four p.m., and during this interval the waggons never ceased to carry off their dead, and twenty were observed heavily laden even after the conflict. With a view of facilitating this duty, as long as it lasted, we abstained from molesting the enemy and from firing a single shot, but found, nevertheless, 800 bodies on the field. A private carriage, moreover, was remarked, and from the pains taken in the search we conjecture it must have been destined to receive the body of a general officer.

At five p.m. a total confusion ensued in the Russian ranks; their lines were completely broken, and their retreat precipitate. An hour later some few rallied in the neighbouring villages, but the remainder fled in disorder. Some of our men pushed forward in pursuit of them beyond the lines, but were summoned back by trumpet to their own quarters.

Our loss amounted to 106 men. We found on the field of battle 500 muskets, *sacs*, cartridge-boxes, equipments, &c.

OMER.

It will be seen by Omer Pacha's despatch that a carriage was sent, and careful search made amongst the dead at Oltenitza for a body supposed to be that of some person of distinction. It is stated that the slain soldier was the son of General Gortschakoff.

General Prim, Lord Worsley, Captains Bathurst and Herbert Wilson, and Lieut Buckley, were with Omer Pacha in the battle of Oltenitza. The Turkish troops were much flattered by the praises of the foreign officers, Spanish and English, who were at the head-quarters of Omer Pacha. The infantry is described as having exhibited all the steadiness as well as bravery of European veterans, and the rapidity and justness of aim of the artillery were much admired. The Turkish artillery, which has been principally trained by Prussian officers, and especially by Lieutenant-Colonel Von Kuczkowski, is admitted to be the best portion of the army. The Emperor Nicholas said last year to General Wrangel, when he took leave of the Czar on his way to Constantinople, "Look well at the Turkish artillery. It is one of the best in Europe. We have to thank you Prussians for that; and it will take strong teeth to crack that nut." It appears that in four hours the fort of Turtukai threw 1500 balls.

The Sultan, on receiving the report of the victory gained by Omer Pacha at Oltenitza, addressed an autograph letter to that officer, congratulating and thanking him, and requesting him to accept, as a mark of distinction, his favourite horse. The Sultan ordered that the horse should be gorgeously caparisoned, and sent without delay to the head-quarters of Omer. Arab Aga (who is said to have killed a Muscovite General at Oltenitza) was named on the field Major of Artillery; the Minister of War granted him the rank of Commandant; and, lastly, the Sultan named him Lieutenant-Colonel.

PLAN OF THE BATTLE OF OLTENITZA.

POSTSCRIPT.

RUSSIA AND TURKEY.

An authentic despatch from Vienna, dated Wednesday evening, says:—"On the 31st, at night, the Turks forced the Russians to quit the island opposite Giurgevo. Two attempts were made by the Russians to retake the island, but were repulsed. In the second attempt, the Russian soldiers had to be forced into the fire. Between seven and eight in the morning of the 24th inst. the Russians retook the island. During the night of the 25th the Turks made another night attack, but were repulsed. The passage of the river at this point, on the part of the Russians, is out of the question. The pontoons have all been sent to Ibrcova, to connect the numerous islands with the right bank of the river." (A View and description of Hirsova will be found in page 468.)

A despatch, dated Bucharest, 27th Nov., says:—

On the night between the 25th and 26th the Turks made eight unsuccessful attempts to get possession of a Wallachian island near Giurgevo They were repulsed by the Russian batteries.

Numerous skirmishes have taken place along the Danube between the Turks and Russians. The Ottoman troops still pursued the system adopted by Omer Pacha of attacking detached corps of Russians with superior forces—a system which had hitherto proved so successful.

The Turks have obtained further advantages in Asia. They not only defend successfully Fort St. Nicholas, but have captured the fortresses of Usurgheti and Bonchoum-Kaleh. It is added that the Georgian people are favourable to the Turks. The Turks have formed two new regiments of marine artillery, to be employed on the coast of Asia between Sinope and Trebizond.

On the 14th ult. the city of Belgrade was on the point of being bombarded by the Turkish garrison of the fortress. The difference was caused by the presence in Belgrade of the Russian Consul. The calamity was averted by the intervention of the Austrian Consul-General.

A misunderstanding has arisen between Baron Brück, the Austrian internuncio at Constantinople, and Redschid Pacha, on account of Servia, which has led to the recal of the former Minister.

General Schlick, who commanded the cavalry at the camp of Olmütz, had been appointed Commander-in-Chief of the Austrian corps assembled in Transylvania. He will establish his head-quarters at Klausenburg.

General Magnan has been retained at Constantinople by General Barsguay d'Hilliers.

Private letters from Warsaw state that the Russians are making preparations on the most extensive scale for the spring campaign.

A letter from Orsova, from the Special Correspondent of the *Times*, dated Nov. 21, says:—

General Fischbeck, at Krajova, has been receiving reinforcements from Bucharest; and his force, which when the Turks landed at Kalafat was only 6000 men, is now between 12,000 and 13,000 men. His troops have been so badly received by the Wallachians, that he has been compelled to issue first one proclamation, and then another; appealing to the religious feelings of the natives, and also holding strong language to those opposed to him. There are no pecuniary requisitions, but, as the Russians pay according to the scale of last June, before the immense rise of prices that has taken place within the last two months, this circumstance is a standing ground of dissatisfaction.

There are everywhere masses of grain awaiting the events of war; in Braila alone, and the neighbourhood, there are above 800,000 quarters in store.

The discipline of both Russians and Turks is remarkably good. Both Sami Pacha, of Widdin, and General Fischbeck vie with each other in menacing with punishment their troops that commit excesses.

By accounts from Widdin, the Turks are working night and day at the fortifications of Kalafat.

A fleet of seven steamers and 20 tugs, belonging to the Danube Company, is at Turnu Severin, between Orsova and Widdin, in complete inactivity.

The wives and families of almost all the wealthier classes in Wallachia are now in Hungary and Transylvania; and, from intelligent persons, I can give an reliable account of the condition of the country. The peasantry are in the lowest state of poverty, ignorance, and barbarism, although the land is not one quarter cultivated. The large estates of the Boyards are very often in the hands of a middleman, who squeezes what he can get out of the very indolent peasantry. The Boyards are very fond of dress and equipages; and in language, manners, and modes of luxury, copy the French; and from what they see in Bessarabia are excessively afraid of annexation to Russia in which case the screw would be placed on the landed proprietor, and the aristocracy would be reduced from power and opulence to utter insignificance. Of any active resistance on the part of the Wallachians to the Russian invasion there is no question whatever. Whatever they may have been in the middle ages they are now the most unwarlike people in Europe.

Baron Ginsberg, Adjutant of Genera' Gortschakoff, has arrived here from Bucharest, *en route* for Vienna.

The miserable and neglected condition of the Russian troops in Wallachia has already been described. It would appear from a letter written by a medical man in the Turkish camp, that the Turkish troops suffer almost as much from want of proper food, clothing, and medical attendance. In addition to cholera, intermittent fever, and dysentery, the Turkish camp is visited by new plagues in the shape of typhus, ugly wounds, hunger, and cold. The writer of the letter saw the troops, half of which were badly dressed, badly disciplined, and badly fed

Asiatics and Egyptians, march to the Danube "almost without medical attendants. The Turks, strong in faith, reckoned on the clear skies, the mildness of the temperature, the promises of consignments of provisions and uniforms from Varna, and of physicians with medicine, surgical instruments, and bandages from Constantinople. Omer Pacha did everything that a general could possibly do; but his exertions to secure a footing in Wallachia and Moldavia were in vain "Rain, snow, wind, and storm conspired against him; and the loamy roads were soon in such a state that the transport of the necessaries of life for large bodies of troops was found to be impracticable, and the army had no choice but to retrace its steps. "The dearth of provisions begins to be very alarming, and the clothing of the men is miserable in the extreme. The skins of the newly killed half-starved sheep are immediately cut up to make coverings for the naked feet of the soldiers." Even in Varna the usual fare of the men, and particularly of the Syrians and Egyptians, is pumpkins boiled in water; and in many of the stations, the troops "are actually suffering from hunger." The hospitals and temporary infirmaries are overfilled with a set of wretched, famished, haggard creatures in want of everything, the necessary attendance not excepted. "the Orientals bring of no use as nurses." The organisation of the medical department of the army has been badly carried for, as there is no "*ambulance*," as is the case in other European armies. Each of the battalions has forty European officers and volunteers, and one-sixth of the artillerymen are foreigners. It is probable that these men were always to be found wherever the danger was greatest, as they have suffered most severely from the lead and iron of the Russians. As the Orientals have a great aversion to operations half the wounded die. "Epidemics, wounds and the water of the Danube have already carried off more than 8000 men, and other 8000 are sick and missing." The Balkan army was estimated at 140,000 men, "but if it does not soon manage to get into Wallachia, many of the men cannot but die in the most miserable manner." "As all the means of transport to Bucharest, and even to Varna, are interrupted, our hospitals will soon be in a desperate condition if it does not freeze. Our severely-tried, but patient troops are in extreme want of clothes, provisions, spirituous liquors, powder, lead, and medicaments. Fortunately, tobacco and coffee are still at hand."

FRANCE.

The Emperor and Empress left Fontainebleau on Wednesday, and are now at the Tuileries.

It is said that M. Brenier, Secretary-General of the department of Foreign Affairs, has left for Italy, and that he intends visiting Tuscany, Piedmont, Naples. This journey is regarded as a diplomatic hint to Austria of her vulnerability in Italy.

The political differences between the King of Naples and France are settled. The Neapolitan Government has made an apology for its proceedings, and M. de Maigne has gone back from Rome to Naples.

At the Paris Bourse, on Wednesday, the Three per Cents opened at 74f. 15c., rose to 74f. 20c., fell subsequently to 74f., and closed at 74f. 10c. for the end of the month.

There rumours in Paris, on Wednesday, of a projected conference, to be held either at Vienna, London, or Paris, for the settlement of the Turkish question, and to which Russia and Turkey would be invited to send plenipotentiaries to explain the final conditions on which those two Powers would consent to an arrangement. The fact of negotiations for a convention between France and England, with a view to establish the conditions and extent of a common intervention in the affairs of the East, is again stated as positive. It is also asserted that a new Russian note has been addressed by Count Nesselrode to the diplomatic agents of the Czar in France and England. This note defines the cases which would produce an interruption of international relations, or a complete rupture between the two Governments, and it is also said that it announces a new manifesto from the Emperor of Russia.

The accounts from the French departments are far from satisfactory. The dearness of provisions has caused a great deal of agitation; and several fires have taken place in the north, and especially in the department of the Ardennes, which are attributed to incendiarism.

The directors of the *Estafette*, *Echo Agricole*, and the *Bulletin des Halles et Marchés* were tried before the police-court of Paris on Tuesday for having published false news. They were acquitted. The false news complained of consisted of errors in the quotations of the price of corn.

SPAIN.

Accounts from Madrid to the 27th ult. state that a Royal order has invited the Senate to withdraw its project of law on railways, and to give the priority to that presented by the Government. This communication is to be examined by a committee. The Ministry have determined, should the conclusions of the committee be unfavourable, to close the Session immediately

Marshal Narvaez left for Aranjuez and Loja on the 26th ult.

Private letters from Madrid speak of an affair which took place in the capital on the 5th day of Sie. Eugénie, in which millinery and diplomacy are oddly mixed up:—

The Marquis de Turgot, the French Ambassador at Madrid gave a ball, which was attended by all that is brilliant in the Spanish capital in the days of Isabella of Castile. Among the guests were the Duke of Alba, the brother-in-law of the Empress of the French; and Mr. Soulé, the son of the newly-appointed Minister of the United States. In the course of the evening, Mr. Perry, the wife of the United States Secretary of Legation, overheard the Duke of Alba (who has recently been in Paris, and is therefore a judge of ladies' dress), make some contemptuous remark on the style of dress adopted by the wife of the American Minister (mother of young Soulé). It appears that the lady had adopted a costume which is now quite the mode *à la Reine des Français*, and which no person up to the throat; whereas the most approved fashion among the Madrid dandies is to exhibit as many of the graces conferred upon them by nature as come within the bounds of decency. The remark of the Duke was "There goes Mary of Burgundy." Mr. Soulé, on hearing the contemptuous expression, left the lady with whom he was walking, and, going up to the Duke, informed him *qu'il était une canaille*, and accompanied this piece of information with a—push. Great excitement ensued, and Mr. Perry's father having interfered, took away the young man, who subsequently addressed a challenge to the Duke, which has not yet been been accepted, the Duke having found it convenient to represent the whole affair as political.

RUMOURED INSURRECTION IN PORTUGAL.

We have disastrous news from Portugal. A rising is said to have taken place at Oporto against the regency of the King-Consort. A letter from Badajoz, dated the 21st instant, states that the 13th regiment of infantry has risen in insurrection, in the direction of the Douro, and proclaimed Don Miguel; and that Miguelites of note had already brought many recruits to their ranks.

The King-Consort has always been unpopular in Portugal. It is not unlikely that the Portuguese Cortes may proclaim the young Prince (Don Pedro) of age; and there is spread at present a report of some excellent education, and, above all, is Portuguese, which conveys a multitude of sins in Portugal, the inhabitants of which are particularly averse to being governed by foreigners. The Miguelite insurrection would have had little chance of success had the young King attained his majority.

CITY OF LONDON COMMISSION.—The Royal Commissioners continue their sittings generally on Tuesday, Wednesday, Thursday, and Friday. On Tuesday, the first witness called was Captain Block, R.N., who was examined relative to the navigation of the Thames and Medway. Mr. Whistler, wine importer, of Size-lane, was next examined. He was followed by Mr. T. Rogers, a solicitor of thirty years' practice in the City; and then Mr. Erskine Perkins, author of various articles in the *Westminster Review* (which have since been republished as pamphlets), was called. Mr. H.'s evidence is very long, going through the statistics of the patronage, revenue, and jurisdiction, local and general, under the control of the Corporation. On Wednesday, Mr. Williams, M.P. for Lambeth, was the principal witness A deputation from Marylebone was examined; and was followed by Mr. Offer, a shipping insurance broker; Mr M'Namara, and Mr. Rose, election agents; and Mr. Grey, of Stepney-green The Commission adjourned to Friday; on which day, Mr. Edward Leigh Pemberton, solicitor to the Board of Land Revenue, underwent a long examination as to the rights of the Crown and the City to the soil and bed of the River Thames. He gave a long detailed account of the proceedings in the suit between the City and the Crown, and read very extensively from old acts of Parliament.

WILLS AND BEQUESTS.—The will of Robert Barclay, Esq., banker, Lombard-street, has been proved in Doctors' Commons: the personalty sworn under £160,000. Mr. Barclay has left a legacy of £100 each to eight charitable institutions—viz., Norwich and Norfolk Hospital, Suffolk County Hospital, London Hospital, Orphan Asylum, Clapton; Infant Orphan, Wanstead; Friends' School, at Ackworth, and at Croydon; and to the Hospital for Diseases of the Chest.—Mrs. Elizabeth Ann Dent, who died possessed of £45,000, has left £1500 to charities; amongst others to St. Ann's Society School, and the Hospital for Consumption.

FATAL ACCIDENT ON THE HUMBER.—On Monday, four men put off in a boat laden heavily with fish, from the smack *Emma*, to proceed to Hull market, to dispose of their produce, when the boat sank. Two were unfortunately drowned.

THE COURT.

The Queen and the Prince Consort, with the Royal children, accompanied by the Duke and Duchess of Brabant, and attended by the ladies and gentlemen of the Court, left Windsor Castle on Saturday last, for Osborne, Isle of Wight, where the illustrious party arrived at two o'clock. The Royal Standard was hoisted on the Castle as the telegraphic message almost immediately after his arrival at Osborne. His Royal Highness re-crossed to Gosport the same night in the *Fiery*, and travelled to Dover by the South-Western and South-Eastern Railway. On Sunday morning his Royal Highness embarked in a Belgian mail-boat for Ostend, *en route* for Brussels; whence the Duke returned to Osborne on Tuesday.

On Sunday Divine service was performed at Osborne, by the Hon. and Rev. G. Wellesley, before her Majesty, his Royal Highness Prince Albert, the Prince of Wales, the Princess Royal, and Prussia Alice.

The Queen and the Royal family have taken their accustomed driving and walking exercise daily during the week.

Lord de Tabley, Lord in Waiting to the Queen, and Colonel Wylde, Groom in Waiting to Prince Albert, both Sundays, on Monday afternoon for Lisbon, with letters of condolence from her Majesty and his Royal Highness to the King Regent of Portugal, on the occasion of the death of the late Queen.

The Marchioness of Ely has succeeded the Countess of Desart as Lady in Waiting to her Majesty.

Her Royal Highness the Duchess of Kent, attended by Lady Fanny Howard and Sir George Couper, arrived in town by the Great Western Railway, on Wednesday morning, from her residence, Frogmore, near Windsor. Her Royal Highness visited her Royal Highness the Duchess of Gloucester, in Gloucester House, in the afternoon, and afterwards returned to Frogmore.

The Prince Nicholas Esterhazy, accompanied by his two youthful sons, has left town for Vienna, to attend the obsequies of his deceased princess.

The Duke and Duchess of Richmond and Lady Cecilia Gordon Lennox have arrived in Portland-place, from visiting the Earl and Countess of Derby, at Knowsley, *en route* from Gordon Castle, N.B. The Duke has been suffering severely from gout, but now enjoys health and His Grace will not leave town for Goodwood until after the Smithfield Club Cattle-show.

STRIKE BY A PROFESSOR.—The Professor of Scots Law (Mr. Mackenzie) insisted that his students should, like those of other classes in the college, have a class library, useful in every department of a collegiate education, but indispensable in that of law. The Faculty of Professor refused to commence his course till it should be determined. The senate, at a recent meeting, so far yielded to the pressure as to vote a sum sufficient to form the nucleus of a law library.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent)

Owing to the comparative tightness in the Money Market, and the continuous shipments of the precious metals to the Continent, Consols have been very inactive, and prices have had a downward tendency. The withdrawal by the Emperor of France from the whole of his balances in the Bank of England, and in the Bank of France, has given rise to some misgivings as regards the future; hence, jobbers and dealers have operated with considerable caution. On the Stock Exchange, on Friday, sellers offered 2½ to 3 per cent on Stock security, and 4 per cent on Foreign Bonds. Out of doors, first class bills, of short date, have been discounted at 3½ per cent. Eastern affairs have as a matter of course, engrossed much attention of the jobbers

On Monday the Three per Cents were done at from 93½ to 93¾, the Three per Cents, Reduced, 94½ to 94¾; and the New Three-and-a-Quarter per Cents, 98½ to 99¾. Annuits of thirty years, 1830, were 8 1-16. South Sea Stock was 112¾; Bank Stock, 210 to 212. Exchequer Bills were quoted at 5s. to 8s. prem.; India Bonds, 1s. to 3s. prem. On Tuesday and Wednesday the Market for Consols was flat. In prices, however, very little change took place in the quotations; though, on the latter day, the Three per Cents closed at 94¼, both for Money and the Account. On Thursday Consols were dull, and rather lower. The Three per Cents were done at 94¼ for the account. 93¾ ¼ and the New Three-and-a-Quarter per Cents, 99. Exchequer Bills declined to 3s. and 6s. prem. India Bonds were par to 2s. prem.

Miscellaneous securities were heavy firm. Australasian Bank [illegible] sold at 84½; London Chartered of Australia, 15¾; London Joint Stock, 26¾; Provincial of Ireland, 49¾; South Australia, 42; Union of Australia, 54¾; Crystal Palace, 7¾; Ditto, New, 4¾; Peel River Land and Mineral, 5⅝; Hungerford bridge, 12; Waterloo, 6¾; Vauxhall, 22; Albion Insurance, 93; County, 127; Globe, 146¾, Guardian, 60; Imperial Fire, 67; Ditto, Life Shares, 7; Ditto, New, 4¾; Royal Exchange, 210; Sun Life, 65; Universal, 46¾. Berlin Waterworks have been done at 1¾. East London, 120; Grand Junction, 73; Southwark and Vauxhall, 84½; West Middlesex, 132. St. Katherine's Docks, 93½ ¾; and the New Three-and-a-Quarter per Cents, 99. Exchequer Bills declined to 3s. and 6s. prem. Indian

THE ILLUSTRATED LONDON NEWS

No. 657.—VOL. XXIII.] SATURDAY, DECEMBER 10, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE LABOUR PARLIAMENT.

It has been represented to that portion of the working classes who have struck for higher wages, that a "Labour Parliament," to discuss the rights of working men and the "tyranny of capital," would be useful at the present moment. A Labour Parliament, or convention of working men is, therefore, to be summoned forthwith. The public has not yet been informed of how many members this parliament is to be composed, where it is assemble, or how long it is to sit. The project, we believe, did not originate with the men of "horny hands,"—not with the real labourers and artisans of Great Britain, but with the paid secretaries or other officials who counsel and organise strikes, who collect the weekly sixpences and shillings of men in full employ in support of the "turn outs:" and who distribute in town and city, on Saturday nights, the wretched pittances on which the operatives must starve until the next dole is due to them, or until it pleases them to resume their former labours. There seems no immediate prospect of a return to reason on the part of the many thousand men who are now living in this unsatisfactory manner. More unwise than the dog in the fable, they have not only thrown away the substance in grasping at the shadow, but they cling to the idea that the shadow is a reality. It is probable that many of them have learned from bitter experience the injury they have done themselves and their families, and that they would gladly exchange their present state of idleness and want for the full work and high wages which they enjoyed a few months ago. But the great majority have been so long accustomed to act in concert, to yield obedience to their unions and committees, and to calculate upon strikes as possible contingencies, that the voice of reason appeals to them in vain. Experience fails to teach them as a body those lessons which they may have learned as individuals. As an expedient, therefore, for prolonging the struggle upon which they have entered, the "Labour Parliament" will doubless last its little day. But the inevitable result will not be altered. Ignorant and violent speeches may keep up a fading enthusiasm for a short time longer; but the wintry cold, the fireless grate, the empty cupboard, the imploring looks of wife and children, and the growing certainty that the masters will not and cannot yield—all these acting together will deprive the oratory of their leaders of the power to persuade them that no bread is better than half a loaf, or that charity wrung from their fellows is pleasanter to live upon than their own honest earnings. There are limits to the sixpences and shillings of artisans who have wives and families of their own to support; even were there no limit to the endurance and self denial of the men who are waging the present contest. But neither wars, nor lawsuits, nor strikes, can be carried on without cash. Already there has been a great diminution in the weekly subscriptions, and, ere many weeks, the little will grow less. Yet, there is something so like heroism in the conduct of the men who, in support of a principle which they deem to be just, have voluntarily reduced themselves to poverty, if not to starvation; that, misguided as they are, it is impossible to speak of them without respect. They assert what they believe to be the right of free men and the dignity of labour; and, if they make a mistake on a question of social and political economy, the fault lies not in the badness of their hearts, but in the incompleteness or the errors of their education. We trust, therefore, that the "Labour Parliament" will really assemble, and that all which can be urged on behalf of the claims of labouring men, to fix their own rate of wages, will be duly set forth by their best speakers, and fully reported in the newspapers. Publicity and the consequent discussion of the principle at issue will not fail to make some converts among the clearest headed of such artisans as may attend the convention, or read of its proceedings. As in

TRIAL HUNT IN THE FOREST OF FONTAINEBLEAU (SEE NEXT PAGE)

all previous cases, the Corn-laws not excepted, one convert will make many; and, in due time, it may be hoped that a little leaven will leaven the whole lump. It took time and pains, and sore heart-burnings to enlighten a large portion of the upper classes on the subject of Protection, and the impolicy of artificially enhancing the price of bread; and we will not do the working classes the injustice to suppose that, on a question affecting the industry by which they subsist, they will be less amenable to reason than the lords and squires, who were converted on the subject of the Corn-laws.

In the meantime, it is curious to see how pertinaciously the leaders of the movement employ words without meaning; in what a vicious circle of argument they run; and how, in asserting capital to be the natural enemy of labour, they direct their efforts to become capitalists themselves. At the meeting held in Manchester, in which it was declared imperatively necessary that a "Labour Parliament" should be summoned, it was resolved, that "the time had arrived when a united and mass-movement of the working classes, based on a national organisation, and guided by one directing body, could alone ensure adequate support to the men now locked out of employment and on strike; and enable working men in future to emancipate labour from the thraldom of capital." It was also resolved that the "Labour Parliament," consisting of delegates elected by the working men of each town, should meet as soon as possible, and devote its energies to the discovery of means by which labour "might become independent, self-supporting, and remunerative, without the necessity of strikes."

We much doubt whether the persons who drew up the resolution, and employed the fine phrase "the thraldom and tyranny of capital" ever asked themselves what it meant. In one sense the phrase may be considered correct. A tyrant is a master, and thraldom is a state of subjection; and there can be no dispute that capital is the master of labour, and that labour is in servitude or subjection to the capital which pays it. But, in this sense, the law of gravitation is a tyranny, and we all of us exist in a state of thraldom to it. The same phrase might be used to designate arithmetic or mathematics, which are as great tyrants as any we know. To such tyrannies and thraldoms men and nature are bound to submit. Capital is a power that acts in accordance with recognised and easily discoverable principle. Ignorant or unthinking men may rail against it, and call it tyranny, if they will; but, until they can prove that capital is anything more than the savings of past labour, or until they can provide any other means for the reward of living labourers than that accumulated fund, they but rail against physical laws, and set themselves in fruitless and foolish opposition to nature and to necessity. The promoters of the "Labour Parliament" in seeking to devise a scheme by which labour may be rendered self-supporting and remunerative, express a desire to become the thing which they condemn. Unless they make themselves capitalists, their scheme—however promising it may appear—can neither be self-supporting nor remunerative. But, while railing against capital, and expressing their determination to become capitalists, all in one breath, they lose sight of the real grievance which operates injuriously against them, and against all working men in this country. What they want is the right or the power to become capitalists themselves—the right of association for trading and manufacturing purposes. The evil lies in the present state of the law of partnership. Were that altered, so as to admit the right of association with Limited responsibility, working men, when dissatisfied with the rate of wages offered them by their employers, might set up in business for themselves, and see whether they could earn more as masters and partners than they did as servants and labourers. Or, if their employer had justice on his side in refusing to accede to their demands, he might admit them to a share in the business, and prove to them by his books—without dictation from extraneous and mischievous unions and secretaries—that a higher rate of wages would annul profits, and bring the whole concern to a stand-still. If the "Labour Parliament" will devote its attention to that part of the subject, it may effect some good; but if it do nothing more than rail at the thraldom of capital, it will but render itself ridiculous, and throw away its opportunities.

LOUIS NAPOLEON'S HUNTING PARTIES AT FONTAINEBLEAU.

The sport of hunting has considerably declined in France since the end of the eighteenth century. After the Revolution, Napoleon I. re-established the hunting arrangements of the ancient monarchy. Louis XVIII., although deprived of the pleasures of the chase by his infirmities, nevertheless showed much solicitude for the sport of hunting, which was considered as one of the elements of Royal luxury. His successor, Charles X., displayed in these sports the tastes and the research of a Prince who had lived in the best days of the Monarchy. Under Louis Philippe, who had the quiet habits of a *bourgeois*, the amusements of the chase held a very small place in the Royal solicitudes. As for the present Emperor, the chase offers him a pastime consonant with the ardour of his character and the vigour of his constitution. The important organisation that he has given to the service of the chase attests his fondness for this kind of sport; for the maintenance of which he has allotted an annual expenditure of 400 000 francs for the appointments of the officers of hunting, and the supply and maintenance of the horses, dogs, implements, &c. There has not yet been time to develop the arrangements desired by the Emperor. The service at present is not composed of more than 56 blood horses, and 113 dogs, of the best English breed.

The number of officers and huntsmen (pickers, trackers, and *valets de chien*,) is about the same as under Charles X. The Imperial hunting residences are reduced to three—St. Germain, Fontainebleau, and Compiègne. Under Charles X. these residences were six in number, besides sixty places for shooting, with all the necessary buildings. General Magnan is Grand Huntsman—a title held, under Charles X., by the Dauphin, the son of the King. M. Edgar Ney is the Chief Huntsman, in which capacity he is charged with all the details of the chase.

The last hunts which took place at Fontainebleau (during the last fortnight in November) were extremely brilliant. Only sixty persons received the "button"—a custom which it is necessary to explain. According to the rules of the Royal hunt, the persons summoned to follow the chase must wear a suitable hunting costume. That adopted by the Emperor is of the time of Louis XV., with the three-cornered hat, relieved by a border of gold lace. The coat (of green cloth) and the waistcoat are both ornamented with gold lace and silver buttons, in the centre of which, in relief, is a stag, in gold. The receipt of a pattern of these buttons (which is called "givin le button") constitutes an invitation, and confers the right of assisting at all Imperial hunting parties. The costume of the ladies consists of the Amazon riding-habit, also of green cloth, and the hat ornamented with gold lace. The buttons are of the same model as those of the men, but smaller. Among the personages to whom the silver buttons have been sent, we may mention—His Imperial Highness the Prince Napoleon, Prince Lucien Murat, the Princess Mathilde, the Grand Duchess Stephanie of Baden, Lord and Lady Cowley, Mr. and Madame de Pierris, le Comte Silvera, Madame Thayer, MM. Nathanie and James Rothschild, M. de Niewerkirke, M. de. Latour-Maubourg. The painters Horace Vernet and Gudin have also followed the chase. The ministers and dignitaries of the household of the Emperor received private invitations, and were received, with their suites, in the Palace of Fontainebleau, which is provided with no less than 1200 beds!

Only the officers of the Imperial hunt have the privilege of mounting the horses belonging to the Emperor's stables. Three relays of horses have been provided for the Emperor, the Empress, and the huntsmen. Lord and Lady Cowley, the Princess Mathilde, and the Grand Duchess of Baden, followed the chase in carriages. The hunting expeditions—which have been rendered more difficult for the cavaliers, in consequence of the unevenness of ground in the forest of Fontainebleau—have shown to great advantage the rare skill in horsemanship of the Imperial huntsmen. Only one accident has happened, and that has not been attended by grave consequences—namely, Madame Thayer's fall from her horse. The Emperor has displayed brilliant qualities, both as *écuyer* and huntsman. As for the Empress, she has worthily sustained the reputation which she has already acquired in the sport. Her Majesty is spoken of as very skilful in the use of fire-arms. Her weapon in the chase is a single-barrelled carbine, and the skill with which she avails herself of it equals, if it does not exceed, that of the most adroit huntsman. She was seen recently at a shooting party at Versailles, to bring down a wild duck from a very great height.

Some brilliant fêtes have marked the progress of the Imperial hunts. The Palace of Fontainebleau (usually a desert, and environed with melancholy *souvenirs* of the kings of France, who succeeded to it from the reign of Charles VII. down to Louis Philippe—to which latter monarch we owe the repairs and extensive restorations of the château) Fontainbleau has latterly assumed an entirely new air of animation. The pleasures of the chase have been varied by splendid receptions, reviews, and, lastly, by a superb carousal given by the Sixth Hussars. As at all the fêtes given by the Emperor, the military formed the majority of the guests at Fontainebleau.

The hunting equipage of the Emperor are about to be considerably augmented. Orders for fresh horses and dogs have been sent to England. The French dogs, which used to form a part of the kennel, have been sent away, and only English dogs are to be used in future. Those which have run at Fontainebleau come from the pack of Mr. F——, a gentleman of large property in the United Kingdom, and an intimate friend of the Emperor's.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The subject of all conversation continues to be, what they call here the fusion, that is to say the union between the two branches of the house of Bourbon. Nothing else is talked of in the *salons* of Paris, the provinces, and amongst the foreigners. "What do you think of the fusion?" Such is the interpellation which pursues you everywhere. You answer, in order to avoid a question importunate, perhaps indiscreet, "I do not think about it." "Ah, that is impossible," answer they; "you must think something about it, and if you do not give your opinion it is because you do not choose to do so. How can you speak of it with such indifference [illegible], nevertheless, a great event; for the Orleanists and Legitimists will no longer have a pretext for not rallying; and the limited number of those who have had the weakness to attach themselves to the Empire, will detach themselves as soon as possible: then will come the full cassed by desertion. Do you not see this—that here is the throne of Louis Napoleon undermined without its being possible for him to prevent it? Do you not see that France is placed between a future Restoration or a new revolution? Under the empire of this fear, who will think of giving balls or fêtes, or having *marchands de coté* for the reception of the 1st January? And, supposing, that the Republic, which was tripped up, recovers its feet?"

What is certain, incontestable, uncontested, is that the *fond* of these conversations is gloomy, and that there hangs over head a thick cloud of dark presentiments.

What is certain, incontestable, uncontested, is that the *affaires publiques* are uneasy. The winter has begun ill. In the provinces bread is very dear, and work has begun to be scarce. To what can this be attributed? No one can blame Liberty, for it no longer exists. Can it be attributed to Authority, which interferes with everything, everywhere? What remains now to conjure the storm which is forming. "The world belongs to the apathetic," said, in 1849, Louis Napoleon, President of the Republic; and so it does till the moment when it escapes them. Apathy! apathy! you will have been what the shade is to the light, error to truth—that is to say, the means of rendering the light more brilliant, the truth more evident.

Anxiety hovers over not only the *salons*, but it enters the shops, where complaints are loud; and even in the green-room of the theatres, where it comes out in all the dialogues. Thus, last Monday, at the brilliant representation of the drama "Mnuprat," by George Sand, people met each other, asking, not "What do you think of the piece?" but as-king "How will all this end? how will the winter pass? how avoid a war in the spring? England and France, will they continue united against Russia and Austria? will Lord Aberdeen yield his place to Lord Palmerston? Silver disappears and gold remains—what is to be done to retain the silver—one cannot pay in gold for a pair of gloves, or a drive in a hackney coach? As the difficulties are greater, men appear less. The contrary is to be desired—excitement and small difficulties."

The frost has come, and interrupted the building works; but it has not driven away the cholera, which continues its ravages.

The Italian Opera languishes; it seems doubtful whether the efforts and sacrifices made will succeed in raising it from the tomb where it was buried alive the 24th of February, 1848.

Mdlle. Rachel has dated, not a decree from Moscow, but from St. Petersburg, her resignation of the Théâtre Français. She renounces the French scene. From Russia she will go to the United States, to secure the sum of £6000 a year, which she is anxious to gain; she then will come and spend it in Paris, where she will, not as an applauded artiste, but as a retired *grand dame*, open to a select few her luxurious *petite maison*. Who will replace her at the Théâtre Français? Who has replaced Talma? Who has replaced Chateaubriand or Balzac? Who will replace Lamartine, Victor Hugo, Eugene Sue, Alexandre Dumas, George Sand, Mdme. Emile de Girardin?

In France, illustrious people disappear and none come in their places; science progresses, but literature and art are on the decline.

The Emperor and Empress visited the Palaces of Trianon and Versailles on Monday, and returned to the Tuileries in the evening at six o'clock.

The French Government is proceeding in the work of strengthening its navy with great expedition. Several new vessels were launched last week.

It is believed that M. J. de Rothschild has concluded a new loan, amounting to six or eight millions sterling.

The steady progress of the revenue in the face of a bad harvest and the prospect of war, is curious as well as cheering fact.

An Imperial decree extends the period to which vessels laden with grain, flour, rice, potatoes, and dried vegetables, are exempted from the payment of navigation dues, from the 31st December to 31st July next.

The syndics of the bakers are now paying them the indemnity due to them for the bread sold during the last fifteen days of October, at the rate commanded by the Government. The amount payable is 619,000f. in consumption of 7,737,500 kilogrammes of bread.

The Emperor has, by an Imperial decree, dated 16th November last, awarded a medal of honour of the first class to Captain Rennie, of the East India Company's ship *Zenobia*, who saved the French brig *Sylphe*, of Bordeaux, from great danger, and towed her into the port of Akyab.

The Minister of Marine has received despatches from the Commodore commanding the French naval forces on the western coast of Africa, dated 25th October last, announcing the complete success of the expedition sent against the hostile tribes in the neighbourhood of the French settlement of Grand Bassam, in the month of September last. The submission of all the tribes of Lake Ebrié and the river Ackba, and of the villages of Grand Bassam, are now complete. Fines, amounting altogether to 160 head of cattle and 13 ounces of gold were imposed on the hostile savages, and hostages were further given as pledges for future tranquillity. A new French post has been established at Dabou.

THE WAR BETWEEN RUSSIA AND TURKEY.

A new project of settlement now engages the attention of the Allied Powers, which affords another chance of arranging the Turkish question without the risk of a general war. It was at first stated that positive and definite engagements had been agreed to by the four mediating Powers, pledging them to maintain the existing territorial arrangements of Europe, and to recommend fresh preliminaries of peace in the East. It has since been stated that the rumour that an alliance had been formed between the four Powers is incorrect. A collective note has been drawn up, but no mutual pledge given to enforce its acceptance. The propositions alluded to, which constitute the latest effort of this protracted negotiation, have originated with the British and French Governments, and not with the Cabinet of Vienna, although they have been readily and unreservedly adopted by both the German Courts. On Friday in last week the Prussian Government signified to its Ministers in London and Paris that it was prepared to co-operate with the Western Powers on the basis proposed. On the following day the Austrian Government gave its assent, and the collective note was then forwarded to the Porte. Without attempting to dictate conditions to the Porte, the Turkish Government will be called upon to name the terms on which it is prepared to enter upon a negotiation for peace. It is, of course, impossible that conditions proposed by England and France could embrace anything short of the retreat of Russia from the Principalities. With respect to any stipulations regarding the protection of Christians in the dominions of the Sultan, it is supposed that they cannot henceforth be included in any separate convention, but must be regulated by the public treaties of the Christian States with the Porte. The matter now awaits the answer to be received from Constantinople. Should Turkey respond to the invitation, and propose such terms as the allies may deem reasonable and equitable; Russia will be invited to enter into negotiations on the basis so laid down; and, in the event of the Czar's acquiescence, a Congress will probably be convened, in order to frame a definitive treaty of peace. In any contingency, however—whether the proposed Congress be or be not found practicable—the explicit declaration of France, England, Austria, and Prussia, is a guarantee to Europe that existing territorial arrangements shall remain unaltered, and that the balance of power shall be maintained intact.

Advices from Constantinople of the 24th ult. state that a three months' armistice, demanded by England, has been refused by the Turkish Ministers; and that, in consequence, Lord Stratford, with a view to obtain the consent which the Turkish Ministers had refused, had an audience of the Sultan, which lasted five hours. An extraordinary Council of Ministers was convened in consequence.

A despatch from Bucharest, dated Dec. 3, says:—

There is an undisturbed cessation of hostilities. Deep snow is on the mountains. The frozen ground in the plain has prevented the Turks completing the constructions they had commenced at Turnul. General Omer-Sarken is expected on the 12th December on the Danube. The river is frozen.

The Turks remain in their strongly-entrenched position, about twelve miles distant from Kalafat, in the direction of Krajova. It would seem that strong divisions of the two armies must have confronted each other at Kalafat and Krajova ever since the close of October, whereas, exchanging some accidental skirmishing at the first passage of the river, we have heard of no serious encounters between the Russians and Turks in this quarter. Great improvements are still being made by the Turks in the fortifications of Kalafat, and an incredible activity is displayed in the construction of redoubts. The Turks have planted 100 guns behind the works of earth in their entrenched camp on the road to Krajova. Upto the 30th November the Russians in Krajova had shown no signs of an intention to advance. A military arrangement on the part of the Turks at Kalafat led to the report of their having been recalled. The whole corps is relieved every forty-eight hours from Widdin. The Russian General Fishback, at Krajova, has been receiving reinforcements from Bucharest; and his force, which, when the Turks landed at Kalafat, was only 6000 men, is now between 12,000 and 13,000 men. Letters from Krajova, of the 30th ult., state that it was thought that General Fishback had been ordered to fall back upon Bucharest, where Prince Gortschakoff is concentrating the whole of his troops, with the front of his army turned towards Silistria. The general opinion among military men is, that Prince Gortschakoff will find it no easy matter to dislodge the Turks from their strong position at Kalafat.

There have been renewed engagements at Giurgevo. This, it will be remembered, is the fort opposite that of Rustchuk, and the only point at which the Turks, at the opening of the campaign, failed to accomplish the passage of the Danube. They never, however, entirely relinquished the attempt, but maintained themselves for some time on an island in the stream, half-way between the two forts. This position the Russians repeatedly and at last successfully attacked; but, on the 21st ult., the Turks recovered the island and held it, in spite of two distinct assaults, until the 24th, when the Russians once more got possession of it. The desperate fighting at this point indicates that both parties foresee events in which its importance would be extreme. On the 26th the Turks constructed a bridge between Rustchuk and the Island of Mokan. On the 26th, 27th, and 28th of November, the Turks continued to make feigned attacks on the island of Mokan, but retreated as soon as the Russian fire opened. The island of Mokan was the object of daily contests, and it appeared that the Turks were resolved to take it at any price.

About 420 of the Russians who were wounded at Oltenitza had died. Among them were about fifteen officers and three colonels. The Russian general who was killed in that battle was a Baron Rosen.

The report that the Turks are in want of provisions is false. A vast quantity of supplies of all kinds, received from England, is lying at Varna. Omer Pacha has been, since the 15th November, in Rasgrad, to which place reinforcements and supplies are forwarded every week. A great number of foreigners, among whom are many Englishmen and Americans, came with the last reinforcements. Since the commencement of hostilities, the Turks have lost about 4000 men, 1500 of whom were either killed in battle or drowned. The Turks were at Turna, where the Aluta falls into the Danube, opposite Nicopolis, on the 18th. On the 15th, a very sharp affair took place at Turna, in which the Russians were worsted and put to flight. There is a middle surrounded by a wall either at Turna or on an island close by, and this is in the hands of the Turks. An exchange of prisoners having been talked of, the Russian prisoners had obtained an interview with Omer Pacha, to beg him to keep them, as they could see his soldiers were much better treated than the Russian troops. It is added, that Omer Pacha complied with their request, and has incorporated them in the Turkish Christian regiments now forming.

Moldo-Wallachia has now become a Russian province, and, for the time being, at least, has ceased to be in any way connected with Turkey. The Wallachian troops have moreover received an order to join the Russian army, and take their share in the campaign against the Sultan. There is a rumour of the desertion of 300 Wallachian gendarmes, who were attached to the corps of General Fishback, and who, with horses, weapons, and accoutrements, are said to have gone over to the Turks.

In Moldavia affairs were conducted in the most absolute manner by General Urusoff. The Jews in particular were the victims of his brutality. Some Austrian Jews had to invoke the protection of the Austrian Consul-General. General Urusoff has since been superseded by Prince Gortschakoff.

The two sons of Prince Vogorides, and some other Boyards, were arrested, simply because they refused to supply the Russian army with provisions.

The Russians appear to be intensely unpopular in the Principalities. At Jassy not less than eighteen large houses, belonging to different Boyards, have been converted into hospitals.

The war is carried on in Asia with great energy. Abdi Pacha writes, on Nov. 6, that the Turkish troops having met the Russians, who had crossed the frontier in the neighbourhood of Bajazid, a battle took place, in which the Russians were defeated, and compelled to retreat. Another affair took place some days after, at a distance of two or three hours' march from the fortress of Akiska. The numbers were about equal on both sides, but the Ottoman troops obtained the victory and the Russians fled in disorder, after having experienced considerable loss. On the 24th ult., Ismail Pacha and Schamyl were to make simultaneous attacks on the Russian lines. Selim Pacha, General-in-Chief of the division of Batoum, has advanced on the Russian territory at eleven leagues from Circassia [illegible] reputation was to assist the Circassians, who were waiting for a favo-

able moment to rise, and form a *corps d'armée* of 30,000 men. Private letters speak of the "truly enthusiastic zeal" of the Asiatic Turks, who appear in crowds at the conscription offices. Each *Cyalet* has to supply 1600 cavalry and 6800 infantry, and this is done with the greatest readiness. The cavalry goes to Erzeroum, and the infantry to Constantinople.

After an inspection of the French fleet, Admiral Hamelin published an order of the day something to this effect:—"The ships of France have long since entered the Bosphorus for the purposes of parade; I am sure then, and I expect, that all and each will be ready to act at the first signal." The official recall of the advertisement relative to the supplies for the French fleet, "between Constantinople and Odessa," has caused some sensation in the Turkish capital. The inhabitants of Constantinople begin to find the pressure of inactive allies, who consume 8000 ocas of meat daily (the oca is 2¾ lb. English), excessively oppressive. The price of provisions has risen enormously.

The recall of Baron Bruck, the Austrian Internuncio at Constantinople, in consequence of a difference with the Porte relative to Servia, is confirmed. Baron Bruck told Redschid Pacha that the Austrian Government supported the neutrality of the Prince of Servia; and that she would not be pleased to see the Porte have recourse to means of coercion in order to compel the Prince to take the part of Turkey. Redschid Pasha replied that the Sultan was resolved to compel the Prince to renounce his neutrality, and that orders had been given for that purpose.

A letter from Constantinople gives some details of the survey that has just been made of the mouths of the Danube:

This survey, which had been called for by foreign commerce, and particularly by several large English houses, has made known that the Sulina, which is the most important of the mouths of the river, is encumbered at this moment by a great number of vessels which had sunk there, and which throw great difficulties in the way of the navigation. The situation of this part of the Danube is the more serious, as, according to treaties, Russia, Austria, and the Porte are bound to keep it clear; and as it is not executed from the same frequent remonstrances on the subject, and faithfully performed her part of the obligations. It results from these facts that foreign merchant-vessels, trading in corn with the ports of Wallachia and Moldavia, meet with great obstacles in their passage.

The Porte has resolved for the present not to accept the offers made for raising a Hungarian and an Italian legion. The Polish legion, however, will be organised at once at Soutari, and then proceed to Kars.

The Turkish Government has issued a strict prohibition against the granting of letters of marque.

By advices of the 26th from Cattaro, we learn that encounters have occurred between the Montenegrins and Turks, attended with the loss of life on both sides.

There is not much ground for expecting any naval engagements in the Black Sea at present. It is stated that the English, French, Turkish, and Egyptian fleets were all in the Bosphorus on the 23rd of November, which had returned from the Black Sea, was not again to sail. The Turkish division which had gone to cruise in the Black Sea, returned on the 19th to the Bosphorus, and resumed its position before Buyukdéré. It was not again to sail.

We hear from Constantinople that the enthusiasm and patriotism of the Turks increase from day to day. Voluntary contributions are received from all parts of the empire, and Constantinople alone has raised 150,000 000 piasters for the maintenance of the army. The Druses of the Le'anon have offered to send 2000 men; but they demand that the Christians shall be disarmed before they depart. The other Druses display far greater military ardour. The warring dignitaries of the Marcotist have also offered the assistance of their people.

Gen. Baraguay d'Hilliers, the new French Ambassador to the Porte, arrived at Constantinople on the 15th ult. He was received by the Seraskier on landing with a regiment of cavalry and four battalions. The address of the General to the Sultan on presenting his credentials was as follows:—

Sire—I have the honour of presenting to your Majesty the letters of his Imperial Master, my august Sovereign, which accredit me as his ambassador to the Sublime Porte. In the difficult circumstances in which the Ottoman Empire is placed, I am happy to have been selected by the Emperor Napoleon to renew to your Majesty the assurance of his friendship. France is the most ancient and the most disinterested of the allies of the Sublime Porte; her sincerity cannot be called in doubt. France does not fear war. Faithful to the support of the principles declared by the Emperor Napoleon himself, France desires peace; but she desires it durable, loyal, and honourable for herself and her allies. For that object the Emperor Napoleon, in concert with the powerful ally the Queen of Great Britain, has sent his fleet to the East. Confiding in the reiterated assurances of the Cabinet of St. Petersburg, he still hopes that the difference which has arisen between the Sublime Porte and the Court of Russia may be smoothed down; and that this temporary trouble, in bringing forward clearly the question of the integrity of the Ottoman Empire, will only serve to consolidate, on more solid foundations, the peace so necessary to the maintenance of the peace of the world. The Sultan may be certain that the Emperor Napoleon, who comprehends so well the wants, sentiments, and grandeur of his throne, will not refuse his support to your Majesty; and I consider myself to be the faithful organ of my august master's will, in giving you this assurance. I seize on this occasion to express to your Imperial Majesty my ardent desire to contribute, with all my efforts, to the maintenance of the old and friendly relations which France has always kept up with the Sublime Porte, and I place at the feet of your Majesty the homage of my profound respect.

The Sultan replied as follows to General Baraguay d'Hilliers:—

I have always relied, and I rely in the present crisis, on the material and moral support of my ancient allies, France and Great Britain. France and the rest of Europe have the right to insist on peace. It, too, desire peace; but only if it can be had without prejudice to my sovereign rights and the independence of Turkey. At present no arrangement is possible without the entire renunciation of the pretensions put forward by Russia, and without the immediate and complete evacuation of the two Principalities, which are part of my empire.

General Baraguay d'Hilliers was accompanied, in addition to his staff and the personnel of the embassy, by Vice-Admiral Hamelin, commanding the French squadron, Rear-Admirals Jacquinot and Le Barbier de Tinan, and several captains; to all of whom the Sultan evinced the most perfect courtesy and cordiality.

General Baraguay d'Hilliers afterwards conferred with the Turkish Ministers and Lord Stratford. The staff officers who accompanied the French diplomatist have already quitted Constantinople. Colonel Fleury, with his aide-de-camp, is gone to Batoum. Lieutenant-Colonel Lavoix and Messrs. Berton and Houche, officers of engineers, are gone to Schumla and Widdin.

RUSSIA.

The effect produced in Russia, and especially on the mind of the Emperor Nicholas, by the intelligence received by the last mail from the frontiers of the Danube and the Caucasus is still imperfectly known to the west of Europe, but the Emperor himself appears to have been alternately irritated and depressed—annoyed by the evident failure of his political schemes and military operations—irresolute in the adoption of measures sufficiently decided to carry on the war on a grand scale, or to conclude a lasting peace. The army in Poland, contrary to the accounts which have been current, has not moved, and has received no orders to move; but the process of recruiting is carried on this year in Poland with peculiar violence and barbarity; the number of conscripts required has been increased; several individuals have been seized even in their own houses and pressed into the Imperial ranks for military service for twenty-five years. If the army of Poland is really intended to move southward, its place must be immediately supplied, and probably the Imperial Guard would advance to the western frontier.

The inglorious commencement of the war, the critical position of the Transcaucasian provinces, the increasing alienation from Russia of all the European Powers, and the scarcity of money, which begins to be felt—are said to produce a very unfavourable effect on the Emperor's mind. At the most critical moment of his reign the confidence which existed between himself and his oldest counsellors, and even his own family, is shaken and impaired. His conduct is wayward, his policy unsettled; and we hear no more of that popular enthusiasm for war in Russia which was said to be urging on the Government to the most violent measures.

It has been ordered that forty officers of his Guard shall proceed to Wallachia, and do duty in the various regiments.

The following is the official (Russian) despatch, announcing the Russian successes in the Black Sea: -

The Russian steam-frigate *Wladimir*, cruising in the Black Sea, took the *Berouss Bachri*, an Egyptian war steamer, of ten guns, after an obstinate resistance. The Russian war-steamer *Besarrabia* took a Turkish steamer, laden with copper, belonging to Government. Both prizes were taken to Sebastopol.

PORTUGAL.

The rumours of insurrectionary movements on the part of the Miguelites in the provinces are not confirmed, and are believed to be without foundation. When the last advices left Lisbon, no opposition was manifested to the Regency of the King Consort.

AMERICA.

By the steamer *Pacific* we have advices to the 26th ult. She has brought 587,000 dollars in specie on freight.

There had been great mortality in the packet-ships arriving at New York since last advices. One of the ships *William Tapscott, American Union, Emma Fields, Centurion*, and *Calhoun*, in the Cadiz had been 65, 80, 13, 42, and 54 respectively; the *Corinthian*, from Havre, 41 deaths; the *Statesman*, from Antwerp, 25; the *Delaware*, from Bremen, 15; and the *Gottenburg*, from Hamburg, 27 deaths.

The steamer *Washington*, from Bremen and Southampton, arrived at New York on the 24th ult. The packet-ship *Constellation* arrived at New York, from Liverpool, on the 25th ult., and was placed in quarantine, having a large number of passengers ill up with cholera: 100 passengers died on the passage. The *Hibernia*, from Liverpool, lost thirty-three passengers from the same disease.

A dreadful conflagration had occurred at New York, in Washington, Jane, and Troy-streets, on the 17th ult., destroying upwards of 500,000 dollars worth of property, and rendering many families houseless.

The new ship *Great Republic*, of 4555 tons, had sailed from Boston for New York to load for Liverpool.

A Special Cabinet Meeting had been held at Washington on the 25th, when the President's Message was read over for the first time.

It is understood that the estimates which will be presented to Congress will show a material reduction over those presented last year.

A good deal of feeling had been expressed at Washington in consequence of Mr. Crampton, at Jullien's Concert, remaining seated whilst "Hail, Columbia!" was being played, the rest of the audience having risen from their seats.

The news from Europe, per Canada, had depressed the New York Stock Market. Most descriptions of Stock declined.

PASSENGERS FROM AUSTRALIA.—The first of several actions at law for non-fulfilment of contract in bringing home passengers from Australia, has been decided, in the Court of Common Pleas, in the case of Smith, v. the Australian Royal Steam Mail Navigation Company, as that company. The case lasted four days, and the evidence went to show that the passengers had not the berths they ought to have had; that the provisions were bad; and the cabins not kept clean or properly ventilated. The jury having given a verdict for the plaintiff, the Lord Chief Judge said all the cases were alike except two, and in those two man and wife were plaintiffs. In each of the ordinary cases the verdict would be for £50, but would be £70 for man and wife. In the seven cases which were entered on the cause list, the jury were then sworn, and returned verdicts in accordance with this decision—Mr. Morgan and wife, £70; Dighton, £50; Westbrook, £50; Wheatley and wife, £70; Lax, £50; Page, £50; Evans, £50. Mr. Sergeant Byles said the verdicts on the whole eleven actions amounted to £610, and he supposed that the company had received for the passage-money of these persons; so that they had carried them safely 12,000 miles for nothing, and had given them money besides.

THE RUSSIAN NAVY.—The efficiency of the naval power of Russia may be judged of to some extent by the following extract from a letter from Portsmouth, on Monday, which says:—"Russian corvette, *Navarin*, 22, the fine part of her copper ripped off, and commenced caulking. How she kept afloat is a mystery; her old caulking came out like rags with the copper from the seams like rotten paper; and as to the caulking mallet, they went clean in to the beam at first blow, to the astonishment of our caulkers, who imagined they should find their way inside the vessel. We will vouch for it that four times the quantity of oakum will be required over and above that in four our own ships; and if these vessels now in our dockyard are specimens of the general condition of the Russian fleet, they will be annihilated at the first broadside from either French or English line-of-battle ship."

STITCHES IN A COAT.—There are, according to a statement made by a tailor in Boston, 252,483 stitches in a coat—viz., basting, 7824; in the edges of the coat, 4890; felling the edges, faces, &c., 7414; out of sight, in the pockets, &c., 1893; in the collar alone, 3036; seams, 5359; button-holes, 1450. A coat takes two days, journeyman's hours, to make.

WRECK OF THE "MERIDIAN."

Of this painfully-interesting catastrophe, which occurred on the 24th of August last, on the south-western point of the island of Amsterdam, in the Indian Ocean, we have been favoured with the following narrative by one of the passengers, the two accompanying illustrations are from lithographs, published at Port Louis, Mauritius:—

On Saturday, June 4th, the ship *Meridian*, Captain Richard Treseda Hernaman, left Gravesend with a full cargo of merchandise, together with twenty-six first-cabin and fifty-eight second-cabin passengers, consisting of men, women, and children; and a crew numbering of twenty-three, but in reality consisting of only fourteen working seamen, including the Captain and three mates, the other being employed as cooks, stewards, &c; and one sailor, who had rheumatic fever before leaving, and who continued ill all the voyage. I may mention that the second mate's watch consisted of only two men and a boy to work the ship. It will thus be seen that the ship was not properly manned; and often the passengers, of their own accord certainly, had to lend their assistance in pulling the ropes; but, of course, this they did only in fine weather: when rough, and their help more needed, they were absent. The provisions were of a very inferior quality. The ship was most certainly a good one, a very fast sailer, and the Captain born an excellent character, zealous in his profession, and anxious his ship should outsail all others. His ambition proved our ruin, for on the day we were wrecked we passed the *John Sugars*, for Sydney; and, from our Captain's anxiety to beat it, he was induced to steer in such a way as to run us on the island of Amsterdam, steering, only half an hour before we struck, ordered the man at the wheel to alter the course a point—thus very alteration proved the our destruction, for if the course had not been altered, we should have been from twelve to fifteen miles clear of the island; this fatal error he paid for with his life.

Our voyage, until the fatal night, was a good one, our ship having passed, with one exception, every vessel we came up to, giving great satisfaction to all on board, as we fully expected to make a quick passage to Sydney. I now refer to my journal

August 24th.—A boisterous, stormy morning, with rain, blowing a strong gale, which commenced at half-past three a.m., during which hour we were disturbed by the Captain ordering out all hands to take in sail. As this job, to who were in bed, there was nothing to indicate the necessity for the precaution, as everything was quiet, but about the time of an hour after, a squall came on, and suddenly the wind was heard blowing with great violence; the sea running high, and the ship pitching and rolling heavily. At this time we were sole only to our Captain's anxiety to steal, until six a.m., when the main-top and fore-top sails, both double-reefed, were hoisted; at noon the fore-sail, reefed, was set. The gale continued blowing all day; and we were going the right course at ten knots per hour.

Our Captain told us we should not now see the island of St. Paul's as expected, but Amsterdam instead. To-day our lat. was 38 15, long. not taken. The lat. of the day before was 38.50, long. 74.20; this I had from his own lips, as we were alarmed by a great bumping, showing that we had run on a rock; the captain, who was in the cuddy at the time, immediately rushed out and ordered the poop; the children and passengers were thrown down with great violence on the floor from one side of the cabin to the other, all were much frightened, and great confusion ensued. On looking out, it was found we were on a reef of rocks, about a quarter of a mile from the island of Amsterdam, and we were shrouds driven by the force of the waves close in shore. Although it was expected we should strike the island, yet no look-out had been kept; even when the watch was changed at six p.m., the second mate pointed out to the third mate what appeared to him to be a squall rising, but which proved to be the island, and notice was taken of it. The ship was launched on constantly with every wave; and the captain, [illegible] which [illegible] station) were lost, all the others eventually were rescued. When we first struck, the stern-post and rudder were carried away from their place—about the time the water into the stern cabins; [illegible] great sailor and, for short [illegible] broken by the force of the waves, and through [illegible] were poured into the cabin with each wave which was [illegible] the ill-fated vessel, and found its way into the stern cabins; but for this, and the ship remaining on one side, we should all have been drowned. The [illegible] passengers, who had scarcely time to get out of their cabin (the water suddenly rising to seven decks and nigh as their necks), were brought into the cuddy, where we remained in a most wretched state until half-past four or five in the morning; we had been recommended so to do by Mr. Leonard Worthington, our third mate, who, throughout the night, behaved in a most gallant manner; telling us, if we would only remain quiet till daylight he would answer for our safety; he likewise promised us that he would not leave the vessel until he had got us safe ashore, which he and a sailor named Snow accomplished in a most praiseworthy manner. Even this assurance of our safety could not allay the uneasiness we felt at our situation.

Prayers were offered up to the Almighty for our preservation, and I believe every one, thinking there was no chance of our being saved, made preparation for going to their last resting-place; but it pleased God this time to spare us. We continued in this perilous situation all night, expecting every moment the ship would go to pieces, from the continued bumping, and the immense quantity of water pouring upon us. At half-past one a.m., the vessel parted amid-ships; and, as soon as daylight appeared we prepared to leave the vessel; and as we did so, walking along the main-mast (which fortunately fell so as to form a bridge from the cuddy door to the shore), the waves broke over us, knocking us down on the rugged rocks, and fearfully bruising us.

August 25th.—When the day fully broke, our situation appeared most frightful, a perpendicular rock of 300 or 400 feet, hanging over our heads, with no apparent means of ascent, and the waves washing nearly up to our feet; thus it seemed we had only escaped one danger to be exposed to another, worse if possible—starvation. As the day advanced, the sailors returned to the wreck, for the purpose of getting stores; but, I am sorry to say, plunder appeared their chief object, and the scenes of drunkenness which ensued were most disgraceful, not among the sailors only, for even some of the passengers were also guilty of the same, showing how soon they had forgotten the mercy so lately bestowed upon them. We sat all this day on the rocks, nearly paralysed with the thoughts of our present danger, and of the loss we had sustained—grieved to see the ship we had been so proud of, breaking up before our eyes. On examination, it was found that only three lives had been lost, which is wonderful considering the large number of children who were on board.

August 26th.—We passed the last night on the rocks in great fear that the sea would flow up to the spot on which we rested, and in much anxiety, for it was evident that unless we could get on high ground we should certainly be washed off when the wind was blowing from the south-west. By some means, one of the passengers ascended the cliff the morning after the wreck, proving the possibility of getting up; the sailors to-day looked out for a proper place to fix ropes, and were successful in attaching them to rocks on the top. Some of the passengers went up by means of them, intending to pass the night there; and they set on the reeds for the purpose of giving notice of our situation to any vessel that might be passing. The island is covered with reeds of from five to eight feet high, and the fire, at times, extended more rapidly than they had anticipated, put their lives in danger; the light from the fire was to us below on the shore most terrific. Rations were given out to all this morning for the day, consisting of one pound of pork and a red herring for adults, and half of the above for the children. On board the ship, as cargo, were a great many pigs red and black, which, on this occasion, were for the good-diggers; many of these were saved on the first day, and were of great service to us all; but gave us a most curious appearance, all wearing them men, women, and children. A great number of ready-made trousers were also saved, useful to the women as well as the men.

August 27th.—The night was again passed by us on the rocks; but, in the course of this day, we ascended the cliff by means of the rope—a most difficult task, but which was accomplished without accident, by aid of the sailors. They drew the women up by means of a rope fastened to the waist by passing a handkerchief round the petticoat, and then, pushing themselves up—a distance of at least 300 feet of nearly perpendicular rock. On reaching the top we found the island almost flat for about two or three miles, covered with reeds; and then there arose a very lofty mountain, covered also with high reeds. Fortunately, we found a penny of fresh water whilst on the island, although in the summer time there is most probably a scarcity; during our stay there was a constant rain on the mountain top, which supplies the numerous small streams. We all passed the night again in the open air, sheltered as well as we could from the wind by the reeds, but exposed to the rain.

August 28th.—This is Sunday; but we had no service to-day, as usual on board our ship; in the evening, however, we were invited to join some others as prayer which was offered up for our preservation. During the day, numbers of young birds were picked up, destroyed by the fire; they were roasted together and cooked, and then divided amongst all, about one-third of a bird to each; which, on account of our present situation, was very acceptable. One of the party who went out with his gun to endeavour to get some food, on his return, reported that he had seen a ship, but very far off. This day a tent was erected for the women and children to pass the night in, the men sleeping outside, but, during the night, a gale came on which blew the tent down, causing great confusion.

August 29th.—The island proves to be very wet, there having been rain every day and night since it has been our lot to be here. A vessel was spoke to-day (the *Monmouth*), as we afterwards learnt, and the same that was seen yesterday, which caused much excitement amongst us; fires were lighted to attract attention, and signals were hoisted—we all prayed most thank God for they were answered; and we hope yet to leave this desolate island. They saw us, and neared the land, hoisting signals in return to ours, to show they were aware of our situation; but the sea was too high for us to launch a boat, impossible for any boat to live in the surf; therefore she stood away; we hoped, however, to see her again. Most probably she was a whaler, as there are numbers of whales blowing near here. She stood the night again on the open sea; heavy rain. There was a gale during the night from the south-west, and the sea ran so high as to wash away many of the stores which had been preserved from the wreck, and which had not yet been removed out of danger.

August 30th.—Our rations to-day were reduced to half a lb. nut, a few raisins, and half-boiled pig, as the loss of stores last night had much reduced them. There is much apprehension of our not being able to shoot each other, the effects of drinking from a cask of brandy, which unfortunately was saved from the wreck.

August 31st.—Finding we had food only for three days, our rations for the day were half a biscuit and a few preserved apples. About 10 this morning we were agreeably surprised to see a boat approaching the shore near our encampment, and the persons in it gaining a footing on the rocks along the cliff to the eastward; this caused great excitement among us; the chief of our delivrance created such anxiety that nearly all started hurriedly away without any provisions, and proceeded to the spot, a short distance to go, but we were sadly disappointed. We found the road most rugged and most difficult to pass over from the large rocks lying in our way, and from the necessity of keeping so near the edge of the cliff, in many places walking was rendered most dangerous. One of the party we travelled with had a tin of red herrings with him, of which we each had one for supper when we lay down at night, taking care to fix on a spot near some water.

September 1st.—We started again at sunrise, and had half a herring for breakfast, no biscuit, and we got one. By night another four miles of the rugged road in one place having to pass over a very steep and high ridge of rocks, the reeds in other places being higher than our heads; the only vegetation besides the reeds and a few trees seen on our journey so far were wild parsley and sow-thistles. As we travelled on we found the habitations of vegetables, for we met with very little water during the early part of the day. While we were stopping at a watering place, we were overtaken by an English sailor named Smith, who had been some years residing in the island by the captain of the ship we had formerly seen, to our assistance; he reported the vessel to be an American whaler, the *Monmouth*, Captain Isaac Ludlow, of Long Island. Smith kindly assured us that the captain would not leave the island until we were all got off in safety, he was very kind to us, and tried to keep our spirits up, and desired us to make all possible haste. We thanked God for his mercy in thus sending him, and marched on our toilsome journey in far better spirits from the kind treatment of Smith, who did all he could to help us. He told us to go on to the northern side of the island, as no boat could land us at the place where we were wrecks. The distance, however, was too far for us to reach that day, we found, to be exhausted; we therefore looked out for a comfortable [illegible]

September 2nd. We [illegible] having had any food [illegible] three p.m. yesterday. [illegible] being obliged to [illegible] women and children [illegible] and a party there [illegible] encamped near [illegible] several [illegible] gave them by some of our sailors who were returning for stores) boiling in a teapot, they gave each of us a spoonful, this being a l we had that day excepting water. As the place appeared well sheltered from the wind, we determined to remain here for the night.

THE WRECK OF "THE MERIDIAN," OFF THE ISLAND OF AMSTERDAM, ON THE MORNING AFTER THE CATASTROPHE.

steward and the child brought on board safe. The intention of the Captain was to take us to the Mauritius this being the nearest port.

September 8th.—Until to-day we have been beating about the island, waiting for the arrival of the sailors with the sick man, who was brought on board this afternoon. Sail was immediately made for the Mauritius.

I must now say something of the island, and of the kindness of all connected with the *Monmouth* to us. We were wrecked on the southern side of Amsterdam, the worst part, and where there is always a surf breaking on the rugged shore; beach there is none; nothing but immense blocks of hard stone, which have from time to time fallen from the cliff. The island is of volcanic origin: indeed, I am informed by Captain Ludlow he saw smoke issuing from a crater just over the place where we were encamped; and as we travelled along we found all the rocks on the surface bearing every appearance of having at some time been in a fluid state. The stones are very heavy, and contain much iron.

We did not see any animals on the island, but plenty of birds; with the exception of reeds and rushes, there was little vegetation; but there is a good peat, which was exceedingly useful to us in making the fires at our various encampments. The island is about 26 miles in circumference, and the part to which we were directed to move (the northern side) is the most pleasant, being much warmer. At this part only did we see any trees. The species was unknown, but one of the sailors thought it was the dog-tree, a bastard species of the mangrove. On this side, too, there is plenty of fine fish to be taken a short distance from the shore, and on the rocks plenty of limpets; but, as we had no boats to take them, to us they were useless. Captain Ludlow, on our arrival on board his ship, sent one of his boats out to catch some, and shortly returned with plenty of large fish, taken with a hook and line, and very good eating they proved.

The kind way in which we were treated by Captain Ludlow can never be effaced from our memories. But for his timely aid, 105 British subjects would have died a miserable death from starvation. We can look upon our rescue but as a most merciful interposition of Providence; for the *Monmouth* was the only vessel whaling near the island last year, and her arrival there this season was full a fortnight sooner than usual. We who have lost our all by the wreck, are unable to recompense him and his crew as they deserve for the loss they have sustained by assisting us; we trust, however, that the British Government, and the people of England, who are deeply interested in the colony of Australia, will not allow the opportunity to pass of justly rewarding such a noble act of humanity, performed by one of our American brethren. As regards the crew of the *Monmouth*, who are all, with one exception, Americans, we found them most kind and obliging to us all; and, although our rescue was effected at the expense of their whaling, yet for us they were willing, both captain and crew, to sacrifice their time and profit. Honour to them all for it! and may they never be in a situation to require the same assistance! Ours is not the first ship which has been cast on the coast of Amsterdam; for, I understand, the *George*, of New London, United States, was wrecked there twelve or fourteen years ago; and the *Lady Munro* was also lost there, with all on board, except two convicts, who were going from the Mauritius to Botany Bay, about twenty years since.

September 26th.—This morning, at half-past six, we saw land, and arrived at the outer harbour of Port Louis at half past five p.m., when we cast anchor. The doctor and an inspector came on board to inquire into the state of our health. Finding it good, a red flag was left with us to hoist. On the following morning some of the passengers went on shore in the ship's boats; and in the afternoon the Government sent a steamer to take off the remainder, a place having been arranged at the Lazaretto for their reception. Provisions were found for them at first, then an allowance of money was given to each instead. Much good feeling was expressed for our destitute condition: money and clothes were liberally sent down to be divided—the greatest kindness being shown us by all.

PASSENGERS OF "THE MERIDIAN" ASCENDING THE CLIFFS OF THE ISLAND OF AMSTERDAM.

Among others, I may mention the names of Messrs. Alloway, George Robinson, Channell, Henry Brun, and the Freemasons living here—each person striving to assist us in the best way they could. Many others were equally zealous in relieving our necessities, but their names are unknown to me. Although we have undergone great hardships and privations, still the Christian charity we have since experienced fully reconciles us to our lot; and may God reward them for the relief they have afforded us.

NEW AUSTRALIAN CLIPPER SHIP "SPEEDY."

The fame of the *Marco Polo*, *Indian Queen*, *Sovereign of the Seas*, and other fast sailing American-built ships, will shortly be contested by the new British clipper ship whose portrait we have engraved this week.

The *Speedy* has been built at the yard of Messrs. Cox and Son, of Bridport, on lines said to be unsurpassed by any vessel afloat; her appearance in the London Docks has excited much interest among the seafaring community, and the confidence of her admirers is shown in the fact that heavy wagers are pending upon her accomplishing the voyage to Sydney in a less period than any other sailing ship has yet done. She is a noble vessel, of 1000 tons register, and 1500 tons burthen, and will carry a limited number of passengers at one uniform rate—all accommodated on the saloon or upper deck, the whole of the lower part of the ship being devoted to freight. Her qualifications appear to us equal to those of any vessel we have yet seen; every appointment both for passengers and crew, being most perfect. She has a poop of unusually large extent; an elegant saloon; is very lofty between decks; and her cabins, both in size and accommodation, are of the highest order. Her brokers, Messrs. Hotchkin and Mobbs, have spared no pains to render the vessel as comfortable aboard as she is outwardly beautiful in mould.

Messrs. Prowse and Co., of Liverpool, the owners of the *Speedy*, are the proprietors of many of the finest liners afloat. The *Speedy* is appointed to sail on the 10th inst., and it will be both curious and satisfactory to the south country builders, if the palm of success in the construction of clipper-ships should after all be awarded to Bridport. She is expected to make the passage to Sydney in seventy days; and her dimensions are as follow:—Length from stem to stern post, 192 feet; over all, 202 feet; beam, 33 feet; depth of hold, 21 feet; poop, 62 feet long. She is built of teak and English oak.

NEW AUSTRALIAN CLIPPER, "SPEEDY."

PRINCE MENSCHIKOFF.

THE RUSSIAN MINISTER OF MARINE.

The name of Prince Menschikow (pronounced, and written in English, Menschikoff) has been familiar in men's mouths in connection with the origin of the dispute between Russia and Turkey. From the nature of his original employment in connection with that question, it might very naturally have been inferred that he was attached to the diplomatic service. Such, however, is not the case. It is the custom in Russia to employ public servants in various capacities—just as, until within a comparatively recent period, was the case in this country. The reader of our domestic history will have met with numerous instances of statesmen suddenly called to the command of fleets, without having had the previous training necessary, according to the ideas of the present day. In Russia these anomalies exist, and are, indeed, a part of the system.

The Prince is by profession (as far as any one in Russia can be said to have a distinct profession) a sailor. All his real laurels have been won as an administrator of the Marine of Russia. Yet was he taken, some quarter of a century ago, from his ships in the north and from his government of Finland, to the command of troops on the Danube: nor was his mission to Constantinople, whence have arisen so many evils, the first of the kind in which he had been engaged.

Prince Menschikoff enjoys the honour of descent from the first Count and the first Prince *created* by a Russian Sovereign. Till then, the dignity of Count was unknown, and that of Prince was only borne by the descendants of Rurik. The honours of the Menschikoff family were won in the reign of Peter the Great, when Alexander Menschikoff, the son of a peasant, and born in the neighbourhood of Moscow, attained to great distinction in the state. His early occupation accorded with his birth, for he sold pastry for a confectioner in the streets of Moscow. His first advancement in life is variously accounted for. It is said that he was instrumental in unmasking a conspiracy by the Strelitz against the Government; while it is also asserted that Lafort, having accidentally discerned the quickness of his talents, took him under his protection, and determined to educate him for the public service. Menschikoff accompanied Lafort in the great embassy of 1697. He proved his aptitude for public affairs; and, on the death of Lafort, succeeded to the confidence of the Czar. Even at this period of his life, that passion for money, which caused his ultimate downfall exhibited itself to an extent which called forth public inquiry into his peculations. The Empress Catherine sub-sequently befriended him, and titles showered thickly upon him. He was raised to the post of First Minister, was made Field Marshal for his exploits at the battle of Pultowa, Duke of Ingria, and Baron and Prince of the German Empire; and also received Orders from the Courts of Copenhagen, Dresden, and Berlin. He was raised to the dignity of a Russian Prince on 30th May, 1707. On the death of the Czar, it was chiefly through Menschikoff's influence that Catherine was raised to the throne. Scandal asserted that he had preceded, and that he now again succeeded Peter the Great in the favours of the Czarina. His ascendancy during the reign of Peter the Second was at its height. At one time he had succeeded in betrothing his daughter, Maria Menschikoff, to the young Paul the Second; but the interference of the Dolgorooney family prevented the marriage. Menschikoff, who had only just before been invested with the title of Generalissimo, was now destined to suffer a sad, but in Russia a very common, reverse. Fresh instances of embezzlement of the public funds having been brought home to him, he was suddenly hurled from power, his vast estate confiscated, and himself condemned to perpetual exile in Siberia. For the rest of his life he practised great self-denial; and so frugal was his expenditure, that out of an income of ten roubles a day, he contrived to save sufficient to construct a church, in which, it is said, he himself worked as a carpenter. He died in 1729, in the forty-first year of his age. His crowning vice was avarice, which led to his mal-appropriation of the money of the nation; but his courage, and his capacity for large and difficult enterprises, placed him in the foremost rank of Russian statesmen. Within a year after his death, his son Alexander, who had succeeded to his titles, was recalled from exile.

We do not read of any other very distinguished member of the family till we come to the present Prince; but, according to the general consent of writers on Russia, he amply makes up, by his abilities and services, for any deficiencies in his immediate ancestors.

We have no record of the exact date of Prince Menschikoff's birth, but believe it to have been in the year 1794 or 1796. After having been subjected to the usual course of education in Russia, he was prepared for the naval service, in which he obtained his first experience. He gradually rose in the confidence of successive Emperors, till he was appointed to the post of Minister of Marine, which he filled during the reign of the Emperor Alexander, and still holds to this hour. If Prince Menschikoff had never done more to cause his name to be remembered than discharge, as he has done, his efficient duties, he would still have been inscribed on the roll of fame. Those who know him best, speak of him as an administrative officer of extraordinary ability, and as one of the most remarkable men of whom the annals of Russia have any note. As a statesman, he is even pronounced to be a man of genius—if any Russian contemporary minister or statesman be entitled to that designation. It is to him that Russia owes the resuscitation of her navy, which, during the reign of Emperor Alexander, had fallen into decay and disrepute. Even before the death of that Monarch, Prince Menschikoff had effected such changes and reforms, that he received, in the most public and honourable manner, the special thanks of the Emperor Alexander himself for the service he had then rendered to his country; and the best proof that his successor could afford of his participation in those sentiments was given when he continued him in that appointment, which, as we have said he has held ever since. He is Admiral in the Russian service, and adds to the post of Chief of the Department of Marine, that of Governor of Finland. This, also, he has held for many years.

PRINCE MENSCHIKOFF, THE RUSSIAN MINISTER OF MARINE.

We have stated that it is the custom in Russia to employ public men in different branches of the public service indiscriminately. This happened to Prince Menschikoff soon after the accession of the Emperor Nicholas to the throne. He was sent by his new Sovereign on an embassy to Teheran, to propose to the Shah of Persia an exchange of territory. He was not successful in his mission, but he received the thanks of the Emperor for his services. He had thus been employed in the naval department, as a civil governor, and as a special ambassador; he was now to be engaged in a service purely military, wherein, it must be added, he was not supremely successful.

In the campaign of 1828, on the Danube, Prince Menschikoff took an important part. The plan of the Russians was to reduce Varna; after that, Shumla; and then to push on towards Constantinople. So important had these operations been considered, that the Emperor Nicholas had accompanied the army, which he only quitted on its being encamped before Varna. Prince Menschikoff took the command in person, and almost immediately afterwards (on the 2nd August) succeeded in carrying the position of the enemy in advance of Varna, from which it was necessary to dislodge them ere commencing the actual siege. The Turks fought with a bravery that puts into the shade their recent exploits. The bayonet was new to the Turkish soldiers; yet they charged the Russians at the point of the bayonet without shrinking. Their general operations were so well conducted, that, although, at the close of a series of murderous conflicts, the Russians were enabled, after great loss, to obtain a parallel which would render their bombardment of Varna more effectual, they were many times in danger of total repulse. Prince Menschikoff was compelled to expose himself personally to danger, and was so severely wounded, that he was obliged to resign the command to Prince Woronzoff.

After his recovery, and after (we believe) assisting at the conclusion of the treaty of Adrianople, he was sent to the East, to the scene of operations, where the General, who now supersedes him, has since gained laurels as an administrator and a general. Here he distinguished himself by taking the fort of Anapa, on the Black Sea; an exploit which raised him higher than ever in favour of the Emperor, as it was of immense service to the Russian operations against the Circassians and the other tribes on the coast.

Prince Menschikoff seems now to have returned to the capital, and to have resumed his functions as Minister of Marine, and we hear no more of him till he again appears on the scene as an unsuccessful Ambassador. The stirring events of the last few months appear to have obliterated from the public mind the immediate origin of the present war, and the personal connection of Prince Menschikoff therewith, although the circumstances are forcibly recalled by the bold rumour that he is disgraced by his Sovereign for his mismanagement of the negotiation. It is said that the Czar now turns round on his too obedient instrument, declaring that Menschikoff had promised him success with Turkey if he would let him play the part of the bully. The past conduct of Nicholas, even his most recent proclamations, discredit this story.

The proceedings of Prince Menschikoff reflect more credit on his talent (according to Russian ideas of ability) than on his sense of honour. He appears to have gone to Constantinople with a pre-arranged determination to provoke a quarrel, and with a concealed purpose, which, if bad in itself, was all the worse for being so concealed. His demeanour, on arriving at Constantinople, was marked by studied insult to the Sultan and his Ministers, and his conduct generally excited the disgust of the representatives of other powers. As, however, it was not the desire of the Porte, acting under advice, to give the Czar the cause of quarrel he wished for, the demands of which Prince Menschikoff was the bearer were gravely considered, and such as were reasonable were at once acceded to. The affair was thus supposed by the Sultan and the Ambassadors of other Powers to have been brought to an amicable conclusion; but such a termination was not consistent with the instructions or the plans of Prince Menschikoff. Whether he exceeded his instructions cannot yet be known. Certainly, at one time, when the indignation of Europe was first aroused, there was talk of his being disavowed by the Emperor; but it came to nothing, and, if it ever was seriously entertained, the Emperor has since so compromised himself by his own subsequent acts, as to have been deprived of the power of exercising this convenient privilege of Kings in difficulties. There can be little doubt that Prince Menschikoff went to Constantinople for the express purpose of picking a quarrel with the Sultan, and so of furnishing an *exparte facto* excuse for the long-meditated aggression of Russia on the Danubian Provinces. No sooner had the original proposals of the Porte been acceded to by the Turkish Government (which behaved throughout with admirable honour and moderation), than new ones were put forth, wholly incompatible with the Sultan's rights of Sovereignty over his Christian subjects. In vain did the Sultan issue a new charter of freedom to those subjects; it was not their freedom Prince Menschikoff was sent to obtain, but an excuse for marching an army into the Danubian provinces, it being supposed that the relations of England and France were such as to prevent their interference. Prince Menschikoff played his part with a wicked consistency, a mixture of audacity and mendacity, for a parallel to which we must look to the proceedings of some of the envoys of the elder Napoleon, when he sought pretexts to invade a neighbour's dominions. At length, on the 5th of May, matters being supposed to be ripe for an invasion of the Principalities, Prince Menschikoff sent in the Emperor's ultimatum. He demanded for the Emperor the Protectorate of the Greek Christians in Turkey, and a special treaty, according to the Russo Greek Church in Turkey all the rights and privileges ever demanded for it, especially as to the "Holy Places." Further, the Greek Patriarch at Constatinople, who hitherto had been removable at the pleasure of the Sultan, was now to be removable only

THE BALKANS.—SKETCHED FROM BELOW GALATZ.—(SEE NEXT PAGE.)

for proved high treason or gross misconduct, and then not without the consent of the Czar! Such insolent pretensions were assuredly never put forth before by any one Sovereign against another; and it required no ordinary Muscovitism in Prince Menschikoff to induce him to submit to the disgrace of fathering such iniquity. The unanimous advice of the friendly Ambassadors led the Sultan to reject these demands, on the 13th of the same month; and Prince Menschikoff, having thus, by his gross personal misconduct and his impudent demand, provoked the semblance of the desired quarrel, at once left Constantinople. Nicholas immediately sent his troops into the Moldo-Wallachian provinces; and by publishing a defence of his pretensions, which was an insult to the sense and feeling of mankind, effectually exonerated Menschikoff from all blame, except that of having been the base and brutal instrument of undisguised tyranny and oppression. The Prince's part was now played; and we presume he returned to St. Petersburg, once more to put himself at the head of the Department of Marine.

The latest accounts from St. Petersburg, however, state that Menschikoff has fallen into disgrace with his Imperial master, who, as a matter of course, attributes to him the whole of the annoyances and difficulties which have arisen between him and the Sultan, and the disgrace and dangers which may follow. It is added that the Emperor was constantly assured, in the commencement of the quarrel, by Prince Menschikoff, that he had only to menace Turkey to obtain all and even more than he desired; that the Western Powers would not only afford no succour to the Sultan, but would leave him exposed to all the danger he would necessarily incur by a refusal; that if France manifested any wish to come to his aid, she would be deterred from following it up by the certainty that she would be left alone in her sympathy; in fact, that there was not the slightest chance of Turkey showing any serious resistance, if Russia spoke loud enough to her. The Emperor Nicholas, thus deceived on all hands—though, no doubt, his advisers believed all they said—followed up his formidable preparations, menaced his best, and at length found himself in a position which has every day become critical, and from which there appeared soon no escape without humiliation.

THE BALKAN, AS SEEN FROM THE DANUBE

BELOW GALATZ.

The view from the flat and marshy shores of the Danube, to the south—to where

> The Balkan cliffs, like giants, stand,
> To sentinel enchanted land,

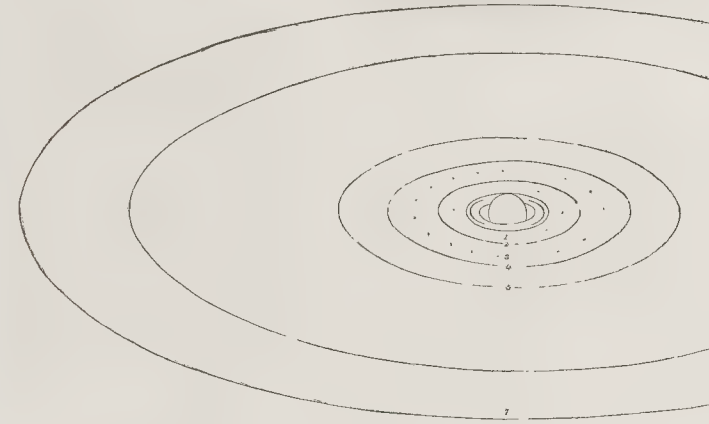
is one of the most imposing and suggestive to be met with in the whole wide field of European travel. From the lofty heights of that rocky wall (the Hæmus of the ancients) twenty-three centuries of known history look down upon us; and its dark and fearful defiles (the name signifies "a difficult defile amongst rocks") are still the same as when Darius marched through them, from south to north, nearly five hundred years before the Christian Era;—the same as when Diebitsch marched through them southward but a quarter of a century ago. During all this long lapse of time the broad and rich delta lying between the Carpathian Mountains and the Balkan Range has lain almost unimproved, its valuable resources almost unknown to the rest of Europe; and the mighty river, upon whose waters they might have been borne for export to all parts of the world, has become choked up so as to be almost impassable.

At a recent meeting of the Geographical Society, a paper by General Jochmus, Ex-Minister of Foreign Affairs to the Germanic Empire of 1848, communicated by Sir R. Murchison, was read, describing a journey undertaken in September and October, 1841, in the Balkan; with an account of the various defiles through it, and a comparison of the routes pursued by Darius, Alexander the Great, and General Diebitsch. General Jochmus, in this interesting document, states:—

So far, the general line of operations of Darius appears to be clear. He crossed the Bosphorus on a bridge of boats, connecting the two continents at the site of the present new castles of Asia and Europe (Gibbon and Herod., Melp. iv., sec. 87), encamped successively at the sources of the Tearus (Banarhissar) and on the banks of the Tcksi or Artesius (at Dewletagatch), and, following the direction of Burgas and Aïboli, and submitting the sea towns, he passed afterwards the Bs kan by the defiles parallel to the sea coast, from Misivria to Iowan Derwah, moving Athus from south to north by the same roads which were chosen by Generals Roth and Rüdiger, and by Marshal Diebitsch himself, from north to south, in 1829. The Russians, also, in 1828, and Darius, about 2300 years before them, passed the Danube "at that part of the river where it begins to branch off" (Melp. iv., sec. 89), that is, near the modern Lestacha.

The description of the defiles through the Balkan, given by the General, are so interesting, as additions to our geographical knowledge, and so important at the present juncture, that we extract a passage of some extent, slightly abridged:—

In order to reconnoitre the important line of the Hæmus or Balkan, which is so little known that the celebrated historian of the Turkish Empire, Herr Von Hammer, reduces erroneously to seven the number of the passages or defiles in the principal mountain chain, I intended to explore the whole ridge, from Cape Emineh (Emis Burn) to Tirnova, at the foot of the mountains between Schibka and Dranova. I have, therefore, traversed in zigzag, seven times, the principal chain of the Balkan, viz.:—From Misivria to Sudshuc, from Sudshuc to Achly, from Achly to Dobral, from Dobral to Carnabat, from Carnabat to Kasan, from Kasan to Selimneh, from Selimneh to Tirnova; and seven times the minor ridges of the Hæmus, viz., from Tirnova to Osmanbazar, from Osmanbazar to Kasan, from Kasan to Czalikavak, from Czalikavak to Koprikoi, from Koprikoi to Schumla, from Schumla to Faraivadi, from Faraivadi to Varna. Leaving Misivria, accompanied by a trusty guide of Sultan Efendi's, we crossed the low ground (marshy in the wet season) extending north of Misivria, towards the Greek village of Mousturkoi; and, having to our right the seals of Ajanas, at the bottom of a fine sandy beach, we ascended the steep vine-clad southern declivities of the Balkan, leaving, right and left, various pretty and picturesque villages. The highest point of the mountain chain above Monastyrkoi may be estimated at about 2000 feet; while the pass or dervend itself lies about 1200 feet above the sea, leading to Rana, four hours from Misivria; the latter two hours and three-quarters through thick forest, chiefly oak, crossed in different directions by roads, for the carts which take wood and timber to the neighbouring scalas of Misivria, Ajanas, Kozluck, and Erekly. The northern branch of the Kamshik is called the Akully, or Wise Kamshik; its floods being generally more tranquil, and its course wider. Both branches unite between Buyuk Chenga and Koprikoi, and form the ancient Pamyssus, falling into the Black Sea between the Black and White Capes (Aspro Bournou and Mavro Bournou). From Isinplu by Sadowa to Papsakoi, the gently rising road, on the left bank of the Kamshik, leads through the well-cultivated, tree-clad Balkan terraces. In the valley are numerous Turkish and Bulgarian villages, inhabited by a fine, sturdy, and apparently warlike population (especially the Musulman part). Beyond Papsakoi begins a splendid oak forest, and the ascent towards Kasan becomes steeper. We cross twice the meandering course of one of the affluents of the Kamshik, which runs down from Kasan, and at three-quarters of an hour before that town we enter a very strong and deep defile, at first magnificently wooded on both sides, the river running on our left. A little later we cross the torrent, and the mountain gorge now shows trees only on its western flank, whilst its eastern side presents a succession of naked, bold, precipitous rocks. The scenery is awfully wild and grand, but the road, partly hewn in the rock, continues practicable for carts, and measures still ten feet in its narrowest part. On leaving the mountain pass, Kasan is seen at a short distance, secluded in one of the most inaccessible vales of the Balkan, and situated in a mountain cauldron, into which descends from the northern or southern slopes of the mighty Hæmus lead only through defiles of such natural strength that a few determined men may arrest there entire armies. The industrious city of Kasan owes its flourishing and prosperous state to its municipal government, and to the circumstance that the Sublime Porte most likely ignores its very existence, whilst the *pro tempore* governor of the pachalik, probably too lazy to explore a rugged mountain region, is satisfied to know that a zabit, or police-officer, and under him a dozen of dervendshisor, guardians of the mountain passes, represent at Kasan the authority of the Sultan. The inhabitants of Kasan, who thus have secured a municipal independence, carry on very extensive coarse cloth (or abah) manufactures, together with the agricultural and pastoral pursuits connected with this industry. Kasan, whose immediate vicinity is rather bare of trees, though the mountains that enclose it are covered with the secular forest that covers the whole eastern Balkan, lies above that elevation where wine can be cultivated, but the wealthy inhabitants of the town have extensive vineyards near Papsakoi. All the houses of Kasan are tile-roofed; and although the general aspect of the place is not cheerful, the streets being narrow and irregular, yet comparative comfort, and a certain feeling of security and independence, is perceptible everywhere. A church, built in 1834, and embellished by a Russian eagle—a menzil chane, or post-office—and two schools, are the public buildings. The virtually independent community of Kasan has become, since the last Russian war, the national and intellectual centre of Bulgaria, in lieu of Tirnova (the residence of a Turkish Pacha), which, however, is always mentioned, with a feeling of veneration, as the ancient capital. The schools of Kasan furnish numerous and the best popular teachers for Bulgaria. Selimneh and its neighbourhood has suffered a good deal from the late war; but as the Russians kept a strict discipline, and have paid for all their requisites, they have remained very popular in the country. In the campaign of 1828, General Montresor had his head-quarters at Mr. Iowansho's house; and the latter explained to me the details of his audacious and successful march from Selimneh on Kasan. The Russian army, being in possession of Varna and Silistria, and having defeated the Grand Vizier in the decisive battle of Kulevdshi, had forced the Balkan on the 16th and 17th of July, by the defiles of Iowan Derwish to Misivria and its plains. Having established an additional base of operation along the sea coast from Varna, by Misivria, Aïboli, Burgas, and Sizepolis, Marshal Diebitsch beat the Turks at Aïdos, and then advanced on Selimneh, whence 4000 to 5000 men, with only four guns, under General Montresol, dislodged, on the 14th of August, one Soliman Pacha from Kasan, the possession of which place consolidated the insurrection of the Bulgarians of the Balkan, who had risen in favour of the Russians. Marshal Diebitsch then advanced safely on Adrianople, where he arrived on the 20th of August, and concluded there the celebrated peace of the 14th of September.



THE PLANET SATURN.

THE PLANET SATURN.

The magnificent planet Saturn, culminating now shortly before midnight, is, in respect of width of opening of his ring, and of meridian altitude, more favourably situated for minute and advantageous scrutiny, than he has been for many years, at least, in this latitude.

He will doubtless, therefore, be an attractive object to those who have good and powerful telescopes, even though they may not be, *par excellence*, astronomers. In respect of his satellites too, as he is, so far as we know, accompanied by a larger number than is possessed by any other attendant upon our Sun; and those, so varying in magnitude as to afford tests of the efficiency and power of almost every size of telescope, from the very smallest ever pointed to the stars, to the most powerful which has ever been constructed; he is an object of great interest to the votary of telescopes, as well as to the cultivator of astronomy, more especially.

But those not engaged in systematic and regular observation are often not sufficiently acquainted with the distances and paths of the satellites to be able readily to recognise and distinguish them from any fixed stars which may happen to lie near the planet. To render these easily recognisable is my present object; and it is at this time especially easy to do so, as none of the satellites can now be either eclipsed or occulted by the planet; and, therefore, they can at all times be seen by telescopes powerful enough to show them.

The accompanying Diagram represents the planet and his ring, drawn approximately to a scale, and the faint ellipses indicate the paths of the satellites in their revolutions round the planet, also in the same proportion, and numbered in order of distance. The view as indicated by the words "north," "south," &c., is that given by an inverting telescope. To prevent confusion from the closeness of the interior satellites, the orbits of two of them are pointed out only by dots, and not by continuous ellipses. The following table gives the proper names which have been applied to the satellites for the sake of distinction; their respective periods, or times of revolution; and their distances from the centre of the planet at the times of their greatest elongations (i.e., when they are in the line of the major axis of the ring east or west), expressed in equatorial radii of the ball or planet itself.

	Periods in days and decimals.	Distances Radius of ball=1
1. Mimas	0 943	3.36
2. Enceladus	1 370	4.31
3. Tethys	1.887	5 34
4. Dione	2.739	6.84
5. Rhea	4.517	9.56
6. Titan	15 945	22 14
7. Hyperion	21.297	28
8. Japetus	79.330	64.36

The most distant satellite, Japetus, is not included in the diagram, because its introduction would very much reduce the scale; and also because not keeping, like the others, in the plane of the ring, its position, without continued observation, is not so easily ascertained. By comparison of the table and diagram, which do not pretend to more than moderate accuracy, I think it will be evident that nothing more than a brief scrutiny in the telescope will be necessary (using the dimensions of the ball or ring mentioned as a scale), to identify pretty easily the respective satellites. Of course any point of light which may be in the field of view, yet obviously out of the delineated orbits, must be set down either as the distant satellite Japetus, or as a fixed star. If the former, he will be detected in two or three nights' observation by his slow orbital change of position; and the intrusion of stars of nearly equal magnitudes with the satellites, within their orbits, is not so frequent as to give much trouble.

Titan, as his name implies, is much larger than any of the others; it can be seen with the smallest astronomical telescope, and therefore may be instantly recognised. Rhea is generally the next in magnitude, but very much fainter. Dione and Tethys are smaller still; but often interchanging in apparent brightness, as they happen to be situated with respect to their apparent distances from the edge of the ring—the splendour of the planet having a powerful effect in diminishing the visibility of the closer satellites at their nearest approach.

In the present position of the planet, Tethys, when passing its poles, north or south, requires a fine state of atmosphere and a powerful telescope—*e.g.*, a 6 or 7-inch achromatic, or a 9-inch Newtonian, to show it well. The recently-discovered satellite Hyperion is not to be assailed except by the highest class of telescopes existing. Enceladus is a valuable test for a pretty high class of telescopes. Roughly speaking, this satellite requires, at its greatest elongation, a telescope of twice the diameter of that which suffices to show Tethys in the same position. And Mimas requires twice the diameter of that which suffices for Enceladus, indeed, it must be placed in the same category with Hyperion, and perhaps requires even finer definition of the telescope, to prevent irradiation from the planet quite extinguishing the satellite. Therefore, no telescope in which Enceladus is not easily seen under all ordinary circumstances, can be expected to afford even a glimpse of Mimas. Enceladus, I know, has been repeatedly seen with a refractor of 6-inch aperture, and with a Newtonian reflector of nine inches aperture; but these may be taken as extreme cases, and the telescopes are, perhaps, *chefs d'œuvres* of their respective artists.

If a diagram be made of the positions of suspected satellites on any evening, and a comparison with the drawing here given leaves any doubt whatever of their identity, the table of periods compared with the diagram of the next observation will probably at once resolve it.

Starfield, 28th Nov., 1853. WM. LASSELL.

The Ipswich Arboretum will be thrown open to the public next week, free of charge, but under certain necessary regulations.

DOUBLE FOG-BOW.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Ochtertyre, Crieff, N.B., 29th Nov., 1853.

I enclose a pen-and-ink Sketch to explain the phenomenon known as the "Specsre of the Brocken," which I had an opportunity of witnessing in great perfection a few days ago, on the ridge of "Beuchoineach"—a hill of 3000 feet altitude, in this neighbourhood.

A beautiful double "Fog-bow" was formed on the driving clouds; the colours of the inner bow very bright and beautiful, but not so bright as in the rainbow, and wanting the gradations of the lighter tints, red and indigo alone being visible. The inner Bow appeared as if about eighty yards distant, and about thirty feet in diameter. Every now and then my shadow was strongly and distinctly projected on the misty clouds, as shown in the Sketch, and apparently at a much greater distance than the arches.

DOUBLE FOG-BOW, SEEN NEAR OCHTERTYRE, N.B.

As I believe this phenomenon has been rarely observed, your insertion of the annexed Sketch may interest some of your readers.

I am, Sir, your obedient servant, W. KEITH MURRAY.

THE CORPORATION OF LONDON.—CITY IMPROVEMENTS.

The first care of a great Municipality should be devoted to the health and convenience of the people: not alone of those who constantly reside within the circle of a circumscribed area, but also of those who, either from necessity or curiosity, are induced to traverse its streets. The condition of the people and their peculiar habits are written as clearly in the architecture and arrangement of the streets of a city as in its most elaborate records. What was considered sufficient to meet the necessities of the metropolis three hundred years ago would be altogether inadequate to meet the exigencies of the present day. Narrow lanes and crooked ways presented little or no obstacle to ordinary traffic when those who could not walk were carried in chairs, and when loads too heavy for human shoulders were borne by pack-horses. The introduction of wheeled carriages created a new necessity and demanded a wider space, while every increase of the number required a further expansion. Within thirty years the population of London has nearly doubled. Cabs, which superseded the old lumbering hackney-coaches, have been more than quadrupled; while omnibuses—of which we have traversing the streets of London daily more than three thousand—were, a few years ago, unknown. All other conveyances have been multiplied in a like proportion; yet the Corporation of London has, with a pertinacity peculiarly its own, from time to time determined, that what answered the purpose of the people when George I. began his reign ought to satisfy the liege subjects of Victoria I. Cheapside has existed for ages, yet King William-street is no wider; and the last great effort of the Improvement Committee—New Cannon-street—was limited to fifty feet in width, against the advice and better judgment of the able architect, whose opinion was surely worth some attention. More than once the question of width was raised; and more than once did the single vote of the chairman decide against the highest and best authority. This New Cannon street is considerably over fifty feet wide in some parts; but such deviations from the prescribed limit only occur where the friendly curve of an old street tends to overcome the original blunder, and demonstrates the want of foresight in those who limited the width to fifty feet

Pacing, as we have done, slowly and carefully over the districts on which the City is exerting its genius, under the guidance of the Committee already referred to, we observe that, where the new street falls into St. Paul's Churchyard, there is left a wedge-like piece of ground—bounded by Old Change on the east, the Churchyard on the north, and the new street on the south—the point of the wedge being westward, as if indicating the position where at present is seated a Commission, the only hope of the citizens. The point of the wedge is rounded off by kerbstones; and the streets on either side are being paved. From all this we infer that the small wedge of ground is to be let or sold for building purposes. We are further confirmed in this opinion by reference to a discussion in the Court of Common Council, where it was promised to hold the land for three months, to enable the Bridge House Committee to report on the project of a new bridge. If that report should be favourable, the land will be required to form a suitable approach; if unfavourable, we presume the land will be immediately covered by some gigantic building, to match the huge pile opposite, and thus close up for ever one of the finest views of our grand Cathedral. This is no small matter dependent on the whim or caprice of any bridge projector or city improver. This is a matter for the citizens at large; and if they are pusillanimous, we appeal to the Board of Works, or whatever department of the Government attends to such matters, to step in and prevent what will be, if our fears are fulfilled, a monstrous mistake. The City authorities must not at the present moment presume too much, nor imagine that a work like that referred to will pass unnoticed. The area is small, but to cover it with any building, however beautiful in itself, would never be excused. To show the propriety of these observations, based upon the public report of their own proceedings, we need only walk a hundred yards northward, and there we shall find a block of buildings standing between the Post-Office and St. Paul's, and shutting out from St. Martin's-le-Grand every vestige of the Cathedral but its cross, which gleams hopefully through these City fogs. One of the houses of the block referred to has been vacated, and is pulled down to be rebuilt. The effect of the majestic dome of the Cathedral, as seen through this narrow chink, is so imposing, that the wakeful body of the Commissioners of Sewers, have stayed the workmen, with the declared object of endeavouring to purchase the whole, and thus lay open a view of our metropolitan church, and show off to great advantage the exquisite proportions of the Post-office. If this be accomplished, as we hope it will be, no finer view will exist in any city in the world.

But mark the disadvantage of divided jurisdiction in the central authorities. While one section of the Corporation is wisely taking advantage of a slight matter to effect a grand improvement, another section of the Corporation—the Improvement Committee, *par excellence*—is meditating the construction of a house, or of houses, the effect of which would be an eyesore as great as, or greater than, that which the Commissioners of Sewers are attempting to demolish. To all who take interest in such matters, and especially to the Government authorities, we advise a visit to the spots referred to.

One of the witnesses examined by the Royal Commissioners has unequivocally expressed his opinion that the City authorities were incapable of grappling with a vast improvement, and referred to their burrowing behind other thoroughfares, relieving isolated parts, and crowding others, instead of boldly carrying out what the common sense of the public, backing the opinion of the City architect has declared—namely, that the greatest public street improvement that can be effected—relieving as it would the gorged streets of Ludgate-hill, Fleet-street, Newgate-street, and Holborn—is the opening up of a new street from Cheapside to Fetter-lane (crossing Farringdon-street by a viaduct), where it would meet the new street laid down by the Government, and thus open up a great line of traffic east and west, nearly straight, and almost on a level. While the City contemptuously tabooes a plan so simple, and wastes its treasures in dark places and out-of-the-way corners, it is gratifying to observe the energy with which the Government are pressing forward this great metropolitan improvement. In the next session of Parliament it is their purpose, as advertised, to seek powers to complete their share of the work forthwith; and we presume that their portion of the work will be finished before that of the City is begun

Advocates as we are for the continuance of a system of representative municipal government, we cannot but regret the want of intelligent activity in those who are placed in power by the people to administer their affairs. Nor can we avoid contrasting the sleepy progress of public works in London with the dazzling rapidity of such works in other European cities. But we need not go from home for examples. Would the members of the *unreformed* corporation of London visit the *reformed* boroughs of Leeds, Manchester, Newcastle, and Liverpool, and take a passing peep at the towns of Bradford, Halifax, and Huddersfield, they would find that these places have sloughed their antiquated skins; and that, in a space of time less than the City of London has occupied in making New Cannon-street, those wonderful towns have been almost entirely rebuilt of the finest stone.

Not only a the City of London accused of extravagance in her renumeration of officers; but, when we go into details, the grave charge of incapacity seems fully established. The blame is, in some respects, attributable to certain persons occupying the chairs of certain committees for a number of years together, being, in fact, essentially, perpetual chairmen. They thus obtain a larger amount of information than most of the members. They are, indeed, the "Perpetual Grands" of their pet committees; and few, if any, of the members dare venture to oppose their opinion, or question their judgment. By such means the expenditure of hundreds of thousands of pounds is determined by an individual will; and the wisdom or folly of improvements depends upon the chance elevation of a popular person, who may or may not be the fittest for the exercise of such powers and the control of such enormous sums of money.

We speak not of individuals, we speak of the system; and if the Corporation would stand well with the public, or as well as it can, with its many alleged imperfections, we would advise the Committees to depose those puffed up gentlemen, and open their chairs to the wholesome influence of annual change. The desire of each to excel his predecessor would introduce a competitive principle which could not fail to benefit the citizens.

Having thus glanced at the Streets within the City, we shall, next week, look at the River and Bridges, and see whether in anything we really can find something worthy of commendation.

IRELAND.

THE ROYAL DUBLIN SOCIETY sent, last week, as usual, to the Smithfield Club Show a splendid collection of Irish-grown farm produce; with a specimen of butter from the farm of that enterprising Irishman, Mr. William Dargan. The collection of roots are the residue of the society's annual autumnal exhibition of farm produce. The Royal Dublin society is one of the most ancient in Europe, being established by Royal charter in 1731; and the idea of sending collections annually to the Smithfield Club Show originated with the Earl of Clarendon, when Viceroy of Ireland, and President of the Society; and it has since received the warm support and sanction of his successors. It has had the effect of securing a very beneficial influence over the value of property in Ireland; it is a practical institution, and directing attention to the excellence of her soil, when cultivated with skill and experience. The society occupied stands Nos. 56, 57, and 58, neatly surrounded by a banner representing Hibernia, with the motto, "Nostra gens laboris." The following noblemen and gentlemen are amongst the exhibitors: The Earl of Charlemont, the Earl of Antrim, the Marquis of Drogheda, Moore Abbey, the Right Hon. Frederick Shaw, Recorder of Dublin, Sir Robert Shaw, Bart., Wm. Dargan, Esq., J. J. Vernon, Esq., Thomas Grosham, Esq., Thomas Bail, Esq., R. S. Wade, Esq., Joseph Radcliff, Esq., LL.D., William Smith, Esq., Charles Pleasant, Esq., Rev. Sir Hunt Walsh, &c. Mr. Mitchell, Esq., the chairman of the Pomeroyby and North Dublin Unions, and A. J. Hawkins, Esq., the Secretary, the Earl of St. Germans, accompanied by T. B. Foote and R. Harrison, Esq., secretary of the society, Esqrs., honoured the exhibition in the Society's Museum in Dublin with a visit, prior to the roots being removed to London. His Excellency expressed himself much pleased with the collection, and examined the different lots with great interest. The curator of the agricultural department of the society was present at the Smithfield show, to give every necessary information to visitors

NEW MAGISTRATE FOR ANTRIM.—Lord Dungannon, it is stated, has just been appointed to the commission of the peace for the county of Antrim, "without any solicitation on the part of his Lordship." From the exultant tone of the local journals, it would appear that this rather simple circumstance is regarded in the light of a great party triumph.

NEW LORD MAYOR OF DUBLIN.—At a meeting of the corporation, held on Monday, Sir Edward M'Donnell, chairman of the Great Southern and Western Railway Company, was unanimously elected Lord Mayor of Dublin for the year 1854.

IT is stated that George Roe, Esq., Chairman of the Executive Committee of the Great Exhibition, accompanied by Mr. Dargan, waited upon the Lord-Lieutenant a few days ago, on the part of the Committee, to express their anxious wish that his Excellency would recommend the two Commissioners of the Dublin Police, Mr. O'Farrall and Col. Browne, to the proper quarter, for the Civil Companionship of the Bath.

ACCIDENT TO GENERAL SIR C. M'DONALD.—Last week there was a brilliant assemblage at Kilkenny Races. Grounds met at eleven o'clock. Lord Desart, Lord Vaux, Sir J. Power, Mr. Brian, Mr. Bellew, Mr. Vansittart, Captain Ponsonby, &c., were amongst the number, but a gloom was cast over all by a sad accident. General M'Donald was riding up the street, a horse kicked him in the thigh, and broke his leg badly. Considering his late illness, the accident is looked upon as dangerous.

THE CLARE UNIONS.—It appears by the returns from Clare that the condition of the unions in that county is improved. In Kilrush the guardians have a balance of £440 in their favour; in Killadysert the balance to the credit of the union is £471; and in Ennistymon, which has been in such dreadful destitution) the guardians have a balance of £1658 to meet their current liabilities.

EVICTION.—The *Galway Vindicator*, in referring to the recent eviction of four hundred persons from an estate in that county, mentions, by way of contrast, that an English proprietor, Mr. Thorngate, who lately purchased an estate in the same neighbourhood, did not disturb a single tenant nor unroof a single cottage; that, on the contrary, "appreciating the industry and honesty of the poor exiled people, Mr. Thorngate has given to some of them holdings and houses on his own estate."

THE LATE RAILWAY ACCIDENT.—In the case of "M'Nally against the Great Southern and Western Railway," on the case of the accident at Straffan, has found a verdict for the plaintiff—£1000 to the widow, and £833 to each of the three children of the deceased M'Nally making in all £3500 damages. In the case of John Monbu against the same company, the jury gave £50 damages, for injury received in his leg on the occasion of the accident. The third case, of Ellen Farrell against the company, was settled out of court.

NEW ZEALAND FLAX.—The excess of silica spoken of as the cause of brittleness does not appear in the analysis, but I think the nonfibrous portion of the *Phormium tenax* is more incorporated with the fibre than in the *Linum usitatissimum*, and this combination may partly account for the brittle nature hither o generally attributed to the fibre If the silica exist in combination with the alkalies potash or soda, which I presume may be the case, I do not see any reason why such a silicate should not be soluble in hot water. Acting on this idea, I have tried the effect of boiling the leaves and rolling afterwards; in fact, adopting a system similar to Watt's patent, which, though not yet perfectly applied to Irish flax so as to please the linen manufacturers, may eventually be successful, and, indeed, appears the most likely way of managing this New Zealand flax. As yet I have no result to lay before you of these experiments, except that I deprecate the use of much alkali to soften the plant, or the fibre after freeing it, as I have found this add greatly to the brittleness of the fibre in the green state.—*Correspondent of the Journal of the Society of Arts.*

SPECULATION IN MELBOURNE.—A Melbourne correspondent writes:—"A Polish Yankee Jew, who came here about twelve months ago without a shilling, commenced a restaurant on credit, and has so marvellously succeeded that he is at the moment in treaty with the owner of the Royal Hotel to take it at establishment, and offers the following terms: £10,000 to the present tenant for the two years of his lease still to run; £1000 to the owner for his consent to the exchange; £1000 a year for the two years, and £5000 for five years after; £10,000 for improvements. This is another fact. The speculator is to make the place the best hotel in Melbourne; and if he does he may clear any money almost, for nothing is wanted more than a first-rate place of that kind."

SUPPLY OF PERUVIAN GUANO.—Despatches from the Admiral commanding in the *Pacific*, contain most interesting and important information relative to the quantity of guano remaining on the Chincha Islands. The quantity stated to be still available is considerably under that given in the news brought by the *Pacific* mail just arrived. The quantity now estimated from the examination made by Mr. M'Intosh, naval instructor, is 8,000,000 tons; while the accounts brought by the mail state it to be 25,000,000. Admiral Moresby, however, states, as the result of his data, in which he says he has confidence, that the islands will be exhausted of the guano that would pay freight, or be saleable in the English market, in eight or nine years.

TOLERATION IN PIEDMONT.—In Piedmont, which ten years ago was, in respect of religious liberty, something worse than the Tuscany of to-day, an Israelite College was opened on the 20th ult., in the presence of the Intendant of the province, the syndic of the town, the rector and professors of the Christian College, and all the Israelite population of the town. The institution has been founded by a rich Israelite, M. Levi Samuel, who, having no family, bequeathed his whole fortune to trustees for that purpose. The public were addressed in appropriate speeches by the Rabbi, the Rector of the Christian College, and the Intendant of the province.

FALSE ALARM.—A paragraph with the startling heading, "Dreadful Murder of a Roman Catholic Priest and Three Ladies," appeared in the *Sun* of Saturday; but on inquiry at the scene of the supposed tragedy (Sutton-place, near Guildford), it turned out that the statement was entirely without foundation.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has conferred the honour of Knighthood upon Captain Stephen Bartlett Lakeman, late commander of Lakeman's Waterkloof Rangers. [A Portrait and Memoir of this distinguished soldier will be found in No. 631.]

The imports of specie last week were but to a limited amount, £260,000, whilst the exports were to the large amount of nearly one million sterling.

Sir Joseph Copley, Bart., of Spotborough-hall, Doncaster, has presented a second donation of £50 to the Devonport Sailors' Home.

From letters received from Italy, we learn that the health of the Marquis of Normanby has considerably improved since his departure from this country. The noble Marquis and Marchioness are not expected home before May.

A boiler is now being constructed at the works of M. Marcellis, at La Rovenne, near Liège, for a steam-engine of 1400-horse power. It is the largest boiler ever made, being 100 feet in diameter in the inside, and 12 feet in height. Its weight is 18 tons.

At a recent special meeting of the subscribers to the Leeds Commercial News-room, it was resolved by a majority of 135 to 90, "That the room be closed on Sundays throughout the day." This resolution was moved by Mr. Edward Baines, and seconded by Mr. Alderman Richardson

The Earl of Clarendon has issued instructions to Mr. Drummond Hay, Consul-General at Tangier, with a view to procure greater commercial facilities in Morocco than those which at present exist.

The Hon. G. S. Stafford Jerningham, now secretary to the Embassy at Paris, is appointed her Majesty's Minister at Stockholm, in place of Sir Edmund Lyons, Bart., G.C.B.

Barrows, the man who is in prison charged with the murder of Charity Glenniser, near Leighton Buzzard, has confessed the crime.

The municipal council of Genoa has subscribed for shares to the amount of 6,000,000 lr., towards the construction of the Lukmanier Railway.

The Irish "Catholic University" has just received a contribution of £1000 to its funds, sent by one of its collectors in Philadelphia.

The Duke and Duchess of Northumberland are dispensing their hospitalities at Rome to a select circle of English and foreign fashionables. Their Graces are not expected to return until early next spring.

The Duke of Belluno, a member of the French Senate, died at Paris on Saturday last.

The ceremony of commencing the Blairgowrie branch of the Scottish and Midland Junction Railway took place last week at the intended terminus, at Blairgowrie, on the property of Mr. Allan Macpherson, whose lady cut the first turf.

The cold in Paris, says *Galignani*, was on Friday nearly half a degree Centigrade greater than on the preceding day. M. Chevalier's thermometer marked, at six in the morning, 3 deg. 8-10th of Centrigade below zero (25½ Fahrenheit).

Lord Benholme is the judicial title assumed by Mr. Hercules Robertson, who succeeds Lord Fullerton as one of the Judges of the Court of Session in Scotland.

The workmen engaged at the Ebbw Vale Works of the British Iron Company have struck for an advance of wages, and the result has been the furnaces are blown out.

Count Paul Esterhazy—who, since the unhappy events of 1849 in Hungary, has been compelled to absent himself from his native land, and has spent the chief portion of his exile in England—has recently received permiss on to return home.

There have been further riots in Sligo, arising out of the continued exportation of potatoes from that port to the English markets.

At the Central Criminal Court, which was concluded last week, no less than 33 persons were charged and found guilty of uttering base coin.

The inhabitants of Stalybridge have memorialised Lord Aberdeen to consider their claims to a seat in Parliament in the next Reform Bill. They state that the population is about 25,000, and that upwards of £60,000 is deposited in the Savings Bank.

An accident occurred on Tuesday week at Cowden-heath Colliery, near Dunfermline, five men having been precipitated to the bottom of the shaft, a depth of 215 feet. Three men were killed on the spot, a fourth died the next day, and the recovery of the fifth is hopeless.

The Emperor of Russia has sent the insignia of Chevalier of the Order of St. Wladimir to M. Struve, the celebrated Russian astronomer.

A ship from near Bristol has just received an order for twelve from chapels, to be exported to Australia by the Roman Catholics of this country.

Zephaniah Williams, one of the Welsh Chartist rioters, who was transported some years since to New South Wales, has just sent home for forty colliers to work in his extensive coal mines.

Glasgow is about to enjoy the advantage of Saturday evening concerts, for the working-classes, on a very cheap scale.

M. de Lamartine, whose health we for some time in a very precarious state, has now so far recovered as to be able to resume his literary labours.

The two senior Masters in Chancery, Mr. Senior and Sir W. Horne, have been released by the Lord Chancellor, under the powers of the Masters in Chancery Abolition Act.

Within the last three years a borough rate has been unknown in Great Yarmouth, the revenue always showing a balance on the right side. Quite a model town!

A Spanish woman named Isabella Chava, died at Seville last week, aged 114 years and 25 days. She preserved her physical and intellectual faculties to within a few days of her decease.

The total exports of Irish whiskey for the month of November reach the unusually large quantity of 90,000 gallons.

The mate of the English brig the *Margaret*, which is lying at Havre, recently fell to the bottom of the hold, and was so dreadfully injured, that he expired in less than an hour.

The packet ship *E. Z.*, which sailed from Liverpool for New York on the 15th ult., put back to Liverpool last week, having encountered a gale, which swept the decks, and washed overboard thirteen of the passengers and five of the crew

The Belgian ship *Atalante*, which sailed from Antwerp in 185 for Sidney, arrived there from Batavia. The whole of the crew having deserted, the captain was obliged to procure a Malay crew, and the vessel has arrived home with forty Malays on board

It has been recently decided in the Cambridge County Court, that a master has no more right to open a servant's box on her discharge from his service, than the domestic has to ransack her employer's desk.

The Marquis of Hertford is building a splendid mansion in the Boulevard des Italiens. The site selected is that on which formerly stood the well-known Bains Chinois, and the Parisians have denominated it a "Petit Palais."

In consequence of the late disturbances in Blackburn, a company of the 94th Regiment, numbering sixty men, has been this week stationed in the town, by order of the Home Secretary.

The Hon. W. C. Eliot (son of the Lord Lieutenant of Ireland), now United States at Berlin, is appointed Second Paid Attaché to her Majesty's Mission at Berlin.

The Saturday half-holiday movement, says the *Edinburgh News*, is progressing towards universal adoption in that city.

During a recent riot in Kirkcudbright, a young woman of the name of Barclay was so much alarmed at the noise that with a shriek she leaned on the floor in a state of madness. She died the following morning.

George Atkinson, Esq., of the Inner Temple, and of the northern circuit, has been sworn in as one of her Majesty's serjeants at law. He gave rings with the motto, "Tout temps prist."

An actress, Miss Helena Gage, was shot in New Orleans on the 18th inst., by a French school master, named Bedford, for refusing to elope with him. The murderer afterwards killed himself.

In consequence of a domestic affliction, the head-master has suspended the representation of the Westminster play for this year, by the expressed wish and desire of the Queen's scholars.

The *Giornale di Roma*, of the 26th ult., states that large quantities of corn are daily arriving in the Papa. States from Leghorn.

The Claddagh (Galway) trawling-rants have been remarkably successful during the last week. The quantity of plaice caught by a single boat in a two days' cruise in the bay realised £7 4s.

Timber-sawing in Van Diemen's Land is more remunerative on the average than good-digging in Australia. Orders have been sent to England for fifty saw mills.

At Melbourne, at the end of August, cabbages were selling at 12s. to 20s. a dozen; carrots [illegible] each. Wages were [illegible] bullock drivers [illegible] with rations, engineers [illegible]

The 2nd of December is a right Imperial day: that day, twenty-eight years ago, the Emperor Nicholas came to the throne; that day, fifty seven years ago, the Emperor Francis Joseph came to the throne; that day, one year ago, the Emperor Louis Napoleon came to the throne; that day, forty eight years ago, the Emperor of France fought the battle of Austerlitz.

SMITHFIELD CLUB PRIZE CATTLE.

CLASS 10, NO. 62.—MR. STRATTON'S SHORT-HORN OX, FIRST PRIZE, £25, AND GOLD AND SILVER MEDALS.

CLASS 5, NO. 57.—MR. STRATTON'S SHORT-HORN OX, FIRST PRIZE, £25, AND SILVER MEDAL.

THE Exhibition of Stock of this Club opened on Tuesday morning under as favourable auspices as on any previous year; the entries being above the average in number, and of a quality that has never been surpassed on any previous occasion. There have been, it is true, higher class specimens of Herefords, Short-horns, and Devons; but in no instance has the general character of the collections of animals been more deserving of commendation than this year: there was less to astonish and surprise, but much more to commend and admire.

On one point of real importance a most decided advance was observable, namely, in the absence of those huge masses of fat that formerly were so characteristic of the Baker-street Exhibition—the leading feature being mere fat, without regard to the manner in which it was laid on, where, or under what circumstances; on this score there was now no reason for complaint, the proper proportions and symmetrical forms of the well-bred animals not being lost in the humps and ridges of fat with which it was formerly the practice to overload them.

So good was the general character of the stock, that the judges had no little difficulty in deciding upon which to award some of the prizes; and it was not until all the tests of touch, and the careful estimation of points had been applied, that judgment was given.

The Short-horns carried off the two gold medals competed for in the cattle class.

Mr. Stratton, who obtained two prizes last year, again carried off the prize for the best ox in any class. His steer is a most beautiful specimen of the breed, carrying an immense weight of beef, yet so evenly fatted and in such excellent proportions, as to cause the animal to appear less fat than it really is. It weighs 220 stones. Until last year it was fed solely on grass and a little meal; latterly, oil-cake has been added.

One of the most remarkable animals in the collection, and that came in for the largest share of attention from the more curious and less initiated class of visitors, was a huge short-horned ox, from the stock of Mr Hayter, of Lindsale, near Leighton Buzzard, fed and exhibited by Sir Harry Verney, Bart., of Claydon House, near Winslow, Bucks. It is five years and eight months old; it is 18 hands high, 6½ feet from tip to shoulder, 8 feet across the hips, 10 feet in girth behind the shoulders, 12 feet in length from nose to rump, and 4 feet 5 inches from chine to bricket; it weighs about 800 stones. It is by no means a finely-proportioned animal, and is remarkable only for its extraordinary size.

Of the Devons, the finest specimen was a cow, fourteen years old, exhibited by Lord Leicester. Lord Portman also obtained a prize for a beautifully-proportioned Devon cow.

The Herefords were considered by good judges to be particu-

CLASS 6, NO. 36.—MR. NIBLET'S HEREFORD OX, FIRST PRIZE, £25, AND SILVER MEDAL.

CLASS 5, NO. 34.—THE EARL OF RADNOR'S HEREFORD OX, FIRST PRIZE, £25, AND SILVER MEDAL.

SMITHFIELD CLUB PRIZE CATTLE.

CLASS 13, NO. 100.—THE REV. MR. ARKWRIGHT'S SCOT, PRIZE £10.

CLASS 13, NO. 81.—MR. H. SMITH'S SHORT-HORN, FIRST PRIZE, £20, AND GOLD AND SILVER MEDALS.

larly fine this year. Lord Radnor obtained a prize for an eight months old steer of this class.

Of the West Highland and polled Galloway the specimens were not equal to those of former years.

Mr. Farrer, of Kempstone Lodge, exhibited an excellent cross between a Durham and a Galloway Scot.

In Sheep, the Duke of Richmond carried all before him, and the Goodwood short woolled breeds will be raised in character in consequence; his display of Southdowns being unusually fine. There were also several other pens of short-woolled sheep, well deserving of commendation.

Mr S Foljambe obtained the gold medal for the best specimens of the long-woolled classes.

There were also several pens of excellent crosses.

Our remarks as to moderate fattening do not apply to the Pigs exhibited this year in Baker-street, for several exhibitors seem to have studied to fatten to the highest point to which the animal can attain and live. The consequence is that, in several pens, the unwieldy monsters might be seen snoring away, with their little noses propped up on small blocks of wood, without which precaution the poor animals would have been suffocated with their own fat. Such a death actually occurred to one of the pigs (exhibited by Lord Radnor) on Monday.

Prince Albert carried off the prize for a pen of Suffolk pigs.

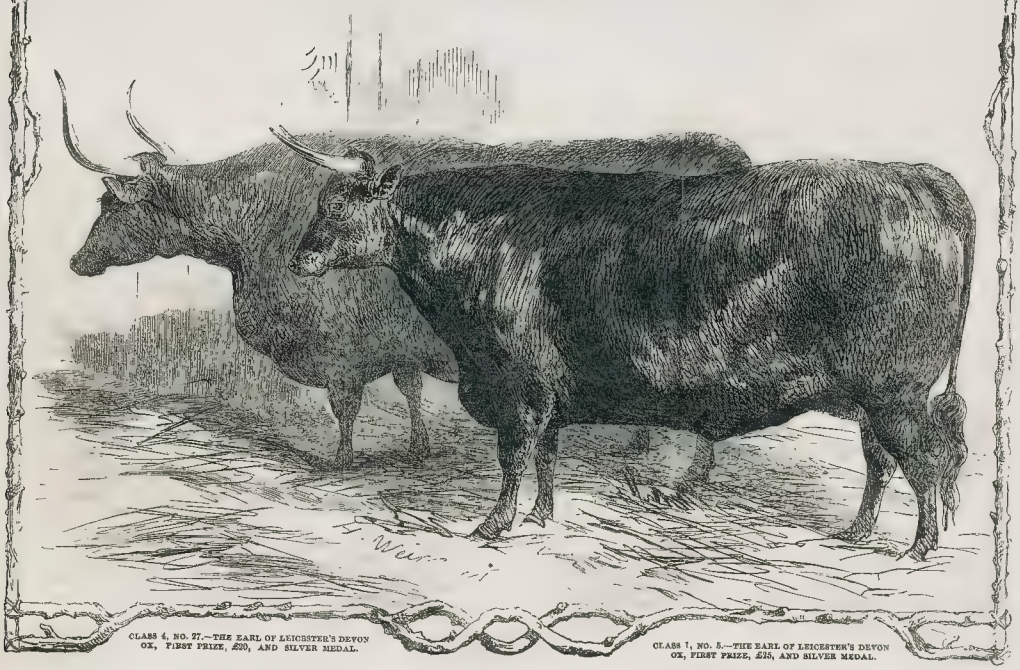
Mr. Betts, of Preston Hall, also obtained a prize for hogs. One of these, a Suffolk and Berkshire cross, fatted to an immense weight, was perhaps as fine a specimen as any in the show.

In one pen was a pure Berkshire hog of immense size; and in another, a Chinese specimen of great excellence.

MACHINERY AND IMPLEMENTS.

This department was unusually well represented this year: all the galleries, and every available spot that could be appropriated, was closely packed with the innumerable contrivances now in use by agriculturalists for economising labour and facilitating their operations. A much larger number of implements, &c., were exhibited than on any previous occasion, and in greater variety; most of the older, and long tried, with improvements and modifications to increase their efficiency or diminish the cost, and many ingenious inventions of a novel character.

Mr Garratt, as usual, had a large stand closely stowed with the drills of all kinds, for which his house is famous, as well as an immense variety of other machines; amongst which a new reaping machine is the most conspicuous; it is the invention of Mr. Atkins, an American gentleman of great mechanical skill. The machine much resembles the most recently-constructed on the M'Cormick principle; but, added to it, is what is called an automaton arm or raker; the action of this rake is as follow:—It first rakes up the cut grain from off the platform and presses it against a toothed plate, between which and the rake it is firmly held; and then swinging round the quarter of a circle behind,



CLASS 4, NO. 27.—THE EARL OF LEICESTER'S DEVON OX, FIRST PRIZE, £20, AND SILVER MEDAL.

CLASS 1, NO. 5.—THE EARL OF LEICESTER'S DEVON OX, FIRST PRIZE, £15, AND SILVER MEDAL.

the rake separates from the toothed plate, and the sheaf is deposited at the side of the platform ready for binding. This action is repeated in measured intervals, proportioned to the advance of the machine and the deposit of grain on the platform. The careful handling by the rake effects a saving over raking by hand.

Messrs. Ransome and Sims exhibited an improved bean mill, of ingenious form, the teeth of a steel mill being so arranged that they may be removed when worn out, and, being triangular in shape, a new edge replaces the old one; the farmer being thus able to renew the cutting action of his mill three times without application to the maker, and even then he can procure a new set of teeth for the machine, at the cost of a few shillings.

Dray and Company had an immense stand, containing all kinds of useful articles, large and small, adapted to agricultural requirements.

Messrs. Hornsby exhibited a selection of drills, combining many improved combinations for adjusting the various motions with greater ease and exactness.

Mr. Crosskill exhibited an improved Bell's reaping machine, or rather a machine modified from all those previously before the public, the general arrangement being Bell's, with the travelling apron for delivering the straw; the cutting action is much like Hussey's, but the action of the knife is something similar to M'Cormick's. There is no doubt but that this reaper is now one of the most effective in use, as most of the advantages claimed by the others are gained in this, while the superior arrangement of Bell's implement is preserved.

A new kind of turnip-cutter was exhibited by Realy, of London, especially adapted for cutting roots into very thin slices, almost pulping it. The roots, when so cut, are mixed with chaff; and many persons are now adopting that plan, as being superior to the old method. The knife is a single plate of steel, having a jagged or serrated edge.

Messrs. Samuelson exhibited their new digging machine, or rather forking apparatus. It consists of a series of tines, placed on discs attached to the shaft of the implement: these, in revolving, disintegrate the earth, while a series of scrapers clean them of the soil that adheres In some descriptions of soil, doubtless, this machine may be of great value.

Mr. Nichols brought forward a new form of paring plough, or horse-hoe, with novel arrangements for regulating the depth. Mr. Smith also added some improvements in his implement for effecting similar objects.

A plan for an improved system of cultivation was illustrated by Mr. Wilkins. It consists in laying underground a horse-shoe tile, but the reverse way to which it is ordinarily placed. Across this, at a small distance from the bottom, is placed a flat piece full of holes; above this earth is placed, and the plants cultivated. At convenient distances along the line of these tiles small vertical pipes are placed, into which liquid manure is poured, which, rising through the holes under pressure saturates the soil immediately beneath the seed. Extraordinary results are said to have been obtained by the adoption of this plan

The yard in which the steam-engines are usually placed presented this year an uncommonly busy appearance, no less than six or seven steam-engines being at work in that small space, actively employed, each in driving a thrashing machine of the largest class, belonging to the respective makers of the engines. The American thrashing and separating engine was also placed here, but so out of the way (being stowed into a narrow gateway), that the greatest possible difficulty was experienced by the numerous farmers in getting a sight of it. They are, however, too deeply interested in anything that will more cheaply or effectively do their work, to be deterred by a little difficulty from ascertaining something of its peculiarities. They might be seen, therefore, squeezing their portly persons into the narrowest possible opening, or climbing over the top to get a sight of its working parts.

The display of roots was this year unusually large, the Messrs. Gibbs, Skirving, and others, exhibiting marvellous specimens of cabbages, swedes, white turnips, and mangold-wurzel. The Royal Dublin Society make a great show in this department, and gave a good idea of what the land of the Sister Isle is capable of producing: specimens of all the roots and plants usually cultivated by farmers, were seen here of the finest possible quality.

A tub of Irish butter was also contributed by Mr. Dargan, the quality of which all pronounced to be most excellent.

The following is the award of prizes made on Monday evening:—

DEVONS.

Class 1.—First prize of 25*l.* to No 8, the Earl of Leicester, of Holkham Hall, Norwich. A silver medal to the breeder, the Earl of Leicester, of Holkham Hall, Norwich. Second prize of 10*l.* to No. 4, Mr. George Turner, of Barton, near Exeter.

Class 2.—First prize of 25*l.* to No 19, Mr. John Coate, of Hammoon, near Blandford. Silver medal to the breeder, Mr. Edward Bond, of Heathfield, near Taunton. Second prize of 10*l.* to No. 9, the Earl of Liecester, of Holkham Hall, Norfolk.

Class 3.—First prize of 15*l.* to No. 21, Mr Samuel Farthing, of Stowey Court, near Bridgwater. Silver medal to the breeder, Mr. John K. Farthing, of Nether Stowey, near Bridgewater.

Class 4.—First prize of 25*l.* to No. 27, the Earl of Leicester, of Holkham Hall, Norfolk. Silver medal to the breeder, the Earl of Leicester, of Holkham Hall, Norfolk. Second prize of 10*l.* to No. 28, Lord Portman, of Bryanstone, near Blandford.

HEREFORDS.

Class 5.—First prize of 25*l.* to No. 34, the Earl of Radnor, of Coleshill House, Berks Silver medal to the breeder, the Earl of Radnor, of Coleshill House, Berks. Second prize of 10*l.* to No. 31, Mr. Josh. Phillips, of Ardington, near Wantage.

Class 6.—First prize of 25*l.* to No. 36, Mr. Isaac Niblet, of Conygre Farm, Filton, near Bristol Silver medal to the breeder, Mr. T. L. Meire, of Council Harbour, Shrewsbury. Second prize of 10*l.* to No. 37, Mr. John Phillips, of Ardington, near Wantage.

Class 7 First prize of 15*l.* to No. 49, Mr Robt. Heman, of Moreton-in March, Gloucester. Silver medal to the breeder, Mr. Josh. Bayzand, of Kingsby, near Alcester. Second prize of 5*l.* to No. 48, Mr. Josh Phillips, of Ardington, near Wantage.

Class 8.—First prize of 20*l.* to No. 59, Mr. W. S. Cartwright, of Stow hill, Newport, Monmouth. Silver medal to the breeder, Mr. Henry Collins, of Newport, Monmouth. Second prize of 10*l.*, no competition.

SHORT HORNS

Class 9.—First prize of 25*l.* to No. 52, Mr. Richard Stratton, of Broad Hinton, near Swindon. Silver medal to the breeder, Mr Richard Stratton, of Broad Hinton, near Swindon. Second prize of 10*l.* to No. 53, Mr. Robert Lynn, of Stroxton, near Grantham

Class 10. First prize of 25*l.* to No 62, Mr. Richard Stratton, of Broad Hinton, near Swindon. Silver medal to the breeder, Mr. Richard Stratton, of Broad Hinton, near Swindon. Second prize of 10*l.* to No. 61, Mr. Edward Frost, of West Wratting Hall, Linton, Cambridge

Class 11.—First prize of 15*l.* to No. 74, Mr. Joseph Phillips, of Ardington, near Wantage. Silver medal to the breeder, Mr Thomas Garne, of Broadmore, near Northleach. Second prize of 5*l.* to No. 75, Mr. Henry Ambler, of Watkinson-hall, near Halifax

Class 12.—First prize of 20*l.* to No. 81, Mr. Henry Smith, of the Grove, Cropwell Butler, near Bingham, Notts. Silver medal to the breeder, Mr William Smith, of West Rasen. Second prize of 10*l.* to No. 89, Mr. Henry Roberts, of Puxford, near Bloxley, Worcester.

SCOTCH, WELSH, OR IRISH.

Class 13.—The prize of 10*l.* to No. 100, the Rev. J. Arkwright, of Markhall, Harlow, Essex.

Class 14.—The prize of 5*l.* to No. 105, the Earl of Leicester, of Holkham-hall, Norfolk.

OTHER PURE BREEDS.

Class 15.—The prize of 10*l.* to No. 107, Mr. J. H. Gurney, of Easton, near Norwich. Silver medal to the breeder, Mr. G. S. Keit, of Brooke, Norfolk.

Class 16.—The prize of 10*l.* to No. 110, Mr. James Caines, of Chesleboone, near Dorchester. Silver medal to the breeder, Mr. James Davis, of Malcombe Horsey, near Dorchester.

CROSS, OR MIXED BREED.

Class 17.—The prize of 15*l.* to No. 119, Mr. William Hewer, of Sevenhampton, near Highworth. Silver medal to the breeder, Mr. William Hewer, of Sevenhampton, near Highworth.

Class 18. The prize of 15*l.* to 116, the Earl of Darnley, of Cobham Hall, Gravesend. Silver medal to the breeder, Mr. John Rogers, of Leddicott, near Leominster

Class 19.—The prize of 10*l.* to No. 120, Mr. W. M. Farrer, of Kempstone Lodge, near Swaffham. Silver medal to the breeder, Mr. Christopher Twiss, of Swardeston Hall, Norwich.

LONG-WOOLLED SHEEP.

Class 20.—First prize of 20*l.* to No. 145, Mr. G. S. Foljambe, of Osberton-hall, Worksop, Notts. Silver medal to the breeder, Mr. G. S. Foljambe, ditto, ditto. Second prize of 10*l.* to No. 147, Mr J. Mutford, of Hoe-fields, Thurlaston, near Hinckley. Third prize of 5*l.* to No. 148, Mr. R. F. Hall, of Hesley-hall, near Bawtry.

Class 21.—First prize of 20*l.* to No. 155, Mr. G. S. Foljambe, of Osberton-hall, near Worksop, Notts. Silver medal to the breeder, Mr. G. S. Foljambe, ditto, ditto. Second prize to No. 161, the Marquis of Exeter, Burghley-park, Stamford. Third prize of 5*l.* to No. 163, Mr. R. L. Bradshaw, Burley-on-the-Hill, Oakham.

LONG-WOOLLED (NOT LEICESTERS).

Class 22.—The prize of 10*l.* to No. 160, Mr. William Slatter, of Stratton, near Cirencester. Silver medal to the breeder, Mr. William Slatter, ditto, ditto.

CROSS-BRED SHEEP.

Class 23.—First prize of 10*l.* to No. 181, Mr. Samuel Druce, of Eynsham, near Oxford. Silver medal to the breeder, Mr. Samuel Druce, of Eynsham, near Oxford. Second prize of 5*l.* to No. 182, Mr. John Hitchman, of Little Milton, near Wheatley, Oxon.

Class 24.—The prize of 10*l.* to No. 188, Lord Walsingham, of Merton hall, Thetford. Silver medal to the breeder, Lord Walsingham, of Merton-hall, Thetford.

SHORT-WOOLLED SHEEP

Class 25.—First prize of 20*l.* to No. 227, the Duke of Richmond, of Goodwood, near Chichester. Silver medal to the breeder, the Duke of Richmond, of Goodwood, near Chichester. Second prize of 10*l.* to No. 205, Mr. William Rigden, of Hove, near Brighton.

Class 26. The prize of 10*l.* to No. 220, the Duke of Richmond, of Goodwood. Silver medal to the breeder, the Duke of Richmond, of Goodwood.

Class 27.—First prize of 20*l.* to No. 229, the Duke of Richmond, of Goodwood. Silver medal to the breeder, the Duke of Richmond, of Goodwood. Second prize of 10*l.* to 234, the Earl of Radnor, of Coleshill House, Berks.

SHORT-WOOLLED (NOT SOUTHDOWNS).

Class 28.—The prize of 10*l.* to 241. Mr. Stephen King, of Old Hayward Farm, Hungerford. Silver medal to the breeder, Mr. Stephen King, of Old Hayward Farm, Hungerford.

PIGS.

Class 29.—First prize of 10*l.* to No. 269, Mr. John Coate of Hammoon, near Blandford. Silver medal to the breeder, ditto, ditto. Second prize of 5*l.*, No 267, his Royal Highness Prince Albert.

Class 30.—First prize of 10*l.* to No. 281, his Royal Highness Prince Albert. Silver medal to the breeder, ditto, ditto. Second prize of 5*l.*, No. 272, Mr. John Coate, of Hammoon, Blandford

Class 31.—First prize of 10*l.* to No. 284, Mr. John Coate, of Hammoon, Blandford. Silver medal to the breeder, ditto, ditto. Second prize of 5*l.* to No. 287, Mr. E. L. Betts, of Preston Hall, Maidstone.

GOLD MEDALS.

Gold medal for the best steer or ox in classes 1. 2, 3, 6, 9, 10, 15, 17, or 18 to No. 52, Mr. Richard Stratton, of Broad Hinton, near Swindon.

Gold medal for the best heifer or cow in classes 3, 4, 7, 8, 11, 12, 16, or 19, to No. 81, Mr. Henry Smith, of the Grove, Cropwell Butler, near Bingham, Notts.

Gold medal for the best pen of long-woolled sheep in classes 20, 21, or 22, to No. 145, Mr. G. S. Foljambe, of Osberton-hall, Worksop, Notts.

Gold medal for the best pen of short-woolled sheep in classes 25, 26, or 28, to No. 227, the Duke of Richmond, of Goodwood.

Gold medal for the best pen of pigs in classes 29, 30, or 31, to No. 281 his Royal Highness Prince Albert.

EXTRA STOCK.

Silver medal, for the best beast, to No. 123, Mr. Chas. Barnett, of Stratton-park, Biggleswade, Beds.

Silver medal, for the best long-woolled sheep, to No. 171, Lord Berners of Keythorpe Hall, Tugby, Leicester.

Silver medal, for the best short-woolled sheep, to No. 246, the Duke of Richmond, of Goodwood.

Silver medal, for the best cross-bred sheep, to No. 204, Mr. John Hitchman, of Little Milton, near Wheatley, Oxon.

Silver medal, for the best pig, to No. 231, Mr. W. J. Sadler, of Bentham Parton, near Swindon.

THE AMERICAN THRASHING AND SEPARATING MACHINE.

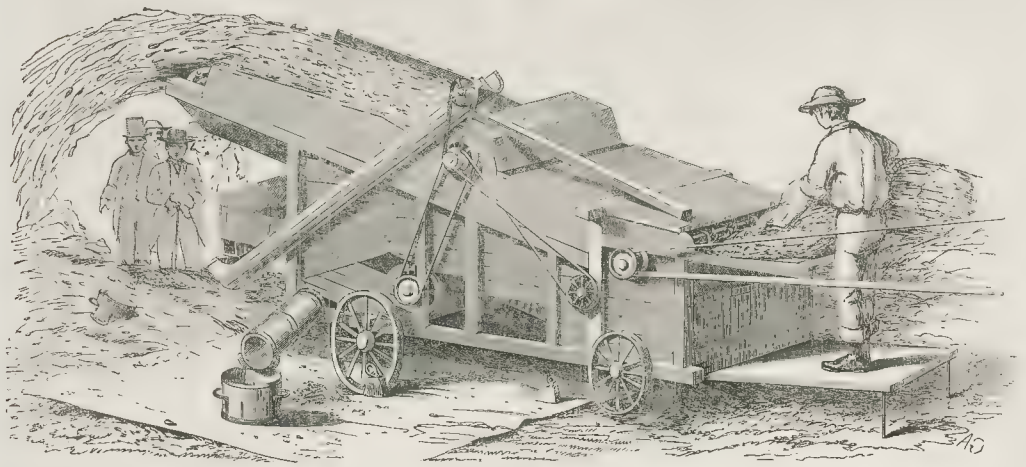
This Machine is the invention of Mr. J. Moffitt, agricultural engineer, of Piqua, Ohio, U.S., who has, in conjunction with Mr. E. H. Knight, of Cincinnati, recently imported a Machine into this country, and has lately made trials of it at Mr. Meehi's farm, at Tiptree, in Essex. A specimen was also exhibited at the Smithfield Club Show.

There appear to be two points of novelty in Mr. Moffitt's Separator. Its chief merit lies in the ingenious manner in which its several parts are arranged and modified to suit different circumstances. The thrashing portion consists of a drum and concave, as in an ordinary English thrashing-machine, but upon the principle known as the peg machine; that is, substituting for the ordinary beaters a series of pegs, so arranged, that, in revolving, they pass similar rows of pegs placed at intervals in the concave which surrounds a considerable portion of the circumference of the drum.

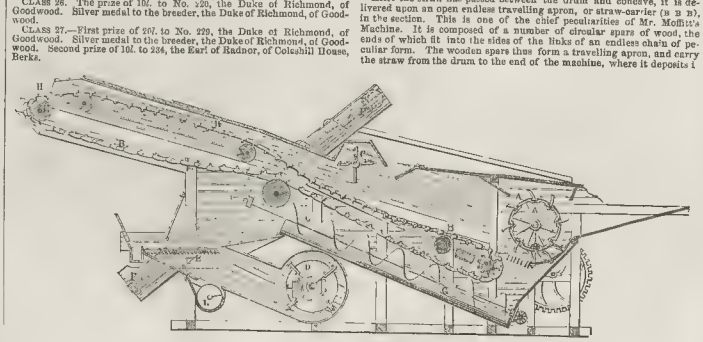
The peg machine is of American origin, having been patented in New York, by Mr. S. Turner, about the year 1830. It was also patented in this country, but was not successful in competitions with the machines then in use, fitted with beaters or scutchers.

Important alterations have, however, been made since that time by Mr. Moffitt; more particularly in the form and position of the pegs: in the original machine they radiated in a straight line from the centre of the drum; they are now made of a different shape, and curved backwards, so that the blow is progressive; and, consequently, the straw not broken so much as formerly.

After the straw has passed between the drum and concave, it is delivered upon an open endless travelling apron, or straw-carrier (a a a), in the section. This is one of the chief peculiarities of Mr. Moffitt's Machine. It is composed of a number of circular spars of wood, the ends of which fit into the sides of the links of an endless chain of peculiar form. The wooden spars thus form a travelling apron, and carry the straw from the drum to the end of the machine, where it deposits i

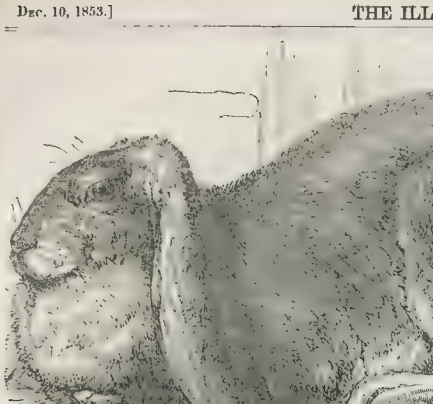


THE AMERICAN THRASHING AND SEPARATING MACHINE.



A. The drum armed with iron pegs.
B B. The travelling apron, showing the side elevation of the links and studs.
C. A revolving straw shaker.
D. The blowing fan.
E. The slat riddle.
F. The Archimedian screw elevator for returning the unthrashed chobs
G. The grain elevator.
H. The straw delivery.
K. Iron pulleys to carry the travelling apron.

THE AMERICAN THRASHING AND SEPARATING MACHINE,—SECTIONAL VIEW.



LARGE RABBIT AT LEICESTER.

into a cart, or any other receptacle. On the under side of the links that form the endless chain are some small studs, which, in passing over the iron pulleys (K K) that carry it, give to it a peculiar jerking motion, which causes the grains of corn to shake out from the straw, and to fall into the well of the machine, from whence they are carried into a separating or winnowing part. This, also, is peculiar; the riddle adopted being in form similar to a partly-closed Venetian blind (E), which allows the grain to pass between the slats that compose it; while the chaff is blown over the end of the shaking shoe, where it is collected by a chaff riddle, if necessary. Any chobs, or imperfectly-thrashed heads, are caught and carried back to the cylinder that they may again be subjected to the action of the drum. The trials that have been made with it are considered highly satisfactory; it thrashed and cleaned, ready for market, in four hours thirty-two quarters of wheat; and, in six hours, it thrashed fifty-six quarters of barley in a superior manner—the barley being sold immediately afterwards at a high price for malting. The wheat was thrashed remarkably clean, and particularly free from broken grain; much of it was purchased for seed by the farmers who were visiting Mr. Mechi's farm.

The Machine, during the trials, was driven by a portable agricultural steam-engine of four-horse power.

LARGE RABBIT.

This extraordinary Rabbit was bred by Mr. Joseph Alleopp, of Leicester, where she is regarded as one of the curiosities of the Fancy. She took a first prize at a Rabbit-show, in September, 1851. She weighed 81b. 8oz. when three months old. She died when twelve months old; weighing 18lb.; length of ears from tip to tip, 22 inches; and circumference of each ear, 8½ inches. This Rabbit was considered the largest in weight and dimensions ever known in the midland counties; and the ears are stated to be the longest ever known in any part. She had the whole of the seven properties which are considered to belong to her variety, in make, shape, colour, &c.

PROVINCIAL INTELLIGENCE.

Yorkshire Agricultural Show.—The Christmas exhibition of fat stock, sheep, pigs, and poultry was opened at Leeds on Tuesday, and continued to Friday. A large pavilion or covered building was erected in Wellington street, near the railway station. The entries, though not very numerous, were quite as much so as was expected, considering that this was the first show, and included some very fine specimens of fat Short-horns, Hereford steers, and other cattle. The show of roots was also good; and that of poultry first-rate. The entries of stock, sheep, and pigs numbered 56; and of poultry, 395. About £350 was awarded in prizes, and about £700 has been expended in making the necessary provisions for the show.

Eton.—Tuesday being "Founder's-day" at Eton, the collegers discussed their customary turkey feast in the dining-hall, and afterwards departed for their respective homes to spend the Christmas vacation. The oppidans took their departure in the morning. In the evening the Provost (the Rev. Dr. Hawtrey) gave the annual banquet to the masters, assistant-masters, and a select circle of old Etonians, in the Audit-chamber. On Wednesday the candidates for the vacant fellowship will be officially declared, and the election is fixed for the 13th inst. It appears that the upper and lower masters have no abstract or legal right to the vacant fellowships, but they have always been understood to possess a priority of claim. All the present fellows, as well as the Provost, were masters at Eton, the only instances to the contrary being those of the late Mr Grover, Mr. Wright, and Mr. Lonsdale.

Departures for Australia.—The *Matilda Wattenbach* sailed from the Mersey on Sunday for Melbourne, with 40 passengers, the English mails (consisting of 86,000 newspapers and 63,000 letters), besides a cargo of 1900 tons of merchandise. The *Golden Age* (screw) sailed on Monday afternoon, having been fully repaired. She had on board about 100 passengers, a fair amount of cargo, and about 12,000 letters and 6000 newspapers.

Windsor.—Last week, at the National School, where 200 boys and as many girls are educated, the greatest terror was caused by the discovery of a mad dog amongst the children. All escaped but one unfortunate little girl, whom the dog seized by the back part of the leg. The child was immediately taken to the Royal Dispensary, where, under the influence of chloroform, the bitten parts were carefully dissected, and afterwards cauterised by Dr. Eton. The dog was shot.

Lost of a Hull Steamer.—The *Marshall*, a screw-steamer, from Hamburg, due at Hull on Monday week, had not arrived on Thursday. She left the Elbe on Sunday; and had on board a large and valuable cargo, and upwards of 150 emigrants, besides her crew, about 18 in number. On Wednesday, some of her boats were picked by a fishing-smack in the North Sea. The barque *Woodhouse* came into collision with a steamer, supposed to be the *Marshall*, on Monday, off the mouth of the Humber, and a Russian vessel heard cries of distress. A number of fishing boats report having seen the masthead of the *Marshall* above lowwater mark near Kuln Sea, about five miles from the Newsand Float.

Government Emigration.—Southampton.—The *Hyderabad*, 615 tons, Captain Castles, left the docks on Friday (last week) with 220 Government emigrants on board. She is bound for Adelaide, and sailed on Tuesday. The *Hooghly*, of 465 tons, is the next Government emigrant ship sailing hence. She will leave about the 14th inst. for Portland Bay; and will be followed, about the 20th inst., by the *Persian*, a fine ship of 1004 tons, for Melbourne. This will make thirty five Government ships and six private ships despatched from this port during the year.

Poaching.—The Earl of Stamford, the other day, came upon three poachers on his grounds at Stourbridge, who made off on seeing him. His Lordship pursued, and caught one of the fellows by the collar, but was knocked violently down to the ground by a heavy blow on the back of the head, which stunned him for a short time, of which the fellows availed themselves to get clear off. His Lordship, on recovering himself, managed to get into the road again, but was so disabled from the effects of the blow that he was obliged to go into a cottage, and send for a carriage to take him home.

Yarmouth Bribery Commission.—This commission has been examining several witnesses, consisting chiefly of publicans and tradesmen, who deposed to having been patronised before the election by the partisans of the respective candidates. Some evidence was elicited that the agent of the Duke of Northumberland had been very active in the last contest, and had used influence to make the tenants vote for Mr. Taylor. It is thought the inquiry will terminate this week.

South Warwickshire Election.—On Saturday, Mr. Evelyn Philip Shirley, a Conservative, was elected M.P. for South Warwickshire, without opposition, in the room of the present Earl of Warwick, who has just succeeded to his title. Mr. Shirley said he should go to Parliament an independent man, prepared to support such measures as might be consistent with the safety of the State, the maintenance of the Apostolic Church of these realms, and the preservation of its connection with monarchy. He should be ready, too, at all times to support the agricultural interest, and he hoped that by such conduct he should be found to be what was called, in the language of a well-known political club—"a safe and good man."

The Two Vacant County Seats.—The seats for both South Staffordshire and East Gloucestershire will be contested. Meetings have been held in each county by the Liberal party, whose candidates are—for South Staffordshire, Lord Paget; and for East Gloucestershire, Mr. Holland.

Monument to Dr. Moir.—Last week the monument which has just been erected to the late Dr. Moir, at Musselburgh, was publicly inaugurated. The site of the memorial is on the right bank of the Esk, and the east end of the New Bridge. It consists of a statue 8½ feet, upon a pedestal of 20 feet. The statue, which is the work of Mr. A. Handyside Ritchie, has given much satisfaction, the countenance and profile being considered to bear a striking resemblance to the deceased. The pedestal is a plain square pillar, exhibiting near the top the letter Delta, the sign *de plume* of the poet, encircled by a wreath. At the base is the following inscription:—"In memory of David Macbeth Moir. Beloved as a man, honoured as a citizen, esteemed as a physician, and celebrated as a poet. Born 5th Jan., 1798. Died 6th July, 1851."

Fatal Gas Explosion.—On Friday week a dreadful explosion occurred at the gas-works recently erected near the St. Mary's Barracks, Chatham. In filling the new gasometer it was found that the gas was escaping, and the engineer (Culver), with a workman named Hall, proceeded to the top to see from what part the leakage came. The men incautiously took with them a lighted candle, and the gasometer instantly blew up with a loud report. Culver was hurled a great distance on the adjacent marshes, and was frightfully mangled, and quite dead. The body of Hall was found under the gasometer.

Opening of the Hereford and Shrewsbury Railway.—The opening of this line took place on Monday last, on which occasion the event was celebrated with rejoicings along the line, more particularly at Leominster and Hereford. On Monday, a special train, in which were Mr. W. O. Gore, M.P., Chairman of the Company; Mr. Robertson, engineer; Mr. J. J. Peele, solicitor; and Mr. W. Roberts, secretary to the Company, and some others officially connected with the line, started from Shrewsbury, and arrived at Leominster soon after three o'clock. Here they were received by the Mayor and Corporation, dressed in their official robes, and a large concourse of the inhabitants of the town and neighborhood, who cheered loudly as the train arrived at the station. The Directors and their friends then adjourned to the Royal Oak Hotel, where a capital dinner was prepared for them, and to which about one hundred gentlemen sat down. On Tuesday similar demonstrations, but on a more extensive scale, took place at Hereford—the good city, at the required point, observing a general holiday on the occasion. The opening of the Newport, Abergavenny, and Hereford line, which is fixed for the 15th instant, will, in connection with the Shrewsbury and Hereford and Shrewsbury and Chester, form a direct chain of communication from the Mersey to the Bristol Channel; and when the Hereford, Ross, and Gloucester is finished, it will form the shortest and quickest route for the traffic between the south of Ireland and London. (Next week we shall Illustrate the festivities at Hereford, on Tuesday.)

The late Fatal Accident at Plymouth.—On Friday week, the jury assembled at the Guildhall, to inquire into the cause of the death of the five boys who were killed, as previously reported, by the fall of the houses in Southside-street. No further evidence was adduced, and the jury returned a verdict of accidental death, coupled with a recommendation to the commissioners that in future all old houses should be pulled down, under the superintendence of the town surveyor, and that proper notice should be given to him of such removals. Another boy, named Dyer, has since died from the injuries received.

A French Steamer in Distress.—The Peninsular and Oriental Company's steamer *Douro*, from Constantinople, put into Plymouth on Saturday last, in consequence of having in tow a French steamer, which she picked up in the Bay of Biscay. The latter was the *Paris*, steam packet, bound from Havre to Marseilles, and her captain stated that her boilers were burnt and collapsed, and that she was unmanageable. An engineer sent on board from the *Douro* got up the steam in the starboard boilers, and so assisted in the propulsion of the vessel. Captain Russell landed the mails and despatches, and having taken the necessary steps with regard to his convoy, left in the *Douro* on Sunday morning for Southampton.

Narrow Escape.—On Friday week, as the Bishop of Natal and Graham's Town were proceeding in a fly to Cuddesdon Palace, to meet a party at the Bishop of Oxford's, the carriage was upset near Wheatley, and the right rev. brethren were extricated from their perilous situation by being helped out through the window, as the door could not be opened. Their Lordships sustained no injury; and as the Bishop of Oxford's carriage, returning from Oxford, fortunately reached the spot shortly after the accident, their Lordships were enabled to proceed to their destination.

The York and North Midland Railway v. Mr. Hudson.—In the Equity Court, on Saturday, the decision of the Master of the Rolls, in the suit brought by the York and North Midland Railway Company against Mr. Hudson, for £54,690, was given in favour of the company, Mr. Hudson being required to pay £70,000 into Court by the 15th of next month, and the remainder by the 15th of April. Among the sums involved in this account was one of £9,000, which Mr. Hudson had stated in his answer to have been distributed by him in the shape of shares to certain persons of influence connected with the landed interest and Parliament for their support to the line; and another of £3 20 which had been paid by him to the Corporation of York, for legal expenses incurred by them in favour of the undertaking. In respect to the former, Mr. Hudson said he was pledged to secrecy, though he would have given the names in private to the Master of the Rolls. The Court, however, could take no cognisance of that offer, and held Mr. Hudson accountable; at the same time condemning the transaction as alike wrong on the part of the giver and the receivers. With respect to the sum paid to the Corporation of York, the Court had no doubt that Mr. Hudson had *bonâ fide* paid the money; but, as he had no authority to do so, they decided that he must refund it, although the requirement seemed rather oppressive. As to the conduct of the Corporation in lending itself to the object out of which the payment arose, the Court thought it unnecessary to express an opinion.

FAT STOCK AND THE SMITHFIELD SHOW.

The event of the week, in London, is, without question, the "Smithfield Club Fat Cattle Show," which—after an existence of more than half a century, still flourishes, and receives undiminished support from contributors of stock—affords decidedly increased attraction to the miscellaneous crowds who hasten there to stare, to study, to compare, and to meet their country friends.

In the Baker-street Exhibition all the tastes of Englishmen are brought out—the gastronomical, the agricultural, the social. The Frenchman's idea of returning from business is to live in Paris, lounge on the Boulevards in the morning, and go the round of the theatres during the evenings of the week. The Frenchman seldom inquires into the quality of the meat served to him; he knows nothing of the difference between Normandy and Brittany beef; a cutlet well cooked is a cutlet to him, no matter where the sheep was fed; but he is learned in sauces—great in *purée* and *sautée*. The Englishman's idea of retiring from trade, is a country life, a small farm, a couple of cows, home-made bread and butter, with pigs of extraordinary fatness, a trotting cob, a yard full of Patagonian Cochin-Chinas, or grand grey Dorkings. Then he is learned, or pretends to be, in the qualities of beef and mutton; discourses critically on Short-horn and Hereford; expresses a preference, in order to be in the fashion, for a four-year-old Highland ox, or Norfolk-fed Devon; and says a great deal on the question between the pure South Down and the Hampshire, or half-bred Leicesters John generally inclines to the more expensive meat—he has acquired a taste for it at his chop-house, and city dinners; but Mrs. Bull, being economical, likes rather more size in legs of mutton, and fat on sirloins of beef, besides objecting to the difference of a penny extra a pound paid for the fashionable Highlander, "of the same sort as that supplied to the Queen," and Downs of the pure Richmond or Shelley breed.

Now all these tastes are fully satisfied at the Christmas Show. People meet their country friends, handle the stock, and indulge the aristocratical admiration which forms so striking a feature in the British character, by closely inspecting, admiring, and tormenting the bullocks sent by Dukes and Earls, and the pigs contributed by Prince Albert.

It is the universal sympathy, the decided taste exhibited by the English public of every degree, that keeps the Christmas Shows up to the mark. Peers and mechanics are as much interested and amused as the farmers who breed and feed.

A few years ago the Smithfield Club held their Exhibition in a small yard in Goswell-street; now the great Bazaar in Baker-street will scarcely contain the entries; although, in various parts of the country, and especially in Birmingham, other Shows are held, by which contributions who formerly sent to London are attracted.

But if local exhibitions have divided the interest once concentrated in London, railroads have extended the range of the Metropolitan Show to districts before unapproachable. A fat ox can be sent a distance in a day at an expense of 40s., which formerly would have required a week's time and twenty pounds of hard money. Railroads have also had their effect on visitors, who are no longer confined to the immediate inhabitants of the metropolis and the few men of wealth who formerly took a part in scientific agriculture. Thirty years ago the use of bones as manure, on which the cultivation of the turnip rests, was slowly extending from the district of Yorkshire, the Lincolnshire Wolds, and Cheshire superphosphates, so stimulating and portable, were unknown; guano was undreamed of; and the use of cake for feeding purposes was, out of two counties, almost as rare as the consumption of claret. Farmers rarely read in those days, and still more rarely travelled beyond the nearest market-town. The existence of excellent breeds and valuable usages in feeding remained unknown beyond limited districts; and a farmer of the south was, perhaps, more strange to a farmer in the north than a French or Dutch agriculturist would be at the present day. It was not that there were not plenty of men of first-rate agricultural and especially stock-breeding skill in these days, but they had few means of coming together and exchanging the benefits of their mutual experience.

Many people eat beef or mutton, fry bacon and cure hams, and have no idea that the manufacture—to use no far-fetched term—of these necessary articles, has made almost as much progress as that of woollen cloth or paper. For instance, the exertions of Coke of Holkham, Francis Duke of Bedford, Earl Spencer, and others untitled, who followed in the traces of Bakewell and the brothers Culley, have shortened the period at which horned stock can be brought to eating condition, without loss of quality, from six years to three—in Short-horns to even less than three years; while, in the other direction, improved stall and box feeding with varieties of fat-making food, render it possible to bring old cows into prime killing condition. For an example, we may refer to the beautiful fat Devon cow, fourteen years old, exhibited this week by the Earl of Leicester. By following up the same principles, five-year-old mutton has been superseded by stock which comes to full maturity at twenty months; and pigs, which used in two years to eat their heads off, are now brought into much primer condition at nine months. The greater part of this improvement may be distinctly traced to the experiments and exertions made by the noblemen, gentlemen, and practical farmers who form, or support by their contribution of animals, the Smithfield Fat-stock Club.

The advantage to the consumer of this increase of meat manufacture is enormous: it has enabled us to use, during the winter, fresh meat, instead of salt meat, which in the early part of the eighteenth century, formed the winter fare of the most respectable families. To the working classes the improvement in the breed of pigs has been of essential service. Within the last ten years, the old-fashioned, unprofitable pig, has been superseded, in the labourers' and mechanics' cottages of Lancashire and Yorkshire, and other active counties, by improved breeds, which a very few years previously were considered the exclusive property of the well-to-do amateurs.

The early maturity and improved quality which has been attained since the Smithfield Club was established, has been accompanied, step by step, by equally important improvements in the other operations of agriculture. Good stock cannot be profitably brought into good killing condition without good food. Turnips and other root-crops are essential for feeding stock to that evenness and symmetry which is now considered an essential qualification for a prize. Corn and cake will give lumpy fat, but roots give evenness and quality. To grow roots in perfection plenty of manure is essential, and well-fed stock form of themselves a great manure manufactory. Again, to grow root crops, good cultivation, drainage, pulverisation, careful sowing, are essential: hence the duties of the mechanic are called into play. But farm-yard manure and root produce is not enough; we want more pungent manures to stimulate and hasten the growth of our roots and grasses. We want, too, more grain and more beans than our fields will supply. So, after having, by railroad and steam-boats, collected bones which once ran almost valueless upon their beach or Devon hills; after having set the farmer to break up his grass land and husband his manure; after having stimulated the landlords to build good sheds and feeding yards, and to drain and thin timber, after having taxed the ingenuity of the implement-maker—we call upon the merchant, and send him abroad to gather guano and nitrate of soda in South America and Africa, and the dung of bats in India, and modern bones from every country in the world, and found bones (or one of our chemists can discover) from Estremadura in Spain, and, not content with these stimulants, we send to and probe in Egypt, and Indian corn and barley and oats grown round the Mediterranean and the Black Sea, as well as the Baltic and beyond the Atlantic.

Thus, in the shows of the Smithfield Club we may learn if we but read the labels, walk round the galleries, examine the implements, and read the contributions of private dealers in seeds as well as of the Royal Irish and English Agricultural Societies—that the roast beef of Old England, the unequalled mutton, and much-envied pork, depend not less on the skill of our graziers and breeders than on the talent of our mechanics and chemists, and the enterprise of our merchants.

SIR HARRY VERNEY'S HUGE SHORT-HORNED OX, EXHIBITED AT THE SMITHFIELD CLUB SHOW.—(SEE PAGE 488)

CHRISTMAS GRAND POULTRY SHOW.

THE grand annual winter show of poultry, formerly held at the Surrey Zoological Gardens, took place this year in the Great Central Horse Repository, St. George's-road, on Tuesday, Wednesday, and Thursday. The number of birds on show was exceedingly large, there being no fewer than 585 pens of poultry, and upwards of 200 pens of pigeons. The character of the show generally was remarkably good, better even than the summer show at the gardens. The Cochin-Chinas mustered in strong force, and looked well. There were also a few of the new variety, the Brahmapoora, which, it is stated, is even more valuable as a layer than the former. They are handsome birds, but appear to be rather extravagantly rated, the price affixed ranging from twenty-five pounds up to a hundred guineas a pen. The other varieties—Dorking, Polands, Hamburgs, Malays, Bantams, &c.—were numerous, and all well deserving the inspection of amateurs. There were several pens of ducks and geese, the latter particularly fine, and a few turkeys and guinea fowls. The pigeons were all exceedingly beautiful, and included most of the fancy varieties. The pens of Mr. Bult and Mr. Wicken deserved special commendation. The following sales are of the principal prizes awarded:—Cochin-China, buff, lemon, or cinnamon, any age, Mr. J. Ival; hatched in 1853, Mr. H. English; white, any age, Mr. G. C. Peters; hatched in 1853, Rev. N. Allen; brown, any age, Mr. J. Fairlie; hatched in 1853, Mr. J. F. Chater; black, Mr. R. P. Fight. Spanish, Mr. T. Painter, Mr. G. Botham, Mr. T. H. Fox. Dorking, coloured, Mr. T. Dutton, Mr. R. Boys, Mr. W. T. Squire; white, Mrs. Mills, Mr. C. Alloway. Polands, black, Mr. J. Crawther, Mr. W. Symonds; golden, Mr. H. F. Fisher; silver, Mr. S. T. Baker, Mr. W. Symonds. Game Fowls, Mr. G. C. Adkins, Mr. J. Mousey, Mr. S. Ridley. Malay, Mr. W. Mannered. Hamburgh, Mr. C. Rawson, Mrs. Henry Fookes, Mr. Cyrus Clark, Mr. B. P. Brent, Mr. C. Backland. Bantams, Mr. H. D. Palmer, Mr. G. C. Adkins, Mr. J. Mousey, Rev. G. F. Hodson. Geese, Mr. C. Rawson. Ducks, Mr. J. Eason. Mr. T. Fairley, Guinea Fowl, Mr. W. G. Vivian. There were several ingenious machines and apparatus connected with poultry management exhibited.

THE SMITHFIELD CLUB PRIZE MEDAL.

SMITHFIELD CLUB PRIZE MEDAL.

Of this Medal, about thirty silver and five gold impressions are annually given to the breeders of the prize animals at the Smithfield Club Show. The Medal bears the effigies of Earl Spencer first President of the Club; and of the Duke of Richmond, the successor of Earl Spencer in the presidential chair. The Medal has been executed by Messrs. Thomas, of 163, New Bond-street, who have been silversmiths to the Club from its formation.

MR. C. ALLOWAY'S WHITE DORKING. GOLDEN POLANDS, MR. H. B. FISHER. SILVER POLAND, MR. W. SYMONDS. MR. B. PIERCE'S HAMBURG SILVER-PENCILLED. SPANISH, MR. T. H. FOX. HAMBURG SILVER-PENCILLED, MR. BERNARD PIERCE. FIRST PRIZE COCHIN-CHINA, MR. JOHN FAIRLIE

PRIZE POULTRY, FROM THE WINTER SHOW, AT ST. GEORGE'S-ROAD.

THE NEW (WEST) WING OF SOMERSET HOUSE.—(SEE NEXT PAGE.)

ROYAL PRESENT TO A BRITISH OFFICER.

This ornamented Cap and Silver Staff have just been presented to Commander Eardley Wilmot (late of H.M.S. *Harlequin*, from the coast of Africa) by the King of Dahomey, through the King of Porto Novo, as a tribute of esteem and friendship.

This Staff is an emblem of high rank, and gives to the possessor the title of Cabooceer, or Great Chief. Whenever the person carrying this Staff is seen, the natives fall prostrate upon the ground, and, according to the homage paid to Royalty, throw dirt over their heads, as a mark of their most profound respect and adoration. Commander Eardley Wilmot has been successful in making several treaties with the Kings and Chiefs of Western Africa; and his name is well known amongst the various tribes.

The Staff is 25 inches long, of plated silver, with the Alligator's Head very conspicuously displayed. This reptile is the "Fetish," or God of the country, and worshipped by them.

The Cap is of purple velvet, with the same device displayed upon it. In the centre, or front, is a golden crescent, the emblem of Royalty. The Staff is a curious specimen of African workmanship, and, altogether, is valuable, not only from the rank that it gives to its possessor, but from its distinguishing feature of African nobility.

This is, we believe, the first occasion of such a mark of esteem being presented to a British officer by an African Sovereign.

AFRICAN SILVER STAFF AND CAP, PRESENTED TO CAPTAIN EARDLEY WILMOT, R.N.

LONDON AND BLACKWALL RAILWAY.—ENLARGEMENT OF THE FENCHURCH-STREET STATION.

The growing importance of the London and Blackwall Railway, the immense number of passengers passing through its London terminus, and the increase anticipated from the working arrangements of the company with the Eastern Counties and Tilbury and Southend Railways, have for some time made it apparent that an enlargement of the Fenchurch-street Station would be necessary.

For several months past the works and buildings requisite to effect this have been steadily progressing; and on Saturday, the 19th ult., a portion of the new Station was opened to the public, and the whole will be very shortly completed.

The new Station will comprise booking-offices and waiting-rooms, with platform accommodation for the London and Blackwall, the North London, the Eastern Counties, and the Tilbury and South-end Railways, covered by one roof, 101 feet span, and upwards of 300 feet long; there is also a wing, containing the secretary's, and other offices, and the board-room.

Considerable care and judgment have been required in the execution of the works to avoid any interruption to the traffic, which has been continued throughout the progress of the works. This circumstance, together with the difficulty in obtaining possession of the land, &c., have caused considerable delay in the execution of the works.

The station has been built by Messrs. J. and C. Rigby, of Westminster; and the roof constructed by Messrs. C. J. Mare and Co. of Blackwall, under the superintendence of Mr. George Berkely, the Company's Engineer.

NEW TERMINUS OF THE BLACKWALL RAILWAY, AT FENCHURCH STREET.

MR. ALBERT SMITH.

On Monday evening, this distinguished *litterateur* resumed his popular entertainment of "The Ascent of Mont Blanc," at the Egyptian-hall in Piccadilly, which suggests a fit opportunity for presenting to our readers the antecedents of our successful illustrator of life and manners.

MR. ALBERT SMITH.—FROM A PHOTOGRAPH BY MAYALL.

Albert Smith was born May 24, 1816, at Chertsey, in Surrey; was educated at Merchant Taylors' School; studied medicine at the Middlesex Hospital, and became a member of the College of Surgeons in 1838, after which he continued his studies at the Hôtel Dieu and Clamart, in Paris; and on his return to England, practised with his father as a surgeon at Chertsey. He had already appeared as an author, in a pamphlet entitled "Arguments against Phrenology," in which the leading question propounded was, 'Whether the external form of the Head corresponds to the external surface of the Brain?' This *brochure* appeared in 1837 when its author was described as "a rising student in one of our metropolitan hospitals." His argument extends to some wood-cut pages, the most remarkable feature in which is the good-natured satire and quiet humour with which the writer demolishes the theory of the Phrenologists. In 1838, Mr. Smith communicated series of clever "Sketches from Paris," to *The Mirror*, then edited by John Timbs; and in 1839-40, appeared in the same editor's periodical, the *Literary World*, Mr. Smith's "Sketches of Evening Parties." In the earliest specimens of the writer's home-spun, and in the same work he printed and illustrated a narrative of his "Passage of the Great St. Bernard," the *avant-courier* of his "Ascent of Mont Blanc," which he faithfully describes as a long-cherished hope of his early youth. About this time he gave a very interesting account, of his Mont Se-

Bernard journey. Illustrated with his own drawings, at several public institutions of the metropolis and its environs He also wrote a set of characteristic papers for the *Medical Times;* and in 1841 he settled in town, and began to write for the magazines, and became a contributor to the pages of *Punch*—in the first volume of which appeared his "Medical Student" sketches In 1843 Mr Smith wrote for the *London Saturday Journal* a *nouvellette,* entitled the "Armourer of Paris;" and an old Chertsey legend, "Blanche Heriot," which he afterwards dramatised for the Surrey Theatre—this being his first essay in writing for the stage

Mr. Smith has since produced the "Adventures of Mr. Ledbury," the "Scattergood Family," the "Marchioness of Brinvilliers," "Christopher Tadpole," and the "Pottleton Legacy," most of which first appeared in *Bentley's Miscellany,* and have been republished in volumes. He, likewise, wrote for the Lyceum and Princess' Theatres several burlesques, which enjoyed great popularity. Next he appeared as the author of a set of amusing little books, the ideas of which may have been taken from the Parisian "Physiologies," but, in each instance, was worked out by our author with great originality; such were "The Gent," "The Flirt," "The Ballet-girl," "The Idler upon Town," "Stunk-up People," &c; which, by good-naturedly shunning the weak points of a very large class of society, insured a very extensive popularity

Meanwhile, Mr. Smith occasionally contributed to *Blackwood's Magazine, the Keepsake, the Book of Beauty,* and other Annuals; and, for several years, he was the dramatic critic of the ILLUSTRATED LONDON NEWS, to which journal also he contributed many a column of pictorial pleasantries. He also wrote several songs for John Parry, and his entertainment entitled "Lights and Shadows of Social Life"

In 1849, Mr. Smith made an excursion to the East, and on his return, published his clever volume, "A Month at Constantinople," and in the following year he produced his entertainment of travel, "The Overland Mail" Next year, Mr. Smith made the ascent of Mont Blanc. Upon this journey he was found his entertainment, first given at the Egyptian Hall, March 15, 1852, the success of which is best attested by the following data: in the two seasons 1852-53 there paid for admission 193,754 persons; the entertainment was represented 471 times, and once privately to Prince Albert, the Prince of Wales, and Prince Alfred, at the Egyptian-hall, June 28, 1852, at half-past nine o'clock in the morning. The sum received at the doors during the two seasons exceeded £17,000; and it is a noteworthy merit of Mr. Smith's management, that no charge was made for places taken or for play-bills.

Our author's latest work, "The Story of Mont Blanc," has already been reviewed in our columns; it is altogether his best literary production, and has a maturity and finish which will prove a lasting merit

"The Ascent of Mont Blanc," as we have already mentioned, was resumed on Monday evening. Mr. Smith has not, however, trusted, in this, his third season, altogether to the old materials, whether of decoration or information. He has had the hall of exhibition refitted; the dais now taking the form of a Swiss châlet, the symbolic representation of which, with its picturesque fretwork, serves in part for a curtain to the dioramic stage. The front still continues to exhibit the same appropriate and pretty aquarium, with its lilies, mosses, shells, and fishes; but the galleries occupied by the audience are made to resemble the balconies of the Bernese châlets, with suitable inscriptions; so that the spectator, on entering, finds he is indeed transported into the midst of a Swiss province, listening to his old friend telling his usual tale of wonder. The changes made in the lecture relate to the route by which the scene of exploit is conducted, and the scenery of the Bernese Oberland, the Rhine-bridge at Basle, Boulogne, Epernay, Zurich, Righi Kulm Hotel, the Lake of Lucerne, Interlaken, and the Wengern Alp inn, with the Jungfrau and Eigers in the distance. Some favourite characterisms are likewise introduced, such as Mr. Pringle, Mr. Parker, and Mr Phipps, with a Mr. Hartley, of the Foreign-Office—with whom new incidents are associated, replete with humour and individuality. The portion relative to Mont Blanc has not at all been altered. But the second, like the former, is entirely novel matter. The Simplon, by the village of Brieg; the Gauthebridge; the Gorge of Gondô, by Domo D'Ossola, down to the Lago Maggiore and back homewards, are the theme of the supplementary lecture, which is accompanied with beautiful views of the scenery, and introduces to our acquaintance a new traveller of the name of Browne, and an extraordinary teller of unintelligible stories. Altogether, the entertainment comes again before the public with many attractions, and was inaugurated with an overflowing and delighted audience

We find the following merited tribute to our author in the *Revue Britannique*, Paris, July, 1852:—

C'est M. Albert Smith en personne, que vous avez pu rencontrer comme nous, il y a quinze ans à Paris, fréquentant la clinique de l'Hôtel Dieu, mais, n'aigrés ses brillantes études en médecine, il y a longtemps qu'il a renoncé à la profession médicale pour se faire successivement romancier, journaliste, et enfin touriste humoriste, vulgarisateur des impressions de voyage, puis revenant à Londres pour les traduire en narration orale. M. Albert Smith est cet homme qui est venu, un charmant comédien. Ajoutons qu'il n'était pas de son talent de mime et de diseur; avec un goût parfait, il se contente de faire rire un moment et revient à la partie sérieuse de sa narration, à peu près telle qu'il l'a publiée lui-même

SOMERSET HOUSE.

THIS noble structure, the work of Sir William Chambers, was commenced in 1776, and was in progress more than fourteen years; since it appears by a report laid before Parliament in 1790, that £ 41 7 5 had been then expended, and that an additional sum of £35,000 was still wanting to complete the building. Ultimately, half a million of money was expended upon it, and it was left unfinished.

Somerset House is one of the finest structures of which the metropolis can boast. The admirable proportions and excellent details of the Strand front, the elegance of the open central bridge into the noble court-yard, around which the offices are placed, the internal distribution, the river front, and the decoration of the interior, have obtained for the architect the praise of those best qualified to judge As a piece of masonry it is marvellously the marks of river deities on the key-stones of the arches, by Carlini and Wilton, are admirably executed

The east wing of Somerset House was left incomplete by Chambers; but in 1829 the vacant space was filled up, from the designs of Sir Robert Smirke, with the building for King's College. The north side, or that next Wellington-street, has remained unfinished till now, flanked by some unsightly brick dwelling-houses In consequence of the consolidation of the boards of Excise, Stamps, and Taxes &c., into one board (the Inland Revenue), it became necessary to abandon the Excise Office, in Broad-street, City, and bring all the establishment under one roof at Somerset House; and Mr. James Pennethorne, the architect to the Board of Works, was directed to make designs for the completion. By the alterations proposed, a large amount of space will be effected, and the cost of the new buildings will be met by the sale of the old Excise Office; so that no expense, we understand, will be incurred for the completion of this side of Somerset House.

The whole extent of the new front will be 300 feet. At the south end, the new building will be kept about 25 feet behind the river front, so that the uniformity of that front may not be interfered with. All the details are to be executed exactly from existing parts of Somerset House; but the centre portion of the new front (which will not be seen from any point of view at the same time with the river front) has an attic; and the chamber windows are heightened, to meet internal requirements.

In the plan, the north wing projects about 55 feet; the south wing, about 48 feet. Our Illustration shows the portion of the new wing already completed.

HARMONIC UNION, EXETER-HALL.—A secular performance is announced for Monday next, consisting of Handel's "Alexander's Feast," and G. A. Macfarren's "Lenora," which was performed with so much success last season.

Emil Devrient, the German tragedian, whose performances in London have made his name popular with the English public, is now performing with much *eclat* at Gotha. The reigning Duke, in token of his satisfaction, has conferred on him the insignia of the ducal order of Ernestine; this is the first instance of the kind conferred in Germany, though decorations have been lavishly bestowed on musicians

M. Brignoli, the young Italian tenor, whose sweet voice and highly successful debut at the Italiens, under Ronconi's direction, will not be forgotten, is, it is understood, likely to appear in London during the ensuing opera season. M. Brignoli is about to leave town for Antwerp, where he is engaged for a short musical campaign as *primo tenore assoluto.*

GAMBLING IN FRANCE.—When the French Government licensed gaming-houses (which the French Government did up to 1838), a public company paid into the national exchequer the annual sum of £200,000 for the exclusive right of keeping them in Paris; and, at a trial, it was seen in the course of the evidence, that the clear profit for 1837, exclusive of the duty, had been £75,000; of which three-fourths were paid to the city of Paris, leaving the lessee £19,000 for his own share.

MUSIC.

THE PROJECTED ENGLISH OPERA.

The circumstance which we mentioned a few weeks ago, as a rumour, has now assumed the shape of positive information. We are to have an attempt, at least, to establish a regular English Opera, on a scale sufficient to afford a reasonable prospect of success. The *entrepreneur* is Mr. Case, the music-seller, of New Bond street, to whom Mr. Smith, the lessee of Drury-lane, has sublet that theatre. Mr. Case, we understand, is forming an operatic company, and is to commence his campaign in February next. He has, it appears, already engaged Mr and Mrs. Sims Reeves, Mr. Swift, Madame Clara Novello, and Miss Louisa Pyne Here are already the chief component parts of a strong company. Clara Novello has trod with success the highest walk on the Italian stage, while she is an Englishwoman in birth, breeding and feelings, and, by education, a musician of the highest and most varied attainments. Louisa Pyne, during her brief career, has become a favourite of the public, as a delicious singer, and a lively, animated, and interesting actress. Mrs. Sims Reeves is a very accomplished singer, and her dramatic powers are considerable. Of Reeves himself it is unnecessary to speak: he is, *par excellence, the* English tenor; and Mr. Swift, though as yet little known to the public, has gained no small reputation abroad. We do not know who is to be the principal bass. The name of Mr. Weiss has not been mentioned; but the formation of an English operatic company without including the finest dramatic bass singer in England would be an incredible absurdity; and we therefore assume that Mr. Weiss will be among the number.

With such principal performers, and a few comprimario subordinates, any opera whatever may be successfully got up, whether it be of native growth, or imported from the Italian, German, or French stage; for, as we have said on a former occasion, we deprecate the adoption of any exclusive principle. Provided an opera is of intrinsic excellence, that it is judiciously adapted to the English stage, and well fitted to the powers of the performers, we care not by whom it is composed, or to what country it owes its birth. *Cateris paribus,* we would prefer works of native growth, as well as performers of native birth; but we would not, for the sake of this consideration, deprive ourselves of superior pieces or superior performers. It was not by listening to a senseless cry of "Rule Britannia" that France gradually attained the greatest national opera in the world. The Académie Royale de Mus que has, for more than a century, been open to the composers and performers of all countries. All that was required was that the operas themselves should be in French. A long line of illustrious Italian and German composers—during the whole of this long period, and down to the present day—have devoted their energies to the Parisian stage. Duni, Gluck, Piccini, Sacchini, Winter, Cherubini, Spontini, Rossini, and Meyerbeer, are only a few of those great masters to whose labours for the French stage we owe many of the brightest gems of the musical drama: the "Iphigenia in Tauris," the "Alceste," the "Armide," the "Dido," the "Vestale," the "Deux Journées," "Guillaume Tell," "Robert le Diable," the "Huguenots," and the "Prophète." Many of the great singers, moreover, on the French stage, have at all times been Italians and Germans. Among a hundred others, it is enough at present to mention the names of Madame Stolz, Marco, and Gardoni. Now what has been the consequence of this free admission of foreign artists? Has it crushed and overwhelmed the "native talent" of France? Quite the contrary; it has had precisely the effect which many among ourselves would vainly produce by an illiberal and exclusive spirit. It has constantly maintained and fed the national French musical stage It has incited and encouraged the native artists to emulate and contend with their foreign rivals; and, to show how successful their efforts have been, it is sufficient to mention the names, and allude to the triumphs of, Grétry (who was to all intents and purposes a Frenchman), Méhul, Boieldieu, Auber, Adam, and Halévy.

In any English opera-house, therefore, that may be established, we shall have no objection to the introduction of foreign pieces or foreign performers, supposing that the pieces are of intrinsic merit, and the performers are competent to appear on the English stage, It must be the sole object of the lessee to provide the operas, with the best singers and actors, be their origin or their country what they may; and in this object the performers themselves must concur earnestly, zealously, and unselfishly. If the green-room become the centre of cliques and coteries, professional either as to art or personal jealousy—if Mr. This thinks he is not sufficiently blazoned as a star, and Mrs. That sickens at the applause bestowed on one whom she chooses to consider a rival—then all hope of success is at an end; and the affair will terminate, as many have done before, in a fiasco.

Even supposing the most judicious arrangements on the part of the manager, and the best dispositions on the part of the company, they must be prepared for serious difficulties with which their Parisian brethren have not to contend. The vexatious privileges, the dangerous almost extinction—into which English Opera has been allowed to fall In Paris, the National Opera has ever been the most fashionable of all entertainments. The two great Opera-houses, the Académie Impériale and the Opéra Comique, absorb nightly crowds of the *élite* of Parisian society. The *librettî* are often dramas of great genius and beauty, written by the most celebrated poets of the day. Since the days when Quinault wrote for Lulli, and Marmontel for Grétry and Piccini, down to our own time, when Scribe has been the literary *collaborateur* of Auber and Meyerbeer, this has always been the case. The writer of these remarks, in conversation with Meyerbeer, once ventured to ask him how it was that he had devoted himself to the French stage in preference to that of his own country. His answer was, that it was in France only that he could find a poem worthy of a musician. How different is the case in England we need hardly say. There is not a "poet" who, however mediocre in talent and reputation, who would not turn up his nose at the bare notion of writing an opera. As to our composers, the case is different. The production of a successful opera is, of course, the height of their ambition; and, in their anxiety to "be doing," they will work upon any trash a playwright may put into their hands, however revolting to their own literary taste and judgment. This unfortunate state of things must undergo a change: we must have real poets to write our operas, as well as real musicians to compose them, before our musical stage can rise to a level with that of France

This not the only, but certainly the greatest—difficulty must be overcome; and it can be overcome only in one way—by placing the theatre on a footing of the highest respectability. Its foundations must be solid, and its resources ample; its management must be guided by large and liberal views, and its entertainments must be of distinguished excellence There must be no favouritism, and no partiality either towards composers or performers. There must be no profusion, in compliance with the exaction of "stars," balanced by niggardly pars mony in other particulars. And there must be a complete and honourable fulfilment of every engagement, and of every pledge made to the public It is by such means only—and we have no eyes to see them employed—that our English Opera may be enabled to raise her drooping head, may command the services of the highest genius in literature as well as music and may rise to her due position in the eyes not of England only, but of the world.

We mentioned last week the completion of St. MARTIN'S HALL, and its opening on Thursday, the 1st of this month, with a concert of vocal and instrumental music, under the direction of Mr. Hullah, to whose energy and perseverance the public are indebted for the Wednesday Music-hall in the metropolis The erection of so great a public edifice by the sole exertions, and on the sole responsibility, of a private individual—not a great capitalist, but a member of a laborious profession—is really an achievement to which we do not know of any parallel In its complete form, St Martin's Hall is not only, from its vast proportions, of a grand and imposing aspect, but it is also beautiful, being light, elegant, and cheerful. It is 120 feet long, 55 feet wide, and 40 feet high; the length being somewhat more than double the width, and the height one-third of the length, proportions which, being calculated to gratify the eye, have also been found not happily adapted for the purposes of music. As observed on the first performance, that both voices and instruments sounded to the greatest possible advantage Their tones were clear, full, and distinctly audible in every corner of the building, without any of the echo, and consequent confusion, which often arise to the effect of music in vast buildings. The interior of the hall is simple and chaste in its decoration; and the staircase and other adjuncts of the building are spacious and convenient. We have heard its situation objected to; but this objection, to which, by the way, the Royal Italian Opera is equally liable, will weigh but lightly against its great and evident advantages. The 'inauguration" concert was a grand performance of Sacred and Secular Music. There was a chorus, about two hundred strong, selected from among the most advanced members of Mr Hullah's classes, who acquitted themselves in such a manner as to do honour to themselves and their instructor; and there was a sufficiently powerful instrumental band, consisting of our most eminent performers. As principal singers, there were Madame Viardot Garcia (herself a host), Mrs. Endersohn, Mr. and Mrs. Weiss, and Mr. Benson; and instrumental solos were performed by Miss Arabella Goddard and Mr. Hullah's daughter. The selection of music, as might be expected from Mr Hullah's taste and judgment, was excellent. The principal features were a "Te Deum," by Haydn, hitherto unknown in this country; several movements of a Mass by Gounod, a young French composer, whose music was first made known to the English public by Mr. Hullah; some scenes from Glück's celebrated Opera, "Orfeo," which gave Madame Viardot an opportun ty of displaying her splendid dramatic powers; and Mendelssohn's "Walpurgis Night," which formed a magnificent conclusion to the concert. Every part of the hall was crowded, and a multitude of distinguished musicians and amateurs were among the audience.

The week before last, the Directors of the WEDNESDAY EVENING CONCERTS gave "A Night with Mendelssohn," which went off so well, that they were induced to give, this week, "a second night" with the same composer. It proved eminently successful; Exeter-hall being almost as crowded as on the nights of the Sacred Harmonic Society's Oratorios. In its principal features, the Concert exactly resembled the previous Mendelssohn performance. There was the same Symphony, and the same concert was executed by that charming young pianist, Mdlle. Clauss. Mr. Weiss sang his favourite buffo air from "The Son and Stranger;" and several of Mendelssohn's loveliest vocal pieces were exceedingly well sung by Miss Poole, the Misses Brougham, Mr. Weiss, and Mr. Perren. The miscellaneous part of the concert consisted chiefly, as usual, of popular and well-known vocal pieces. The circumstance which created the greatest sensation was the appearance of Madame Amedei, who had already made a strong impression at a previous concert. On this occasion she made an impression still stronger. She sang the fine aria, "Ah, quel giorno!" belonging to the character of *Arsace,* in the first act of "Semiramide," with much beauty of voice, a nobleness of style, and a degree of force and expression, which showed her to be one of the most accomplished dramatic singers of the day. She would be an invaluable acquisition to the Royal Italian Opera. We have had no such *comprimario* after Alboni; and, were she to perform the part of *Arsace* to Grisi's *Semiramide,* Rossini's gorgeous opera would have an effect such as it has not had since Alboni left us.

THE THEATRES, &c.

HAYMARKET.

On Saturday, a new piece, being a comedy in three acts, was produced It is by Mr. Stirling Coyne, and entitled "The Hope of the Family." The characters are a group of grotesque persons, brought together for the illustration of a cleverly-constructed story, consisting of a number of odd and whimsical incidents. First in importance is *Jos Wadd* (Mr. Buckstone), who is taken from the omnibus stand by a scheming attorney, *Mr. D'Oyly Duckweed* (Mr. Chippendale), to personate *Henry Melville,* son to *Sir William Melville,* a millionaire client, hourly expected from India; the true heir having, many years ago, run away from the school of *Dr. Polybius Pengwin* (Mr. Compton), where, having been discarded and disowned by his father, he had been brought up under the name of *Jacob Brown* (Mr. W. Farren) The boy, in fact, had gone to sea, and it so happens in our piece to board the Indiaman, in which his unknown father and cousin are on their passage to England. The young fellow arrives just after the arrangements have been made for substituting him, and *Dr Polybius,* who is in the hands of the lawyer, and compelled to obey his bidding, claims him for his illegitimate son. The comic *vis* of the piece lies with Mr. Buckstone, and his attempts at gentility, in which he is assisted by *Penny* (Mrs Fitzwilliam), who acts in the joint capacity of housemaid and clerk to *Duckweed,* and who has a secret passion for him: but, notwithstanding all her care, the neophyte of fashion gets drunk, and betrays his want of acquaintance with the rules of decent society. The pedagogue *Polybius Pengwin,* being dissatisfied with *Duckweed,* and afraid to return to his wife, is, at this juncture, induced to reveal the whole state of the case to *Joe,* in the hope of extorting from him a thousand pounds to keep the secret. But *Joe* conides the affair to *Penny,* who convinces the poor lad that honesty is the best policy; and, accordingly, both nefarious lawyer and schoolmaster are defeated in their designs. The former, too, is victimised by the daughter of his housekeeper, *Miss Selina Huffymer,* who pretends to be the widow of a bishop with a large fortune, and who involves him, as she had already many others, in the consequences of a breach of promise of marriage. This plot was supported by dialogue especially remarkable for its vivacity and wit, and was illustrated by some remarkably beautiful scenery. That of a railway-room ending in a conservatory, was particularly deserving notice for its good taste and felicitous arrangement The comedy was enthusiastically received by a full house.

ADELPHI.

On Monday a new piece was produced, under the title of "The Thirst of Gold; or, The Lost Ship and Wild Flower of Mexico," translated by Mr. Webster, from "La Prière des Naufrages," by MM. Dennery and Dugué. It is in five tableaux, and its success mainly depends on the scenery and machinery, and in particular on the second tableau, which represents a sea of ice, with the captain of the *Eugénie,* and his wife and child, and a faithful sailor, perishing of cold and hunger among the icebergs, until the ice cracks and the sea flows in, and all sink into the rushing water: except the child *Marie de Valois,* who floats away on an ice-drift. This unfortunate party had been forced out to sea in a boat, from the vessel of which the husband is captain-commander, by an adventurer in search of Californian gold, who had induced the crew to mutiny. In the third tableau, the person appears as the *Marquis D'Arvey* (Mr. Webster), who is pursuing his ambitious purposes in Mexico, and there is brought into contact with *Ouvarida* (Miss Louisa Delcare), who is none other than *Marie de Valois,* now fifteen years older. She has nearly lost her native language; but some words still linger on her lips, and little by little she recovers her recollection of the scenes of her infancy, to the development of all of her consciousness the last two tableaux are devoted, until, by the aid of the faithful seaman above mentioned, who is also saved—*Ouillot,* alias *Putney Bill* (Mr. Keeley)—the entire case against the gold and blood-thirsty Marquis is established. To increase the dramatic interest, the Marquis is made to fall in love with "the Wild Flower of Mexico," who, like another Judah, betrays the modern Holofernes into the matrimonial toils, in order the better to ensure his destruction. Ultimately, he is safely delivered into the hands of justice. The piece occupies four hours in performance, and was well acted. The house was very full, and the spectacular incidents of the new drama called forth the frequent admiration of the audience.

TESTIMONIAL TO MR WATKIN, OF THE LONDON AND NORTH WESTERN RAILWAY.

AT a meeting of the officers of the Company, held at Euston-square, on Tuesday week, and presided over by the general manager, Captain Huish, it was resolved to present to Mr. Watkin—who leaves the Company's service to become the general manager of the Manchester, Sheffield, and Lincolnshire Railway—as a testimonial of the regard and esteem which they (his brother officers) entertain towards him. The resolution to this effect expressed the deep regret of the meeting at Mr. Watkin's retirement from the Company's service. Mr. Watkin, we believe, goes to the Manchester, Sheffield, and Lincolnshire Company under an engagement for five years, at £1200 per annum. We have often had occasion to notice this gentleman's railway experience, business habits, and ability; and we speak from personal knowledge when we say, that, while he carries with him the hearty good wishes of the whole of the London and North-Western executive, and every officer of the Company, he must, at the same time, enter upon his new duties with the satisfaction of feeling that a large body of the shareholders of the Company he now diminishes he will have to encounter

and, we trust, to surmount—are perfectly cognisant of the responsible position he has long held at Euston square, and the very satisfactory manner in which he has maintained it. Few men have had larger opportunities than Mr. Watkin of becoming intimately acquainted with railway management in all its manifold ramifications; and we believe that none could, under the circumstances, have gained greater knowledge of our railway system and its requirements than that gentleman has frequently shown he possesses of both the one and the other. The Manchester, Sheffield, and Lincolnshire Company may congratulate themselves upon having secured Mr. Watkin's services; for he is one amongst the few of our railway men who are really able to grapple with the very serious difficulties under which the Company unfortunately labours.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

There was a Cornish wonder, called John Opie, who died, now some half century ago, leaving a name still honourably remembered in English Art. He was discovered among the tin-mines of Cornwall, by no less a person, in those days—we refer to some "sixty years since"—than Peter Pindar. Peter (or Dr. Wolcot) was in some degree the means of bringing him to London. Opie was rough, unpolished, yet full of talent. Peter had many means of making him known: he talked about him, wrote about him, printed about him, and, still more usefully, took persons of consequence to his rooms, many of whom sat for their portraits; and some few of whom (to become an incressing number) gave commissions. His fame soon spread eastward of Temple bar, so that, when Pitt and Nelson died, "the Cornish Wonder" was in the full blaze of his reputation; making money more rapidly than spendthrifts consume it; courted by all, in spite of "Peter," a full Royal Academician, and, better still, a married man. Opie had a genius for art. The world was with him almost as soon as he did anything that was good. New honours were awaiting him when some fifty years since, he died, leaving a widow—the "Amelia Opie" of thousands of readers—to regret and mourn his loss. Half a century seems a long time to roll over recollection and widowhood; yet half a century, or something very near it, has elapsed since Opie was laid in St. Paul's Cathedral, near to Wren, but nearer to "Sir Joshua." How strange has been the feeling, then, occasioned in literary circles by an announcement, in this week's obituary, that the widow of "The Cornish Wonder" (still Amelia Opie) was no more—that she died, indeed, as recently as the second day of the month recognised by almanacks, and by the tacit common consent of mankind! How easily are people thrown into another generation! When you talk to the Nestor of living poets—why should we conceal his name? we allude to Mr. Rogers—do you not hear the connecting voice of the age of Gray and Mason, of Johnson and of Boswell, linked to your own? An association of the same nature, not so large we confess, is connected with the name of Amelia Opie. Her husband was the Caravaggio of English art: he drew boldly on canvas: she sketched boldly on paper. Too great an interest has, perhaps, been attached to their names, and their after reputations may, perhaps, be gathered from the often-repeated observations of the critical artist and the critical author—one calling the husband a *bad* Caravaggio; and the other calling the wife a *bad* Mrs. Inchbald. Mrs. Opie was in her eighty-fifth year

A *mild* excitement has been raised in literary circles during the present week by the continued announcement of a collected edition of the works of the author of the "Omnipresence of the Deity." When the first advertisement appeared, there was a supposition (very uncalled for, we confess) that the Rev Robert Montgomery was no more, in the flesh at least, a Miltonic genius; that the poet had been very properly obscured, but raised at the same time to the more scriptural calling of a useful preacher. Mr Jeffrey told us, though Mr. Macaulay has not re-echoed the clever criticism of his friend and adviser, that there is much—aye, much, to admire in the early lucubrations of the Oxford poet. We had thought, we confess, that "Satan" and "The Omnipresence of the Deity" had both sunk among the forgotten epics of other days—that Mr. Montgomery was no more a poet than Blackmore or Ned Howard: and that his once-popular poems had been cast to the same forgotten recesses to which the better taste of this age has condemned Mr. Hayley and Miss Seward. Let us press again—

For rising merit will buoy up at last;

and we are soon to be called upon to pronounce a final verdict on "the genius and the faculty divine" of the Rev Robert Montgomery

That *still* useful and improvingly useful body, the Society of Antiquaries of London, continues to suffer from the inward agitation of its newly adopted laws, laws only approved of during the present month of December. It has been the custom of this far-famed corporate body, to have at least two secretaries, neither of whom did their duty, neither of whom (as might easily be suspected) were, or are, sufficiently paid. The posts were therefore looked upon as little sinecure offices, conferring on each holder a slender salary, and an honourable position. In these days, when societies, to be of use, must at least endeavour to be useful, some hip-and-thigh utilitarians have crept in among the lawgivers—the secretaries are reduced to one (a change for the better, we confess); and the draft law, as submitted to the members is made to contain a recommendation that the new secretary should confine his whole attention to the affairs of the Society. When laws were submitted to the general body for approval, an amendment was proposed and carried, that the secretary (for the salary is but small) shall give his *best* (not his entire) attention to the Society's affairs. Is it not desirable to have a scholar and a man of genius, as secretary to a chartered society? Yes certainly: is the ready reply. Then engraving the draft rule confirmed—why exclude scholars and men of genius, with other small chances of income, from adding to their slender and necessary receipts? Scholars and men of genius will not neglect your interests, they will advance them, a great society does not want mere clerks: it wants (perhaps a rare combination) a scholar and a man of business. The amendment was properly carried

Who has not heard of Pepys and his "Diary"? who does not possess a copy of the best diary in any language? Though discovered nearly two centuries after it was written, and relating to the public and individual events of only ten years, it has, in the course of some five and twenty years, run through three large editions, and is now, we are glad to hear, in a new and enlarged, and more carefully annotated, edition. Lord Braybrooke, it is said, has bestowed, for the first time, great pains on the text. We shall have a few slight additions from the Rev. Mr. Hunter, and, what, perhaps, is of equal importance, some explanatory notes from "eminent hands" called in by the noble Lord to make his new edition what it should be, and what his Lordship now thinks an edition of Pepys should endeavour to be like

Literary or one pound a year clubs are, it is said, fast dying out; they are languishing, we are told, the fate of the annuals We can confirm the gossip of the day. Some (once flourishing) are defunct, others are on their last legs, and scarcely one has a two-year old spark of vitality about it. Yet we are to have a new club (even in this exhausted state), one to be called the Warton Club (after Thomas of Trinity), built on the ruins, and from the ruins, of the Percy Club. Tom Warton and Tom Percy were friends, and we should not trifle with honoured names. It would be hard to say, with Dryden in allusion to this new club—

Stil, Tom, he second reigns like Tom the first.

Yet (with every wish for the success of the scheme) we doubt in these hard times for subscription book societies, if the new project is at all likely to succeed.

Art during the present week has not offered anything of consequence to require preservation or comment: not that the *Table* has been silent or the *Town* indifferent, even for a week, to the claims of artists or the labours of publishers: he shall have something to say next week connected with art—its professors and its followers.

"BIOLOGY.—At the close of a "Biological" entertainment at Stafford the other evening, a little boy, as occurred, which led to an *éclaircissement*. A boy had been offered a shilling to induce him to speak when the lecturer said he could not; the lecturer, according to the boy's statement, promised him half-a-crown not to speak; and when the lad went for the larger he he was reminded it. The other boys then declared that they had been offered one shilling before by the lecturer, and from each he had taken for their part of his silence, and they stated that their "susceptibility" was a sham all the way thro

CHESS.

TO CORRESPONDENTS.

F C C.—Touch and move is a positive rule among all good players. Indeed, there can be no good play where this rule is not enforced

ALBERT.—At move 26 of game 21 in the impending match, there is no Pawn which White's Kt can take. You must have forgotten that, at move 24, Black played P to K Kt 3rd.

J. H. Bentford.—You have forgotten to furnish the particulars of the newly-formed club and to send your own address.

C. [illegible].—Your games by correspondence shall have attention the moment the [illegible]

(The game having now lasted about twelve hours, and both players being thoroughly exhausted as well by weight by, it was adjourned until the next day. It was then carried on as follows:

48. B takes K Kt P	K R takes K B P	6) R to Q Kt 7th	K to his sq
49 B to Kt 8th	Q R to Q B sq	61 B takes P	K to Q K 4th
50 B to K B 4th	K to Q B sq	62 B takes P	K to Q K 3rd
51 B to K B 6th	K to B sq	63 B to K B 6th	K to Q K 4th
52 P to Q B 4th	K to Q B 2nd	64. P to K Kt 6th	K to Q K 3rd
53 K to his 2nd	K to Q B 3rd	65 K to his 3rd (j)	K to Kt sq (q)
54 K to his 3rd	P takes P		
55 P takes P	K to Q B 4th		
56 P to Q 4th	Q R to Q B 5th		
57 K to K R 3rd (k)	K to Kt sq (q)		

(a) The usual move here is Q to her sq.

(b) At this period the game perhaps. The check might have been kept in reserve, and another piece brought into action.

(c) White's pieces are now much better developed than his opponent's; but Mr. L. does not make as much of his superior position as it admits of.

(d) We should have preferred playing Kt to K Kt 3rd. By moving the Kt to K 6th, White encourages a piece of his own, whilst he capitally stationed, for one of his adversary's quite useless pieces.

(e) Surely he (or even now to have played the Bishop to K Kt 3rd. Kt to Q 4th would also have done well enough, perhaps than the one actually adopted.

(f) Again to no purpose, as he has been going out the Pawn

(g) Castles as here. We should rather have made sure of an exchange of Rooks and commenced a fresh attack on the Queen's side.

(h) Mr. Lowenthal would have done well to have now adjourned the game. Its termination must, however, be a matter of time, and very great time, too.

(i) Apparently, though a careful examination of the position will show that White has a winning game.

(j) Surely he (or even now to have played the Bishop to K Kt 3rd. Kt to Q 4th would also have done well enough, perhaps than the one actually adopted.

(k) Again to no purpose, as he has been going out the Pawn

(l) Castles as here. We should rather have made sure of an exchange of Rooks and commenced a fresh attack on the Queen's side.

(m) Mr. Lowenthal would have done well to have now adjourned the game. Its termination must, however, be a matter of time, and very great time, too.

(n) Again to no purpose, as he has been going out the Pawn

(o) Castles as here. We should rather have made sure of an exchange of Rooks and commenced a fresh attack on the Queen's side.

THE REBELLION IN CHINA.—CREDENTIAL OF A MEMBER OF THE TRIAD SOCIETY.

symbols of universal sovereignty, and there are many signs which allude to the promised advent of Hung as Tien-tse', or the Son of Heaven—one of the common titles of the Emperor of China. Fourteen small flags point to the functions of the Bannermen, who cut an important figure in the military history of China. There are subordinate flags, which bear testimony to the courageous virtues which are exhibited by the supporters of Hung. Incense vases bear their odours to the gods. The head of the insurgents has taken to himself the name of Hung, but there is no reason whatever to believe that he is in any way connected with the ancient Imperial race; indeed, he has put forward no such claim, but has chosen rather to designate himself as a son of the "Heavenly Father." The Amoy rebels have, however, distinctly proclaimed themselves members of the Triad Society, and confederated to re-establish the national Chinese dynasty.

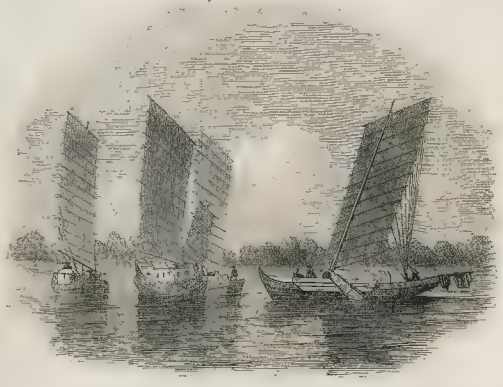
We add a Sketch of the boats of her Majesty's ship *Hermes* ascending the Yang-tse-Kiang river, upon which, at the date of the last advices, the Imperial authorities at Shanghae, were still maintaining offensive operations against the insurgents. Our second Engraving is a Sketch of Amoy Harbour, the scene of continually recurring conflicts between the Imperialists and the insurgents. The Sketches were taken in the present year, by Mr. Williams, whose diary describing the expedition of the *Hermes* boats up the Yang-tse-Kiang, appeared in this Journal of the 5th ult.

RACES NEAR WELLINGTON, NEW ZEALAND.

The two leading characteristics of the Anglo-Saxon branch of the human family are admitted to be—that restless activity which leads them to occupy the earth and subdue it; and that strong attachment to the laws and customs, and even the sports and amusements, of their native land, by which they are impelled to reproduce in the most distant parts of the world the old familiar scenes. Thus, the town of Wellington had scarcely risen from its foundations, when an attempt was made, and not altogether without success, to transfer to the *rues* of New Ulster some portion of the attractions which annually draw thousands to the Downs of Epsom. For their horses, New South Wales and Van Diemen's Land have supplied New Zealand with a strong, hardy breed, that is itself a cross between some horses brought by the Australian colonists from England, and some Arabs subsequently imported.

Our Engraving represents the race-course of the Plain or Valley of the Wairarapá, so called from the lake of that name; this race-course is about thirty-nine miles from Wellington, and is beautifully situated at the back water-flats of the river Rhuamahunga; being bounded on the one side by the stream, on the other by the bush—the blue line of which may be seen in our sketch, extending along the base of the hills. These races take place annually, in the height of the summer—that is to say, in January or February; and are attended by a gay crowd of visitors, both ladies and gentlemen: the former of whom, indeed, take such interest in the sport, that we find in 1853 a whip was given by the fair ones of the valley, which was competed for under the title of the "Ladies' Whip." The races are—the Wairarapá

SKETCH IN AMOY HARBOUR.



BOATS OF "THE HERMES" ON THE YANG-TSE-KIANG RIVER.

IMPROVED SHORT-HORNS, PURCHASED FOR THE UNITED STATES.

Stakes, the Grazing Purse, and the Consolation Stakes. This exciting diversion arouses even the natives from their usual apathy; and not only do they muster on the ground in full force, but many of them enter horses for the race: thus, in 1852, the programme comprises the names of Manihera's ch. g. Jack, Naturie's gr. m. Kaipanga, and Nireo's bl. g. Wairongomai; and in 1853 the name of Manihera figures in the list of stewards.

These plains, however, afford interest and amusement to the botanist no less than the sporting man. Thus, in the long line of plants and shrubs which reaches across the foreground of our Engraving, are comprised an arborescent fern, termed by the natives *nenmaka*, or *pitan*—whose stem consists of an edible pulp, from which the early colonists contrived to manufacture a tolerably respectable imitation of apple-tart; the *Toutouni*, a reed, whose cane-coloured seed-stem frequently rises to the height of six feet, from a whirl of leaves four feet in length; and last, though assuredly not least in importance, the *Phormium-tenax*, or native flax, of which our readers will need no description.

Those, again, who are admirers of natural scenery, will find their taste gratified by the glorious landscape around them; so that, on the whole, we believe few indeed, if any, will return disappointed from a visit to the race-course of the Wairarapa.

IMPROVED SHORT-HORNS.

The extraordinary prices paid during the past year for favourite individuals and families of this well-known breed of cattle, must have been remarked by all those interested in stock breeding or in agriculture, as an evidence of the growing popularity of this breed at home and abroad. The foreign demand has been large, though chiefly confined to America, to whose climate and rich pastures short-horns seem peculiarly adapted. Accordingly, the bidders from the United States strongly competed with the English breeders at the Great Tortworth Sale; when the Americans carried off both the celebrated Duchess-tribe Bulls, and four out of the eight females of the same family, all at very high prices. Of these four, three were purchased by Mr. J. Thorne, of New York; and, with a number of other animals, were shipped from Southampton by the steamer *Hermann*. Our Artist saw them on their way through London, and thus secured portraits of several of them. The group in the Engraving consists of the roan cow, Duchess (59), bred by Mr. Bates, of Kirklevington, and bought at the Tortworth sale for 300 guineas; she is mother of the bull, Duke of Gloster, who was purchased by Messrs. Morris and Bezar, of New York, for 650 guineas. Behind her is Duchess (58), a yearling, bought at the same sale for 300 guineas, and promising to make a very superior animal. The two heifers on the left are from the celebrated herd of Charles Townley, Esq. They have been winners of numerous prizes in Yorkshire, Lancashire, Ireland, &c., &c. Among them may be mentioned the Royal Agricultural Society's show at Lewes, last year. The other animals of the lot were from the well-known herds of the late Earl Ducie, Mr. Bolden, Mr. Tanqueray, &c., and are excellent specimens of their respective stocks. Among the number may be particularised the bull Grand Duke, whose portrait was given in the Illustrated London News of October 17. By some oversight, the name of Mr. Thorne, his present owner, was not even mentioned: he is also the sole owner of Grand Duke, whilst the bull Comet, from whom Grand Duke is directly descended, was purchased by a company of four gentlemen for the same price—1000 guineas. The Duke of Gloster was also bought for 650 guineas, by several individuals; so that Mr. Thorne's single-handed enterprise and liberality are entitled to mention.

The prices paid for these animals were high; yet the selection showed that discrimination and judgment and an intimate acquaintance with this description of stock had guided the large outlay. They were selected by Mr. Rotch, of Otsego, county New York, who came to England for the purpose; and after visiting the principal shows and sales here, collected the admirable lot we had the pleasure of seeing.

RACES ON THE PLAIN OF THE WAIRARAPA, NEAR WELLINGTON, NEW ZEALAND.

CALENDAR FOR THE WEEK.

SUNDAY, December 11.—3rd Sunday in Advent.
MONDAY, 12.—Lord Hood born, 1724. Cromwell declared Protector, 1653.
TUESDAY, 13.—St. Lucy. Dr Johnson died, 1784.
WEDNESDAY, 14.—Ember Week. Washington died, 1799.
THURSDAY, 15.—Earl Stanhope died, 1816
FRIDAY, 16.—Cambridge and Oxford Terms end.
SATURDAY, 17. Guy, founder of the celebrated Hospital, died, 1724.

GRAND CHRISTMAS NUMBER, 1853.

ON SATURDAY, DECEMBER 24th, will be published a GRAND EXTRA NUMBER of the ILLUSTRATED LONDON NEWS, for CHRISTMAS-DAY; with a variety of Splendid Engravings Illustrative of the Amusements for the Season. Part of this magnificent Number will be printed in Paris.

To secure Copies, immediate Orders must be given to all Newsagents.

Further particulars will appear in next week's Paper.

THE CENSUS.—Early in the New Year will be published, the CENSUS of the UNITED KINGDOM, prepared for the ILLUSTRATED LONDON NEWS: comprising a Comparative View of the Population (distinguishing the Sexes) of every Parish and Town in the Empire in 1841 and 1851: with a Detailed View of the Population of the Metropolis; a Comparison of the Population in Counties and Towns, and of the whole Empire, at Different Periods: and a Variety of Interesting Information concerning the Movement of the Population—the groundwork of all Political Science.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 10, 1853.

AT the beginning of the week a ray of hope illumined the political horizon, upon the announcement—which seemed to come with official guarantees—that Austria and Prussia had accepted the proposals of England and France for concerting measures, with a view to the settlement of the Russo-Turkish question. Indeed, the information given by one leading journal upon the subject was very ample, and carefully reasoned; setting forth the precise terms of settlement upon which the four Great Powers were prepared to insist—including, of course, amongst other points, the immediate evacuation of the Principalities, and the substitution of a modified Protectorate over the Christian subjects of the Porte, in the Christian States of Europe, instead of the pretended protectorate in the single hands of Russia, which the latter pretends to, under the Treaty of Kainardji. In a word, the whole question which had puzzled the diplomatists of Europe for so many months was now about to be settled in its minutest details; and a Treaty of Peace was foreshadowed which should place the European balance in the East upon a surer and more equitable footing than it had ever before enjoyed, or than had ever been hoped for by any of the last generation of politicians. Although there are many who did not at once give credence to so favourable a *denouement*—hardly conceiving it possible that either Austria or Prussia should presume to join in a course of policy which might possibly become one of coercion against their terrible neighbour Russia—there were some who fancied they saw their way through the difficulty; discerning, in this proceeding of our German allies, a timely move, at the suggestion of Russia herself—such a move as should render an act of concession possible to her with dignity, inasmuch as it would be performed in obedience to the stern necessity involved in a confederacy of all the great European Powers against her. This idea was confirmed by certain revelations, which contemporaneously appeared, of the sudden awakening of the good Emperor Nicholas to the real facts of the case, and how grievously he had been deceived all along by his chosen agent Menschikoff, who was now to be disgraced and dimissed. In short, it was generally believed that the Czar had begun to see the error of his ways, and was prepared to retrace them with as much grace as might be compatible with his truly awkward position, in obedience to the dictates of reason, and the behests of his European Allies.

Such was the cheering picture indulged in during the greater part of a whole day, in the City, during which the Funds went up like a football, and business went on merrily, as of yore, before the Eastern crisis was thought of. The delusion, however, was of short duration. The second editions of the morning papers of Wednesday contained a telegraphic despatch from Vienna, which put the affair in its true light, and fully verified the apprehensions which we expressed last week as to the extent and nature of the co-operation the independent Governments of the West of Europe were likely to receive from the German States in this matter. From this despatch it appears that Austria and Prussia have merely gone to the extent of agreeing with England and France upon the terms of a collective note; but without any pledges as to the course of policy to be adopted in case that new diplomatic effort should fail of realising its object. It is further stated that Austria has the modesty to require that the future negotiations should be removed to Vienna, where her efforts were before so successful—in the cause of mischief.

We are bound, then, to reiterate what we have said again and again—that it is folly to seek for aid in the councils of Austria and Prussia in this affair; that they are not in a position even to give us honest independent advice, much less material co-operation; and that their only motives in pretending to assent to our pacific views, is to afford them the opportunity of mixing themselves up in our proceedings in the hope of influencing or obstructing them in the interests of Russia. Those, therefore, who have indulged in sanguine hopes of a peaceful solution of this long-pending difficulty, may rest assured that that desirable consummation is just as far off as it was six months ago; and that it will continue as far off—so long as England and France consent to mix themselves up with Governments which have neither the power nor the will to behave honestly by them.

And even if the Four Powers of Europe could, by a miracle, become armed upon a common object and a common course of policy in this matter, are the contending elements, the principals between whom they would mediate, in a condition which would render their immediate submission a matter of certainty, or reasonably to be expected? Sacrifices, either in respect of matters in actual enjoyment or "in supposition" must be made on one side or the other; perhaps, on both. The Russian galled to madness by unexpected and ignominious defeat—the Turk elated by repeated and dazzling successes: will the former consent to withdraw incontinently from the field, giving up all the pretensions with which he entered it? will the latter look no further back than to the day when his old enemy, in audacious infraction of treaties, marched his armies across the frontiers bitterly conceded in the day of the Osmanli's distress? May not Turkey, if she see the probability of continued success attending her new-found arms, resolve on seizing the occasion to wipe out the indignities and redress the wrongs of a whole century; to recover her territory as it was when Peter the Great first framed the programme of her subjugation; or when Catherine II. insolently inscribed over the gates of Kherson, "The road to Constantinople"? It would be worse than madness to undervalue the difficulties which surround this question, and which become every day more complicated. We must add that it will be mad and criminal longer to delay dealing effectually with this matter, which threatens Europe to its very core.

LONDON and Paris are both afflicted with a municipal tax upon combustibles. The City of London levies a heavy impost upon coal, while Paris taxes wood—the ostensible object of both being the embellishment and improvement of the capital city of a great nation. The Commission which is now sitting to inquire into the abuses which have crept into the Corporation of London has already brought into fuller light than before the hardship inflicted by the coal-tax upon the large district that lies within a circuit of 120 miles around the metropolis. Yet it must be confessed that the tax has been productive of some benefit. To the large sums derived from it we owe London-bridge and its new approaches, the Coal Exchange, and the opening-up of Cannon-street—all within the limits of the City; together with New Oxford-street, and the splendid approach, now in course of construction, from Buckingham Palace to Westminster Abbey. A great city must have great revenues for the purposes of improvement; or it must be dependent upon the State for the construction of new streets, the erection of public edifices, and the general care of public works. London depends to some extent upon both. The City levies its tax, and hands over about three-fourths of the proceeds to the State, on behalf of those portions of the metropolis over which its own jurisdiction does not extend. In this respect, as in many others, the labours of the Commission now sitting will, in all probability, bring about a reform.

But there is a reform still more urgently needed, which we fear that neither the Commission nor the Government will be able to operate. London will continue to burn coal, whether it be taxed or untaxed. If, by any possibility, it could be induced to burn its own smoke as well as its own coal, it would do more towards its own embellishment and improvement than has ever been done by its ancient Corporation, or by all the Commissioners of Woods and Forests that have ever existed. Already a beginning has been made; and the chimneys of manufactories and printing-offices, and all establishments that make use of steam-power, are no longer to be permitted to pollute the London sky, by pouring out their daily and nightly clouds. Such establishments must consume their own smoke, or cease to exist within the limits of the metropolis. But until science shall discover some mode whereby the smoke nuisance may be utterly abolished in private houses as well as in manufactories, London will remain almost as dingy as before. Its atmosphere will be heavy with floating soot; its noble cathedrals will be encrusted with black, and its wayfarers and inhabitants who wish to be clean will have to wash their hands and faces thrice as often as is necessary in those cities of the Continent where the people burn wood.

London has hitherto been unable to prevent the smoke nuisance; but Paris, by means of an impolitic tax, has been gradually approaching to a state of atmosphere, which will not allow it, with any justice, to reproach London for being dingy. Paris owes much of its attractions to its clear skies—and clear skies would no longer crown it, if its million of inhabitants burned coal instead of wood. Yet coal is rapidly superseding wood in that capital. We learn from an article in the *Journal des Debats*, that in the year 1799 fire-wood was free from taxation. In the year 1800 a tax of 1 franc per stere was levied upon it. In the year 1816 the tax was increased to 1 franc 65 centimes; in 1833, to 2 francs 99 centimes; and in 1852, to 3 francs 18 centimes. Complaints having arisen that wood was thus rendered too dear, the City of Paris determined upon a remedy. But, instead of untaxing wood, it bethought itself of untaxing coal. In 1818 the tax on coal was reduced to 55 centimes (5½d.) per hectolitre; and, in 1852, to 36 centimes. The consequences may be imagined. The consumption of wood has rapidly decreased, and that of coal has as rapidly augmented. In 1817, when the population of Paris was 700,000, the annual consumption of wood was 1,000,000 of steres. In 1853, with a population of upwards of a million, the consumption of wood is but half a million of steres. The consumption of coal was, in the year 1816, about 673,000 hectolitres; in the year 1851 it had increased to 3,625,000 hectolitres. The consumption in 1852 and 1853 has not been published; but it is notoriously much greater than in the years preceding. Let Paris beware, therefore, and untax wood as fast as it can; or it will soon be in a condition as bad as London. There is, however, no occasion to despair of the ultimate purity of either capital. No sane man in our day attempts to limit the capabilities of science, and it is not hoping too much to anticipate that, ere many years shall elapse, the smoke nuisance will go the way of the oil lamps and the stage-coaches; and be only remembered by old people, or in the pages of novelists and romance writers. But, in the meantime, Paris, with a cloud of smoke hanging over it, will cease to be the Queen of Pleasure, or the most beautiful city in Europe.

POSTSCRIPT.

RUSSIA AND TURKEY.

Advices from Odessa to the 17th ult., state that preparations for war were never so energetic as at that moment. It was confidently believed that the Russians would cross the Danube, in spite of the winter. The garrison of Odessa is to be moved to Galatz, and fresh troops from Tauris will occupy Odessa. Between the 29th of September and 7th of October 16,000 Russian troops, 827 horses, two batteries, rations for ten days, and reserve rations for twenty days, were forwarded from Odessa to Asia. After the 16th of October, 8000 men were conveyed from Odessa to Sebastopol. Eleven ships of war were employed in the transport of the troops. Prince Menschikoff superintended the embarkation, and General Kornileff the landing of the men on the Caucasian coast.

The following is an extract from a letter from Bucharest, dated November 26:—

The Turks have now retired from the entire line of the left bank of the Danube, with the exception of Kalafat, in which town and the immediate neighbourhood they still remain unmolested. They also occupy the little island of Mokan, opposite Giurgevo, where they pass their time in firing, under cover of the trees, at any of the Russian soldiers that may come within their reach. At Kalafat the Turks are pushing on their advanced post to Krajova. In all they now muster at this point about 20,000 men. The greatest mystery envelopes the movements of the Russian army, but I have reason to believe that Prince Gortschakoff is silently meditating a movement in the neighbourhood of Kalafat. It is evident that the Czar's generals are to endure the Turks to assemble in force on some one point, and then to fall upon them suddenly. Such was his plan at Oltenitza, but the great slaughter in the Russian ranks must have shown him that he had underrated his adversary. The Russians have not been able to hold the quarantine point at Oltenitza, for the place can at any moment be swept by the guns of Turkoki. The island of Mokan, opposite Giurgevo, is under the Russian guns. The island might be shelled at any time, and the Turks driven off. The Russians, however, are determined to act upon the defensive, and they seem to invite the Turks to come over to the left bank. That part of General Luders' corps which occupied Galatz and Ibraila has marched for Bessarabia. Some suppose that the soldiers are simply going into winter quarters; others say that the whole of Luders' corps is to embark at Odessa for the Black Sea.

The Russian forces that entered the Principalities in July last, are estimated at 70,000 effective men. They have since received reinforcements amounting to about 10,000 men. From the total, however, a large deficit must be made on account of the deaths from sickness and wounds. During the four days preceding the 26th, a hard frost prevailed at the seat of war, and the hostile armies already began to feel the rigours of a Wallachian winter.

The engagement between the Servians and the Turks was less important than has generally been believed. The Turks lost about fifty soldiers.

From Constantinople we hear that General Baraguay d'Hilliers is the very reverse of his predecessor. The latter acted in a warlike manner, and acted peaceably; the former speaks mildly enough, but his actions are warlike. He has inspected all the fortifications, and ordered two of his officers of Engineers to make a plan of Constantinople and its defences for the Emperor Napoleon.

The recall of the Baron de Bruck, the Austrian Nuncio at Constantinople, which was a day or two ago confirmed on what seemed to be good authority, is now officially contradicted. The report of the recall of M. de Wildenbruch, the Prussian Envoy at Constantinople, is also contradicted.

We hear from Vienna, that although the British Cabinet is endeavouring to persuade the two great German Powers to join France and England in laying down conditions which Russia and the Porte shall, if necessary, be forced to accept, few well informed persons believe that the project of the English Government will be crowned with success. The Vienna Cabinet will probably not object to the renewal of the Conferences, but it is by no means likely to give the pledge required by France and England, who it is foreseen, will insist on conditions which must be highly unacceptable to Russia. It appears almost impossible that the Vienna politicians and statesmen can seriously believe an amicable solution of the Oriental difference to be still possible, the Imperial Cabinet having publicly expressed its opinion that the claims of Russia to the Protectorate over the Oriental Church are not entirely unfounded. The representatives of the smaller Powers assert, that should the British Government display any inclination to make concessions to Russia on this point, the harmony which at present exists between France and England will soon be at an end.

The latest advices from Constantinople bring fresh confirmation of the intelligence previously published of the successes of the Turkish arms on the shores of the Black Sea. This news is thus summed up in a telegraphic message:—

The struggle continues in Asia. The Russians, after three sanguinary affairs, have been driven back by superior force from Zobin on Lodova. Their forces of Saffa, and it is said also that of Adakan, have been taken by assault by Selim Pacha. The entrenched camp of Abdi Pacha, at Bayazid, has been attacked without success by the Russians, who also failed on the 11th in a last attack, having for its object the recapture of the fort of St. Nicholas. A small Turkish steamer, the *Nedjik Tahharat*, has been captured. The Capitan Pacha has given a splendid banquet to the Admirals and officers of the French and English fleets on board his ship the *Mahmoudie*. The officers were presented to the Sultan, and Lord Stratford delivered a speech, in which he promised to Abdul Medjid an effective co-operation against an unjust aggression; but recommending the conclusion of a prompt and honourable peace. The Sultan replied that he desired peace; but on condition that it would not cover the honour of Turkey, and would be compatible with his sovereign rights."

FRANCE.

The inauguration of the statue of Marshal Ney took place on Wednesday. The statue stands on the spot where the Marshal was executed, on the 7th of December, 1815. We shall give an engraving of the statue in our next.

The Paris Bourse was extremely animated on Wednesday, and a considerable rise took place in the prices of public securities. The Three per Cents opened at 74f. 85c., rose to 74f. 90c., and closed at 74f. 65c. exdividend for the end of the month.

ITALY.

A despatch, dated Genoa, announces the opening, on the 6th inst., of the railway from Turin to Genoa. The train of state carriages which conveyed the ministers, senators, &c., performed the distance (165 kilometres) in about four hours.

Advices from Rome of the 26th ult. state that twenty young men have been arrested on suspicion of being members of secret societies and agents of a revolutionary club in London.

A private letter from Rome, dated Nov. 28, says:

The last three Sundays here have had results even attractions the two former in the shape of the beatification of two saints; and the latter (after the ascent of a balloon, which attracted an immense crowd of all classes of Romans), a sermon preached by Cardinal Wiseman, in the church of St. Andrea de le Frati, near the Propaganda. Among other topics, his Eminence congratulated the Roman Catholics on the schisms among the various Dissenting bodies in England, and especially on the defiance offered to them in the Church of England on the subject of baptismal regeneration, which, he considered, betokened the speedy dissolution of that establishment, and that many converts had been made to the Roman Catholic Church in England during the last ten years than in three hundred years previously. He then entered on a dissertation on the doctrine of baptismal regeneration, and the right he (as priest) had to remit to Rome, after an absence of ten years, during which time the whole world had been shaken by revolutions, but without any effect or alteration being produced here (forgetting the presence of a French garrison, without which Pio Nono would probably have remained the guest of the King of Naples; and to whose bayonets the Roman Catholic religion owes its present existence, even in its own capital). He concluded by drawing a parallel between the inevitability of the Greek sceptics in the rites of the Jewish, and that of the Protestants in the ceremonies of the Roman Catholic religion; and said that, however strangers might despise our manners and them, the poorest Roman Catholic fully comprehended their meaning and beauty.

It is said here that the question of receiving an English Ambassador has been lately discussed by the authorities, and that the Cardinal Secretary is to have it settled in the affirmative.

The unfortunate aeronaut who ascended from the Piazza di Termini was found, two hours after, frozen to death in his balloon, which had descended in the neighbourhood of Mount Soracte, about twenty-five miles distant from this city, he was an old man, and a native of Bologna.

Rome is as much infested with beggars as ever, notwithstanding the improvement that was to have taken place in that respect. Formerly one used to see the established race of old knaves and cripples; but now the streets are filled with girls, and which promises to be in operation on Christmas-day.

The King of Naples has dismissed two of the officers of the Board of Health in that city, in order to give satisfaction to the Imperial Government on the subject of the French officers kept in quarantine some time since. It is believed that this arrangement terminates the affair. M. de Maupas has returned to Naples.

LATEST INTELLIGENCE.

FOREIGN.

The attempt which has just been made by the Four Powers to terminate hostilities, is officially noticed in the *Moniteur* of Friday morning, which announces the agreement (*accord*) between the Four Powers on the Eastern Question. A protocol to this effect was signed at Vienna on the 5th inst., in a conference at which the representatives of France, England, Austria, and Prussia were present. The basis is to re-establish peace between Russia and the Porte, on conditions honourable to the two parties; to maintain the territorial integrity of the Ottoman Empire; and to acknowledge beforehand (*reconnaître d'avance*) that the present war can in no manner lead to modifications in the state of possession which time has consecrated in the East.

The excitement which was created at the Paris Bourse by the news of an arrangement between the Four Powers for another effort at pacification on the 5th instant, had much subsided on Thursday. It was busy, and Orleans [illegible] were [illegible] the Three per Cents, and seventy-five centimes on the Four-and-a-Half per Cents.

THE HON. HENRY GEORGE HOWARD, Secretary of Legation at Vienna, has been appointed Secretary of Embassy at Paris, in the room of the Hon. G. S. Saville Jermingham, now her Majesty's representative at the Court of Sweden.

THE ELECTRIC TELEGRAPH is now extended to Osborne, the marine residence of her Majesty, in the Isle of Wight, and telegraph messages [illegible] necessary.

CITY CORPORATION COMMISSION.—The Commission resumed their inquiry on Friday, when William Prichard, Esq. (High Bailiff of Southwark), and a deputation from the inhabitants of the Borough had an interview. Mr. Lawrence, a stockbroker, was afterwards examined on a matter relating to Stock Exchange business.

BIRMINGHAM BOROUGH COURT. The Judicial Committee of the Privy Council has decided on a petition in the matter of "The Removal of the Borough Court of Birmingham." The Lord Chief Justice of the Common Pleas said, "It is the opinion of the Council that we should advise her Majesty to exclude from the Borough Court all causes of which the County Court has jurisdiction." This decision is tantamount to one of the abolition of the Borough Court.

CUSTOMS' COURT.—[illegible] COURT, which was opened for the first time on Friday morning. It is a convenient, well-fitted-up chamber in that large and important building, the Custom House. Thames-street, and is intended to try, before one more of the Commissioners of Customs, any matters of dispute connected with Customs dues levied in the case of any owner, merchant, agent, &c. Before the Court was formed a [illegible] chamber was introduced, not to have a mere tour-de-force as to their musical excellence, but the Custom House value. Sir Thomas Fremantle was in the chair, and the question which was raised by Mr. Solomons, the importer of the instrument, was, whether sixty-one reeds [illegible] were [illegible] At the conclusion of the proceedings, Sir Thomas Fremantle said that he would inform the Commissioners on the subject. The Court then broke up.

SEE OF SYDNEY.—The metropolitan see of Sydney will be offered to the Bishop of New Zealand on his return to England. The Venerable Octavius Hadfield, Archdeacon of Waimate, will probably succeed Bishop Selwyn in the See of New Zealand.

CROUCH DE LION IN PALACE-YARD.—On Thursday workmen commenced enclosing a considerable area in Palace-yard, opposite the entrance to Westminster Hall, on the site of which it is intended to erect the statue of Richard Cœur de Lion.

THE SILVER brought by the West India packet *Orinoco*, last Sunday, was chiefly from Mexico. Its weight was 50 tons 8 cwt. It was the largest quantity, with one or two exceptions, that was ever brought to this country in one ship.

FOREIGN CATTLE.—An extraordinary importation of live stock from abroad has taken place during the past week. The arrivals comprised upwards of 8,0 head of oxen and cows, and nearly 13,000 sheep, with other stock, amounting collectively to nearly 20,000 head of cattle of all kinds.

THE FARMERS' CLUB had their annual dinner on Thursday evening, at the York Hotel, Blackfriars. The only noticeable feature of the proceedings was that Mr. Pusey was very vaguely [illegible] [illegible] year at the Smithfield Club Dinner, Mr. Pusey was almost cried down by the Protectionists and only was allowed to present on that occasion. Speeches were made by Mr. Pusey, Mr. Sidney, Mr. Lattersall, and others.

A LIBRARY AT PRESCOT.—On Thursday the Earl of Derby, Lord Stanley, the Rev. R. L. Bansom, and a number of gentlemen, inaugurated the neighbourhood, attended at the inauguration of a working man's library at Prescot, near Liverpool. The institution has been set on foot mainly by the Derby family; and the Earl and Lord Stanley have each given £100 towards its establishment.

SIR E. BULWER LYTTON, M.P., has consented to preside at the annual soiree of the Leeds Mechanics' Institution, which will take place in January.

LARGE FIRE AT GLENFIELD STARCH WORKS, PAISLEY.—On [illegible] [illegible] well known Glenfield patent starch in the late broke out in the store-room, which will be flat above, and the goods inside, was totally consumed. Some 200 workmen will, we are sorry to find, be thrown out of employment, but for a short period only, as no time will be lost in completing new premises and the more extensive workshops on the same spot.

STEAM-BOAT COLLISION AT THE MOUTH OF THE THAMES.—A VESSEL SUNK.—On Friday morning the *Ostend*, from Hull, sprod, arrived in the river, by which information was received of the total loss of the [illegible] Hull, off South Shields; which vessel came into violent collision, on the night, with the *Waterwitch*, bound from London for Hull, [illegible] immediately sank. The crew were saved. The *Ostend* also reports that she was in collision with the above-mentioned steam-ship, the same evening, and sustained some damage to her topsides.

ILLEGAL LOTTERIES.—The magistrates [illegible] Bow-street Police-office, yesterday morning, [illegible] against Mr. H. Kent, a stationer, carrying on a large business in that city, for having held what was termed a "distribution on the plan of the Fine Arts' distribution." The case excited a very large amount of interest, from the fact that the prosecution was understood to have been instituted at the instigation of the Trades Protection Association. After a lengthened argument, Mr. Hersaglia (one of the magistrates) gave judgment in favour of Mr. Kent. He said the matter was one of an [illegible] importance; as, should the judgment of the magistrates be tenable, persons would be opening lottery-offices all over the kingdom, which [illegible] he observed, "we are quite satisfied that the offence has been committed, but think that we have not the power to deal with it summarily." Mr. Reynolds (Solicitor to the Treasury), expressed his conviction that, should the present decision be confirmed upon review, the Government would feel it their duty to obtain a new Act of Parliament. The magistrates were of opinion that such lotteries were prejudicial to public morals, and that they ought to be put an end to.

WRECK OF THE "MERIDIAN."—Although the gallant services o. Captain Ludlow do not, we have been given to understand, come within the terms of the recent grant of the Royal Humane Society, for the Preservation of Life from Shipwreck—which is limited to the saving of life from wrecks on the coasts of the United Kingdom—we trust the society will make an exception in his case, and bestow the medal, not vote to Captain Ludlow its gold medal hon; for no one, amongst the hundreds of brave men the society has thus honoured with its medal, has more [illegible] and richly deserved it.

ACCIDENT AT THE PORTLAND BREAKWATER.—We have received from a Correspondent the following account, in correction of the statement which has been published:—The engine, with four iron waggons, proceeded to the end of the breakwater staging, and was placed united back a short distance to the spot assigned for the discharge of the stone. The whole train now being in a state of quiescence, the workmen were about to "tip" the waggons, when suddenly the pier on which the railroad was supported broke into four pieces, and the whole descended into the water with the train—the engine driver (George Evans) and his fireman jumping from the locomotive as it reached the water, but the two breaksmen disappeared below the surface. Several boats were immediately in attendance, and succeeded in picking up the engine driver, stoker, and one or two other men, who had been on the staging at the time of its descent. In the afternoon divers went down, but no traces of the men were visible. Next day the engine and waggons were brought up in a very damaged condition.

SERIOUS ACCIDENT FROM A TRIFLING CAUSE.—On Wednesday afternoon, Mr. Bellchambers, an undertaker, of Union street, Lambeth-walk, proceeded to make inquiries respecting a funeral in the parish. Whilst conversing with a neighbour, he stepped off the kerb, and broke his thigh in two places. The unfortunate sufferer was removed to St. Thomas's Hospital; [illegible] (upwards of six), while [illegible] a coroner's inquest [illegible]

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, DEC. 8.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest in the Day.	Thermometer. Lowest in the Night.	Mean Temperature of the Day.	Departure from Mean Temperature Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the Barometer decreased from 30.05 inches at the beginning of the week to 29.87, by 5 p.m. on the 3rd; increased to 30.10 inches by 6 p.m. on the 3rd; decreased to 29.91 inches by 3 p.m. on the 5th, and increased to 30.25 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.007 inches.

The mean Temperature of the week was 38°9, being 2·7° below the average of the corresponding week during 38 years.

The range of Temperature during the week was 19.1°; being the difference between the highest reading, on the 8th; and the lowest on the 3rd.

The mean daily range of Temperature during the week was 8°8°.

Strong Auroral Light was seen during the evening of the 6th.

Fog was prevalent on the 3rd, 4th, 5th, and 8th.

The Weather on the 2nd was fine; and from the 3rd the sky has been for the most part overcast.

Lewisham, 9th December, 1853. JAMES GLAISHER.

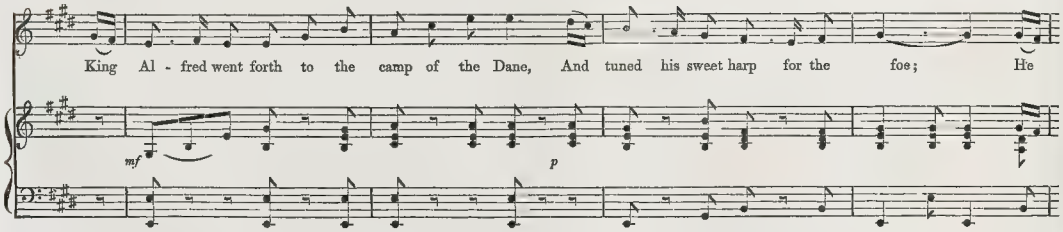
HEALTH OF LONDON.—Within the Metropolitan districts the births of 1,163 boys, and 1,037 girls, were registered in the week ending Dec. 3. The average for the preceding eight years are 736 and 690 respectively. The number of deaths within the same period was 1414; in the week preceding it was only 1,317; the number was 1113, in each week of that three the numbers have increased. In the ten weeks corresponding to last week, of the year 1843 to 1852, the average number of deaths was 1260, and this, in proportion to increase of population, becomes 1320, the number [illegible] [illegible] [illegible]

KING ALFRED.

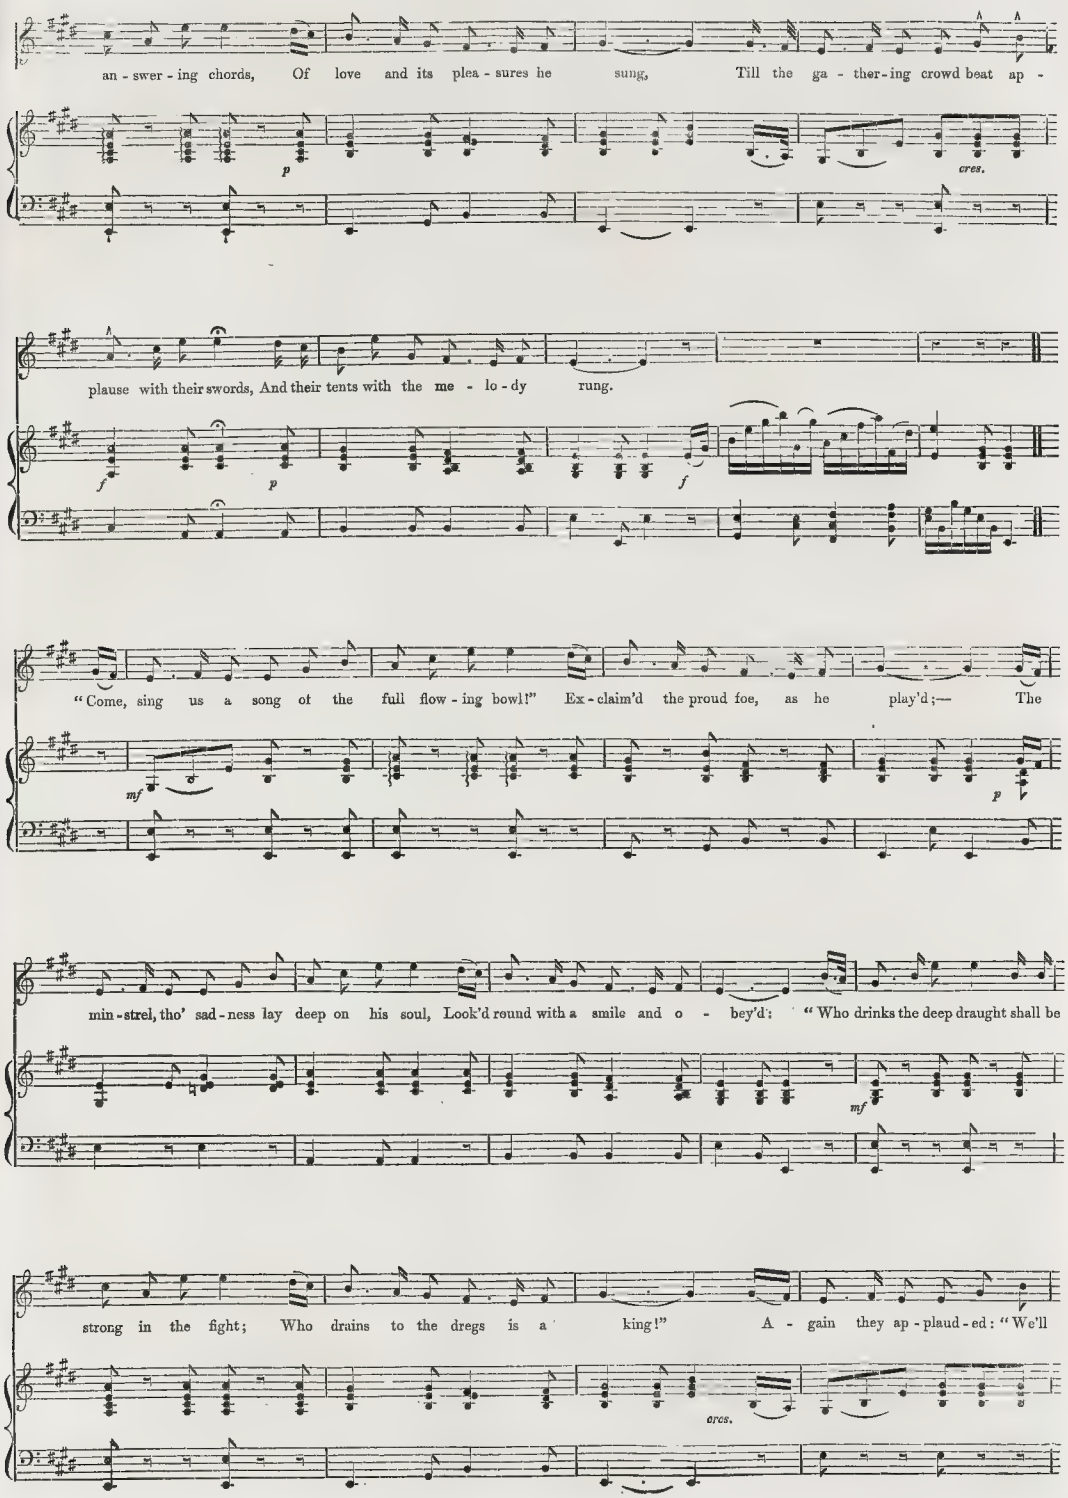
The Poetry by Charles Mackay. The Symphonies and Accompaniments by Sir H. R. Bishop.

Rather slow, and with much expression. Air, "My Lodging is on the cold Ground."

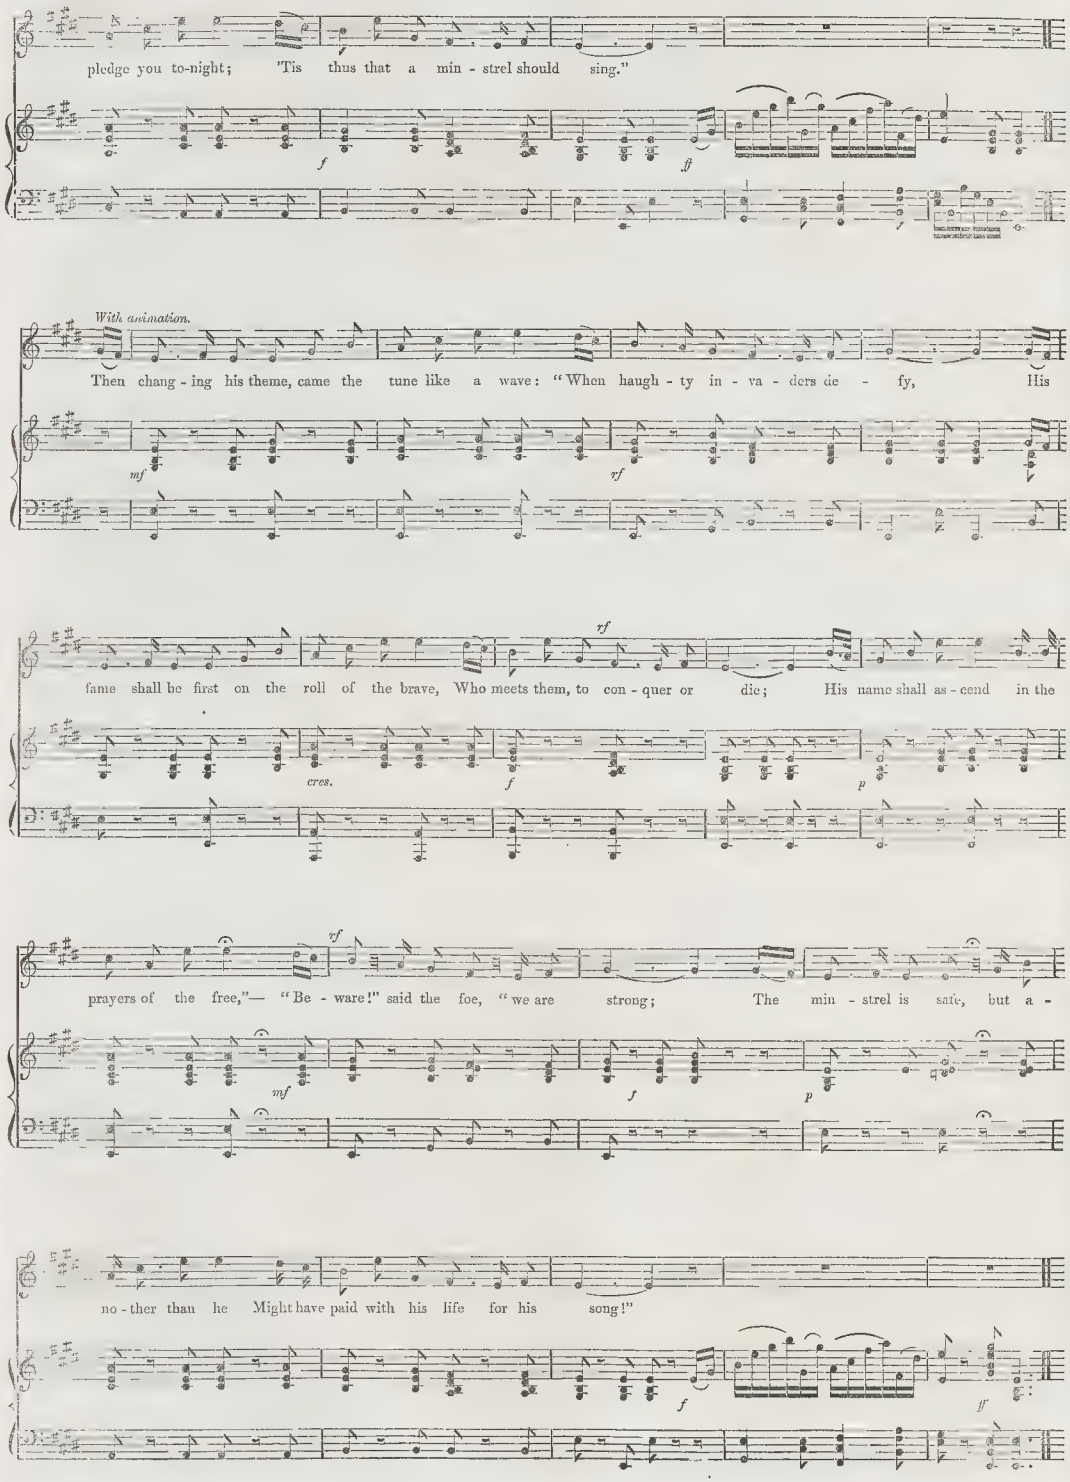
King Al - fred went forth to the camp of the Dane, And tuned his sweet harp for the foe; He



thought of his coun-try with sor-row and pain, And sigh'd for her glo - ry laid low. Then strik-ing his hand o'er the



an - swer - ing chords, Of love and its plea - sures he sung, Till the ga - ther - ing crowd beat ap -
p
cres.
plause with their swords, And their tents with the me - lo - dy rung.
f
p
f
"Come, sing us a song of the full flow - ing bowl!" Ex - claim'd the proud foe, as he play'd;— The
mf
p
min - strel, tho' sad - ness lay deep on his soul, Look'd round with a smile and o - bey'd; "Who drinks the deep draught shall be
mf
strong in the fight; Who drains to the dregs is a king!" A - gain they ap - plaud - ed: "We'll
cres.



pledge you to-night; 'Tis thus that a min - strel should sing."
With animation.
Then chang - ing his theme, came the tune like a wave: "When haugh - ty in - va - ders de - fy, His
fame shall be first on the roll of the brave, Who meets them, to con - quer or die; His name shall as - cend in the
prayers of the free,"— "Be - ware!" said the foe, "we are strong; The min - strel is safe, but a -
no - ther than he Might have paid with his life for his song!"

"KING ALFRED."

BY CHARLES MACKAY.

KING ALFRED went forth to the camp of the Dane,
And tuned his sweet harp for the foe;
He thought of his country with sorrow and pain,
And sigh'd for her glory laid low.
Then striking his hand o'er the answering chords,
Of love and its pleasures he sung,
Till the gallant-eyed Saxon beat time with their swords,
And their tents with the melody rung.

"Come, sing us a song of the full flowing bowl!"
Exclaim'd the proud foe, as he play'd;—
The minstrel, tho' sadness lay deep on his soul,
Look'd round with a smile and obey'd.
"Who drinks the deep draug'ht shall be strong in the fight;
Who drains to the dregs is a king!"
And they applauded: "We'll pledge you to-night;
'Tis thus that a minstrel should sing."

Then changing his theme, came the tune like a wave:
"When haughty invaders defy,
His fame shall be first on the roll of the brave,
His name shall ascend in the prayers of the free,"
"Beware!" said the foe, "we are strong;
The minstrel is safe, but another than he
Might have paid with his life for his song!"

SMITHFIELD CLUB DINNER.

In page 488, of this day's Number, we have given an account of the opening of the Cattle Show, the list of the prizes, &c. The annual dinner was held at the Freemasons' Tavern on Wednesday; the Duke of Richmond, K.G., presiding; supported by Lord Portman, Lord Berners, Sir John Shelley, M.P., Mr. Pusey, Admiral Saumarez, and about eighty other friends and supporters of the club. The usual loyal toasts having been most warmly responded to, the Chairman said he believed it was important to keep up the Smithfield Cattle Show for the purpose of promoting the production of fine cattle, sheep, and pigs—not such monster animals as that from Buckingham shire, but animals which would give to the people wholesome and clean food. He was authorised by the Duke of Richmond to say, that there never was a better show, and that the sheep and pigs exhibited were most creditable to the country. As regarded the position of the club, he begged leave to tell them on the authority of the Minister of the Exchequer, that they had a surplus in hand, after the payment of all demands, to carry on their operations in future years. The noble Duke concluded by proposing "Prosperity to the Smithfield Cattle Club" (cheers).

The various prizes having been distributed, the Chairman proposed the "Health of Mr. Stratton, the winner of the gold medal." Mr. Stratton returned thanks.

Lord Portman, in rising to the toast of "The Trustees," observed that the objects of the Smithfield Club were to support not so much the begining as the end of farming, by bringing the best of food to market at the cheapest rate to pay all the same; not the grazier and the butcher.

Lord Berners, in reply to the toast of "The Vice presidents," alluded to the advantages which the Royal Agricultural Society of England were for the profession and breeders, and related a case of his own, where he was continually losing valuable animals by disease, until, under a rule of the society, he made application for a professor from the Royal Veterinary College, who, shortly appointed, and under the advice of Professor Symonds, thirty-nine valuable beasts were saved. It should be known to all that, upon application to the Royal Agricultural Society, they put at the service gratuitously. (Cheers.)

Mr. Chaplin proposed "The Royal Agricultural Society of England," coupled with the health of Mr. Philip Pusey, its president.

Mr Pusey in responding, said he believed that society now represented ten or eleven hundred of the tenant farmers of England, and that it has conferred, and was conferring, a national benefit.

The health of Professor Gamgee, and Mr. Brandreth Gibbs (the secretary), and other toasts, having been disposed of, the company separated.

Thursday and Friday were the last days of the Smithfield Cattle Show, and never on any previous occasion were so many persons known to pass through the doors as on Thursday, when upwards of 30,000 looked on. The great desire appeared to be to see the monster ox contributed by Sir Henry Verney, but the refusal of the animal to keep on its legs disappointed many.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. W. F. J. Keye, to an Hon Prebend in Lincoln Cathedral. The Rev. H. Scott, to the Rectory of Tarrington, with the Perpetual Curacy *Rectories:* The Rev. E. M. Langley, to Eye cum Braiseley, the Rev. W. Bousfield, to Cockington, near Aylesbury; the Rev. C. J. Cartwright, to St Mary-at-Steps, Exeter; the Rev. W. Cotterill, to Pitham, Lincolnshire; the Rev J. Binett, to Ballinaclash, Ireland, the Rev. J. F. Moor, jun., to Ampfield, Hampshire; the Rev. C. I. Read, to St. Michael-at-Thorn, Norwich. *Perpetual Curacy:* The Rev. E. H. Kirby, to Haverthwaite, Lancashire.

TESTIMONIAL TO LORD ADOLPHUS VANE.—Pursuant to an invitation from his late constituents, Lord Adolphus Vane, unseated by a committee of the House of Commons for bribery by his agents, and thereby deprived of his late constituents at a dinner, the magnificent testimonial. Now it is [illegible] that on Wednesday in the afternoon his Lordship was presented, by W. D. Wharton, Esq., on behalf of the ladies of Durham, and vicinity, with a gold and box and diamond pin, as a memorial of the unanimous feeling of the ladies of Durham. Mr. W. F. Wharton, of Durham, presided at dinner, at which were also present Mr. H. Liddell, M.P. for North Northumberland, and Mr Mowbray, M.P. for Durham.

TESTIMONIALS TO MR. GEORGE HAMMOND WHALLEY.—On Tuesday evening last, a public dinner was held in the Corn Exchange, Peterborough, for the purpose of presenting two testimonials to Mr. G. H. Whalley, who has recently been twice elected M.P. for the city, and twice unseated by decisions of a Committee of the House of Common. The meeting was not a party one, the chairman being Mr. John Wentworth, a well-known Liberal; and the vice-chairman, Edward Newcomen, of Water Newton, and Mr. George Speechley, both staunch Conservatives. On the death of Mr. Watson, in the year 1852, Mr. G. C. Lewis was brought forward on the Milton interest, when Mr. Whalley was the independent candidate, and was elected by a majority of 18. A petition was presented against his return, and he was unseated on proof that he had partaken of the wine drunk at the dinner to celebrate his triumph. Mr. Bethell, the Solicitor General, gave the opinion that this treating, not being corrupt, did not disqualify Mr. Whalley from again becoming member. The gentleman, therefore, again appealed to the constituency, his opponent being Mr. Thomas Hankey, jun. The second election took place on the 30th of June, when exactly the same number of voters polled as before, viz., 481; but the majority for Mr. Whalley was increased from 18 to 21. A second petition against his return was presented by Mr. Hayter, and another Committee was appointed, who declared that Mr. Whalley was disqualified from being a candidate at the recent election. They, therefore, unseated him, by striking off 24 votes, and Mr. Hankey now sits as member for Peterborough. The electors, however, feeling themselves much indebted to Mr. Whalley for the energy he had displayed in their cause, determined on presenting him with a piece of plate, which accordingly was presented to Mr. Whalley. Mr. John Williams, ex-M.P. for Macclesfield; Mr. John Patrick Murrough, M.P. for Bridport; Mr. Stammers, Q.C.; and the leading men of both the Conservative and Radical parties. Above 200 gentlemen dined, and the Exchange was crowded with electors and non-electors. The meeting was also graced by the presence of Mrs. Whalley, and other ladies of the city. Speeches were delivered by Mr. Whalley, the Chairman, Mr. Williams, Mr. Murrough, and other gentlemen. The testimonial consisted of a very handsome centre-piece, which will form an ornament to any sideboard, and also an elegant candelabra. Another testimonial was presented by upwards of 300 non electors: this consisted of a very handsome silver salver. Both centre-piece and salver were manufactured by S. S. and J. W. Benson, silversmiths, Cornhill, from their own designs.

NINE WAGGON-LOADS OF SILVER MONEYS.—Considerable curiosity was manifested on Saturday morning last by the arrival, at the Waterloo-road terminus of the London and South Western Railway, of nine waggons filled with silver money, which was packed on carriages in the line, to be conveyed to Southampton, preparatory to being shipped for India and the East. Together with the [illegible] 100

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

There has been rather an extensive business transacted in the Consol Market, the prices of which have been largely influenced by those who wish to receive the dividend, have been large; and, altogether, matters have assumed a favourable appearance. The news from the East is regarded as most satisfactory; although, up to the present moment, only positive prospect of an amicable arrangement between Russia and Turkey. The Account has passed off remarkably well; but the actual balances paid have not been large.

We have had rather extensive arrivals of bullion: viz., 2,042,139 dollars from Mexico, &c.—60,000 being on account of the Mexican dividends; £220,000 from New York; and about £70,000 in silver from Holland. The latter has evidently been forwarded to purchase gold. The shipments of silver to the East, owing to the rapid fall in the value in China, have almost entirely ceased; and it is scarcely probable, seeing the immense amount of treasure in the hands of the East India Company, in its various Dependencies estimated at £16,000,000 sterling, that any further trade will be resumed on anything like an extensive scale. In the value of that metal, very little change has taken place in it, but the demand has ruled heavy.

The Continental Exchanges have undergone a favourable change, as regards this country—gold being 0·40 per cent dearer in London than at Hamburgh, and 0·97 per cent dearer in London than in Paris. Should these prices continue, we may look forward to a return of a portion of the late heavy exports. There has been a moderate demand for money, and which has been fairly met by the private bankers. We may observe, however, that none but first-class bills have been discounted at ½ per cent. Doubtful ones have ranged as from 6 to 7 per cent.

Consols were very firm on Monday. The Three per Cents marked 95⅞ to 95½; the Three per Cents Reduced, 94⅝; and the New Three-and-a-Quarter per Cents, 95⅝ to 96⅛. Bank Stock was 219 to 218; India Stock, 258; Long Annuities, 19. India Bonds, par; Exchequer Bills, 3s. to 6s. prem. South Sea Stock was done at 113. There was considerable activity in the market on Tuesday, and a rapid advance took place in prices. The Three per Cents, both for Money and the Account, were done as high as 96⅜, closing at 96⅜. The New Three-and-a-Quarter per Cents were 97⅛. A good business was transacted on Wednesday, and the highest price for Consols was 96⅝, rather buyers. Long Annuities 19 1-16th. Ditto for 78, prem.

On Thursday Consols were steady, without any material change in the quotations. The Three per Cents, ex div. for the opening, were 96⅛ to 96⅜; the Three per Cents Reduced, 95⅜; and the New Three-and-a-Quarter per Cents, 97. Exchequer Bills were 3s. to 6s. prem.

The amount of bills drawn by the East India Company upon their respective Presidences, from the 24th ult. to the 7th inst., was £460,258 6s. 6d.

The accounts from the manufacturing districts are of a more favourable character than those we had for some time past. Most of the operatives are returning to their employments, although on short time.

The Foreign House has ruled rather active on higher terms. Brazilian Bonds have been 98⅝; Chilian Six per Cents, 102; Ecuador, 4½; Grenada, Deferred, 19½; Mexican Three per Cents, 20½; Peruvian Four-and-a-half per Cents, 66⅞; Portuguese Four per Cents, 42; Russian Four-and-a-Half per Cents, 99; Sardinian Five per Cents, 90¾; Spanish Three per Cents, 20; Ditto New, Deferred, 9¾; Venezuela, 32; Belgian Four-and-a-Half per Cents, 94½; and Dutch Four per Cents, 95¾.

On the whole, the market for Miscellaneous Shares has ruled steady, and prices have been well supported. British North American Bank Shares have sold at 64⅞; Chartered Bank of Asia, 4½; English, Scottish, and Australian Chartered, 9; London Chartered Bank of Australia, 13⅞; London Joint-Stock, 8¼; Union of Australia, 74⅞ to 75; Australian Agricultural Shares have been 40 to 48; British American Land, 68; Crystal Palaces, 7⅛; Ditto, New, 4⅞; General Screw Steam Company, 12½; Hecla Iron Works, 3; North British Australasian, 3; Peel River Land and Mineral, 6⅞; Scottish Australian Investment, 2¾; South Australian Land, 76; Van Diemen's Land, 16; Hungerford Bridge Shares have marked 12; Water co. (2), Hankall, 27; Alliance Insurance, 50; County, 125; Globe, 143; Imperial Fire, 375; Pelican, 45; Phœnix, 186; Royal Exchange, 240; Sun, 63; Victoria Docks, 7⅞; Wrexam Mineral, 3½ ex div.

British American Land, 60; Canada Six per cent Bonds, 115; Peninsular and Oriental Steam, 72¾.

The market for Railway Shares has been firm. In most instances, prices have had an upward tendency. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 21¾; Ambergate, Nottingham, and Boston Junction, 8¾; Caledonian, 66⅝; Dublin and Belfast Junction, 46; East Anglian, 2¼; Eastern Counties, 12⅝; Edinburgh, Perth, and Dundee, 82½; Great Northern, 104½; Ditto, A. Stock, 60¾; Great Southern and Western (Ireland), 103¾; Great Western, 84; Lancaster and Carlisle (Thirds), 12 prem.; Lancashire and Yorkshire, 83; Ditto, Thirds, 11; London, Brighton, and Blackwall, 8⅜; London, Tilbury, and Southend, 9⅝; London and Brighton, 99¾; London and North-Western, 102½; Ditto, 250 Share, 1⅝; London and South-Western, 78; Manchester, Sheffield, and Lincolnshire, 24; Midland, 64; Newry and Enniskillen, 2⅞; North Britain, 33¾; Oxford, Worcester, and Wolverhampton, 20½; Shrewsbury Union, 2¾; South Wales, 23¾; Waterford and Kilkenny, 6; York, New castle, and Berwick, 65½; Ditto Extension, 11⅝; York and North Midland, 49¾.

LINES LEASED AT FIXED RENTALS.—Manchester, Buxton, and Matlock, 2¾; Midland Bradford, 90½; Northern and Eastern, Six per Cent, 68; Wear Valley, 31½; Wilts and Somerset, 89.

PREFERENCE SHARES.—Chester and Holyhead, 18; Eastern Counties Extension, No. 3, 1¼ prem; Ditto, Six per Cent Stock, 14½; Great Northern, Five per Cent, 121; Great Southern and Western (Ireland), Rights, 8¾; Great Western, Four-and-a-Half per Cent, 102; Ditto, Irredeemable, 99; London and Brighton, Six per Cent, 149; London, Tilbury, and Enniskillen, 12¾; Consolidated Bristol and Birmingham, Six per Cent Stock, 149¾; North British, 10¾; South-Eastern, 94.

FOREIGN. Grand Trunk of Canada, 7¾; Luxembourg, 10⅝; Namur and Liege (with interest), 8⅝; Ditto, ex int., 6¾; Paris and Lyons, 26⅝; South Eastern of France, 2⅜. Mines Shares have been flat. On Thursday, Agua Frias were 1⅞; Australian, 2½; Imperial Brazilian, 6; St. John del Rey, 38; Cobre Copper, 40¾; Copiago, 15½; and United Mexican, 4¼ to 4.

Friday Evening.

The market for Consols has ruled steady to-day, and prices have been on the advance. The Three per Cents for the Opening have marked 96⅜; the Three per Cents Reduced, 95⅝; Bank Stock, 220; New Three-and-a-Quarter per Cents, 97⅝; Bank Stock, 220; India Bonds, 4s.; and Exchequer Bills, 5s., 8s. prem. Foreign Bonds and Railway Shares remain firm.

THE MARKETS.

JOHN EXCHANGE, Friday.—The quantity of wheat received fresh up to this morning's markets from Essex, Kent, &c., was very moderate, and we had small arrivals by land carriage. The show of samples was limited; nevertheless the demand for all descriptions of English wheat was very inactive, at barely Monday's currency. Foreign wheat we were fairly supplied. Good red Baltic parcels were to somewhat improved request, as full prices were paid. All other lots moved off slowly, at late rates. In floating cargoes very little transaction took place. The show of barley was seasonably good. Dealers purchased cautiously, at late figures. We had a dull sale for malt, on former terms. The supply of oats being small, holders were firm, and prices were well supported. Beans, peas, and flour remained dull very little attention. The top price of the latter was 70s. per 280 lbs.

ARRIVALS.—English wheat, 2110 quarters; barley, 1950; malt, 1640; oats, 3720 flour, 2330. Irish: barley, 700; oats, 2520. Foreign: wheat, 9990; barley, 4320; oats, 3910.

English.—Wheat, Essex and Kent, red, 36s to 37s; ditto, white, 42s. to 43s; Norfolk and Suffolk, red, 36s. to 37s.; ditto, white, 42s. to —s.; rye, 38s. to 40s., grinding barley, 22s. to 24s.; distilling ditto, 25s. to 27s.; malting ditto, 37s. to 39s.; Lincoln and Norfolk oats, 18s. to 20s.; brown ditto, 16s. to 18s.; Yorkshire and Scotch ditto, 20s. to 22s.; Scotch and Yorkshire and Lincolnshire beans, 34s. to 36s.; Essex and Suffolk ditto, 37s. to 38s.; Kingston ditto, 40s. to 41s.; black, 32s. to 34s.; tick, white, 32s to 33s.; tick beans, new, 41s. to 43s.; ditto, old, 46s. to 48s.; grey peas, 34s. to 36s.; maples, 42s. to 43s.; white, new, 41s. to —s.; boilers, 40s. to 42s.; marrow, Town-made flour, 52s. to 70s.; Suffolk, Norfolk, Yorkshire, and Stockton, 44s. to 47s. per 280 lbs. *Foreign:* French flour, —s. to —s. per sack; wheat, 35s. to 38s. per bushel.

ARRIVALS.—For most kinds of seeds the demand is inactive, at last week's prices. Tares are quite as dear as last advised.

Linseed, English, sowing, 56s. to 60s.; Baltic crushing, 47s. to 52s.; Mediterranean and Odessa, 50s to 54s.; baxseed, 35s. to 36s. per quarter; Coriander, 16s to 18s. per cwt.; Brown mustard, 10s to 12s; white ditto, 7s. to 8s.; and tares, 7s. 6d. to 8s. per bushel. English rapeseed, £30 to £34 per last of twenty-four quarters. Linseed cakes, £6 to £6 10s.; ditto, foreign, £5 5s. to £5 10s. per ton. Rapeseed cakes, £6 0s. to £6 10s per ton. Canary, 60s. to 70s. per quarter. Clover-seed unsold.

Imperial Weekly Average.—Wheat, 72s. 7d.; barley, 40s. 9d.; oats, 23s. 1d.; rye, 47s. 1d.; beans, 35s. 9d.; peas, 35s. 3d.

The Six Weeks' Average.—Wheat, 71s. 11d.; barley, 41s. 6d.; oats, 23s. 8d.; rye, 47s. 11d.; beans, 36s. 4d.; peas, 35s. 3d.

Duties on Foreign Corn. Wheat, [illegible] barley, 2s.; oats, 2s.; rye, 4s.; beans, 4s.; peas, 4s.

Quantities of Grain Sold Last Week.—Wheat, 16,000 quarters; barley, 165 [illegible]; oats, 157 beans, 480; peas, 1200 quarters.

Bread.—The prices of wholesome bread in the metropolis are from 10½d. to 11d.; of households ditto, 9d. to 10d. per 4lb. loaf.

Tea.—The demand for all kinds of tea continues steady, at full prices. Congou, congou, has sold at 1s 3d to 1s. 5d. per lb. The total deliveries to the [illegible] yellow 3s. 4d. per lb. [illegible]

Sugar.—Very moderate sales of raw sugar have taken place, on offer this week. Improved quite equal to [illegible] Refined Bowers, 37s. 6d. to 38s.; Bowes, mediums, 36s. 6d. to 37s. 6d.; fine, 37s. 6d. to 38s.; Refined goods have given way 6d. Brown lumps, 42s. to 43s. 6d.; grocery, 42s. 6d. to 47s. per cwt. The total clearances, to the 3rd inst., were 6,467,591 cwts., against 5,830,166 ditto in 1852.

Coffee.—Good ordinary native Ceylon has changed hands at 47s. per cwt. Plantation kinds support former terms. In foreign coffee very little is doing.

Rice. On market is dull, and prices are about 3d per cwt. lower.

Provisions. For all kinds of butter we have to report a dull sale, at a decline in the quotations of from 1s to 2s. per cwt. The bacon market is heavy, and prices continue to decline. Waterford, streaky, 57s. to 59s.; fleay, 56s. to 58s. per cwt. Prime hams are quite as dear as last week. Most other kinds of provisions are selling on former terms.

Tallow.—The demand is steady P.Y.C., on the spot, 57s.; and for the spring, 57s. 3d. per cwt. Town tallow 55s. 6d.; not cash.

Oils.—Linseed, cod, and sunflower, are in request, and dearer. Other oils are steady. Turpentine is lower. Spirits, £2 16s., on pennheoon, £3 15s.; rough, 14 per cwt.

Spirits.—There is no sale for rum is tolerably steady. From Leewards, 2s. 6d. to 2s. 6¼d.; and East India, 2s. 6d. per gallon. Brandy is firm. Sales of cognac, best brau is of 1851, 6s. 4d. to 6s. 8d.; 1850 ditto, 5s. 7d. to 6s. 4d.; other, 5s. 6d. to 5s. 9d. per gallon. British-made spirits, 10s. 8d.

Hay and Straw.—Meadow hay, £3 10s. to £5 10s.; clover ditto, £4 0s. to £6 6s., and straw, £1 15s. to £2 2s. per load.

Wool.—English qualities are steady, and prices are well supported. Foreign and colonial parcels are about unusual

Potatoes.—About an average business is doing in most kinds, at from 55s to 150s. per ton.

Coals (Friday).—Lambton, 21s.; Hetton, 20s.; Newcastle, 20s.; Caunsh, 20s.; Haugh Hall, 20s.; South Kelloh, 20s.; Plummer, 20s.; Richmond, 20s.

Hops (Tuesday).—Our markets is very dull, and prices have a downward tendency. Foreign hops are selling at from £7 7s. to £9 9s. per cwt. This week's imports are—2 bags from Hamburg, 1 ditto from Rotterdam, 143 from Zealand, and 24 from Amsterdam. New Mid and last have pockets £4 4s. to £18 5s.; New Weald £11 0s. to £[illegible] per cwt.

Spirits (Friday).—To-day's market was very inactive, at a decline in the quotations of one farthing per gallon. Malt whisky was in moderate request, at previous rates. Grain spirits the demand ruled firm, and, in some instances, prices were slightly [illegible] the numbers of sheep were rather limited, as compared [illegible] Monday's currency. Beasts were in moderate request, at from 4s to 4s 2d per 8lbs. Calves were in fair demand, at from 4s 4d to 5s 4d per 8lbs. Prime Scots, 5s. Pigs were in limited request, at from 4s to 4s 4d per 8lbs.

SMITHFIELD (Monday).—Only a moderate supply of foreign stock was on sale this morning. Our own grazing breeders had, on sale, a good show of beasts, which moved off slowly, at Monday's currency. Scarcely any cows were inquired for. Calves were in limited request, at previous rates. Sheep sold dull but not cheaper. Hogs were in heavy, at from £14 to £15 each, including their small calf.

Per 8lbs to sink the offals.—Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large oxen, 4s. 2d. to 4s. 4d.; prime Scots, 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime coarse woolled ditto, 4s. 2d. to 4s. 4d.; prime Down [illegible] 4s. 10d. to 5s. 2d.; large [illegible] 4s. 0d. to 5s. 4d.; large sows, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d.; small porkers, 4s. 6d. to 4s. 8d.; suckling calves, 21s. to 28s.; [illegible] 18s. to 24s.; [illegible] 18s. to 24s.; sheep, 402; calves, 46; pigs, 264. Foreign: Beasts, 220; sheep, 510; calves, 49.

Newgate and Leadenhall (Friday).—The trade ruled steady, at our quotations.—

To sink the offals.—Inferior beasts, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 3s. 8d.; prime large oxen, 3s. 8d. to 3s. 10d.; prime small ditto, 4s. 0d. to 4s. 2d.; large cows, 4s. 4d. to 4s. 6d.; prime ditto, 4s. 6d. to 4s. 8d.; large calves, 4s. 4d. to 4s. 6d.; prime ditto, 4s. 8d. to 5s.; large pigs, 4s. 2d. to 4s. 4d.; small porkers, 4s. 6d. to 4s. 8d.

THE LONDON GAZETTE.

TUESDAY, DEC. 6.

BANKRUPTCY ANNULLED.

J. BAYERS, High-street, Wandsworth, Surrey, carpenter and upholsterer.

A. HARDWICK, High-street Windsor, Berks, linen draper. E. H. STREET, [illegible], Dover, cabinet maker. J. BLOOMER and PHILIPPS BLOOMER, Ewhurst, Surrey, joiners. [illegible] Rue. W. M'CURTIN and J. R. RILEY, Liverpool, commission merchants. [illegible] CHARLES, Liverpool, importer of French and German goods.

SCOTCH SEQUESTRATIONS

D. M'KENZIE, Aberdeen, hair-keeper. R. Mc. THOMPSON, [illegible] wright, writer to the Signet. J. REID PERSON, Edinburgh, [illegible] Glasgow, grain merchant and commission agent. J. MILCHRIST, Milton of Nairne [illegible] and [illegible] Nairnshire.

FRIDAY, DEC. 9.

WAR OFFICE, Dec. 8.

30th Foot.—Major-General H. Godwin, C.B., to be Colonel, vice Major-General Sir W. Gomm, G.C.B.

DIED.—Col Sir J. Chase, K.C.B., to be Honorary Aide-de-Camp to her Majesty.—To be Lieutenant Colonels in the Army: Majors F. Whinyates, A. C. Errington, C. A. Edwards, A. Elliot. Armstrong, H. Cotton, and S. Reid.—To be Majors in the Army in the East Indies: Captains W. A. J. Mayhew, S. G. C. Hessad, G. Adam, A. R. Dallas, W. F. Reinhall, A. Fyfe, Commissariat Department, to be Deputy Assistants, &c.

OFFICE OF ORDNANCE, Dec. 7.

Royal Regiment: Lieutenant-General Sir G. W. Pasley, K.C.B., to be Colonel of Marines, vice Major-General Augustus de Bosset.

ADMIRALTY, Dec. 7.

The following promotions have taken place in consequence of the [illegible] Rear-Admiral of the White Sir W. [illegible] Vice-Admiral of the Blue, to be Rear-Admiral of the White. Captain [illegible] to be Rear-Admiral of the Blue. Captain the Hon. M. Stopford to be [illegible] Admiral of the White. Captain H. Fraser, C.B., Captain [illegible] to be Rear-Admiral of the Blue. Retired Captain W. Bethano, R.N., has also been promoted to be [illegible]

JAMES, Oxford-street, and John-street, Oxford-street, trunk-maker.

BANKRUPTS.

J. SADLER, Vere-street, Clare-market, wine merchant and maltster. T. SHELTON, Rotherhithe-street, Middlesex, grocer. F. SALTER, York place, Pentonville-road, Middlesex, [illegible] of musician and composer. J. [illegible] Bridge-street, Southwark, Surrey, [illegible] and [illegible] J. L. WARD, Fulham, Surrey, [illegible] Lancashire, cotton-spinner. C. S. WILKINSON, Bridge-street, Blackfriars, Middlesex, [illegible] HEANEY, Mark-lane, wine merchant. G. A. CLARKE, late of Macclesfield, but now of Manchester. F. OLIVER, Edward-street, Hemp-on, and Llambadarnfawr, Cardiganshire, dealer in railway shares and [illegible]

BIRTHS.

BATTYE.—At Clifton, the wife of the Rev. W. W. Battye, of a son.

BOOTHBY.—At the Rectory, Welwyn, Herts, Lady Boothby, of a daughter.

BROUGHAM.—In Grosvenor-square, the wife of W. Brougham, Esq., of a son.

CRANLEY.—The Viscountess Cranley, of a daughter.

HARRISON.—At Hyde Park-gate, the wife of Rev. J. Harrison, of a son.

HORNER.—In Upper Harley-street, the wife of the Rev J. Horner, of a son.

JESSE.—On the 4th inst., the wife of Captain Jesse, Royal [illegible] of a daughter

PARKIN.—At the Rectory, South Kelsey, Lincolnshire, the wife of the Rev. L. Parkin, of a daughter.

MARRIAGES.

BARTON—HILLER.—At the British Embassy, Brussels, T. Bart a Esq., of Bexhill, Sussex, to Maryanne, eldest daughter of J. Hiller, Esq., of Roberisbridge, in the same county.

DOE—LARKIN.—At Dunblane St. Andrew, Wilts, the Rev. [illegible] Doe, M.A., to Hannah Merrick, fourth daughter of the Rev. W. Hinds, M.A., Prebendary of [illegible]

HAMLEY—SUTTON.—At Tunbridge Wells, the Rev. [illegible] Hamley, eldest son of T. Hewlett, Esq., Harrow-on-the-Hill, to Virginia, eldest daughter of Sir A. Stephen, Chief Justice of [illegible]

SELWYN—PRETHEROE.—At [illegible] Plymouth, [illegible] Selwyn, Esq., to Frances, eldest daughter of A. Pretheroe, Esq., [illegible] Cornwall.

SARSON—WOODROFFE.—On the 6th inst., at [illegible] Grosvenor-square, Walter, eldest son of [illegible] Sarson, of [illegible] Meadow of the late Skyrmer G. Woodroffe, Esq., of Hanover-square.

TATHAM—CRAWFORD.—At Rodbourney, Lieut.-Colonel C. C. Tathamough, C.B., 1st Regt., to Flora Sophia Emma, only daughter of D. Grant, Esq., of Cambridge-villas, Notting-hill.

DEATHS.

CHANTO.—On the 4th inst., at Somerton, Agnes, second daughter of Mr. Wm. A. Chanto, aged 24.

COMYN.—On the 3rd inst., at Richmond, Edward Anstey Comyn, Esq., aged 61.

DAINES.—At Catisfield Lodge, near Fareham, Hants, J. R. Daines, Esq., Vice-Admiral of the Red, aged 68.

EBORALL.—On the 30th ult., at his residence, Broomfield-house, Handsworth, Birmingham, Lieut.-Colonel Samuel Eborall, R.N., for many years one of the chief officers of the London and North-Western Railway, aged 63.

HOLMES.—On the 4th inst., at her residence, Oxmantown-place, Parsonstown, Ireland, at the advanced age of eighty-six years, Mary, relict of George Washington Holmes, late Major 93rd Highlanders.

OPIE.—On the 2nd inst., at [illegible] Norwich, in the Castle meadow, Norwich, aged eighty-five, Amelia Opie, widow of J. Opie, Esq., R.A., and only daughter of the late J. Alderson, M.D., of Norwich.

SIR.—On the 6th inst., T. Roe, Esq., of Doughty-street, Mecklenburgh-square, and Temple Chambers, Fleet-street, age 69.

TRABERNE.—At St. Hilary, in the county of Glamorgan, the Rev. G. Traberne, rector of St. George's, aged 80.

WITHAM.—At Higham, Suffolk, Sir C. Witham, K.L., Lieutenant in H.M. Navy, aged 81.

FAVOURITES OF THE ROYAL STUD

We have given on the next page an Engraving of a Group of Horses from her Majesty's stables. The black horse with a star on his forehead is her Majesty's favourite charger, Begdale, which she rode twice at the Chobham Encampment. The one facing him is a bay, Hyperion, the favourite charger of H.R.H. Prince Albert, on which he rode by the side of her Majesty, at the Camp. The grey is Khorsead, an Arab of pure race; presented to her Majesty by Sir Jamsetjee Jeejeebhoy, the great Parsee Merchant of Bombay, on whom the honour of knighthood was conferred some years since. Next to the grey Arab is Said, a bay; presented to her Majesty by the Imaum of Muscat. A pair presented to William IV., by the same Potentate, were sold, at his Majesty's death, to the King of Prussia, who has bred excellent artillery horses, by crossing with Arabs. On the left-hand corner is Hamman, a half-bred Arab, [illegible] Majesty's favourite riding horse, which was presented to her Majesty by Prince [illegible] Pasha, [illegible] Pasquis, presented to the Prince of Wales by the President [illegible] and Caspar, which is his Royal Highness' favourite.

HER MAJESTY'S RIDING-HORSE. GREY MEXICAN PONY, PAQUITA. HER MAJESTY'S BLACK CHARGER. PRINCE ALBERT'S BAY CHARGER [illegible] PRINCE OF WALES'S PONY [illegible] GREY ARAB, KHORSEED. BROWN ARAB, SAID.

FAVOURITES OF THE ROYAL STUD.—(SEE PRECEDING PAGE.)

THE ILLUSTRATED LONDON NEWS

No. 658.—VOL. XXIII.] SATURDAY, DECEMBER 17, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE WAR AND THE CONFERENCE.

THE Turks have achieved very considerable success in Wallachia and in Asia; and Russia has achieved a small success in the Black Sea. We suppose that neither the one nor the other will have much influence upon the fortune of the war. The Turks needed success to inspire them with self-reliance; and the Turkish Generals have proved themselves equal to their task. The fear was that the Turks would grow too confident, and that they required a reverse to bring them to reason. The Russians—or, more properly speaking, the Czar (for we cannot consider the dispute a national one when the ambition of a single individual has caused the war, and his single caprice or fear might end it)—also needed a victory, as a salve to that wounded self-love which has hitherto played so sorry a part before Europe. We could almost have wished that the Russian victory at Sinope had been of greater value; if it could have been the means of soothing the exasperation that the Emperor Nicholas must have felt at seeing himself so foiled by the allies of Turkey, and so beaten by Turkey herself. But this Black Sea battle—even upon the showing of the Russian despatches, from which we derive our only knowledge of it—is but little to boast of. A Turkish Pacha, with a few transports, was conveying troops and ammunition to the coast of Circassia, when he was attacked by a greatly superior force of Russian ships of the line, and conquered, after an engagement so severe as to render it difficult for the Russian Admiral to steer thirty-six leagues across the Black Sea, from Sinope to Sebastopol. So small an egg of victory is surely not worth the lusty cackle that has been made over it. If, however, the event be agreeable to Russia, and shall induce the Czar to stoop from his lofty isolation, and so far to mingle in the crowd of men and nations, as to listen for the first time to reasonable projects of pacification, the world will not begrudge him his victory.

War is so dreadful an evil that the statesmen of the west of Europe deserve all possible respect and gratitude for the long-continued efforts they have made to prevent it. Whatever may happen in the future, the Governments of Great Britain and France—and, in a minor degree, those of Austria and Prussia—will not be liable to the reproach of having neglected any precaution or spared any pains to avert the mischief. The new Conference that has been summoned is a fresh proof of their anxiety to spare this generation so barbarising a calamity as a general war. Yet it is very much to be doubted whether the successful diplomacy of the Four Allied Powers at the present stage of the conflict would be productive of all the benefits expected; or that it would ultimately prevent a far more sanguinary war than the one which is now raging. The Emperor of Russia needs a lesson. He requires to know his true place and his real weight. The peaceable and industrious people of the middle and west of Europe cannot afford to be periodically annoyed by the dread of his power and ambition. Since the year 1812, when Napoleon shut his eyes, and dashed his imperial forehead against an icy rock which he could not move; and since 1814, when Russia wiped out the shame of her own invasion by parading her Cossacks through the streets of Paris—a degradation which the French have never forgiven—the Czars have traded upon the unwieldiness of their empire. The Czar Nicholas has cleverly contrived to frighten the timid into the belief that Russia is very powerful, because she is very big; and as invincible, when it pleases her to become an aggressor, as she was when Napoleon was ill-advised enough to run his famous muck against her, bruising his head and heels in the rash encounter. All these ideas require to be wiped out—not only from the minds of the people of Europe, and more especially from those of Germany, but out of the mind of the Czar himself. Such of his people as have any mind at all upon the subject, require similar enlightenment. Were the new Conference to draw up a basis of pacification satisfactory both to Turks and Russians, it would, doubtless, save the present effusion of much innocent blood; but would it humble the pride of Russia sufficiently to justify the hope that she would not repeat the same game at the first convenient opportunity? We think not. There is a vulgar saying in the streets of London, that when a man is too "bounceable," it is necessary "to take the bounce out of him." Russia is, and has been for nearly forty years, in this "bounceable" position; and it would administer to her own future welfare, and to the world's repose, if she could be effectually humbled at the present time. An actual measurement and gauge of her strength with any one of the three antagonists, that either is, or speedily may be, opposed to her, will be the means of dispelling the illusion of her invincibility, among many others which it is the interest of Russia to maintain, but of Europe to destroy.

From all that is known of the present character of the Czar—from all that we read of his published proclamations (in which the insolence and the blasphemy seem to strive for pre-eminence)—and from all that we can gather from the openly avowed or covertly hinted opinions of the agents and emissaries of his Government, it is unlikely that the Conference will be able to impose peace upon the belligerents, until the war has run a much longer course. We know what desperate things are done in smaller circles by private persons, when foiled ambition, or spite, or wounded vanity, is the motive power that impels them to action. All history teaches us how irresistible these forces are, in driving mighty states and sovereigns to violent courses,

NICHOLAS, EMPEROR OF RUSSIA.—FROM THE LATEST PORTRAIT, JUST PUBLISHED AT ST. PETERSBURG.

which prudence and sound policy would condemn. The undisturbed possession of supreme and irresponsible power for a third part of a century; the notion, daily and hourly dinned into his ears, and instilled into his mind, by slavish worshippers and interested advisers, that he is not only an earthly sovereign, but the vicegerent and representative of Heaven, in all matters of conscience; added to the terror which his name and arms have excited throughout the ignorant population of the states that border upon his heterogeneous and chaotic empire—all these are elements in the character and position of the Czar, which lead the world to anticipate that he will persevere in his designs until the opposition of superior force shall render perseverance no longer possible. Were he the responsible minister of a Constitutional Government, or even of an ambitious sovereign, it is probable that the victory of Sinope, coming so soon after, and as if to counterbalance, the defeats at Oltenitza and San Nicholas, and the general successes of Selim Pacha in Asia, would afford him the pretext for a display of prudence under the guise of magnanimity. But, being responsible to no human authority, it is more probable that one success—small as it is—will urge him to attempt another, or to procrastinate in the hope of new advantages. He knows that delay—prejudicial, if not fatal, to his opponent—might be favourable, and could not be fatal, to himself. In this case, Great Britain and France, who have not yet taken any part in the war, though they have done so much to prevent or to shorten it, will have to become principals, instead of advisers or umpires. The capture of Sebastopol and Odessa, and the destruction of the Russian fleets in the Black Sea by the combined fleets of Great Britain and France, will thus be the necessary preliminaries to any further negotiations, if those of the Conference should fail, as in all probability they will. To that consummation events are rapidly tending. On the morrow of that day, the Czar, like the Wedding Guest in the "Ancient Mariner," will arise "a sadder and a wise man." On the morrow of that day, also, will Europe be delivered from an incubus that has too long sat upon her breast; and Russia will assume her proper proportions and her befitting level in the great commonwealth of nations.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The Imperial receptions at the Tuileries commence on the 1st of January. On that occasion there is to be a grand assembly—*les demoiselles* excluded—for the solemn inauguration of the *manteau de cour* (train) That of the Empress is to be in cloth of silver, trimmed with silver blonde sprinkled with flowers. It is commanded that only members of the Imperial family are to wear the bees. The train becoming a necessary appendage at all Court receptions, it is predicted that the number who aspire to the honour of a presentation will be immensely diminished. The *manteau* forming no part of the rest of the dress, cannot, it is computed, be obtained under £25 or £30 at least; hence great lamentations among a large class of fair dames, who would fain make their appearance in the *salons* of the Tuileries, if the distinction could only be attained on more reasonable terms. Evidently the aristocracy of the Chaussée d'Antin will beat that of the Faubourg St. Honore—the Faubourg St. Germain *est hors de question* in all Imperial *réunions*—out of the field, except among the diplomatists and other wealthy foreigners who inhabit that quarter. Louis Napoleon is, after this occasion, to hold weekly receptions, to which invitations will be issued in a certain series; and on the 31st inst. the Princess Mathilde is to offer a grand ball to their Majesties.

A new list of senators is spoken of for the coming year. Many attempts have been and are being made, to win over, by the conferring of this dignity, certain persons who have hitherto held faithful to other causes and opinions. The success of these attempts yet remains unknown, as some of the names rumoured as likely to appear in the new list are warmly disputed by other parties—those of the Duce de Noailles and Valmy more especially. M. Dupin *aîne* will, there is little doubt, be one of those named to the post in question.

It is said that the Emperor intends, as a mark of his extreme satisfaction at the successful efforts of M. de Bourquency in the affair of the signing of the protocol of the Four Powers, to accord him a promotion in the order of the Legion of Honour; and further to present him with a snuff-box of great value, bearing his portrait, and that of the Empress, painted by Winterhalter.

The inauguration of the statue of the Maréchal Ney took place with much pomp, and the ceremony, presided over by the ex-K ng Jerome, was numerously attended. The Maréchal St. Arnaud pronounced a speech on the occasion, greeted with much applause; he was followed by M. Dupin *aîné*, whose discours was of an infinitely more political tendency—a fact which, it is hinted, is not altogether foreign to the probability of his approaching elevation, it being supposed previously that he was a warm advocate for the fusion of Frohsdorf

M. Thiers, in addition to the study of history and literature, employs his leisure in the forming a collection of paintings, sculpture, and other objects of *virtu*. It is said that he has the intention of writing a *brochure* on the progress and movement of art since the year 1830—the number of copies printed not to exceed fifty.

M. de Lamartine has published in his monthly number of the *Civilisateur*, a study on Cromwell, whom, as he states in a curious preface, he regards i a new view—simply that of a fanatic.

Various curious and interesting sales of books, correspondence, and autographs are announced as about shortly to take place; but, in consequence of certain scandals greatly complained of—some relating to living persons—in the headings of the catalogue of the famous *vente, Tremont*, the Government has the intention of exercising in future a strict surveillance over all such sales. On the 28th of last month commenced a sale of most interesting autographs, which, independent of a complete set of those of the Marshals of the Empire, contained forty-three letters of Napoleon, some addressed to Talleyrand, others to General Savary, and all those concerning the campaigns of France to the Duc de Raguse. This part of the sale, however, was stopped by the reclamation of some o. the Duc's family, and all these letters were withdrawn. Some of these epistles are extremely curious, and we regret that our limits will not permit our quoting them. In the same collection is a letter from the late Duke of Wellington, written from Brussels a fortnight before the Battle of Waterloo, to the Duc de Raguse. From this document, which is of six pages, we cite some passages, which form the *resumé*:—

The principle on which you act is generally true and good; an honest man cannot serve in the ranks of the enemies of his country. * * We are the enemies of one man and of his adherents, who has used his influence over the French army to overthrow the throne of the King, so as to subjugate France, and then to revive for us all the days of misfortune which we thought we had escaped. We are at war with him because we all feel that we cannot be at peace. It is a misfortune for France that she becomes the theatre of a war which this man necessitates, and of which he is the cause and the end; but she must not think that this war is directed against her * * On the contrary. Although I agree with you that you do well to keep away for the moment, I strongly advise you not to do so too long.

The small-pox has been making terrible ravages both in Paris and the departments. At Sarthe, the Bishop of Mazas has been obliged to break up his great seminary, in consequence of the violence of the disease, which has killed the Professor of Philosophy, and attacked several other professors, as well as upwards of forty of the scholars. The cholera, the cholerine, and the influenza are no less prevalent

M. Emile de Girardin's pamphlet, "Solution de la Question d'Orient" being exhausted in a few days, a second edition, with an addition of twenty-four pages, has already made its appearance, and is selling with no less rapidity than the first. This work, contains in an appendix, all the documents, relative to the affair which now occupies the attention of Europe.

Mademoiselle Georges—the beautiful, the gifted, the beloved, the admired, the celebrated—who fifty years ago made her début at the Théâtre Français—who turned all heads and all hearts, from Napoleon's to those of the poorest *ouvrier* who could scrape together a sufficient sum to obtain the worst place in the theatre—Mdlle Georges, after a retreat of a quarter of a century, once more makes her final appearance on the same stage that formerly witnessed her triumphs, in "Rodogune," which, we believe, has not been played since represented by her. We hope next week to give a description of this *solennité*, which for the moment takes the place of the *question d'Orient*, if not at the Bourse, at least in the *salons*. Alexander Dumas—the indefatigable, the *undiscouragea*ble (to coin a word) having had his second *Jeunesse* nipped in the bud by the merciless *Censeur*, has, nothing daunted, started with a third, written by steam, like its predecessor; but, as the youth of kings seem to *porter malheur* to his efforts, he has this time taken the *Jeunesse de Louis* as his theme: we heartily wish him, like Jacob Faithful's father, "better luck next time." The Italian Opera makes its way with difficulty, and does not attract as it was expected to do. The Grand Opéra weeps the departure of Mdlle. Rosati. The Gymnase continues to draw crowds to "Diane de Lys;" the Variétés fails to do so to "Diane de Lys et de Camelia." The Gaîté has an immense success with "Les Cosaques;" and the Odéon succeeds better with "Mauprat" since it has cut the piece down a little—frankly, six acts of anything is a trial of patience. At the Vaudeville, the "Genevève" of M. de Lamartine—that sweet and tender elegy—has been dramatised by MM. de Couralles and Jaime *fils*. We need hardly say the success was more—or less—than mediocre. Such a composition *must* lose its vaporous charm, its virginal purity, behind the footlights. As well try to seize and embody, and present to the public, the mist of the morning clothed in the properties of the theatre.

The hope of a successful issue for the labours of the Conference on the affairs of the East rather diminishes than increases, for it is asserted in the diplomatic circles of Paris that the idea of a new mediation came from Austria, and that no pledge has been given by the Emperor of Austria that he will take part in active measures against Russia if the Czar should refuse to subscribe to the views of the Conference.

The official reports of the police, addressed to the Central Administration, mention a frightful increase in the number of incendiary fires throughout France. The departments the most cruelly visited are those of the Oise, Aisne, Ille et Vilaine, Ardennes, &c. Everywhere the authorities are on the watch, and the gendarmerie perform continual patrols; but hitherto only a small number of incendiaries have been arrested.

Since his return from Fontainebleau, the Emperor has, almost unattended, paid several visits to the public buildings of the capital. On Sunday afternoon the Emperor, dressed in plain clothes, left the Tuileries, and went to the Museum, where he walked about in the midst of a crowd of persons who generally assemble there on Sundays. After having visited several of the halls, he again crossed the court of the Louvre, to visit the works on the side of St. Germain l'Auxerrois; after which his Majesty walked back to the Tuileries, examining the new buildings of the Louvre in his way. In the evening their Majesties went to the Opéra Comique. On Monday afternoon the Emperor drove along the Boulevards, and visited the rue de Strasbourg, the opening of which took place on Saturday. No escort, beyond two gendarmes, as outriders, and two after the third carriage, attended him.

The rise in the price of wheat, which recommenced last week, has made further progress, and flour has reached a higher figure than any hitherto quoted.

THE WAR BETWEEN RUSSIA AND TURKEY.

A naval action has been fought on the coast of Asia Minor, ending in the total destruction of a portion of the Ottoman fleet. The engagement is thus described in the *Moniteur*:—

On the 30th November the Russian Admiral Nachimoff, at the head of six ships of the line, forced the entrance of the harbour of Sinope, and destroyed, in an engagement which lasted one hour, seven frigates, two corvettes, a steam-boat, and three transports. The frigate the least injured, which the Russians were bringing to Sebastopol, was abandoned at sea, and Osman Pacha, with his staff, was taken on board the Admiral's ship. An aide de camp of Prince Menschikoff brought the news to Odessa on the 5th December.

Further accounts state the battle began at an hour's distance from Sinope. The larger Turkish vessels which were destroyed had each 800 soldiers, besides artillerymen, on board, and a large sum of money, being bound for the east coast of the Black Sea. A fourteenth vessel escaped undamaged.

Advices from Bucharest of the 10th, state that the Russian squadron which destroyed the Turkish vessels at Sinope, consisted of four ships of 120 guns, and four of 86 guns, commanded by Admiral Nachimoff Admiral Cornilof arrived afterwards in the steamer *Odrian*. Three Turkish ships were set on fire by the enemy, but it was impossible to secure the prizes. The Russian ships were greatly damaged, and required many repairs to enable them to reach Sebastopol. Four hundred Turkish guns were sunk. The above is authentic

The carnage at Sinope is described as immense. A private letter from Vienna says that Osman Pacha succeeded in landing at Sinope the warlike stores and the crews from the transports which he was charged with escorting to Trebizond, and which were not captured by the Russians, and that the landing was effected while Osman was, with much gallantry, defending the entrance of the port.

Sinope is a port on the coast of Asia Minor, on the Black Sea, situate midway between Constantinople and Trebizond, nearly opposite Sebastopol, at the points where the Euxine is narrowest; it is distant from that Russian fortress about 150 miles. The Russians crozed it in twenty-four hours, and returned to Sebastopol in the same time. Sinope is the best harbour on the coast of Asia Minor, situated about 300 miles from the Bosphorus. The town of Sinope is built on the isthmus of a peninsula jutting out into the Euxine, and forming two capacious harbours. That to the south-east is used by the Turks as a naval station. The town is square, flanked with towers, and covered by a small citadel; but, in spite of the importance of the place, it has long been considered the most vulnerable point on the whole north coast of Asia Minor. The squadron which the Russians have demolished was a convoy bound with troops and arms for some point on the coast of Asia, and, it is believed, that the Russian cruisers pursued this convoy into the road of Sinope. The land batteries of the port appear to have been quite incompetent to meet the fire of the ships, and this engagement furnishes another example of the comparative weakness of ordinary fortifications when opposed to modern naval gunnery. After the destruction of no less than twelve turkish vessels, without taking a single prize in a state to be removed to Sebastopol, the Russian ships were themselves in a condition to reach that harbour with difficulty. The havoc which is described to have taken place shows that the ships on both sides were fought with great gallantry. The Russians had, however, by their own account, a vast superiority of force, and Osman Bey, the Turkish commander, only surrendered at the last extremity. It has also been suggested that, as Sinope is a naval arsenal, it is possible that some of the vessels destroyed by the Russians were built in the port. The importance attached to this victory by Russia may be inferred from the fact that Prince Menschikoff, the original author of these calamities and the instrument of this fresh outrage, hurried from Odessa to St. Petersburg, to lay the news of this victory at the feet of the Czar.

The defeat at Sinope was known at Constantinople on the 3rd, when great excitement prevailed. A Grand Divan was held, at which all the foreign Minister were present. The English and French Ambassadors were urged to despatch the combined fleets into the Black Sea, but they had an audience of the Sultan, at which it was resolved not to send the whole fleets at once, but four frigates, to obtain more precise information. Accordingly, four steam-frigates were immediately despatched from the combined squadrons to Sinope, and two other steam frigates to Varna, for the purpose of procuring precise intelligence. There was no doubt that, upon the return of these vessels, the combined fleets would traverse entire the Black Sea, to prevent, if possible, any further collision between the Russian and Turkish naval forces

It is well ascertained that on the 28th of November, two days prior to the action, the principal divisions of the Turkish fleet were at anchor in the Bosphorus. Admiral Slade had brought back his division some days before, with the exception of one frigate, which had taken shelter at Sinope, and great satisfaction had been expressed that at this inclement season of the year the line-of-battle ships and frigates were safe in harbour.

The Turks continue to be successful in Asia. The two corps of Batoum and Anatolia were advancing on the Russian territory, and were to unite at Tefis. The Turks have obtained some important advantages over the Russians in the neighbourhood of Teflis. A majority of the inhabitants of Georgia had declared in favour of the Turks. The Turkish division of Bajazid entered the Russian territory in the province of Erivan on the 24th October. The Russian advanced guard having been attacked by 3000 Bashi-Bozouks, who preceded the Turkish division, were completely routed, and the Turks continued their march to Erivan. Abdi Pacha entered the Russian territory in Georgia on the 10th November, with the greater portion of his army.

Advices from Constantinople, of the 1st December, state that the Russian fortress of Safa, near Chevketli, has been taken by the Turks; 400 Russians were killed, 200 escaped. On the 17th November 1200 Russians landed on the same coast, but Selim Pacha forced them to return to their ships. In this engagement the Russians had 400 killed, and lost one cannon. The Turks have advanced to Alexandrinople, in Georgia. Their attack upon that fortress was repulsed, but they have blockaded the citadel of Akhalzikh (or Akiats). Its fall was daily expected. Schamyl and Selim Pacha have taken various fortresses; and they surround Prince Woronzow on all sides in the vicinity of Tiflis. Near Fort St. Nicholas (Chevketli), the Russians were repulsed in an attempt to land 18,000 men. Both retreat was attended with heavy loss. The Russian army was cut off from a retreat to Russia. The Mussulman population of Georgia had risen in arms for Turkey. Goumri, Redu-Kaleh, and Kutais were in the hands of the Turks. Schamyl attacked the fortress of Zakhatala. It capitulated after thirty-six hours hard fighting. The loss on both sides was heavy. Kahetty also surrendered, after several days' fighting. Schamyl has taken Djein and three other Russian fortresses, and report says that he has also defeated 10,000 Russians under General Orbianoff

We hear from Bucharest that the Russians were pushing their troops forward on the road to Kalafat. The Turks were still engaged in fortifying that place. On the 26th ult., a Russian Major was killed in a skirmish near Giurgevo. The Turks were still holding the island of Mokan. Entrenchments have been thrown up round Bucharest. A re-commencement of hostilities is shortly expected on both banks of the Danube, especially between Krajova and Kalafat. The entire portion of Wallachia adjoining the Danube has been covered with water, which rendered it impossible for the Russians to make any movement in the neighbourhood of the river. Kalafat, fortified and garrisoned by 20,000 men, was regarded as impregnable.

On the 8th, 4000 men of Osten-Sacken's corps arrived at Jassy. A division of the same corps had been sent to Redout Kaleh, in Asia.

A *cordon* was to be formed along the line of the Dniester.

General von Budberg was at Jassy, and immediately proceeded to enter upon his duties as the Russian Commissioner Extraordinary, in which capacity he will discharge the duties of internal administration which have hitherto devolved upon the Hospodars of Wallachia and Moldavia. The General will also have to make provision for the necessities of the army, under the instructions of Prince Gortschakoff, who is his superior officer.

A letter from Jassy states that Count Constantine Rakovitza, an aide-de-camp to Prince Gika, Hospodar of Moldavia, had been transported to Russia, on charge of having maintained a correspondence with one of his relatives attached to the camp of Omer Pacha

Affrays have taken place at Galacz between the Wallachian militia and the Russian troops. The people of Wallachia are refused to obey the orders of a Russian General The battalion in question and four companies of Wallachians were consigned to their barracks.

News of the 28th ult., from Constantinople, states that new propositions for the Conference, and the communication thereof by M. de Bruck to the representatives of the Powers. We are also told of an "autograph letter from the Queen of England to Lord Redcliffe, urged him to continue his efforts to induce the Divan to accept the last note proposed by England."

The following particulars relative to the scene of the late naval engagement will be read with interest:—

The town of Sinope (Sinoub of the Turks) is situate in Anatolia, on the southern shore of the Black Sea, half way between Constantinople and Trebizond, and about 120 leagues from each of these places. It is dependent on the Grand Pachalic of Angora, and has a population of from 8000 to 10,000 inhabitants. The port extends to the east of the town, but, as it is not enclosed by any mole, it can only be considered as an open roadstead. The roadstead is defenced by batteries and by the castle of the town, a large massive construction, raised in the time of the Greek Emperors. The importance of Sinope consists in its naval arsenal and building-yard—the only one in Turkey besides that at Constantinople. Ships of the line and frigates are built there. The site, cut on the surrounding mountains, is very hard, and the vessels built at Sinope are considered as the best in the Turkish fleet. The engineers are, for the most part, foreigners, as the service in Turkey, also the workmen are Greeks of the country, who are paid from ten to twelve sous a day. The fortifications of the port are incomplete and in a bad state. In 1828, at the time of the attempt of Admiral Duckworth on Constantinople, when defended by General Sebastiani, the French Ambassador, that officer, comprehending the importance of Sinope, sent two Frein officers and two subofficers of engineers to repair the fortifications. Their first care was to erect a battery at the point of the promontory in such a position as to be able to command both sides of the peninsula and the entrance of the roadstead. They afterwards completed other works of defence, some of which were never executed, and the others were not kept in repair any more than the rest of the fortifications. Thus the place remained without security for forty years, and those which have been lately commenced had not received the necessary development. The Russians, in 1807, made an attack on Trebizond by sea, but were repulsed. In the days of Turkish glory, when anything against Sinope, the Turks persuaded themselves that they had nothing to fear, and they have just been roughly punished for their carelessness. It may be readily conceived that a shipwright-in-ordinary, their heavy ornaments, studding appearing in the roadstead, could soon knock to pieces such old and dilapidated ramparts. It cannot be called a sea-fight, since the Turkish vessels were all at anchor in the port. It appears, according to the despatches, that it is there that they were sunk by an irresistible superior fire, to which the Turkish batteries were not in a state to reply. The length of time The cannonade, we are told, only lasted one hour, and that space of time was sufficient to destroy thirteen vessels, ten of which were vessels of war, and three transports. If the war is to continue actively next year in Europe and in Asia, it will become a matter of great importance for the Turks to rebuild the fortifications of Sinope on the principles of modern art, and to put that place in security, not only against a *coup de main*, like the present, but also in a state to maintain a regular siege. If the Russians were to take possession of Sinope—which they could readily do in its present wretched and unprotected condition—they might make it a place impregnable against the Turks, and convert it into a kind of Gibraltar on the Turkish coast of the Black Sea. An establishment in a position of this kind, which would enable them to land a considerable body of troops, they would keep in check all the centre of Asia Minor, and cut off the communications between Constantinople and Erzeroum. The Turkish army of Armenia would then have not only to oppose the enemy on the side of Georgia, but it would be another army in its rear, and the Ottoman government would be obliged to organise a second army in Asia Minor These considerations cannot escape the notice of the European military officers who give strategic advice to the Ottoman Porte, and town of Sinope is built with the materials of the old Greek city, a colony of the Milesians. Sinope was the birth-place of Diogenes, and the capital of Mithridates. It includes took possession of it in the year 71 before Christ. The houses and the fortifications present a multitude of ancient ruins confusedly heaped together. There may be there seen Greek and Pehlvi agonian inscriptions, busts, and military statues. Travellers mention having seen an entire statue, placed head downwards in the walls of the castle All the towns of Asia Minor, formerly so flourishing in arts and commerce, present the same spectacle so afflicting to the eyes of Europeans. The Turks have vegetated for three centuries on these ruins without deriving a lesson from it. They appear at length to be awakened

to an idea of civilisation, and the shock which they have just received will, perhaps, benefit them for the future.

It is reported that the British Chargé d'Affaires at Teheran had suspended his diplomatic relations with the Persian Government, in consequence of that Power having resolved, as it is said, on the instigation of Russia, to take part against the Ottoman Porte, and to march an army to the frontier. This movement on the part of the Schah of Persia had for some time been apprehended, as his relations with Turkey were such as to induce him to take advantage of the incressing difficulties which encompass the Ottoman Empire. The intelligence, however, still requires confirmation. The Persians are reported to be marching upon Arabistan; and it is believed that a combined Russian and Persian force would march on Erzeroum.

SPAIN.

The Senate have adopted, by 106 votes to 69, the resolutions recommended by the majority of the Committee, to the effect that the Senate ought to proceed with a bill before it on the railways, instead of, in compliance with the wish of the Cabinet, dropping it, and waiting until a new bill on the subject, presented to the Chamber of Deputies by the Government, shall be sent up to the Senate. On the following day (the 10th inst.) a Royal decree was issued, by which the sittings of the Cortes have been suspended; and no day is fixed for their meeting again. Everything seems to portend a *coup d'état*.

CAPE OF GOOD HOPE.

By the *Victoria* steamship, we have information from the Cape of Good Hope to the 7th ult. The principal subject of interest was the pending fate of the Orange River Sovereignty, where Sir George Clerk, with plenary powers, was obtaining information regarding its future disposal. Great fears are entertained by the colonists that the Government will withdraw British protection from it, by which case they expect their farms will fall into the hands of the Boers.

On the 18th of October Colonel Nisbett, 60th Rifles, Commandant of British Kaffraria, was unfortunately drowned in the Kei River. He was visiting outposts, and, while crossing the river at a drift directly below Fort Cox, his horse stumbled, and he fell in. The recent heavy rains had swollen the stream, and greatly increased its rapidity. The body was found a mile below, eight days after the accident. The command of the 60th devolved on Captain Bligh, and Colonel Pool (of the Lancers) took command of British Kaffraria.

INDIA, CHINA, AND AUSTRALIA.

The Overland Mail has brought dates from Calcutta to the 6th of November; Madras, 10; Shanghai, Oct. 5; Amoy, 12; Hong-Kong, 27; Bombay, 14; Batmah, Oct 23; Sydney, Sept. 20; Melbourne, 26; Adelaide, Oct. 1.

Pegu is still in an unsettled condition, and many attacks from the Dacoits have occurred. General Godwin died at Simla on the 26th October

Major H. Edwardes is appointed Commissioner at Peshawur.

Cholera has appeared in Bombay.

One hundred convicts mutinied at Rangoon, and the greater part of them were cut down.

At Shanghai and Amoy they are still fighting. At Foochowfoo there is great disaffection. Canton is quiet, but great apprehension prevails. Trade in China is good.

Great excitement prevailed at Whampoa, in consequence of the death of a Chinese female confined in prison by order of the British Consul. The Americans protected the English Consul.

The Constitution Bill of New South Wales had been read a second time, by a majority of 34 to 8.

THE AUSTRALIAN COLONIES.

The screw ship *Victoria* has brought the following dates:—Sydney, September 17; Melbourne, 23; Adelaide, 29; the Cape of Good Hope, Nov. 8; she is 84 days from Sydney, 78 from Melbourne, 72 from Adelaide, and 32 days 20 hours from the Cape of Good Hope. She brings on freight 134,000 ounces of gold, and has forty-four first and fifty-three second-class passengers, who probably possess over 20,000 fifty-three second-class passengers, who probably possess over 20,000 ounces of them having nuggets varying from thirty-four to sixty-five ounces each. The intelligence from the colonies generally is of a most satisfactory character.

At Sydney the rural and pastoral districts to the north were very prosperous, and high prices were given for stations. The city is free from robberies, and handsome build ngs are rising in all directions.

The news from the gold mining districts of Victoria is favourable, and the diggers are adopting a more scientific mode than formerly:—

The Golden Gully diggings are now spreading over a large extent of territory. Great things are expected of the Ovens during the ensuing summer. Bendigo also continues to maintain its reputation. But the chief talk, of late, has been about Ballarat, the first of our gold-fields, and still worthy of being ranked among the best. At the close of last month, several diggers there came upon what they called a regular "table of gold;" and those were so fortunate as to strike the line, took almost fabulous quantities out of their claims, which, from their richness, received the appellation of the "jewellers' shop." The escort returns having confirmed the current reports, a "rush" was the immediate consequence; though, from the nature of the new diggings in that quarter, multitudes will be doomed to disappointment. All the heavy finds have been obtained by deep sinking. The depth of the holes is frequently from 60 to 120 feet, and many very productive ones have lately been above 100

Some of the holes in Canadian gully have been estimated to yield gold to the value of £2000 per running foot, but this is probably an exaggeration. We have it on good authority, that one hole (one of the richest) was valued at £800 per running foot, and as the future was ten feet wide, it would give £80 for the whole foot, instead of the £1200 or £2000 mentioned by a contemporary.

Experiments in deep-sinking have also been going on for some time at Bendigo, with the view of reaching a second bottom, and, should experience confirm the conjectures of speculation as to their being several auriferous bottoms, we shall enter upon a new era in gold digging. Mining would come to be followed as a profession, in which capital and co-operation would be indispensable requisites to continuous industry and success.

The agitation against the gold-digging license has been at length crowned with success. The history of this license is as follows:—On the 7th of May, 1852, Mr. Latrobe, the Governor of Port Phillip, having announced his intention of raising the license fee from 30s. to £3 a month, the miners assembled together, to the number of 5000, and passed a resolution pledging themselves to protect any miner against whom the fee might be sought to be enforced. The Government gave way without a struggle, and the miners were for a moment satisfied The diggers became unlicensed, and the police found it frequently from 40 to 120 feet, and many very productive ones have lately been above 100 profitless to enforce the payment of the fee. Public banks are added to the list of our luxuries. Melbourne, too, has now a post-office which is a model of completeness and convenience. The *Melbourne Argus* says:—

Provisions in general are not dear, in proportion to house rent; at least tea, sugar, butcher's meat, and potatoes are at a reasonable price; but bread, milk, butter, and such vegetables as turnips, cabbages, &c., are still at a high figure; the quartern loaf is 1s. 6d. It must be distinctly understood, in spite of all the "croaking" letters which have swarmed in the English papers, that the industrious workman may secure employment at high wages the very day he lands; while, at the same time, the clerk shopman, or broken-down city idler lingers about our streets dispirited, unemployed, and miserable.

Some land sales at Melbourne had realised £165 per foot, or £13 per inch, frontage. Fine flour, £23; cauliflowers, 12s. to 24s. per dozen; beef, 2d. to 3d. each; fowls per pair, 14s.; potatoes, 30s. per cwt.; butter, 4s. 6d. per lb; hay, £25 per ton.

Freight to London: Gold, 4½d. per oz.

Labour-market: Married couple (no children), £70 to £100 per annum; with family, £80 to £90; shepherds, £35 to £40; general useful servants, £70 to £75; gardeners, £70 to £80; cooks, £2 to £4 per week; carpenters, 20s. to 25s. per day; masons, 25s. to 30s.; blacksmiths, 20s. to 25s.; farm labourers, 25s. to 30s. (with rations) per week; seamen, for London, £45 to £50; coasting, £3 to £10 per month. About twenty or thirty merchant ships, with their topmasts struck, are lying useless in the port. Seamen are scarce.

At Adelaide trade was improving rapidly.

Accounts from New Zealand are favourable. The drain of labourers from Van Diemen's Land is severely felt by the colonists.

Several persons have been arrested in Victoria, on suspicion of being concerned in the robbery of the gold escort; but they have all been discharged for want of evidence. The wounded troopers are recovering.

The wine-growers of the colony have at last resolved to bring their produce boldly and directly into the market, and compete with the foreign wines now so largely imported.

ISTHMUS OF DARIEN.—The Atlantic and Pacific Junction Company, having obtained the co-operation of England, France, and America, to assist in carrying out the proposal of connecting the two oceans by an artificial ship canal across the Isthmus of Darien, has completed all necessary arrangements to send out a large surveying expedition, for the purpose of making a detailed survey of the line of the Isthmus lying between Port Escoose and San Miguel, the interior of which is entirely unknown to the world at large, and appears, from the discoveries made by Messrs Gisborne and Forde, on the occasion of their examining that country in 1852, to present great facilities for the accomplishment of such an inter-oceanic communication, and well deserving the support given to it. The surveying party, under Mr. Lionel Galliford's charge, is to set from Southampton on the 17th inst. (this day), and is to be accompanied by Lieut. St. John, R.E., and a party of sappers and miners, on the part of our Government. Dr Cullen is also to accompany Mr. Gisborne, and aid him as far as possible with his local knowledge of the country. The *Scorpion* Government surveying vessel has been appointed for this service, and has already left England for the Pacific, where she will join the English, French, and American war-steamers, which are to form the protecting squadron for Mr Gisborne and his party—each country having provided a party of marines to accompany the expedition into the interior, should the hostilities of the Indians render it necessary. One half of the expedition will be disembarked at Port Escoose, and with Mr. H. C. Forde direct to Panama, where an English Government steamer is to be in readiness to accompany them to the Gulf San Miguel, and to remain there during the entire time that the survey is in operation.

THE SON OF THE EMPEROR OF HAYTI.—This young Prince has recently arrived in England from France, having travelled under the name of M. Daluid. His Highness, who is described as a most intelligent and gentlemanlike person, has been sojourning for a short time at the fashionable watering-place of Torquay, where he is visiting the country is said to be to complete his education, for which purpose he will shortly proceed to Dawlish, and place himself under a clergyman of that place. It is expected that the young Prince will be presented by some of the members of the Court, will visit his son during the ensuing spring.

BRITISH OFFICERS IN TURKEY.—The following officers have quitted England for Constantinople, intending to proceed thence to the Danube: Colonel K. Cameron, K.H., of Charles III., and of St. Ferdinand; Major Forbes, Madras Light Cavalry; Captain Lake, Madras Engineers; Captain Rigby, Bombay Infantry; Captain Malfour Ogilvy, Madras Army; Lieut. Green, Bombay Army; Lieut. Anderson, Bombay Artillery; Captain Twopenny, British service; and Lieut. Erlam, late Austrian cavalry. Three officers will be followed by Lieut. Colonel Kent Murray. Lieut.-Colonel Beatson, Bengal Army, has already joined Omer Pacha's army. These gentlemen proceed to Turkey with introductions from Lord Clarendon and the Turkish Embassy, but with no decided expectations of employment

STATUE OF MARSHAL NEY.

THE French Government have just realised with great pomp and éclat an idea which was conceived four years ago by the Republican Government.

In execution of an Imperial decree, a statue in bronze has been erected to the memory of Marshal Ney, upon the exact spot where he was shot on the 7th December, 1815, in the alley of the observatory, near a wall about one hundred yards from the *grille* of the garden of the Luxembourg.

The Marshal is represented at the moment when at the head of his division, he carried to the cry of "Vive l'Empereur!" the redoubt of Moscow. He has dropped at his feet the Marshal's bâton, in order to seize the sword with which he is about to win the title of Prince

It will be recollected that Marshal Ney was one of the first General's who, in 1814, after the fall of the Empire, flew to submission to the Bourbons. In reward he was created Peer of France, and Chevalier of St Louis. In February, 1815, when the news arrived that Napoleon had returned from Elba, he went to Louis XVIII, and promised him to bring him the ex-Emperor in an iron cage. He put himself at the head of the troops, in order to oppose the Emperor's progress; but on his arrival at Lons-le-Saulnier, on the 16th March, his opinions underwent a sudden change, for he read to his army a proclamation commencing:—"The cause of the Bourbons is lost: it is to Napoleon, our Sovereign, to whom alone it belongs to reign over this great country." When Napoleon fell a second time from the throne, Marshal Ney took refuge in the château of Bessonis, in the environs of Aurillac, where he was discovered, and, on the 6th December, 1815, was condemned to death by the Court of Peers. One hundred and thirty-nine Peers voted for the capital punishment, seventeen for banishment, and five members abstained from voting. The Marshal showed considerable embarrassment and feebleness during the interval of suspense; but, as soon as the condemnation was pronounced, he recovered the grandeur of soul of a hero. When the authorities came to read his sentence, he interrupted the functionary *sévèrement*, who began to enumerate his titles, and cried:—"Say simply Michel Ney, who will soon be a handful of dust." The next day, at eight in the morning, he was conducted into the alley of the Observatory, whilst the populace expected him on the plain of Grenelle where it was believed the execution would take place. Ney was placed with his back to the wall. He refused to have his eyes bound; but placing his right hand upon his heart, he said, in a firm voice, "Soldiers, aim at the heart!" He fell instantly, struck by six balls in the breast and three in the head

The artist charged with the execution of the statue had proposed to represent Marshal Ney, clad in a plain great coat, his hand upon his breast, and with the word of command to fire. But the Administration of Fine Arts were of opinion that this scene would be too dramatic; and they gave the preference to the heroic attitude which perpetuates the souvenir of one of the greatest feats of arms that illustrate the brilliant career of the celebrated warrior who, by birth the son of a wine-cooper of Sarreloui, rose to be a Marshal and a Prince, whom Napoleon surnamed the Bravest of the Brave, and "*Tame trampled Glacier*"

The ceremony of the inauguration of the Statue took place on the 7th instant, in the avenue of the Observatory. In the presence of the relations of the deceased, and of a vast number of military officers, high civil functionaries, and other persons invited, the venerable widow of the Marshal, who yet lives, was not present being prevented by want of strength from assisting at so great and striking a ceremony. Among the persons present were Marshals de Saint Arnaud, Vaillant, Magnan, de Castellane, Harispe, and Reille; several Admirals, the Ministers of State, of Public Instruction, and of Justice; the President and Vice-President of the Council of State, and a considerable number of senators, deputies, and high functionaries, all in grand uniform. Round the monument a large space was appropriated to officers of every arm; and three tribunals handsomely hung with crimson velvet, were set apart for the dignitaries of State, the members of the Senate and Legislative Body, and a considerable number of ladies dressed in mourning. A little before one o'clock the Prince de la Moskowa, General of Brigade and member of the Senate; the Duke d'Elchingen, in the uniform of a non commissioned officer of dragoons; Colonel Edgard Ney, Aide-de-Camp to the Emperor and Count de Faverney, Minister of the Interior (married to the grand daughter of the deceased Marshal), arrived, and took the places specially assigned to them in one of the tribunes, as members of the family of the deceased. Prince Napoleon arrived shortly after; and almost at the same moment the Archbishop of Paris advanced at the head of the metropolitan clergy. The prelate, wearing his mitre, and preceded by the crosier and other emblems of religion, came forward to the foot of the Statue, the clergy chanting the "De Profundis," and all the persons present remaining uncovered. After a short religious service the clergy took their places, and a flourish of military music gave notice that the ceremony was about to commence. The damask covering which enveloped the Statue then slowly fell, and the figure of Marshal Ney appeared, as the sculptor has represented him, with the right arm stretched out in an attitude of command, familiar to the deceased. An immense cry of "Vive l'Empereur!" then arose from every side, the officers waving their helmets and shakos, and the ladies agitating their handkerchiefs. When tranquillity had been restored, Marshal de St. Arnaud, Minister of War, advanced and delivered the following address:

Gent emen,—We are to-day assembled to perform a great act of national reparation; we are come to inaugurate a Statue to Marshal Ney, on the same spot where, thirty-eight years ago, the hero fell a victim to civil discords and to the misfortunes of the country. This solemn reparation was due to the memory of the Prince of Moskowa, to his services, and to his companions-in-arms. If there is a privilege which belongs to great men united to the destinies of empires, it is to be judged by their services, and not by their errors. His legal rehabilitation may be seen in the act which we now assemble to witness. France will hail it with respect, mingled with gratitude. Soldiers! it is to you more particularly that I now address myself. The glory of Marshal Ney belongs to France; but it is, in the first place, the patrimony of the army. His life was connected with the finest souvenirs of our military history. Germany, Italy, Spain, and Russia have contemplated on their most famous fields of battle that noble form, as impassive in danger as the bronze which now represents him. To follow Marshal Ney in the details of his military career would be to write a history of our most glorious triumphs; I shall therefore now confine myself to a rapid sketch of the principal events of his life.

The Minister then gave a biographical sketch of the services of Marshal Ney, from his first entrance into the army in 1788, as a private in the Hussars, up to the end of his military career, specifying in detail the various titles and campaigns in which he had taken part, and concluded by saying:—"Let us offer our thanks to him (the Emperor) whose noble mind has acquitted this debt of France, and has permitted the army to come and seek in our hearts inspirations at the foot of the statue of a great captain."

M Dupin next addressed the meeting, and, on rising, was hailed by loud acclamations by the assembled multitude, who called to mind that he was before the Court-martial and the Chamber of Peers the defender of Marshal Ney, and had all his life advocated his rehabilitation. M. Dupin said:—

Gentlemen, in 1815, when Paris was occupied by the foreign armies—when their bivouacs, still smoking, stained the Tuileries and the Luxembourg, M. Ney and myself were entrusted with the defence of Marshal Ney. We then were accomplishing a great duty—the duty the most sacred of the profession of an advocate. Our efforts were fruitless, as the Tribunal-our accused succumbed! This day, after a long interval, furrowed by several revolutions, I come, with the sons of the Marshal, to be present at a great act of reparation accorded to the memory of their father. It is an honour in which I thank them for having associated me. That condemnation was not a just one; for it was hurried on in presence, and under the pressure, of the foreigner. It is in the name of "glory," said the Prime Minister of the Restoration, in the Chamber of Peers, when bringing before it the charge against the Marshal, "it is in the name of glory" that I come here to confound you, and require you, at the same time, to condemn Marshal Ney!" No, that condemnation was not legal, for it was pronounced in contempt and violation of a formal article of the convention signed, arm-in hand, under the walls of Paris, by the plenipotentiaries of that convention, General Guilleminot, when called as witness before the Chamber of Peers, and interrogated by the Chancellor as to the part which he had taken in that negotiation, replied in these terms:—"I was charged, as head of the staff of the army, to stipulate for an amnesty for all persons, whatever might have been their opinions, actions, and conduct. That point was accordingly settled without any difficulty. I had orders to break off every conference if a refusal was given. The army was ready to attack, and it was that article which caused it to lay down its arms." In fine, that condemnation was not regular, for the defence of the accused, without which there cannot be a true verdict, was not free. And, accordingly, at the moment when his defenders were interrupted, the Marshal, full of life to make his interruption, protested energetically against the iniquity of such a proceeding:—"Hitherto," said he, "my defence has appeared free; but I perceive that it is no longer allowed with. I thank my defenders for what they have done, and for what they are still ready to do for me; but I prefer not being defended at all to having only the appearance of a defence. What! I am accused, contrary to the faith of treaties, and it is endeavoured to prevent my invoking them! I appeal to Europe and to posterity!" This protest, which the Marshal handed to me on the instant, was warmly received by public opinion, that protest the sons of the Marshal renew in the face of heaven! and now depose it at the foot of the statue! You have heard, gentlemen, the Minister of War, when speaking in the name of the Government and in presence of the representative of the whole military profession of France, depict in eloquent language the great feats of arms of him whom Napoleon had designated (with justice he was one) "the bravest of the brave;" and each of you, in listening to him, has mournfully exclaimed from the bottom of his heart, "Ah, how much we should have wished the question examined anew, the powerful arm of which it deprived France!" The Marshal fell a victim of a political reaction, the victim of the implacable hatred which an anti-national coalition bore to the illustrious heads of that glorious army, of which the glorious remnant had just before been dismissed in presence of the enemy, on the banks of the Loire. Marshal Ney, Duke d'Elchingen, Prince de la Moskowa, of whose victorious on our battle fields was the holocaust offered up in expiation of the military glories of the Empire

It was the tricoloured flag immolated to the white flag! It was reserved to the sculptor of the Emperor to restore its colours, by raising a monument of honour in the place of a funeral monument; and by raising the statue of a hero on the very spot which had beheld the victim fall! Parties (continued M. Dupin, pointing to the spirited and beautiful sabre of the Statue) parties should bear in mind, that certain men whom they kill rise again in the attitude of command! Honour to the man who rose thus called from the tomb, and who says, and says before posterity, in the midst of the consolatory ceremonies of religion, and of the sad emotions of their fellow-citizens; and, like Marshal Ney, in the attitude of command!

Renewed cries of "Vive l'Empereur!" followed; and, the troops and deputations having filed off before the Statue, the ceremony term inated.

M. Francois Nude, sculptor of the Statue, is one of the first contemporary sculptors in France. He is now an old man, with a white beard, but with energetic features, and a lively and penetrating expression. Born at Dijon—the French city which, after Paris, has the greatest taste for the arts—he was a pupil of Cartelier. In 1812 he carried away the great prize which the Institute gave every year; and, two years after, for the place was preparing to go to Rome, to continue his studies at the French Academy there: when events occurred in the political world which compelled him to change his design. His family were Republicans; and he took refuge with them in Belgium, where he remained during almost the whole of the interval of the Restoration. During this period he profited much by the counsel and encouragement of his illustrious compatriot in exile, Louis David. He has executed, among other works, a series of compositions, of which Achilles was the hero, for the palace of the Prince of Orange. Among his works best known in France we may mention "La Marseillaise"—one of the four great bas-reliefs [illegible] de Triomphe de l'Etoile; the group of the Baptism, [illegible] the statue of Cato, in the garden of the Tuileries; Joan of [illegible] Mercure, in the garden of the Luxembourg; [illegible] Perseus [illegible] the Museum of the same palace; and La Peruse, at the Museum of the Marine.

The *chef d'œuvre* of M. Nude appears to be his little statue in silver of

THE GILDED PAGODA, AT PROME.

Louis XIII., at the château of Dampierre, belonging to an illustrious protector of the arts, M. de Luques. The young King is represented, at the age of fifteen, in the elegant costume of the period. The pedestal of this statue is of rare workmanship. There is also remarked at some distance from Dijon, in a country-house situated upon an eminence in the middle of a grove of trees, and in face of the Alps, a fine funeral monument, which represents the apotheosis of Napoleon. When the French troops pass near this edifice, they turn on one side to salute the Emperor with discharges of artillery and volleys of musketry. At Paris may be seen at the present moment, upon the colonnade of the Louvre, the bronze statue of Marshal Bertrand, destined for a public place at Châteauroux. This is one of M. Nude's works, who had also in his *atelier* many other remarkable works of sculpture; among which are the funeral statue of Godefroy Cavaignac, brother of the late chief of the Republican Government; "Hebe, playing with the Eagle of Jupiter;" a "Cupid, bearing a Sceptre as King of Nature, seated upon a Rock."

The Statue of Marshal Ney was cast in the *ateliers* of MM. Ekke and Durand.

THE GILDED PAGODA AT PROME.

This Pagoda is situated upon a conically-shaped hill of about 300 feet in height, and is approached on all four quarters by a flight of steps, which are covered over with a succession of wooden buildings, the roofs of which overlap each other, and are very elaborately carved. Our Sketch shows the entrance to the north flight of steps, consisting of a very pretty wooden pagoda-like building, with seven roofs, terminating in a gilded spire. The spire is surmounted by a "Tee," or umbrella—an ornament upon which bells are suspended. The building is flanked by two immense figures, representing griffins in the act of devouring a crocodile and a tiger. The buildings to the left are converted into barracks for the Bengal artillery, the officers of that company occupying the houses on the pagoda terrace. When the attack was made upon Prome, it was up these steps that the storming party rushed in taking the Pagoda. Strange to say, the first to enter was a little dog, which had followed one of the storming companies throughout the campaign. In the foreground are seen two guns of the Light Horse Field Battery, Foot Artillery. We are indebted for this Sketch to an officer in the British service.

We hear that the Rev. Mr. Burney, during the occupation of Prome, was most active in providing for the soldiers' spiritual welfare; and that the Governor-General seconded his efforts by placing 1000 rupees at his disposal for books for the garrison.

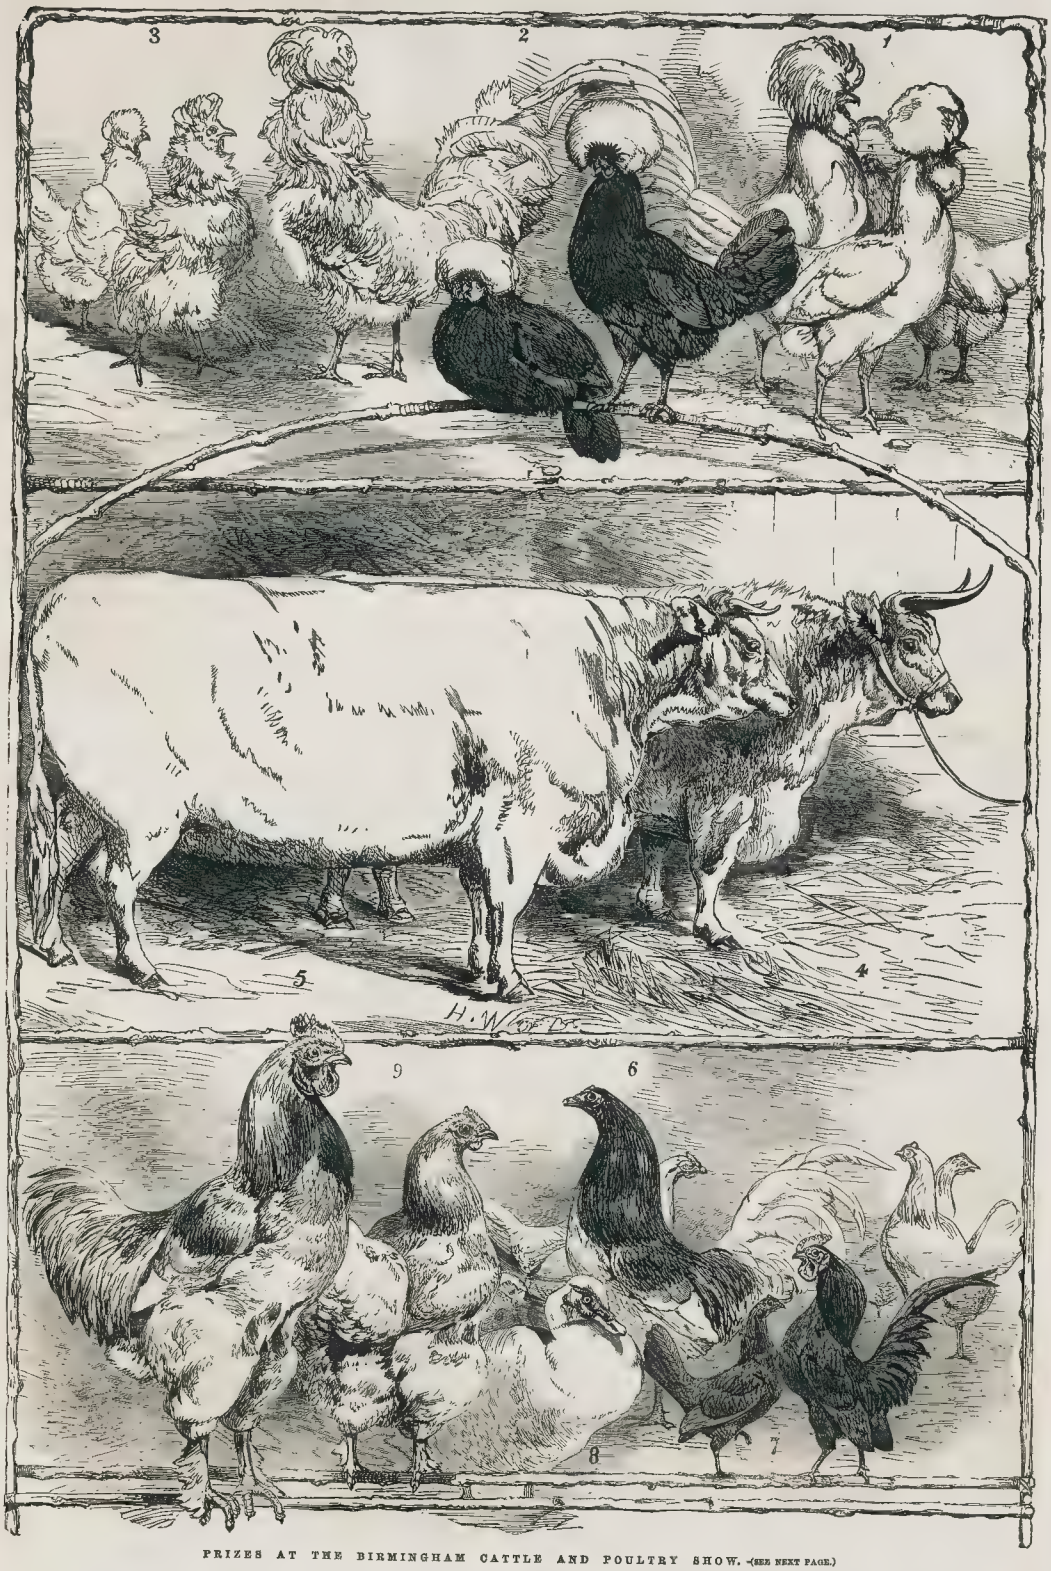
DEATH OF MAJOR-GENERAL GODWIN.

General Godwin, the veteran East Indian Commander, died at Simla on the 24th October last. General Godwin, who had risen to his high rank through long and laborious service, was chosen to conduct the late warlike expedition against Burmah: his appointment and his subsequent dilatory mode of proceeding afforded subject for much public discussion. The General was, however, far from being unsuccessful his progress proved slow but sure; to his great defeat of the Burmese on the 21st November, 1852, and his subsequent conquest of Pegu is, no doubt, owing to the victorious peace which our arms obtained last June from the Sovereign of Burmah. General Godwin has not long survived this prosperous ending of his campaign.

THE LATE GENERAL GODWIN.

The above Portrait has been engraved from a very clever and characteristic pen-and-ink drawing, forwarded to us from Burmah, by a non-commissioned officer, who served under the General during the greater part of the Burmese War.

INAUGURATION OF THE STATUE OF MARSHAL NEY, IN THE GARDENS OF THE LUXEMBOURG, PARIS.



PRIZES AT THE BIRMINGHAM CATTLE AND POULTRY SHOW. (SEE NEXT PAGE.)

THE BIRMINGHAM CATTLE AND POULTRY SHOW.

THIS important Show of Cattle and Poultry was opened, in Bingley-hall-street, for the private view on Tuesday, and to the public the day following; and a very successful exhibition it is pronounced to be, excelling in many essentials all its predecessors. The Show is only in its fifth year, yet in some respects it is equal to that of the Smithfield Club. The great object which the promoters have had in view has been to foster and encourage the principle of "early maturity." All the classes for neat cattle were well filled with animals of the highest merit, and so equally matched that in some classes the Judges had very great difficulty in awarding the prize.

There was not quite so large a show of Hereford oxen as last year; but, in point of quality, the display was, upon the whole, superior. The show of Hereford steers was eminently successful, for a finer range of young oxen were never stalled. The gold medal for the best ox or steer was awarded to Mr. W. Heath, of Ludham-hall, Norfolk for his Hereford steer. The Hereford heifers were equally good. In the Short-horn classes some very fine specimens were exhibited—heifers chiefly attracting the attention of agriculturists. The breed of pure Devons was well represented. The Cross-breds exhibited were superior to those hitherto sent here, and there was a larger number of animals stored. The first prize in this class was awarded to the Duke of Beaufort for a cross between a West Highland Scotch bull and a pure Devon cow. A few long-horns were shown, quite average samples of their class: but this breed finds less favour with breeders and feeders than some others. There was a capital display of the Scotch and Welch breeds, in which several, Mr. Robbs, of Thirsk, contributed some of the most meritorious specimens. Altogether the cattle show was deserving of the highest consideration.

The number of Sheep exhibited was small, and the quality of the favourite breeds barely up to the mark of the Smithfield Club. Even in their own peculiar district, Leicesters seemed to decline in estimation Sir Robert Throckmorton's prize pen of Downs was much admired; but the principal feature of the sheep show was the fine display of Shropshires and crosses. The Earl of Aylesford: Mr. I. C. Whitmore, of Apley, Shropshire; the Hon. Robert Curzon; Mr. Druce, of Eynsham; the Marquis of Exeter; Mr. Mellor, of South Leigh, Oxfordshire; Mr. Twitchett, of Wilby, Northamptonshire; and Mr. Fleming, of Coldicott; were the chief competitors in these classes—the prizes of which were exceedingly well contested.

The show of Pigs was both large and splendid, thus supplying to the general character of the display an important feature of it: at inattentiveness An exhibition of fat stock, without the porcine element to squeak, grunt, snore, and be poked at by visitors, would indeed be the play with the part of *Hamlet* left out At Bingley-hall there has been no such omission, and it says a good deal for the merits of the Prince's pigs that they were here again selected for the chief prize in their class. The finest specimen, however, exhibited was, undoubtedly, a model porker—the property of Mr I. Brotherst Hall, Back-hall, Chester

The most characteristic excellence, however, of the Birmingham Show was the Poultry, in which it has taken, and, probably, will long maintain, the lead Last year's exhibition contained 1300 pens; this year the entries were 2275. If it be borne in mind that the contributors—who came from all parts of the country, and even from Ireland, with the exception of some fifty or sixty—were all amateurs, and that the sales of birds exhibited amounted, on Tuesday, before four o'clock, to £1000, some idea may be formed of the wide area over which the poultry mania is diffused, and of the intensity of its symptoms. It gave an extraordinary interest to this year's Show at Birmingham, for such a collection has never previously been brought together. The display was not off by a new and greatly improved arrangement of pens, which enabled the birds to be much better seen than formerly. Exhibited in such numbers and excellence, facilities of inspection, so as to discriminate their nicely-shaded merits, are essential. In Dorkings, especially the dark grey, there was a wonderful display. The Spanish and game varieties were also exceedingly well represented. Malays, which generally form weak parts of poultry exhibitions, were here exceedingly strong. As for Cochin-Chinas, they were larger, more awe-inspiring upon their legs, and heavier than ever; and, therefore, were considered more beautiful by discriminating judges. At this season of the year, when turkeys rise so much in estimation and in price, it may not be useless to point out that the wild American species, distinguishable by its bronzed wing, has carried the palm away, as all our recent shows, for weight and excellence. Being close-feathered birds, they do not look so large as they are in reality. A cock and two hens exhibited weighed 55 lbs. Aylesbury ducks retained their old superiority: but there were some novelties in geese, the "Embden" beating the "Toulouse." Although the agriculturist may hold in some disparagement the poultry department of the Birmingham Exhibition, the attractiveness of the whole display with the general public appeared largely upon that feature.

Upon the preceding page we have engraved the following prizes:—

1. BOLAND FOWL.—Class 42, No. 1611.—First Prize, £2 2s. J. B. Walker, Esq., M.P., Singleton, Swansea.

2. POLAND FOWLS, black, with white crests).—Class 36, No. 1601.—First Prize, £2 2s. Mrs Adams, Carpenter-road, Edgbaston, near Birmingham.

3 FRIZZLED, or ITALIAN.—Class 42, No. 1663.—First Prize, £2 2s. Miss Vivian, Singleton, Swansea

4. HEREFORD HEIFER.—Class 4, No. 31.—First Prize, £10, and Silver Medal to Breeder. Exhibitor, Mr. William Heath, Ludham Hall, Norwich; Breeder, Charles Henry Hoskins, Esq., R.N., Hopesay, Shropshire. Age, 2 years and 7 months. Fed on grass, hay, turnips, oat and pea-meal.

5. SHORT-HORN HEIFER.—Class 8, No. 66.—First Prize, £10, and Silver Medal as Breeder; also the Gold Medal and extra Prize of £20 for the best Cow or Heifer. Exhibitor and Breeder, Mr. H. Ambler, Watkinson Hall, Halifax. Age, 3 yrs. 11 m. Fed on grass hay, swedes, mangold-wurtz, linseed, and cake

6 GAME FOWL Class 39, No. 1011.—First Prize, £1 1s. Mr. Henry Fellowes, Tamworth

7. BANTAMS. Class 45, No. 1767.—First Prize, 15s Mr. Gilbert W. Moss, Liverpool. Age, 2 years.

8. DORKS.—Class 32, No. 1044.—First Prize, 10s. Mr. Charles Sturge, Edgbaston, Birmingham.

9 COCHIN-CHINA —Class 13, No. 812.—First Prize, £1 1s. Mr. Charles Packhard, Saint's Hall, near Haverhill, Suffolk.

MR. REYNOLDS'S PRIZE COCHIN CHINA FOWLS, FROM THE GREAT NORTHERN ASSOCIATION EXHIBITION, AT DONCASTER.

PRIZE COCHIN CHINA FOWLS.

FOREMOST among the Prizes awarded at the Great Northern Pig and Poultry Exhibition, at Doncaster, on the 1st and 2nd inst., were the Cochin-China Fowls, shown by Mr. Reynolds, of Boston, and which eclipsed by comparison from all parts of the Kingdom. They are remarkably short legged, and beautifully feathered to the extremity of the toe. The First-prize hirds are of a very rich buff colour, free from dark hackle feathers in the neck, and of great size and beauty. We have engraved a pair. The second-prize birds are of a delicate buff—a very rare tint. These are among the finest specimens we remember to have seen of the Cochin China breed, which has, doubtless, been very much improved, and made to assume all the habits of the barn-door fowl.

ROYAL GEOGRAPHICAL SOCIETY.

—The third meeting of this learned body was held on Monday evening, in the rooms, Regent-street—Sir R. Murchison in the chair—when the second portion of a paper on the passes of the Balkan range, or Mount Hemus, was read to the members. This paper minutely described the several defiles, and entered into a comparison of the advantages and disadvantages in a military point of view, of the routes pursued by the armies of Darius, Alexander the Great, Marcus Duchitch, and Lieut.-Gen. Jomini and was drawn up from communications supplied by the President. The first portion had reference more especially to the line of communication between Salymni and Hasan Tsa and proceeded to describe in military detail the pass through the range from Salyumi to Starika, and on to Babrova, representing it as a very difficult, especially between Salymni and Starika. At Yacovitza it is said there was a defile of an hour's march, which was very narrow Near Shumla a bridge crossed the ravine. Here it was that the Russians forced their passage, during the campaign of 1829, against the Turks Passing the route of Alexander, 326 B.C., it minutely described the country between the Upper and Lower Dwina, supposed to be the battle-field of the wars between the Macedonians and the Tribulians At the conclusion of the paper it was asked if any gentlemen present could account for the manner in which Darius and other military leaders of antiquity had been able, without large commissariats, to conduct their forces through these defiles. Colonel Rawlinson, gentleman, presented a volume of beautiful illustrations of "Scenes in Ethiopia." by John North Bernard, artist in the late British Mission to the Court of Abyssinia, presented by the author. Mr. Thomas Baines, draughtsman to the forces under General somerset, exhibited at the meeting a collection of elaborate panic illustrative of the scenery and events in South Africa.

REMOVAL OF QUARANTINE IN THE ADRIATIC.—A notice appearing on Tuesday night's *Gazette* that the rigorous quarantine lately imposed on vessels arriving from Great Britain had been removed in the Adriatic ports of the Lombardo-Venetian kingdom, and arriving from and sailing in those ports will be admitted on the same footing as vessels coming from the ports of France, Sardinia, and Tuscany.

LETTERS AND NEWSPAPERS TO CALCUTTA.—GENERAL POST-OFFICE, Dec. 1853.—The Postmaster-General has been informed that the Overland Express from Bombay to Calcutta has been discontinued, and that the mails of letters and newspapers sent to Calcutta, when sent via France, will be forwarded in future by the ordinary daily mail. It is necessary to make this alteration know, to the public in the United Kingdom, as a considerable saving of time will thereby be effected, no arrangements under which letters might be conveyed to Calcutta by the Government express, it appears, be addressed.

INTERNATIONAL COPYRIGHT.—The Lords Commissioners of her Majesty's Treasury have caused to be transmitted to the Commissioners of Customs for the information and guidance of their officers at the several ports in the United Kingdom, a copy of a letter from the Chevalier Bunsen, and of a note from the Chevalier Bunsen, the Prussian Minister at this Court, enclosing patterns of the stamps to be hereafter affixed to the works imported into this country from the States of Germany parties to the International Copyright Convention with this country.

LARGE IRON ROOM.—Messrs. Chubb and Son, of 57, St. Paul's Churchyard have just completed one of their large moveable wrought-iron fireproof strong rooms, for the Adelaide Branch of the South Australian Banking Company. Its external dimensions are seven feet high seven feet wide, and seven feet deep; and, after deducting the necessary thickness of the fireproof materials, the internal dimensions amount to 275 cubic feet The interior of the room is fitted with tiers of shelves, sufficient to accommodate a great quantity of books, deed boxes, &c., and at the farther end with two distinct rooms iron closets for the deposit of cash, bills, and other valuables, which will be accessible only to the officials who possess the keys of these depositories. The room is lined throughout with hard steel plates, to render ineffectual any attempt to gain access to the interior by means of drilling, and the thickness of the iron plates forming the body of the room is three quarters of an inch at the thinnest part. The room is so constructed as to be taken to pieces for convenience of packing and transit, and can be erected in its new position in a few hours. The fireproofing composition is enclosed in separate chambers, which are secured in their proper positions when erecting the room The entrance is secured by a pair of strong fireproof wrought-iron folding doors, fitted with two massive detector locks, with twelve tumblers in each, no additional security as such doors is made to open independently of the other, that in case of the accidental loss of any of the set of keys belonging to either door, access to the interior may be obtained by the other, in order that the business of the bank may not be impeded. The weight of the room, complete, is nearly seven tons.

THE COAL TRADE.—At the present time, when the exceeding dearness of coals is much felt by all classes of consumers, the following extract, from the *Durham Chronicle*, will be found very interesting:—"To the Durham coal industry been developed, that not less than 47,000,000 of tons are annually raised, the value of which at the pit's mouth is little less than £10,000,000; at the places of consumption, probably not less than £20,000,000. The capital employed in the various coal fields is about 400 from records of Great Britain coal are annually 10,000,000 tons of coals, and 7,000,000 tons of ironstone, in order to produce 2,500,000 tons of pig iron, of the value of upwards of £5,000,000. For the supply of the metropolis alone, 3,000,000 tons of coals are required for manufacturing and domestic purposes; our coasting vessels conveyed, in 1850 upwards of 3,500,000 tons to various ports in the United Kingdom, and 3,350,000 tons were exported to foreign countries and the British possessions. The exhibit of the coal areas in the British Islands is 12,000 square miles, and the annual produce 37,000,000 tons of Belgium, 250 miles, annual produce, 2,000,000 tons; of France, 2000 miles, annual produce, 4,150,000 tons; of the United States, 113,000 miles, annual produce, 4,000,000 tons, of Spain, [illegible] miles, produce, 3,500,000 tons; of Spain, 4000 miles, annual produce, 50,000 tons; of British North America, 180,000 miles, annual produce not known. Taking the British coal-fields, and grouping them into districts, we find the supposed workable area as follows, in acres: Northumberland and Durham, 600,000. Cumberland, Westmoreland, and West Riding, 50,000 Lancashire, Flintshire, and north Staffordshire, 550,000; Shropshire and Worcestershire, 79,950; South Staffordshire, 65,50, Warwickshire and Leicestershire, 84,000; Somerset shire and Gloucestershire, 1 7,500. South Wales, 600,000. Scottish coal fields, 1,050 Irish coal fields—Ulster, 500,000; Connaught, 200 000; Leinster, 15,000; Munster, 1,050,000. Our exports, which in 1840 amounted to 1,576,000 tons, valued at £978,000, had increased in 1850 to 3,841,000 tons, of the value of £1 284,000. In 1841 our exports to France were 451,300 tons; to Holland, 173,378 tons; to Prussia, 116,295 tons; and to Russia, 77,102 tons. In 1850 there were to France 613,545 tons; to Holland, 159,353 tons; to Prussia, 186,328 tons; and to Russia, 288,188 tons.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The Central Railroad, New York, has over twenty-six miles of freight-care in use, yet even this does not accommodate the vast business that offers itself, and new cars are constantly in progress.

Her Majesty has been graciously pleased to contribute £100 to the building of the new church for the accommodation of the British residents in Paris

The extra clerks in the Customs are in future to be paid monthly, instead of, as hitherto, once in each quarter.

The Paris Advices state that Namik Pachia is likely to contract a Turkish loan per cent loan at sixty. These terms, however, are much lower than those which have been understood to have been contemplated by him.

The Rev. Richard Whittington, M.A., one of the masters of the Islington Proprietary School, has been elected to the vacant Assistantship in Merchant Taylors' School.

A groundless rumour has been put in circulation to the effect that baron Richards is about to retire from the Chief Commissionership of the Encumbered Estates' Court.

Her Majesty's Emigration Commissioners have given notice that they require two more ships to convey emigrants to Melbourne, to be ready to receive passengers on the 24th and 27th of January next

Mr. Frederick Glennie, resident at Mexico, has been appointed her Britannic Majesty's Consul in that city.

The Rev. Mr. Barnes has been great distinguished lately with the Chinamen at the Turon diggings, near Bathurst, and many of them have been marched to the watch-house. The "yellow skins" have been so much annoyance to the authorities that they have ordered them off the diggings.

Last week Mrs. Caroline Chisholm delivered an interesting address to the members of the Mechanics' Institution at the Music hall, Leeds, on the subject of emigration to Australia

The barque *Sultana*, from Smyrna to Boston, has been spoken with near the latter city. Martin Koszta was among her passengers

Of the gold from the United States, per *Arabia*, at Liverpool, on Sunday, 686 081 dollars, there were 277,022 dollars transhipped to France, in the *Marseret*, for Havre

A letter from Quebec, dated Nov. 23, says—"There are now in this port, ready to sail, at least 45 vessels, 40 of which are not yet loaded. Sailors' wages are £2 10s.—cash down, in silver, the moment the vessel's anchor is weighed.

The number of vessels in the month ended the 5th ult., employed in the intercourse between Great Britain and Ireland, that entered inwards was 940, and the tonnage 134,372; and that cleared outwards was 1,161, and the tonnage 2,160,561.

Mr. Hercules Robertson presented her Majesty's letter before the Court on Friday, at seven o'clock, and sat as Lord Probationer. On Saturday, after reporting, he took his place in the Outer House as Lord Benholme.

The Queen has conferred the honour of Knighthood on Lieut.-Colonel Archibald Bogle, of the East India Company's service

Several cases have arrived from India, containing arms intended to be deposited in the armoury of the Tower of London, and the necessary arrangements have been made with the Government authorities for their admission.

The amount of railway calls falling due on December is £4,416. The total amount called in all 1853 is £11,222,373 against £13,611 in 1852, showing an increase of £3,216,768

The Bishop of Gloucester and Bristol has just issued a pastoral to the inhabitants of the latter city, urging them to use every exertion for the establishment of model lodging houses.

According to the *Correspondance* of Berlin, it is stated that the Dowager Princess of Hohenzolern-Sigmaringen is about to enter a French convent at Kennebiem, near Colmar.

A station-master and guard on the Caledonian Railway have been fined—one in £2 10s., and the other in £2 7s.—for taking two passengers in custody who protested against an undue filling of a carriage with passengers beyond the number allowed by the regulations.

At the Earl of Derby's seat at Knowsley, Lords Malmesbury, Lucan, and Ossulston, and the Hons. Col. Stanley and Mr. Talbot, shot in one day, 62 pheasants, 29 hares, and 814 rabbits—in all 905 head.

The steamer *Duntroon Castle*, from Jersey to Newhaven, put into Portsmouth on Tuesday evening disabled. Her passengers were conveyed per special train to London.

Lord Justice Knight Bruce has severely bruised the bones of his knee by a fall, and there is no probability of his resuming his judicial duties for some days.

Placards appeared in Paris on Wednesday, announcing the sale of the château and estate of Ravigny, belonging to the Orleans family, in virtue of the confiscation decree of the 22nd of January, 1852. The upset price is 1,333,0387.

About 1400 rats were recently killed in some very old-standing wheat-ricks on an estate in the neighbourhood of Upton-on-Severn The quantity of grain consumed by the vermin must have been very great, as they had long held possession of their quarters.

An official notice has been received at the Liverpool Customhouse, stating that the claims of the lockers had been granted; that, in future, they would rank in the service as salaried officers, and be paid in a similar way to those in London.

The Roman Catholic inhabitants of London alone, of Irish birth, exceed in number the whole population of Dublin—being more than 200,000.

Letters from Naples announce that another ancient town has been discovered, several feet under ground, between Acerno and Sculfan. It is stated that it does not resemble Herculaneum or Pompeii in any respect.

Lord Palmerston has complied with a memorial of the inhabitants of Newcastle, praying for an "inquiry into the cause of the late mortality of that town." A commission will be appointed to make the inquiry prayed for.

A shock of earthquake was felt at Algiers on the morning of the 26th ult., and on the same day a more severe shock was experienced at Bogbar.

Miss Margaret Catchpole, the heroine of the Rev. R. Cobbold's novel bearing her name, is about to emigrate to Australia.

The Spanish Government has addressed a letter to Earl Granville, as President of the International Postage Association, in which a speedy reduction of postal rates is announced.

Mr. Schiel, of Manchester, who was badly treated by the Austrian military authorities on the frontiers of Lombardy, has been appointed Austrian consul at Manchester, as an *amende honorable*.

In ten months ended the 31st ult. there were 3,079,908 pairs of gloves imported into the United Kingdom.

After Thursday last the Rotterdam mails will be sent via Belgium, and the postage on letters will be reduced to 8d. the half ounce.

The numerous important despatches and papers connected with Ireland from February, 1849, to December, 1852. An illustrative map is included.

A new comet, discovered by Mr. Hind, on the 8th ult., is to be called "Euterpe."

The Prussian Prayer-book enjoins that the whole of the service, including the sermon, shall not exceed an hour.

Papers illustrative of the character and results of the revenue survey introduced into the north-west provinces of the Bengal Presidency since 1838, have just appeared in "Blue Book."

The new wing of the Metropolitan Benefit Societies Asylum is now erected, and will be finally completed, in regard to the internal arrangements, in about a fortnight, and opened for the reception of new candidates at the July election.

The *Robert Small*, convict ship, arrived in Swan River, 29th August, after having put into Rio on the 12th June. She had caught fire on her passage out, but the convicts had rendered every aid. For this they would be favourably reported to the Colonial Government.

Captain Cox, the first commander of that unfortunate steamer, the *Melbourne*, has obtained a verdict for £500 damages, for sudden and unjust dismissal from that vessel, against the Australian Royal Mail Steam-packet Company.

The Rev. Charles Luxmoore has been chosen a Fellow of Eton College; and an Assistant-mastership thereby becomes vacant in the Lower School at Eton.

The Queen has approved of Mr. George Moss as Consul at Messina for the Queen of Spain; and also of Mr. Thomas Snow, as Vice-Consul at Dublin for the Republic of New Granada.

A deputation of magistrates on the subject of a Reformatory School for Juvenile Prisoners of the county of Middlesex, had an interview with Viscount Palmerston, on Monday, at the Home-office

In and around the metropolis, bread which was selling at 8½d. and 9d. per 4-lb., can now be obtained at 8d. and 8½d., and country bread (unweighed) at 7½. and 7½d. per loaf. The price of the best bread is reduced about ½d., and that of the League Bakery is selling at 8½d. per 4-lb. loaf

Woodcocks, in considerable numbers, are now to be met with in the sporting shops skirting the parish of Deptford, Kent; and, from their early arrival, a hard winter is prognosticated.

ARMY CLOTHING.

(From a Military Correspondent.)

For many years the costume of the infantry soldier in regiments of the line has offered matter for animadversion. Officers of the highest rank, conscious of the defective mode of clothing the troops, as relates both to comfort and utility, offered valuable suggestions; but hitherto they have been unproductive of beneficial result. At Chobham some new patterns were displayed, and the army was led to believe in the advent of a long-looked-for improvement; but nothing towards salutary alteration has hitherto been accomplished. The heavy ill-fashioned knapsack, the hideous shako, and objectionable coatee and trouser still maintain their supremacy. Substitutes for each have in vain been laid before the Board. It is now said that no alteration will be effected until 1855. In what consists the necessity for procrastination remains unrevealed. Were the officers composing the Clothing Board to consult any of the veterans at present serving in the ranks, they would obtain information, from practical experience, more valuable than any suggestion emanating from speculative clothiers and accoutrement makers. Possibly such a measure *has* been resorted to; but, if so, why—in the parlance of the drill-sergeant—do the men remain "as they were"? No legitimately-armed force throughout Europe is so badly clothed and needlessly burthened as the British. Adherence to practice inconsistent with sound judgment might create the supposition that a variation from the outward appearance of a soldier, must deteriorate from the long-tried valour of the wearer—an hypothesis not likely to be credited by the service. The "sealed pattern," as it is termed, and the coat actually served out, are two very different habiliments. This violation of what is right originates in another reprehensible system.

If the money voted by Parliament for clothing an infantry regiment was devoted to that particular purpose, it would prove amply sufficient. But such is not the case, as presently shall be shown. The coatee now worn is composed of a brick-dust coloured material, affording neither warmth nor defence against wet. It is of a spongy, woolly substance; badly made; giving inadequate protection in cold weather, and absorbing instead of resisting rain. The great coats are issued by the Ordnance; and from whence such startling proofs of unprofitableness are gathered together, might puzzle the greatest of slop-tailors to explain.

A general officer, when given a regiment, derives his chief emolument from the clothing. In following the example of his predecessors, nothing disparaging can be affixed to his conduct. He accepts the appointment with the tacit understanding that his increase of income is derivable from a particular source, and from that quarter he expects the anticipated addition to arise. The fault, therefore, rests not with him on whom the superior distinction is conferred, but must be attributed to the defective system. Formerly, the Lieutenant Colonel of a regiment of Foot Guards received £800 per annum on being removed from his command by brevet. The allowance is now reduced to £600. In the line, the officer, under similar circumstances, was adjudged the bare pay of the rank he quitted; but the new regulation gives him £400 a year. Small recompense, in either case, when the retired allowance does not equal the interest of amount expended on promotion, irrespective of the officers having devoted the best part of existence to the service of their country. In the British Army a General, if unemployed, does not draw pay equivalent to that allotted to a retired first-class civilian clerk in the War-office! That the Colonel of a regiment should be recompensed—ay, and well recompensed—for years of toil and danger, does not admit contradiction; but that such benefit should be gained by deprivation of health and ease from the non-commissioned and private soldiers, is indisputably wrong.

Take a corps on home service composed of 47 sergeants, 40 corporals, 17 drummers or buglers, and 800 privates—making a total of 904 men. It will be shown by the estimates that the sum individually granted for clothing the sergeant amounts to £7 9s. 2d.; for the corporal, £4 19s. 6d.; for the bugler or drummer, the same; and for the private, £2 6s. Now, in point of fact, the outlay actually expended on the higher rank is £3, and on the others £1 13s. each—leaving, out of £2474 2s. 4d. allowed by Government for the whole regiment, a clear gain to the Colonel of £929 1s. 4d., exclusive of "compensation," &c., by which considerable profit accrues to the officer.

On nomination to the Colonelcy of a regiment, the General* enjoys the increased annual pay of £500, in the place of £400 already mentioned; which, together with the profits arising from the clothing, raises his salary to between £1300, and £1400 per annum. But this is not all clear gain: the General has many demands on his pocket for subscriptions to mess and band funds, together with various incidental expenses. It is true, that compliance with such requests is in no degree compulsory, and many refuse when referred to. On the other hand, instances of great generosity might be quoted, where officers, without waiting for solicitation, have devoted the greater part of their emoluments towards benefiting their corps. But it is not every general officer whose pecuniary position enables him to disburse for similar purposes money which, though not *nominally*, is, nevertheless, in *reality*, intended for his own use and benefit. Here, again, a glaring defect in the system becomes obvious by opening opportunity for comparison; since, where one Colonel is lauded for liberality, the commendation must be bestowed to the detraction of another.

There is a further outlay to which Colonels are subjected—namely, the accoutrements; and these must be furnished from the grant already quoted as given by Parliament under the head of clothing; but which expenditure need not greatly detract from the General's income. For the complement of men previously named, the accoutrements would probably cost £1200, each set of which may be averaged to last twelve years. A small sum annually invested, and at compound interest, would meet this additional demand without greatly detracting from the General's perquisites. These facts are incontrovertible.

When the Army Estimates are next laid before the House of Commons, it were well these matters should be inquired into. Few but military men are cognisant that money voted to the army for a specific purpose, is too often turned into a widely different channel. Scarcely one member of Parliament—if, indeed, any—cares to enter into details on such professional subjects; and thence the grant for infantry clothing is carried, under a prevalent impression as to its intended just appropriation.

The emoluments of a Colonel ought at *least* to equal his present receipts; but it should be asked from the country as a well-merited reward for gallant service in the field, instead of being smuggled through Parliament by a paltry subterfuge, in compliance with the usages of "political expedency." The working of the present arrangement is as repugnant to the feelings of him on whom the boon is bestowed, as it is unjust to the soldier by depriving him of so essential a comfort, as good and serviceable clothing.

Green Jugs Used by the Templars.—In clearing out the ground for the formation of Raymond buildings, in Gray's-inn, about thirty years ago, two earthen green jugs were dug up, which are preserved by the brothers as a memento of "the olden times." They will hold very little more than half a pint of liquor; are tall and of good proportions, but so small at the top as almost to preclude their being used to drink out of, and, having a lip, it is surmised that they held the portion assigned to each student, who was also supplied with a drinking-horn. I have seen a jug of the same description in the possession of a gentleman in Lincoln's-inn, which he informed me was brought to light in excavating for the new hall. It is, therefore, probable that all the inns of court were accustomed to provide jugs of the same description.—*Notes and Queries.*

Spanish Paintings.—The Duke de Montpensier has just presented the municipality of Seville with several valuable paintings of the Spanish school, which formerly belonged to the town. In the number is a "Virgin" of Murillo, and another of Morales; four large pictures by Zurbaran; different portraits of the celebrated painters of Spain, executed by themselves—amongst them one of Velasquez.

Loss of the "Hyperion."—The American ship *Edward Everett* arrived in the London Docks on Monday, and landed Captain Perkins, Thomas Hartley (first mate), Henry Swift (second mate), and George Phillips (seamen), the only survivors of the American barque *Hyperion*, from New York for Jamaica, which was picked up floating on pieces of wreck, where they had been for 57 hours, exposed to the greatest suffering. The *Hyperion* left New York on Friday, 28th October, for Jamaica, and on the following day the wind headed to the N.E., and commenced blowing heavily, accompanied by rain. After being thrown on her beam-ends, and every effort made to save her, it was found, on Sunday night, that she was settling down fast. The pumps were quitted in order to get out the boats; but before they could be got clear, the ship sunk, in lat. 35 deg. 10 min., lon. 73 deg. 45 min., Cape Hatteras distant 60 miles. As the ship foundered, the two mates and the seaman got hold of the side of the forecastle house, and the Captain upon a piece of the top of the batch house, five feet square. The night was very severe, and it was extraordinary that they escaped being washed off by the heavy seas whi h broke over them. The Captain saw nothing of the three men on the forecastle, nor they him, so that they imagined all else had perished. At daybreak, on Monday, Captain Perkins found a more secure kind of raft in a por ion of the top of the forecastle-house. There was a hole through which the pipe of the stove passed, through which he put his legs, and which enabled him to keep his hold. In this position he was buffeted about the ocean until Wednesday morning. The weather had but very little moderated; he suffered much from thirst, cold, and severe cramp, death seemed to him inevitable; and once or twice so severe was his suffering and hopeless his chance of rescue, he had an idea of casting him self off, but for a shark which kept dodging about the raft the whole two days, at times almost rubbing his sides against the timber. On the Tuesday a sail appeared near him, but he was not observed, and was left to another night's misery. On the Wednesday morning, the *Edward Everett* appeared in sight. To do the utmost to excite observation, he waved his cap with one hand and a piece of board, painted white, with the other. The crew of the ship noticed him, but at the same thought it was a boat with two sails. A boat, however, was lowered, and he was rescued from off his frail and perilous support, although much exhausted. What is his preservation was being so completely effected, he espied, at three-quarters of a mile off, the three seamen who were on the side of the forecastle. Like their capta n, they had endured great suffering They had buoyed up each other's spirits as well as they could, but of their time in endeavouring to scare away two or three sharks, which kept floundering about their frail and swamping craft. The crew of the ship *Edward Everett* saw a shower of their hats, and the same thought it was a boat with two sails. A boat, however, was lowered, and he was rescued from off his frail and perilous support, although much exhausted. What is his preservation was being so completely effected, he espied, at three-quarters of a mile off, the three seamen who were on the side of the forecastle. Like their capta n, they had endured great suffering They had buoyed up each other's spirits as well as they could, but of their time in endeavouring to scare away two or three sharks, which kept floundering about their frail and swamping craft. The crew of the ship *Edward Everett* saw a shower of their hats, and the same thought it was a boat, and, despite the sea which was running, the men were soon reached and rescued. On board the ship they received the utmost kindness. The number who perished was eight. The rapid rolling of the ship was thought to be caused by the starting of some of her butt-ends.

Arsenical Food.—In some parts of Lower Austria and Styria, and especially in the hilly region towards Hungary (says *Blackwood's Edinburgh Magazine*), there prevails among the peasantry a singular custom of eating arsenic. It is eaten professedly for one or both of two purposes: first—That the eater may thereby acquire freshness of complexion and plumpness of figure. Second—That the wind may be improved, so that long and steep heights may be climbed without difficulty of breathing. By the middle-aged and the old it is esteemed for this influence, and both results are described as following almost invariably from the use of arsenic. To improve their appearance young peasants of both sexes have recourse to it. And it is very remarkable to see how wonderfully well they attain their object; for these young poison-eaters are generally remarkable for blooming complexions, and a full, rounded, healthy appearance. No symptoms of illness or of chronic poisoning are observable, when the dose is carefully adapted to the constitution and habit of body of the person using it. But, if, from any cause, the arsenic be left off for a time, symptoms of disease occur which resemble those of slight arsenical poisoning. From these symptoms there is only one speedy mode of relief—an immediate return to arsenic-eating.

PRINCE WORONZOW, GOVERNOR-GENERAL OF SOUTHERN RUSSIA AND THE CAUCASUS.

Prince Michael Woronzow (pronounced, and often in England spelt, Woronzoff), was lately described by a public writer as, perhaps, the second personage in the Russian Empire; an assumption founded rather on the high offices he holds, and the immense territory entrusted to his care as Governor, than upon any intimate knowledge of the political hierarchy of which the Emperor Nicholas is the chief. That he is one of the most important of the public functionaries of Russia, however, is beyond a doubt; and the new service to his country have by no means equalled those of Prince Paskiewitsch, or the late Count Diebitsch. The post inn which he now holds in Asia, and the defeats which he has experienced at the hands of the Turks, attract more than ordinary interest to his career and character.

Prince Woronzow is the first of his family who has held that title of nobility. The family is not of very ancient origin; and it must not be confounded with that of the old Boyard race of the same name, which bore itself so illustrious in the Russian history of the fifteenth and sixteenth centuries, but which became extinct towards the close of the latter—that is to say, in the year 1676. We have it on the authority of Prince Pierre Dolgorouky that the first known ancestor of the present house of Woronzow was Gabriel Woronzow, who died at the siege of Tchigirino, in Little Russia, in 1678. His son, Hilarion Woronzow, had three sons—Roman, Michael, and John. Michael owed his rise, like so many of the Russian nobles, to the personal favour of an Empress, the Empress Elizabeth. He afterwards married his cousin, the Countess Anna Scavronsky. Elizabeth created him Chancellor of the Empire, and afterwards Minister for Foreign Affairs. She also procured for him, from the Emperor Charles VII., the dignity of Count of the Holy Roman Empire, on the 27th March, 1744. He left only one child, a daughter, the Countess Alexander Strogonow, wife of the Baron Alexander Strogonow, who was subsequently created Count by Paul I., in 1798. He obtained, with his brothers, Roman and John, the dignity of Counts of the Holy Roman Empire, which was conferred on them in January, 1760, by the Emperor Francis I. General Count Roman Woronzow is described as a man of great merit; but of a spasmodic disposition. He left two sons, Alexander and Simon, both of whom became statesmen and servants of the Crown, and were distinguished for their loyalty and virtues of character. Alexander filled, under the Empress Catherine the Great, the office of President of the College of Commerce (which answers to that of Minister of Commerce), and he was subsequently, under the Emperor Alexander, Chancellor of the Empire and Minister for Foreign Affairs.

The other brother, the General Count Simon Woronzow, passed through a distinguished diplomatic career, in the course of which he was intimately associated with England and English politics. We have some facts in connexion with his life and residence in London, which will be found interesting. He was Russian Ambassador in London when the French Revolution broke out, and took an active part in all the negotiations between England and Russia during the reigns of Catherine, Paul I., and Alexander. He died in London in 1832, in his 85th year. Of his military and diplomatic services we may here give a short detail. He began his as one of the pages in the household of the Empress Elizabeth, daughter of Peter the Great, and at the death of that Princess entered as lieutenant in the regiment of the Preobrazinsk Guards. When the revolution took place, which brought Catherine II. to the Throne, Count Woronzow was one of the very small number in that corps, who, remaining faithful to the Emperor, Peter III., opposed the movement in favour of the Empress. He was, in consequence, placed under arrest, together with the captain of his company; but all opposition to Catherine's elevation having ceased, he recovered his liberty at the end of three days. Before entering on active service his father sent him to visit the interior parts of Russia, which he traversed in every direction. He then accompanied his uncle, Count Michael Woronzow, to Vienna, Rome, Paris, &c. War having been declared by the Ottoman Porte against Russia, Count Woronzow eagerly solicited military engagement, and was appointed Lieutenant-Colonel of a battalion of Grenadiers, at the head of which he was the first to storm the Turkish entrenchments at the battle of Kahul. As a reward for his distinguished conduct on that occasion, Count Woronzow was instantly promoted to the rank of Colonel; received, besides, the Cross of St. George of the third class; and was soon afterwards appointed to the command of the 1st Regiment of Grenadiers. At the peace of Kaimardgi, in 1775, the Count was made Brigadier-General, and his regiment received the title of "Grenadiers of the Empress." Soon afterwards Count Woronzow departed again for Italy; in which country he remained down to the year 1781, when he returned to Russia, and married the Lady Catherine, daughter of Admiral Sir Charles Cathcart. In 1782 the Count was appointed Russian Minister at Venice. He was removed from Italy in 1789, to be sent on a special mission to London, where he soon after became resident Minister and Ambassador. From that time he never ceased to play an important part in the politics, not only of Russia and England respectively, but of all Europe. He was the constant opponent of the French revolutionary ideas, and an equally stanch supporter of the principles of Legitimacy. Particularly well treated at first by the Emperor Paul, on his accession to the throne, he left his service without hesitation, when that monarch entered into an alliance with Buonaparte, and it was only on Alexander succeeding to his father's crown that he was reappointed Ambassador to the Court of St. James's. From London he went to Russia, in 1809, on the occasion of his brother, Count Alexander Woronzow being made Chancellor; but soon after returned to England; where, in 1808, his daughter Catherine married the late Earl of Pembroke. From that day he never left this country, except for some short excursions to France in 1815 and 1819, which he undertook to see his son, Count Michael, when at the head of the Russian corps, forming part of the army of observation under the command of the Duke of Wellington.

Prince Michael Woronzow, the subject of this memoir, was born at Moscow, we do not know in what year, but shortly before the close of the eighteenth century. While he was yet a child he was taken to London by his father, who was, as we have said, Ambassador there from the Courts of St. Petersburg. The young Count had been originally destined for the diplomatic service, but he preferred a military career, and he served with great distinction in the Russian army during the campaigns against Napoleon, from 1812 to 1814. He subsequently commanded the Russian troops which occupied France from 1815 to 1818. After they left France, he proceeded to Aix, to the Conference there, in which, on behalf of Russia, he took a prominent part. On his return to Russia, he was appointed Governor-General of Odessa, New Russia, and Bessarabia; and, during his administration of those provinces, he many times received the thanks of the Emperor Alexander for his services, partly as a civil governor, and partly for the additions he from time to time made to the Russian territory.

On the accession of Nicholas I. to the Imperial throne, in 1826, Count Woronzow received the command of his Sovereign to assist Ribeaupierre in his negotiation with Persia. He was continued in his functions as Governor-General of Southern Russia; but, without being superseded in them, he was called on to take part in the Danubian campaign. Prince Menschikoff, then in command of the force besieging Varna, had been so severely wounded that his death was reported. He was obliged to resign his command and Prince (then Count) Woronzow succeeded him. He accomplished the reduction of Varna—whether by superior military tactics forcing the Turkish commander to surrender, or by bribery inducing him to commit an act of treachery, appears to be a matter of controversy. The latter assumption is supported by the universal execration of the Turkish Governor of Varna among his own countrymen, and his having lived ever after on the bounty of Russia a despised and degraded man. Count Woronzow acquitted himself in this campaign so entirely to the satisfaction of his Imperial master, that he was soon after made Commander-in-Chief of all the forces set apart for the reduction of the mountaineers of the Caucasus. This, indeed, was only a natural appendage to his government of southern Russia, which he had continued to hold. We believe the following to be a correct enumeration of his various offices:—He is General of Infantry, Aide-de-Camp General, and First Member of the Council of the Government for the department of Political Economy; he is also Governor-General of New Russia, and Bessarabia, having under him as acting governor General Federoff. He is also Commandant-in-Chief of Georgia, Armenia, and the Trans-Caucasus; Lieutenant-General in the Caucasus, and Commander-in-Chief of the Army of the Caucasus. His duties in these capacities have been threefold—diplomatic, administrative, and military. It was his mission to consolidate the power of Russia in her territory already conquered, and to pave the way, ultimately to use it, for the acquisition of more.

A volume would scarcely suffice for a detailed description of the prolonged operations of Prince Woronzow, and the Generals under his command, in the Caucasus. It may here be mentioned, that the family did not receive the dignity of Count till the 5th of April, 1797; and that it was raised to the rank of Prince (in the person of the subject of our memoir) in August, 1845, as a reward for a brilliant affair in which Schamyl's fortress of Dargo was captured. We are, however, here, a little anticipating events.

Besides making direct conquests of territory on the shores of the Black Sea and the Caspian, the policy of Russia has tended towards establishing such an armed circle round the semi-subdued parts of Turkey in Asia, as would enable her, at a future time, to co-operate in that quarter simultaneously with a conquering army advancing on Constantinople. The military operations of Prince Woronzow have been directed to that end; although, of late years, his attention has chiefly been absorbed by the war in the Caucasus. All his efforts to subdue those intrepid mountaineers have proved unavailing. Year after year Intelligence has arrived in this country of Russian posts taken, and Russian troops repulsed; and it seems that, whatever advantages have been gained by the Russians, have been purchased by a frightful sacrifice of men and ammunition; while the enthusiasm of the Caucasians remains unabated. Prince Woronzow has not, personally, taken part in these operations.

Edmund Spencer, the author of interesting books of travel in the Western Caucasus, Circassia, &c., acknowledges (in 1838) the courtesy of Count Woronzow, as Governor-General of South Russia, who invited him to accompany him on his voyage round the Black Sea, and visit the Russian "settlements" in Circassia, Mingrelia, and Gourial. "It was the means," says Mr. Spencer, "of procuring me a variety of information respecting the existing situation of countries which had been hitherto, owing to Russian influence, hermetically sealed from the inspection of the foreigner."

The same author speaks highly of Prince (then Count) Woronzow, as the "enlightened Governor of New Russia." He built the Hôtel de Richelieu at Odessa, at his own expense, and by so doing conferred a great benefit on travellers in the country, who otherwise suffered much through the barbarous customs of the country.

During the coasting expedition round the Black Sea with Woronzow, Mr Spencer notices Kertch, the ancient Panticæsæum, once the famous capita. of allthridates Eutapor, the celebrated King of Pontus. Count Woronzow, aware of the advantages of this most animated seaport (Kertch) had done everything to promote its prosperity; and, among other regulations to further his design, he recently obtained a ukase from St. Petersburg compelling all vessels bound for the Sea of Azov to stop here and perform quarantine. The quarantine establishment of Kertch, planned and executed according to a plan of Woronzow, is said to be a perfect model of its kind with respect to its convenience and arrangements. Woronzow was received at Kertch, as well as at Theodosia, with military honours, illuminations, and fireworks; and the whole of the party were regaled with a splendid banquet, given by the Governor of the town, "Prince Khirkbeoulidzeff."

In January, 1853, intelligence arrived in England of operations in the Caucasus very unfavourable to the Russians. A part of Prince

* To be the *full* Colonel of a regiment the officer *must* hold the rank of a Major-General at least.

Woronzow's scheme is to blockade the Circassian coast of the Black Sea, so as to prevent the landing of arms or other succours from that side. But some Circassian vessels succeeded in forcing the blockade, and had made their way, laden with slaves, to Trebizond, Sinope, and Constantinople. Schamyl had wrested from the Russians all the ports they had gained during the previous year, and Mehemet Arnim, his Lieutenant, had succeeded in concentrating under his standard all the Circassian tribes on the coast of the Black Sea, and had beaten the Russians at several points.

In October last Prince Woronzow suffered another defeat: he was personally engaged in the encounter. Selim Pacha, the Turkish commander on the Georgian frontiers, was, on the 20th of October, inspecting the ground, when some Russian cavalry made their appearance. The Turkish general sent for reinforcements. After they had arrived, Selim fell in with a Russian corps of 15,000 men from Redout Kalé, with which he engaged. The fight was a severe one; but it ended in the flight of the Russians, pursued by the Turks. The affair ended with the planting of the Turkish colours, by the Turkish chief, at Orelle, a post eight hours' distance from Clorock Deré. A short time previous to this decisive encounter, the Circassians had taken from the Russians the fortress of Foprak Kalé, as well as five fortified ports, and two other forts—Gostcgajewskoff and Tenguinsky—which they razed. Prince Woronzow found himself compelled to send for reinforcements; but he was at once menaced by the Turkish chiefs, Selim Pacha, and Adi Pacha of Tortum, with a serious movement in favour of the Circassians. An affair more fatal to the Russian arms, was the capture of St. Nicholas, as it is called by them, or Chevkedy, according to the local nomenclature. On the 14th October, the Russians having commenced fortifications on the Tobouroukssou, Selim Pacha crossed the river at several points, and drove the Russians back, pursued as far as Orelli, by Hassan Pacha. The Russians lost 600 men killed and wounded, and two pieces of artillery, besides 144 prisoners taken by the Turks. They had retired to Chevkedy, where they received reinforcements; and here another engagement ensued, which was more fatal to the Russians than the previous one. The Turkish General, Selim Pacha, took the fort by storm, after having made two attacks. The loss of the Russians was very great in killed, prisoners, ammunition, and provisions. Among the prisoners was General Klüf, a Cossack chief. Besides their other advantages, the Turks got 3000 sacks of flour, 1600 muskets, and a considerable store of ammunition. The Russians made five unsuccessful attempts to regain the fortress. Selim Pacha at once pushed on to improve his advantages.

The foregoing details are taken from the despatch of the Turkish General. Prince Woronzow also issued a bulletin, with an account of the affair at Chevkedy, in which he admits the importance of the Turkish capture, because it contained a dépôt of provisions. "It was judged necessary," he says, "to maintain the position as long as possible, on account of the provisions. But the detachment in the fortress could not do so, and fell fighting. Thirty soldiers only and three officers were able to cut their way through the enemy's forces; but two pieces of artillery fell into the hands of the Turks, and the provisions were burnt. It is painful for me to announce my report of our hostilities with the Turks by so unfortunate an event; but it remains for us to hope and to say, as in 1812, 'God will punish the aggressor.'" This impious cant seems a habit of Russian chiefs, from the Emperor downwards. At the present moment Prince Woronzow is said to be in a dangerous state of health; but this may be only a rumour set on foot by the worse than Chinese purblind cunning of Russia, in order to cover the disgrace of recent defeats in the territory under the Prince's control. In his military capacity, the work of many years is menaced by the Turks, who are operating in two quarters a diversion in favour of the Circassians. Selim Pacha is manœuvring on the coast of the Black Sea, with the view of destroying the blockade, and rendering Schamyl free to act; while Abdi Pacha is operating in the direction of Georgia. The effect may be judged from the urgent demands of Prince Woronzow for reinforcements to his already enormous force.

Mr. Spencer, whom we have already quoted, tells us that the civil administration of Prince Woronzow has been more successful. He says that it is characterised by justice, prudence, and benevolence; that the Prince is a protector and judge, who will not only listen to, but redress, the wrongs of the inhabitants. The greater portion of his family fortune is expended in plans for the improvement of the vast provinces under his control. Various beneficial changes have been wrought entirely by his influence; particularly in the Crimea, where he principally resides, and where he will long be remembered by the inhabitants.

PRINCE WORONZOW, GENERAL-IN-CHIEF OF THE RUSSIAN FORCES IN ASIA.

His education in England gave his mind a bias in favour of our manners, institutions, and customs; but he is, nevertheless, a sincere Papist, and firmly attached to the fortunes of his country, whether he serve in the Cabinet or in the field.

The family of this Prince Woronzow must not be confounded by the reader with that of Woronzow-Daschkaw, which is descended from his uncle John. The Daschkaw family was one of the most ancient in Russia—descended from Rurik, the founder of the Monarchy. It was formerly a reigning family at Smolensk. This family became extinct in 1810; but a daughter of Roman Woronzow became the wife of the then Prince Daschkaw. This was the celebrated Princess Daschkaw, who figures so conspicuously in the history of the Empress Catherine II., and whose memoirs have lately been published. Through her comes the connection between this branch of the Woronzow and the Daschkaw family. The present Count Woronzow-Daschkaw is a distinguished civilian in the Russian service. He is a member of the Imperial Privy Council attached to the Administration of Poland; and also Vice President of the Chapter of Imperial and Royal orders; and Grand Master of the Ceremonies to the Imperial Court.

SMYRNA.

Smyrna, the principal town and harbour in Asiatic Turkey, is delightfully situated at the extremity of a gulf, about thirty miles in depth, and varying from five to fifteen in breadth. This gulf is encompassed with high mountains, many of them richly wooded, which rise from the water's edge. Ancient Smyrna—for it was founded by Alexander the Great, and has risen ten times from its ruins—has been celebrated for its charming local advantages. It has been styled the Queen of the cities of Anatolia, the Crown of Ionia, the Gem of Asia, &c. Its greatest glory perhaps, lay in the fact—or, at least, the traditions of history—that it was the birth-place of Homer.

The form of the town is elliptical, and it extends nearly two miles in length. It stands at the foot of Mount Pagus, whose summit is still crowned with the ruins of an ancient castle. Within the walls of this ruin are to be seen some relics of the Temple of Jupiter. The stadium is formed on one side by an excavation in the hill. Polycarp is said to have suffered martyrdom on this spot. Traces of the theatre may be seen in another part of the hill. Numerous columns, busts, cornices, and entablatures, are seen built into the walls throughout all the upper parts of Smyrna. Within the walls of the castle are also the ruins of a mosque, said to have been the primitive church of Smyrna, one of the Seven Churches of the East.

Seen from the harbour, the smiling aspect of the town at once delights the stranger on arriving; the appearance of the buildings is more European and civilised than Constantinople itself; and the streets, though certainly narrow, are very superior to those of that famous but monstrously degenerate old city. The Bazaar, also, is very superior, in business-like appearance, to that of Constantinople. It is the principal dépôt for Turkish and Persian carpets, and other Oriental manufactures; and also of the figs, grapes, and currants of the interior, which form so important an item of export.

In the fruit season all is animation and activity at Smyrna, when strings of camels, tied head to tail, arrive from all parts of Asia Minor. They are generally in lots of five or six, seldom more; and drowsily they walk along, the foremost decorated with a little bell; and, as string upon string of these singular quadrupeds enter the streets leading to the Bazaar, the whole town is filled with their tinkling noise.

Arrived at the merchant's yard, the camels kneel down to deposit their loads (which are quickly disposed of)—gangs of men, women, and children being employed the live-long day in packing the fruits for exportation. The operation in the case of the figs is very interesting and full of bustle. The figs but still green fruit is picked from the branches and leaves, and then packed in drums, handful by handful, each handful being arranged in a circular form, so as to suit the shape of the drum. The operator wets his hand every now and then in sea water, and sprinkles each layer with the same fluid, which, it is said, tends to their preservation. The figs being packed, the lids of the drums are nailed down to prevent the fruit from swelling, which they would otherwise do to a great extent, and are immediately shipped for exportation. They ripen, and become coated with their saccharine "bloom" on the voyage. It is said that a prize of £30 is given to the first ship which arrives in London with the new fruit.

In commercial importance, Smyrna takes rank next to Constantinople—the value of the exports and imports of the two places respectively being about as follows:—

	Imports.	Exports.	Total.
Constantinople ..	£2,200,000 ..	£1,000,000 ..	£3,200,000
Smyrna ..	£1,200,000 ..	£1,500,000 ..	£2,700,000

The greater part of the carrying trade, however—that, at least, to the capital and dependencies—is performed in Greek vessels, which enjoy almost a monopoly in this line, owing to the low freights at which they carry.

The imports consist chiefly of cotton goods from England and Switzerland, and miscellaneous articles of hosiery from the former place. The annual value, in gross, of such articles must exceed half a million; and they are displayed, at all the stalls in the bazaar, in such abundance, as to impress the traveller with the idea that he is within a hundred miles of Manchester, or, at furthest, in one of the Channel Islands. Smyrna imports considerable quantities of woollens from England and Germany, and of French silks.

The population of Smyrna amounts to about 150,000: of whom, 80,000 are Turks; 40,000, Greeks; 15,000 Jews; 10,000 Armenians and 5000 Franks. The Consulates are chiefly along the edge of the water; and, in the midst of them, is the Casino, or Merchants' Club, where everything is done à l'Européne, and where strangers are always politely admitted, to read the papers, magazines, &c., which are supplied in abundance.

SMYRNA, FROM THE JEWS' CEMETERY

THE BATTLE OF OLTENITZA.—FROM A SKETCH BY AN EYE-WITNESS.

THE BATTLE OF OLTENITZA.

We have been favoured by an English military officer of distinction, who witnessed the Battle of Oltenitza, with a Sketch taken by him during the action from the opposite bank of the Danube. Our Correspondent, while making the Sketch, stood upon the same hill from which Omer Pacha and his staff surveyed the battle. The position of the different corps was marked at the period of the hottest part of the action. On the day after the battle the gentleman in question went over the ground in order to verify the accuracy of the Sketch with which he has favoured us. The point of attack was the Quarantine Station, indicated by trees and buildings on the right of the foreground. The ground to the extreme left is marshy, and the Russian troops would have in vain endeavoured to operate there. The village to the extreme right is Oltenitza, which is about a mile from the Quarantine Station, and is divided from the Danube by a level plain, the land being partly ploughed and partly meadow. The Danube is about 1200 yards wide at the point between the Quarantine Station and the opposite bank of Turtukai. The Turkish entrenchments, which took in the Quarantine Station, were about a third of a mile long. The tents at the extreme left show the Turkish encampment upon a small island in the Danube. Our Correspondent has also enclosed a short account of the action, which will be found to contain details not hitherto published:—

Before daybreak on the morning of the 31st Oct. Omer Pacha arrived unexpectedly at Turtukai in a dense fog, with 25,000 men from Schumla. At noon the same day he took possession of the island near the Wallachian bank of the Danube (shown on the left of the Sketch), and planted a battery of six guns upon it. On the 2nd of November he crossed troops to the Quarantine Station, opposite Turtukai, turning out a few Cossacks only. He immediately commenced entrenching himself in that position, his left flank resting on the River Argish (in the centre of the Sketch), a small but deep stream, with wood and marshy ground on the other bank. He continued to cross over artillery, gabions, &c., for the fortifications as fast as a limited supply of boats would allow him. The works continued during the night, the troops standing under arms.

On the 3rd the works continued without interruption. A battery in front of the Quarantine Station (commanding the plain) was constructed, of six guns. Turks continued crossing till after dusk, making up the amount of three battalions, and 150 Irregular Horse.

THE BATTLE.

Nov. 4th.—A beautiful morning. Everything quiet up to eleven a.m. Omer Pacha sat on the hill, with General Prim, on the right bank of the river (which he never quitted during the action). At about 11 15 a cloud of dust was visible skirting the wood beyond the village of Oltenitza, and soon a dark mass of Russians was seen advancing from the village, gradually becoming more distinct as division after division took up their station on the plain.

A fourth battalion of Turkish troops was crossed over at this period to the entrenchments.

The Russian line consisted of twelve pieces of positions in the centre: the right was composed of four battalions of infantry, flanked by four pieces of artillery, the left, of four battalions of infantry, and five guns. Two regiments of cavalry on their extreme left also advanced in the commencement of the action, and subsequently retired out of fire.

At noon the Russian line advanced in the above order. The field batteries commenced cannonading, and were answered by the Turkish batteries on the island, and shortly after by the three batteries of heavy artillery from the heights of Turtukai (from which the Sketch was taken).

The Russian balls passed the Quarantine Station in rapid succession, and soon exploded two tumbrils of ammunition. The first attack on the entrenchments was then made by the four battalions of infantry of the Russian right, who advanced in the low brushwood on the banks of the Argish throwing out skirmishers to within twenty-five or thirty yards of the left of the Turkish position. They were repulsed by a well-sustained fire of musketry from the latter, and by the flanking fire from the batteries on the island. A field-officer and many men fell. The cannonading on both sides continued without intermission. The plain between Oltenitza and the Russian rear was dotted with parties carrying off the dead and wounded.

At half-past two o'clock the second infantry attack was made by the four battalions of the Russian left, supported by their artillery, on the right of the Turkish entrenchments. They advanced in close quarter-distance column across the plain, throwing out skirmishers to the front, keeping up an incessant fire of musketry. Exposed as they were to the fire from behind the entrenchments, and the great guns from Turtukai, they were literally mowed down, and the column soon broke and commenced a rapid retreat towards Oltenitza, leaving the ground strewed with their dead.

The 150 irregular Turkish horse at this period made a *sortie*, but were recalled by a bugle sound from Omer Pacha's tent on the opposite bank of the river.

The Russian artillery continued their fire while within range. The last shot was fired about 4 p.m., and the staff and foreign officers round Omer Pacha's tent cried "*Vive le Sultan*," and congratulated him on his first success this campaign.

The Russian army marched out this morning, perfectly confident in their success; without reconnoitring, or other preliminaries, they advanced as to certain victory! Before four p.m. they were completely repulsed. The ground was red with the blood of their soldiers, who had been led up within thirty

yards of the entrenchments. Their probable loss, according to General Prim and the best unbiassed opinions, must have been, at the least, 400 killed, and from 1200 to 1500 wounded. The Turks lost about thirty men and as many horses, who were killed by the fire on the Quarantine Station, within which they were stabled.

That night there was a beautiful sunset from the hill. The band played outside Omer Pasha's tent; and Achmed Pacha, who had commanded the infantry at the entrenchments, and been slightly wounded in the hand, came across and received the Brevet rank of Colonel. The cheering continued long. Fresh troops crossed over at dark, to reinforce their tired comrades.

Had Omer Pasha's precautions been less well taken and defeat ensued, the Turkish force had no means of retreat. Since then a bridge to the island has been constructed of the mills which float on the river, and the low brushwood on the left of their front has been cut down or burnt.

The ship on the right of the Sketch was set on fire towards the close of the action by a shell, and continued burning all night.

The 4th November was the Turkish Sunday, the only day the Turks hoist their flag.

Nov. 5.—Dense fog.—Went up early to Omer Pasha's tent; found him examining the trophies outside his tent—180 stand of arms, 117 helmets, swords, knapsacks, drums, &c. From the numbers it appeared that the Russian regiments, of four battalions each, engaged yesterday were the 21st and 22nd.

Got permission to cross over to the entrenchments; found the Turks busily employed repairing them.

The corpses were still lying thick out he plain, although some had been thrown into the Danube, some taken away by the Russians during the night; others were being roughly buried with a few spadefuls of earth on them: the remainder have since been burnt.

The dead were fine men, mostly bearing the medal for Transylvania and Hungary, in 1849. They had been marched into action in heavy marching order, with their full kit, and 6 lbs. or 8 lbs. of bread. A strange thing to bring men up to attack entrenchments shackled with such a weight! Inside the entrenchments many dead horses were lying. The houses and fruit trees were riddled with cannon-balls.

Nov. 8.—The Russian camp still di-cernible in the distance, but no fresh attack anticipated; if so there will be an awful carnage as the entrenchments are being widened. The Turkish force has been increased to seven battalions of infantry, 500 Chasseurs, sixteen guns; and a parapet for the cavalry is in process of erection. The whole is capable of withstanding a regular siege of heavy artillery. The winter is now setting in very severely.

NAVAL AND MILITARY INTELLIGENCE.

PLYMOUTH.—The newly-raised men belonging to the *St. Jean d'Acre*, 101 (screw), Captain Hon. H. Keppell, were paid wages in advance, in the Sound. She has been supplied with a pinnace launch of 42 feet, similar to the one already on board, also a 32-feet barge, returning a 26-feet pinnace. She has now four boom boats, capable of carrying guns; while the weight of the two 42-feet boats exceeds but very little that of the ordinary launches supplied to sailing ships, while they carry more men. The *St. Jean d'Acre* sailed on Monday evening for Lisbon and Madeira. She is expected to return to this port about the middle of next month.

SHEERNESS, Dec. 13.—The *Cressy*, 80, screw steam-ship, is ordered to be commissioned immediately, and all necessary preparations are being made for completing her figment. The *Cressy* will not be completely fitted until the early part of February next.

THE ARCTIC SEARCH.—We are informed that no letters or despatches have yet been received by the Admiralty from her Majesty's ship *Amphitrite*, on her return from Behring's Strait, and there is, consequently, no foundation for the statement that there has been news from the *Enterprise* and *Investigator*. The latest intelligence from the latter ship had already reached us by Captain Inglefield, that nothing more can be known of her until the autumn of next year. Of the *Enterprise* no intelligence has been received. It is also untrue that the name of Sir John Franklin will be struck off the books of the Admiralty, in order to make room for that of Captain Chads. It is not to be supposed that the Admiralty would contemplate such a step while the issue even of their own expeditions in search of Sir John Franklin is unknown.—*Morning Chronicle*.

THE NEW ADJUTANT-GENERAL.—RUMOURS have prevailed about town for some days, of a difference between the authorities at the Horse Guards, relative to the leave of absence granted to certain officers, and it was said these differences would cause the resignation of an official of high rank in that department. The officer in question is the Adjutant-General, Sir George Brown, who has given in his resignation Sir George will, in all probability, be succeeded as Adjutant-General by Major-General Wetherall, the Duke. The Prince, however, states that the present Commander-in-Chief at the Cape of Good Hope, the Hon Lieut.-General Cathcart, will receive the appointment, and give up his command there.]

THE ARMY.—The first of the regiments (the 62nd) ordered to the Mediterranean for the usual reliefs, will embark at Cork about the 1st of January. The 46th, from Dublin, march this day to relieve the 62nd at Kilkenny.

THE COLONELCY OF THE 20TH.—By the unexpected death of Major-General Godwin, C.B., the Colonelcy of the 20th Regiment is again placed in the hands of the General Commanding-in-Chief. General Godwin died before the notification of his appointment to that regiment, and he being made a K.C.B. reached him in Burmah.

REGIMENTAL JOKING.—A general meeting was held last week at the Army and Navy Club, to determine what steps should be taken, in reference to the promotion of the fourth rule, for removing from the list of members two officers who have been obliged to quit the service for an absurd indulgence in practical jokes. The club decided that the conduct of the officers, not being ungentlemanlike, they were worthy to continue members thereof.—*United Service Gazette*.

THE NAVAL COAST VOLUNTEERS.—The pay of the Captain-superintendent to this force is to be £1000 a year. The other captains are to receive £500 a year each, £100 for a house, and £8. a day for subsistence, and 17s. 6d. a day for travelling expenses, when compelled to go off their stations on duty. A commander will be attached to each captain. A paymaster is to be attached to each division. The following officers of that grade have already been selected:—Henry N. Scaife, Edwin J. Forster, and Julian A. Messum. The pay of these officers will be £200 per annum, and 10s. a day for subsistence or travelling money. Surgeons will also be attached to each station.

THE WINE DUTIES.—A great and favourable impulse, as far as French interests are concerned, has been produced by Mr. Oliveira's visit to Bordeaux, during his tour in the French wine district. A special meeting of the Chamber of Commerce was convened to receive Mr. Oliveira; and the Vice-President (M. Bethe) entered very fully into all the questions—commercial, moral, and international; expressing in earnest hope that Mr. Oliveira's effort might be successful as well for the interests of Bordeaux, those of the wine districts of France generally, and the still higher claims of international friendship and alliance—to all of which Mr. Oliveira gave a cordial response. Subsequently the Chamber of Commerce invited Mr. Oliveira to an official dinner, a compliment rarely paid by that body; and upon that occasion the great merchants and municipal body were all present, as also the British Consul.

AMERICA AND THE SULTAN.—A letter from Berlin says:—"A piece of curious news is circulated here as authentic, but the truth of which it is impossible to ascertain at Berlin. Namik Pacha has not succeeded at Paris in negotiating a loan. This was to be expected. But what could not be foreseen is that the United States of America have (so it is said) offered a very considerable sum to the Porte, on the condition that some small island in the Archipelago should be ceded to them.

THE UNITED STATES IMPORTS AND EXPORTS.—The Philadelphia correspondent of the *Chronicle* writes that the whole United States exports for the fiscal year ending June 30, 1853, were valued at 240,000,000 dollars specie included); but exclusive of specie they were 205,000,000 dols. The coal imports were valued at 258,000,000 dols., or 41,500,000 more than the previous year.

BULLION, &C., OF THE BANK OF ENGLAND.—A return just issued gives a statement of the amount of notes, securities, bullion, &c., of the Bank of England; also the quarterly averages of the weekly liabilities and assets of the Bank, and the monthly average aggregate amount of promissory notes in circulation; also a return of the weekly average prices of wheat, barley, oats, rye, beans, and peas from July, 1849, to June last, and the number of quarters of wheat and wheat flour, &c., imported into Great Britain in each month from January, 1849, to June, 1853. The document extends to twenty-five pages, and contains a mass of figures. It appears that on the 6th of August the weekly liabilities of the Bank of England were £41,439,000, and the assets £44,816,000.

EGGS AND POTATOES.—Immense quantities of eggs are now imported into this country from Spain and potatoes from Portugal. Englishmen live in Portugal now specially to cultivate and export potatoes from that country.

RUSKIN ON ARCHITECTURE.*

(SECOND NOTICE.)

THE secret of Mr. Ruskin's errors, and of the disappointment and dissent which the perusal of his work provokes, is, in a great measure, attributable to the fact that, in common with too many architectural critics of modern days, he treats of the ornamental features rather than the structural genius of the art;—the same mistake as it would be to describe the coat instead of the man, and sometimes not even the coat, but the buttons and braid which cover it. Indeed, in more than one place, Mr. Ruskin contends that it is impossible to give a satisfactory account of the structural arrangement of a fine building by verbal description, even when aided by graphic illustration:—

The principal reason (he assures us) why architectural criticism is at this day so far behind all other is, the impossibility of illustrating the best architecture faithfully. Of the various schools of painting, examples are accessible to everyone; and reference to the works themselves is found sufficient for all purposes of criticism; but there is nothing like St. Mark's or the Ducal Palace to be referred to in the National Gallery; and no faithful illustration of them is possible on the scale of such a volume as this; and it is exceedingly difficult in any scale. No thing is so rare in art, as far as my experience goes, as a fair illustration of architecture—perfect illustration does not exist.

In these views we wholly disagree with the writer. Putting out of the question the reference to individual paintings in the National Gallery—which is not a parallel case to that of "translating," so to express it, the design of a work of art into another medium, we consider that, of the three sister arts—Architecture, Sculpture, and Painting—it is precisely the first named which is most capable of satisfactory exemplification, for purposes of criticism and education, by means of verbal description and graphic illustration. Its intrinsic merit is independent of the colour of Painting, which pierces the canvass plain with unfathomable recesses, and endows an opaque surface with the transparent splendour of a summer's sky;—it is equally independent of the delusive executive attributes of Sculpture, which give the roundness, smoothness, and apparent softness of flesh to the mountain marble. The features of an architectural work are of a sterner and more determinate kind; its merit depends upon general fitness of style, grandeur or elegance of proportion and convenience of arrangement; matters which can be made palpable to the educated eye by means of outlines of the plan and elevation, or even by a perspective view alone; to which, if desirable, may be added the details of parts upon a larger scale. There is no building in the world which might not be made appreciable to the mind's eye by these means, within the compass of a page much smaller than that of Mr. Ruskin's book, indeed, we have, in various books close to our hand, such engraved illustrations of most of the remarkable structures in the world—St. Peter's, St. Paul's, the Mosque of St. Sophia, and innumerable Basilicæ and Cathedrals, measuring about two or three inches each; all capable of being studied with interest and advantage. Another very essential point of architectural merit is the structural economy achieved in it—determinable by consideration of the relative proportions of the whole areas, and the areas of the points of support; and the relative proportions of the solids and voids in section. These, and other points revealing the creative intelligence of the designer, are the means of the art which the reasoning mind is never tired of contemplating, and in comparison with which mere decorative detail is a matter of but secondary import. But these are the very points in which Mr. Ruskin takes no interest; indeed, in sundry places, he preaches open rebellion against all the rules upon which they, as well as all that relates to orderly arrangement, depend. Recurring to the passage from which we have just quoted a few lines, we find the following observations, which, though amb iguously worded, betray a very incomplete appreciation of the genius of architecture; besides attributing to it many qualities which true architecture would repudiate. Enforcing the assertion as to the almost impossibility of illustrating architectural works, he says:—

For all good architecture depends upon the adaptation of its chiselling to the effect at a certain distance from the eye; and, to render the peculiar confusion in the midst of order, and uncertainty in the midst of decision, and mystery in the midst of intelligible lines, which are the result of distance, together with perfect expression of the peculiarities of the design, requires the skill of the most admirable artist, devoted to the work with the most severe self-consciousness, &c.

After this, we are not surprised when the author tells us:—"With respect to the two buildings, which are the principal subject of the present volume, St. Mark's and the Ducal Palace, *I have found it quite impossible to do the slightest justice to any kind of portraiture*;" and find that the numberless illustrations which crowd his pages are confined to details of capitals, bosses, leafage, and other decorative details to be found in various parts of the buildings in question. In the case of the Ducal Palace, he consoles himself for the absence of any general portraiture, with the reflection that "there will be placed *a noble cast of one of its angles*" in the new Crystal Palace now erecting at Sydenham; the said angle being only a piece of allegorical sculpture upon rather a large scale, and, for the purpose of architectural illustration, being about as serviceable as would be a brick, as a sample of a house.

As for St. Mark's (adds Mr Ruskin) the effort was hopeless from the beginning. For its effect depends not only upon the most delicate sculpture in every part, but, as we have just stated, commonly on its colour also, and that the most subtle, variable, inexpressible colour in the world—the colour of glass, of transparent alabaster, of polished marble, and lustrous gold. It would be easier to illustrate a crest of a Scottish mountain, with its purple heaths and pale bunches of tufted rushes and fairest, or a glade of furze forest, with its floor of anemone and moss, than a single portico of St. Mark's. The fragment of one of its archivolts, given at the bottom of one of the opposite plates, is not to illustrate the thing itself, but to illustrate the impossibility of illustration.

After what we have already suggested, we need add no comment to this, to show how far it is from the true field and purpose of architectural criticism; and that the "impossibility of illustration" in this matter "depends" not upon the subject, but him who treats it.

Mr. Ruskin charges Greek and Renaissance architecture with pride, impiety, lifelessness, unmeaningness, and sundry other characteristics, offensive to morals and taste; and he commends Gothic architecture, as being subject to none of these accusations. He devotes a chapter of eighty pages to an essay on "The Nature of Gothic;" in which—dealing lavishly with assertion and abstract generalisation, and indulging interminably in an extraordinary style of moral disquisition, to which he is much addicted—he utterly fails of realising a rational and practical conception of the characteristics of the Gothic; leaving, indeed, the subject more uncertain and confused than at the outset of his essay he describes it to be. He sets forth by promising to "endeavour to give the reader an idea, at once broad and definite, of the true nature of Gothic architecture, properly so called;" but, in the next paragraph, he discovers "that the main principal difficulty in doing this arises from the fact that every building of the Gothic period differs in some important respect from each other; and many include features which, if they occurred in other buildings, would not be considered Gothic at all; so that all we have to reason upon is merely, if I may be allowed so to express it, a greater or less degree of Gothicness in each building we examine." The inexperienced reader might really be driven by this mysterious prelude to imagine that the past existence of Gothic architecture was a new discovery, and that Mr. Ruskin was the Layard who had dug up its long-buried "Remains;" that nothing had ever before been written upon existing examples of Gothic structure, and the principles upon which they had been reared. Mr. Ruskin attempts the task of general definition negatively:—"That is to say, pointed arches do not constitute Gothic, nor vaulted roofs, nor flying buttresses, nor grotesque sculptures; but all or some of these things, and many others with them, when they come together so as to have life;" a sentence which means nothing, because it means nothing certain. We may here be permitted, perhaps, to mention two very important characteristics which are found in all real Gothic; namely, first, that the mouldings forming the framework of the building are vertical in their direction, converging arch-wise as they ascend, to support or form the roof; secondly, that the sculptured decoration is effected by the removal of superfluous material, and not by the addition of attached ornament: neither of which principles does Mr. Ruskin appears to see the force of.

But, dismissing the consideration of what regards the "material form" of Gothic, in which we find Mr. Ruskin confused and uncertain, we turn to its "mental power in expression;" upon which we might have hoped to find our author's suggestions more pertinent and exact, but in which the result equally disappoints us. Mr. Ruskin lays it down that "the characteristic or moral elements of Gothic are the following, placed in the order of their importance:—1, Savageness; 2, Changefulness; 3, Naturalism; 4, Grotesqueness; 5, Rigidity; 6, Redundance. The-e terms apply to the building itself; the relative characteristics in the builder being thus expressed:—"1, Savageness, or Rudeness; 2, Love of change; 3, Love of Nature; 4, Disturbed imagination; 5, Obstinacy; 6, Generosity. And I repeat," says Mr. Ruskin, "that the withdrawal of any one, or any two, will not at once destroy the Gothic character of a building; but the removal of a majority of them will."

We need not follow the author through the wordy maze by which he encircles and illustrates these six features of Gothicism. We shall be content with some of his observations upon "Savageness" and "Changefulness."

And, first, of "Savageness." Under this term we understand Mr. Ruskin to refer to that sort of untutored labour, and wild uneducated fancy, which knows no precedent, and recognizes no control—no combined purpose; and evidence of which he pretends he discovers in all Gothic structures. He denounces all notion of dictation in respect of form or device by the designer, or controlling architect of a building. The principle of subordination and division of labour to which this would lead, he asserts, is one of moral tyranny, enslaving and degrading the workmen; its effect is "to smother their souls within them, to blight and hew into rotting pollards the suckling branches of their human intelligence, to make the flesh and skin (which, after the worm's work on it, is to see God) into leathern thongs to yoke machinery with," &c. Furthermore—"It is not, truly speaking, the labour that is divided, but the men; divided into mere segments of men, broken into small fragments and crumbs of life; so that all the little piece of intelligence that is left in a man is not enough to make a pin or a nail, but exhausts itself in making the point of a pin or the head of a nail." Omitting many other illustrations of this humiliating phantasm in which the author indulges, applied to various branches of manufacture, we find him drawing the conclusion that the result of the sub-division of labour is to divide the industrious community into two classes, "both ungentle—the one envying, the other despising, his brother;" and that from this cause "the mass of society is made up of *morbid thinkers and miserable workers*." Every body who has at all studied the history of manufactures in this country, will at once acknowledge how untrue, as well as how mischievous and uncharitable all this is. The names of Watt, Arkwright, and Peel are but three out of innumerable instances in which, under a system of well-applied and divided labour, men, employed as the humblest agents in manufacturing processes, have originated contrivances which have given increased intelligence and efficiency to machinery, diminished the onerousness, and increased the productiveness of human labour, and elevated the "morbid thinker and miserable worker" to the highest pinnacle of success and worldly happiness.

Returning, however, to the author's extraordinary doctrine as applied to the subject of architecture and sculpture. He denounces Greek and Classic architecture generally, because its forms and its proportions are prescribed, and the workman is, consequently, a slave to principles and rules. In Gothic architecture he conceives the reverse to be the case, all being the result of the instinctive skill and unshackled fancy of the particular workman; and to show the extent to which he goes in this admiration of rude unskilled labour, we extract the following passage from an earlier portion of his work (Vol. II., p. 107):—

Until a man has passed through a course of academy studentship, and can draw in an approved manner, with French chalk, and knows foreshortening and perspective, and something of anatomy, we do not think he can possibly be an artist; what is worse, we are very apt to think that we can *make him* an artist by teaching him anatomy, and how to draw with French chalk; whereas the real gift in him is utterly independent of all such accomplishments; and I believe there are many peasants on every estate, and labourers in every town, of Europe, who have imaginative powers of a high order, which, nevertheless, cannot be used for our good, because we will not choose to look at anything but what is expressed in a legs and scientific way. I believe there is many a village mason who, set to carve a series of Scripture or any other histories, would find many a strange and noble fancy in his head, and set it down—roughly enough, indeed, but in a way well worth our having. But we are too grand to let him do this, or set up his clumsy work when it is done; and, accordingly, the poor stone-mason is kept hewing stones enough in the quarries, and we build our church of the smooth, square stones, and consider ourselves wise.

We agree as to the absurdity of the notion of making artists by teaching drawing, we are fully impressed, also, with the heaven-born character of genius; but we are of opinion, with Sir Joshua Reynolds, that genius itself, to be great and healthy, must submit to the discipline of the School, wherein are accumulated and perpetuated the experience and the examples of genius which have gone before. It is our misfortune too often to mistake erratic fancy, "savageness," "changefulness," "disturbed imagination," and other incidents of a wayward, overweening self-conceit for genius; and from the multiplication of the works of persons gifted after this manner, we wish to be defended. We have already enough abominable examples of wild, untutored conceit in every department and school of art, in all our streets, and in all our studios, to wish for a wholesale addition to them.

Proceeding, now, to the consideration of the second important element of Gothic "changefulness," we find Mr. Ruskin making the startling announcement, that, in the days of Gothic architecture, "every successive architect employed upon a great work built the pieces he added in his own way, utterly regardless of the style adopted by his predecessors." From all which, and much more to the same purport, one would be led to this conclusion, that the finest Gothic edifices which have so long been the admiration of the world were the result of the accidental agglomeration of the works of a vast number of untutored men, who all worked without principle to guide them, and without reference to what was done by their fellows or predecessors; without, in short, the slightest regard to the beauty or usefulness of the entire structure.

To say nothing of the inherent absurdity of such a notion, the history of architecture during the Gothic period is full of evidence to the contrary; evidence incontestable that if the Greek architects were precise in dictating proportions and measurements—even the niceties of form to their assistants and disciples, the great and powerful Freemasons—who monopolised all the great works of architecture, from the earliest period of European art down to the very decline and extinction of the Gothic—were equally precise, and even more strict in enforcing their behests. Endless examples and authorities might be cited in support of this assertion. Even in the earliest Norman times, the architects were men of great science and skill, whose names have justly been recorded in history; and many of them were bishops or ecclesiastics. Take, as example, a few from the middle of

* "The Stones of Venice." By John Ruskin. Vol. II. "The Sea-stories." Vol. III. "The Fall." Smith, Elder, and Co.

the eleventh to the middle of the twelfth century:—Aldred, Bishop of Worcester, and architect of that cathedral, Gundulph (cathedrals of Rochester, Canterbury, and Peterborough), William de Carilepho (cathedral of Durham, completed by Ranulph Flambard). Lanfranc (choir of Canterbury Cathedral), Roger of Salisbury (cathedral) Henry of Blois, Bishop of Winchester (conventual churches of St. Cross and Romsey), &c. Gervase of Canterbury records that William of Sens, the architect of Archbishop Lanfranc, in building his cathedral, was an artist of great talent; and that he not only made a complete model of the cathedral upon which he was employed, but *of all the details of sculpture necessary for its completion* " Dr. Henry observes:—" It is impossible to view the remains of many magnificent fabrics, both sacred and civil, that were erected at this period, without admiring the genius of the architects by whom they were planned, and the dexterity of the workmen by whom they were executed."

With regard to the body of Freemasons, it is difficult to assign the date of their first institution; but, on all hands it seems to be admitted that we are indebted to it for the noble structures of the Middle ages. The antiquity claimed by the Freemasons themselves is certainly almost absurd; but there can be no doubt that their association had its types at a period extremely remote—corporations or *collegia* of artificers existing among the early Romans, and even amongst the Greeks themselves. They were scattered, but not extinguished, by the downfall of the two Empires; records of them, and of their power, being found through all subsequent periods down to the fifteenth century. The contents of a statute of HENRY VI., prohibiting them from meeting in chapters, shows that, at that period, they continued to enjoy privileges amounting almost to monopoly. It was not, however, till the twelfth century that the large body of Freemasons succeeded in purging from ecclesiastic influence all the architectural business of the period; and they inaugurated their triumph by perpetuating upon the walls, even of sacred edifices, sculptured lampoons against the clergy.

The earliest lodge of which we have any authentic knowledge was that of Strasbourg, which was regularly instituted by the middle of the thirteenth century. Pope Nicholas III. granted to it a bull of absolution, which was renewed by his successors. The result of the establishment of this lodge as a centre, and of the branch lodges, in connection with it at Cologne, Verona, and Zurich, and afterwards in various parts of France, England, and Italy, was to establish a greater uniformity of practice; insomuch that many of the principal monuments of the thirteenth century, and later, bear so great a resemblance to one another, in the ruling principle of design, that it is impossible to assign their similarity to accident. The connection between the various lodges in all parts of the world appears to have been prompt and complete; and novelties, both in structural and decorative design, successfully adopted in one part of the world, were soon made known to, and practised equally by, those of the craft in the most distant places As they moved from place to place, as they found churches to build, their government was regular. A surveyor governing in chief, and every tenth man being a warden, overlooking nine. Wren's "Parentalia" bears testimony to the great economy and skill displayed in all their works, and the rapidity with which they were executed, and it is remarked that it was precisely in the course of the period during which their influence prevailed that sculpture was first made extensively available for architectural decoration; the necessary moulds for which were all carefully prepared, and handed about for use, one among the other; so that, in all this process, absolutely nothing was left to the fancy of "the village mason." On the contrary, the complaint which we find constantly made throughout the great artistic period is not so much the want of patronage, or of money, or of materials; but the paucity of skilled architects and workmen; which would not have been the case if the genius of "the village mason" had been appreciated as highly by our forefathers as by Mr. Ruskin.

With the neglect of ecclesiastical and monastic architecture, at the period of the Reformation, and the contemporaneous introduction of the Classic school, under new professors, the monopoly and power of the Freemasons began to give way, and much of the mystery pertaining to the craft has since been lost, with its perfect organisation. The attempt to revive Gothicism, therefore, in the present day, is to "reckon without one's host;" and to set up a sham and a mockery, a *caput mortuum*, where our works should be real and noble, and instinct with life.

In a future article we shall conclude our remarks upon this publication.

A NEW COMET.—On the morning of the 2nd instant a comet was discovered by Mr. Klinkerfues, of the Gottingen Observatory, on the border of the Constellation Perseus, near the foot of Andromeda. At four o'clock, a.m., on the 3rd, its right ascension was in 1h. 37m. 30s. and its declination at dep. 37 sec. north. The diurna motion in right ascension was 2m towards the west, and in declination of 1½ deg. towards the south. Mr. Klinkerfues was the discoverer of the third comet of the present year, which became so conspicuous at the end of August in the north-western heavens.

METEORIC CIRCLES.—M. Petit, director of the observatory of Toulouse, has communicated the following note to the journals of that place:—" The earth is at this moment entering into one of the numerous meteoric circles, the existence of which has been for some years admitted by astronomers. It will remain there until about the 16th or 18th inst. Some of the planetary corpuscules, near which we are about to pass, are of very considerable dimensions; one of them, for instance, as large as the telescope of Toulouse, was, in 1807, turned from its route by the action of the earth, and fell in America. At other times, in 1803, 1803, 1807, 1813, &c., their passage manifested itself by showers of dust or fragments of stones. These exceptional falls will, however, only produce very insignificant effects on the earth; and the neighbourhood of some small stars which we approach need inspire us with no alarm. It only excites pure curiosity." *Indépendance.*

AMERICAN NEW INVENTIONS.—The American papers report two great inventions. The first a machine for excavating rock formations, consists of a number of rotating steel discs, worked by steam, which saws and crush the hardest rocks with irresistible power. Exclusively of the engine and boiler, the machinery weighs seventy-five tons: it is easily worked by four men. The other machine is described as a "mechanical amphibia," enabling persons to go to the bottom of the sea or of rivers, and remain there to perform any work needed, such as laying foundations, exploring, gathering treasure, &c. Several gentlemen, among them Mr. Robert Walker, have been down to the bottom of the sea; remaining there half an hour, and moving about at pleasure. The description furnished by the papers is unintelligible, but the principle of the invention appears to be the use of a compressed air, on whose expansion, regulated at will, the vehicle floats, while an arrangement of grapnels and cords is used for locomotion.

NAUTICAL EDUCATION.—The facilities now afforded to all classes in the merchant navy, to attain a good nautical education are highly creditable to the Board of Trade, under whose auspices seven schools have been established for the purpose. Among them is one at the Sailors' Home, Well street, London Docks: there are three distinct classes to whom instruction is given, according to the proficiency of those attending the school, and the object they have in view. Those of the first class may learn to qualify themselves for the examination which they are now required to undergo, to take command of a ship in the foreign trade. The two lower classes are intended for those who have not made so much progress or who are not as yet looking forward to a command. To young men, who, by the shortness of their apprenticeship, have not been very great; and the process of graduation, from the lowest form to the higher grades of instruction—from the reason why terms at which it can be done—brings it within the reach of every one.

LIGHTHOUSES.—From a return issued on Tuesday, it appears that for the year ending December, 1853 a sum of £76,000 remained at the disposa. of the Trinity House, arising from the revenue derived from lighthouses, &c. This has been applied partly to the liquidation of the debt incurred in the purchase of private lights, and to charitable and other uses authorised by law.

MR. HUDSON, M.P., AND THE ROLLS COURT.—Mr. Hudson cleared £43,850 by the sale of the Newby-park estate. The hon member is having comparatively retired, until he comes with the York and Northern Midland Railway is over. He is determined to appeal to the House of Lords, under a full belief that the decision of the Rolls Court will be reversed.—*Herapath's Journal.*

CHESS.

TO CORRESPONDENTS.

SECRETARY.—We have not room, but we are glad to see that what we have so long recommended is about to be carried out At the beginning of the year, the *Chess Players' Chronicle* will commence publishing a List of British Chess-clubs, commencing the List every month on the wrapper. This will really be a boon to the chess-world, both inside and outside the clubs.

A. G.—You have not even approached the true solution. Try and master the Chess Notation You must learn it before you can make any progress in chess.

AN OLD SUBSCRIBER.—We believe among the arrangements for re-organising the West-End Chess-club, the engagement of a player of eminence to be constantly in attendance, is determined on. Applications for the appointment should address the Secretary of the Club. The salary, it is said will be from 60 to 100 guineas per annum

A WELL-WISHER.—Send your name and address; and in the meanwhile take this piece of advice—Whenever, in a public Chess-room, you are accosted by a shabby-genteel person, who, in hasty tones begins as if you are "disposed for a game," give him the "cold shoulder." Be sure to be one of the party with an ivory guide, with whom the less you have to do the better, both for your purse and credit!

YORKIST.—We hear that Mr. R. Crosbie has left Halifax to establish himself as an accountant in Dublin, if this is true, there is a good prospect of a revival of the old Chess spirit in the Irish capital With such players as the Rev. G. Salmon, Mr. Waller, Sir John Blunden, and the above-named amateur, surely a Chess-club might be established with success.

J. H. E. Penrhyn.—We really were not responsible when we spoke of the defence to the A. giler Gambit [illegible] almost any defence, by Mr. Staunton and Mr. Lowe. But that it had now been published by us as defects, to No. VI. of the *Chess Players Chronicle*, which was also directed expressly for us. But the same defence [illegible] to No. 1. [illegible] and the second move. Mr. Kenny may now look out on one side, and MM. Dufresne and Chamouillet on the other Thanks for the correction. 2 As the game in inquiry was assigned, and the error was discovered until the next day, we do not think it should be resumed. Had the false play been detected at the time, White must have retracted Pawn to e4.

BAGSHOT.—He would, probably, have taken the K. Pawn with his Kt, as recommended by the books

J. P.—They are too long-winded. The public at large care nothing for Problems so many moves deep. Try your hand on an end game of not more than four moves

A. Z. R. Y.—I examine the position at leisure one more. You may rely upon its not admitting of a solution in less than five moves 2. We have not space to spare for the solution you require at this moment.

M. P. Hull.—There is no Chess-club at Brussels Some excellent play, however is going on there between Messrs Van den Hoebeck, Sers, de Rivis, and Arts, and we hope to hear received of these gentlemen's each taking a first rate Chess Society

IGNOTUS (Cork, Ire.), Peckham, J., Alexander.—You are mistaken. Look at No 511 again and attentively

R. P., Brompton.—It shall be examined.

VIATOR, Belgium.—You are undoubtedly correct, and speak the opinion of nine-tenths of the Chess community, not only here, but on the Continent in saying that the play of Mr. Harwitz in the pending Match completely confirms the belief we expressed at the beginning. He has certainly raised in that readiness at [illegible] masterly combination gives, but he has lost in combinative skill Against inferior opponents he probably plays better than ever, but against one of the first class he would have no chance than he did seven years ago. After so-ing the extraordinary deficiency in depth and compactness which he has exhibited in the present contest, the idea of comparing him to such players as his countrymen, Von Heydebrand and Lasa, is a mere mockery, either would give him the odds of the Pawn and Move

T. P. H.—If the King retire to his own square after the first check, mate cannot be given in less than five moves

F.—There is no vacancy at the present moment. If any occurs, your offer shall not be forgot on

WAKEFIELD CHESS CLUB.—It is pleasant to hear that it is old-established Chess Society has been re organised; and, under the management of its original professors Messrs. Shepherd and Rathbone, promises to occupy the same proud post as it held ten years back, as one of the best clubs in Yorkshire

RICARDO.—The Dragon you refer to shall appear in its turn. 2. We do not approve of "castling" in a Chess Problem

F. M., Ricardo Bailey, H. W., of Walsall; H. L., of CHOCK; H. E. K.; Enquirator The Problems received shall be reported on next week

A. C.—When the conditions of a Problem are that "White is to move first and mate in three moves," they mean that White—in Black mate in the best possible defence—will give checkmate in three moves, in his own pieces only three times.

SOLUTIONS OF PROBLEM No. 512 by Bolver, Gregorius, True Blue, B. B., Phiz, H. S., Augustine, S. W. K., T. A. of Norwich, T. G. Wells, Ladovicus, T. J. of Hanworth, are correct

SOLUTIONS OF PROBLEM No. 513 by Ernest, Inverness, T. F. Hall, T. A. of Norwich, Tom Boy, M. F. Burphy, Balfour, G. G., S. B. T. J. S., Opal, Cavis, S. T., L. F. of Dalston, are correct All others are wrong.

MATCH BETWEEN MESSRS. LOWENTHAL AND HARRWITZ.

The score up to Wednesday evening, when we write, stands thus:—

Lowenthal	..	..	..	..	..	10
Harwitz	..	..	..	..	..	10
Drawn	..	..	..	..	..	11

CHESS ENIGMAS.

No. 854.—By HON ACCORD, of the Aberdeen Chess-club.

White: K at his 6th, Q at K R 8th, B at K R 3rd, Kts at K 3rd and Q Kt 2nd; P's at K B 2nd and 3rd, and Q R 3rd.

Black: K at Q B 6th, Q at Q Kt 3rd, Bs at K 7th and Q sq, Kts at Q 2nd and Q Kt 6th; P's at K Kt 4th, Q 4th and 7th, and Q R 2nd.

White to play, and mate in five moves.

No. 855.—By STEELA.

White: K at Q R 4th, R at K 6th, B at Q Kt 8th, Kt at K 4th.

Black: K at Q 4th, P at Q 5th.

White, playing first, gives mate in four moves.

THE United States Government has resolved to fit out an expedition to explore the newly-discovered track for a ship-canal across the Isthmus of Darien. The track selected is to that discovered by Mr Lionel Galbourne.

THE fine steamer the *Queen*, running from Aberdeen and Inverness to Edinburgh, had a narrow escape during the dense fog on Saturday last. She struck on a rock not far from Inchkeith, but floated with the rising tide, and was towed by two steam-tugs safely to Granton.

OBITUARY OF EMINENT PERSONS.

THE REV. DR. HARRINGTON.

THE Rev. Richard Harrington, D.D., Principal of Brasenose College, Oxford, died on the 13th inst., after an illness of only three days' duration Dr. Harrington was formerly an Undergraduate of Christ Church, Oxford, from which he was elected to a Fellowship of Brasenose College, in March, 1822, having, in Michaelmas Term preceding, obtained a first-class in *Literæ humaniores*. He was a fellow and Tutor of Brasenose College for a period of eleven years, when he succeeded to a college living, which he held until 1844 In that year he was elected Principal of Brasenose College, on the elevation of the Rev. Dr. Ashurst Turner Gilbert, then Principal to the Episcopal See of Chichester. Dr. Harrington was one of the Pro-Vice-Chancellors, a Delegate of Appeals in Convocation, a Commissioner of the Streets and Market, and a county magistrate. In the affairs of the University, the Rev. Doctor took an active and prominent part, and enjoyed confidence to the fullest extent His talents were of a diversified order, and he was a zealous lover and promoter of all that related to architecture and archæology. He filled the office of President of the Architectural Society for several years, only retired from that post at the commencement of the present month. At the annual meeting of the Archæological Society, held in Oxford in 1850, Dr. Harrington read a valuable and interesting paper on the restoration of the spire of St. Mary's Church, which had been effected, in a great measure, under his personal superintendence. As a divine, Dr. Harrington was regarded with great and deserved respect; and although he was not often called on to officiate, yet his sermons before the University were such as reflected credit on himself, and were worthy of the University pulpit. Dr. Harrington at the time of death was in his 53rd year. He has left a widow (his second wife) and four children.

In the early part of last week, some fellows entered the outhouse of Mr. Shaw, of Bretton west, Yorkshire, and slaughtered nineteen sheep, by cutting their throats. A man named Syke has been apprehended on suspicion.

PHARMACY IN PARIS.—A report from the Minister of Public Instruction recommends the suppression of the chair of medical chemistry, left vacant by the death of M. Orfila, and the substitution for it of a chair of pharmacy, as being of more general utility. An imperial decree has sanctioned the proposition of the report, and created the chair of pharmacy so proposed, and appoints to the new chair thus established Dr Soubeiran, professor of the Superior School of Pharmacy of Paris.

COD LIVER OIL.—*Mere flammam*—to feed common lamps—was, till lately, all that it professed to do; but now its vaunt is, *clere videre*—to replenish the lamp of life when burning low, and threatening to go out. About sixty years have elapsed since Dr. Bardsley first sounded its praises; but scarce a dozen have passed since it was fairly put upon trial in this country, and everybody now knows the result. Thousands of cases, hitherto most unpromising, have, under its auspices, suddenly changed their aspect, and looked bright, hare, a fair fair hastening to decay had scarcely taken a few doses when the ominous cough was suppressed, she recovered her cases, smiled once more on a re-assured family of friends, and went on her way rejoicing; there a case of graver import, which had whispered death to the inquiring ear, made a stand, rallied, and consumption was, for the time, arrested in mid-course: and again, in patients still further reduced by the blighting malady, the administration of the hand oil was frequently observed to respite, soften, and assuage sufferings beyond its power to remove. Scepticism, by slow degrees, made way to conviction; and he who, a few years back, would justly have passed for a quack who should have pretended to cure consumption, is now countenanced everywhere by brother practitioners, who have a l the same story to tell, till the world at large has become convinced of the fact, and there is not now a village apothecary through the length and breadth of our isle who has not himself witnessed some of the endless beneficent wonders which this penetrating balm, under the Divine blessing, has already worked, and is daily working, among the children of men. *Farmer's Magazine.*

MR BENNOCH AND THE COMMON COUNCIL.—Mr. Bennoch has addressed the following letter to the freemen and non freemen of the ward of Cripplegate within:—Gentlemen, For eight years I have endeavoured in the Court of Common Council to represent faithfully, not only the interests of the privileged freemen, but also the interest of the large body of non-freemen within this ward, who, to the disgrace of the Corporation, possess no voice in the elections. On entering the Common Council I soon found that, by the large majority of non-freemen, real independence was little respected, and that a man, to be anybody, must be all things to all men. He must mingle with the cliques that pervade and the coteries that abound in connection with that body. While I met with much to admire, I met with more to lament. I found many men worthy of all respect, but many more with whom I could never cordially co operate, and discerned without difficulty that, if true to my own nature, the area of my influence must be very circumscribed. Seldom concealing my opinion, I was looked upon as an interloper; and I rejoice to say that little, if any, of their confidence was intrusted to my keeping. When a few years ago I felt impelled to offer evidence to the Royal Commissioners, and was summoned before them, I uttered fearlessly and truthfully what I knew to be the facts which have not been and cannot be contested Then the hostility of the mass was so lashed every corrupt motive was imputed—I was denounced as a traitor, and had every unpleasable insult heaped upon me. Now, however much I may respect Cripplegate within—however much I may be obliged to those friends, of all parties, who have so kindly and uniformly given me their support and unwavering confidence, I am, nevertheless, bound to say that, notwithstanding all these gratifications, I am indisposed to subject myself to secret, cowardly innuendoes, or to open brutal attacks. The doubtful honour is not worth the positive annoyance; and so long as the Common Council is constituted as at present, I am resolved to enter it no more. My conduct for eight years is before you. I have never been a silent member, and I am not aware of any pledge made that I have left unredeemed, or am I conscious of having ever given a vote that I now would wish to see annulled. The trust confided, and seven times renewed, I return into your hands. I regret its retirement; and should the time ever arrive when I shall be nearer than many of us imagine—when I can promote your interests without dishonouring myself, which is not now the case, you may command my services. Until then, I am, gentlemen, your faithful servant, FRANCIS BENNOCH. 77, Wood-street, Dec. 8."

OPENING OF RAILWAY COMMUNICATION TO HEREFORD.

IN our Journal of last week we briefly recorded the completion and opening of the Newport, Abergavenny, and Hereford Line of Railway, on Tuesday week. The line affords a direct communication from the mineral districts of Monmouthshire and South Wales with the North of England; and the day was, accordingly, an eventful one in the several towns on the route. Addresses of congratulation were presented by the inhabitants of Newport to the Directors of the Railway; and the first train arrived at Hereford soon after one o'clock. The streets of the interesting old city were tastefully decorated for the occasion, and a procession was formed of the Railway Navvies, Masons, Carpenters, and Foremen, Odd Fellows of the Manchester Unity and Wonderful Order, and the Mayor of Hereford, attended by the Mace bearers and Sword-bearer, and supported by Captain Money Kyrle, and the High Sheriff; the Members of the Town Council; Mayors and Corporations of other Boroughs; citizens, visitors, &c.; several superb banners being borne in the cortège, which emerged from the Barton gate; and, after passing along King-street, Broad-street, High-town, and St. Peter's-street, entered the Shire Hall, where the banquet was served with great taste by the Messrs. Hosley, of the Green Dragon Hotel. The Hall was decorated with the Royal arms, the Corporation sword and maces, banners, and other characteristic establishments. On the dais, five tiers of tables were laid, looking towards the body of the hall; and immediately in front of the dais lay a cross, on a crimson cushion, close to which was placed the mystic Loaf of beef (230 lb. weight), presided over by Mr. Hamlet, of Worcester (to whose superintendence the whole had been entrusted), assisted by Hodges, the cook at the Dragon. On the right, amongst some evergreens, was a group of halberts; and, a little beyond them, on a pedestal, stood the statue of "Cupid," by Mr. Jennings, of Hereford. The eye then rested upon the fine painting of the equestrian figure of George III., decorated with flags; and over the whole was placed a crown. Upon the painting of the Duke of Norfolk, by Lonsdale. On the left of the Mayor's seat were a group of halberts; several blue silk banners, with mottoes wrought in gold. At the lower end of the room the portrait of the late Mr. John Cotterell, Bart., was also decorated with flags and banners, the Royal standard, belonging to the Hereford-shire Friendly Society, &c. A great number of banners, mottoes, and Masonic emblems, kindly lent by the Palladian Lodge of Freemasons, in this city, contributed materially in decorating the room. Many of the dishes of meat, &c., bore appropriate mottoes

The whole of the decorations were entrusted to Mr. Abraham Winter, of the Shire-hall, and were completed by him in the most satisfactory manner.

Mr. Charles Anthony, the Mayor of Hereford, presided, assisted by the

THE DAIS, AT THE BANQUET IN THE SHIRE-HALL, TO COMMEMORATE THE GENERAL OPENING OF RAILWAY COMMUNICATION TO HEREFORD.

ollowing Vice-Presidents:—Sir Robert Price, Bart, M.P.; Colonel Clifford, M.P.; T. Evans, Esq., William James, Esq., James Jay, Esq., F. L. Rodenham, Esq., W. Bennett, Esq., G. Bonnor, Esq., J. E. Gough, Esq., E. Pritchard, Esq. Among those present were—the Lord Bishop of the diocese; Lord Hereford; the High Sheriff of the county, W. Money Kyrle, Esq.; the Ven. Archdeacon of Hereford; Hon. Captain Fitzmaurice; Chairman of the Newport, Abergavenny, and Hereford Railway; Rev. Dr. Symons; Rev. Canon Musgrave; Lady Price; Mrs. Anthony; Mrs. Lingen; Thomas Brown, Esq., Ebbw Vale; the Mayors of Newport, Cardiff, Swansea, and Brecon; Thos. Pritchard, Esq., Secretary to the Newport, Abergavenny, and Hereford Railway; James Grayston, York, Director of the Eastern Union Railway; &c., &c. The company numbering between 500 and 600.

After the repast, the Chairman gave the loyal toasts in succession, followed by the health of "The Bishop and Clergy of the Diocese."

The Bishop of Hereford returned thanks.

The Chairman then gave "The Army and Navy."

Major Montgomery (First Royals) responded in the name of the army; and Lieut. Lyne, of Newport, for the navy.

The healths of the Lord-Lieutenant and the High Sheriff were then drunk. The Chairman then gave "The Chairman and Directors of the Newport, Abergavenny, and Hereford Railway;" for which the Hon. Captain Fitzmaurice returned thanks; and proposed the health of the Mayor of Hereford, for which the Chairman thanked the company. Several other toasts were drunk, including "Success and prosperity to the London and North-Western Company" joining to the toast the names of the most noble the Marquis of Chandos, Mr. Moon, and Capt. Huish. Mr. Alderman Moon and Capt. Huish severally responded. Mr. T. Brown next proposed, in terms of the highest eulogy, "The health of Mr. Brassey," who thanked the company. Mr. Thomas Evans proposed the health of the engineers of the Newport and Shrewsbury Companies—Mr. Liddell and Professor Gordon of the former; and Mr. Robertson, of the latter. Both gentlemen responded. Mr. E. Pritchard proposed "The health of Messrs. Rennie and Logan." The Archdeacon of Hereford then gave "The donors of coal." "Mrs. Anthony and the Ladies" was the last toast of the evening, proposed by Captain Fitzmaurice, and responded to by the Mayor. Several other toasts remained on the list, but the time for the return of the train to Newport having nearly arrived, an instant break up was inevitable.

In the evening a grand Ball and Supper were given at the Shire-hall.

During the day, the navvies employed on the different lines were regaled; as were also the children of the City schools. A ball was also given at the old Town-hall; the theatre was opened gratuitously; and there was a display of fireworks on the Castle green. Altogether, this was a day of glorious festivity for the city of Hereford. The event was similarly celebrated at Leominster, on Monday.

The second Illustration represents one of the principal works on the line—an iron bridge, of fine proportions, across the Wye, near Hereford.

RAILWAY IRON BRIDGE OVER THE WYE, AT HEREFORD.

THE SEA OF ICE," FROM THE NEW DRAMA OF "THE THIRST OF GOLD," AT THE ADELPHI THEATRE.

KIDDERMINSTER PUBLIC ROOMS AND CORN EXCHANGE.

THE foundation-stone of the handsome edifice represented in the accompanying illustration, was laid at Kidderminster, with great ceremony, by Lord Ward on Wednesday week. The site of the building (intended for Public Rooms and a Corn-exchange) is near the junction of Vicar-street with the Oxford-road. The design is by Messrs. Bidlake and Lovatt, of Wolverhampton, favourably known as the architects of Bilston and Pontypool Town-halls, and other public buildings. The plan includes a fine concert-hall, a commodious corn-exchange, a library, a news-room, a lecture-room, and a school of design. The style adopted is Italian. The smaller rooms will be disposed in the front in two stories. The materials are red brick, with white stone dressings, with the exception of the lower story of the front, which will be of white stone, rusticated. The front will be decorated with stone Corinthian pilasters, surmounted by a cornice and balustrade. In a niche in a pediment raised over the front, will be placed the borough arms, cut in stone. The entrance leads to a hall; at the extremity of which will be the entrance of the concert-room—86 feet long, 46 feet wide, and 33 feet high, with a paneled ceiling. The Corn exchange will flank the Music-hall: it will be 59 feet long, 36 wide, and 20 feet to the top of the walls, and will have an open iron ornamental roof. It will be provided with that most important requisite, light, by a row of windows on one side, and by windows in

THE KIDDERMINSTER PUBLIC ROOMS AND CORN-EXCHANGE, FOUNDED ON WEDNESDAY WEEK.

the roof. The Corn-exchange and Music-hall being, together, a good deal wider than the main front of the edifice, and the front wall of the Corn-exchange lying some thirty feet further back than the main front, the architects have partly concealed the Corn exchange by means of a tower 60 feet high, containing a second entrance to the Music hall, and also an elegant campanile. This entrance is on the same frontage with the main entrance, but lies about fourteen feet further back: receding nearly the same distance still further is the entrance to the Corn exchange, surmounted by a clock. The Corn exchange is so constructed that it will form a convenient supper-room, communicating by means of lobbies with the Concert room. The arrangement of the several apartments throughout the building is well conceived.

After the foundation-stone had been laid by Lord Ward, his Lordship addressed the company on the advantages of the institution; and was followed by Mr. Lowe, M.P. for the borough. In the afternoon, the event of the day was celebrated by a public dinner, at the Lion inn, at which there were about 130 guests.

"THE SEA OF ICE," AT THE ADELPHI.

WE this week present an Illustration of the second tableau in the new piece produced at the Adelphi Theatre, under the title of "The Thirst of [for?] Gold." The scene in question is the "Sea of Ice" on which the commander of the *Eugenie* is cast, with his family, and *Putney Will*. We have already described the extraordinary machinery by which the icy surface of the stage is converted into a watery one while the hapless parents sink into the in-rushing sea, leaving their infant daughter on an ice-block, yet undissolved, and which floats her ultimately to a place of safety. The situation is, in all respects, awfully restored; and, illustrated, as it is, by scenery and machinery so applicable, is irresistibly effective. The acting of the piece throughout is capital. Mr. Webster, as the villanous *Pedro*, afterwards the *Marquis D'Arvex*, displays his usual tact and talent in the portraiture of cool and quiet rascality, which has become, as it were, the pattern-type now-a-days of the stage criminal. The accepted playwright of the present time eschews bombast verse, and affects a colloquial familiarity, which requires from the actor more intensity than vehemence. We doubt whether the recipe is not growing of too easy application, and makes, on every fresh occasion, fewer demands on both performer and dramatist: the character is, in fact, fast becoming stereotype, though it has not yet quite outlived its attraction. Madame Celeste's impersonation of the Mexican girl is decidedly picturesque and telling; while the development of the psychological elements requires more than ordinary intellectual acumen: and this Madame Celeste brings to the performance, and realises the difficult situations of the later scenes with equal truth and vigour. *Putney Will* by Mr. Keeley is also a rare example of eccentric acting. The idea of the character is somewhat *outré*. A British sailor, who mistakes his trembling impulse to partake in every row, and to resist oppression of every sort, for the sign and symptom of cowardice: and then wonders at the deeds of valour he has performed, while in such a state of excitement. The assumption suits Mr. Keeley's style of acting perfectly. The part, unfortunately, only appears at short intervals; but it is so well interpreted that it is never forgotten. The drama, considered as a spectacle only, is eminently calculated for a long run.

THE ELEPHANT'S FEAT, ASTLEY'S.—(SEE NEXT PAGE.)

THE ELEPHANT'S FEAT, AT ASTLEY'S.

A grand Chinese spectacle, entitled "The Wise Elephants of the East; or, the Magic Gong," has been produced here, and excited no common admiration, owing to the extraordinary feats performed by these docile and well-instructed animals. These vast creatures are made to stand on their hind-legs, with their fore-feet, poodle-wise, dangling in the air; one of them also makes a colossal bridge for the other to pass under; and the latter ultimately is seen standing, as it were, on its head and trunk, with its hind legs raised perpendicularly. Both elephants place themselves also on pedestals, and wheel round rapidly; the female contrives, moreover, to balance herself on her wide legs on a narrow pedestal; and the male, placing his fore feeton the pedestal, pirouets, in a circular direction, with extraordinary swiftness, the attendant being all the while on his back, who still retains his position after the animal quits the pedestal, and during the time that he lies down and rises again to his feet. The dramatic piece prepared for their introduction is written by Mr. George Almar. It is gratifying to learn that, in the instruction of these stupendous creatures, no cruelty has been exercised. Their owner, he pursues, he says, "a system of training based on the maxim, that the *suaviter in modo* is at all times preferable to the *fortiter in re*." The elephants have been in his possession for two years, and during that period, by a course of gentle training and humane treatment, without the slightest coercion, he has brought them to the present point of perfection. They are now seven years old; the length of each being nine feet from toe front of the head to the tail; they are ten feet in girth; and in height, seven feet two inches and seven feet respectively. Their joint weight is three tons. Their proprietor justly takes credit to himself for having, in their training, produced a novelty hitherto unparalleled in the history of this mammoth quadruped.

MUSIC.

English Songs and Melodies. By Charles Mackay and Sir H. R. Bishop.

King Alfred.—We omitted last week to publish a Note by Sir H. R. Bishop in explanation of the history of the beautiful air, "My Lodging is on the Cold Ground;" to which the song of "King Alfred" has been adapted. The melody is a great favourite, and has been claimed by Thomas Moore, on behalf of the Irish; and by Robert Burns, on behalf of the Scotch. Irish and Scotch music are rich enough to stand on their own merits, without appropriating the music of England. Sir H. Bishop says, in reference to it:—"The account which Downes has given of this song is referred to in Sir John Hawkins' 'History of Music,' vol. iv.:—Downes relates that Mrs Mary Davis acted in a play called "The Rivals" (said to have been written by Sir William D'Avenant, 1668), and in it sung, in the character of a shepherdess mad for love, the following song, "My Lodging is on the Cold Ground," &c.; which King Charles II. hearing, he was so pleased, that he took her off the stage. Several circumstances occur to justify the assertion which has been put forth, that the song attributed to Sir W. D'Avenant was originally sung to a tune called 'On the Cold Ground;' a copy of which, printed in 1685, is preserved in the Bodleian Library, Oxford. It may also be worthy of notice, that the fine impressive melody to 'How stands the Glass around?" commonly known as "General Wolfe's Song,' was founded upon the same tune. The pre-cnt air, adapted to the words beginning 'My Lodging is on the Cold Ground,' is in 'The Songster's Companion,' printed in London, 1775; but there are some detached editions of the music, with those words, bearing marks of an earlier date. Although published by the late Mr. Moore, in his celebrated collection of 'Irish Melodies,' we are warranted in stating that this beautiful air is undoubtedly English."

The Harmonic Union, on Monday evening, gave a concert consisting entirely of secular music. The programme, it would seem, was not attractive; for the attendance was very thin. The performance began with Beethoven's overture to "Prometheus," played with considerable spirit; then followed Mr. Macfarren's cantata, "Lenora," which was first produced last season. It was now much better performed than before, and had a more satisfactory effect. The principal singers were Miss Dolby, Mr. and Mrs Weiss who gave the solos exceedingly well. The choruses and orchestral parts, likewise, appeared to have been carefully rehearsed. The only fault was the excessive loudness of the instruments: they were often positively deafening, and completely overpowered the voices, both in the solos and in the choruses. As the performance went on, none of the particular morceaux appeared to make much impression; but there was considerable applause at the end. The cantata has certainly much merit; it is the work of an able and experienced musician. But it smells too much of the lamp, the score is overcrowded; there are too many laboured contrapuntal contrivances, and there is, throughout, a want of that simplicity, so difficult to attain, which is the consummation of art. The different movements, moreover, are too much spun out; and the length of the whole is out of all proportion to the subject, a simple legendary ballad. This cantata was followed by Mendelssohn's fine concerto for the violin, most splendidly executed by M. Sainton—a treat of the very highest order to the amateur. The rest of the evening was devoted to Handel's famous secular cantata, "Alexander's Feast," a beautiful work, which, however, has not withstood the attacks of time as the great master's immortal oratorios have done. The light dramatic music of Handel's day has an antiquated air, like a fine old picture of some beauty of George the Second's day, decked out in flounce and furbelow, hoops, and stomacher. The airs, frequently charming in their subject and design, are disfigured by stiff, formal divisions; and the choruses have too much fugue and counterpoint. The effect of this style of composition can be got over only by the masterful and finished performance, but, on this occasion, the principal airs were entrusted to young singers, not unpromising, but quite unfit for so delicate a task; and the choruses, though tolerably accurate, were sung with as profound a gravity as if they had belonged to an oratorio. The thinness and dryness, too, of Handel's orchestral scores, when not retouched and embellished by the ilcate hand of a Mozart, are much more felt in his light and secular than in his grand sacred works.

The Wednesday Evening Concert of this week presented a sufficient variety of matter. Parts of it were good; but very little was new. There was, in the first place, a selection from Rossini's "Guillaume Tell," consisting of the overture, an air, and a duet. Then, Madame Amedei sang the splendid scena, "Elena, o m'," from the opera "Donna del Lago," in which she displayed the richness of voice and greatness of style for which she is so highly distinguished. There was next a sort of musical curiosity—a Grand March said to have been lately composed by Rossini for the Turkish Sultan. To give it the full effect a corps of military bands were added to the orchestra, and it is scarcely necessary to say that the martial clangour was astounding. Several favourite vocal and instrumental pieces, selected from the works of Mr. Benedict, were then performed: among these were the overture to "The Musen-singer," several songs from "The Gipsy's Warning" and the "Bride of Venice;" and one of his pianoforte concertos, performed by Mdme. de Barry, a highly-accomplished pianist, who, on this occasion, made her debut in London. The remainder of the concert, as usual, was of a light and familiar kind, consisting chiefly of vocal pieces, sung by Madame Amedei, Miss Lascelles, Miss Stabbach, Mr. Weiss, Mr. Perren, and other vocalists: most of them very good in themselves, but some of them sadly common and hackneyed. The hall was pretty well attended, but not so well as last week; indeed, the concert was composed of less attractive materials.

Miss Dolby concluded her series of soirées on Tuesday evening with an interesting selection of music, both vocal and instrumental. Her own singing was admirable. She repeated Mr. Lindsay Sloper's new cantata "The Lady and the Nightingale," which was first performed at her previous concert, and gave it with even increased effect. And she was equally successful in Beethoven's scena air, "In questa tomba oscura," so full of deep and gloomy feeling. Several other vocal pieces were well sung by Signor Ciabatta, Mr. Walter Bolton, and Mr. Land. The principal instrumental pieces were Haydn's Quartet in E flat, No. 64, performed by Messrs. Dando, Watson, Cramer, and Lucas; Weber's duet for piano and clarinet, played by Mr. Sloper and Mr Lazarus; and a fine trio for the piano, violin, and violoncello, composed by Mr. Osborne, and performed by himself along with Messrs. Dando and Lucas. This series of soirées have been attended with the success due to the elegance and taste with which they have been conducted. Miss Dolby has "gained golden opinions" by them in more senses than one; for her rooms have been crowded with fashionable company and her audiences have been warm in their approbation.

Mr. and Mrs. Sims Reeves are in Paris, whither they have wisely gone for the sake of rest and relaxation, after their great exertions in the provinces during the autumn. They will return for the opening of the English opera at Drury-lane, which is expected to take place in February next.

Mademoiselle Clauss has taken her departure, *vid* Paris, for St. Petersburg, from whence she intends to return about the beginning of our musical season.

PROVINCIAL INTELLIGENCE

A New Theatre for Leeds.—We are glad to hear that the long-talked-of and much-required scheme of building a new and commodious theatre, suitable to the wants and importance of this town, has again been mooted: and, from the spirited manner in which the promoters are carrying out their views, we trust that the undertaking will meet with the success it deserves especially as it seems likely to be of a very profitable character. We are informed that the scheme has been duly registered, and that a prospectus will be published in a few days, and that share for more than half the required capital have been already applied for.—*Leeds Intelligencer.*

Lord Adolphus Vane and Fair Non-Electors of Durham.—On Tuesday last the ladies of Durham presented Lord Adolphus Vane, ex M.P., with a snuff-box and diamond ring, at the Exhibition Rooms. The snuff-box bore the following inscription on the lid, surmounted by the city arms:—"Presented by the ladies of Durham to Lord Adolphus Vane, December, 1852." On the bottom were the family arms of the noble Lord. It is presumed that these gifts, which amount in value to £70, are meant to console the noble Lord for the loss of the representation of Durham. His Lordship appeared to be much affected with his reception, and was enthusiastically cheered during the whole of an excellent address, in acknowledging the gratifying compliment paid to him.

Hailebury College Examination.—The public examination of the students of the college took place on Monday, in the library of the college. Some interest was imparted to the examination from the fact that it was the last examination which the Court of Directors, as at present constituted, have power to hold. The competition during the present year was an unusually close one. The prize for the English essay was borne away by Master M. Melvill, the son of the respected Principal, a young man who has just completed his first term in rank and first in his class was Master Manyles, son of Capt. Manyles, of the West India Steam Packet Company, who carried off a full third of all the honours conferred on the class. Mr. Morley, a student who successfully competed for the first appointment conferred by Lord Broughton on the last University, was also mentioned as having passed with high distinction though he carried off no prize.

The War in the East.—Newcastle.—On Monday evening a public meeting was held in the Lecture room, Nelson street, in this town, "to consider the propriety of petitioning her Majesty the Queen to co-operate vigorously with France in the defence of the Ottoman Empire." The meeting was convened by the Mayor (Mr. R. Dodds), in pursuance of a requisition addressed to him, and signed by 120 of the principal inhabitants, including Sir John Fife, and a considerable number of the members of the Town-council, merchants, tradesmen, professional men, and others. The room in which the meeting was held is capable of accommodating upwards of 1000 persons, and it was crowded to excess throughout the proceedings. Resolutions expressing the feeling of the meeting were unanimously adopted; and the proceedings then terminated by a vote of thanks to the Mayor, who presided.

Dartmoor Prize Essay.—The premium offered for the best plan for reclaiming Dartmoor, and for the development of its various resources, has been awarded to Mr. Henry Tanner, estate agent, of Exeter, who was the successful competitor for the Royal Agricultural Society's £50 prize for his report on the agriculture of Devonshire. The recent alterations in the transportation laws have rendered Dartmoor an object of national interest, from the great success which has resulted from the establishment of the convict prisons on the moor, and the profitable employment of the convicts in reclaiming the surrounding waste. There are upwards of 200,000 acres of waste land, of good quality, lying in the midst of the fertile county of Devon, the property of the Prince of Wales, which is now almost unproductive.

New Catholic Church at Shrewsbury.—The Earl of Shrewsbury attained his majority on Saturday, and in commemoration of the event, the four-and-ten-sons of a Roman Catholic Church was laid at Shrewsbury, by the Right Rev. Dr. Brown, in the presence of a large number of the Roman Catholic clergy and the principal residents of that persuasion. The edifice is to be erected at the expense of the noble Earl, from the designs of Mr. Pugin, son of the late eminent architect. It is estimated to cost £10,000.

Sailors' Home at Greenock.—Steps are being taken to re-establish the Sailors' Home at this port. An energetic committee have made arrangements for the purpose, and will engage a steward and qualified superintendent, on whom, it is obvious, the practical efficiency of the institution must in a large measure depend. It is no doubt desirable that all such establishments should be well-equipped with libraries and other means of intellectual and moral improvement being provided, no Sailors' Home throughout the kingdom has an income equal to its expenditure. It is, therefore, to be hoped that the friends of the sailor will assist in at least giving a new impetus to an institution likely to prove beneficial in its operations.

Emigration from Plymouth.—On Monday week the *Scotia*, 716 tons register, left Plymouth for Sydney, and the *Zo la* for New Zealand. On the following Wednesday the *Kent* (815) sailed for Melbourne. These ships have taken out 40 married couples, 18 single men, 131 single women, and 87 children. The *Bodmin* (887) arrived from London on the same day, *en route* for Sydney, and sailed on the following Saturday.

Diabolical Act of Poisoning Dogs and Game.—For some time lately some miscreants have resorted to a diabolical system against A. M. Mundy, Esq., of Shipley Hall, Derby, by poisoning his pheasants. Several of the preserves have roads passing by them, of which the parishioners at Shipley have a right of access; the birds in these resort. At the beginning of the season Mr Mundy lost one of his best pointers, and since then a valuable retriever dog, both by poison. There is very little doubt that Mr. Mundy's party were watched, and no road too correctly judged by which they would return, and that poisoned food was laid where the dogs would be sure to pass, as in each instance they were suddenly seized and died almost immediately, and on examination of the contents of the stomach poison was discovered.

Grave-closing at Portsmouth.—A letter has been received from the Home-office, addressed to the churchwardens of the parish, and written by the direction of the Queen in Council, ordering all the vaults and graves under the various places of worship to be closed forthwith, and all interments in the graveyards attached to the same to be discontinued on and after the 1st of June next. This order is the result of a report of the graveyards in this parish had been a source of great complaint for some time past, and the above order has been hailed with satisfaction.

The Fog in Manchester.—During the past week there were serious fogs on the Manchester Exchange. People lost their way; children were put in the streets weeping and in great distress—though some of them were not many yards from their own doors. Unprotected females were in some cases almost frantic. Patent safety cabs were no longer safe even for their drivers, who had to dismount from their seats and lead their horses by the reins. Omnibuses travelling in strings, were frequently brought to a sudden halt on finding that the foremost had run the 1 ders up against a church or some other public building, or had got upon a footpath. At least three people lost their lives by walking into canals. Several had a narrow escape from drowning.

Juvenile Criminals at Liverpool.—The General Committee of the Liverpool Town council have had under consideration a proposition to establish a reformatory for juvenile criminals in Liverpool, and have decided upon making a recommendation on the subject to the Council at their next meeting, and a number of gentlemen connected with the shipping interest are favourable to the project.

Extraordinary Outrage.—On Thursday evening week, Mr. Bingalle, of Sheffield, residing near Rotherham), nurseryman, whose house and grounds are in a lonely situation, nearly a mile from that village, opened the door, walked into his grounds about six p.m., when he was seized by three ruffians bound by both his hands and feet, and secured to the handle of the oven door, and threatened with instant death if he did not reveal to them where his money was. He gave up all the money he had, amounting to 19s. 3d. Not satisfied, they ransacked the house, leaving Mr. Bingalle fast bound. Fortunately the cord with which his hands were secured was new, and he succeeded in loosening the knot, and thus freed himself from his bonds. The villains have as yet escaped.

Rewards for Dispatch.—The South American Government has, on the motion of the Legislative Council, awarded the sum of £400 to Captain Champion, of the *Victoria* steamer, in consideration of his having made the voyage out from England to Port Adelaide, with a cargo in 69 clear days. The like sum will also be awarded to any other ... which shall make the voyage out, whether under sail or by steam, in 67 days, within the next two years. To provide for this the sum of £6000 has been voted. It is made a condition that such vessels shall take out a contract mail.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

The literary pensions just granted by Lord Aberdeen, in the name of her Majesty, to Mr. Alaric A. Watts, and to Mrs. Hogg, the widow of the Ettrick Shepherd, have afforded subjects for conversation in literary circles during the past week. To Mr. Watts has been given a pension of one hundred pounds a year, and to Mrs. Hogg a pension of fifty pounds a year. The services to art-literature rendered by Mr. Watts have not been sufficiently appreciated by the public. The "Literary Souvenir" (of the sustained annuals by very far the best) was, while under Mr. Watts's editorship, a real service to the cause of illustrated books. The pictures were generally selected with great good taste; and the literature appended to them, whether poetry or prose, was always to the point, and good of its kind—the kind also being good of itself. But Mr Watts's services to literature were not restricted to editorial duties: he was, and will perhaps be again, a graceful poet. Some of his verses (why has he been so long silent?) overflow with domestic pathos and beauty of no ordinary kind. It will be pleasant to him, no doubt, to learn that we have not heard a syllable said against the propriety of the grant. Authors, it is alleged, are seldom kind critics about one another. There is truth in the remark; but not less true is it that they are always ready to rejoice in the pecuniary welfare of one another.

Poets, poetasters, postasters, and poetites (for into these divisions does Ben Jonson divide all dabblers in verse) complain, and with reason, of the slender encouragement afforded by the public to new poetry even of the best description. Tennyson, it is true, derives a comfortable annuity from the sale of his four little volumes of verse; Charles Mackay is not only handsomely paid by English publishers, but, in spite of the non-existence of an international copyright, shares in the profits of his works that have been republished in America; and Mr. Longfellow, it is said, "does pretty well" with his poems; but what other living poet, it is asked, of recent reputation, obtains a penny from his publisher for his effusions in verse? Our great publishing houses are thinking seriously of adopting a lithographed form of letter for refusing and returning every offer of verse—epic, dramatic, pastoral, or even "on several occasions" "A greater drug in the market than verse," said a modern Jaush Torson to us the other day, "cannot to be imagined. The last age was a poetical one, this is an engineering age. Our fathers delighted in fiction—we rejoice in facts. Lord, Sir, we have more good poetry already in England than people care to read. There's Mr —— (I will not name him), will commence and complete a poem in an omnibus—ah, and not a bad poem too!—between Lord's Cricket-ground and the Elephant and Castle; and yet, to my knowledge, he has never read 'The Deserted Village' or 'The Vanity of Human Wishes;' and as for buying them, he would never, I assure you, think of that." "And yet," it was observed in reply to our left-legged Jacob, "this is, in many respects, a poetical age. We have more poets than ever. Ask Mr. Murray; ask Mr. Longman; above all, ask Mr. Moxon. Young men and girls, mistaking inclination for power, and the desire for the faculty divine, rush into rhyme—and would, if possible, rush into print with a reckless rapidity unforetold by Horace, or unthought of even by Pope. The public, I agree with you, will not buy new poetry; and as publishers do not exist to benefit the public at their own loss, it is hard to expect that they should throw their money away in the idle belief that they are doing good to poetry by encouraging writers of verse, in an idle expectation of discovering a new Milton in Moorfields or a new Byron in Bermondsey or St. Mary Axe."

Collectors of works of art are complaining, and not unjustly, of the depreciation of many modern prints, by the recent sale of the stock of Mr. Alderman Moon. There is a curious, but a general feeling prevalent among the connoisseurs, to wish to possess what other people do not possess, and not to care very much about things particularly common. Rarity alone supplies, at times, the place of beauty. Imagine then the disgust among collectors, on seeing at almost every railway refreshment station, in the principal waiting rooms of every hotel, and not unfrequently behind the bars of busy public houses, prints after Landseer and Wilkie, obtained by their recent purchasers at one-tenth less than collectors paid for them. Sir Ephraim Stanes, in Belgrave-square, and Hans Holbein, Esq., in Westbourne-terrace, are not over well-pleased at finding the same decorations in the Swindon refreshment-room of the Great Western Railway, or the bar of the Goose and Gridiron, that they have been accustomed to see on their own walls at home; nor do they care to hear from some of their friends that Jones and Smith, the tax-collectors for their districts, have each bought a Bolton Abbey in the Olden Time and hung them over their mantelpieces in their front parlours in Hanover-place and Coleshill-street. The public, it is true, gain by the wider dispersal of fine engravings; but are the impressions really fine? It is asked; and does not Sir Edwin Landseer and Mr. Cousens equally suffer as artists by the sale of prints, in which the original delicacy of finish to be found in the best and really only good impressions, is not traceable by the keenest eye, and by the best well-wisher to their joint reputations? The effect of such a depreciation of fine prints is already visible. Collectors will no longer pay large prices for new works and proofs before letters. They will wait till the stock is sold off, and proofs and prints have fallen to their real market value. This waiting on the part of collectors will, if we mistake not, seriously interfere with the production of very fine engravings. As for line engraving in England—that noble branch of the art—no one pursues it now amongst us, except Mr. J. H. Robinson, Mr. Doo, and Mr. Watt. Size, rapidity, and general effects are all that engravers and print-publishers think very much about.

Mr. Monckton Milnes has become the purchaser, during the present week, for the sum of six guineas, of a copy of Congreve's works, presented by the poet himself to Sarah, Duchess of Marlborough, the wife of the great Duke. We envy Mr Milnes his acquisition. The copy is a fine one; large paper, and in old red morocco: with a dated inscription on each volume in Sarah's own handwriting, recording their presentation to her in 1710, by the great dramatist. The "Wimbledon" book plate in each volume accounts for the sale of the volumes. They were probably never at Blenheim.

Labourers are busy erecting Marochetti's equestrian statue of King Richard I. in front of Westminster Hall. The site is good in itself, though far from appropriate. Smithfield, with its tournament associations, or the Tilt-yard, so famous for its jousts would have been better places. An admirer of "Ivanhoe" recommended Ashby-de-la Zouch. There was some humour and some propriety in the recommendation.

Mr. Dickens has returned to London from a tour in Italy.

Australian Wool.—The *Melbourne Argus* gives the following comparative table of exports of wool shipped during the year ending July 5th:—

	1852	1853
Melbourne	9,381,967lb.	10,218,046lb.
Geelong	6,731,400	6,721,260
Port Fairy	723,000	1,239,738
Portland	1,752,800	3,080,560
	18 657 867	21 119 294

The number of Cattle ... and in 1853, 761,5... But it would be wrong ... of which we have ... and which may one day seriously affect the supply of wool which they now draw from these shores. The value of the carcase is so ... naturally to effect the care with which ... In fine, fat, large-sized sheep now frequently sell at 30s. each, the current price before the gold discovery having been 10s. to 12s., while the fleece has scarcely improved in value at all.

NEW BOOKS, &c.

CRABB'S DICTIONARY.

The Fifth Edition, corrected, enlarged, and brought down to the present time. By the Rev. HENRY DAVIS, M.A. Illustrated with 700 Engravings. Crown 8vo, cloth, price 9s.

A DICTIONARY of GENERAL KNOWLEDGE; comprising an Explanation of Words and Things connected with Literature and Science, &c. By GEORGE CRABB, A.M. London: WILLIAM TEGG and Co., 85, Queen-street, Cheapside.

TEGG'S CHRONOLOGY.

In one handsome volume, post 8vo, cloth, price 9s.,

TEGG'S DICTIONARY of CHRONOLOGY; or, the Historical Reminder. Forming a Complete Guide to the Pronunciation, Derivation, and Right Application of Chronological Terms and Phrases, from the Earliest Period of Time to the Present Time. Fifth Edition, revised and improved

London: WILLIAM TEGG and Co., 85, Queen-street, Cheapside.

Ten th Edition of

RUINS of MANY LANDS.—NOTICE.—A Fourth and Cheaper Edition, Revised and considerably Enlarged, of Mr. MITCHELL'S "RUINS of MANY LANDS." With Illustrations. Cloth, price 6s. 6d.

"In this delightful volume Remarks on Layard's latest Discoveries at Nineveh and traces of nearly all the Ruins of interest now in the world. London: WILLIAM TEGG and Co., 85, Queen-street, Cheapside.

Now Ready, on super-royal sheet price Twopence; and on plate paper, price 4d.; with 7 beautiful Illustrations by GILBERT M'KERNAN and other Artists Engraved by THOMAS GILKS.

GILKS' PICTORIAL ALMANAC FOR 1854.

London: PIPER BROTHERS and Co., Paternoster-row.

Just Published, Part I., price 1s.,

PROCEEDINGS under the ROYAL COMMISSION of ENQUIRY into the CONSTITUTION and CONDUCT of the CORPORATION of the CITY of LONDON, and the Alleged Abuses of Bridge, Gurney, Municipal Writers in the House of Lords; and Edited, Explained, and Illustrated with Map by JAMES ALEXANDER, Secretary to the City of London Municipal Reform Association.

H. G. COLLINS, 92, Paternoster-row.

"A hearty welcome to you, my very best of friends."—Shakspeare.

KIDD'S JOURNAL of NATURE and NATURAL HISTORY: edited by WILLIAM KIDD, of Hammersmith, has now become a Journal Favourite and deservedly so. It is full of good things, fresh as a morning spent in all parts of the country with the birds, and the flowers, and the fields. Published also Monthly, price 1s. 6d.; or, post free, 1s. 8d.

London: B. GROOMBRIDGE and SONS, 5, Paternoster-row.

ELEGANT CHRISTMAS PRESENT.

This day is published, 4to, handsomely bound in cloth gilt, price 18s., or morocco extra, 28s.,

FEATHERED FAVOURITES. Twelve exquisite Coloured PICTURES of BRITISH BIRDS. From Life and by HARRISON WEIR. With Descriptions adapted from the best Authors.

"A companion volume to 'Poets of the Woods;' and what can always be a more companion volumes, the present one is better than its predecessor. As specimens of printing in colours, the plates are among the most exquisite ever produced."—Athenæum.

"As delightful a gift-book as the season will produce."—Spectator.

The POETS of the WOODS. Twelve beautifully-coloured Plates, from Original Designs by JOSEPH WOLF. 4to, handsomely bound in cloth, 18s.; or morocco extra, 28s.

London: THOMAS MCLEAN, 26, Haymarket.

Now ready, Cheap Edition, 3s. 6d., cloth,

THE SUCCESSFUL MERCHANT: Sketches of the Life of Mr. SAMUEL BUDGETT, late of Kingswood Hill, Bristol. By the Rev. WILLIAM ARTHUR, A.M.

*** The Crown 8vo Edition, price 5s., is still on sale.

London: HAMILTON, ADAMS and Co.; and JOHN MASON, Bristol.

BOOKS, by the Rev. J. A. JAMES, suitable for CHRISTMAS and NEW YEAR'S PRESENTS.

THE YOUNG MAN from HOME; or, Counsels and Guide through Life to Immortality. Eleventh Thousand. Fcap., 3s. 6d., cloth.

His Majesty the King of Denmark,
&c. &c. &c.

The FIRST VOLUME of

ILLUSTRATIONS of the SPIRES and TOWERS of the MEDIÆVAL CHURCHES of ENGLAND. By CHARLES WICKES, Architect. Royal folio, containing Twenty Six beautifully LITHOGRAPHIC PLATES, several of which are double, making in all Forty-one Subjects, drawn on Stone by the Author, Printed on Stone by Mr. Graham, and published under the superintendence of Mr. Wickes. Illustrations have been selected with great judgment, and appear to be drawn with the greatest care and truthfulness."—Daily News.

"The number of which has yet appeared in illustration of the spires and towers of our native land. * * * More perfectly artistic architectural drawings we have never seen. * * * Consummately beautiful, taken from such favourable points, and executed with such skill as will delight every lover of Gothic Architecture."—Morning Advertiser.

"Mr. Wickes' very eloquent and highly instructive introduction."—Ibid.

"The magnificent volume * * * We scarcely dare allow ourselves to dwell on the specimens here so faithfully, artistically, and with great pencilled, and the engravings upon plates as the work deserves should pass the bounds of sober judgment."—Mr. Wickes' Illustrated Architectural Works.

"A prospectus of the work will be forwarded on application. All orders and communications to be addressed to Mr. W. M. THOMSON, at the office for the publication of Mr. Wickes' Illustrated Architectural Works, 28, Sackville-street, Piccadilly, London.

SIXTY-FOUR PAGES FOR TWOPENCE.

Now ready, No. 1, of

THE ART-WRITER:

A New Monthly Illustrated Magazine.

THE PRESS.

Books and Magazines have been essential to the moral life of nations and the highest interests of civilisation. It is into that "The Art-Writer" will fill a long and detailed want in the popular literature of the day.

THE USEFUL.

"The Favorite" will vindicate its right to exist, and its claim to be read by everybody, by giving information that everybody ought to know.

THE ENTERTAINING.

Every person who likes a pleasant hour may get it by reading the Stories, humorous Sketches, and amusing Anecdotes; and admiring the Pictures in "The Favorite."

THE BEAUTIFUL.

"The Favorite" will attempt to cultivate the taste of the Beautiful in all its readers.

THE WONDERFUL.

"The Favorite" will minister to the healthy craving of Wonder in the human mind, by giving correct descriptions and illustrations of the wonders of the world.

THE CURIOUS.

One of the departments of "The Favorite" will be devoted to verbal and pictorial delineations of curious things, including the most interesting samples of the Blackness, and the rarest specimens of the genus homo.

THE ARTS

The Fine Arts, both in their relation to manufactures and social refinement, will be specially and particular an element of popular progress. "The Favorite" will answer a demand, and fill in with a tendency, by assisting the Art Education of the people.

THE SCIENCES.

Science, in its triumphal progress, and its application to the utilities of life, being "The Favorite" great task of the age, will find a familiar exponent and a truthful recorder in the pages of "The Favorite."

THE FIRESIDE.

Nothing being of more importance to the welfare of our people than the innovation of healthful Pastimes for the Fireside, it will give variety of information and advice on domestic economy, amusing and interesting, and other subjects appertaining to the duties, the graces, and the happiness of Home.

THE JUVENILES.

In its zeal to interest and utility the general reader, "The Favorite" will not forget the 5th millions of our juvenile population, but will endeavour to assist the efforts of parents and teachers in the great work of Education, and make itself the companion of the school and the playground.

THE PROGRESSIVE.

As the constitution of the human race, "The Favorite" will steer the progressive capabilities of the human race. "The Favorite" will strive to assist in the slow and sublime march of humanity to higher destinies.

QUALITY.

The subject-matter of "The Favorite" will be supplied by some of our best writers, so that its articles will be drawn and engraved by some of our best artists. The work will be educational in its aim, scrupulously moral in its tone, and elevating in its tendency.

QUANTITY

Each number of "The Favorite" will be well printed, in clear, legible type, on good paper, and contain SIXTY-FOUR PAGES, for each of which it will be published in a wrapper, and published monthly, for a Penny.

Published by PARTRIDGE and CRANEY, 34, Paternoster-row; and sold by Booksellers.

"These are Mr. Russell's most celebrated songs, and there is hardly a song in London who is not acquainted with 'Cheer, Boys, Cheer.'"—The Times, Sept. 19, 1853.

DR. RIMBAULT'S OPERA MUSIC BOOKS. A Selection of the most favourite and well-known Operas, arranged for the Pianoforte, without words. Price 6s. each.

In the present series of Operas, all cautionary matter is carefully omitted, the arrangement being confined to the Music alone, which follow in the same order as in the Opera. Each Book contains the whole of the Melodies in each Opera, while the usual "Books of Airs" rarely contain more than one half. Each Book is handsomely bound in cloth, and the Opera Music Books, which is confidently believed to be the most portable and convenient, as well as the most facility of execution with effect, and, what is especially important, a due consideration of the mechanical requirements in the modern pianoforte.

The Series consists of—

La Figlia del Reggimento	Le Domino Noir
La Favorita	Nitt
Lucrezia Borgia	Anna Bolena
Semira di Zamora	Le Prè aux Clercs
Don Giovanni	La Gazza Ladra
Sonnambula	Otello

A large assortment of Violins, Harps, Instruments, Concertinas, Flutes, Zoucave Horns, Metronomes with and without the bell, and other Instruments. Also Books, Reeds, Strings of all sorts, and every article required by the musician. Catalogues and Price Lists containing a variety of particulars are to be had on application, gratis, or postage free.

ROBERT COCKS and CO., New Burlington-street, Publishers to the Queen.

BROOK-STREET RAGGED AND INDUSTRIAL SCHOOL.

RAGGED, INDUSTRIAL, AND FREE DAY-SCHOOLS, HAMPSTEAD-ROAD.

The efforts made to reclaim the criminal class of our population have been attended with considerable success; and we see, with pleasure, that next week a conference will be held at Birmingham, "in reference to proceedings in the approaching Session of Parliament, for establishing reformatories for young criminals throughout the kingdom;" the conference to be followed by a public meeting in the Town hall. Of kindred interest is the accompanying brief history of a metropolitan establishment, now in full activity with the above benevolent object, in Henry-passage, Henry-street, Hampstead-road; and known as the "Brook-street, New-road, Ragged, Industrial, Sabbath, and Free-day Schools."

In the year 1843 the locality in which these Schools are situated abounded with vice; in it two of the most notorious gangs of thieves in London existed, and houses of the most infamous character abounded; and the immoral miasm of the place was so well known to the police, that when the attempt was first made to reclaim some of these outcasts, they deemed it impossible; seeing that the gaol and the cat, and solitary imprisonment had failed. The tradespeople were continually deprived of their goods, if left even for a few minutes unwatched; and in some instances, even large articles were abstracted from the property of the neighbouring Birmingham Railway. The City Mission-ary of the district, together with a few devoted fellow labourers, however, determined to make an effort to better this deplorable state of things: they devoted their only day of rest to this object, and commenced a Sabbath-school for the poor ragged children of the neighbourhood. This attempt was met by the most disorderly conduct: on some occasions compelling the teachers to close the school abruptly for the day, and in a few instances to seek the assistance of the civil power. Happily, these difficulties are now over; showing how powerful and triumphant is the principle of love, which even induced some of those who had been amenable to the laws of their country to receive the advice of the teachers with attention.

The kindness of the teachers, and the confidence imparted thereby, led to a great increase in the number of the scholars, until at length the loft over the blacksmith's forge, in which they met, became so packed, that there was no space to move in; and the female teachers and their pupils were, on some occasions, compelled to stand on this account. This led to deep consideration as to the propriety of securing larger premises; but the teachers being poor, it became a serious question to build a place, and there was none suitable that would receive them. But they were strong in that faith which can remove mountains; and accordingly, in 1846, they agreed for a building to be erected for a Sabbath-school, in which the day-school is now held. (*See the Illustration.*)

In 1848, in consequence of the repeated imprisonment for theft of the youths who constituted the bands of thieves already spoken of—arising, in some instances, from want, the result of loss of character and consequent want of employment—the School Committee, aided by the pecuniary assistance of Mr. John Platt, of Park-square, Treasurer of the school, commenced an industrial department to provide food and a trade for these poor lads: fifteen of whom were received and placed by the Committee under the care of Mr. John Ellis (now of Birmingham), to learn shoe-making. Under this arrangement, the industrial school, continued some time with varying success, involving a great outlay of money, which even now paralyses the energies of the teachers. At length it was found necessary to give up the shoe-making, and resort to a more remunerative occupation—that of carding wool, picking horse-hair, and making firewood—under another master.

In the year 1850 the establishment of the day-school was suggested by Mr. Robert Wilkinson, of Cumberland-terrace, who has contributed liberally to its support ever since. This was followed by the most cheering results: the children who attended the Sabbath-school now flocked to the day school; and thus the good instruction of the Sunday was not lost during the intervening six days.

The heavy expense of the industrial department and the day-school led to serious thoughts of discontinuing either one or the other; when the present master, Mr. Blanchard, suggested a new mode of conducting the two branches, by which a great saving could be effected. These

BROOK-STREET RAGGED SCHOOL.—THE WORK-ROOM.

views were approved of. A story was added to the day school, in which were rooms for the master and mistress, and a large room serving as a workshop for the industrial boys by day (See Engraving), and as their dormitory by night. By the work here done these lads support themselves, and participate in the profits of their own industry; by which means, two of the boys, who recently emigrated to America, saved a considerable sum. These poor lads were on the streets, without a friend; when one of the teachers directed them to this Refuge.

On one occasion a policeman brought a young man, about seventeen years of age, to the school doors, and stated that the lad had just been liberated from prison, and he felt sure he should to morrow have to take him there again—for he had no home, no character, nor means of getting an honest living. He begged hard for him to be taken into the industrial department. This was done; and the young man never again troubled the detectives.

The average attendance in the Sabbath-school is, in the winter, 150—in the summer, 70; except in wet weather, when the number is increased by those who seek shelte r, which is often the first opportunity of getting access to the minds and better feelings of these neglected ones.

The day-school, which commenced with fifteen scholars, within three months amounted to 180: the average attendance is 130.

Owing to the erratic habits of the parents, half of the scholars pass through the school in the course of twelve months, leaving it for other neighbourhoods, where perhaps no such institution exists; or they go into occupations which deprive them even of the advantage of a lesson on the Sunday: hence, to many, the instruction imparted during this short term is all the education they receive. The industrial department, for want of more capacious premises and capital, is limited to fourteen boys, but generally includes eighteen or twenty. From the time of its existence it has afforded a home to 100 lads, who, with three exceptions, are obtaining honest livelihoods.

Other agencies besides those named have been brought to bear upon the neighbourhood. Among these are a Maternal Society; a Clothes Club—to which fund threepence is added from the School for every shilling subscribed by a member; a Loan L brary; and a Band of Hope: besides which, Bibles and tracts have been distributed, and devotional meetings held on the Sabbath. The teachers have established a class-room on scientific subjects, and evening classes, endeavouring in every way to help the parents and children out of the depth of degradation, ignorance, and misery into which they have fallen, through misfortune, intemperance, and orphanage—in which efforts they have been most zealously aided by the City Missionary of the district.

Although the bands of thieves have been destroyed, and good in various other ways has been accomplished, yet much remains to be done; and for this end more extensive agency must be employed. But this the debt upon the School prevents being brought into action by the teachers, who, to their credit be it spoken, add instruction in a pestilential atmosphere on the Sabbath to their six days' toil. This institution, if freed from its debt, would, double-less, expand into one of the most important and useful institutions of this country.

SHOP-LIFTING AT COLCHESTER.—MRS. Bathia Webb, of Great Bentley, and Miss Elizabeth Holby, of Thorp-le-Socken, respectably dressed and connected, being sisters, were, last week, placed at the bar, charged with committing a series of robberies of vel s, stockings, handkerchiefs, ribbons, &c.—from tradesmen's shops. Several cases were deposed to by shopkeepers and their assistants, and many of the articles taken were produced by the policeman, who found them at the prisoners' lodgings on seeing the things discovered in the hands of the policeman. Mrs. Webb declared she was innocent of the theits, and M ss Holby said—"I alone am guilty; I alone am responsible: my sister knows nothing about it." The prisoners were remanded to Thursday to complete the depositions, and bail was refused.

ROMAN COINS.—Recently, as some workmen were excavating for foundations on land belonging to the representatives of the late John Downes, Esq., situate in Nantwich, they found, at the depth of two feet, about eighty coins, some of the reign of Claudius, and others supposed to be of greater age, but which fell to powder on the slightest pressure. Roman coins have rarely been found in Nantwich; indeed, only the name of the street in which these were discovered, and the formation, &c., of the surrounding ground, there can be no doubt this town was an outpost in connexion with the more important station maintained by the Romans at Chester.

THE Royal Commissioners for the Corporation Inquiry did not meet on Tuesday. The inquiry, it is said, is adjourned *sine die*. It may be, however, that one or two sittings will take place before Christmas.

COUNTY COURT CLERKS.—A deputation of County Court clerks, consisting of Mr. Marshall, Mr. Dulling, and Mr. Pulley, had an interview with Mr. J. Wilson, M.P., at the Treasury, on Tuesday last, to present a memorial, signed by the chief clerks of courts, praying for better remuneration to the clerks of County Courts.

THE CHRISTMAS HOLIDAY.—To promote the observance of a general holiday on Monday, the 26th inst., the Bank of England and the other banks will present on the previous Saturday all bills that fall due on the 26th and that are not addressed at any banking or other rendezvous. It is understood that the transfer offices at the Bank of England will be closed on that day, also the Stock Exchange. Nothing has transpired with regard to the intentions of the Government. It appears now generally considered that the law would fully authorise the proclamation of a distinct holiday, and the convenience to trade would be universal if the matter were definitively settled in that manner. Under any circumstances, however, it is assumed that notices will be issued of arrangements for facilitating the duties of all the public offices as much as possible.

WHITTINGTON CLUB.—On Wednesday evening the second fancy dress ball of the members of this club and their friends took place. By twelve o'clock about 300 persons had assembled in the large room. The two-thirds of the company were in fancy costumes classical and modern Greek, Chinese, Turkish, and Russian. The Plantagenets, Tudors, Stuarts, and the Georges seemed to be, however, most in favour. We noticed four native Indians, in their veritable costume. Several of the Artillery Company, as well as naval and military dresses were conspicuous. The affair altogether was very well managed.

MAIDSTONE CATTLE SHOW.—The stock and poultry, roots and implements to be exhibited at the Maidstone annual show of cattle, were deposited in the show-yard on Monday. The fat stock comprised some well-fed beasts. Several of them would not have disgraced the famous pastures of Earl Darnley. The show of sheep was unusually good, both for the butcher and for the flock. The pigs were just in that condition pigs ought to be in this season of the year. There was a very respectable show of poultry. The popular taste was exemplified by the fact that there were twenty-one pens of Dorkings, while there were but twelve of Dorkings, and three of Spanish. The implement yard was only partially filled.

HIGHLAND SOCIETY'S WINTER SHOW.—The first winter exhibition of fat stock, in connexion with the Highland and Agricultural Society of Scotland took place on Monday, in the Edinburgh Cattle Market. Similar in principle, and with much the same object, as the Christmas show of the Smithfield Club, the exhibition—the first ever held on that side the Tweed—reflected the highest credit on the breeders and agriculturists of Scotland, and has more than justified the anticipations formed of it.

SALISBURY FAT CATTLE SHOW.—The annual exhibition of stock, in connection with the Salisbury Agricultural Society, took place on Monday, in the temporary erection used as the Cheese Market. In point of numbers the exhibition fell far below its predecessors, but the general quality of the stock was commendable, and many of the animals were much admired

THE NUGGET BRACELET.—An article of personal ornament, with the above title, has been registered by Messrs. Clayton and Co., of Watling street. The bracelet is formed of small nuggets of Australian gold, strung together, to which are appended miniature gold digging implements. The design is novel, striking, and rich in effect.

SUSSEX HALL, LEADENHALL-STREET.—A vocal and instrumental concert was given by Miss Annie Wyatt at this Hall on Tuesday evening, which was attended by an exceedingly fashionable audience.

Captain Duncombe Buckley, Fusilier Guards, arrived on Saturday, at Gen. Buckley's house, South Audley-street, from Constantinople, bringing despatches, and immediately proceeded to the Foreign-office. The Captain, accompanied by his brother and Lord Worsley, and Mr. Wilson, were present during the battle of Constantinople.

RESIGNATION OF THE LORD STEWARD.—We understand that his Grace the Duke of Norfolk has resigned his office of Lord Steward of her Majesty's Household, and that the resignation is unconnected with any political motive.

IRISH "TEMPERANCE."—Such is the extraordinary demand for whisky in Galway that its two extensive distilleries cannot furnish the requisite supplies. In Cork, the price of whisky has been reduced 3d. per gallon. Drunkenness, nevertheless, is increasing in the "beautiful city" and all the precepts of Father Mathew appear to have been utterly forgotten by his fellow-townsmen. The Cork *Southern Reporter* says: "That the temperance movement has turned out a complete failure in Ireland is a statement which no man possessed of the smallest candour and observation will deny.

THE CORPORATION OF LONDON.—MISMANAGEMENT OF THE RIVER.

WHEREVER we find a city that has continued prosperous for a long series of years, we may at once conclude that its situation is near a large and convenient river. In early times the streams and rivers were the principal highways; by them the commodities of foreign countries were introduced to the interior, and through them the native produce passed for exportation to distant lands. It soon become manifest that those whose convenience was consulted, and whose interests were promoted by such means of internal communication, must associate and take steps to maintain the waterway clear and navigable—support the banks, remove shoals, and otherwise guard against any and every impediment that might obstruct the free course of navigation. To ensure the most efficient system, certain privileges were granted, such as tolls and dues levied upon all ships using the channel thus kept open. Such dues and tolls were only permitted to be levied on the ground that all revenues so raised should be expended in the improvement of the river, and not diverted to any other purpose whatsoever.

For centuries the City of London has exercised the right of granting licenses to embank and build on the shores of the Thames. It has claimed and exercised the power of measuring and taxing a variety of commodities arriving by the river; not only commodities the growth of foreign countries, or of our colonial possessions, but also of produce coming from other ports of the United Kingdom. Had all the funds so accumulated been devoted to the purpose for which the privilege was granted, and the tolls permitted to be imposed, few persons would have been found bold enough to censure the Corporation of London. So long as what is taken from the public, is shown to be expended for the public good, the public, like a patient brute, bears the burthen cheerfully; and, although it may occasionally grumble, it still continues to pay. But men of all parties, and from almost every condition in life—the wealthy merchants, shipowners, factors, brokers, agents, and bargemen—all who have occasion to use the river, or come before its Corpor..te Conservators, have been singularly unanimous in bearing testimony to the fact, that, instead of being a public advantage, the conservation of the river, as now administered, is a public nuisance—the intervention of the Committee being a restriction upon trade, while the legitimate duties of the office are either ill performed or entirely neglected; and that the men to whom are entrusted the various matters connected with the Thames are wholly incompetent—many of them hardly knowing whether the natural current of the river is up to Richmond, or down to Gravesend.

Unseemly differences between the City and the Government have induced the latter to do as little as possible, while the former are not empowered to do anything. We need not, therefore, be surprised to see great shoals raising their slimy backs at almost every winding reach of the river; huge islands of living mud, giving off, at every period of low water, their poisonous exhalations, breeding and feeding the miasma that weakens, and the cholera that kills the poor wretches compelled to burrow in hovels on the undrained banks. Thanks to the fever of anxiety manifested by the Corporation in their desire to stand well with the public—now that the Royal Commission is probing their wounds deeply, and holding up to public criticism the loathsome matters that have been cankering for so long in the trading body of the community—they have determined to expend between £30,000 and £40,000 on improving the upper navigation of the river, where it is likely to be affected by the new water companies drawing their supply from the Thames.

To turn the beautiful river—once the theme of the purest poetry—where water-lilies grew in abundance, and sweetest fish were caught at London-bridge—into a common sewer, a stream of liquid filth, is almost a sin unpardonable. For the whole of this abomination, the City is not responsible, nor would we blame it wholly, did it not also claim the sole privilege of the conservancy. Had it done its duty according to its charters, the river would have been properly embanked long ago; quays and promenades, from Westminster to the Tower, would have been constructed—and even now ought to be executed without delay. Along with proper embankments might be constructed gigantic sewers, sufficient for the drainage of the entire metropolis. It has ever been our opinion, that the course of the river indicated most accurately the proper position for the great spiral or central sewers. There is no difficulty as to levels: the sufficiency of the fall is certain, the lateral branches could be regulated and introduced naturally and without difficulty; while, by constructing an immense sewer on each side of the river, surmounted by an embankment, forming a roadway for carriage and pedestrian traffic, a systematic arrangement of traps, gates, doors, &c., might, at the same time, be effected, that would overcome or totally prevent the annoyance of breaking up pavements and stopping up streets to remove any obstruction that might occur.

The City neglect of this its highest duty is well shown by the Rev. C. Dalton, Rector of Lambeth, who, in his evidence, on the 9th inst, before the Royal Commissioners, stated "that the banks of the river Thames, in the parish of Lambeth, are very low, and subject to inundations at spring-tides, which inflict great injury upon both the rich and poor occupiers of premises and houses along the banks. The poor suffer intensely from the consequences of the floods, and subscriptions are frequently made to compensate for the loss and alleviate the sufferings of the poor." Not only is this fact patent in Lambeth, but all along the low ground from Deptford to Vauxhall, thousands upon thousands of treasure is lost, and God only knows how much disease is experienced by the insufficiency of the embankments.

Where such are the facts in connexion with its easiest and oldest duty, we can hardly expect the conservators of the river capable of grappling with the higher duties of making ample provision for the accommodation of the shipping of the metropolis. It appears that over fifty years ago the merchants and shipowners applied to Government for wharfs, docks, and other matters necessary for the protection of their floating property. The City was urged to make the provision required, and was offered the full control of all such works along the river side, so that no competing company might destroy the advantages thus volunteered. The City followed its antiquated course, and declined the task. The natural results were, that the merchants constructed their own docks, and other conveniences, and became independent of the City, eschewed its counsels, and despised its honours.

Contrast this lack of forethought with the conduct of the energetic minds of Lancashire. Look at the sig-zag ins and outs of the banks of the Thames, even in the heart of the City, and then at the bold, imposing, and regular water frontage of the Mersey, at Liverpool. The contrast is, as the Queen's Palace to a cowshed, or the manufacturers of Manchester to the "incapables" of the Corporation of the City of London

Then the ostentation and display manifested by these do-nothing Conservators. See them, on state occasions, in holiday costume, in their shining shallops ascending or descending the river, toasting their City Monarch of the Thames as if he were the veritable Neptune of the ocean. How they swell and glorify themselves: little thinking that, while eulogising their order, and pampering their appetites, they are in reality condemning the system by which they exist, and are rapidly rushing on their own destruction.

When we pass in review the Chairmen of the Thames Navigation Committee for the last twenty years, we are not surprised at the evidence given; but we are surprised that the practical-minded merchants of the metropolis coming occasionally in contact with the Committee, and always being in contact with the evidences of its incompetence or neglect, should have so long submitted to its mismanagement. However, the end is at hand: the remedy will be applied, and our noble river relieved from the discredit which now attaches to it. Whether as regards the rich or the poor, the centre or the sides of the river—whether in its commercial or sanitary aspect, the river Thames, in its present condition, is a disgrace to the country.

IRELAND.

THE TENANT LEAGUE.—A meeting of the remains of the Tenant League was held on Tuesday night, in the theatre of the Mechanics' Institute, Dublin. The oratory was of the usual calibre, but the precise objects of the speakers could not be divined; and the Rev. Dr. Kearney, Messrs. Cantwell, Gavan Duffy, and a few more, having talked to their hearts' content, the proceedings were brought to a conclusion.

PRESSURE OF THE POOR-RATES.—Clare, or at least a portion of that county, still suffers under the pressure of a poor's rate, nearly equal in amount to the sums levied during the worst seasons of disease and famine combined. A rate struck for the union of Tul a shows that in one electoral division alone the rate is as high as 7s in the pound, in another, 6s., in four others the average is 5s 8d., in five more the average is 4s. 7d.; in three, about 3s 6d., while in two only the rate is a few pence below the last mentioned figure

ENCUMBERED ESTATES COURT.—The Tipperary estate of Sir John Carden has been sold in nine lots, the gross net rental of which was estimated at £1425 per annum. Of these, three only were disposed of, there being no bidders for the remaining six. The net rental of the lots sold was £667; which produced £12,918 equal to about 19½ years' purchase.—The Galway estate of Mr D. M'Kevin, yielding a net rental of £953, realised £16,175, equal to 17 years' purchase, and the extensive estates of Gilleek and Creggs, also in Galway, containing 7500 statute acres, have been sold by private contract, for the sum of £35,000. It is not likely that there will be any further sales effected until after the Christmas holidays

THE ELECTION FOR CLONMEL has been delayed by a very unexpected circumstance—a strange mistake in the writ received at the Hanaper-office, Dublin, which directed the election of a burgess "in the room of the Hon. Cecil Lawless, raised to the Peerage, in consequence of the decease of Lord Cloncurry." The Hon. Cecil Lawless, who died shortly after his father, was the second son of the Lord Cloncurry; and it was the demise of Mr. C. Lawless that created a vacancy in the representation of Clonmel. The Speaker will have to issue a new writ; and the election, in any case, cannot take place for a fortnight. It seems, however, no doubt but that Mr. John O'Connell will be returned for Clonmel. Mr. Charles Bianconi has refused to allow his son to oppose "the son of O'Connell."

THE LADY MAYORESS OF DUBLIN.—We regret to state that her Lady ship is confined with an attack of measles, having taken to her bed the day after her brilliant ball. The attack is a severe one; but her Ladyship progresses favourably.

THE LAST OF THE O'MOORES.—The last of the O'Moores has quitted Cloghan Castle, and the paternal mansion of that ancient family for longer acknowledges an O'Moore for its master.

DEATH OF FRANCIS MEAGHER, ESQ.—One of the rising men of the Irish bar, Francis Meagher, Esq., died on Monday, to the great regret of his learned brethren, with whom he was a great favourite. Mr. Meagher was only called to the bar in 1846, yet he had a very extensive practice in both law and equity.

LIFE AT THE DIGGINGS.

In addition to our Australian news, in a preceding column, the following extract will be found very interesting. It is from a letter sent by a digger at the Eagle Hawk Diggings, and is dated Sept. 3rd:—

Times have improved very much since you left us in one way, but they have fallen off very much in another. Food is cheaper, and, true to the old rule, "When food is plentiful labour is cheap." Gold is more scarce, I think the diggers would do better if they would only stick to one spot, and explore it thoroughly before giving it up, instead of, as many do, sink two or three holes in a gully, getting only moderate finds, then give it up in place of exploring further and try elsewhere, running up expense in carriage, losing their time, and doing no good; and why? because it takes a long time to get into the run of the gold; and when at last they shift they have, as it were, to go through a fresh apprenticeship to a new diggings.

You remember "Dead Horse Gully," the scene of our sporting adventures. Well, I lately sank a hole there in the deep sinking. Mine ran about 12 feet deep, and, as I turned out pretty good, I drove in about 50 feet towards the side of the hill. One day I had been more than usually lucky, so next morning betimes I was stirring, made fast my rope to a tree, and down I went by it, hand under hand in my slush lamp, and proceeded along the drive on my hands and knees, as I was at work, and thinking of the lit nuggets. You remember I was always accustomed for making hand drives. Shading the light with my hand I crawled in. Near the face and I suppose I was feeling through a small pool of water. Casting the light before me to see how far the drive extended, I observed on the other side of the pool I perceived a pair of small guttering grey eyes, intently watching me. Cold, malignant expression of which forced the warm blood back to my heart with a bound which nearly suffocated me. I knew at once that it was a snake—and a deadly one, too. Ar hing its head, I don't know; came in contact with the roof of the tunnel, and I fell back stunned a ill senseless. How long I lay in this state I know not: but when I came to myself I was at last thought that I was at home in the "big smoke." I bitten? To the last mental query I cheerfully answered "No," for most certainly I was very deadly and the bi ten part swells up immediately. On consideration, I remembered that the snake had reared for the purpose so that it was clear that I had fallen in the nick of time, and the reptile had passed over me; but where was it now. A cold shudder passed over me when I considered that the snake must still be in the hole—perhaps even within a few feet, watching me with its glassy eyes, and preparing for another spring. I am not easily frightened, as you will be in with how for all the gold in Bendigo. I would not be in that mine again. How was I to proceed? My only weapon was a drive pick. Grasping it, and creeping cautiously along, I heard a noise in front. Was it the snake? I held my breath in fearful suspense, with the sweat of agony moisten ng my brow. No; it was only some loo-e stones fall from the roof. Deliberately, Excidedly I should be able to ke the first blow if I could succeed in reaching the mouth with my pick-axe. I made up my mind at once, perhaps rashly, I might have done better if I had waited until it was asleep. Muttering a prayer, I crept cautiously forward, I put the head of my pick caught hold of the rope pulled it, and down came a lot of earth. Curs-s on my bad luck, I looked to see what effect this move have on the snake. It was evidently aroused, twisting and contorting its body into all sorts of knots and loops, but still keeping its piercing glance fixed on the mouth of the tunnel. Darting quickly from my concealment, I nailed the snake to the ground through the neck with my pick. With a hiss of pain it suddenly twined itself round my leg, and partly drew it towards its head, recovering, I planted my left firmly, pulled out my tomahawk with my left hand, and cut the snake in two about a foot from its head, still the s mp body was contracted round my leg, and still the forked tongue was p aying in and out, notwithstanding the body was severed in two. I carefully cut up the side of the hole with the snake's body still cling ng to my leg, when I cut it in the head again cut the snake in two at d unwound it, thanking God for my narrow escape. The snake measured eight feet six inches. I went home to my tent and made out the day "fossicking." Hal and Tom send their remembrances, and, wishing you luck, I remain yours, &c.

MONUMENT TO LIEUTENANT BELLOT.—At a general meeting of the underwriters of Lloyd's, held on Wednesday, the sum of £50 was voted in aid of the subscription now being raised for the erection of a monument to the memory of Lieutenant Bellot, of the French Imperial navy, who lost his life in the last Arctic expedition in search of Sir John Franklin.

INTERESTING SALE.—Next week the remaining portion of the valuable library of the late John Hugh Smith Pigott, Esq., of Brockley Hall, Somerset, will be disposed of by auction by Messrs. Sotheby and Wilkinson. Among the 2100 lots, are some books with manuscript notes, by Dr. Johnson, Horace Walpole, and others; valuable historical documents and MSS.; coins; a complete collection of our earliest Eng sh newspapers; besides a large number of rare books on the eccentric sciences. Among the curiosities is the "marvellous speculum and magic crystal," used by the astrologer, Dr. Dee.

FALL IN THE PRICE OF COALS.—In consequence of the timely arrival of so many ships from the colliery districts, with large cargoes, into the port of London, it has materially reduced the high prices which have prevailed for some weeks, as they have fallen from 28s. to 24s per ton. The retail dealers throughout the metropolis reduced them from 3d. to 2d. per cwt. Coke, which has been as high as 9d per bushel, is 6d. to 7d. Should the arrivals continue, another fall is expected next week.

CALENDAR FOR THE WEEK.

Sunday, December 18.—4th Sunday in Advent.
Monday, 19.—Dr. Darwin died, 1792. Tycho Brahe born, 1586.
Tuesday, 20.—Gray born, 1716.
Wednesday, 21.—St. Thomas. Shortest day.
Thursday, 22.—Holcroft born, 1744
Friday, 23.—Abdication of James II., 1688.
Saturday, 24.—Christmas-eve Robin Hood died, 1247.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING DECEMBER 24.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
m h m h m h m h m h m h m h	m h m h m h m h m h m h m h	m h m h m h m h m h m h m h	m h m h m h m h m h m h m h	m h m h m h m h m h m h m h	m h m h m h m h m h m h m h	m h m h m h m h m h m h m h

TO CORRESPONDENTS.

H. S. P., Cheltenham.—The phenomenon seen by our Correspondent, October 31, was the Aurora Borealis

C. B. R., Liverpool.—The difference of time between the ports of London and Montpellier (in the south of France) is 27 minutes, 29 seconds.

I. W. F.—The price is 26s. per annum, and sixpence each extra for shilling numbers.

Corporation of London Inquiry.—Mr. Pulling need be under no apprehension that we entertained the slightest notion that he could personally blame the confidence reposed in him as a barrister. We only inferred to say, that he might be so charged—but certainly not justly: if any such charge was made, it could only be by a member of the exposed Corporation. We may further add that Mr. Pulling need not be surprised to hear whisperings alleging that the incentive to his manly evidence was disappointed ambition. He may be as much puzzled as we are in what respect but strange things will occasionally take possession of weak minds. The Corporation is much in the fix of the young pickpocket, who complained to the magistrate, "that all the politest men in London were against him."

W. B., Market Drayton.—The sketch sent us is from a half groat of Queen Elizabeth.

B. G. C., Bath.—The sum mentioned in the *Edinburgh Review* 25,283,165 millions sterling, annually—is the value of the whole quantity of beer consumed, and not of the tax paid upon it.

An Admirer of Charles Mackay.—We regret that we are unable to publish the poem.

The Coal Question.—If "One of the Trade" will forward a concise correction of the quotation which he states to be incorrect, it shall appear.

Erratum.—In our account of the Surrey Poultry Show, last week, at the foot of page 492, Mr. Bernard Pierce should be Mr. Bernard Pierce Brent.

THE

CHRISTMAS DOUBLE NUMBER

OF THE

ILLUSTRATED LONDON NEWS,

WITH SUPPLEMENT GRATIS,

WILL BE PUBLISHED ON SATURDAY, DECEMBER 24.

The Proprietors of the ILLUSTRATED LONDON NEWS have the honour to announce to their Subscribers and the Public that no effort or expense has been spared to render their ANNUAL CHRISTMAS NUMBER one of unusual interest and beauty. The following subjects by the most distinguished Artists, are amongst those selected for Illustration:—

A Beautiful Allegorical Title. By G. Thomas.	Christmas Charity. By B. Foster.
Raphael's Virgin and Child. Engraved by W. J. Linton.	The Waits; or, "Making the Most of It." By H. G. Hine.
The Village Waits. Drawn by B. Foster.	The Goose-Club. By Phiz.
A London Market on Christmas Eve. By G. Dodgeon.	Christmas in Mad id. By J. Gilbert.
The Christmas Market-Waggon. By E. Duncan.	Christmas in Australia—the Picnic. By H. G. Hine.
Going to the Pantomime. By J. Leech.	The Mistletoe-seller. By Phiz.
	The Christmas Tree; or, the Liabilities of the Head of a Family. (A Humorous Page Engraving.) Designed by H. G. Hine.

A SONG for CHRISTMAS, by CHARLES MACKAY, the Music by Sir H. R. BISHOP, with an Illustration by James Godwin. With original Tales, Sketches, Essays, Poems, &c., by the most eminent Writers.

CHRISTMAS IN FRANCE.

An Additional Half-Sheet Supplement will be PRESENTED GRATIS, illustrating Christmas and the New Year in France. The greatest Parisian Talent has been engaged to Illustrate the following Subjects:—

The Midnight Mass on Christmas Eve. By P. Blanchard.	The "Sonneurs" (or Waits) of Brittany. By Penguilly.
The Serenade at the Tuileries. By Eugène Lami.	A fine Page Engraving—"New Year's Gifts in an Artizan's Family." By Gavarni.
The Bon-bon Shop on New Year's-day. By Genicle.	

With Christmas Tales, Legends, &c., by Jules Janin, E. Souvestre, M. Charton, Paul Dupont, M. Martin, &c., &c.

Price of the Double Number, One Shilling, with Supplement Gratis.

Volume XXIV. commences with January 7, 1854. Persons desirous to commence taking the Illustrated London News with the New Year should give immediate orders to any Bookseller or News-agent.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 17, 1853.

Now that the civilised countries of the West are fairly committed by the affair of Sinope—on which we have elsewhere commented—to material interference in the Russo-Turkish question, it is well that we should consider the light in which we regard the question at issue, and the precise objects which we should seek to attain by the aid of our arms. The primary objects of the campaign before us are simple enough; namely, to rid the Turkish territory of the presence of wanton invaders, and to assert the integrity and sovereign independence of the Turkish empire; in short, to re-establish matters in the east of Europe, territorially, as they were six months ago. These objects attained, the relations between the Porte and its dependencies, and the neighbouring states, would have to be reconsidered, and so effectually remodelled as to give reasonable assurance against the recurrence of a state of things such as that with which all Europe has so long been scandalised and outraged. These objects are plain enough, and are undoubtedly within our attainment by firm and concerted action. We are sorry, however, to see recently thrown out—in a journal supposed by some to speak the sentiments of the Cabinet, and known by all to speak the sentiments of Russia—suggestions as to further objects which we are to seek to accomplish—objects having regard to the social condition of the Christian subjects of the Porte; the realisation of which could only be attained by the sacrifice of the sovereign independence of the Sultan within his dominions, which is the vital point now in contest between him and the Emperor of Russia. We will not now discuss in the abstract the propriety of England and France throwing themselves in on the side of the "persecuted Rayah" against his "Mussulman oppressor;" nor the merits of "the imperishable cause of Christianity and civilisation in European Turkey;" nor whether, in point of fact, the Christians of Turkey "burn to throw off the Turkish yoke," and "may be driven in this convulsion to side even with Russia rather than still undergo what they have undergone." We will simply assert that the statements of fact upon which all this alleged case of national grievance and all these apprehensions are based, are wide, very wide from the truth, evidencing a melancholy ignorance of the real condition of affairs in Turkey.

The late Sultan Mahmoud laboured strenuously to abolish all prejudices and distinctions upon religious grounds between his subjects—to place all in equality before the law—convinced that it was the only means of consolidating the authority of the law, too long despised, and promoting the internal prosperity. In his last progress through the provinces, undertaken only a few months before his death, he solemnly inculcated doctrines of equity and good-will between man and man. "Let us recognise," he said, "amongst the Turkish population, the Mussulman only at the Mosque, the Christian at the Church, and the Jew at the Tabernacle—elsewhere let all be as one family." And his son Abdul-Medjid has, from the very beginning of his reign, followed out the wise and humane instructions of his father. His first public act was the famous Tanzimat of Gulkana (promulgated Nov. 3, 1839); in other words, a charter of constitution, in which the life, the liberties, and the property of all subjects of the Porte were declared to be sacred; and all men, Mussulmans and Rayahs, equal before the law; and this important act has not been allowed to remain a dead letter—it has been followed up by acts for the reforming and remodelling of the law—civil and criminal—and of every department of the State.

Besides the improved administration of law generally, which has been introduced under the new order of things, courts of mixed judicature have been established at Constantinople, Smyrna, Adrianople, Salonica, Beyrout, and other principal towns in Turkey Proper, and since extended to Egypt, for the decision of cases civil and criminal, upon the European principle. In these courts the evidences of Christians is received, even against that of Mahomedans—a most delicate and dangerous innovation upon the prejudices of the letter; and the system has been found to work so satisfactorily that it is confidently expected that it may, before very long, be adopted as an element of reform in the whole jurisprudence of the country. Indeed, according to M. Ubicini, who has recently written a most intelligent work on the present state of Turkey, the reception of Christian evidence has already been adopted in *mehkemes*, or ordinary Courts of the Empire.

In the matter of religious worship, all the subjects of the Porte—Turk, Christian, and Jew—are entirely free, and upon a perfect equality. In matters of taxation, also, all are upon an equal footing, with the exception only of the *kharadji*, or cap tation-tax upon the Christians, in lieu of liability to military service; which, so far from being a dishonourable or burthensome charge, is absolutely the welcome price of a valuable exemption. The amount of this tax is very trifling—fifteen, thirty, or sixty piasters (about 2s. 6d., 5s., or 10s.) a head per adult male, according to amount of property; lunatics, decrepid persons, persons in indigent circumstances, and priests of every denomination, being exempt. The tax is collected through the Primate of each religious community, who returns the amount directly to the Treasury; so that all idea of imposition or persecution is done away with. In proof of the light in which this impost is viewed by the "persecuted" Rayahs who pay it, we have only to add that recently, in the carrying out of the general reforms of the state, when, with the object of establishing a perfect equality between all classes of the Sultan's subjects, it was proposed to abolish this special tax, and in lieu thereof to render the Christian population available for service in the army, upon the same footing as their Mahomedan neighbours, the outcry of the former against the proposed arrangement was so great, that the Divan, after the passing of an ordonnance for the purpose, was obliged to abandon it.

The tenure of land in Turkey by Christians is as free, and as sure, as that of Mahomedans; the only distinction being that it is held by the females of the family—it being a principle in the Mahomedan creed that women cannot be dispossessed of their property, by fate of war or otherwise.

Finally, as to the pretensions of Russia to protect the Greek religion in Turkey. This idea is quite as preposterous as would be, on the part of England, a pretence to protect the Roman Catholic Church in any part of Italy, or in any other Catholic state. The Emperor of Russia is a schismatic from the Greek Church; and the clergy of that Church know full well that, if they were to be subject to his rule, not only would their consciences, and those of their flocks, be outraged, but the Church revenues themselves be spoiled, and at the mercy of a stranger. And as to the tender keeping of their social rights, which the Christian subjects of the Porte would have to expect at the hands of the "God-believing Emperor," the unhappy inhabitants of Wallachia and Moldavia can speak but too feelingly, after forty years' experience, of his good offices in their behalf.

Having disposed—too briefly, perhaps—of these points, of which unhappily too little is known to ordinary newspaper readers, we have to add that, independently of all considerations which they suggest, the proposal for a joint interference by England and France on behalf of the Christian subjects of the Porte, as an incident in the present proceedings, is one which should not be entertained for a single moment—one which if insisted upon, would make our present position with regard to Russia utterly untenable, besides depriving our conduct of all grace in the estimation of our old ally the Porte. It was the pretension set up by Russia to a protectorate over the Christian subjects of the Sultan, which the latter resisted as fatally incompatible with his sovereign rights, and utterly without precedent in the law and history of nations; and in this view of the case the Sultan was supported by the Governments of England and of France, and, indeed, by the whole diplomatic authority of Europe. It was to assert the preposterous claim in question that the armed occupation of the Danubian Provinces by Russia took place; and it was to resist it, as a concession involving no thing short of political annihilation, that the Sultan has gathered together his troops from the widest extremities of his dominions, to oppose and drive out the invader. Finally, it is to assist him in this armed defence of his rights that the British and French fleets are now cruising in the Black Sea. With what face, therefore, can England and France ask of the Sultan, as the price of their timely aid, that he should abandon to them that very principle for which so much blood and treasure have been expended; and in the hour of victory sign a document, unprecedented in character, which shall place Turkey in the light of a protected state, subject at all times to the interference—not of a single state, but of a confederacy of states?

Peruvian Bonds fell three per cent last week, in consequence of an unfavourable report from our Admiral on the Pacific station as to the supply of guano. On the last day of the same week we find the Royal Agricultural Society closing its labours for the year, by sending up a deputation—of its President (Mr. Pusey) and Lord Berners—to the Secretary for Foreign Affairs, to press Lord Clarendon to negotiate with Peru a reduction of the price of the same article. This being the third deputation on the same subject—one having gone up from the same Society when Lord Malmesbury was Foreign Secretary, and another from the Liverpool merchants to Lord Clarendon—people not unnaturally inquire "What is this article which is occasioning almost as much stir as that monopoly of Sicilian sulphur, which, during the time of the Carlist War in Spain, embroiled us with the King of Naples?"

As much nonsense is talked on the subject, it will be best to begin at the beginning, and relate, in a small compass, what is known of a substance, the supply of which, in sufficient quantities, at a moderate price, our best agriculturists consider the most important agricultural question of the day. Guano is the excrement of sea-birds, deposited on islands, promontories, and caves, within zones where rain never falls. These districts or zones will be found marked in maps of physical geography; and it is only within these zones that deposits of any value can be found.

The value of guano as manure for maize, and other cereal crops, was well known to the native population under the Incas, by whose laws the guano deposits were protected by severe penalties. No one was allowed to enter the islands during the breeding season, under pain of death, lest the fowls should be driven from their nests; and every detail of the gathering and distribution of the manure was settled by minute regulations.

It does not appear that the use of this stimulant was ever carried to Spain; it lingered unnoticed by Europeans among the native agriculturists, until within the last eighteen years. About that period a single cargo was imported into Liverpool; but, although experiment and scientific analysis showed that guano possessed, in a small compass, the properties most valuable for our principal crops, it cannot be said that its use made great progress among ordinary tenant farmers until within the last thirteen, and especially the last five years.

In 1833 the Peruvian Government issued a decree prohibiting foreign vessels from fishing along the coast, and on the Islands of Peru; and citizens of Peru engaged in such pursuit were required to obtain special permission. Attention was shortly afterwards directed to this decree by the seizure of the British schooner *Campeadora*, fishing for seals on the Lobos Islands.

In December, 1840, the Peruvian Government appears to have granted a monopoly of the export of Guano to one Don Quiros; and, in December, 1841, that contract was annulled, and a monopoly established, by which, for a period of five years, one-third net profit was to go to Quiros and Allier, and two-thirds to the State. The contract was not to extend to more than 20,000 tons, until the stock of guano had been surveyed. Guano was still permitted to be exported for the use of the agriculture of the country. This contract appears to have been immediately divided with Messrs. Gibbs and Co., who have ever since had in their hands the entire control of the foreign supply. By a decree of May 10, 1842, Messrs. Quiros and Gibbs were made the sole company by whom guano could be exported to foreign parts; and no guano was permitted to be taken except from the island north of the Chincha Islands. This island is included under Lobos de Tierra.

In the hands of Messrs. Gibbs the sale of guano was pushed, and its peculiar merits became known. The Ichaboe Islands, on the coast of Africa—containing a deposit not equal to Peruvian, but of useful quality—were discovered, and supplied an export in one year calculated at one million sterling. Other deposits from the coast of Australia and Saldanah Bay, near Cape Colony, were, from the falling of rains, scarcely worth freight and export duty. Thus Peru was established in a natural monopoly of a substance to which our first farmers looked as a palliative for the loss of Protection. Under these circumstances, Captain Buller wrote to the Foreign-office, pointing out the Lobos Islands as the probable sources of a great supply of guano, without the control of the Peruvian Government. The Foreign-office had forgotten the case of the *Campeadora*, and made an evasive reply; so Mr. Buller wrote to the *Times* with the information of his supposed discovery of an island of agricultural treasure. The guano-buying world was set in a ferment and deputations, petitions, memorials poured into the Foreign-office from Liverpool merchants, Northamptonshire farmers, and agricultural societies. Very soon the case of the *Campeadora* turned up, which settled the case of possession. Lord Malmesbury had a good deal of trouble to satisfy his agricultural friends that they could not annex the Lobos Islands; and to this day they remain dissatisfied, at having to pay from £9 to £10 a ton for an article of which they would and could use profitably double the quantity, if it were sold at half the price—for it is calcu-

lated that one ton of guano is equal to thirty-four tons of farmyard manure.

But Peru is a poor country, with many revolutions, few exports, and a considerable debt, and therefore not likely to abandon a monopoly without some strong financial argument.

By a survey made in 1846, by Don Rivero, it was supposed that there were 27,000,000 tons of guano, part of which only was of the quality worth exporting to England. Of this quantity the Chincha Islands were estimated to contain 18,000,000 tons. Admiral Moresby's survey apparently reduces that quantity to 8,500,000 tons. But we cannot make out whether his report refers to one or to all the three islands. According to Rivero, the southern group contained nearly 8,000,000 tons, and the Lobos nearly 1,000,000; but if Admiral Moresby's calculation applies to the whole three groups, then all hope of favourable negotiation with Peru for reduced prices is at an end. Nevertheless the Royal Society gets up a deputation, and agricultural noblemen deplore the greediness of Peru. All this is waste of time. The only useful deputation would be to Sir James Graham and Mr. Osborne at the Admiralty, to get a steamer ordered to explore every island, bay, arch, and cave within the rainless zones, on every coast where guano might be discovered. Let the farmers and landlords join, wich or without the shipowners, to offer premiums for genuine information. At any rate, sooner or later, guano deposits must be exhausted; and we shall have to rely on our chemists for the means of turning waste and offal of flesh and fish into portable fertilizers.

THE COURT.

The Queen and Prince Albert are again enjoying perfect domestic seclusion at their marine residence at Osborne. The Duchess of Kent took leave of her Majesty on Saturday, and returned to Frogmore; and, on Monday, the Duke and Duchess de Brabant departed for Brussels. The Earl of Aberdeen, Viscount Hardinge, and Lord John Russell, have paid visits to her Majesty during the week.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, and Princess Alice, attended by the ladies and gentlemen in waiting, went to Whippenham Parish Church. The service was performed by the Rev G. Prothoreo.

The Queen and Prince, and the youthful members of the Royal family have taken their accustomed driving and wal king exercise daily, except when prevented by the unfavourable state of the weather.

THE DUKE AND DUCHESS DE BRABANT.

The Duke and Duchess de Brabant accompanied by his Excellency the Belgian Minister, and attended by the Count and Countess de Launoy, embarked at Cowes on Monday morning, at eleven o'clock, in the *Fairy* Royal yacht, and crossed over the Formyault on their return to Brussels. Her Majesty and his Royal Highness Prince Albert drove down to Trinity-wharf, and took leave of the Duke and Duchess on board the Royal Yacht. The Duke and Duchess travelled from Portsmouth by special train, and arrived at Dover at five o'clock in the afternoon. Their Royal Highnesses proceeded from the railway station to Birmingham's Royal Ship Hotel, where they partook of a *dejeuner*; and at half-past seven o'clock the illustrious party embarked in the *Ruby*, Belgian Government steamer, for Ostend, which port they reached, after a favourable passage, at one o'clock on Tuesday morning. Their Royal Highnesses arrived at Brussels on Tuesday afternoon.

Her Royal Highness the Duchess of Kent left Osborne on Saturday last, on her return to Frogmore. The Duchess crossed to Southampton in the *Fairy*, and travelled to Windsor by special train on the South-Western Railway.

BENEVOLENCE OF THE QUEEN.—Her Majesty, in consideration of the severity of the season, and the excessive price of every necessary of life, has, with her usual Royal munificence, announced her gracious intention of contributing £200 towards the raising of a fund by the Association for Promoting the Relief of Destitu ion in the Metropolis.

ACCIDENT TO THE DUKE AND DUCHESS OF SAXE-COBURG-GOTHA.—As the Duke and Duchess of Saxe-Coburg Gotha were, five days ago, returning from their Palace of Ketlenburg to Gotha, the carriage, which was driven by the Duke himself, struck against a large stone in descending a steep hill. The shock was so violent that the Duke was thrown into an adjoining field. The horses, in a fright, started off at a rapid rate; and, on reaching the bottom of the hill, ran against a stake in a hedge with such violence that the pole was broken, and the Duchess was thrown to a considerable distance from the carriage. Fortunately, however the Duke only sprained his foot, and the Duchess was not at all injured.—*Gothaner*.

THE LATE QUEEN OF PORTUGAL.—On Thursday morning a funeral service was celebrated in the Catholic Church of the Bavarian Embassy, Warwick-street, Golden-square, for the repose of the soul of her late Majesty the Queen of Portugal. The service was sung, and high mass was performed by Father Brumber, McGuyer, &c. Invitations were sent by the Portuguese Minister to all the representatives of the sovereign powers related by consanguinity or affinity with the august deceased, as well as all the Portuguese and Brazilians resident in London. The church was most numerously attended. We shall illustrate the solemnity next week.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. C. N. Duncombe, to the Chancellorship of the Cathedral of Cork. *Honorary Canonries*: The Rev. W. Atkinson, and the Rev. W. Proctor, to Durham. The Rev. W. Berry, rector of Bilsworth, Northamptonshire; Rev. G. Robins, rector of Courteenhall, Northamptonshire; Rev. Canon James, vicar of Sedgingworth, Leicestershire; and Rev. T. Evens, of Preswood, Buckinghamshire, to be *Rural Deans*. *Rectories*: The Rev. C. A. Alington, to Burwell, Lincolnshire; the Rev. J. Grant, to Templebreedan; the Rev. H. B. Pickles, to Hillingdon, near Castle Bishop; Rev. E. M. Closed, to Wrentham, Suffolk; Rev. J. D. Ridout to Bourn, Cambridgeshire; Rev. E. Bramell, to Hoe, Norfolk. *Vicarages*: The Rev. J. Coop ly, to Hay Trinity, Cork; Rev. T. Pike, to Wimeswould, near Loughborough; Rev. J. W. Hull, to North Muskham; Rev. J. H. Croft, to Tembesombe, Somerset; Rev. A. M. Wilcox, to Ashtable, near Penrith; Rev J. Bartlett, to St. Blazey, Cornwall. *Incumbencies*: The Rev. R. E. Formby, to Hythe, Kent; Rev. W. Herbert, to Hancovye, Carmarthenshire; Rev. B. Wright, to Flockton, near Dewsbury; Rev. G. W. Spooner, to St. Mary Tunnall, Staffordshire; Rev. S. Horsgood, to Wayford, near Crewkerne; Rev. T. K. Little, to Lenwy, Flintshire; Rev. T. Davis, to Debewri and Llanor Church, Cardiganshire. *Perpetual Curacies*: The Rev. J. Jameson, to the Proprietary Chapel, Lamington; Rev. J. Lawrell, to St. Matthew, Great Peter street, Westminster; Rev. E. R. Pitman, to Pipe Ridware, Staffordshire.

TESTIMONIALS.—The following clergymen have recently received testimonials of affection and esteem:—The Rev. W. M. Inland, of Willbarton, Surrey, one of his flock and friends, as a sincere, though inadequate, memorial of their high esteem and respectful attachment to him as their pastor; and of the general regret experienced at the prospect of their losing the advantage of his ministry. The Rev. C. H. Whyley, "by the parishioners of Oakington, Cambridgeshire, as a token of esteem and regard, 1853." The Rev. Francis F. Statham, of St. Peter's Church, Walworth, a testimonial, and a purse of £100, as "an earnest of their goodwill and appreciation of his mi is erial labours." This is the second testimonial to the rev. gentleman; his services while assistant-minister of Verulam Episcopal Chapel, Lambeth, having been recognised in a similar way by the presentation of a handsome piece of plate.

ST. PAUL'S CATHEDRAL.—It is understood that the Bishop of London, assisted by Dr. Lushington and Sir James Patteson, sitting as assessors, will commence an inquiry, on the 9th January, into certain alleged abuses connected with the above Cathedral.

SOCIETY FOR THE PROPAGATION OF THE GOSPEL.—The usual Royal Letter, addressed to the Archbishop of Canterbury, authorising a general collection of alms for the purpose of enabling the Society for the Propagation of the Gospel in Foreign Parts to continue and extend its operations, has been published. It bears date the 15th of October, and is the best answer that could be given to the report propagated that no such letter would be issued this year.

THE RUSSIAN AGGRESSION.—A crowded meeting was held at the Town-hall, Paisley, on Monday evening last—Provost Macfarlane in the chair—to consider the unwarrantable aggression made by Russia on Turkey; and to memorialise the Government on the subject. Resolutions bearing on the subject were moved and carried unanimously.

LATEST INTELLIGENCE.

RESIGNATION OF LORD PALMERSTON.

It was rumoured last night, and we fear, with too much truth, that Lord Palmerston has taken a step which will excite the deepest regret on the part both of his colleagues and of the public. That distinguished statesman has, it is reported, tendered his resignation of the office which he has so ably filled since the formation of Lord Aberdeen's administration; and it is stated that the Premier's present visit to Osborne has reference to the lamented withdrawal of one of the most popular members of his Cabinet.

The noble Lord's resignation, from all that we have been able to ascertain, is in no way connected with any difference of opinion between himself and his colleagues on the Eastern Question, or, indeed on any other point of foreign policy. On all subjects affecting the interests and the honour of this country abroad, and, with one exception, on all matters of domestic policy, his Lordship's views are, we believe, in harmony with those of the Government. The exception to which we allude is the important question of Parliamentary Reform. Lord Palmerston, it is said, objects to the measure which his colleagues contemplate submitting to Parliament, in the ensuing session, for the amendment of our representative system; and his conscientious inability to concur with them on this subject is the cause—and, so far as it is known, the exclusive cause—of the decision which his Lordship has definitively adopted. We acknowledge that this resolution surprises us, as the general impression is that the new Reform Bill will rather fall below than exceed the expectations of the majority of reformers.

The sincere regret with which the country will learn that it is about to lose the official services of so eminent a statesman, will, we are convinced, be fully shared by the Government. From all that is known, Lord Palmerston, from the formation of the present Ministry, has uniformly acted towards his colleagues with that perfect cordiality which naturally characterises the intercourse of honourable men jointly labouring for the public good; and the frank and hearty sincerity with which, in a position of great and peculiar difficulty, he has steadily cooperated with the other members of the Cabinet, will greatly add to the sorrow with which they must regard the severance of their official connection.—*Morning Chronicle*.

On this subject the *Times* has two long articles; and on these the *Standard* has given a strong commentary, from which we take some extracts:—

"We have arrived at 'the beginning of the end.' On Wednesday, Lord Palmerston tendered a resignation of his office of Secretary for the Home Department; and yesterday Lord Aberdeen proceeded to Osborne to lay the resignation before the Queen. Thus the Ministry has lost the single man of character and talent whose association preserved it from utter contempt; the single man of its whole number who commanded any respect in the nation at large. The *Times* has no less than two long leading articles, laboriously endeavouring to prove that it is not in disgust at the foreign policy of the Austro-Russian Premier the late Home Secretary has withdrawn from the official service of his country, but from dissatisfaction at the sweeping extent of Lord John Russell's threatened Reform Bill. *We do not believe one word of this.* Without pretending to any secret intelligence of Lord Palmers on's feeling upon the subject of the Russian aggression, we know, from the whole tenour of his conduct while holding the seals of the foreign office, that he must from his heart condemn the vile truckling and trafficking system pursued by Lord Aberdeen during the last seven or eight months. Regarding the threatened Reform Bill as a sub to the whale, accustomed to engage public attention while the best interests of Europe and of England are being betrayed to the Russian tyrant, Lord Palmerston may object to its introduction at present, just as Mr. Pitt declared, on the eve of the French Revolution War, he would oppose *even his own Reform Bill* with such a temper as he now sees him impending; but, what ver Lord Palmerston's opinion of the new Reform Bill:—if indeed that bill is already in shape, which we doubt—whatever his view of the exped ency of bringing it forward early or late, the approach ng session, his character is a pledge that, if satisfied with the foreign policy of the Government, he would not, at a crisis like the present, weaken that Government by his retirement—as weaken it he must. . . . The artifices of the Czar to obtain a loan are patent. Among the artifices to allying reports of Asiatic victories, in places where neither Turks nor Russians can be traced, hold a prominent place. We repeat it, that, were Lord Palmerston satisfied with the foreign policy of the Government of which he was a member (which the entire course of his public life proves he cannot be), he would not have deserted that Government at a conjuncture like the present. If he had merely disliked Lord John Russell's Reform Bill, he might have demanded—as any reasonable man would—that the time for discussing the measure, might ask—its postponement for a month or two, or until the urgency of our actual complications had been overpassed; but he would not at such a crisis have abandoned the post. All the elaborate reason ng of the two long articles inserted by Lord Aberdeen's order in the *Times* proves indeed just the contrary of what it is intended to prove—proves that Lord Pa merston *has retired in disgust at the foreign policy of the Austro-Russian Premier*—proves, too, with what dishonest purpose it is proposed to distract the country with another Reform Bill agitation, at a time when no man calls for it—that purpose being to withdraw public attention from the outrageous violation of all public law by Russia . . . Let Lord Aberdeen place the seals of the Home Office in Mr. Cobden's hands (it would not surprise us if he should do so); he will still fail to get up a Reform clamour like that of 1831, or a no-Russian clamour. The hours of his Government are counted; and he can only make the end of his administration more infamous by whatever plunge he may take."—*Standard*, Dec. 16.

MINISTERIAL MOVEMENTS.—A Cabinet Council was held at the Foreign-office this day (Saturday). The Earl of Aberdeen arrived in town last evening, from Osborne. Sir Charles Wood arrived in town on Thursday night; and the Chancellor of the Exchequer on Friday evening.

THE IRISH EXHIBITION.—The Dublin Exhibition building was opened on Thursday as a winter-garden and exhibition promenade. The Lord-Lieutenant and Lady St. Germans were present, and six military bands played a selection of music.

MR. WILLIAMS, M.P., AND THE ELECTORS OF LAMBETH.—In accordance with a usual custom of meeting his constituents at the end of each session, Mr. Williams has invited the attendance of the inhabitants of Lambeth at the Horns Tavern, Kennington, on Monday evening next, the 19th instant.

CARDINAL WISEMAN.—An important ceremony is about to take place at Rome in regard to two clergymen from England, for the first time, it is believed, since the period of the Reformation. His Holiness has, at the instance of Cardinal Wiseman, granted them a general private audience. It is understood to be at present arranged for the Carnival to return into England after Christmas, for the purpose of actively resuming his accredited functions in this country.

THE "THEOLOGY OF TABLE-TURNING."—On Thursday evening the Rev. N. T. Godfrey delivered a lecture on this subject at the Hanoverian-rooms. The rev. gentleman stoutly contended that table-turning, spirit-rapping, and clairvoyance were nothing less than a direct communication with the Evil One. The chairman, Mr. J Bateman, suggested that the meeting should conclude by prayer, and a hymn was being amidst great confusion. An extraordinary scene then took place. The chairman, left the, and a number of clergymen on the platform made a precipitate retreat amidst loud cries for the chairman to keep his seat. Several gentlemen attempted to address the meeting, and a Mr. E. Connor was called to take the chair, for the purpose of making experiments. He made several extraordinary state ments. The officials connected with the hall attempted to extinguish the lights, but were prevented doing so by main force. The table having, however, been at last turned over by the same means, the meeting separated amidst great confusion.

APPROACHING STRIKE IN GLASGOW.—We regret to learn that there is every prospect of a strike taking place in this town and neighbourhood amongst the operative cotton spinners, in consequence of an intended reduction, by a few of the employers upon a scale of prices lately agreed to by the second masters of Scotland. In connexion on with this matter, we learn that the whole of the master spinners of Scot and are willing to abide by the "scale," with the exception of seven.—*Glasgow Post*.

ALLOWANCE FOR SPOILED STAMPS.—The following important notice was issued on Thursday, by order of the Commissioners of Stamps, that, after Saturday, the 24th inst., all receipt stamps rendered useless by the new Penny Receipt Stamp Act, will only be allowed for as spoiled stamps, on the following days—viz., Tuesdays, Thursdays, and Saturdays, between the hours of twelve and two o'clock in the afternoon. Until the 24th inst., parties having any quantity of the old stamps (which have now become useless by the new penny stamp), may have them exchanged daily (Monday excepted), from twelve till two p.m.

FOREIGN POULTRY FOR CHRISTMAS.—Large quantities of poultry of all kinds are now being imported from France, Belgium, and Holland for Christmas cheer; and further large arrivals will take place, to assist in the supply of the markets, during the ensuing week.

FOREIGN.

RUSSIA AND TURKEY.

The following bulletin was posted on the Bourse at Odessa on the 5th of December:—

The Russian fleet, under the command of Admiral Nachimoff, has met in the Black Sea a Turkish and Egyptian fleet, composed of eighteen ships two-deckers *frigates*, corvettes, together with two steamers of 500-horse power, and two others of 300-horse power. After a long engagement, the following Turkish ships have been destroyed or captured:—

One of 84 guns	..	No name given.
— 62 guns	..	Id.
— 52 guns	..	Nezraini Effendi.
— 50 guns	..	Ahmet Ali.
— 46 guns	..	Nazim Fesim.
— 22 guns	..	Fessi Mahmoud.

Steamers—Two of 20 guns each; two transports; one British transport. The engagement took place near Sinope: 5000 Turks have been killed, and many taken prisoners. Osman Pachs, who was wounded, has also been taken prisoner.

Several officers, both English and French, were on board the Turkish fleet.

A naval division of ten powerful steamers, under the command of Kaiserly Ahmed Pachs, left Constantinople for the Black Sea on the 2nd instant.

THE OVERLAND MAIL.

The despatches from India and China, in advance of the Overland Mail, bring accounts from Burmah down to the 28th of October. They represent the country to be in a state of anarchy and confusion from the several chiefs already perpetrated by the Dacoits, but against whom Captain Latter had marched his troops and inflicted severe punishment, desperately wounding the notorious chief Meah Toon, who was conveyed on a litter to Ava; so that it was hoped the flagrant offences of this daring band would be at least suspended for a time. While Captain Latter was thus engaged, Captain Smith was not less active in the neighbourhood of Sarawah, where he succeeded in capturing one of the leaders, named Moung Koung Gyee, whom he ordered for immediate execution. With the exception of Burmah, India never enjoyed more tranquility than at present. Major Herbert Edwardes, C.B., had succeeded the late Colonel Mackeson as Commissioner at Peshawur. The death of Major General Godwin is confirmed: the veteran officer died at Simlah on the 26th October, after a very short illness, while on a visit to his Excellency the Commander-in-Chief, Sir W. Gomm. Admiral Austin, the Naval Commander-in-Chief in the Burmese waters, it will be recollected, fell a victim to the climate; and now the Military Commander has sunk under the same influence. Sir Theophilus Metcalfe, the Commissioner at Delhi, died on the 3rd ult. We have also to announce the decease at Madras of Lieut.-Colonel Gordon, the Adjutant-General of that army. The gallant General died of cholera, brought on by overtasking his energies. This epidemic had also broken out at Bombay, where 275 persons had fallen victims. The disease was, unfortunately, on the increase. The financial condition of India appears to be in a prosperous. A Gazette Extraordinary notifies that the Company intended to pay off a further portion of their five per Cent Loan, or commute the interest thereon to 4 per cent, and of their having passed a new loan at 3½ per cent interest. The paying off the remaining portion of the loan, it was expected, would soon follow. These official announcements caused an advance in most descriptions of Government Securities and Joint-Stock Bank Shares.

The news from China is of Oct. 27, which brings no later intelligence from Shanghae. Hostilities were still going on at Amoy, and other places; but, from the confused and partial accounts published to the several local papers, it is impossible to know upon which side the advantage lies.

Commercial accounts from Canton state that cotton had advanced, and confidence seemed to be returning. The exports of tea had been moderate.

The Russians claim several successes in Asia. Advices from Odessa state that the Russians defeated the Turks at Aour, in the Caucasus, and took possession of their baggage. News has been received at St Petersburg that Prince Orbeliani encountered 20,000 Turks, who had passed the Arpatchai, near Alexandropol, and, after a sharp engagement, drove them back. They were retreating on the 14th November. It is also stated that, in another direction, General Brunner charged 7000 Turks with the bayonet, and completely routed them, taking a cannon, two standards, and a part of the Turkish train and ammunition.

A telegraphic despatch from Vienna, dated "Thursday morning," says:—

The Russian General Andronikoff has totally defeated the Turks in a battle at Akaltsik, on the borders of Turkish Armenia. The Turks left 4000 slain on the field.

Letters from Bucharest of the 8th inst. announce the *de facto* suspension of hostilities on the banks of the Danube. Mutual operations are at a standstill everywhere. Glungevo is being fortified, and heavy artillery sent there. The Russians have strongly fortified the little island opposite, connected by a bridge with the left bank. Turna Severin is held by 5000 Turks. The Russian hospitals are as full as ever.

We hear from Pernambuco (Brazil), that a conflict has taken place between the Russian and Wallachian troops: the commandant of the latter has been removed. Several companies have been sent into the interior.

General Budberg arrived at Bucharest on the 6th. The Boyards received him with great honours. He is accompanied by a staff of thirty officers of the Czar's guard.

Two Russian steamers were cruising near Varna, to cut off the Turkish reinforcements.

A despatch from St. Petersburg says:—

On the 29th ult. an officer was shot here for having furnished to Radziwill, the Secretary of Prince Gortschakoff, the materials for a correspondence with Omer Pacha. This is the first execution that has taken place at St. Petersburg for five-and-twenty years. Radziwill himself was shot on the spot.

FRANCE.

The committee appointed by the British residents of Paris to collect the subscription raised in honour of the late Lieut. Bellot have had an audience with M. Ducos, the Minister of the Marine. It is a curious fact that while the English residents in Paris have raised fully 12,000 francs for the Bellot fund, a French committee now sitting in Paris has only been able to collect 6000 francs for the same purpose among their countrymen. The English committee propose to erect a memorial in some conspicuous quarter in Paris, and to hand over 10,000 francs to the brother of Lieut Bellot.

At the Paris Bourse on Thursday the funds experienced a considerable decline. The Three per Cents closed at 74f. 75c. for the end of the month.

THE WEST INDIA MAIL.

SOUTHAMPTON, Thursday Night.—The *La Plata* has just arrived, and landed her Mails. Her dates are—Trinidad, Nov. 25; Jamaica, 27; Cha rges, 24; St. Thomas, Dec. 1. She has fifty passengers, and 629,842 dollars in specie, and a usual cargo.

At Jamaica the Import Duty Bill had received the assent of the three branches of the Legislature, and was to take effect from the 3rd of November last. In the new tariff several important reductions have been effected in the rates chargeable on several of the most heavily taxed articles, including salted beef, pork, spirits, tobacco, wine, rice, Jews' harps, &c.

In political affairs in Jamaica the dead-lock had at last been removed, and the different branches of the Legislature were working harmoniously together, with some prospects of a continuance of this favourable change. The island was healthy

PERU.—We learn from advices from the south-western coast of America that an insurrection had taken place in the north of Peru; the Peruvian territory had been invaded also by the Bolivian army, headed by General Belzu. The Peruvian President has resolved to take the field against the Bolivians. The position of the Peruvian Government was critical.

METROPOLITAN NEWS.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 30.39 inches at the beginning of the week to 29.21 inches by 11h. a.m. on the 14th; increased to 29.26 inches by 5h. p.m. on the same day; decreased to 29 20 inches by 3h. a.m. on the 15th, and remained at about that reading to the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.769 inches.

The mean daily temperatures have ranged from 8·9° below, to 0·5° above, their average values. During the time they were below their averages, viz., on every day from the 2nd to the 14th (except on the 8th and 7th, when they were slightly above), the mean defect was 3½° daily.

The mean temperature of the week was 36·9°, being 3·8° below the average of the corresponding week during 38 years.

The range of temperature during the week was 15·9°, being the difference between the highest reading on the 13th, and the lowest on the 14th.

The mean daily range of temperature during the week was 9·8°. The greatest was 18½° on the 13th, and the least 6° on the 15th.

Rain fell during the week to the depth of 0·22 inch.

Snow fell on the 15th.

The Weather during the week was dull and cold. The wind from N.E. The sky was overcast, except during the afternoons of the 12th and 14th, when it was almost cloudless.

Lewisham, Dec. 16, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 838 boys, and 790 girls, were registered in the week ending Dec. 10. In the eight corresponding weeks of the years 1845 to 1852, the average numbers were 712 boys, and 685 girls. A considerable increase in the number of births, in the preceding week (it was 1414; so that this return shows a decrease of mortality in London. In the ten weeks corresponding to last week of the ten preceding years the average was 1215; but in this week in the year 1847 the number of deaths was 2416, in which week influenza carried off 374; bronchitis, 259, and pneumonia, 294: if this week be omitted, the average will be 1051, and increased in the proportion of increase of population, become 1200, so that the public health is still in an unfavourable state. The number of deaths in the West Districts was 156 (average, 179); North-West 327 (average 330); Central Districts, 210 (average 216); East Districts, 304 (average 285); and South Districts, 361 (average 329). The number at three different periods of life was—Under 15 years, 384 (average 430); from 15 to 60 years, 423 (average 382); and at 60 and upwards, 301 (average 281). The number of fatal cases caused by zymotic diseases, was 277 (average 380); of these, 5 were caused by small-pox; 35, by measles; 45, by scarlatina; 56, by hooping-cough (average 40); 31, by diarrhœa; 13, by cholera; 64, by typhus fever. By dropsy, cancer, &c., 50 (average 51); to tubercular diseases, 208 (average 176); of these 157 were consumption (whose average is 139). By those of the brain, 123 (average 125). By those of the heart, &c., 62 (average 41). By those of the lungs and of the other organs of respiration, 348 (average 296); of these 169 were bronchitis (average 103); and pneumonia, 134 (average 122). By those of the stomach, 49 (ave age 61); by age, 58 (average 62); by want of breast milk, 10 (average 9); by burns and scalds 2; by hanging, 2; by drowning, 3; and by fractures, 4. From the above, as compared with the preceding, it will be seen that the deaths caused by diseases of the respiratory organs has been the principal feature of late. The numbers referred to this class have been, in the last four weeks, 180, 257, 279, and 348. From phthisis or consumption, in the tubercular class, they were in the same period 128, 111, 126, and 157. Last week bronchitis was fatal to 134 persons, which number exceeding its average; and pneumonia in 142, also in a much excess. In zymotic diseases typhus and hooping-cough predominate; the former numbering 64 cases, the latter 56. Typhus shows an increased tendency to prevail. Cholera rapidly declines: in the first week of November the deaths numbered 102, and last week 13.

SOCIETY OF ARTS.—MR. MECHI'S FARMING.—On Wednesday evening, at the ordinary meeting of the Society of Arts, at their house in John-street Adelphi. Mr. Mechi read a third paper, containing some account of his operations at Tiptree-hall in Essex, and of the results with which they had been attended. He urged the necessity of steam-power in the farm-yard operations. He felt persuaded that every farmer of 200 or 300 acres, who was willing to devote his mind to the subject, would learn in time, and one which circumstances would be certain to teach him. Mr. Mechi entered into a detail of the great value of a steam-engine, on a farm, in the balance sheet of profit and loss account of the farm, which he had now to lay before them, exhibited a clear profit, for the past working year, of £683 18s. 8d., including rent, profit, and investment. To this he might add a further sum, due to the improved condition of the soil, in consequence of his having purchased, for consumption by his live stock, £700 worth of corn, oilcake, &c., of which he should have the benefit next year, and which, however, would not between the valuation of 31st October, 1852, and 31st October, 1853, was £883 18s. 8d. This large profit was the result, in his opinion, after an attentive consideration of the matter in its minute details, of the system of manure irrigation which he pursued on his farm; and he detailed the much more valuable properties of liquid, in comparison to solid manures. Mr. Mechi concluded his paper (which was listened to throughout with the greatest attention) by a few observations on the advantages of Usher's steam-plough and Romaine's cultivator.

THE CHARTER HOUSE.—The "Poor Brothers" of the Charter House have lately had a "movement," by soliciting an increase of the pension of £25 now annually allotted to them. On Friday week the Governors of the institution took the petition into consideration, when they resolved that it ey could not consistently with their duty, make any increase to the pension of the brotherhood.

OBSTRUCTING THE PAVEMENT IN THE CITY.—The inhabitants of the City, and persons whose occupations require them to pass daily through the principal thoroughfares, having called the attention of Mr. D. W. Harvey, Commissioner of Police, to the annoyance and obstruction they experience in consequence of the troops of juvenile beggars, orarity girls, and men with barrows; that the officer with the greatest promptitude has issued orders for a number of constables to be selected from each division, for the suppression of the nuisance; and although the system is only in operation a few days, it has been found to work so well, that beggars, and itinerant fruit and flower sellers have disappeared from the leading thoroughfares.

THE NEW CREATURE AT BROMPTON.—The works on the plot of ground purchased by the Oratorians at Brompton, for the erection of a church and college on a large scale, have proceeded with great rapidity since the closing of the building in King William-street. Several of the buildings for the intended college has already been entirely erected, and is of very considerable extent and of imposing appearance. As the Fathers have been very desirous of having the building able to receive Divine service with as little delay as possible, a temporary church has been erected during the past week, and it is understood to be intended to serve for that purpose for the next six months. The premises on which these extensive buildings, for the purposes of the Roman Catholic Church, are being erected, are at the point of the road facing the Fulham-road, and leading immediately contiguous to the Kensington Gardens to the large plot of ground purchased by the Government for the new National Gallery.

DEFALCATION OF A TAX COLLECTOR.—Mr. Thomas Boulton, the collector of the property and income-tax for the parish of St. Clement Danes, has become a defaulter for the large amount of £3600. An official notice has been issued by Messrs. Twin ng and Wood (the assessors), stating that they had seized goods to the value of £3600 in the collector's premises, who are four in number, are, as a matter of course, accountable for his defalcations. The appointments, which he held for many years, have been lately disposed of.

DEPUTATION FROM GIBRALTAR.—A deputation, consisting of William Carver and John Peacock, from the merchants and inhabitants of Gibraltar, introduced by Mr. John Bright, M.P., and accompanied by Mr. J. B. Smith, M.P.; Mr. B. Carr, Mr. J. Turner, President of the Commercial Association, Manchester; Mr. H. Ashworth, Vice-President of the Chamber of Commerce; Mr. J. Stagg, Director of the Chamber of Commerce; &c., had an interview with the Duke of Newcastle on Wednesday, at the Colonial office.

TESTIMONIAL.—On Wednesday a very handsome service of plate was presented to Mr. John Kesst by his fellow parishioners, and other friends, in acknowledgement of the efficient manner in which he had filled the office of Churchwarden and Chairman of the Board of Guardians of St. Luke's parish. The presentation took place at a dinner at the Prince of Wales Tavern, Banner-street. Among the guests were the Master and Warden of Dulwich College, of which the churchwardens of the parish of St. Luke are *ex officio* assistants. We shall engrave the testimonial next week.

His Excellency the Belgian Minister has returned to Portland-place, after attending the Duke and Duchess de Brabant on their departure for Brussels.

SPECIAL DESPATCHES FROM CONSTANTINOPLE.—Lieut. Henry Carr Glyn, the son of the London banker, and lieutenant of Admiral Dundas's flag-ship, arrived in Downing street, on Saturday last, charged with important and secret despatches from Constantinople. This young officer, who was selected for this duty, came home via Marseilles, in the French steam-packet. He is under orders to be in readiness to return to the fleet at a moment's notice.

JENNY LIND'S RETURN TO THE STAGE.—The musical public will be glad to learn that the Swedish nightingale—now Mdme. Goldschmidt—has returned to the stage, as will be seen by the following letter from Dresden, dated the 6th inst. On Saturday (says the writer at Dresden, in a letter dated Monday week), I attended the second of a series of concerts given by Herrn Otto Goldschmidt in the music hall of the Kreuz-school, which was filled in the remotest part by a distinguished audience, that on which Mdme. Jenny Goldschmidt made her first appearance in public since her marriage and return from America. Her voice is as fine as ever it was.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Great inactivity has prevailed in the Stock Exchange during nearly the whole of the week. National Stocks have met a dull market, and prices have shown a tendency to decline. The fall has been comparatively small; nevertheless, an important change has certainly taken place in the temper of an unfavourable issue as regards the dispute between Turkey and Russia. The continued shipments of bullion to France and other quarters have not, it appears, led to any material drain upon the Bank of England as had been anticipated; whilst the large imports from Australia and the United States—from which quarters nearly £1,000,000 sterling has come to hand this week—render the absence of any material falling off will be observed during the next two or three weeks, especially as the purchases for the India and China market have declined to almost a nominal sum.

On Monday, Consols for Account fluctuated between 95⅞ to 95⅝ and 95⅞. The Three per Cents Reduced were done at 95⅝, and the New Three per Cents-Quarter per Cents, 97⅝. Long Annuities closed at 7⅞. Bank Stock marked 221½; India Bonds sold at 5s.; and Exchequer Bills, 1s. to 2s. premium. Very little change took place in prices on Tuesday. On the following day, Consols for Account, 95⅝, were noted at 94⅞, closing at 4⅞. The New Three-and-a-Quarter per Cents were 96⅝; South Sea Old Annuities, 99⅛; and Long Annuities, 7⅞. Bank Stock, 221½; India Stock, 274½; and Exchequer Bills, 1s. per Cents Reduced were ⅛ and the New Three-and-a-Quarter per Cents, 96⅝ ⅞, cheaper bute, 4s. to 2s. prem ium.

The arrival from the Bank of France show a further decline in the stock of bullion of £560,000. In the October returns, the decrease was £2,080,000; and in November, £1,080,000. The total amount of specie withdrawn from the above institution this year, has been £6,753,000, chiefly in silver. In the same period, the Bank of England has lost £5,485,095. Our advices from Australia and California, in reference to the produce of gold, are very favourable. There are now on passage from the above colony about £500,000. The demand for silver has fa len off, and the price has consequently declined. Dollars have sold at 5s. 0¼d. per ounce; and bar, 5s. 1½d.

On the whole, a steady business has been transacted in the Foreign House, and prices have been well supported. Brazilian Bonds have marked 98; Ditto, Four-and-a-Half per Cent, 1852, 94½ ex div.; Chilian Six per Cents 103; Grenada Deferred, 8⅜ to 9; Peruvian Four-and-a-Half per Cents, 76; Ditto, for the Account, 76; Russian Five per Cents, 104½ to 104; Ditto, Four-and-a-Half per Cents, 88⅜; Sardinian Five per Cents, 90⅝ ex div.; Spanish Three per Cents, 46⅝; Ditto New Deferred, 22¾, to which Committee Certificates of Coupon, 6¼ per cent

In Miscellaneous Securities, only a limited business has been transacted. Albion Insurance have marked 36½; Argus Life, 23; County, 125; Globe, 144 to 148, Guardian, 60; Imperial Fire, 375; Ditto Life, 20; Pelican Life, 39; Phœnix, 185; Rock Life, 8½; Royal Exchange, 240; Sun Life, 65; Universal, 45½; Berzin Waterworks, 15; East London, 130; Grand Junction, 75; Southwark and Vauxhall, 80; Caledonian Railway, 10; South-western Ditto, 85; Australian Pacific Mail, 8⅞; Australian Royal Mail, Steam, 2½; Canada Six per Cent Bonds, 113; Peninsular and Oriental Steam, 75 to 71.

Mining Shares have been rather lower, the latter decline having been advanced to 50, consequent upon the renewed reports relative to the discovery of gold on this company's property. Australasia Bank Shares have touched 83; Ditto New, 79; Ditto, for the Account, 79; Ditto for the Australian Chartered, 8⅜ to 9; London Joint Stock, 27⅞; South Australia, 43½ to 44; Ditto, New, 78½ to 78½.

In the market for Railway Shares very few transactions worthy of notice have taken place. Jobbers have been much occupied in preparing for the Account. The following are the official closing prices on Thursday.

ORDINARY SHARES AND STOCKS.—Aberdeen, 22¼; Ambergate, Nottingham, and Boston Junction, 6⅝; Caledonian, 76½; East Anglian, 3⅞; Eastern Counties, 6⅝; East Lancashire, 65; Great Northern 86¾; Ditto, B Stock, 121; Great Western, 83⅝; Lancashire and Yorkshire, 68⅞; London and Blackwall, 8⅞; London and North-Western, 97¾; Manchester, Sheffield, and Lincolnshire, 35¾; Midland, 66; North British, 34¾; North Staffordshire, 12, Sarewsbury and Birmingham, 61; South-Eastern, 64; York, Newcastle, and Berwick, 64; York and North Midland, 48.

LINES LEASED AT FIXED RENTALS.—Northern and Eastern, 61; Wear Valley, 31.

PREFERENCE SHARES.—Eastern Counties, Extension, No. 2, 1¼ prem.; Great Northern Four-and-a-Half Per Cent Scrip, 10⅞; Norfolk, 1847, Five-and-a-Half per Cent, 115.

FOREIGN.—Belgian Eastern Junction, 1¼; Dutch Rhenish, 6; Grand Trunk of Canada Shares, 20¾; Luxembourg, 10⅛; Ditto, Guaranteed, 5, Northern of France, 35½; Paris and Strasbourg, 33½; Royal Danish, 9¼; Sambre and Meuse, 9¼.

Mining Shares have sold heavily. On Thursday, Australian Cordillera were 5⅞; English and Australian Copper Smelting Company, 9; Great Nugget Vein Scrip, 9⅛; Mexican and South American, 7½; Santiago de Cuba, 6¾.

Friday Evening

In the car's part of to-day the Consol Market was heavy, and the Three per Cents for the Accounts were done at 94⅝; but the price subsequently rallied to 94⅞. The Three per Cents Reduced have marked 94⅝; and the Three-and-a-Quarter per Cents, 96⅝. India Bonds have been par to 3s. prem.; Exchequer Bills, 4s. to 6s. prem. Foreign Bonds and Railway Shares steady.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up to-day the arrivals of English wheat, constwise and by land carriage, were moderate, and in some instances, fine parcels were in per quarter loads the demand ruled steady, and, in some instances, fine parcels were in per quarter loads the demand ruled steady, and, in some instances, fine parcels were in per quarter higher than on Monday. Although the imports of foreign wheat have continued to 20,000 quarters, the inquiry for it has been active, partly for the Continent, and good heavy wheats were

THE ILLUSTRATED LONDON NEWS

No. 659.—VOL. XXIII.] SATURDAY, DECEMBER 24, 1853. TWO NUMBERS, 1s. { WITH SUPPLEMENT GRATIS.

LORD PALMERSTON, THE MINISTRY, AND THE WAR IN THE EAST.

THE country has recovered from the astonishment into which it was thrown last week, by the announcement of the resignation of Lord Palmerston. The loss of his Lordship's name to the Ministry, and of his services to the nation in a ministerial capacity, is felt to be great; but people are no longer of opinion that it is irreparable. No one questions his eminent ability, his long services, and his almost unprecedented popularity; but no one believes, even though a few partisan writers may assert, that the affairs of the nation are to be brought to a stand by the withdrawal of his Lordship, or any other statesman, however potent. Lord Palmerston is, and was, a favourite with all parties. His personal bearing, so courteous and so gentlemanly, his readiness in debate, his prompt and good-humoured wit, his exemplary industry, his accessibility, his thorough knowledge of State business, his downright English spirit—all these, and many other good qualities, both private and public, combined to render him at once the best known, and the best liked, of living statesmen. His name abroad was oftener heard than that of any other Englishman, and was respected by all the friends and feared by all the foes of Great Britain. But the damage that no other person could inflict, he has inflicted upon himself, for the Ministry will not be dislocated or even embarrassed by his secession. The time which his Lordship chose to disconnect himself from his colleagues was unlucky. With war impending, if not actually commenced, against the most formidable and nefarious power in Europe, and at the opening of a long series of important, and it may be, deplorable events, of which it is impossible to foresee the issue, it should have been no light matter that induced Lord Palmerston to quit the Ministry. That he took so grave a step, and one that, without explanation, is so damaging to his reputation, because he could not support Lord John Russell in a new Reform Bill that is to disfranchise a few rotten boroughs, is a statement that we cannot accept upon any other authority than his Lordship's own. Until the meeting of Parliament, the world must be content to remain in the dark upon the subject, and to feel regret that his retirement had not been delayed, even although it may have been inevitable, until his Lordship, in his place in the House of Commons, could have removed all doubt of his motives and reasons, by openly declaring them. In the meantime people will put their own construction upon the matter; and Lord Palmerston will incur the reproach of having forsaken the Ministry at a moment when it was essential to Great Britain and her allies that a firm and determined front should not only be made, but should appear to have been made, against the common enemy of Europe.

Events will, however, give a contradiction to all false surmises on the subject; and the whole Continent—Russia as well as Turkey—will speedily be as thoroughly informed as any one in England upon the true causes of his Lordship's retirement, and upon the position of the war question in the Ministry, and in the public mind. Things are evidently marching to a catastrophe in the East; and ere this sheet meets the eyes of our readers, a combined attack of Turkey and her allies against Sebastopol and the Russian fleet in the Black Sea, may have set at rest the assertion that the British Ministry was for peace *à tout prix*, and that Lord Palmerston was the only supporter of active measures against the Russians. The true history of the cowardly butchery at Sinope has at length been made known; and the British and French fleets, that were not able to prevent, will certainly be able to punish it. If blasphemy and presumption be the characteristics of the Czar's own proclamations, misrepresentation the most shameless is the characteristic of all the despatches that emanate either from his diplomatists or his generals. The battle of Sinope was only a battle on the side of the Turks, who fought with a bravery unsurpassed in naval history. On the side of the Russians it was nothing but a treacherous massacre. So far from being engaged in conveying men and ammunition to the coast of Circassia, as alleged in the Russian despatch, the Turkish vessels were quietly lying in their own harbour or roadstead of Sinope. A dense fog concealed the approach of the enemy. When sufficiently near to be descried, the Russians hoisted the British flag, and bore down upon their unsuspecting victims, with a force at least five times as great. The result is already known, and adds another and the heaviest item to the sanguinary catalogue of the crimes of Russia in the abominable and selfish war which she is now waging.

The affair at Sinope is alone sufficient to nullify all pending negotiations for an adjustment of differences, and to warrant a declaration of war against Russia by the Four Allies of Turkey. Whether Austria and Prussia will carry their sense of justice so far, remains to be seen; but if, as we believe, Lord Stratford de Redcliffe and General Baraguay d'Hilliers have the full powers of their respective Governments, we cannot so far doubt the judgment of either, as to suppose that the final step will not be taken

STATUE OF SCHWARZ, THE INVENTOR OF GUNPOWDER, JUST ERECTED AT FREIBURG, IN SAXONY —(SEE NEXT PAGE.)

on so great a provocation. The Four Powers only consented to arbitrate after the occupation of Moldavia and Wallachia, upon the understanding that Russia was in the interval to adopt no further measures of aggression. Russia has broken faith both in Europe and in Asia. If it could be proved that the Turkish vessels destroyed at Sinope were engaged in carrying either arms or men to foment and aid rebellion in a Russian province, the attack, though murderous, considering the disproportion of forces, would be justifiable by the code of war. It would amount to an act of defence, not of aggression; and would free the Emperor of Russia from the double disgrace which now attaches to him—the disgrace of having deceived and broken his promise to the mediating Powers, and the scandal of an attack, the most barbarous and bloody ever committed by a nation calling itself either civilised or Christian. But this cannot be proved. Even upon the showing of the Russians themselves, the first story promulgated is no longer maintainable; and all testimony—not Russian—confirms the statement that the Turkish vessels were in harbour, and not engaged in any hostile movement whatsoever. Even a hostile intention is not to be attributed to them.

For these reasons the renewed Conference at Vienna loses its interest. The battles of the East are too hasty for the palaver of the West. Diplomacy dozes while the cannon rattles; and the sword unsettles in an hour that which it takes the punctilious pens of ambassadors and plenipotentiaries months to indite and months to sign. It is satisfactory, however, to perceive that on the 5th of December—seven days before the battle of Sinope was known to the Western Powers—there was a perfect accord between them, that Russia should not be allowed to retain possession of the Danubian Principalities. The events that have since occurred can but have strengthened that resolution. It is quite evident that the retirement of Lord Palmerston from the British Ministry cannot have weakened it.

MONUMENT TO SCHWARZ, AT FREIBURG.

Germany, the land of so many inventions, arts, and sciences, has just paid its meed of honour to one of the most eminent men in the history of inventions: a statue in commemoration of the inventor of gunpowder has been erected at Freiburg, in the Grand Duchy of Baden. The ceremony took place on the 30th ult., at two o'clock, when the statue was inaugurated in the presence of the leading authorities of the town.

Berthold Schwarz was born at Freiburg, and became there a monk in the monastery of the order of St. Francis.

In old books Bertholdus Schwarz is also called Constantine Anglklitzer, and he is common name seems to have been given him on account of his physical and chemical experiments, unusual for his age; which gained for him the appellation of "the Black Berthold" (der Schwarz Berthold), Bertholdus being his friar name. His favourite study was chemistry, in which he made great progress. Once, in the year 1340, he had stamped in a mortar a mixture of saltpetre, sulphur, and charcoal, and had covered it by a stone. A spark of fire got into the mortar, the stone flew up into the ceiling of the room, and with such power that a part of the building fell into ruins. The monk searched after the cause, and repeated the experiment: the result was always the same; and thus gunpowder was invented; but Schwarz himself is believed to have lost his life in pursuing this study about 1354

The Chinese are said, indeed, to have invented the composition of the gunpowder, and the monks to have learnt it from them; for some men of that order had, already in the thirteenth century, visited China in the character of missionaries, and returned to Europe in 1255.

In the year 1294, Roger Bacon, the celebrated English friar, died at Oxford. In his work, entitled "Opus Majus," he says—

Of saltpetre and other ingredients an artful fire can be produced, which burns even in the farthest distance, and is able to imitate thunder and lightning. A portion of this matter, well prepared, can ruin a whole army, and a town, with a horrible clap and an intense luminosity.

And in another passage he says very distinctly.—"Thunder and lightning can be imitated by a mixture of saltpetre, sulphur, and coal." But the monks seem to have concealed their discovery in their monasteries, and not to have known what use to make of their inventions

The circumstance, therefore, that the Chinese, the monks, and the learned Bacon knew the mixture of gunpowder a long time ago, prior to its discovery by Schwarz, does not at all deprive the latter of the honour of having invented gunpowder; because he did not learn it from any other person. He taught, also, how the force of the powder could be used to blast rocks and walls, and to sling great stones in form of balls out of mortars towards walls and gates of hostile towns and castles. Berthold Schwarz is, therefore, also the inventor of fire-arms. About the year 1380 the use of them had become common. The Venetians employed them in their war with the Republic of Genoa, at the siege of Chiogia, which they conquered the 21st of June, in 1380. The English used gunpowder the first time at the glorious battle of Crecy, 1346.

The monument to Schwarz is erected in the Augustine-place. It consists of a fountain, which sends its crystalline water through four brass pipes. Above these are four niches; in one of which, on the front side, is bas-relief is to be seen showing the terrified monk at the moment when the explosion surprises him. In the three other niches inscriptions are to be read concerning the name, life, and conditions of the inventor, and the time and manner of his invention The inventor himself, chiseled in grey stone, stands upon the column of the fountain, in his monas ic habit, absorbed in deep study, holding his right hand (in which he keeps his book) upon the mortar, which stands upon a pedestal by the side of him. The sculptor is M. Knittel.

To the left side of our Engraving the Church of St. Martin lately restored—is seen, after the Cathedral the most beautiful of the ten churches of the city. In the background is the former Monastery of the Friars of St. Augustine, with a fine hall of Gothic style. The square about the monument is the Market-place of the city: at certain seasons it presents a lively picture of the dresses, costumes, productions, and of the inhabitants of the high-land of Baden. Women with caps resembling wings (one stands upon the pump step) from the environs of Freiburg, are, by their caps, known to be of the Protestant religion. Other peasant women wear high yellow hats and tails, lengthened by long ribands hanging down to the knees. They wear exceedingly short bodices; and the coat begins almost under the arms, being only a piece of thick cloth hanging down in regular plaits a little out and sewed. These women are from the dales of the Black Forest. One of these women stands in the foreground of our picture, with two men—one of whom (with the hat and the long coat) is also an inhabitant of her dale. The other man, with the short black breeches, the long waistcoat, and the white stockings, is an inhabitant of the country Hanenstein. There are also two policemen, one weighing the butter, the other noting the prices of the victuals. Near the cross of stone at the church wall rises the market flag, forbidding every stranger to buy anything before ten o'clock, when it is to be removed.

Thus has the town of Freiburg done honour to the monk who added Freiburg to the towns distinguished as the birthplace of great men, and who gave the honour to Germany of being the mother-country to that mysterious composition which awoke the new age of history, and now governs the world, and decides its most important events.

Glass Columns.—The Prussians have put glass to a novel use. A column, consisting entirely of glass, placed on a pedestal of Carrara marble, and surmounted by a statue of Peace, six feet high, by the celebrated sculptor Rauch, has been erected in the garden of the palace at Potsdam. The shaft is ornamented with spiral lines of blue and white.

Quick Sailing.—The ship *Star of the East* arrived out at Port Phillip in 75½ days. She took out a heavy cargo, besides her full complement—upwards of 400 passengers; which makes her passage the more remarkable, as all the other ships that have made the passage in from 86 to 90 days have gone out with passengers only, and in "ballast trim." The *Stretford*, which had been taken up by her Majesty's Government for the mails of the 4th of June, had not delivered her letters in Melbourne when the *Star of the East* (which sailed from Liverpool 34 days after her) arrived out.

FOREIGN AND COLONIAL NEWS.

THE WAR IN THE EAST.

(From our Special Correspondent.)

Belgrade, Dec. 9, 1853.

The summer tourist who has once run down the Danube will be sadly disappointed if he fancies that the same facilities and speed are attainable in December as are to be enjoyed in August. The steamer which left Pesth on Wednesday, the 30th November, was one of the smallest and weakest on the line between Vienna and Semlin. The snow lay thick on the streets of the Hungarian capital; and, though the trumpets could be heard as they summoned from their beds the troops of the citadel, the utmost darkness covered the morning, and the fog of the the Danube obscured all else save the mustachioed guardsmen and police, who watched the travellers as they stepped into the steamer, saw their passes correct, and with lanterns sternly scrutinised their faces. It is needless to say that the existence of a state of war upon the Turkish frontier of Austria has not rendered the authorities less scrutinising and less watchful. But the fact that such a state of things existed rendered the passage from Pesth to Semlin more interesting to one whose only object was curiosity. A most varied and motley mass crowded the deck and cabin of the steamer. There were pursy little officers with incipient moustaches, on their way to quarters. Servian, Jew, and Hungarian dealers; a detachment of Greuzers or frontier troops; and, gliding amongst them all, was the never-failing policeman with his peaked shako and his sword. The confusion of tongues, the fetid atmosphere of every species of bad tobacco, the pernicious gas of the iron stove—the noise and the smell did not render the prospect of even two days' journey from Pesth to Semlin in the least inviting; but two days only is a summer trip, not to be enjoyed at any other time.

The fog-bell of the steamer tolled incessantly, as the *Maria Anna* left the quay, and passed with speed the numberless water-mills that crowd the river. The Danube's stream was smaller than it had been known for many years; and this impediment, together with the fog, rendered it incumbent to be doubly careful. The distance run on the first day was, therefore, slight. The fog came on about two hours after noon, and the ship lay too until morning. The next day, and the next, the fourth, and the fifth, rolled on; and we were still a considerable distance from Semlin. A breeze and sunshine greeted the passengers on the fifth, and hopes were entertained that Semlin would be reached that night—but no such fortune was its store. The sun went down, and as its disc decreased in size below a distant bank of clouds, the cold and frosty air upraised the mist which curled into fe-toons above the water, and gradually obscured the sky. The *Maria Anna*, with her weary passengers, was then at Czerrovitz, six miles from Peterwardein, and there the anchor dropped. Five hours' steaming is calculated as the distance from Czerrovitz to Semlin, and it was supposed by your Correspondent that in ten it might be possible to run the distance by the banks. Joined by two gentlemen and a lady, intent upon arriving at their destination, I left the steam boat at the village of Czerrovitz. At first some difficulty appeared to exist as to means of transport. The Slovoks who inhabit the village did not understand us, and German and Hungarian were unavailable amongst them. At last a man was found who spoke Italian. A *bauer*, or farmer, was then induced to furnish means of transport, and soon the common *vorspann* of the frontier was brought round, in which we mounted. The prospect on the whole was not inviting. The only thing which distinguishes the frontier roads from ploughed fields, is this—that the ruts are deeper than the plough would make them, and that these ruts are varied with here a mound, and there a hole. Into ground like this, in ordinary weather, the wheels of the vorspann, which are preternaturally small in the rim, roll into the shaft. In winter the whole is frozen, and the springless cart is rattled up and down, and sideways, with a speed unknown to any but the old mail coaches. The jolting, tilting, bumping, and noise soon shook the breath from out of us; and it was only during eye-balls and aching bones that we entered Peterwardein. The gates were opened as we rattled in; the sombre walls of the main defences cast gloomy shade upon the place, and the sentries gave no challenge as we passed. We found an inn with ease. There are fourteen houses in Peterwardein, and seven of these are taverns, at one of which we stepped. The lady who had joined us was at her journey's end, but not so with the rest; and, having landed her, the vorspann once more started. It appears that Peterwardein is like an eel trap—easy to enter, but hard to leave. The gates were shut before us, and egress was refused. There was nothing for it, then, but to spend a night in bed; and a general surrender of passports was effected Still, the object of the trip had been defeated; for, doubtless, the steamer would depart with dawn, and reach Semlin before us. We drew some comfort still from feeling that a night or ruin a tortress was more agreeable than one on board a steamer; and so it proved. But, in the morning, came fresh tribulations. As we rose to leave, the doors of all the rooms were found to have been closed with just as much effect as had been those of the defences on the previous night—namely, two policemen barred the entrance; and, with the utmost politeness, gave us to understand that the passports were not in order; that we were *suspects*, and prisoners. Your Correspondent, for his part, found refuge in that coolness which has never deserted him, and merely requested the policemen, with a politeness equal to their own, to acquaint the Governor of the fortress that the cause of our presence was that already described to you, and not a fruitless endeavour to spy into what certainly did not concern us; and, indeed, what we were far from having the means of understanding. It was farther hinted to the officers that, as a British subject, it was probable that I should lodge a formal complaint against the Governor at our Embassy in Vienna. One of my companions, who did not share my phlegm, endeavoured to persuade the officers of his importance and high position; in which attempt, although I knew that he advanced no more than the simple truth, he met with nothing but apparent incredulity An hour passed, and still no change took place. But presently a portly person, in blue uniform and a great military cloak, marched us off, accompanied by another officer. The first was the Burgermaster of Peterwardein, the second a Lieut.-Colonel at the head of the Platz Commando. "Your passports, gentlemen, are not in order. Yours, Sir," said the Lieut.-Colonel, addressing my companion, "is so far wrong that you are described as of middling stature, whilst you are of full size. Yours, Sir," said he, turning to me, "we cannot read." I stared with astonishment at the stolidity of this old soldier, who could make his ignorance a pretext for detaining me. It was soon evident, however, that these military gentlemen had discovered that they had found a mare's nest; for after the cause of our presence was thus already described to you, and not a full

to their Governments; and it is generally believed that the combined fleets will not enter the Black Sea until the Cabinets of London and Paris give express orders to this effect. The Turks were so greatly excited that it was reported that their fleet, under Admiral Slade (Mushaver Pacha) would attack Sebastopol.

A strict inquiry has been ordered into the causes of the destruction of part of the Turkish fleet at Sinope, which is attributed to the neglect of the Turkish authorities, in not recalling those vessels after they had been warned to do so, or to the want of timely information that the Russian fleet was cruising off the coast of Asia.

Two British merchantmen, the property of a Maltese house, which sailed with cargoes of coals to the Black Sea, were very roughly dealt with in the Battle of Sinope.

At Jassy a thanksgiving for the victory of Sinope had been solemnly celebrated. The Austrian, Prussian, and Greek Consuls were invited to attend on the happy occasion, but they did not appear. The English and French Consuls had a ready taken their departure.

THE WAR IN WALLACHIA.

Advices from Bucharest of the 17th announce that an action had taken place at Matschin (opposite Ibrails). The Russians made a reconnoissance with two steamers, five gun-boats, and four battalions of riflemen. The island between Ibrails and Matschin was occupied by the Russians, who landed twelve hundred riflemen on the right bank of the Danube, opposite Ibrails, and destroyed the Turkish batteries below the Bulgerian town of Matschin. The invaders were vigorously opposed by a body of Turkish cavalry, and, after a cannonade which is said to have lasted twenty hours, the assailants retired. The Russians sustained a severe loss of killed and wounded; and the attack is said to have been a complete failure.

Since the 6th December Dannenberg has been at Bucharest, although the greater part of his corps is in Lesser-Wallachia, close to the left bank of the Aluta. Sudden landings and surprises on the part of the Turks are still the order of the day along the whole line of the Danube. The Turks fight with such fanatical enthusiasm that hardly any prisoners are made; in Bucharest none have been seen.

The news tha. General Aurepis marching to dislodge the Turks from Kalafat, is confirmed by the latest advices from the Russian camp.

The Turks have thrown up immense fortifications at Kalafat, and courageously await the attack of the Russians. Selim Pacha and six other pachas command the troops there, which number from 20,000 to 25,000. Above 100 pieces of artillery are said to have been placed upon the walls. The discipline among the Turks is excellent. The communication between the Turkish camp at Kalafat and Widdin has been interrupted by the drifting ice on the Danube. A physician in the service of the Turks reports that the Turkish troops are suffering much severely from intermittent fever; and that of late other diseases, such as typhus fever, cholerina (a kind of cholera), &c., have increased the numbers of the sick to an alarming extent. It was believed that immediately after the cessation of the drifting ice Omer Pacha intended to cross the Danube at three points. Omer Pacha removed his head-quarter from Rasgrad to Rustchuk on the 8th inst.

Giurgevo is strongly fortified by the Russians. The works are well supplied with 24 pounders, and have been placed under the command of an experienced general. The Russian corps quartered at Fratesch in earth-huts consists of a regiment of Lancers and Hussars, and six battalions of Rifles and Artillery. At Radeschi, Dobresi, and towards Oltenitza, six large subterranean dwellings have been constructed, each nearly fathoms long and six fathoms wide, and which accommodate 3000 Russian infantry.

General Prince Eugen Fischbach, at Krajova, ordered Major Burileanu to keep his troop of 1600 disciplined Wallachian cavalry prepared to march against the Turks. The Major communicated this to his officers and men, and they, during the ensuing night, disappeared. Major Burileanu was called to account for this, and on the 20th November he died suddenly. His decease has made a very deep impression in Krajova, and the city is full of singular rumours.

Mr. Gardner, the British Consul at Jassy, has received Lord Redcliffe's instructions to leave the Principality.

THE WAR IN ASIA.

The intelligence of General Andronikoff's victory over the Turks at Akhaltzik is confirmed. According to the Russian despatch the Turks lost 5000 killed, 12 cannon at the point of the bayonet, seven stand of colours the whole baggage of the besieging force, and large stores of ammunition. The Turks appear to have had possession of the town of Akhaltzik, but to have been driven out of it subsequently by a sortie of the garrison from the citadel or fortress, which the Turks had not been able to take. Another account states that the Turks were from 10 000 to 16,000 in number, and that the lost 1800 men killed and 3000 prisoners, besides standards, cannon, &c. The Russian loss was severe, and General Freitag was wounded.

Official news from St. Petersburg of the 15th inst. state that, on the 1st of December, Prince Bebutoff won a victory over the Turkish Serasckier at Ongusli (Asia), on the Turkish territory, taking twenty-four cannon, the whole Turkish camp, ammunition, &c. The Serasckier retreated in great disorder upon Kars.

On the other hand, Constantinople letters state that the Turks are constantly gaining new victories in Asia. The Georgians are in arms, and the greater part of Armenia has been retaken by the Turks

Persia is said to have offered, through Prince Woronzow, 30,000 troops to Russia, and demanded a Russian General. The declaration of war by Persia against Turkey is, however, still doubted.

By electric telegraph as late as Wednesday evening, we have received the following important intelligence from Vienna :-

The combined English, French, and Turkish fleets entered the Black Sea on the 30th. It is supposed that their destination is Sebastopol.

Three ships from each squadron have been left to guard the approach to Constantinople.

TURKISH VICTORIES IN ASIA.

The following important Turkish despatches have been received. If correct, of which there is little doubt, considering the source from which they have been derived, they place matters in the East upon a very different footing to the Russian bulletins :

ERZEROUM, Nov. 16. Mehemet Pacha, General of the Division of Bayazid, has penetrated the Russian territory, and occupied several villages situated near the frontier, in the province of Erivan. Anxious to profit by his first successes, he immediately advanced upon the city of Erivan. At his approach, the principal persons and authorities advanced to meet him in a body, and delivered the place up to him. The Russians had evacuated it.

Mehemet Pacha, thinking it unwise to enter Erivan at once, for fear of stratagem, took up a position in the environs. This event proves the sympathy of the inhabitants for the Turks, and it is a certain probable that the Russians, having abandoned so important a place, will also evacuate the whole province.

On the 14th November, a yaverl (an aide-de camp) passed through Erzeroum, bringing intelligence of an engagement at Gounri, a town situated on the frontier near Alexandropol, where the Russians have a large custom-house.

After a desperate fight (*combat acharné*), the Turks, led by Ahmed Pacha, President of the Military Council of the Army of Anatolia, repulsed the Russians, who took refuge in the citadel of Alexandropol. Not having cannon of sufficient calibre to lay siege to the citadel, Ahmed Pacha took his position, and fortified himself in the town of Gounri.

At the same time, Zarif Mustapha, in command of the *corps d'armée* of the frontier of Akhaltzik, at the head of the Bachi Bouzouks, and of several battalions of regular troops, se zed upon Tchildir at some distance from the fortified town of Akhaltzik, which the Russians had retired. He intended to fortify Paskoff, and, leaving a garrison there to hold the Russians in check, to push further into the province, of which the inhabitants are well disposed to the Turks.

THE NEGOTIATIONS FOR PEACE

The points agreed upon between the Four Powers are stated to be—1st. Maintenance of the territorial integrity and independence of Turkey. 2nd. The Dardanelles constituted Vienna Note. 3rd. Not to be the basis of the negotiations for a new treaty of peace. 3rd. All former treaties between the belligerent powers to be re-established. 4th. Evacuation of the Danubian Principalities after the conclusion of peace

The Protocol of the Four Powers—England, France, Austria, and Prussia—has been published together with the collective note of the 5th December, and the circular instructions sent by the Four Powers to their Envoys at the Porte. We append the most important pa sage of the Protocol :

The assurances given on several occasions by the Emperor of Russia exclude the idea that any just sovereign can engage any work to interfere with the integrity of the Ottoman empire. The existence of Turkey in the limits which treaties have assigned to her is in fact become one of the necessary conditions of the European equilibrium; and the undersigned plenipotentiaries declare what has long been the thought sent wrapt not only care involve considerations in the territorial circumscriptions of the two empires, calculated to alter the state of possession on which treaties consecrated in the East, and which is equally necessary for the tranquillity of all the other Powers. The Emperor of Russia, besides, has not confined himself to such assurances, but has declared that his intention had never been to impose on the Porte new obligations, or any that were not exactly in conformity with the treaties of Kutchuck Kainardji and Adrianople, according to which the Sublime Porte has promised to protect in the whole extent of its states the Christian religion and its churches. The Court of Russia has stated, that, in demanding from the Ottoman Government a testimony of its fidelity to its anterior engagements, it had in no respect intended to attenuate the authority of the Sultan over his Christian subjects, and that it only objected to obtain explanations of a nature to prevent every motive of doubt and every reason for misunderstanding with a friendly and neighbouring power. The sentiments manifested by the Sublime Porte during the last negotiations prove, on the other hand, that that Power was ready to recognise all its contracted obligations, and to pay full attention, in the measure of its sovereign rights, to the interests entertained by the Emperor of Russia for a religion which is his own and that of the majority of his people. In that state of things, the undersigned are convinced that the earnest and most ready means of attaining the object desired by their Courts, is to make a communication in common to the Sublime Porte, to explain to it how wish of the Powers to count but by their friendly intervention to the re-establishment of peace, and to give it an opportunity of stating the conditions on which it would be disposed to treat.

The following is the collective note :-

The undersigned, representatives of Austria, France, Great Britain, and Prussia assembled as a conference at Vienna, have received instructions to declare that their respective Governments behold with a profound regret the commencement of hostilities between Russia and the Porte, and desire exceedingly, by intervening between the belligerent Powers, to prevent any fresh effusion of blood, and to put an end to a state of things which menaces seriously the peace of Europe. Russia having given an assurance that she was disposed to treat, and the undersigned not doubting that the Porte is animated with the same spirit, they request, in the name of their respective Governments, to be informed on what conditions the Ottoman Empire would consent to negotiate a treaty of peace.

It has been asserted that the object of the four Powers was only to induce the Porte to submit to the demands of Russia under another form, and that the vital point of the evacuation of the Principalities was not expressly provided for. To this statement the circumstances give a categorical refutation; for the advice tendered by the four Powers is that the Divan should declare its readiness to renew its offers, and to discuss the form in which peace should be restored and the religious question settled, *on condition only that it should not have to accede to any one of the demands it has already refused*; and, further, that *an arrangement be concluded for the evacuation of the Principalities*. It has been stated that a direct negotiation between Russia and Turkey had been recommended; but the instructions expressly recommend that "the Plenipotentiaries of these Powers should not treat alone, but in presence of the representatives of the four other great Powers."

RUSSIA.

Advices from St. Petersburg of the 13th state that a Te Deum has been sung in the Czar's chapel for the victories of Akhaltzik and Sinope. Te Deums have also been sung in all the churches of the capital. The population came in crowds to join in the service

The news of Nachimoff's naval success created St Petersburg by the 9th inst, and produced a tone of feeling there described to be little favourable to any projects of arrangement which in any way should reckon on concession on the part of Russia

The Czar has published a ukase, proclaiming the state of siege throughout Bessarabia and the governments of Cherson and Tauris, and placing those provinces under martial law. Tauris, and the left bank of the Bug, is put under the command of Prince Menschikoff; Cherson and the right bank of the Bug under the command of Baron von Osten-Sa ken

Letters from St. Petersburg state that the preparations making by the Emperor of Russia for the prosecution of the war in spring, are on an unprecedented scale of magnitude. In Poland the levy is no less than one in thirty of the male population -and that not (as is ordinarily the case) of the grown-up population, but of all males, whatever their age. In Russia, where the levies are more frequent, more than 12 per 1000 of the male population, the levy for the present year has been doubled. On a recent occasion, the Czar, having remarked that the number of men raised among the serfs in the neighbourhood of St. Petersburg was smaller than in any part of his dominions, asked the reason. He was informed that the landowners round St Petersburg were in the habit of permitting their serfs to take service in the capital, on paying a portion of their wages to their masters; so that, in point of fact, the majority of those registered in the neighbourhood were actually in the capital. Two days after, the gates of the city were closed, and a razzia was made on all the coachmen, footmen, &c., of St. Petersburg, a large proportion of whom forthwith removed from their good places, and sent off to the army to fight the Turks.

FRANCE.

The announcement that Lord Palmerston had resigned caused a profound sensation at the Paris Bourse. The first effect produced was a rise in the price of public securities, but a reaction afterwards followed.

The *Moniteur* contains the following paragraph on the resignation of Lord Palmerston :—

The accounts received to-day from London confirm the resignation by Lord Palmerston of the functions which he occupied in the English Cabinet as Secretary of State for the Home Department. This resignation, as all the organs of public opinion in England are unanimous in declaring, is the consequence of a difference of opinion which arose in the Cabinet on a question of Parliamentary reform. Foreign politics are totally unconnected with the resolution of the noble Lord, and this incident cannot in any respect alter, we feel assured, the understanding so fortunately established between the Government of England and France on the great objects which occupy the attention of Europe. Nobody can be astonished, however, that our regrets should accompany a statesman in his quitting office who so actively contributed to produce that good understanding, and whose sentiments the Government of his Majesty the Emperor has ever had to applaud.

It was rumoured in Paris, on Wednesday, that the Russian Ambassador in Paris was on the point of demanding his passports. When the news is officially communicated to him of the combined fleets entering the Black Sea, such a step on the part of M. de Kisseleff is not improbable. It will then be seen if the Emperor Nicholas still regards the entry of the fleets as tantamount to a declaration of war.

Government Securities experienced a considerable decline at the Bourse on Wednesday, in consequence of the announcement that the English and French fleets had en ered the Black Sea. The Three per Cents opened at 76f 10c., rose to 76f. 25c., and subsequently to 74f. 50c., and closed at 74f 60c for the end of the month.

The Emperor has granted a sum of 25,000f from his private purse for the establishment of four markets in Paris, where butchers' meat is to be sold by auction and by retail.

GERMANY.

The intelligence of the retirement of Lord Palmerston from the English Ministry produced great excitement at Vienna and Berlin. The first effect of the news was to give somewhat increased buoyancy to the Money-market in both cities, as the prospect of a termination of hostilities in the East was thereby improved. Throughout Germany there appears to be great difficulty in believing that the resignation of the noble Viscount was unconnected with foreign politics.

The winter has set in throughout Germany and the North of Europe with unusual severity.

According to the last census taken in 1852, the total population of Prussia is 16 935,420 souls. Of these, 10,359,994 are Protestants, 6,382,293 Catholics, 1485 members of the Greek Church, 14,780 Mormonites, and 226 568 Jews.

Count Valentine Esterhazy has been appointed Ambassador Extraordinary from Munich to St. Petersburg

The Austrian budget for 1854 shows a deficit of 43,000,000 florins under the head of ordinary expenses; while the extraordinary expenses create a deficit of 50,000,000 florins.

ITALY

Letters from Rome state that the concentration of the French troops at Rome and at Civita Vecchia had taken place, and that the Pontifical troops had replaced them at Viterbo, and other towns, a strong Pontifical garrison, however, remained at Rome. The persons lately arrested belong to the category of forcat nurses or the high releases of society. A comic, late schism had manifested itself among the members of the secret societies. A party ceeired a Constitutional King, another a Republican Government, and both the unity of Italy. The partisans of the first already increased in number. M. Berni, a distinguished painter, was among the persons arrested.

It has already been announced that the son of the Duke de Castiglione Minister of Foreign Affairs of Tuscany, was to marry the eldest daughter of Queen Christina by her marriage with the Duke de Rianzares. The bride's fortune was fixed at 3 000 000f. and Prince Corsini, the bridegroom's grandfather, aged eigh y-five, as ured to the young Prince all his fortune, amounting to 10,000,000f. or 12,000,000f. The Duke de Casigliano and his son lately passed through Marseilles on their way to Italy We now hear that the Duke de Casigliano has just expired at Florence, and that the young Prince, who was to be married to Queen Christina's daughter, has been carried off by typhus fever.

The opening of the Legislative Assembly of Piedmont took place on the 19th. The King was received with great enthusiasm. The Ministry of Count Cavour have, by the recent elections, gained a large majority of votes in the Lower House.

SPAIN.

Accounts from Madrid to the 15th inst. state that a Ministerial crisis was impending.

The Government had concluded a contract with the Bank of San Fernando for the payment of the dividend due on the 7th of January next, both in Spain and abroad.

Bread was still very dear, which fact, however, did not interfere with the public amusements of Madrid. On Sunday there were no less than 14 representations in the different theatres of the capital, and three balls—all of which were crowded.

The Government will celebrate the happy delivery of the Queen with an amnesty, which will comprise all those who are in prison or in exile for political crimes.

A duel took place a few days ago, at 4 p.m., near the Prado, Madrid, between the Duke of Alba and Mr Soulé, jun., son of the United States Envoy at the Court of Spain. The seconds of the Duke were General Ros de Olano and the Count of Quinsorato; and those of Mr. Soulé were Colonel Milans del Bosch and Mr. Perry, Secretary to the American Legation. The parties fought with swords, but fortunately without either being wounded; and it ended in the seconds drawing up a minute of their proceedings as having been conducted in a manner satisfactory to the honour and reputation of both parties. It was also agreed upon the letters which have passed between them should be mutually withdrawn.

AMERICA.

The *Canada* steamer has brought the President's Message, which was delivered on the 6th inst. The Message commences with thanksgiving for the continued prosperity of the country, and states that the diplomatic relations with foreign Powers are essentially unchanged since the Congress. Negotiations are pending with England respecting the fishery question, with a fair prospect of a fay urable settlement for American fishermen. Embarrassing questions have arisen with England respecting Central America. England proposes an amicable arrangement, and the American Minister in London is now negotiating. It recommends that a boundary line between the United States and the Russian Possessions in the north-west should be traced and marked. The Message then reports that some progress has been made in negotiating a treaty of commerce and navigation with France; announces that since last Congress no attempts have been made by unauthorised expeditions within the United States against the Spanish colonies; and promises that, should any movement be made, all the means at the President's command shall be vigorously exercised to repress them. Respecting Kossta, the President has arrived at the conclusion that he was seized at Smyrna illegally; that he was wrongfully detained in an Austrian ship; that at the time of seizure he was clothed with American nationality; that the acts of the American officers, under the circumstances, were justifiable and fully approved, and compliance with the demands of Austria is refused. The Treasury surplus for the fiscal year is 22,000 000 dollars, with which 13 000 000 dollars of the public debt has been paid, leaving the present debt 56,000,000 dollars. It recommends further progress in extinguishing the debt with the surplus; recommends a reduction of the tariff as the second best means of preventing a surplus; reports the navy to be inefficient, and recommends improvement; recommends an increase in the army, especially on the frontiers; reports the Post-office revenue deficient 1 000,000 dollars; favours aiding the construction of the Pacific Railway by all constitutional means; and concludes by briefly alluding to the death of Vice-President King.

The cholera was committing great ravages at New Orleans—214 died in one day.

The accounts from Canada give further confirmation of the remarkable prosperity of the province. A return of the revenue receipts from the 1st of February to the commencement of the present month shows a total derived from customs, public works, &c., of £1,069,191, against £742 933 in the corresponding period of last year, which was in itself one of great prosperity.

THE AUSTRALIAN COLONIES.

The latest advices from the gold mines confirm the intelligence of the extraordinary richness of some of the Ballarat mines. Ballarat, indeed, stands out in bold relief from the other gold-fields, as being preeminently the best and most enduring. The first discovered, it is the most lasting. It has gradually improved, and the yield for August was greater than during any month since December. A letter, dated Ballarat, August 26th, says :—

A hole is sunk not far from my tent 90 feet through the slate, and the parties have come upon gold a very great abundance. They took out of the hole last Tuesday 102 lb. weight. They are now paying two men 1 oz. of gold each per night to watch the hole, so it must be rich to enable them to do that. I was at the place myself on Tuesday, and have every reason to believe the accounts (which are really astounding) are all true. The parties were three months in sinking the hole which has turned out so rich a one.

Another letter, dated Ballarat, September 5th, says :—

The quantity of gold found is perfectly incredible. This week's escort is 15,277 oz. Besides this, there are 9000 oz. on deposit, which will be left behind. I saw seven men (Garratt's party) start for Geelong on Saturday with two carts, taking with them 1023 lb weight of gold, obtained in seven weeks. I spoke to Garratt, and requested him to call upon you.

A gold digger, named John Long, of Geelong, working in Prince Regent's Gully, Ballarat, deposited as follow :-

I do declare to my own knowledge that I saw 100lbs. weight of gold taken from a ten-gallon keg, half filled with stuff, taken from one claim in Prince Regent's Gully. I saw the gold weighed, and the weight was 100lbs. avoirdupoise. The digger to whom it belongs I also know; his name is Wilson, and he was lately servant to Mr. Harrison, formerly landlord of the Shearers' Arms, New Town [I do not care who believes it I saw it, and handled it, and God bless the diggers!

The announcements about the recent gold yields at Ballarat caused quite a sensation in Melbourne, and many parties of diggers started from the city and C. Ilingwood, resolved to try the golden lottery. A very fine 35 oz nugget, a specimen of so old gold was shown in the Queen's, Waterman's Arms Hotel, Melbourne. It was half of a 70 oz nugget dug up at Ballarat by a party of six, and in their division of their earnings, the mass of precious metal was actually chopped in two with an axe.

SOUTH STAFFORDSHIRE ELECTION.—It has been rumoured that a misunderstanding had arisen between the Liberals and Lord Paget, who has been selected to contest the southern division, and which retarded the Lordship declining to stand the contest. All doubt, however, upon the subject has been removed. A meeting was held on Saturday evening week, at Wolverhampton, of the friends of Lord Paget, at which it was officially announced that his Lordship would allow himself to be put in nomination, and contest the election. His friends are, therefore, exceedingly active.

SIR E. BULWER LYTTON.—It has now been definitively arranged that the Lord Provost of the Associated Societies of the University of Edinburgh will deliver his inaugural address on Wednesday, the 18th of January. The address is to be delivered in Queen-street Hall, and it is understood that the Lord Advocate has consented to introduce the distinguished Baronet to the societies.

CHELTENHAM GRAMMAR SCHOOL.—On Wednesday week the inhabitants of Cheltenham presented an address to the Head Master (Dr. Edw. R. Humphreys) of the Grammar School in that town, thanking him for the admirable manner in which he had conducted the duties of the school At the same time the scholars presented their master with a very handsome time-piece, bearing a suitable inscription. One little feature will show the value of this establishment:—When Dr. Humphreys first open d the school (under the act of 3 and 4 Vict., cap. 97), early in 1852, there were 30 scholars; at the end of the second half-year there were 180, and at the present time there are 250!

JUVENILE DELINQUENCY.—On Tuesday morning a conference was held in Dee's Hotel, Birmingham, to consider the measures it might be most suitable to adopt with the view of promoting the establishment of reformatories for young criminals throughout the country. The meeting was attended by a great number of noblemen, clergymen, and gentlemen who take an interest in the social and moral improvement of the poorer classes. The present conference was a renewal of a similar meeting held here on the 10th of December, 1851, on the subject of legislative enactments in the national treatment of morally-destitute and criminal children. Sir J. Pakington was voted to the chair. The resolutions proposed were adopted. A second meeting was held in the evening.

GRAND FUNERAL SERVICE FOR THE QUEEN OF PORTUGAL, IN THE CHAPEL OF THE BAVARIAN EMBASSY, WARWICK-STREET, GOLDEN-SQUARE.

THE LATE QUEEN OF PORTUGAL.

On the morning of Thursday week, the 15th instant, a grand funereal service took place, at the Chapel of the Bavarian Embassy, in Warwick-street, for the repose of the soul of her late lamented Majesty, Donna Maria, Queen of Portugal.

The interior of the chapel was darkened, and hung with black cloth, upon which were emblazoned escutcheons of the Royal arms of Portugal. In the centre of the chapel was a catafalque representing the coffin of the illustrious deceased, covered with a crimson-velvet pall. The crown and sceptre were placed at the head of the coffin, and over it was suspended a small Portuguse national flag. The upper portion of the catafalque was composed of black crape, festooned, extending from the ceiling almost to the floor of the chapel.

The ordinary service for the dead was commenced, at eleven o'clock, by the officiating priests attached to the chapel. At twelve o'clock, the distinguished personages invited to attend the solemn ceremonial began to arrive. Among the earliest were their Royal Highnesses the Duke and Duchess de Nemours, her Imperial Highness the Princess de Salerno, and his Royal Highness the Duke d'Aumale. His Excellency Count Lavradio, Portuguese Minister at the Court of St. James's—attended by the First Secretary of Legation, M. Pinto de Soveral—received the illustrious party at the entrance of the chapel, and conducted them to a reserved pew in the gallery overlooking the altar. The members of the corps diplomatique had been invited by Count Lavradio, and they were present almost without an exception, attended by the secretaries and attachés of the various Legations, and attired in their full official costumes The Countess Lavradio, wife of the Portuguese Minister, Madame Van de Weyer, Madame Tricoupi, Madame Mu-urus, Madame Pinto de Soveral and many other ladies of distinction, occupied seats in the gallery; and the chapel was crowded with all the respectable Portuguese and Brazilian residents in London. Admiral Sir Charles Napier walked into the chapel just as the service commenced, and, with another Englishman whose sword did good service to Portugal a quarter of a century ago—General Sir Henry Fynn—remained interested spectators until the ceremony terminated.

His Excellency Count Lavradio having taken his seat as chief mourner at the head of the catafalque, attended by M. Pinto de Soveral and M. Mendoza, the service was proceeded with. The Most Rev. Dr. Morris, the Roman Catholic Archbishop of Troy, and formerly chaplain to the Portuguese Legation, officiated, and was assisted by Dr. Hason, Dr. Tavares, and the priests of the French chapel. The musical service was very imposing. The ceremonial lasted over two hours. At its conclusion, the members of the ex-Royal family of France were conducted to their carriages by his Excellency the Portuguese Minister. Alms were distributed to the poor after the service.

THE WINE DUTIES' QUESTION.—Since the return of Mr. Oliveira, M.P., from Bordeaux, he has been engaged at Paris in seeing persons of influence and consideration, who can give him information and assistance. M. Drouyn de Lhuys, the Minister of Foreign Affairs, gave Mr. Oliveira a reception, when his Excellency assured him of the desire felt by the French Government to adopt and extend the principles of a reduced tariff, as shown by the commencement made with iron and coal, and which it was the sincere wish of the Government to apply to other articles. Mr. Oliveira has also had an interview with M. Ducos, who expressed opinions equally favourable to the extension of the principles of reduction lately adopted by the French Government. Mr. Oliveira had the opportunity of discussing the question in its fiscal relations with the very able Inspector-General of Customs, M. Greterin; and he also had a reception by the Minister of Commerce. Mr. Oliveira was presented to their Imperial Majesties, at the Tuileries, by Lord Cowley.—*Galignani.*

A SENSIBLE PIECE OF PROPERTY.—"Twenty Dollars Reward.—Ran away from the subscriber, on the 28th day of July, my negro boy 'Bob' He is five feet eight or nine inches high, will weigh one hundred and fifty pounds, is very neatly made, his colour black, head small, forehead tolerably high, chin short, eyes a little full, speaks tolerably quick, and is apt to elevate his voice when scared: *he is very sensible*, and handles tools with considerable slight. He may attempt to make his escape to the free States, but I think it is probable that he is either in Memphis or about Covington, Tipton County, Tenn. I will give the above reward for his apprehension and confinement in jail, so I can get him. Holly Springs.—G. W. Reynolds."—*American Paper.*

A decree in the *Moniteur* authorises the admission into France, duty free, of China crape shawls, when introduced for the purpose of being embroidered, and exported within a period of six months.

THE "DUNBAR" EAST INDIAMAN.

THE *Dunbar*, which is the property of Duncan Dunbar, Esq., of London, is the largest ship, by nearly 300 tons, that has ever been built at Sunderland, where she was launched on the 30th ult. She was constructed at the building-yard of Mr. James Laing, by whom a large portion of Mr. Dunbar's splendid fleet, amounting now to nearly 35,000 tons, has been built. A few years ago the building of a ship of near 2000 tons burthern on the Wear would have been considered a dream; and that the feat has now been accomplished is a proof of the mastery which science, capital, and perseverance, have obtained over natural obstacles in these go-ahead days of Free-trade and stimulating competition.

The dimensions of the *Dunbar* are—length of keel for measurement, 201 ft. 9 in.; extreme breadth, 35 ft.; depth of hold, 22 ft. 7 in.; height between decks, 7 ft. 3 in. She is of 1980 tons burthen, her register tonnage being 1321. Her timbers are of British oak, and she is planked and decked with East India teak. She is built for strength, stowage, and durability, yet withal is a graceful model. She is extra copper-fastened throughout, and her iron knees and other fastenings are of enormous strength. The masts of the *Dunbar* are in keeping with the rest of the gigantic structure. They are built of teak. The mainmast weighs nine tons, the foremast eight tons, and the mizen in proportion. The poop is eighty-two feet in length, and seven feet in height; it is tastefully panelled in front, and ornamented with a row of pillars of polished teak; and it will be fitted up with all the elegances of modern upholstery for the enjoyment of first-class passengers. Great attention has been paid to ventilation in all parts of the vessel. The between-decks has the appearance of a large hall, each berth being separately lighted.

The *Dunbar* has been carefully inspected by many of the first shipping authorities, who have unanimously declared her to be the finest merchant ship afloat; and in strength, quality of material, and workmanship, will bear comparison with the best productions of the dockyards of this or of any other country in the world.

"THE DUNBAR" NEW EAST INDIAMAN.

MLLE. GEORGES, OF THE THEATRE FRANCAIS, AS "CLEOPATRE," IN THE PLAY OF "KODOGUNE."
(SEE NEXT PAGE.)

CAPTAIN LUDLOW.

An obliging Correspondent, who writes from Port Louis, Mauritius, has favoured us with the accompanying Portrait of the gallant Captain Ludlow, of the *Monmouth* whaler, who, at great difficulty and danger, rescued the crew and passengers of the *Meridian* from the Isle of Amsterdam. Our Correspondent writes:—

On the 27th Sept., the American whaling barque, the *Monmouth*, entered this port, having on board 84 passengers, besides the officers and crew, of the *Meridian*, of London, which had been wrecked on the solitary island of Amsterdam in the previous month. Their arrival excited universal sympathy here, and just and generous admiration of the conduct of Captain Ludlow, a native of Long Island, a man who has been thirty years at sea, and, it is said, expected to settle on shore at the termination of his present voyage. One of the passengers, Mr. Newbold, made some very interesting sketches of scenes connected with the wreck, which have been lithographed here. One of these illustrations I therefore forward—a photograph of the Captain, which I have taken here: the likeness is considered by the passengers to be good.

In an admirably written and touching narrative of the wreck which appeared in the *Morning Chronicle* on the 2nd inst., it is justly observed of Captain Ludlow's services:—

It must be borne in mind that every man of the *Monmouth*'s crew incurred a considerable pecuniary loss by his participation in Captain Ludlow's views. In a whale ship, no one receives any wages, but every one takes a certain share in the profits of the voyage, according to his rating in the ship. They had been out two years, and had not been very successful, the *Monmouth* being only half full of oil. They had come upon fishing ground where in a few days they might have filled the ship, for I myself saw several whales sporting about close to the shore near the cabbage-garden, and one monstrous fellow shoved his black back above the water within an eighth of a mile from the boat which carried me to the ship, but not a murmur was heard from the lips of the gallant *Monmouth*s at the loss of their whaling season, and with it a sacrifice of their means of living.

* * *

You may be sure that the behaviour of Captain Ludlow has not passed unnoticed. The Colonial Secretary has addressed to him a letter, couched in very handsome terms, stating the confident expectation of the Governor that he will be authorised by her Majesty's Government not only to indemnify him for the loss which he incurred by quitting his whaling station, but also to present him with a testimonial "which may endure, to record exertions of which it could not pretend to be a recompense." To-day (Oct. 14), the Chamber of Commerce have presented him with a service of plate, value £120, and the passengers of the *Meridian*, out of their slender resources, have subscribed upwards of £20, to purchase something which may be handed down as an heir-loom to his children's children, and which may serve to perpetuate the gratitude which we shall ever feel towards the man who saved 100 human beings from a dreadful death. We held our meeting on the 3rd inst., and passed a series of resolutions expressive of our obligations to him, and to the second and third mates of the *Meridian*, and Charles Snow, as also to the Government and inhabitants of the Mauritius, for the sympathy shown towards us in our distress, and the promptitude with which they came forward to relieve it.

The passengers' testimonial of gratitude to Captain Ludlow, towards which £27 has been subscribed, is to assume the form of a watch, with a suitable inscription, and is to be purchased in London (there being no watch which can be bought here which is worth half the money), through the house of Blyth Brothers, and forwarded through Baring Brothers to New York.

CAPTAIN LUDLOW, COMMANDER OF THE AMERICAN WHALING BARQUE, "MONMOUTH."

Captain Ludlow has been greatly feted since his arrival, but receives all the attentions which are paid to him with his characteristic modesty. By the way, I must mention that, at his request, the £120 subscribed by the Chamber of Commerce for a service of plate has been handed over to him in money, the captain thinking that such a display of plate would be inconsistent with the frugal style of living to which he is accustomed. He purposes, therefore, to invest the money for the benefit of his children.

THE TURKEY.

The Turkey is an interesting bird at all times, but at Christmas it assumes a higher degree of importance, as the bird *par excellence*;—that is to figure upon hundreds of thousands of dinner-tables.

Few, in fact (we of course except the members of the sci-entific world), know anything relative to the Turkey, save that it is one of our farmyard poultry, and was so, as far as they know, from time immemorial. They place it in the same category with the ordinary fowl, the pea-fowl, and the guinea fowl; taking it for granted that the Turkey and the others mentioned are all indigenous—or, if introduced from "foreign parts," all introduced at or about the same period. We might easily prove the fallacy of this supposition, as it respects the three last-named birds; but, at present, it is the Turkey only that concerns us. Now, by way of adding zest to the Turkey, as, well served up, it graces the table, we purpose to run over its history. If our reader is anticipating a feast at "the goodman's board," where, "in its pride of place," the noble Turkey will add dignity to the entertainment, a little scientific knowledge connected with this subject of gastronomic pleasure may, perhaps, increase his relish, and lead him to "bless his stars" that he was not born in the days of Henry VII.; for it was after the year 1509 that the Turkey was introduced into England. Indeed, John Walcott (a writer on British birds, 1789) affirms that it was first brought into our island about the year 1521; but it could not then have been common. He rightly states it to be a native of America.

It remains a doubt whether we derive the Turkey through the intermedium of Spain or directly from North America. We incline to Spain, for the following reasons:—1. If we had received the bird directly from America, it would never have had the name of Turkey, or Turkey-bird. There is no connection between this name and its original country—but to this we shall again advert. 2. Belon, an eminent French scholar and Physician (born 1517, died 1564), erroneously termed it Meleagris, in allusion to one of Ovid's fables, supposing it to be the bird into which the sisters of Meleager were transformed—viz., the Pintado. Surely he could not have known that it came from America. In the application of this term he was, unfortunately, followed by Linnæus, who knew its native country, and it is now retained, although it is the specific title of the Pintado. In most Continental languages it is termed Indian Fowl—as Gallo d'India, Coq d'Inde, Indianische Hahn, &c. Now, by India is not meant *Eastern* India, which has received the Turkey from England, but *Western* India, as the discoverers of America always deemed the portions of America to be, which after (to them) a mysterious voyage, greeted their astonished eyes.

We have not yet erased the term "West Indies" from our geographical vocabulary. Hence the Spaniards and Portuguese would naturally call so noble and striking a bird—which there cannot be a doubt was a domestic tenant of the Mexican aviary—by the appellation of "Indian." Under this name it was transported into Spain. Oviedo, who embarked for the West Indies in 1514, and resided as Governor of the fort of Hayti, then called Hispaniola, published, among other works, one entitl d "Truidado de la Natural Historia de las Indias" (Toledo, 1526); in which he describes the Turkey as a kind of peacock, abounding in New Spain, whence numbers had been transported into the Islands and the Spanish Main, and were domesticated in the houses of the Christian inhabitants.

Our relations with Spain, at the commencement of the reign of Henry VIII., were very intimate. At this period we had a company of merchants trading throughout the Mediterranean, north and south, from the Strait of Gibraltar to Aleppo, and to Smyrna on the eastern coast of Asia Minor, and thence through the Sea of Marmora to Constantinople. Now, the ships of these Turkey merchants touched at various Spanish ports on their return to England, and there conducted business. On their return home they brought from Spain, by design or accident, numbers of these striking birds, which, like the Cochin-China fowls of the present day (accidental arrivals, we know not truly whence), became first fancy fowls, were then dispersed, and that in purity, from their interbreeding with no other domestic gallinaceous bird. Their celebrity for the table as something recherché would accompany them; but then they came to England in Turkey merchants' vessels. What is their name? Who found themselves about Spanish? Of course they were Turkey fowls, or Turkeys. Now, at this time, the ports of Norfolk were of an importance which, from changes along the coast, we can scarcely now appreciate. Liverpool was a rude village, and the navigation of the Thames a work of tediousness and difficulty. It was then, as we suspect, to the county of Norfolk that the Turkey was first introduced; and, having spread there, in a congenial locality, and been graciously adopted, it reflected a sort of credit upon Norfolk, to the advantage of the Norfolk farmer, even to the present day. We do not mean to say that in subsequent times Turkeys from America have not been imported; quite the contrary; we are discussing the original importation of the bird into our island.

There is an old couplet quoted by that eminent zoologist, Mr. Yarrell, which runs as follows:—

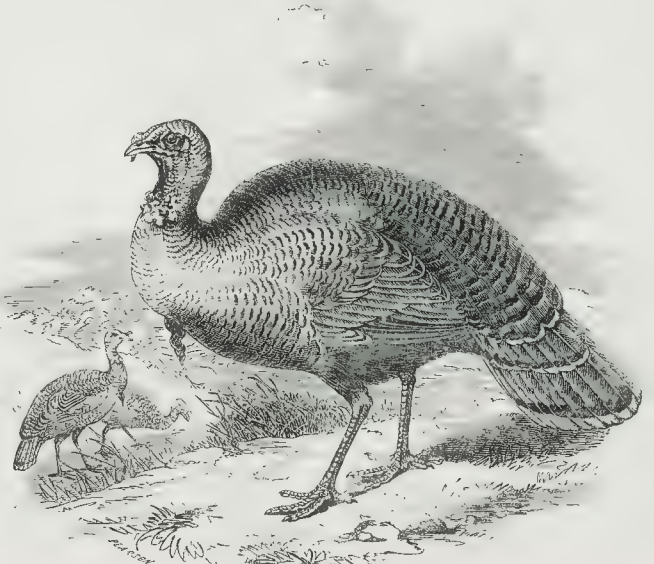
Turkeys, carps, hops, pickerell, and beer,
Came into England all in one year.

By beer we presume is meant beer made with hops, for beer is an old national beverage, from the days of the Celts downwards. However, we shall quote Mr. Yarrell's comment, proving how full of error an old saying may be:—

Pike, or pickerell, were the subjects of legal regulations in the time of Edward I. (died 1307). Carp are mentioned in the "Boke of St. Albans," printed in 1496. *Turkeys* and hops were unknown till 1524, previous to which, wormwood and other bitter plants were used to preserve beer; and the Parliament, in 1528, petitioned against hops, as a *wicked weed*. Beer was licensed for exportation by Henry VII. in 1489; and an excise on beer existed as early as 1284 (also in the reign of Edward I.)

It has been suggested that the name Turkey was given to this bird in the same way as we apply the term Goth to men of rude and barbarous habits—inasmuch as it was a strange foreigner, and very irascible; or, perhaps, because of the beard (pectoral tuft of the male); or, perhaps, because popular opinion attributed its introduction into Europe to the Turks—Turkey then being a formidable and dreaded power, whose ships ravaged the coasts of Italy and Spain, and whose armies laid waste the vast territories of Hungary, and the adjacent parts of Germany. Suleiman the Great reigned from 1520 to 1566. We adhere to our own theory.

About the year 1524, then, as it would appear, the Turkey was in-



THE WILD TURKEY.

troduced into our island, and, as we believe, through the intermedium of Spain, either directly, or by the agency of our merchant vessels trading in the Mediterranean. It is evident that the bird soon began to multiply, a fact which (its fame having probably preceded it) evinces the attention paid to it, since, from the extreme tenderness of the young the successful rearing of broods is by no means easy. In 1541 we find the Turkey enumerated among the luxuries of the table. Archbishop Cranmer (Leland's "Collectanea") ordered that at festivals there should be no more than one dish of cranes, swans, and *Turkey cocks*. In 1555, two Turkeys and two Turkey-poults were served up at the inauguration dinner of the serjeants-at-law, in London; they cost four shillings each while the swans were rated at ten shillings, and the capons at half a crown.—(See Dugdale, "Orig. Jud.") In 1573, Tusser in his "Five Hundred points of Good Husbandry," mentions these birds as forming part of the Christmas fare of the farmer. We now express a hope that it may grace many a goodman's board at the close of the year 1853, and the dawn of 1854.

No domestic fowl, when grown up, is hardier than the Turkey—a singular fact, when we consider the delicacy of the chicks, which are almost certain to die if drenched by a shower of rain, and which, from their propensity to wander abroad, are liable to accidents. Now the delicacy of the chicks is not the result of domestication, or of transplantation into a foreign land; the same observation applies to the wild Turkey, in its indigenous regions: hence it is that in rainy seasons the broods become greatly thinned, for the young, if once completely wetted, seldom recover; their vital energy sinks under the abstraction of caloric during evaporation. This observation leads us from the domestic Turkey in Europe to the wild Turkey in America; but here, we must be very brief, referring for fuller details to the works of Audubon, and to C. L. Bonaparte (Prince of Musignano and Canino), on "American Ornithology" (See Constable's "Miscellaneous American Ornithology," Volume IV. Edinburgh, 1831).

The Wild Turkey (*Meleagris gallopavo*, Linn.) is a native of North America—from Canada to Mexico; south of which it is not to be found. Everywhere, however—like the Red Indian it has receded before the footsteps of the European colonist; and is very rare in Georgia, Florida, and the Carolinas; and more so in Virginia and Pennsylvania. It still maintains its ground, however, in the wooded parts of the Arkansas, Louisiana, Tennessee, Alabama, and the immediate vicinity of those states of Ohio, Kentucky, Indiana, and Illinois. The vast expanse of territory north-west of these states, on the Mississippi and Missouri, as far as the forests extend, is also abundantly supplied with this very valuable game; but we have reason to believe that its range does not extend beyond the frontier base of the Rocky Mountains.

The Wild Turkey is polygamous: each male, after a hundred fights, leads, during February, March, and part of April, a serallo in his train; and these distinguished ladies of the harem roost at night near their sultan—some on the same tree. But this unitedness lasts only for a short time; for, as soon as the females begin to lay, they gradually leave the company of their lord; and, indeed, sedulously avoid him, except for a few hours during the day; their actions being guided by instinctive prudence. It is about the middle of April that they prepare for incubation, arranging their simple nests in some concealed spot, among logs of wood, amidst dense brushwood or interangled herbage, in order that they may escape not only the eye of the crow, and of other marauders, but that of their tyrannical lord, who, if he were to discover the eggs, would, from jealousy, break them all. It not unfrequently happens that two, three, or even more hens associate together, form a common nest, probably for the sake of mutual aid and assistance, and rear their broods together. In such cases the nest is never left unguarded. Mr. Audubon states that he once found three hens sitting on forty-two eggs. The female sits close; and a person may pass near the spot, if he walk carelessly along, so as not to excite suspicion, without causing the female to quit the nest, but if he make his approach stealthily, as if searching for some object, she will steal away from it, and, having glided through the brushwood to some distance, will boldly show herself, uttering at intervals a clucking note, in hopes, probably, of drawing away the intruder, and baffling his research.

The males being deserted during the secluded incubation of the females, lay aside mutual hostilities, cease their threats of defiance, and meet in peace. At this juncture they are out of condition, and require time to recover their strength and energy.

When the young are hatched, great is the anxiety of the female, and great is other vigilance: the crow, the hawk, the owl, the polecat, the snake, and other enemies, are, as she well knows, ever on the alert; moreover, they are apt to wander away, and thus tax her patience. For the first day or two her cautious solicitude does not extend far beyond the precincts of the nest; to which, as evening approaches, she retires with her brood to rest. Subsequently, she wanders to a greater distance, leading her brood over dry and undulating grounds, in search of ants and their larvæ, grasshoppers, and other insects, wild strawberries, and other fruits. When about a fortnight old, the young birds begin to use their wings: hitherto, sheltered by the female, they have roosted on the ground; but now they mount with her into trees—first to some low or easily accessible bough—soon to higher branches—and there, crowding close under her plumage, feel instinctive reliance on her maternal solicitude. At this period they begin to wander more freely; visiting glades and open lands bordering the woods, where they spend much time in dusting their young feathers, and divesting them of loose scales and parasitic vermin: deserted ant-nests are favourite dusting places.

By the month of August the young birds have acquired considerable growth, and use their legs and wings with great readiness and vigour, so that, by rising quickly from the ground into the trees, they are able to escape the sudden attack of foxes, and other beasts of prey. Still they avoid the old males, by whom they are always assaulted, with vindictive fury, more especially as the young cocks now begin to show their distinctive characteristic, and even to utter an imperfect gobble, while the young hens purr and leap. Several broods now flock together, and prepare for a sort of partial and irregular migratory movement which takes place in October. On the recurrence of spring a dissolution of this general union takes place: the young cocks gobble and strut, and strike their wings with a whirring jar on the ground; a scene of gladiatorial strife ensues; the victors carry off in triumph the fair prizes of battle; and, like their sires, establish their respective harems.

We have alluded to a sort of migration which takes place in October. This movement, instinct-directed, is according to a great law, which enforces a change of locality in many of the feathered tribes, thus producing at once to lead them to territories where plenty reigns and climate is congenial. It is thus described by Audubon:—

> About the beginning of October, when scarcely any of the seeds and fruits have fallen from the trees, these buds assemble in flocks, and gradually move towards the rich bottom lands of the Ohio and Mississippi. The old males, or, as they are more commonly called, the "gobblers," keep in parties of from ten to a hundred, and search for food apart from the females; while the latter are seen collecting with the young, each with its brood of young, then about two thirds grown, or in union with other families, forming parties often amounting to seventy or eighty individuals, all intent on *shunning the old cocks*. Old and young, however, move on in the same course, unless their progress be interrupted by a river, or the hunter's dog force them to take wing.
>
> When they come upon a river, it requires a day or two for gobbling consultation, and for the screwing up of their courage, before making the perilous attempt. At length all mount to the tops of the highest trees adjacent, and at the *signal cluck* of a leader, take flight for the opposite shore. If the river be a mile in breadth, the older birds easily pass over, but some of the young and less robust frequently fall on the wing, and drop into the water; not to be drowned, however, for, pressing their wings close to the body, and spreading out the tail as a support, they stretch forward the neck, strike vigorously with the legs, and thus gain the landing-place. After their transaquatic expedition, the flock seems for some time as if bewildered, and while rambling about without caution, numbers fall a prey to natural enemies, and to the hunter.
>
> Order is restored, the birds separate into smaller companies, each composed of birds of all ages and both sexes, and devour greedily the falling mast; sometimes, attracted by food, they enter within the precincts of the settler's farm, and even associate with the poultry. Thus roaming about, they pass the autumn and the winter, till the middle of February, when the females separate from the males, but by whom they are perseveringly followed; then commences the battle—then triumphs the victor—and then the female acknowledges him as a champion worthy of her favour.

The above is a mere graphic sketch. We have forborne to enter into many details, and this the rather because all are acquainted with our domestic Turkey, which, in its peculiarities, displays far more of that instinct derived from its pre-progenitors, than do many of the reclaimed animals which we hold under our despotic rule.

We must not close without observing that there is another species of Turkey in America, the Honduras Turkey (*Meleagris ocellata*), of smaller size than the common Turkey, but of most effulgent beauty. The first specimen of this bird which appeared in this country was exhibited in Bullock's Museum, and was allowed, at the sale of that rich collection, to pass from London to Paris. Noble specimens are, however, now in the British Museum. It is a native of the countries bordering the Bay of Honduras, and is doubtless limited in its range of *habitat*.

W. C. L. M.

MADEMOISELLE GEORGES, OF THE THEATRE FRANCAIS.

Corneille's tragedy of "Rodogune" was, for the first time for the space of twenty-five years, reproduced at the Théâtre Français, a few days since, having been selected by Mademoiselle Georges, the celebrated tragic actress, for her farewell performance and benefit. The remarkable event was thus noticed in our Paris correspondence of last week:—"Mademoiselle Georges—the beautiful, the gifted, the beloved, the admired, the celebrated—who fifty years ago made her début at the Théâtre Français—who turned all heads and all hearts, from Napoleon's to those of the poorest *ouvrier* who could scrape together a sufficient sum to obtain the worst place in the theatre—Mdlle. Georges, after a retreat of a quarter of a century, once more makes her final appearance on the same stage that formerly witnessed her triumphs, in "Rodogune," which, we believe, has not been played since represented by her." Mdlle. Georges' performance of *Cléopâtre* is one of the topics glanced at by our Paris Correspondent this week. Her performance is also eulogistically noticed by the French theatrical critics.

The celebrated *feuilletonist* and dramatic critic, Jules Janin, says:—"Mademoiselle Georges, the *tragedienne epique*, attempted a great undertaking in giving us *Rodogune*. By her fine personal presence, her eloquent looks and gestures, by that truly royal mode of wearing the purple and crown, she recalled many interesting *souvenirs* to the playgoer. Her performance attracted to the Théâtre Français an enormous crowd—itself an imposing and curious element of the spectacle. The present generation had heard confused accounts of this *chef d'œuvre* of Corneille, and wished to see it in this last moment of its majesty, beauty, and grandeur."

Another Parisian theatrical critic says of Mdlle. Georges:—"We are now able to divine the fascinations and the success of her past theatrical career. She has saved from the ravages of time the grand outline of her noble head—eyes made to sparkle through the mask of Melpomene—shoulders of unchangeable marble—a neck of sculptural energy—and hands exquisite for their delicacy and grace. She played the character of *Cleopâtre* according to the triumphant and magnificent manner of the ancient school of tragedy—royally, grandly, solemnly, majestically, and slowly. Her voice is enfeebled, but it is still very expressive. She had to sustain during five acts, by turns frightful hypocrisies, the fury of a lioness, and inexpressible disdain; but, even in her imprecations, her anger, and in the depths of her rage and agony, she preserved the calm, the step, and the sovereign majesty of the Queen who, whether she wishes to kill her rival, or herself calls upon death, holds herself in the purple of royalty. The success of Mdlle. Georges was immense. She was overwhelmed with flowers, applause, and enthusiasm. It was a sad evening nevertheless. One of the great voices of tragedy was heard for the last time; a great genius entered into eternal silence; the shade of a great beauty appeared for the last time in an age, the old men of which she had dazzled in their youth by the splendour of her genius and beauty."

CALENDAR FOR THE WEEK.

Sunday, December 25.—Christmas Day. Nativity of our Saviour.
Monday, 26.—St. Stephen. John Wilkes died, 1797.
Tuesday, 27.—St. John the Evangelist.
Wednesday, 28.—Innocents. Malthus died, 1834.
Thursday, 29.—Lord Stafford beheaded, 1663.
Friday, 30.—Royal Socie y established, 1660.
Saturday, 31.—St. Silvester.

REVISED SCALE FOR INSERTION OF ADVERTISEMENTS IN THE ILLUSTRATED LONDON NEWS.

In consequence of the increased and increasing sale of this Journal, the Scale will be One Shilling per Line on and after January 1st, 1854.

*** Advertisements received at the Office, 198, Strand; and also by the sole authorised Agents, Messrs. Maxwell and Co., 31, Nicholas lane, Lombard-street, City.

Part of this Double Number being printed in Paris, an error has occurred in the folio; the binder is, therefore, requested to observe that page 554 is immediately followed by page 561.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 24th, 1853.

There seems to be mischief brewing in Spain. It might be unjust to assert that the Spaniards are unfit for constitutional freedom, but it is certainly correct to state that they have not yet satisfactorily shown that they appreciate, or even understand it. The late King Louis Philippe was too keen an observer not to be aware of the fact, and too selfish and unscrupulous an intriguer not to endeavour to turn it to account. The odious transactions known as the "Spanish marriages" were his first great step to ruin. They were also a great step in the misery and demoralisation of Spain. They blighted the life and corrupted the heart of an unoffending girl. They inspired her with evil thoughts, and surrounded her with evil counsellors. They depraved the manners of a Court, and set an infamous example to a whole nation. Yet, to such an extremity has Spain been reduced, that the best hopes of the best men in the country are centred in the life and in the progeny of a youthful Queen, whose life is beset by many perils, and whose healthful progeny is scarcely to be expected. Never since the days of Mary Stuart has there been a Sovereign so helpless, so outraged, and so much to be pitied as Isabella II. She has both a mother and a husband, bound by nature and by duty to support and cherish her; but she has no one willing to give her honest, or competent to give her sound advice. As the critical period of her maternity draws near, the intriguers who wish to occupy her throne are more than usually busy. The Duke de Montpensier hovers about the inheritance which it was the object of his father he should gain; and the Carlists make no secret of their wish that what has happened in Lisbon may happen in Madrid. From such a calamity to herself and to her country, every right-thinking man and woman in Spain will earnestly pray that Providence in its mercy may preserve Queen Isabella. Under her government Spain has a chance, although a poor one, of not being left to lag irretrievably behind in the march of European civilisation. Failing her and her direct line of succession, that unhappy country would again become the prey to a civil war more protracted and fatal than the last; a war as perplexing and mischievous to France as to Spain, and which might, perhaps, embroil other countries besides those two. But, as if there were not risk enough in this contingency, the persons who monopolise place and power in the palace of the young Queen, seem bent upon doing their utmost to render her throne more precarious than her life. Spain has a damaged character, and they do nothing to retrieve it; she has a failing revenue, and they do nothing to put it upon a healthy footing;—she has the stupidest commercial code of any nation under heaven, and they shut their eyes to the experience by which all other nations are endeavouring to profit. They are only entrusted with power because Spain is a constitutional state; and they do their worst to bring the constitution into contempt, as a preparatory step to its destruction. They meditate a *coup d'état*, and the establishment of a despotism, because Louis Napoleon succeeded in a similar attempt, and because knaves have a better chance of plunder and aggrandizement under a despotic Sovereign, especially if she be a woman, than under any Parliamentary system, however corrupt and imperfect. In their anxiety to strike a *coup d'état*, they forget that the circumstances of France in Dec., 1851, and of Spain in Dec., 1853, are not at all similar; and that history is not made to repeat itself, because it may suit the purpose of ambitious men to plagiarise in politics. They forget that Louis Napoleon had a powerful name, a high genius, foolish opponents, and a first-rate opportunity; while they have neither name, nor genius, nor pretext, nor opportunity, but are a mere clique of palace *fainéans* and selfish adventurers. Their last act has been a summary dismissal of the Cortes, on insufficient grounds, and without appointing a day for their re-assembling. In fact, the Cortes are in their way. The Duke de Montpensier is naturally on the alert to profit by the follies or crimes of the present Court of Spain; and, if there were any reasonable hope that, under the reign of Donna Luisa, a free, firm, and progressive Government could be secured to the Peninsula, the word would take much less interest than it does in the present position of Queen Isabella. It is deplorable to think that Spain does not possess a single statesman of sufficient energy and ability to rescue the Queen from evil counsellors, to rally around her the friends of rational liberty, and to secure her a permanent place in the affections of her country. Unless such a man be speedily found, Spain will inevitably pass through the ordeal of one, if not of many, civil wars, before she be in a position to do justice to her magnificent resources, or to assume her proper place among the nations of Europe.

The meeting and the conference at Birmingham on the subject of Juvenile Delinquency, again call attention, in a forcible manner, to an evil of national importance. The reformation of young criminals is a subject often debated, but which, nevertheless, makes but slow progress amongst us. We excel other nations, both in our philanthropy and in our spirit of enterprise; but on this question, which requires the exercise of both, we suffer ourselves to be overpassed by many who are our inferiors. The evil of juvenile delinquency is one that must be combated. Day after day it clamours for a remedy, and will not be gainsaid or neglected under any less penalty than that of national disgrace. What is to be done with our young criminals? is the melancholy, and often the hopeless cry of police magistrates and judges, who, in the exercise of their functions, are brought into daily contact with so-called criminals, who are too young to know right from wrong, and so destitute as to deserve compassion far more than severity.

These miserable and neglected creatures know nothing of the law but as something severe and terrible. They never heard of its care or its beneficence, except in the protection of tills and pocket-handkerchiefs. It is to them the Destroyer, not the Preserver—the awful power that punishes, but never rewards. To consign to the discipline of a prison the babes who are driven to petty larceny by starvation, is alike cruel and useless. To punish them when they have been trained into vice by their fathers and mothers, or by strangers who profit by their misdeeds, is to punish the comparatively innocent, and to let the guilty go free. To neglect them altogether, is but to foster and encourage a monstrous social scandal; while, to feed, clothe, and teach those who qualify for the privilege by the commission of robbery, is to give advantages to the dishonest which neither the law nor society accords to the unoffending children of poor and hard-working men. The subject is surrounded and beset with difficulties. It can neither be satisfactorily dealt with, nor allowed to remain untouched. It is true that there is a remedy, which goes to the very root of the evil—the establishment of a system which shall make it as much the right of every British child to demand its education at the expense of the State—if its parents cannot afford to pay for it—as it has to demand, under the Poor-law system, the bread which may save it from dying of starvation in the streets. But this prevention of the evil is quite as difficult as the partial remedy for it; not from any insurmountable impediment in the subject itself, but from the unhappy jealousies which arise on the mere mention of national education. Other countries are, in this respect, more fortunate than our own. The United States of America, France, and Germany have not so many young criminals as we have; because Religion—or, more properly speaking, because an intolerant and jealous sectarian bigotry that usurps the name of Religion—does not interfere to prevent the State from regarding all destitute children as its own, and from acting towards them the part of a wise and just parent. No system of reformation for young criminals that the kind hearts and active intellects of good men can devise, will ever prove satisfactory, unless it be preceded by a system of National Education. When the State has done its duty by teaching its laws to the whole of its children; when no child born in the British Isles is suffered to remain uninstructed in the elements of all knowledge—not only of the knowledge derived from the Scripture to fit it for the life to come, but of the knowledge of "common things," to fit it for the due performance of its duties in this; and when the number of juvenile criminals has, by these means, been reduced to one-fourth, if not to one-tenth, of its present amount; then, and then only, will it be possible to consider the question of the reformation of juvenile criminals in a satisfactory manner. The residuum of youthful vagrancy and crime, after a few years trial of a sound and comprehensive scheme of National Education, will be but small, and will be easily dealt with. Those who devote themselves to the task of reforming

the young thief or beggar, will not be met, at the threshold of their labours, by the startling objection that they devote more of their care and attention to the poor who are vicious, than to the poor who are honest. The numbers, also, will not be so great as to deter philanthropy by the hopelessness of combating an evil so widely spread and so deeply rooted as at present. In the meantime, however, we would render all due honour to the benevolent men who have taken up the question—men who, like Mr. M. D. Hill, have made it the business of their lives; and men like Lord Shaftesbury, Mr. Adderley, Mr. Monckton Milnes, and others, who have devoted themselves to its consideration at a later period, and given it the assistance of their hearts as well as of their heads, of their feelings as well as of their intellects. We trust that, in due time, something will come of their exertions; and that neither "wars nor rumours of wars" will distract public attention to such a degree as to suffer the whole question, or any part of it, to fall into neglect or abeyance.

THE MINISTRY.

It is positively asserted that Lord Palmerston has consented to return to the Coalition Cabinet. Should this be the fact, the noble Viscount has, of course, obtained his own terms. If orders have been given to the British fleet to enter the Black Sea, with a view to active operations, and if it be true that Lord Lansdowne and the Duke of Devonshire have threatened to withdraw their support from the Ministry if the main provision of the intended Reform Bill are not given up—then it is not impossible that Lord Palmerston may have consented to return to the Home Office. A few hours will, in all probability, place all the facts in connection with this affair in our possession.—*Morning Herald*, Friday.

The Cabinet met in Council yesterday in Downing-street, and were engaged in discussion five hours and a half. *Lord Lansdowne was not present.* It transpired in the course of the evening that Sir George Grey urged the unsatisfactory state of his health as a reason for declining the proffered post of Home Secretary. This refusal of office rendered it more than ever desirable that Lord Palmerston should be induced to re-assume the post he had given up. . . . . Lord John Russell's services as Home Secretary would be gladly accepted, but he (like Sir George Grey) is understood to have urged the plea of insufficient health as a reason for the non-assumption of duties additional to those now on his hands. And, assuredly, the chief parentage of a new Reform Bill is quite enough, both in labour and responsibility, for any one statesman. . . . . It is said that the question of *what* the Reform Bill shall really be has *not yet been decided by the Cabinet*—the plans before the Government being still in the hands of the Ministerial Committee, to whom the task of preparing a complete measure has been entrusted.—*Daily News*, Friday.

THE COURT.

The Queen and the Prince Consort, accompanied by their Royal Highnesses the Princes and the Princesses of the Royal family, and attended by the ladies and gentlemen of the Royal household, left Osborne at an early hour on Thursday morning, on their return to Windsor Castle for the Christmas holidays. The illustrious party embarked at East Cowes, in the *Fairy*, Royal yacht, and crossed during rather a smart breeze to Portsmouth, whence they travelled by special train on the South-Western Railway to Basingstoke, and thence by the Great Western Railway to Windsor. The Royal party arrived at the Castle at two o'clock.

Sir James Graham has been the only visitor at Osborne during the past week.

It is understood that the sojourn of the Court at Windsor Castle will extend to the first week in February next.

Her Royal Highness the Duchess of Kent, attended by Lady Fanny Howard and Col. Sir George Couper, arrived in town on Tuesday morning, from her residence, Frogmore, near Windsor. Her Royal Highness visited the Duchess of Gloucester, at Gloucester House, and afterwards left London on her return to Frogmore.

His Excellency the Ambassador of France and the Countess Walewski have been among the distinguished circle enjoying the hospitality of the Marquis of Lansdowne, at Bowood, during the past week.

The Duchess of Inverness gave a grand dinner on Saturday last, at Kensington Palace, to their Royal Highnesses the Duchess of Cambridge and the Princess Mary, the Duke of Cambridge, the Duke and Duchess d'Aumale, and a distinguished party.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. H. S. M. Hubert, to Saxton, Norfolk; the Rev. S. Churchill, to Boughton, Norfolk; the Rev. T. E. Espin, to Hadleigh, Essex; the Rev. C. W. Doherty, to Pelham, near Gainsborough; the Rev. A. Matthews, to Grimsby, near Market Harborough; the Rev. T. Miles, to Tenbach; the Rev. W. A. Ormsby, to Smallburgh, Norfolk. *Vicarage*: The Rev. T. Rees, to Rumney, near Cardiff. *Incumbencies*: The Rev. F. H. Bishop, to Grazeley, near Reading; the Rev. L. Thomas, to Merthyr Mawr, Glamorganshire; the Rev. W. T. Newenham, to St. John the Evangelist, West Derby. *Perpetual Curacy*: The Rev. John Judge, to Treflystan, with the Chapelry of Leighton, near Welshpool.

KING'S COLLEGE, LONDON.—The following appointments have been made by the Council of this College in order to fill up the Professorships recently vacated by the Rev. F. D. Maurice:—The Rev. A. M'Caul, D.D. is elected to fill the chair of Ecclesiastical History, in addition to that of Hebrew and the Old Testament, which he has hitherto held. A lecturer is to be immediately appointed to relieve Dr. M'Caul, by instructing the junior classes in Hebrew. Mr. George Webbe Dasent, of Magdalene Hall, Oxford, Doctor of Civil Law, has been elected to the chair of English Literature and Modern History.

NEW CHURCHES AT BAYSWATER.—Two new churches are in course of erection at Bayswater, and are fast advancing towards completion. One of these is situated on the south side of Craven Hill and Westbourne-terrace, and the other farther westward of Notting-hill. The erection of these new churches has been found to be necessary, in consequence of the additional accommodation required to meet the great increase of inhabitants in this improved locality.

THE ROYAL BARON OF BEEF.—The baron of beef, destined to grace her Majesty's sideboard on Christmas-day, has been supplied by Mr Minton, Windsor. Mr. Minton received three prime Scots, estimated to weigh about 100 stone each, in order that the Castle employés might choose from which the baron was to be taken: they were all of unrivalled quality. The baron was roasted on Friday, and will be served up cold on Christmas-day.

JUNCTION OF RAILWAYS.—A meeting of the proprietary of the Eastern Counties Railway Company was held on Tuesday, in the London Tavern Mr. Waddington, M.P., in the chair—when an agreement was entered into to unite that Company and the Norfolk and Eastern Union Companies. At meetings of the Norfolk and Eastern Union Companies, respectively, the same agreement was submitted to the proprietors and agreed to.

LIEUTENANT BELLOT.—Paris letters state that the members of the sub committee for the testimonial to this lamented officer were received a few days since by his Excellency the Minister of Marine, who promised to further their views in any way they may point out. The tablet to his memory is to be placed in the Marine Museum of the Louvre. The subscription list will be closed on the 31st inst., after which the general committee will make its report.

SMITH O'BRIEN IN JAMAICA.—It appears that Smith O'Brien, follow.ng the example of M'Manus, Meagher, O'Donoghue, and Mitchel, has escaped from Van Diemen's Land, and is now in the United States. A Limerick paper says:—"The writer of the letter was one of those who assisted Smith O'Brien in his escape. We may add, that he was bound by no parole to the Government, and that no charge of breach of faith can be made against him."

STORM IN THE IRISH CHANNEL.—During Monday and Tuesday night, a violent hurricane was blowing in the Irish Channel, and on the west coast of England and the east of Ireland. A great deal of damage has been done Several ships were wrecked, and some have foundered; and many lives have been lost. Some parts of the Irish coast are strewn with portions of drift-wood and wreck.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Bank of England have given notice that, with a view to the observance of a general holiday, the transfer and dividend offices will be closed on Monday, the 26th inst.

Mr. William Brodie, unpaid *attaché* to her Majesty's Legation at Stockholm, has been appointed unpaid *attaché* to the Embassy at Constantinople.

A large meeting was held last week at Bristol, in favour of the vote by ballot. The meeting was unanimously in favour of secret voting.

There is a man in Orkney aged nearly ninety years, who has led to the hymeneal altar and followed to the grave eight wives. He is about to be married the ninth time.

Monsignor Jean-Francois de Saunhac-Belcastel, Bishop of Perpignan, died at Perpignan on the 9th, in the 80th year of his age. He was the oldest member of the French episcopacy.

Mr. W. Wilson, of Sackhill, Rathmines, Dublin, has forwarded a donation of £100, to be disposed of as the authorities of the Belfast Sailors' Home think best; but suggesting a library

Last week a number of persons in Leeds were summoned for neglecting to consume the smoke issuing from their furnaces, and fined 40s. and costs.

The Duke of Parma has pardoned six political prisoners, who had been condemned by court-martial to various punishments, on the 20th May, 1853.

The Duke of Hamilton has purchased Beaufort-house, in Arlington-street, for £60,000.

Up Friday week the corn-mill at Wike, near Leeds, occupied by Mr. John Briggs, was entirely destroyed by fire.

The Minister of Finance at Modena has extended the exemption from duty on corn, maize, and oats, which was to expire at the end of this month, to the end of March, 1854

The submarine cable across the Frith of Forth and Tay is being laid down, so as to complete the chain of telegraphic communication between the far north of Scotland and the south.

Letters for officers, seamen, and marines, serving in the undermentioned ships in the Arctic Seas, will be in time to be forwarded, if sent to the Admiralty on or before the 1st of January, 1854—H.M.S. *Enterprise*, *Battlesnake*, and *Plover*.

Workmen are at present employed in constructing a Crystal Palace on the Roken-square in Amsterdam, destined for the annual exhibition of flowers, the culture of which is carried to so great an extent in Holland, and particularly near that city and Haarlem.

The Master-General of the Ordnance has appointed Lieut.-Colonel the Hon. Robert E. Boyle, Coldstream Guards, to be his secretary, in the room of Captain Lord Clarence Paget, R.N., resigned.

We regret to state that Mr. John Martin, the painter of "Belshazzar's Feast," has suffered an attack of paralysis that disables his right hand and impedes his utterance, though his hearing and sight remain perfect. This misfortune occurred to him last month, in the Isle of Man

The *Giornale di Roma*, of the 10th, announces that the Pope has appointed Cardinal Wiseman a member of the Congregation of Immunity.

Sir Thomas Redington has been appointed permanent secretary to the Board of Control

The schooner *Invincible*, Capt. Pennington, from Palermo to Liverpool, has been driven ashore close to the Green Island, Gibraltar. The captain and crew (six in number) escaped.

By a return just printed it appears that the acreage in England and Wales of the parishes is 9,177,196 acres, 1 roods, 5perches, out of which 65,047 acres and 6 perches are occupied by railways

The *Journal d'Augsburg* announces the death of Comte Vincent de Tabasz Krosnowski, Hereditary Commander of the Order of Malta, Chevalier of several other orders, and one of the most distinguished noblemen of Galicia.

Mr. Robert Mackriane has been appointed Sheriff of Renfrewshire, in the room of Mr. Hercules Robertson, recently promoted to a seat on the Scottish Bench.

A railway is announced to extend the communication by the South Devon line from Torquay to Dartmouth and Brixham.

M. Elie de Beaumont was on Monday elected perpetual secretary of the Academy of Sciences, in place of the late M. Arago. The other candidates were M. Lalnes, M. C Dupin, and M. Pouillet.

The Peninsular and Oriental steamer *Hindostan*, which sailed from Southampton on Tuesday, took out £241,436 in specie, of which £208,300 is for the Presidencies and China.

The soldier who fired upon the mob in the Gavazzi riots at Montreal has been discharged under a writ of habeas corpus, and has entered into recognizances to appear before the colonial Court of Queen's Bench to answer the charge.

On Monday evening, between five and six o'clock, a glazed leather bag, containing nearly a thousand pounds' worth of jewellery, was stolen from a cab standing at the door of a tradesman in the Strand.

According to the advices just received from Buenos Ayres, the financial condition of the Republic is anything but flourishing, and there is small hope of any regular dividends for the bondholders for some years to come.

According to a return just issued the mileage of railways in England is 5288 miles, 5 furlongs, and 211 yards; and in Wales, 348 miles, 5 furlongs, and 203 yards.

At a moment when it was believed that the mania for turning tables and appearing to make them speak, was dying away in France, the Bishop of Vivior has, in an excess of zeal, revived the subject, by a letter to the clergy of his diocese, in which he denounces the practice.

The New York papers announce that the Earl of Mountcashel had arrive l there from a long tour through Canada and the United States of America.

Thirteen inhabitants of Hereford have subscribed the donation of 720 tons of coal for the poor of that city.

A veteran of the Prussian army, named Bause, died a few days since at Wesel, aged ninety-six. He had served for sixty-two years. He was taken prisoner at the battle of Jena in 1806, but was soon after exchanged.

It is shown by a return that last year the amount contributed by railway property to the poor-rates was, in England and Wales, £136,559 4s. 9½d.

On Monday there were attempts at skating on the ornamental waters in the Parks, though the ice was not thick enough to bear. Six persons were immersed, and narrowly escaped a watery grave.

Madame Lola Montes, Countess de Landsfelt (says the *Panama Herald*), passed through Sacramento, on her way to Grass Valley. Among her parlour ornaments were a piano, a parrot, two dogs, and a grizzly bear.

A thief has been carried off from the house of a police-inspector at Manchester, two belonging to the officer himself: one was his uniform coat, and in the pockets were a number of summonses and warrants.

The American Minister at Berlin, Governor Vroom, has been obliged to don a "State" costume, for the King declared he would not permit a deviation from the rule that official introductions shall not be in plain dress.

Sir Edward Bulwer Lytton has consented to preside at the next soirée of the Leeds Mechanics' Institution.

There has been a new coinage of pence and half-pence, but it has by no means got into general circulation.

A man has perished of cold and hunger on the mountain of Great Lae, in Carnarvonshire, having lost himself in the fog.

There were no less than seven fires between five o'clock on Saturday evening and five o'clock on Sunday morning, in various parts of London. None of the fires, however, were of serious consequence.

An extensive landslip has just occurred on the Wilts, Somerset, and Weymouth line, consisting of near Devises, carrying away an occupation bridge, owing to the immense superincumbent weight of an embankment, which has at great expense been made and re-made.

Among the items of expenditure by the Trinity House last year was one of £51 16s. 3d., "for reading books for the use of the keepers of the lighthouses and crews of the light-vessels.

The Rev. Dr. Burgess, curate of St. Mary's, Blackburn, has been elected a member of the Royal Society of Literature.

A gentleman who had arrived in Melbourne, when he was leaving the hotel, asked a friend what he ought to give the servants. "Why, I hardly know," was the reply, "I should think their notions were rather grand, for I know Boots estimates his Trinity at £1600 a year."

At the High Court, Edinburgh, on Monday last, William Cumming was convicted of the murder of his wife, by repeated and barbarous treatment, and ordered to be executed on Monday, 9th January next.

Mr. Cobden, M.P., was present at the *viva voce* examination in the School of Law and Medicine, which commenced at Oxford on Tuesday week.

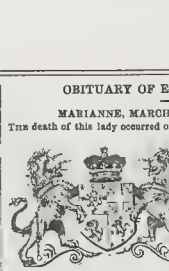
It is said that a bill is in the course of preparation, which will be introduced at the meeting of Parliament, with a view to throw open the coasting trade to foreign ships.

The anniversary of the Polish revolution was celebrated at Constantinople on the 29th ult., by about 100 Polish emigrants.

OBITUARY OF EMINENT PERSONS.

MARIANNE, MARCHIONESS WELLESLEY.

THE death of this lady occurred on the 17th inst., at her apartments in Hampton Court Palace, after a short illness. The Marchioness was daughter of the late Richard Caton, Esq., of Maryland, and grand-daughter of the celebrated William Carrol, of Carrolstown, who signed the original declaration of American Independence. One of Lady Wellesley's sisters was Mrs. MacTavish, another is Duchess of Leeds, and another the Dowager Lady Stafford.

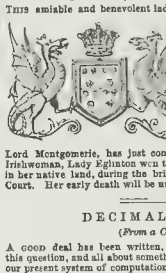


Lady Wellesley married, 1st, Robert Paterson, Esq., and, 2ndly, 29th Oct., 1825, Richard, late Marquis Wellesley (eldest brother of Arthur 1st Duke of Wellington); by whom, who died 26th Sept., 1842, she had no issue. Her Ladyship was for many years Lady of the Bedchamber to Queen Adelaide

It may not, perhaps, be very generally known that the Marchioness's sister-in-law, Miss Paterson—a famous beauty in her day—was the first wife of the ex-King, Jerome Bonsparte, and is still alive; being resident in America, and known as Mrs. Bonsparte Paterson. She was married to Jerome when he was captain of a vessel, during the Consulate of Napoleon; but, on the establishment of the French Empire, it pleased the new Sovereign to make Jerome a King, with the proviso that his beautiful American wife should be divorced. By Miss Paterson Jerome had a son, who is now a citizen of the United States, and appears to be entitled to the position of a French Prince of the Imperial dynasty.

THERESA, COUNTESS OF EGLINTON.

THIS amiable and benevolent lady died, deeply lamented, at Eglinton Castle, on the 16th inst. Her Ladyship, who was daughter of Charles Newcomen, Esq., married, first, Richard Howe Cosserell, Esq., Commander R.N., and secondly, 17th February, 1841, Archibald William, present Earl of Eglinton and Winton, by whom she leaves one daughter Egidia, born 17th December, 1843, and three sons, of whom the eldest, Archbald William, Lord Montgomerie, has just completed his 12th year. By birth an Irishwoman, Lady Eglinton won the esteem and affection of all classes in her native land, during the brief period she presided over the Irish Court. Her early death will be universally deplored.



DECIMAL COINAGE.

(From a Correspondent.)

A good deal has been written, and a thick Blue Book published on this question, and all about something which ought to be done to reform our present system of computation and coinage. What we propose as the simplest and best is as follows:—That the present coinage should remain, and three new pieces be created: one, a 10d. piece, to be called Victoria; another, containing 20 Victorias, to be called Albert; to divide the penny into farthings and half-farthings the farthing to be one-fifth part of a penny, instead of, as at present, one quarter; the half-farthing to be called a Centime. Our coinage would then be:—8 Centimes make 1 penny; 10 pennies, 1 Victoria: 20 Victorias, 1 Albert; our present 20s. sovereign would be 24 Victorias: our present shilling would, as at present, be 12 pennies; the half crown would be 9 Victorias; our crown-piece (5s.) would be 6 Victorias. This plan would at once simplify our coinage, and render it as easy as any extant.

RUSSIAN POST AT KALOUGERNI.

THE monument in the centre of the picture upon the next page was erected by Michael the Great, upon the site of a great battle between his troops and the Turks. This prince strove to free his nation from the dominion of the Porte; and held, for a time, in his power various parts of Roumania, Transylvania, Moldavia, and Wallachia. But he was assassinated by Basta, a General of Rodolphe II., Emperor of Germany, who found in Michael a useful, but a too independent ally. The event took place in 1601. It is not unlikely that the above locality may again become the scene of contest during the present war.

THE EMPEROR OF RUSSIA, IN HIS DROSHKY,

(SLEDGE,) AT ST. PETERSBURG.

THE appearance of the Emperor Nicholas, as he sits in the rapid droshky or sledge,—of which we this week present our readers with a life like Sketch—is by far the most familiar of all his out-door appearances to the inhabitants of St. Petersburg.

He carries the love of a certain proud and austere simplicity to even a much greater extent than did the late monarch, his brother, Alexander; and of him it was said, as will be remembered, that he first taught our English aristocracy in London the dignity there was in not being over sumptuous.

We shall speak in a moment of this droshky and its uses; but, first, a word upon a subject which it forcibly suggests. In general, the idea of semi-civilised people and the idea of gaudy habits and florid display go together. "Barbaric magnificence" has become a proverbial expression; while sobriety of costume, and a sort of smooth plainness of manners are well known throughout all history to have been the general accompaniments of superior enlightenment. Military splendour is, for obvious reasons, a necessary exception to the rule. Yet, even in military life, we have a numerous interesting examples of how the great chief, on whom the fate of every enterprise depended the centre of all hopes the object of all anxieties—increased his moral weight by always appearing conspicuously simple amidst the surrounding pomps of war. Napoleon's grey capote, and the barbarian King's persussion, in ancient days, that Parmenio was, and must be, Alexander the Great himself although he wore the dress of a Persian, are instances of what we mean. Still, martial displays form, as we have remarked, a time-honoured and very just case of departure from this great canon of moral policy.

Now, what is undoubtedly singular, is that the Russians, who are reputed to be so barbarous a nation, seem to us the more deeply impressed with reverence for their Autocrat, the more they see him pass daily amongst them, and "stale his presence," in all the carelessness of a plain costume. Any one who spends some months at St Petersburg—bearing in mind the witty yet terrible saying, that "the natural death of the sovereigns of Russia is assassination"—will scarcely withhold an occasional tribute of inward admiration, as he beholds the unattended monarch receiving, as he darts through the capital, the salutes of the mixed crowd. But, how different are those salutes! They are paid by the upper classes; but *given* by the lower. With bare head, and crossing himself, the "sheepskin" bows as low as his own knees, and sometimes even beside them, when he meets the man who has abolished serfdom on his own estates, and before whom the ancient peasant-grinding nobility have been made to tremble. There is, doubtless, more grace in the Prince's reverence; but, oh! how much more heart in the boor's

Enough, however, of these grave reflections. Let us come to our droshky, or rather to the Emperor's. Let us hold on behind, if we can. This is no easy task, for the rate at which it dashes through the streets is incredible. A stranger immediately asks, "What on earth is the matter?" The answer is "It is Majesty always travels in that rapid way; and nothing is the matter only woe to the guard whom he may chance to find off their guard or to the public establishment whose officials are not in full working order."

St. Petersburg, not very long ago, was a city of wooden houses; it is now a city of granite quays, massive palaces, and golden domes. Fires were formerly frequent; they are rare at present. But habit is strong; and the precautions which Nicholas once employed through necessity, he now continues out of routine. The fire-brigades and their various stations are the chief objects of this incessant perambulatory persecution. There is no hour of the day there is no hour of the night—at which these devoted men are safe from the sudden appearance of the Emperor. Not even is his absence from St. Peterburg a guarantee: he has been supposed to be at Moscow, when the heavy clank of his from

THE EMPEROR OF RUSSIA, IN HIS DROSHKY (SLEDGE), AT ST. PETERSBURG.

step in the corridor has been the first announcement of his presence. By a system of metropolitan telegraphs, worked from the roofs of certain watch-towers, he has been known to summon all the fire-engines in the capital, without exception, to the Winter Palace, where there was no fire whatever. To those who arrived first, in proportion to distance, he has given bountiful rewards; those who have not been on the alert he has punished.

We have spoken of his speed. Even through the crowded streets of the capital he seldom goes at less than fifteen miles an hour; and in his longer journeys through the country, his road is often strewn with dead horses, while generally he drops one exhausted attendant after another at some inn by the way. Though, in town, he is often seen in a common hired vehicle, our Engraving represents his own private droshky and driver. The latter is almost a portrait. We have often seen the original. That is his beard, his face, his very attitude; and there, behind him, with helmet, and grey cavalry cloak, sits the figure of Nicholas himself, as if carved out of granite. The position of the driver's arms is remarkable. Our English "whips" would probably deride it as unscientific; and certainly it does appear that, if the horse were to bolt, the coachman would have no purchase, and must be pulled out of his box. Yet it is the universal fashion at St. Petersburg, and all through Russia.

On great occasions the Emperor is seen on horseback, in which position he looks to the best advantage. Every morning (while in the capital) he may be seen on foot, about seven o'clock, striding along the Nevski. Occasionally he goes out in a two-horse carriage. But his characteristic equipage, which will be longest remembered, is the simple vehicle which we have engraved. Winter and summer are all the same; except that, when the frost has set in, the wheels are taken off, and the body of the little carriage is set upon a sledge.

RUSSIAN POST, AT KALOUGERINI.—(SEE PRECEDING PAGE.)

OMER PACHA, AT THE BATTLE OF OLTENITZA.

THE BATTLE OF OLTENITZA.

We have been favoured by an eye-witness of this memorable battle with the accompanying Sketch of Omer Pacha, in his Camp, as he viewed the progress of the engagement; to which we append the following extract from a private letter, which has appeared in a contemporary journal :—

——, of the ——, has just returned from Constantinople, and certainly has been extremely lucky. He got letters from the Seraskier Pacha to Omer Pacha, who treated him with the greatest kindness. He arrived the day before the action, and he sat beside Omer during the whole of the battle. They had a most brilliant view of the whole thing a beautiful sunny morning, without a cloud, and a fine west wind blowing the smoke away. They were on the south side of the Danube, where it is only a third of a mile in breadth; and the bank on their side being very high ground, they sat and looked down on the plain on the opposite shore, which is flat, so that the Russian fire all struck 100 feet below the spot where Omer Pacha and his staff were placed. The action began at eleven o'clock by several columns of Russians—in all about 10,000—crossing the plain to attack the Turkish intrenchments, which had been hastily thrown up in the night, the Turks having crossed to the number of 4000 the previous evening.

The Turks allowed these columns to advance well into the plain, and then the heavy batteries which were Omer Pacha's head (on the right bank) opened upon them; next the batteries on the island: and then the guns in the intrenchment, which last were of small calibre, and only six in number. —— says it was a tremendous sight to see the effect of the Turkish guns on the Russian columns the moment they had got the range. The Turks are inferior to none in artillery, and they tore the columns to pieces The whole action lasted four hours. The Russians continued advancing, their guns playing into the intrenchment, which was little more than breast high; but when they got close up the carnage was frightful, as the Turks had 500 armed with the Minié rifle, and drilled on the Chasseurs de Vincennes system, who picked them off at every shot, besides the incessant fire of grape which the Turks kept up. —— says he saw the heavy shot and grape clearing regular alleys through the columns. He looked down and saw everything as perfectly as it it were a review seen from a hill. He saw one officer knocked down from his horse, who was evidently a General, for they immediately carried him far to the rear, and a carriage drove up furiously and took him away. By the time the columns were within 300 yards, they deployed, and Omer Pacha and every one expected to see them attempt to storm this low entrenchment with the bayonet, as they were three times the number of the Turks; but, after marching to within 20 yards of the narrow ditch—which my friend cleared at an easy jump, entrenchment and all, immediately after the action—they fairly turned tail and ran for it, the Turks giving them grape and musketry till they were out of sight. The Russians had about 15 guns with them the whole time, which did a good deal of execution, killing a few Turks and a good many *horses*—the latter, of course, standing higher than the parapet, for they had some irregular cavalry in the work. The Turkish artillery and musketry were kept up with a rapidity of fire that —— could not have imagined. Omer Pacha is about 50 years of age, adored by his army, of great military acquirements and information, and a perfect Turk in coolness and presence of mind. The four hours of the action he sat cross legged, with his long pipe in his hand; never at any moment changing a muscle of his countenance, and directing

GENERAL PRIM, IN BIVOUAC, AT THE BATTLE OF OLTENITZA.

everything himself by means of his bugler, who stood beside him, and sounded to the intrenchment across the river any order required. Several French, Spanish, and other foreigners in the Turkish service who were present, all agreed that they never saw anything so grand or so perfect as the whole course of their experience; and perhaps no other action was ever seen so perfectly in all its details. The enthusiasm of the Turks was tremendous when the Russians broke and ran. The cry of "God bless the Sultan" rose from the entrenchments, the island, and the whole Turkish army behind Omer. One thing spoke badly for the Russians:—— saw the officers pricking their men on with their swords, to try to make them dash on, but they would not. He walked over the field half an hour after the action, and describes the carnage as immense; there must have been 1000 killed, and wounded innumerable—lying in dozens, dismembered and torn to pieces by the grape, thrown in *a loud portion*. The Russians are very sickly; the Turks, on the contrary, are in rich condition and great spirits. The senior medical officer, a Frenchman, assured —— that he had only two per cent sick.

We have been favoured, also, with the accompanying Sketch of General Prim, who was an eye witness of the battle.

It was upon his own demand that General Prim obtained the mission to the Turkish camp; and, no doubt, if he had asked for a longer leave of absence, it would have been granted to him without objection. A the Tribune of the Cortes, the absence of an Opposition chief is easily excused by the Government, especially if he is daring enough to defend the Constitutional liberty conquered by the sword.

The bulletins of the army of the Danube at first assigned a conspicuous rôle to General Prim; but the Spanish Government, although it has not yet been recognised by the Autocrat of the Russias, has not authorised the General to accept active service in the Turkish army. For the rest, says a Correspondent, who knows the General well "Whatever part he may take, he will always serve worthily and honourably the cause in which he may be engaged; and nothing that is not noble and of good report may be expected of so valiant a captain."

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, DEC. 22.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Mean Snow and Rain in Inches.

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29·35 inches at the beginning of the week to 29·70 by the afternoon of the 17th; decreased to 29·56 inches by the morning of the 19th, and increased to 30·15 inches by the end of the week. The mean for the week at the height of 82 feet above the level of the sea, was 29·722 inches.

The temperature throughout the week has been low, and much below its average. The 16th was a painfully cold day; the wind blew from the N.W., its temperature fell 13° below the average of the same days; on four other days it was from 8° to 10°, and on the remaining three days from 4° to 5° below it. The 16th December, in the year 1849 was very cold; its temperature was 26·2°, and no other 16th day has been so low as this week; in the year 1840, the mean temperature of the 17th was 24·8°; and in 1821, the 19th of December was 28·5°; and these are the lowest temperatures on those days for forty years.

The mean temperature of the week was 31°, being 8° below the average of the same week in the preceding forty years. The temperature of this week is lower than any corresponding week since that in the year 1814, which was somewhat lower.

The range of temperature during the week was, 16·1°, being the difference between the lowest reading, 21°, on the 17th, and the highest, 37·1°, on the 20th.

The mean daily range of temperature was 7·6°.

Snow fell, on the 17th, 20th, and 22nd, producing water to the depth of three-tenths of an inch.

The weather during the week has been severe, and the wind chiefly from the N.E. The severity of the weather has, for some time past, acted injuriously on the public health.

Lewisham, 23rd December, 1853. JAMES GLAISHER.

THE CONSERVATIVE LAND SOCIETY.—The annual meeting of this society was held at the Freemasons' Tavern, on the 15th inst., Viscount Hardinge in the chair. The Executive Committee presented an elaborate report, detailing the principal occurrences of the year, from which it appeared that the society has met with a remarkable success in the short period of its operations. It was originally 7762 shares had been issued, representing a subscribed capital of £388,100, of which upwards of £75,000 was paid up. The large number of 2016 shares had been entitled to rights of choice. Sixteen estates had been purchased, of which eight were already allotted, and two were ready for allotment. A bonus of £6 per cent was declared to the shareholders, and it was intimated that the committee had raised the rate of interest on deposits from three to five per cent. The retiring directors were unanimously re-elected, and a handsome acknowledgment of the valuable services of the committees and officers of the society made by the meeting. The report and financial statement appeared to give entire satisfaction to a very crowded meeting of shareholders. A net profit of £1944 12s. 5d. in favour of the society has been realised, in addition to £7814 16s. 1d. reserve fund.

THE NEW CAB ACT.—THE FOUR-MILE RADIUS.—Sir R. Mayne, Commissioner of Police, has applied, by a circular, to the various local boards of trustees for lighting the roads leading from the metropolis, to the effect that the most efficient mode of giving information to the public, at night as well as by day, of the point of the circumference of a circle of four miles radius from Charing-cross, is to place a lamp-post at the spot, upon which a notice of the distance may be affixed. The trustees are, therefore, requested to be so good as to cause a lamp-post to be put up at the exact place, which will be pointed out to them by the superintendents of the respective divisions of police in which they are situated; and who will supply the iron plates on which the notice is embossed in white raised letters upon a black ground.

THE CIVIC ELECTIONS.—Wednesday being St. Thomas's Day, the usual elections took place in the various City Wardmotes: in most of them the same gentlemen were returned as Common Councilmen. In some of the wards notice was taken of the Royal Commission, by urging corporate reform, or requesting that the "privileges" of the City should be kept intact.

CLOSING OF THE COMMON LAW OFFICES.—The whole of the offices connected with the several departments of the Courts of Queen's Bench, Common Pleas, and Exchequer, including the Rule and Taxing Masters' Offices, will be closed on Monday, Tuesday, and Wednesday in Christmas week.

THE NEW HOME SECRETARY.—It is generally believed that Sir James Graham accepts the office of Secretary of the Home Department, and that Fox Maule (Lord Panmure) is to be First Lord of the Admiralty.—*Morning Herald.*

THE CORONATION COMMISSION resumed its sittings on Tuesday, and, after examining several witnesses, adjourned till the 11th Jan., when the examination of witnesses favourable to the Coronation will be entered upon.

THE LAMBETH CONSTITUENCY.—On Monday night a public meeting of the electors of the borough of Lambeth was held at the Horns Tavern, Kennington, to hear from Mr. Williams, their representative, an account of his Parliamentary conduct for the last session. A vote of confidence in him was passed.

TREATMENT OF THE POOR IN MARYLEBONE.—Mr. Austin, on Tuesday morning, resumed the inquiry instituted by the Poor-law Board into the circumstances attending the death of the infant Walsh. Garrett Walsh, the father of the child, was again examined by Mr. Austin, after which two officers of the house. The inquiry was again adjourned.

STEAM-BOAT COLLISION.—A very serious collision took place on the river on Sunday evening, in the Half-way Reach, by which the Gravesend steamer *Meteor* was struck by the *Sylph*, Dublin screw steam-ship, the passengers and crew of the *Meteor* having a narrow escape of perishing with her. The bows of the *Sylph* pierced the *Meteor*, carrying away the steward's pantry, the companion ladder, and reaching more than half way across the beam of the vessel, shutting out a chance of escape. Their position at once became perilous in the extreme, the water was pouring through the small side port windows, flooding the cabin to such an extent, that several of the passengers were up to their waists in water. They were at length rescued, and put on board the *Sylph*. As soon as the vessels parted, the *Meteor* went down head first immediately. The ebb tide providentially had the effect of keeping her hanging, as it were, to the bow of the *Sylph* for full ten minutes; and to that circumstance may be attributed the saving of every soul on board.

A MERRY CHRISTMAS!

CHRISTMAS, with its delightful festivities, and its hallowed memories, has again arrived to concentrate the social and domestic affections with the sanctions of a high and joyful religious festival.

Brought into companionship as these pages are with the very flower of English beauty, and admitted into homes whence every influence that is not pure and elevating is carefully excluded, how is it possible we should be insensible to the innocent delights which our artists and essayists, vying with each other in their labour of love, know so well how to produce? Is it by some magical sympathy we feel that lustrous eyes will sparkle with unwonted pleasure, that sweetest smiles will mantle upon the cheek of beauty, and that winning lips will utter ejaculations of delight when our Christmas Supplement—pre-eminently the Supplement of the year—is opened out, and discloses how lavishly the resources of art have been employed in illustrating Christmas scenes and Christmas associations.

In the very midst of our home festivities, when fires blaze most cheerfully, and lights burn most resplendent—when looks are fondest, mirth highest, and enjoyment supreme—let not our readers within the four seas forget the true English hearts indulging in fond thoughts of home in some distant portion of the globe. Every family has a brother, a son, or a friend, whom a spirit of manly enterprise has summoned from all that is dearest to him in existence—some to languish in the pestilential swamps of Burmah, others to encounter indescribable peril and hardship among the icebergs of the Arctic Regions, while thousands have left our shores to seek precarious wealth at the gold mines of the Antipodes. When some months hence our Christmas Number shall gladden the dreary life of our countrymen in some distant portion of our colonial empire, let these few lines, and our Illustrations of Christmas in distant lands be the witnesses that, in every Christmas circle in the United Kingdom tender wishes were poured out for the welfare of the absent exiles, and affectionate regrets interchanged that the once familiar and still loved faces could not be seen in our Christmas hospitalities. For ourselves, we should be without excuse if we could forget our countrymen in distant lands; for, wherever a British fleet is cruising, or a British army is cantoned; in whatever quarter of the globe British enterprise and science may be engaged in digging mines, spanning rivers, and annihilating distance between great cities; wherever, in short, scenes of social and historical interest are being enacted—whether it be the discovery of the North-West Passage, a great battle upon the Danube, or the Irrawaddy, or the opening up of hitherto unknown waters in the populous territories of China and Japan—there the ILLUSTRATED LONDON NEWS has some friend and Correspondent, whose ready pencil transfers the salient features of the scene to paper, to be afterwards reproduced by our Artists and Engravers for the gratification of the public at home. To all these fellow-countrymen—many of them personally unknown—we beg to tender our warm acknowledgments, and to assure them that their contributions to our columns have carried the most varied instruction and delight to thousands of firesides, where we would, "by these presents," have them "freshly remembered" at this happy season.

If we carry our regards from the family circle to the state of the nation, we find the condition of our fellow-countrymen to afford occasion for much gratulation and thankfulness. Notwithstanding the high price of provisions and fuel, the great mass of the working classes will be enabled to provide themselves with good Christmas fare, and to surround themselves with comforts denied to them in less prosperous years. Australia sends us tons of fine gold, until it outrivals ancient Ophir; and California continues to pour her vast mineral riches into the treasury of the world. Trade and commerce, during the past year, have concurrently experienced a healthy expansion, which nothing but the twofold disaster of a deficient European harvest, and hostilities in the East threatening a general war, have been able to check. During this period of national prosperity, the relations between capital and labour have undergone a change which has brought an appreciable increase of comfort and independence to the industrial classes. These relations are not yet brought into a course of satisfactory adjustment; but even the Lancashire operatives who are "out on strike," will, it is hoped, be provided with an allowance during Christmas week, that will enable them to enjoy the festivities which an unusually early and inclement winter has rendered doubly welcome and exhilarating.

A word for the poor! The snow and severe frost which ushered in the Christmas of 1853 must have suggested to the benevolent that very many of our fellow-creatures are sadly in want of certain comforts at this inclement season, which it is in their power to bestow. The dwellers in well-warmed and luxurious habitations who, whenever they go forth to encounter the winter's cold, can arm themselves in triple panoply of comfortable clothing, are, we trust, in no danger of forgetting the thousands who are pining with hunger and shivering with cold in their damp and dreary abodes. Against what has been well called "the vice of indiscriminate almsgiving," we trust we need not caution our fair readers, for street alms to sturdy mendicants and professional beggars, whether male or female, breed vice and imposture in their most hideous forms. In large cities there are many difficulties in the performance of the Christian duty of personally visiting and relieving the poor. But benevolence can never want legitimate objects for its exercise in the metropolis, so long as we see the governors of those noble institutions, our great London hospitals, compelled to issue the most urgent applications for public support—for the want of a larger measure of which, hundreds of the suffering and indigent poor are turned away from their doors. Nor are there wanting parochial and district charities in every quarter of the metropolis, and in every large town, the committees of which perform the duty of personal visitation, and exercise due care in the selection of the proper recipients of their bounty.

And now with mirth and laughter let Old Christmas come! In ducal halls, in suburban villas, in comfortable farm-houses, in the snug drawing-room and smaller parlour, in the humbler dwelling of the honest artisan and the farm-labourer, may there be heard the musical laugh of young girls, bubbling up to their lips like the waters of some pure fountain, and the hearty and unrestrained roar of brothers, friends, and boon companions. Draw the curtains; shut out the world; pile high the blazing log! And now, all needful preliminaries having been made, we wish our readers, one and all, a MERRY CHRISTMAS AND A HAPPY NEW YEAR!

G. C.

CHRISTMAS ENTERTAINMENTS.

Boxing-night falling this year on Monday deprives the weekly critic of an early notice, unless he can contrive to anticipate theatrical doings. Different managers, however, are naturally desirous to conceal their plans until the very last; and some prudently object altogether to anticipate the surprise of the evening. What, however, can be done to gratify curiosity we will attempt.

The PANTOMIMES this year will be more numerous than usual.

At DRURY-LANE, the task of providing this species of entertainment has been confided to Mr. E. L. Blanchard, who furnishes the introduction; but the comic scenes, or "pantomime proper" will be prepared by the well-practised hand of Mr. Nelson Lee. In it will be introduced "Les Femmes Volantes," from the Théâtre de l'Ambigu, under the title of "The Flying Women and Celestial Aëronauts" Tom Matthews is engaged for *Clown*, Hulford will be the *Pantaloon*, Miss to the *Harlequin*, Miss Annie Cushine the *Columbine*, and the *Sprites* by the Elthare family. A new three-act drama likewise is announced, written by Mr. Mark Lemon, and in which Mr. T. Mead will appear. Farce and ballet also are to be added to the entertainments, which are stated in the puffs preliminary to "be on a most extensive scale, unprecedented in the annals of theatricals for novelty, splendour, and mechanical wonders."

From the pantomime at the HAYMARKET great things are expected, as it is understood that it will be the production of Mr. Buckstone himself, and founded on a comical fairy tale which has been overlooked by the Planchés, Taylors, and Talfourds. Mr. Buckstone, has, in fact, gone to an unusual source for his story—namely, to Southey's poetry. "Jack Pudding and the Three Bears; or, Little silverhair and the Fairies," is the title. The programme of the scenery promises much variety and splendour, and, we are told, it is all new; so that, for picturesqueness and beauty, it is not likely to be exceeded. Mr. Buckstone has decided on a most wholesome regulation during the holidays—he announces that the performances will not only commence punctually at seven, but close at eleven

Next in rank we take the PRINCESS'; and here we shall meet with the production of Mr George Ellis, under the title of "Harlequin and the Miller and his Men; or, King Salamander and the *Fairy* of the Azure Lake." The plot is sufficiently indicated by this description, and there can be no doubt that the appointments will be of a costly description. The character of *Clown* will be sustained by M Hulme; Mr. Vincent the *Pantaloon*, and Mr. Cormack the *Harlequin*. The *Columbine* will be most attractively personated by Miss Desborough.

For the ADELPHI, it is understood, that Mr Mark Lemon has written a grand magical spectacle, called "Number Nip and the Spirit Bride." *Number Nip*, King of the Gnomes, has been subject to the *Cruel Wolfenstein*, and can only be released by certain conditions to be fulfilled by a bride on the day of her espousal. To accomplish this, *Estella*, a sylph, in the power of the *Gnome*, is compelled to assume a mortal shape, and her endeavours to secure the love of *Count Rudolf*, form the action of the drama, which abounds in magical effects and splendid appointments.

From the pantomime at the OLYMPIC great things ought to be expected; for it will be, we understand, the production of Mr. Tom Taylor. The title is "Harlequin Columbus; or, the Old World and the New"—a rich subject, though somewhat of a serious character. The history of Columbus is one of the most pathetic narratives in the world. Mr. Taylor, however, is famous for a kind of cynical fun, and will doubtless contrive to teach, as well as to amuse. The Rochs family will, in this, sustain the three *rôles* of *Clown*, *Pantaloon*, and *Sprite*. Mr. Moreland will be *Harlequin*, and Miss Wyadham, *Columbine*.

At the MARYLEBONE THEATRE, the pantomime will be contributed by Mr. Nelson Lee. It is entitled, "Harlequin Ugly-Mug, and Tiny Lady Lee, of Old London-bridge broken down." Of the manner in which it will be supported, it may be sufficient to state that the *Clown* will be represented by Kileno; the other names have not reached us. Stonehenge by moonlight forms the introductory scene.

At SADLER'S WELLS, the pantomime will be, as usual, the handy-work of the acting manager, Mr. Greenwood. Conlin is to be the *Clown*; Naylor, the *Pantaloon*; C. Fenton, *Harlequin*; and Miss Caroline Parkes, *Columbine*.

At the STRAND, Mr. Flexmore is engaged for the *Clown*; Bologna, for *Harlequin*; Griffith, for *Pantaloon*; and Miss Goward, as *Columbine*. The pantomime will be entitled "Harlequin and King Nutcracker." In order to give more effect to the performance, a new stage has been constructed.

The SURREY will again resort to Alfred Crowquill for the literary portion of the pantomime. "King Muffin; or, Harlequin Heartcake, and the Fairies of the Glow-worm Glade." Doughty is, we understand, to be the *Clown*; Bradbury, the *Pantaloon*; Alexander, the *Harlequin*; and the Misses Gunniss, *Columbine* and *Harlequina*.

ASTLEY'S and the CITY OF LONDON will be supplied by Mr. Nelson Lee with their respective pantomimes. At the former theatre, the entertainment will be entitled "Old Billy Button's Journey to Brentford, or Harlequin and the Lady's Favourite." At the latter, the name of the forthcoming pantomime is called "Ocean Queen; or, Harlequin and the Mystic Branch."

The VICTORIA promises "the most gorgeous Christmas pantomime ever produced at a minor theatre."

Mr Planché, as usual, will be the presiding Christmas genius of the LYCEUM. The extravaganza to be written by him is promised to be accompanied with brilliant spectacular accessories, surpassing even the previous efforts made at that house. It is suggestively entitled "Once on a Time there were Three Kings."

The NATIONAL STANDARD theatre produces a pantomime comprehending no fewer than twenty three new and beautiful scenes, and to be supported by Mr. Buck as *Clown*, and "the world's wonder," Miss and Master Barnum.

Of extra-theatrical entertainments likely to prove peculiarly attractive, "Mr. ALBERT SMITH'S MONT BLANC," that "monarch of mountains," deserves the first place, not only on his own account, but on that of his most adroit *premier* and public spokesman. It is not necessary for us again to describe the improvements which have been made both to the feature and the lecture-room—it will be enough for the public to learn that both are accessible. As a drawing-room entertainment the thing is perfect. What is attempted is neither elaborate nor multiform; but it is executed with an elegance which forestalls admiration and conciliates regard.

Another ASCENT OF MONT BLANC by another Mr. Smith, is exhibited in Leicester-square. This forms part of MR. J. R. SMITH'S GRAND TOUR OF EUROPE, the whole of which may be commended as an admirable exhibition. The scenes in this series are executed with a precision and accuracy, perfectly surprising; and ought to command as much attention as the same artist's Mississippi and Missouri, a few seasons ago. The amount of instruction to be gained from the present diorama, is very great, and communicated as it is through the medium of a delightful art, exceedingly pleasing. Mr. R. Smith is a good lecturer, and imparts his knowledge with much grace.

Mr. LOVE, the polyphonist, has a new and original entertainment lately written for him, and comprehending many characters drawn with considerable dramatic skill, which will, no doubt, afford as great delight to her Majesty's lieges in this metropolis, as it has recently given in Dublin. The production is entitled "The London Season," and will be found full of first-rate humour, illustrated with some new ventriloquial effects well calculated to excite especial wonder. Mr. Love stands at the head of all modern professors of this art, if indeed he may not be said to be the only *true* polyphonist in existence. This word, excellently descriptive of the more refined examples of ventriloquial skill, was indeed first *created* by him; and it may be legally doubted whether any other person be really entitled to it as an individual appellation; but, whether or not this be the case, he is the polyphonist *par excellence*; and those who are delighted with this kind of exhibition will find their taste in him justified by the artistic excellence of his performance. As to the entertainment itself, which serves in part for the vehicle of such special talent, it deserves a distinctive character. It is a monodrama of high order, and is throughout so impersonated as to make demands on various

histrionic susceptibilities—and Mr. Love may claim to be a distinguished actor. We have indeed sometimes wished that we could see him on the stage. He would do old Farren's parts capitally.

Mr. W. S. WOODIN is also in London for the holidays, and dignifies his entertainment with the sounding title of "Myriographic." This is a big name; but Mr. Woodin is no little man, and has taste as well as talent His "Carpet Bag, and Sketch Book" will doubtless attract his many admirers to the Regent Gallery on the 26th December, announced for their re opening.

The Quadrant will also rejoice in the presence of Mr. ALFRED BUNN, who advertises an entertainment replete with his recent American experiences, and to be appropriately called "A Visit from John to Jonathan." He will deliver his le ture in a splendid room, which is announced as being fitted up for the especial purpose.

At the ASIATIC GALLERY, Baker-street Bazaar, the Moving Diorama from Calcutta to the Himalaya, will be open for the holidays; also, at the CYCLORAMA and COLOSSEUM, Regent's-park, the Panorama of the Destruction of Lisbon and of London, both by day and night, will lose nothing of their usual attraction. The latter may yet boast of its admirable Museum of Sculpture, its Conservatories, its Swiss Cottages and its Muse.

Talking of music, we perceive that at BLAGROVE'S ROOMS, Mortimer-street, an Introductory Lecture will be given on the 20th December, for the purpose of affording public practice to young vocal and instrumental performers. An excellent idea!

BURFORD'S PANORAMA, in Leicester square, will also merit the attention of holiday sight-seers who seek in struction as well as amusement. A new panorama of CONSTANTINOPLE has been opened only this week, and exhibits a Golden Horn, Valley of Sweet Waters, Pera, Galata, the various palaces, Scutari, Tower of Leander, the Seven Towers Santa Sophia, and all the Mosques, the Sea of Marmora, with Mount Olympus in the distance, and the Bosphorus, with the combined British and French fleets. Mr. Burford's Panoramas of the Granada and the Alhambra, and of the Bernese Alps, still also continue open for exhibition.

At the ROYAL GALLERY OF ILLUSTRATION, it is intended to deliver a lecture on the North-West Passage, from authorities contributed by Captain Inglefield, R.N., in addition to the pictures of Constantinople and St. Petersburg, and the Diorama of the Ocean Mail to the Cape, India, and Australia.

Mr. SAMUEL LOVER promises to appear in the field, through his representative, Mr E. L. Blanc, for whom he has composed certain "Songs and Sayings," which can scarcely fail of popular appreciation.

Madame TUSSAUD'S EXHIBITION has been strengthened, for the edification of the loyal, with groups of the Queen, Prince Albert, Prince of Wales, Prince Alfred, the Princess Royal, the Princess Alice, the Princesses Helena and Louisa, and Prince Arthur.

The GARDENS of the ZOOLOGICAL SOCIETY, Regent's Park, will be open to visitors at sixpence a day, from Christmas-eve to January 8. An ex ensive collection of living fish, and other marine animals, has been made, and a magnificent specimen of the giant ant-eater, two crocodiles, and an immense grisly bear, added.

The ROYAL PANOPTICON of SCIENCE and ART, in Leicester-square, opens to the visitor both amusement and utility in the photographic department, which is now in full operation.

BALLS and CONCERTS, of course, are properties of the festive season; and the usual nobises of Moirato's Promenade Concerts at St. Martin's-hall, Long-acre, have appeared. Twenty-four concerts, commencing on the 19th inst., are advertised.

At the ROYAL MARIONETTE THEATRE, the Hungarian Concerts will, probably, continue; while Mr. Hatch, at the SALLE ROBIN, will proceed with his "Irish Tourist;" and Mrs. Gibbs, at the HIBERNIA, next the Polytechnic, continues, we believe, her entertainment of "The Emerald Isle." The POLYTECHNIC itself will, of course, present its numerous attractions; and Mr. Wyld's GREAT GLOBE, in Leicester-square, will continue its daily or, rather, hourly lectures, and the exhibition of its maps, models, and other aids to geograph cal study.

MUSIC.

The Society of British Musicians had their Second Concert of this Season on Monday evening, at Kratz's Rooms, in Berners-street. The instrumental pieces were—Mozart's Quintet in A—for varied principals and stringed instruments; a Trio (MS.) for the pianoforte, violin, and violoncello, by Mr. Aguilar; a Quartet for two violins, viola, and violoncello, by Mr. Tom Barnett; and a "Divertisso" for the pianoforte, with stringed and wind instruments, by Mr. J. H. Griesbach. The vocal music consisted of a song, "Ah, that I could wing my way," composed by Mr. W. Watson, and sung by Miss M. Wells, a canzonet, "Ah, come not," by Mr. H Graves, and sung by Mr. Redfearn; Mr. C. E. Stevens's Duet, "Muse," sung by the Misses Wells; Wallace's Song, "In happy moments," sung by Mr. Walter Bolton; a Song by Mr. W. Watson, "Why should I blush," sung by Miss J. Wells; and Barnett's Duet, "This magic-wove scarf," from the "Mountain Sylph," sung by Miss J. Wells, Mr. Redfearn, and Mr. Bolton. The various performances went off exceedingly well, and were warmly applauded by a crowded audience.

There have been three great performances of the "Messiah" this week—on Wednesday evening, at St. Martin's Hall, under the direction of Mr. Hullah; on Thursday evening, at Exeter Hall, by the London Sacred Harmonic Society, under the direction of Mr. Surman; and on Friday evening, by the Sacred Harmonic Society, under the direction of Mr. Costa.

M. Moirato has commenced a series of Promenade Concerts at St. Mart n's Hall, in imitation of those of Jullien The first took place on Monday evenin . There was a large and competent orchestra; Miss Cecly Nott was the vocalist; and a good selection of music was performed to the satisfaction of a numerous assemblage.

The Wednesday Evening Concert of this week was by no means remarkable. Its principal features were Mendelssohn's music in the "Midsummer Night's Dream," and a selection from Balfe's opera, "The Bohemian Girl." Madame Amedei sang the scena, "Come per me sereno," "In si barbara sciagura," producing a great effect by her beautiful voice and expressive style. The rest of the miscellaneous music was of an ordinary description.

On Monday last, at the Wolverton Institution, Mr. W. West gave a lecture on the "Clowns and Fools of Shakspeare," with musical illustrations by Miss Vaughan.

ROYAL ACADEMY OF MUSIC.—KING'S SCHOLARSHIPS.—The examination for these scholarships, which become annually vacant—one for young ladies and one for young gentlemen—took place on Monday last. The number of candidates was eighteen—seven ladies and eleven gentlemen. The scholars elected were Miss Rose P. Lyne and Mr. John Barnett (re-elected). Miss Rosetta Vinning was re-elected a scholar for one year. Mr John Cheshire was specially commended. The following were commended: Miss Carely and Miss Southgate; and Messrs. Watson, Wheeldon, Schroeder, and Mason.

MADAME MEDORI, who was so duly commended by the English public in the last season at Covent-garden Theatre, now at St. Petersburg, has fully confirmed our judgment of her musical talents. She has performed the characters of "Lucrezia Borgia;" *Alice*, in "Roberto il Diavolo;" *Norma*, in "Don Pasquale;" and *Norma*. In all her characters she has been warmly received.

RICHMOND.—A concert under the immediate patronage of the Duchesses of Gloucester and Cambridge, and the Marchioness of Salisbury, was given on Tuesday evening last, at the Castle Hotel, for the benefit of the poor inhabitants of Richmond. The following eminent artistes kindly assisting to further so excellent an object:—Miss Stabbach and Miss Wells, Mr. J. L. Hatton, Mr. George Perren, and Mr. Wrighton. The concert was fully and fashionably attended.

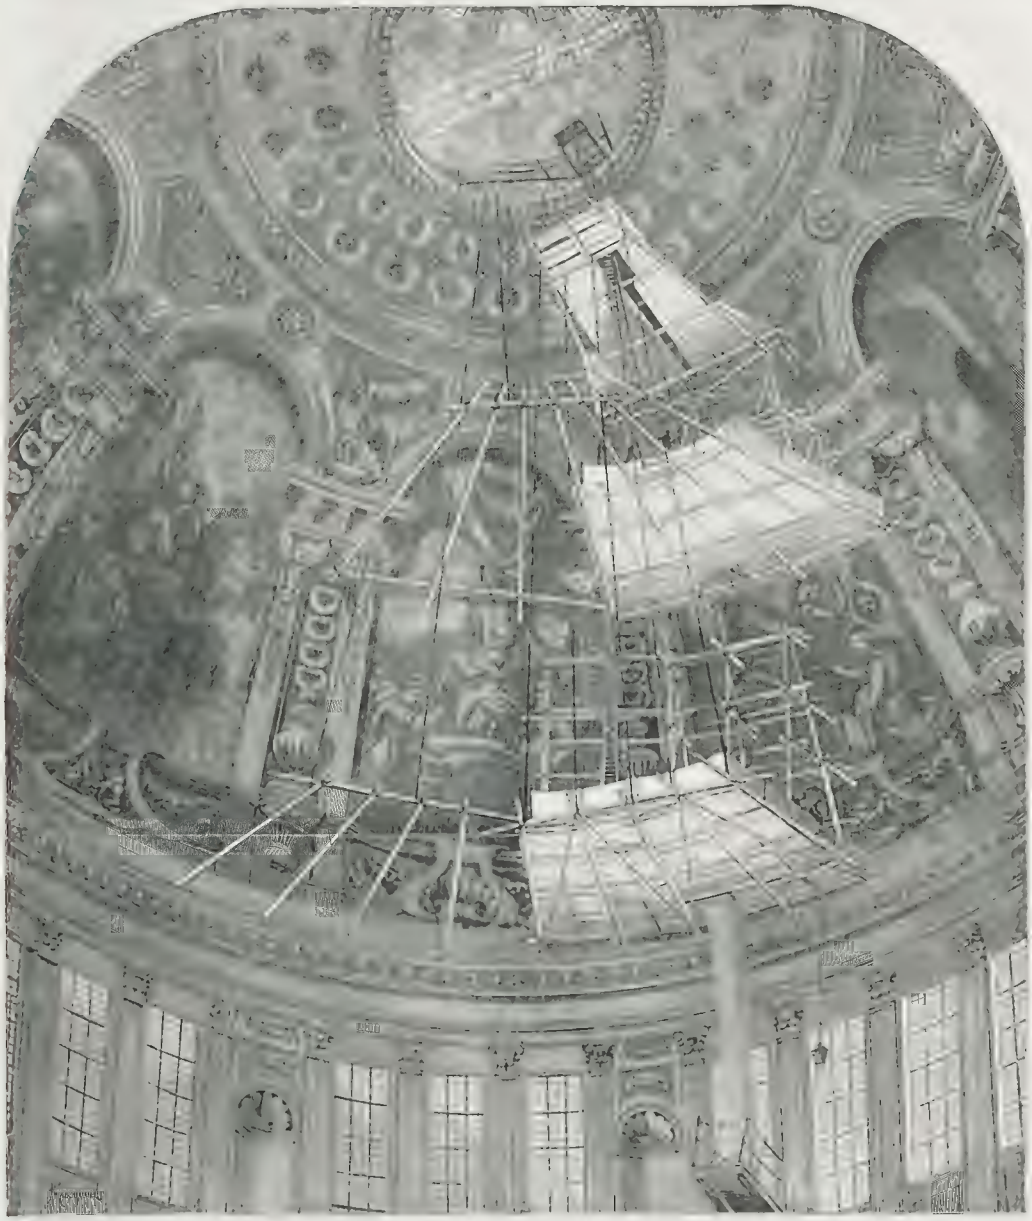
A MISER.—A man, named Beaving, died last week at Chilcompton, Somersetshire, aged 92. He would deny himself almost every necessary, either food, fire, or clothing. After his death there was discovered hid about the cottage nearly £200, principally in guineas and half guineas; several suits of clothes, rotten from lying by; and a quantity of coal in a pantry, which was bought by him about twenty-one years since, but which he was too niggard to burn; also a will, wherein he bequeathed £800, which, it seems, he had put out at interest, together with his other money, &c., to some relatives in America, leaving a poor old relative, who had rendered him every assistance in her power, without a shilling.

CHRISTMAS BOOKS.

ALTHOUGH, with the exception of the *Keepsake*, the Annuals, strictly so speaking, are defunct, yet London publishers take advantage of the purse-open season of the year to send forth the most enticing of their volumes. Gorgeously-bound books, glowing in crimson, purple, and blue covers, gilt edged, and "got up" with particular taste and attention, litter our table. Nor is the subject matter any longer confined to insipid love stories, drivelling little poems—Odes to "my Canary," or Sonnets "on seeing Miss —— pick up a polyanthus." all styles are consulted; and, accordingly, among the volumes submitted to our contemplation, we find, in addition to those books which one has upon our drawing-room tables and beguile the time of our visitors while awaiting our advent, many of deeper and more serious interest. As, however, at a literary tribunal, all claimants are on an equality as to right of hearing, we must at once commence our task, and taking the first on the pile before us, find we have made a lucky selection in choosing

The Court Album (Bogue). *Place aux dames!* Here we have eleven of the finest of our female art-lecturers presenting for the edification

RESTORATION OF THE PAINTINGS IN THE DOME OF ST. PAUL'S.



RESTORATION OF THE PAINTINGS IN ST. PAUL'S CATHEDRAL.

Sight-seers and holiday-keepers have, for many years past, in their visits to our metropolitan Cathedral, expressed their regret that the paintings of the inner dome have been hidden from mortal eye by the accumulated dirt and grime of years. The blank appearance of the vast church has been a subject of regret from the time of its erection; and the rejection of the offer of Sir Joshua Reynolds, and other great painters, to decorate the piers of the building, has long been a tantalising record in its history, and has not been lessened by the spectator looking upward, and there beholding the only attempt at pictorial decoration "in darkness visible." Sir Christopher Wren intended to have lined this dome with mosaic; but, as a cheap substitute for this decoration, Sir James Thornhill was engaged to paint the vast concave with a series of events in the Life of St. Paul, for which the artist is stated by Walpole to have received only *forty shillings a square yard!* They do not possess very great merit: but it should be recollected that they were executed in such a situation as to preclude an artist's best efforts; and, as bargainers say, "consider the price." For many years past, these pictures, viewed from the pavement of the Cathedral, have presented merely indications of forms mingled with patches of broken plaster; from the Whispering Gallery, the sad decay was still more evident; and, upon the lighting of the Cathedral with gas, at the funeral of the late Duke of Wellington, the effect was still worse. Whatever may be the merits of Thornhill's pictures, it must be conceded that they were, at least, worthy of being preserved; and their restoration has been often mooted. In 1821, when the new ball was fixed on the dome, attention was drawn to the state of the pictures; but the want of funds, and the great expense of raising a scaffolding for the repair of the plaster, and the restoration of the paintings, prevented anything being done in the matter, which would have been costly; for the proposals included a scaffold built from the ground, and a platform covering the whole area of the dome at its springing. When the circumstances obtained publicity, Mr. Parris, the artist, was induced to contrive a moveable apparatus, by means of which he could readily approach every part of the dome, and thus effect the repair and restoration safely, and at a comparatively small expense; though it should be explained that the plaster had not then suffered to the extent it has since. A model, showing the nature of Mr. Parris's contrivance, was sent to the proper authorities, with a tender to execute the restoration for a moderate sum; but it was stated, in reply, that the Cathedral funds in hand would not warrant the expenditure. The contrivance was approved of by those best able to judge of its capabilities; and among them was Professor Cockerell, conservating architect of the Cathedral; who, in 1829, again brought the proposal before the authorities, and introduced Mr. Parris and his model of the scaffold to the Dean and Chapter, who smiled approbation; but still there were "no funds;" and the model was consigned to the Institute of British Architects. In 1845 the matter was once more agitated, and the late Dean ascended to the Whispering Gallery with Mr. Parris, to ascertain the state of the dome; but the result ended with a repetition of "no funds." About the middle of the last year it was intimated that the paintings were to be restored; but, as the state of the plastering was so much worse than when the first proposal was made by Mr. Parris, it was deemed requisite to raise or construct a scaffold capable of allowing at least eight workmen to operate at one time. This has been effected by Mr. Parris, aided by Mr. Penrose, who has solved the problem very satisfactorily, and at a cost comparatively trifling; and the first pole was raised on March 1. The construction has a strange appearance: it consists of platforms suspended one above the other in the dome, so that the cleaning of the paintings, and the repair of the stucco can be executed simultaneously. From the main cornice above the Whispering-gallery are thrown out a certain number of poles, 32 feet long, the thick end resting on the cornice, and some of them (three out of five) secured by bolts through the wall of the dome. At the other end these are secured to a cross pole, which is carried by three wire ropes passing through the eye of the cupola, and secured to the main timbers of the outer dome. There is a stout flooring of boards upon the poles, and an inclosure round its edge about 3 feet high. At a height of 30 feet above this first floating platform there is

THE CONVERSION OF ST. PAUL.

THE CONVERSION OF THE GAOLER.

THE CURE OF THE CRIPPLE, AT LYSTRA.

PAUL PREACHING AT ATHENS.

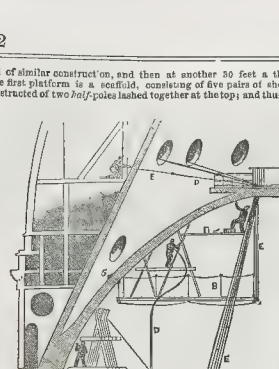
PAUL BEFORE AGRIPPA.

THE BURNING OF THE BOOKS, AT EPHESUS.

THE PUNISHMENT OF ELYMAS, THE SORCERER.

THE SHIPWRECK ON THE ISLAND OF MELITA.

a second of similar construction, and then at another 30 feet a third. Upon the first platform is a scaffold, consisting of five pairs of shears, each constructed of two *half*-poles lashed together at the top; and thus the whole height of the dome for one-eighth of its extent is completed. The contrivance will be better understood by aid of the accompanying diagram:—



A. The platform used by the plasterers.
B. An upper platform used at the commencement of the work—now taken down, as it was found to obstruct the light.
C C C C. Backets used by the painters, which can be raised or lowered at pleasure.
D. Is a gutta percha tube for communicating from above or below.
E E E. Wire ropes sustaining the scaffolding towards the centre of dome.

The height of the platform from the pavement, is 160 feet, and it is the same to the centre of the inner dome, 220 feet. Each rope was tested with eight tons, and there have been as many as twenty-three persons upon the platform at once, since it was completed. Its extent enables the artist to retire twenty-four feet from the picture to see its effect. It is more free from oscillation than a wooden scaffolding would have been, strange as it may appear; and it has not cost half the amount of a wooden erection. It is ascended by a flight of steps or ladder, surrounded with canvas, from a window in the drum of the dome.

Mr. Parris, in commencing his work of restoration, or rather repainting, the pictures, found twenty-five feet of the stucco, all round the dome, so far punished as to require plastering afresh (with lime, sand, and puzzolana), the old work being cut down to the brickwork. Where one quarter of the picture has been repainted, the platforms will be shifted; the lower one being used for the plastering; and the baskets through which the workmen descend to the ground, for the painting.

These are firmly fastened to the ends of the platform, and pass through the opening to the lantern, where they are carried over the floor of the gallery, and thence through the circular openings, and are thus fastened to the upright beam, work, by a combination of neap rope, from D. The end of the platform near the wall of the dome rests upon a roller, and is firmly secured by a ring bolt, which is made to pass through the wall of the inner dome: this is seen in the diagram at E, E, 1 and 5.

out for the painting, as they do not offer any obstruction to the light which comes up from the circle of windows above the Whispering Gallery. Mr. Parris is heightening the tone of the subjects as much light and vigour as possible, and carrying the general colour of the stonework throughout the fabric into the dome. The compartments of Paul and Barnabas at Lystra is finished, and will be seen at once on entering the Architectural Court, when it is all in remarked Mr Parris considers that the pictures were originally painted by Thornhill much lighter than they now appear, and that the bolder oil with which they were worked has darkened. The medium he is now using is encaustic, his own "marble medium."

Putting on one side the vital error in the general arrangement, whereby the endeavour is made by painting to transform the cupola into a drum of upright walls, the pictures are new works of merit, and the heads are painted with much force. The figures are each fourteen feet high.

CHESS.

TO CORRESPONDENTS.

RICARDO.—The best we have seen of your invention. It shall appear shortly.
H. L. of C. H. C.—In time, my.
H. W. of Wakefield.—It is very good, and shall have issue for when we are less pressed for room.
A. P. BRIDGMAN.—Burns has no officer for two Pawns. We should take his game for choice; but as the position is to be placed out, must decline suggesting "the best first two moves."
A SUBSCRIBER FROM THE FIRST.—It shall be reported on in the next Number.
J. D. Cargill.—We do not think your solution sound.
C. A. M., Whitehaven.—Feel only correct.
MOPHUSEL.—The *Railway Examiner*, as to be issued with its contemporary in the Western Presidency, has commenced giving a series of exceedingly chess Problems, Games, and articles on the game.
ABSOLO-INTRAM.—You are right to the one. The other you have not yet hit.
C. H. D., Aberdeen.—Send your name and address, and you will soon meet with an opponent.
A and B.—It must reduce his Rook; and, as a penalty for having made a false move, must then play his King.
J. B. L.—You can Castle, after having been checked.
C. F. S., Bromwich.—Thanks. The games are some of them very entertaining, and well deserving publicity. We do like the theory. Your plan for abolishing the "shilling play" in public rooms, is very good in case; there could be no difficulty in getting a station to it: as we believe it is done in Paris; but it is only a place it can be got rid of only by the determination of amateurs not to encourage a system so derogatory to the interests of the game.
R. W. W.—The Problem is certainly not that of the solution, or it would be valueless. This solution you have missed, is very fair.
J. E. B. of Islington.—If I "—" is generally one variation, and that three set, of the solution of No. 513. Suppose Black to move, there is no mate.
P. T. S.—We have not more room, as Chess, at the moving of the members of the ST. GEORGE'S CHESS-CLUB. E. The Club, we understand, will take possession of their new house, No. 53, St. James-street, on the 1st of January. 2. The annual subscription is to be the same as before without any entrance fee, and the members to be exempt from all further pecuniary responsibility.
BAGSHOT.—No, your way of playing must have lost White the game. Black would have double ed his Rook on the Q. Rook's file, before the Pawn could reach the 8th square.
ENIGMATIST, Brighton.—The Black cannot make the move in question.
H. F. K., Sheffield.—It can be proved in five moves.
SOLUTIONS OF PROBLEM NO. 513, by J. P., Sigma, T. T. M., A. Z., Omega, Rob, Murphy, L. S. D. S. P. Q. R. M. N. L., G. R. V. R. S., are correct.
SOLUTIONS OF PROBLEM No. 514 by Jack of Worcester, Annabella, Semph, M. P., Gregory, Cupid, J. P. S. A. Z. Brewer, T. J. of Hauworth, are correct.
SOLUTIONS OF ENIGMAS by Brewer, M. P., Richmond, "Nemo me impune, &c." Orig, Jack of Worcester, Onyx, Perseus, Achilles, D. D., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 512.

WHITE.	BLACK.	WHITE.	BLACK.

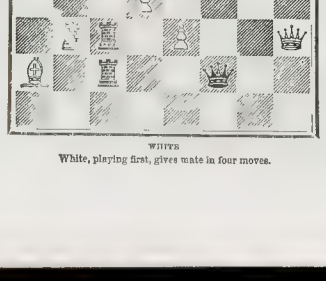
PROBLEM No. 515.

By E. B. C., of Princeton, U.S.

BLACK.



WHITE

White, playing first, gives mate in four moves.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although the amount of business doing in the Market for National Securities has not been extensive prices have kept up remarkably well, considering the progress of events in the East. The firmness in the quotations may be attributed to the steady imports of bullion, the slight additions to the stock of gold in the Bank of England, and the announcement that the Chancellor of the Exchequer is now in a position to pay off the Exchequer Bonds, amounting to £6,042,785, due on the 6th of January, without the necessity of throwing any additional sums into the market. The large amount of Government deposits in the Bank upwards of £10,000,000—Chancellor of the Exchequer has borrowed about £1,000,000 to aid him in reducing our indebtedness.

Very few fluctuations took place in the value of English Stocks on Monday. The Three per Cents Reduced were 94⅞ ⅞, the New Three-and-a-Quarter per Cents, 95¾ 96¼; Consols for Account, 95¼ ⅝ ¼. In a few hours we were to 4s. prem.; Exchequer Bills, 3s. to 5s. prem. On Tuesday Bank Stock made 210 to 212. The top price of the Three per Cents Reduced was 94⅞; and of the New Three-and-a-Quarter per Cents, Long Annuities sold at 5. The Market on Wednesday was steady. The Three per Cents marked 95; and the New Three-and-a-Quarter per Cents, 96⅝. On Thursday, the English Stock Market was flat. In price very little change took place, the Three per Cents, for the Account, being quoted at 94⅝; the Three per Cents Reduced, 94⅞ ⅞; and the New Three-and-a-Quarter per Cents, 96⅜. Exchequer Bills, 3s. to 5s. prem. Stock Bank Shares have been 8 ⅜, British North American, 85, London Stock, 27½; Oriental Bank Corporation, 4⅝; South Australia, 4⅜; Union of Australia 75; Australasian Agricultural, 47; Berlin Waterworks, 18 ⅜; Ditto, New, 4; Peel River Land and Mineral, 6⅝; South Australian Land, 4½. Albion Insurance, 95. Colonial, 11; Globe, 144 144; Guardian, 80½; Imperial Fire, 37½; Ditto Life, 20; Pelican, 45½; Phœnix, 18½; Royal Exchange, 296; Sun, 131; Universal, 47½; Australian Royal Mail Steam Navigation, 27⅜. Peninsula and Oriental Steam, 61⅜, ex. div. and bonus £140,000 from Australia and £40,000 from other quarters. With the specimens of gold. Some additions have been made to the stock in the Bank. The exports have amounted to £241,450 to the East, and about £170,000 to the Continent.

A committee has been lately formed in the City for the purpose of ascertaining what is the actual position of those mining companies who have not yet published any reports of their proceedings. The Committee of the Stock Exchange have offered every facility in their power to aid the investigation. No doubt some curious facts will shortly be elicited.

Foreign Bonds have continued towards firm. Russians especially have kept up extremely well owing to the large heavy purchases on account of the Russian Government. Ecuador Bonds have been 5¼; Greek Four per Cents, 22; Mexican Four-and-a-Half per Cents, 67½ to 69¼; Portuguese Four per Cents, 40⅜; Russian Five per Cents, 110⅜; Russian Four-and-a-Half per Cents, 98; Spanish Three per Cents, 46⅜; Dutch Two-and-a-Half per Cents, 65; Four per Cents 96.

For Railway Shares there has been only a moderate inquiry, nevertheless the quotations have kept up extremely well. The following are the closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23¾; Ambergate, Nottingham, and Boston Junction, 5¼; Caledonian, 56¾; Chester and Holyhead, 17; East Anglian, 3¾; Eastern Counties, 13⅝; Great North of England, 84½; Ditto, A. Stock, 60; Great Western, 54; Lancaster and Carlisle, 17¾; London and Blackwall, 8¾; London and Brighton, 100; London and North-Western, 114; London and South-Western, 79; Manchester, Sheffield, and Lincolnshire, 24¾. Mid-Kent, 8¾; North British, 33; Northern and Eastern, 20; North Staffordshire, 10; Oxford, Worcester, and Wolverhampton, 38; Shrewsbury and Birmingham, 60; York, Newcastle, and Berwick, 65; Ditto, G. N. E. Purchase, 7¾.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 163. Hull and Selby, 110; Manchester, Buxton, and Matlock, 2¾; Wilts and Somerset, 99.

PREFERENCE SHARES.—Caledonian, 10½; East Anglian, 4¾; Eastern Counties, New Six per Cent Stock, 14; Eastern Union, Six per Cent, 20¾; Great Northern, Five per Cent, 110; Ditto, Four-and-a-Half per Cent, 103; Great Western, Four-and-a-Half per Cent, 101¾; Norfolk Extension, 1846 10¾; South-Eastern, 24.

FOREIGN.—Great Indian Peninsula, 6; Grand Trunk of Canada, Shares and Bonds, 7¾; Great Western of Canada, 20¾; Luxembourg, 7¾; Ditto, Guaranteed, 5¾; Namur and Liege, 8¾; Northern of France, 34⅜; Royal Dutch, 8¾; Royal Swedish, 14.

In Joint Stocks very little has been doing. On Thursday, Agua Fria were 1¾; British Australian Gold, ⅞; St. John del Rey, 3½; Great Nugget Vein Scrip, 2¾; Great Polgooth, 1¾; Mariquita, ⅞; New Grenada, 1; Santiago de Cuba, 5⅛; West Grenada, ⅛.

Friday Afternoon.

About an average business has been done in the Consol market to day. The Three per Cents are 94⅞ ⅞; the Three per Cents Reduced, 94⅞ ⅝; and the New Three and a-Half per Cents, 96 to 96¼. Foreign Bonds and Railway Shares are steady.

THE MARKETS.

CORN EXCHANGE (Friday).—The supply of English wheat on sale in to-day's market was very moderate. The following kinds were held steadily, though not to any extent, during the early part of the day. From several of the imports of wheat have been large, viz., rather over 20,000 quarters. A fair average business was transacted in most descriptions, on former terms. Floating cargoes were in request, on Continental account. The above of barley was rather limited and a good demand existed, at late prices. Oats were in fair request for English or Scotch, on former terms. In other articles of the trade little was passing.

ARRIVALS.—English wheat, 7647 barley, 2080 malt, 3250 oats, 770 flour, 1620. Irish barley, 6000 oats, 15,720. Foreign wheat, 24,240 barley, 4800 oats, 19,950 flour, 3110 beans.

CHAMBER'S JOURNAL of POPULAR LITERATURE, SCIENCE, and ARTS.
The Second Series of CHAMBER'S EDINBURGH JOURNAL will close with No. 324, on December 31, and the
FIRST NUMBER of a NEW PERIODICAL with the same title will be issued on SATURDAY, 7th JANUARY, 1854. Resembling the existing Work in its external form, the new one will retain such features as will suffice to constitute a change of the wishes of Messrs CHAMBERS to adapt their efforts to the improved taste of the age. In particular, efforts will be presented a higher class of Fiction, commencing with a
TALE OF MODERN LIFE,
by Mr LEITCH RITCHIE, which will be continued in Weekly Chapters until completed.
MONTHLY REVIEW of the LIBRARY and STUDIO.
In addition to a Monthly Record, will more carefully drawn up than formerly, of the
TECHNICHES of SCIENCE and the USEFUL ARTS.
Among separate contributions for the present, may be mentioned a series of Articles on
THINGS as THEY ARE IN AMERICA,
by Mr. WILLIAM CHAMBERS, who is at present travelling in the United States, and for the purpose of collecting materials and observations
It will be the constant study of the Editors to maintain in the New Work all those general features which for Twenty-two Years have given their Journal its extensive popularity—a cheerful, Light Literature, comprehensive Information, sound Ethics, and enlightened views of a Conservative Social Economy, without the admixture of controversial matter of any kind
Issued in Weekly Numbers, at 1½d.
Monthly Parts, at 7½ and 9½d
Half-yearly Volumes, at 4s 6d.
The Second Series of CHAMBER'S EDINBURGH JOURNAL will form a complete work, in Twenty handsome volumes, well adapted for Popular and Village Libraries, for Emigrants, and for Presents. Price 5s 7s in sheets, or £4 10s. bound in cloth. Price of each volume separately, 4s 6d.
Published by W. and R. CHAMBERS, 3, Bride-passage, Fleet-street, London, and 339, High-street, Edinburgh: and J. M'Glashan, Dublin; R. Campbell, Glasgow; and all Booksellers.

Price 13d.,

MIDNIGHT MASS AT THE MADELEINE, PARIS. — DRAWN BY PH. BLANCHARD.

CHRISTMAS IN PARIS.

By M. Charton.

Noël! Noël! disons trois fois Noël!
Chantons de cœur Noël pour complaire à Noël!

Midnight strikes! All the clocks of Paris ring, chime, buzz: all the cradles (of the infant Jesus) are decked with leaves and illuminated. But the small churches—sombre, poor, and naked—open their doors in vain: people pass by without stopping before their dark and deserted portals, or their windows which the feeble light within scarcely serves to illuminate. The multitude are hastening towards Notre-Dame, the Madeleine, Notre-Dame de Lorette, Saint-Vincent de Paul, Saint-Roch, Saint-Sulpice, or Sainte-Geneviève; and soon the waves of that living sea pour into those vast sanctuaries, all glittering with pictures, sculpture, gold, and lights, resonant with the chaunt of priests, the murmur of prayers, and the noise of footsteps. It is a brilliant and admirable spectacle for the eyes; but is it equally so for the mind? Is it, in truth, a real piety which calls together, at this hour of the night, beneath the sacred vaults these crowds of men and women, of old and young, of rich and poor? Alas! if suddenly a voice should sound from on high, uttering in a tone like thunder: "All ye that in this House of God, think not of God, depart! Ye that pray not, depart! Ye that came here solely out of worldly curiosity, depart! Ye that nourish in your hearts frivolous or guilty passions, depart! Depart, indifferent and forgetful souls! Souls without faith, depart!" Oh! what a sudden terror would blench all these faces! With what haste these pretended Christians would rush dismayed towards the doors! How easy it would be to count, in a few seconds, the rare and truely faithful bending to the earth, and fervently imploring the divine mercy in the midst of the silence and the solitude!

It is sad to think that the Midnight Mass should be one of the ceremonies which give the most trouble to the Parisian police. Whilst the Swiss (beadles) with their silver mounted canes and their innocent *hallebardes*, give chase to dogs and to school-boys of small invention, who empty bottles of ink into the fountains of holy water, and laugh at the black spots which pious women make upon their foreheads, the police agents glide into the crowd, observe and spy, and surprise more than one hand insinuating itself into the pockets of the lookers-on. But to be impartial, we must acknowledge that these scandals are not peculiar to our century. They have existed almost in every age, and more than once the ceremony of the Midnight Mass has been altogether proscribed. Mercier, the author of the *Tableau de Paris*, relates that in his time armed soldiers had to be stationed at intervals of twenty paces in the church of Saint-Sulpice, in order to check the impudence and audacity of the youth of both sexes assembled there.

If Christmas-night is the only one in the year on which churches are frequented, it is also the only one on which the custom of taking supper is generally preserved. Where is the humble home in which, midnight passed, the *réveillon* is not heard? On the first floors the tables are covered with wax-lights, flowers, oysters, turbots, *pâtés de foie gras, galantines, truffes*, fruits and champagne. At the *reveillon* of the garret and the porter's lodge, there is nothing more than a piece of that meat, which is the abhorrence of the Jews, smoking upon the gridiron, with, perhaps, some fritters, roasted chesnuts, and a pitcher of cider. Add to these a few old songs and the entertainment is complete. This last dish, not the least enjoyed, no longer enlivens the suppers of the rich; their ears have become too delicate for the choruses of their fathers. People still find pleasure, however, in some saloons in hearing couplets in which the wit excels the music, and sallies, decently joyous, provoke the smile. Such couplets are usually sung by artistes; but artistes like Nodaud, the poet-musician, and the comic Levasseur, are not to be found every day. After the repast and the songs, the juveniles dance the *cadillon*: the elder people, and those who call themselves reasonables, sit round the card-tables, scowl and dispute at whist with a sour politeness; and cast, from time to time, a look of envy towards the rows of ices or the punch which groups of idlers lay violent lands upon in the passage.

At length the dawn is about to appear, the lamps grow pale, the weary faces grow white, the cotillons and the whist are over, the visitors retire to their own abodes; but there is a noise of gliding footsteps in the rooms of the little children. Behold! what a strange circumstance! Before all the mantel-pieces of Paris are ranged, with a wonderful symmetry, charming little shoes, pretty little *bottines*, miniature slippers, and, at the extremities of the *faubourgs*, poor little sabots! It will be asked, what all those tiny little boots and shoes are doing there? There are enough of them to cover the feet of all the inhabitants of the vast kingdom of Lilliput. What are they doing there? They are waiting for a beautiful little luminous hand to descend from heaven to fill them with preserved fruits and bonbons! In the olden time the presents intended for children were fastened to the two ends of the Yule Log. Later an attempt was made to introduce into France the Christmas-tree, which, in a large portion of Europe, has superseded the Yule Log. But it is most usual to keep to the simple custom of filling the little shoes with bonbons, which more than one mother, *ouvrière et bourgeoise*, has had the foresight to reserve for that purpose. We will not venture to say that, whilst the good mother or the elder sister is stealthily approaching the hearth and stooping down, one of the little sleepers, kept awake with expectation, does not open his eyelids slily, and say to himself: "Ah! I was sure it was not Child Jesus!" But the prudent child will take care not to confess that he has discovered the mystery: he has too much interest in being cheated next Christmas-day: and in a few hours the room will ring with his cries of false surprise but real gratification.

CHRISTMAS IN THE PROVINCES.

By M. Charton.

The provincial towns, seeing that the old customs are abandoned by the Parisians, have no great desire to preserve them any longer. That which ceases to amuse Paris, is not worthy to amuse the *préfectures* and the *sous-préfectures*. Better a thousand times *ennui* than a diversion which is no longer the fashion in the capital. The programme is therefore simple: after the mass will come the *réveillon*; there will be no singing, but there will be dancing if Messrs., the lawyers' clerks, do not consider this diversion beneath their dignity, or do not prefer risking their month's salary at whist. Happy are the children of the provinces that Paris has not yet abolished the *bonbons* in the little shoes!

In order to find traces of the old customs of Christmas, we must leave the large cities, the small towns, the great boroughs, and the large villages behind us, and wander away into the fields, at a wide distance from the high roads, and, above all, from the lines of railway. But go as far as we may, we shall nowhere find that the fête of Christmas-day is celebrated with all its ancient traditions. The ceremonies used to commence long before the solemn day arrived. Rustic musicians, called "*Hautbois de l'Avent*," blew their instruments from house to house, beginning at nine o'clock in the evening and ending at midnight, during the four Sundays preceding Christmas-day, which were called, with their weeks, the *Temps de l'Avent*. On the morning of the eventful day they accompanied the seigneur, the provost, and the seneschal to the *pare des coultres forestiares*; an enclosure, adjoining the chateau, in which the cattle of the poor peasants were shut up for having had the audacity to browse a little grass or a few sprouts in the seigneur's domaine. The provost and the seneschal after having made the sign of the cross, and repeated aloud three times: "*Pax sit inter vos!*" opened the barrier of the park and restored to their owners the guilty oxen and asses, if it should so happen that there were any. At night-fall the fires of all the houses were extinguished. Brands were then lighted at the lamp of the Virgin in the church and blessed by the *curé*; the people then traversed the whole country round about, bearing in their hands these flaming branches, which, on their return home, served as a means of rekindling the fires; foremost among which was the famous Log known by the name of the Yule Log or the *coque de Noël*. It very rarely happened that the enormous Log was entirely consumed; and its remnants were carefully preserved until the following Christmas. While the Log was burning the children retired into a corner of the room and repeated prayers: the elder portion of the party took advantage of the interval to attach to the ends, the spiced sweetmeats and packets intended for the young folks. At the same moment a branch of ivy was suspended from the chimney piece. At this signal, received with joyous shouts, the boys embraced the little girls, tearing away, for every kiss, a leaf of the ivy-bough until it was left entirely bare. Out of doors, in the field or the court-yard of the chateau, the people amused themselves in a thousand different ways; some mounted upon the carts by the side of the musicians; some went about in disguise as at the carnival; some carried banners with tongues represented upon them, crying: "False tongues, we will skin them all, since they are good for nothing!" Others again made grimaces as if they wished to bite the moon, to break a needle with their knees, or to stop the four winds with their hands. At midnight all the games ceased; the bells rang slowly; on all sides the merry-makers flocked towards the churches, with pitch torches or tarred brands. After the mass the congregation chaunted the Christmas Carols or *Noëls*, as they are called, and returned home again, singing all the way, to sup before their burning Yule Log, unless the liberality of the seigneur should have provided them with a grand *réveillon* in the vast hall of the chateau.

There are no such fêtes now-a-day in France: but the Noël is still celebrated with a portion of the ancient piety and solemnity in some of the provinces.

In Britany, in the district of Tregnier, for example, troops of boys and girls disperse themselves on all sides, when the night sets in, and sing Noëls at the corner of the *carrefour*.

In Burgundy, nothing of the olden time has been preserved except good humour and glad songs; and more guests may be seen at the *réveillons* than Christians at the mass. The old men still repeat by rote several of the celebrated ancient *Noëls bourgumois*, in which the native Burgundian wit is more abundant than the piety.

In Normandy, the custom of beginning the year on Christmas-day was preserved for many centuries. The midnight fête was then a more solemn one than it is at present, and its symbolical meaning more easily understood by simple minds. Christmas-day was a more manifest signal for universal renovation. Religion, nature, customs, business, the affections, all seemed to re-unite on that anniversary of regeneration, to start afresh with renewed activity in all the various directions of human life. There was a singular emblem of this idea in the monasteries of the olden time: on Christmas-eve the monks were authorized to take a bath and change their garments, as they had great need, poor fellows! but it was at the same time a symbolical way of saying to all Christians: "Purify your consciences, renovate your hearts!" The symbol is forgotten—the lessons remains. After every year of fatigues and trials, have we not all great need to cast aside our old garments and to bathe our hearts at a new fountain of resolution and hope?

THE STONES OF PLOUHINEC.

A CHRISTMAS LEGEND.

By ÉMILE SOUVESTRE

Plouhinec is a poor town beyond Hennebon, in the vicinity of the sea. There is nothing to be seen around it but heaths and small pine woods; and the parish has never possessed enough grass to feed an ox for the slaughter-house, nor enough bran to fatten a descendant of the Rohans (1).

But if the inhabitants are destitute of corn and cattle, they have more flints than would serve to build Lorient. And beyond the town is a large heath in which the Korigans have erected two rows of long stones, that might be mistaken for an avenue if they led any where.

Near these stones, towards the banks of the river Intel, there once lived a man called Marzinne: he was rich, for the district; that is to say, he could salt a little pig every year, eat black bread *à discrétion*, and purchase a pair of *sabots* on the *dimanche du Launer* (Easter-Sunday).

Marzinne was considered a proud man in the country, and had refused his sister Rozenne to several young men who "earned their bread by the sweat of their brows."

Among these was a youth called Bernez, a hard-worker and a worthy Christian, who had brought nothing legitimate into the world with him, except a willing heart. Bernez had known Rozenne when she was a little child; he had then just arrived from Ponscarff-Bride, to work in the parish, and she had often followed him singing the song that the children repeat to all who come from his country:

Ponscarff Bride,
Cl air de chèvre, bée. Ba-a-ah!

This first brought them together, and by degrees, in proportion as Rozenne grew up, the attachment of Bernez increased;—until one day he found himself in love, *comme les Anglais sont dames*, that is to say, without knowing why.

It is easy to understand that the refusal of Marzinne was to him a heart-breaking circumstance; nevertheless he did not lose courage, for Rozenne continued to receive him well and to sing to him with smiles the old chorus composed for those that come from Ponscarff.

It was on the night of Christmas-day, and as the stormy weather had put a stop to all out-of-door labour, the farmers assembled together, and with them several young men of the neighbourhood, among whom was Bernez. The master of the house who wished to show how large a heart he had, had caused a supper of puddings and *bouillie de froment au miel* (porridge and honey) to be prepared. All eyes were turned towards the fire, except those of Bernez, who looked upon his dear *Rozennik*.

But lo! Just as the seats had been drawn up to the tables and the wooden spoons planted *en rond* in the basin, an old man threw open the door hastily and wished every body a good appetite.

It was a beggar of Pluvigner who never went to church, and of whom honest folks were afraid. People accused him of casting charms upon the cattle, of blackening the corn, and of selling magic herbs to the wrestlers. Some even suspected him of being able to turn himself into a hobgobbin.

Nevertheless, as he wore the clothes of a poor man, the farmer allowed him to approach the fire; he even let him have a three-legged stool to sit upon, and treated him like a guest.

When the sorcerer had finished eating, he asked if he might have a night's lodging, and Bernez went to open the door of the stable for him, where there were only an old donkey and a thin ox. So the beggar lay down between them to warm himself, and rested his head upon a sack of heath. But just as he was about to fall asleep, midnight struck. The old ass shook its long ears and turned towards the meagre ox.

"Well, cousin, how have you been since last Christmas, when I spoke to you?" asked the ass, in a friendly tone.

Instead of replying the other animal glanced towards the beggar.

"It is a great pity that the Trinity has accorded us the gift of speech on Christmas-night," said he, in a sulky tone; "and thus recompensed us for the assistance our ancestors rendered to the birth of Jesus, if we are to have for an auditor such a good-for-nothing as this beggar."

"You are a very proud animal, M. de Ker-Meuglant," resumed the ass gayly: "I have more right to complain;—I, the chief of whose family formerly carried the Christ to Jerusalem, as is proved by the cross which has since been marked between our shoulders; but I know how to be contented with the blessings which the Trinity accords to me. Do you not see, besides, that the sorcerer is asleep?"

"All his sorceries have not sufficed to enrich him," replied the ox; "and he damns himself for very little. The devil has not even given him notice of the fine chance he will have, in a few days—and close by this place, too."

"What fine chance?" asked the ass.

"What that," replied the ox; "do you not know then that, every hundred years, the stones on the heath of Plouhinec drink in the river Intel, and that during this time the treasures hidden under them are brought to light?"

"Ah! I recollect now," interrupted the ass; "but the stones return so quickly to their places, that it is impossible to avoid being crushed by them, unless you take with you, to preserve yourself against the danger, a branch of the Herb of the Cross, surrounded by sprigs of clover with five leaves."

"And moreover," added the ox, "the treasures that you have taken away will crumble into dust unless you give in return a damned soul; for nothing less than the death of a Christian will bribe the demon to allow you to enjoy in peace the riches of Plouhinec."

The beggar who had listened to all this conversation scarcely dared to breathe.

"Ah! dear animals! my little hearts!" thought the beggar to himself; "you have just made me richer than all the *bourgeois* of Vannes and Lorient: be assured, the sorcerer of Pluvigner will not damn himself for nothing any more."

He then fell asleep, and in the morrow at day-break, he was in the fields seeking the "Herb of the Cross," and the clover with five leaves. He was obliged to search for a long time and to plunge deep into the country, where the air is warmer and the plants are always green. At length, on New-Years-eve, he reappeared at Plouhinec, looking like a weasel that has found its way to a dove-cot.

As he was crossing over the heath, he perceived Bernez occupied in striking a pointed hammer against one of the highest stones.

"God help me!" cried the sorcerer, laughing; "are you going to carve a house out of this column?"

"No," replied Bernez, quietly; "but since I am out of work for the moment, I thought that if I were to trace a Cross upon one of these accursed stones, I would do a work agreeable to God, who would recompense me sooner or later."

"You have then something to ask of him?" observed the old man.

"All Christians have to ask of him the safety of their souls," replied the young man.

"And have you not also something to ask him about Rozenne?" added the beggar, in a lower tone.

Bernez looked at him.

"Ah! you know, then?" he resumed; "but after all, there is no shame or sin in it; for if I do seek the young girl, it will be to lead her before the *curé*. Unhappily, however, Marzinne wants a brother-in-law who can count more *réales* than I have hairs on my head."

"And if I put you in the way of obtaining more *louis d'or* than Marzinne has of *réales*?" said the sorcerer, in a whisper.

"You!" exclaimed Bernez.

"Me."

"What would you ask then in return"

"No more than a remembrance in your prayers."

"There would then be no need of my compromising the safety of my soul?"

"It would only require courage."

"Then tell me what I am to do!" exclaimed Bernez, dropping his hammer on the ground. "I am ready to expose myself to thirty deaths, for I would rather marry and die, than live without marrying."

When the beggar perceived that the young man was so well disposed, he related to him how on the coming night the treasures would be displayed, but did not inform him of the means of avoiding the stones on their return. The young man, thinking it only required courage and promptitude, resumed

"As sure as there are three persons in one God, I will profit by the occasion, old man, and my life will be at your service for the hint you have given me. Let me only finish the cross which I have commenced to carve upon this stone, and when the time arrives I will rejoin you near the little pine-wood."

Bernez kept his word, and arrived at the appointed place an hour before midnight. He found the beggar waiting for him, with a wallet in each hand and one round his neck.

"Come," said he to the young man, "sit down there and think of what you will be when you have all the silver and gold and precious stones at your command."

The young man sat down on the ground and replied:

"When I have the silver at my command I will give to my sweet Rozennik all that she desires, and all that she has ever desired, from lilacs up to silk and from bread up to oranges."

"And when you have the gold at your command?" added the sorcerer.

"When I have the gold at my command," said the boy, "I will make the parents of Rozennik rich, and all the friends of her parents to the farthest limits of the parish."

"And when you have the jewels and precious stones?" said the old man.

"Then," cried Bernez, "I will make all men happy upon the earth, and say that it was Rozennik who wished me to do so."

While they were talking in this manner the hour passed and midnight struck.

At that very instant they heard a great noise upon the heath, and they saw, by the light of the stars, all the large stones leaving their places and rushing towards the river Intel. They descended the length of the hill-side, bruising the earth as they went, and tumbling against each other like drunken giants. Passing beside the two men they disappeared in the darkness.

Then the beggar ran towards the heath followed by Bernez, and in those places where a short time since the great stones had stood, they saw wells full to overflowing with gold and silver and precious stones.

Bernez uttered a cry of admiration and made the sign of the cross; but the sorcerer set to work, filling his wallets, at the same time listening attentively in the direction of the river.

He had just finished loading his third wallet, and the young man his waistcoat pockets, when a dull murmur like that of an approaching storm, sounded in the distance.

The stones had finished drinking the water of the Intel, and were returning to their places. They rushed on, bending forwards like racers, and broke every thing they came near. When the young man perceived them approaching he stood straight up and cried aloud:

"Oh! Virgin Mary, we are lost!"

"Not I," said the sorcerer, who had seized in his hand the Herb of the Cross and the clover with the five leaves; "for I have here

(1) A soubriquet given to pigs in Normandy.

my safeguard. But it was necessary that a Christian should lose his life to assure me of these riches; therefore renounce Rozenne and prepare for death!"

When he had uttered these words, the army of stones arrived; but he presented his magic bouquet and it turned away to the right and to the left to precipitate itself upon Bernez. He, perceiving that all was over with him, fell down upon his knees and was going to close his eyes, when the great stone which headed the rest stopped all of a sudden and closing up the passage, placed itself against him, to protect him, like a barrier.

Bernez, astonished, raised his head and recognised the stone upon which he had engraved the cross! It was now a baptised stone and could do no injury to a Christian.

It stood still before the young man, until all its companions had taken their places; and then darted forward as swiftly as a sea-bird to its own place, meeting on its way the beggar who had been retarded by the weight of his three wallets.

On seeing it approach, the sorcerer stretched out his magic plants; but the stone, now become Christian, no longer submitted to the enchantments of the demon, and passed hastily on, smashing the sorcerer as if he had been an insect.

Bernez thus possessed, besides what he had himself collected, the three wallets filled by the beggar, and became rich enough to marry Rozenne, and to rear as many children as the *laouinnak* has young ones in its nest.

CHRISTMAS AND THE CARNIVAL.

By M. H. Marie Martin.

La vieille église tonte vibrante et toute sonore, était dans ses perpétuelle joie de cloches.
V. Hugo, *Notre-Dame de Paris.*

When on the Christmas of the pious year 1482 the brisk bells of Notre-Dame filled the night with merry chimes, and the old towers shook with the resounding echoes, those mighty voices were understood by the faithful multitude; and Quasimodo himself – the deaf, the hunchbacked Quasimodo — understood and loved them! And along the crooked, ugly streets of the old Gallic city, the obedient Christians came in crowds at that revered signal to attend the solemn mass of midnight.

But at the present day, how things have changed!

Modern Paris with its new streets, tastefully laid out, and its clean spacious, comfortable houses — like so many palaces! — Paris, with its galeries and its pleasures, its sciences and its luxuries, — when the great bell of Notre-Dame sounds at midnight in commemoration of the mystery of the divine birth — Paris is as deaf as Quasimodo.

Ah! it is because France has no longer any Christmas! No Sacred Christmas-day, festival so beloved by our pious ancestors; no Merry Christmas-day, — no dear old family tradition, — no joyful fête of the domestic hearth.

Christmas was a creed; Chrismas was a custom.

But the modern French are a nation of sceptics; they have no creed!

The France of our time is a revolutionary country; she has broken the links that joined her with the past; she has no traditions — no customs. More than sixty years ago she scattered to the four winds of heaven — never to call them back — her old usages, her joyous Gallic songs, her renown for amiability of manners, and her chivalry!

Happy the old nations who have a Christmas-day! Such nations are still young. Christmas, called by our fathers the *Cri de Joie*, is the fête *par excellence* of juvenile gaiety — the festival of children. It is the first, the youngest day in the Christian period; therefore the nations that have remained faithful to it, and celebrate it joyfully, prove alike their faith and their youth.

We, by antithesis, who call ourselves *young France*, we, who have lost our native faith and gaiety, we, — a people without a Christmas, — what fête have we chosen? What is the day of our sceptical joys, — what is the moment of our pagan laughter? It is the end of that period of which Christmas is the commencement; — it is the *mardi gras*; — it is the carnival!

We speak of "the diversions of carnival" as the English speak of "Merry Christmas." By these different names given to the same period of pleasure, the moral age of the two nations may be estimated.

Thus the customs of Christmas-night pass away and are lost. There are traces of them however still in existence, but we must not seek them in Paris; but far away from that revolutionary centre, in some province that is behind the time, some humble corner of France, such as Brittany, where the peasants still go out to the midnight mass, singing "Noëls" in the midst of their barren heaths; and where the children still walk in ranks to the doors of the farms and the *chateaux* on New-Year's-eve, singing the ancient chorus of the Druids: *An Gui! an Gui! l'An neuf!*

The Yule-Log too is forgotten among us! And there is perhaps not one Frenchman of the nineteenth century who has ever reflected on the simple origin of this *bûche*, so necessary to the peasants during the cold Christmas-nights, when they sat up waiting for the bells to call them to mass. "In every family," says one of our old chroniclers, "they blessed the Yule-Log, anointing it with wine and repeating over it the words: "In the name of the Father!"

Now-a-days we are too wise, too proud, too philosophical to sing Christmas Carols and to bless Yule-Logs! That was all very well at the time of Quasimodo. The bells of Notre-Dame chime in vain — such music is not for our refined ears. For us, let it be said once more, for us there is no Christmas; but, there is a carnival!

Very well! let us speak about the carnival!

The carnival lasts from New-Year's-day to *mardi gras*. That is the true Parisian season.

New-Year's-day is a day of surprises. It is not for us to talk about the boxes of bonbons that the good old January slips under little children's pillows during the night. — Grand surprise!

Nor is it our place to speak of the visits of those poor disdained second cousins, who go on that day only to visit the great lady, their relative. — The unexpected apparition!

But what impatience, what desires, what diplomacy are identified with *étrennes*, or New-Year's-gifts! and often, how many deceptions!

But here, at least, we find traces of one of our oldest traditions. For it is direct from the ancient Romans that the custom has come down to us of giving compliments and *étrennes* (strenæ) in the kalends of January.

At ego læta tuis dicam decuntar verba calendis
Et cana adhibens accipiensque preces?

asks Ovid in his *Fasti*.

But let us see how far we are faithful observers of this tradition of good wishes and presents on New-Year's-day.

First of all we acknowledge willingly that compliments are as numerous now as ever they were; — they cost nothing.

As for *étrennes*, the following is an authentic anecdote about them, which would be disavowed even by Pierre Durand, the witty chronicler of our *salons*, and which is one illustration, among a thousand others, of the morality of New-Year's-gifts.

On the 28th December of last year, at a soirée which took place in one of the finest hotels of the *Chaussée-d'Antin*, M. Charles C..., an *agent de change*, was dancing with the wife of a rich banker, when in the *causerie* of the *contredanse*, they happened to speak about *étrennes*, and Mme X..., the banker's wife, complained of her husband's parsimony.

"I expect," said she, "some niggardly present; but I am resigned."

"Who knows?" observed M. Charles, with an expressive smile.

"What do you mean?"

"And you, Madame, what would you say, if your husband gave you a bracelet worth three hundred *louis d'or*?"

"Oh! it is impossible," replied the lady.

"It would astonish you still more, perhaps, if I were to tell you that it depends entirely upon me."

"My husband's giving me a rich present depends upon you?"

"Yes, Madame."

"And how came you ascertain the exact amount of his outlay?"

"The outlay is already made, but the question is whether the gift will be for you."

"I understand you," said Mme X... frowning, as Juno must have frowned on hearing of Jupiter's intrigue with Danaë.

"The affair is a delicate one," continued M. Charles; "but that is my concern."

"What have you to do with it?"

"That is my secret; but what matter, so that I succeed?"

"Oh! if you succeed!..."

And, interrupting herself, Mme X... smiled upon him in her turn with singular expression.

On New-Year's-eve the banker knocked at the door of an elegant apartment in the *quartier Bréda*.

M. Charles was lounging in an immense arm-chair, with his feet upon the fender. He rose on hearing the knock.

"It is he!" said a little silvery voice. "Run, Charles, run down by the secret staircase."

But instead of doing as he was desired, M. Charles went himself and opened the door.

It was a *coup de théâtre*. The fair owner of the soft voice uttered a piercing cry and fell down fainting upon the carpet. The banker, dumb with astonishment, manifested his indignation in a tragic pantomime. M. Charles alone stood calm and smiling.

Some minutes afterwards, the banker regaining the use of his tongue, exclaimed: "I suspected it! but I was far from being sure — on this day, too, above all others, when I had brought her *étrennes* — superb *étrennes!* a present worthy of a prince!"

And he drew out of his pocket a jewel-box containing a bracelet worth three hundred Louis. — "What folly!"

He resumed: "but what am I to do with the bracelet?"

To return it to the jeweller would be to sustain a loss of ten or twelve per cent, which financiers do not like to lose; — they would much rather give than lose.

The banker returned home with the jewel-box in his hand.

"*Parbleu!* said he to himself;" I will give it to my wife!"

Mme X... received the bracelet.

And the gallant husband, who thought he had done wonders, made sure that his wife would be grateful.

We must confess that we have nothing to be proud of in this tradition *des étrennes*. The shameful marriages for money which we see around us — and it may be said that a marriage for love is a rare exception in France — are carrying us on fatally towards the dissolution of the social ties. To the rich Frenchman, a legitimate wife is nothing but a name!

And what could I show English readers in our French society, even if I were to call up before your eyes a panorama of the Parisian carnival with its concerts and its balls of all kinds: balls of the Tuileries, balls of the hôtel de ville, subscription-balls of the mayoralty, balls of charity, balls of duchesses, balls of vanity, burlesque balls, balls *celibataires*, and balls of ladies under twenty-five years of age, and most *recherchés* of all — children's balls and *bals masques* of the Opera?

What is there to show you in this glittering review of the high society of Paris? — A brilliant display of dresses embroidered with gold and silk, jewellery and lace, furs and diamonds! — Wives estranged from their husbands; husbands gambling at cards or at the Bourse; serious young men already at twenty years of age disgusted with dancing, and humiliated for a dowry; and young girls ambitious of obtaining a husband, not for the sake of the holy joys of mutual affection, but in order to be free from restrains and to have the right of wearing diamonds!

And if you seek the true French gentleman, with that noble bearing, that distinguished and perfect elegance, of which the emigration at the end of the last century sent so many models to foreign countries — seek him not in the modern carnival of Paris. Rather go back to the time of Quasimodo.

Salons where the French wit still sparkles, relieved by all the delicacy of the purest gallantry, salons not yet rendered vacant by death, — that politics have not trouble and dismembered; shall we find any left! Shall we cite those of Mme de Staël? — of Mme Récamier, — of the Princess de Belgiojoso, — of Mme Lamartine, — of Mme Victor Hugo, — of Mme de Montcalm, — of Mme la duchesse de Duras, — of Mme la vicomtesse de Noailles, — of Mme d'Agousseau, of Mme de Viriville, — of Mme la comtesse Merlin, — of Mme de Beausai, — of Mme Philippe Ségur, — of Mme de Castellane, etc.?

We will not say that all these salons are defunct, on the contrary, there still remain charming ones! But count them!

No doubt you will think us severe critics of French society; but why ask us for a Christmas, when we have only a carnival to show you?

It is true some people see magnificent hopes appearing on our horizon; they see that with the modern development of civilization a New Faith will rise up which will be the safe guard of the French people. We accept, with thankful hearts, these blessed auguries, and when another Quasimodo shall toll the bells of Notre-Dame for all, we will be the first to raise the joy-shout of our fathers: "*Noël! Noel!*"

PARIS ON NEW YEAR'S MORNING.

Paris is asleep from one end of the city to the other. But long before day-break the drums cause the silent streets to resound with a deafening noise: it is the morning homage of the National Guard to the superior officers of that force. This signal warns the citizens of the liberality they will have to display; for under colour of respect and deference the music of the drums is but a demand for a gratuity. A serenade or aubade, we scarcely know which to call it, is also given on a grand scale, under the windows of the Tuileries — to salute the Empress or the Emperor — and was in like manner given with similar formality to the king or queen, when there was either king or queen in France. But this, though an imposing spectacle (see *Illustration*) is one that is not familar to the mass of the people of Paris. Every body is too busy on New-Year's-morning, to have time for looking at shows however splendid — or listening to music however admirably performed. Each family has its own business to attend to. The grand-children awaken in expectation of the dawn; they anticipate in thought the enjoyments and surprises of the day. The head of the family soon receives the compliments and the promises of the various members of his household. There is not a tradesman in his employment, there is not an individual who has rendered him any service direct or indirect in the course of the year, who, on the first of January, does not compose himself towards him with the same ceremony as if he filled the highest position in rank and power. Irrespective of his duties as head of a family and subordinate of some other person, the citizen has to fulfil various obligations as a member of society. He has connections in the world, friends or acquaintances as it may be, whom he has to visit. The exigencies of civility are less with regard to these last-mentioned. In a country where the social relations extend with marvellous facility, a man would be infallibly bored to death if he were obliged to pay these visits in person. The sending or leaving of cards shortens this long and wearisome formality. Our era has even gone beyond the *sans façon* of the last century. Formerly these cards were taken by servants; in this proceeding there was a remnant of respect. But now-a-days it is to the post-office, or to the agents of an administration specially charged with this service, that is delegated the duty of distributing *cartes de visite*. In the provincial towns where the relations of life are more immediate, it is customary to place a dish at the door, in which every visitor drops his card. The custom of inscribing the name in a book at the door, is reserved for high and royal personages.

NEW YEAR'S GIFTS IN A WORKING MAN'S FAMILY,

[WITH AN ILLUSTRATION BY GAVARNI.]

By Émile Souvestre.

Among those large and but little frequented streets, which occupy the high ground on the left bank of the Seine, there is one of which the aspect is particularly quiet, and so to speak, provincial; it is the *rue du Montparnasse*. In that street several houses of the better class of citizens, surrounded by planted courts or gardens, are mingled among carpenters' workshops, timber-yards, and the humbler abodes of mechanics and artizans. The comfortable hotel overlooks the shed; the superfine coat rubs against the blouse. And this contiguity produces neither arrogant disdain on the one side nor envious hostility on the other; each lives in his own sphere without comparing himself with his neighbour.

It was chiefly on account of the quietude of the place that M. Lefèvre, an *ex-conseiller d'Etat*, had decided upon fixing his abode in it. M. Lefèvre was an old bachelor, rich and well-informed, who, after having lived for himself when he might have been useful to his fellows, found fault with others for doing as he had done, now that he began to have need of their sympathy and assistance. His egotism, having grown old, had, as usually happens, transformed itself into misanthropy. Too enlightened not to recognize his mistake, and too self indulgent to reproach himself with it, he made a compromise between his judgment and his *amour-propre* by deferring the self-condemnation which he knew that he deserved.

He employed all his ingenuity in proving the vices of his fellow creatures. Drawing consolation from every fresh instance of perfidiousness, hypocrisy or servility, he exclaimed, with a kind of melancholy satisfaction: "I said it was so!" The world for him was nothing better than a vast hospital of diseased people who gave him the opportunity of proving his skill as a physician by pronouncing them incurable.

There were certain circumstances and certain periods of the year which, to him, were particularly favourable for such reflexions. M. Lefèvre took a supercilious delight in assuring himself of the greedy baseness of all who came to him in the hope of profit; he moved with a pitiless hand the springs of such human *marionnettes*, and when he had forced them into a betrayal of their own baseness, he cast them a piece of gold into the gutter.

This wicked diversion which was, at bottom, only a round-about way of seeking his own self-justification, had brought its punishment along with it. Far from finding in it any real satisfaction, the old *conseiller d'Etat* grew daily more morose. It was all very well to degrade mankind in order to exalt himself, but a sentiment of brotherhood made him participate in the degradation. In vain he sought to fortify himself by hatred and disdain; he was like the reed spoken of by the Evangelist which breaks at the first step, and pierces the hand which it ought to support.

He had had a new proof of this on the occasion of New-Year's-day. Seated before the fire in a luxurious and costly arm-chair, which he never by any chance offered to a visitor, he had successively received all those pretended friends who hasten to offer their vulgar good-wishes on New-Year's-day. First came the servants for the customary *étrennes*, repeating the venal compliments which they had learned by rote; then the god-daughters and clients in straightened circumstances who, in expressing their good-wishes, always found the means of referring to their wants; next came the relations, near or remote, bringing useless presents — usurious loans which he had been obliged to pay back a hundred fold. To these succeeded acquaintances repeating the ordinary good-wishes for his health and happiness with the same indifferent interest which they would have displayed in deploring the ruin; and lastly, came the outer circle of acquaintances less intimate, who leave their *cartes de visite* at your door, to testify that your name is still inscribed in their visiting-books among those of the people to whom they owe a call.

The old magistrate who had found no satisfaction in his morning's work, except in the irony with which he had presented each comer with his gift, and who had exhausted both his patience and his wit, breathed a sigh of satisfaction when he saw that the drawer in which he had deposited his *étrennes* was at last quite empty. He cast his eyes upon a little memorandum he had made of the persons among whom he had just distributed his gifts, and reckoned calculated what they had cost him.

"Twelve hundred francs!" he muttered, shrugging his shoulders; "twelve hundred francs paid for falsehoods, which have not had wit enough among them to be different in their forms! Twelve hundred francs to make twenty discontented, and thirty ungrateful persons! For of all those who have just left me, carrying away my gold or my crown pieces, is there a single one who supposes my liberality to have been voluntary? Who is there among them that would not prefer my death to my life, if it would bring him a sou more? New-Year's-gifts! ridiculous cheats kept up by custom, in spite of common-sense — pitiful comedy which really deceives no one, and in which one person gives without pleasure what the other receives without gratitude. What is it but a remnant of the old Roman relations between client and patron — an unnecessary custom which cupidity favours, and vanity dares not abolish?"

At these words he closed the drawer and rose with a bitter heart; beneath his apparent disdain for humanity, a sadness and discouragement lay concealed which he in vain strove to disguise from himself. These men, despicable as he deemed them, were after all, his fellow-travellers in the journey of life — his only beings with whom he could exchange ideas, anxieties or hopes. The more he found them unworthy, the more he deprived himself of sympathy and of resources. Every vice was a security lost; for in every man whom he successively discovered to be despicable he lost a companion or a friend!

Saddened by these reflections he drew near to the window, leaning his feverish brow against the pane of glass, freshened by the cold air without. He remained for some time motionless in the same place, his eyes wandering along the street and among the gardens and the workshops.

His looks were at last fixed on the *atelier* of an old turner, named Humbert, who had only been established in the street for a few months. Although age had bowed his shoulders and silvered his beard; and although he was compelled to have recourse to spectacles to help his weak sight, he went to his work as soon as the day dawned, and at night-fall he still toiled by the light of his lamp. Whilst the only assistant he employed, rested from time to time, took his meals at ease, and slowly obeyed the bell that called him to his task, old Humbert was always at his post, break fasted without leaving his bench, and had for a time-piece nothing but his zeal. Indulgent to every one, he was exacting only to himself.

He had thus managed to bring up and educate a son, now one of the first mechanics in Paris, and who was at once his father's pride and his happiness. An only daughter still remained at home; and it was for her sake that the old man worked so hard. Already betrothed to a cousin, she waited till the savings of the young man might enable them to keep house: and the old father laboured in silence, to hasten the coming of the day which would leave him alone in the world: – but which would, at the same time, secure the happiness of his daughter.

At the moment when the eyes of M. Lefèvre fell upon this modest *atelier*, the old turner was at work with his assistant, and the rolling of the two wheels, then in movement, might be heard across the street.

Suddenly M. Lefèvre saw the door open, and the old man's daughter entered the *atelier*.

SHOWING, AT THE TUILERIES ON NEW YEAR'S EVE, — DRAWN BY EUGÈNE LAMY.

NEW YEAR'S GIFTS IN A WORKING MAN'S FAMILY.—DRAWN BY GAVARNI.

She no doubt announced the arrival of an expected visitor, for her father showed signs of joy, and opening a cupboard, took out a *bilboquet* (cup-and-ball) and a child's toy representing a windmill.

Almost at the same instant the son appeared at the door, and threw himself into his father's arms. There was in the warm embrace of the young workman, in his agitated voice, and in his gestures, from which a bystander might almost have guessed the words that were unspoken, so tender an expression that the old *conseiller d'Etat* was interested in spite of himself. He rubbed his hand over the window-pane, dimmed by his breath, and gazed more attentively.

New actors shortly made their appearance on the scene to complete this family picture; they were the two grand-children of the old turner, introduced by their mother.

The old man hastened to hide the play-things behind his back, whilst the son, with his arm affectionately placed upon his father's shoulder, encouraged the children to approach. The youngest held in its hand a snuff-box of *cuir bouilli*, resembling ebony in colour and polish; the other a porcelain cup, with a saucer, on which the initials of the grand-father were traced in golden letters. Both advanced half shy, half smiling, and the youngest lisped a good-wish for the New Year, whilst the mother, at every hesitation, whispered in its ear the forgotten word or syllable.

The old man much affected, pressed both the children to his heart. He asked them little questions, listened to their replies, his hand all the while playing among their curls;—kissed each of their foreheads; and then, in his turn, distributed the *étrennes* which he had purchased for them.

On seeing the little wind-mill and the cup-and-ball, the children uttered shouts of joy. The gifts were evidently unexpected. After throwing their arms around their grandfather's neck, they forced every one present to admire their riches. They went from their father to their aunt, from their mother to the workman, showing the wonderful playthings with triumphant exclamations, and then returned to the old man to thank him again. New embraces were interchanged among the members of the family, and all left the *atelier* together: the children going before accompanied by the young girl, and followed by the aged mechanic, arm in arm with his son and his son's wife.

After their disappearance M. Lefèvre remained for a long time in the same place. What he had just seen appeared like a reply to the accusations which a short time before had risen from his chagrined heart; and a doubt came over his conscience whether his philosophy were quite sound. He thought that if the rich presents which had fallen from his hands, had not awakened a gratitude similar to that with which the humble gifts of the old turner had been received, it was not the fault of humanity, but of himself; that after all love was only the result of love, and that the value of New-Year-day-gifts, like that of every thing else, could only be estimated by the heart.

ENVOI A GAVARNI,

Sur son tableau "*Le Jour de l'An de l'ouvrier.*"

Sous des ris de charpente, en des murs bien bâtis,
Je vois un atelier et de simples outils :
L'engrenage, le tour, l'étau, le T, l'équerre,
Ce qui mesure, isole, assouplit la matière.
Devant son établi, debout, un grand vieillard
Qui porte sur son front ses soucis de son art,
Dont au premier aspect la physionomie
Tempère la finesse avec la bonhomie,
Supporte doucement sur son dos mi-voûté
Son fils, homme de fer, doux et plein de fierté
Une enfant déjà grande et sa mère, deux anges,
Dissemblables beautés et vertus sans mélanges.
Présentent par la main et sur le premier plan
Deux beaux petits garçons. Le premier jour de l'an
Se devine aux jouets qu'ils montrent au grand-père.
Le vieillard, affectant une mine sévère,
Cache derrière son pour les montrer après
Avec pas de plaisir, des joujoux qu'il tient prêts :
C'est un moulin à vent aux deux ailes croisées
Avec un bilboquet. Oh! les douces visées
Qui naissent dans l'esprit de ces naïfs parents!
Les moins enfants, je crois, ne sont pas les plus grands.
Un artiste railleur dont le crayon s'aiguise
Sur le déshabillé de mainte Sydalise,
Par un contraste heureux qui retrempe son cœur
Et donne à son talent une jeune vigueur,
A buriné ces traits où vit tant d'espérance,
Où d'une belle eau bleue on voit la transparence,
Que d'avenir sommeille en ce tableau pieux!
Il met du baume à l'âme et repose les yeux
Les enfants élevés dans cette humble atmosphère,
Gavarni! seront grands sans sortir de leur sphère.
Cette fête naïve et ce recueillement
Font aimer le travail. Ce bel enseignement
A décoré sans art de ton heureux génie
Qui laisse reposer un instant l'ironie.
C'est le cœur tout empreint de la douce leçon,
Que je l'ai dédié cette frêle chanson

LA CHANSON DU JOUR DE L'AN.

Refrain.

Petits enfants, je sais lire
Dans ce livre,
Ce rare s. rose et si blanc;
C'est aujourd'hui le jour de l'an.

Le beau jour de l'an, pour l'enfance,
Est toujours un événement;
On bramborions quelle abondance,
En échange d'un compliment!
Pour leurs dents fines, mais rangées
Que les petites dents des rats,
Que de bonbons et de dragées!
Ils ont des joujoux à pleins bras!

L'arbre de Noël, cette année,
Avait déjà porté son fruit;
Jésus, sous votre cheminée,
Vrait mis son présent, la nuit;
Huit jours sont un siècle, peut-être,
Pour vos petits gosiers d'oiseaux;
Le jour de l'an, par la fenêtre,
Éclaire de présents nouveaux.

Chacun d'entre eux se précipite
Sur ses bonbons, sur ses joujoux;
Vingt fois les prend, vingt fois les quitte,
Glisse dessus, roule dessous.
A chaque fois qu'on vous embrasse
C'est un déluge de cadeaux;
Du pantin la ficelle casse,
Et Polichinelle a bon dos.

Un tambour derrière l'épaule,
Trompette en bouche ou fifre aux dents,
C'est un petit-fils de la Gaule,
Sabre au poing, et les yeux ardents
Prends plutôt ce petit navire,
Ou cette bêche, ou ce compas!
Dans ton alphabet sais-tu lire,
Toi qui marches si bien au pas?

Dans le jour pâle des mansardes,
Je vois des enfants demi-nus
Jouer avec de vieilles hardes,
De petits martyrs inconnus.
Enfants riches! de leurs guenilles
N'ayez jamais peur en chemin;
Donnez-leur un peu de vos billes,
Et tendez-leur de votre pain.

PIERRE DUPONT.

Le 30 novembre 1853.

THE SONNEURS OR WAITS OF BRITTANY.

[WITH AN ILLUSTRATION BY PENGUELLY.]

By EMILE SOUVESTRE

"Souffle, souffle, hardi sonneur! En t'écoutant, les jeunes filles "rêvent la danse sur le sable uni des grèves, et les jeunes gars pré-"parent l'anneau d'argent pour leurs plus aimées; hardi sonneur, "souffle toujours."

I repeated in a low voice this couplet from a song of the district of Cornouaille, recalled to my memory by the wild melodies of the hautbois and the *binious* which resounded from all parts: it was the *sonneurs* (or waits) of the country who were making their rounds in celebration of the New Year, playing *aubades* at the doors of all the village authorities. I had already met several of their bands and exchanged the ordinary salutations.

"Joy be with you from the white to the black month, my dear, gentleman." (†)

"The same to you, my friend."

"May the Trinity receive you in its paradise after the last anguish!"

"May it give you a crown of stars!"

"God be with you!"

"The virgin protect you!"

And I pursued my journey, still hearing as I went the echoes of these rustic melodies, which seemed to throw after me from afar many happy good wishes for the approaching New Year.

I had long known this race of wandering musicians who traverse the parishes of old Brittany, gaining their subsistence from marriage and other celebrations, and always in search of festivities. Uncouth remnants of the once powerful corporation of the *Bars*, or Bards, formerly attached to the Druids, and charged with the care of preserving in their songs the remembrance of the national glory. The *sonneurs* of Brittany have retained some of the customs of the ancient Bards. Like their predecessors, a wandering people, known by everybody and receiving everywhere a ready welcome, they acquire in this exceptional existence a sort of rough gaiety foreign to the other Bretons. The people often cite instances of their audacity in visiting haunted places at midnight, in braving apparitions in the churchyards, or in traversing districts inhabited by those redoubtable dwarfs, called Korils, who live amongst the stones of the Druids; others speak of the Arbez mountains, crossed in the middle of the winter, while troops of famished wolves are abroad besieging the doors of the hamlets. The *sonneurs* thus acquire a high prestige and reputation: not that they gain affection or respect, but that a kind of admiration is felt for these rash and merry "Bohemians," who, according to an expression of one of their band, "walk bravely upon the earth without fear of anything either above or below!"

The night was gathering around me on the moor; I saw the circular tops of the hills disappearing in the cold fog of the last day of December; patches of snow covered here and there the uneven portions of the more elevated heaths, and the steeple of the church of the *Château neuf du Faou* rose before me illumined by the last rays of the setting sun.

I soon reached the hospitable dwelling of Captain Le Sur, who was expecting my arrival.

I found the cloth laid in a small apartment, which, with its low ceiling, its painted wainscotting and its narrow windows, had the appearance of the cabin of a ship. The captain, whose life had been spent in ploughing the seas, took a pleasure in these arrangements, so conformable to his old habits and reminiscences.

He received me with the cordiality of a Breton and a sailor, without speeches but with extended hands and smiling lips. An old arm-chair was placed for my disposal beside the hearth on which the stump of a young oak tree was burning cheerfully. At a corner of the table prepared for the evening's repast stood one of those dusty bottles with their *cachets* mildewed by time, which announce choice nectars such as those to which Horace refers, and which have been left "to grow old in Sabine casks during several consulates!"

I had just sat down, with my feet upon the hearth; the heat had already begun to melt the hoar-frost incrusted on the rim of my gaiters, and my host, his hand placed kindly upon my knees, had just done inquiring about the friends we mutually esteemed, when we were suddenly interrupted by the explosion of an *aubade* beneath the windows of the house.

At the same instant, old Dinorah, opened the door, crying out: "Monsieur! it is the two Plodus and Bavarnek."

"Ah! ah!" said the captain, rising with an air of satisfaction; "the old chouans have not forgotten me then."

"Perhaps you have become a public character since my last visit?" I inquired, smiling; "and I am the guest of a new magistrate?"

"Not that I know of," said he.

"What is the reason then of this concert?"

"Oh! that is an old story," replied the sailor; "but let me see to these musicians. Dinorah, follow me with the glasses into the cellar."

He went out with the old servant, and I approached the window to have a look at the *sonneurs* who continued playing their music.

They were three in number; their dress consisted of the breeches usually worn in Cornouaille, a leather belt, a *soutache*, and a little fringed hat adorned with a pea-cock's feather. The plaintive music of the *binion*, an instrument formed of goat skins, was played by the elder of the three; whilst the younger musician accompanied them on one of those rustic hautbois, whose sharp notes pierce the air like arrows. All three seemed animated by a passionate ardour, as if the rude harmony they produced intoxicated them with delight. There was a sort of violence in the expression of their faces, and in their breathless efforts. With sparkling eyes and tightening hands they prolonged their provoking modulations as if they were hurling a defiance. The notes actually seemed to hiss in the air and clash against each other.

At last they ceased in a long and plaintive cadence; I then heard the door open, and the captain went out followed by Dinorah carrying four glasses on a tin dish.

On perceiving the sailor, the three *sonneurs* saluted him with joyful and friendly deference. He went from one to the other, shook them heartily by the hand, and filled and emptied the glasses with the two Plodus and Bavarnek.

From the window at which I stood, I heard them exchanging the New-Year's greetings. Each drank another glass of wine and the *sonneurs* prepared to take their leave.

"Joy be with you till the year following the one that is coming," exclaimed the elder of the two Plodus, touching his hat.

"God grant that we may all meet together again as we have done to-night," exclaimed the younger brother.

"Let us drink each other's health in memory of the night on which we first met!" exclaimed Bavarnek.

At this remembrance they touched the four glasses one against the other, and the *sonneurs* departed.

They had long disappeared in the darkness when I heard once more the sound of the *binious* and the sharp, piercing notes of the hautbois. The echoes grew weaker and weaker till they were lost in the silence of the night.

The captain returned, Dinorah following with the plates for supper; he pointed out my seat at table, and drawing the cork from the mildewed bottle already referred to, made excuses for the *aubade* and the delay it had occasioned.

"Our Breton music," said he, "is not of the choicest to offer to a guest, and has perhaps spoiled your appetite for supper; but I and Bavarnek and the Flodus are old friends, and I could not leave them standing at my door without giving them, as the phrase goes '*le salut des vins*'."

"Indeed it appeared to me," I replied, "that your acquaintance was intimate and of ancient date."

"Twenty years."

"And if I am to believe what the elder of the three said, it is closely allied to an event of which this day in particular recalls the memory."

"True; their *aubade* is the celebration of an anniversary."

"You have already told me," I resumed, looking at him, "that it is an old story."

"And you wish me to relate it," said the captain, smiling. "But a host should refuse nothing to his guests. Besides I remember that at Coppet, when there was not enough for dinner, Mme de Staël made up for the deficiency by an anecdote; perhaps my recital will serve to distract your attention from Dinorah's deficiences. If the palate is not satisfied the ears can take supper."

Thus speaking he filled my plate and my glass, and leaning his elbow on the table, whilst I ate and drank with an appetite which protested against his fears, commenced the following recital:—

"The story I am about to relate," said he, "goes back to the last days of the Empire, when France was vanquished by Europe; when our Breton ports were blocked up by the English fleets and filled with disarmed vessels, amongst which was my brig the "Alcyon." Condemned to an involuntary idleness, I returned to my native town where we soon learnt that certain ancient chiefs of the royalist party, encouraged by the recent disasters of our troops, had again armed the chouans.

All the scouts of the royalists were in movement; some huntsmen who, emboldened by custom, still ventured into the woods of Saint-Goazec, or into the heaths of Montreff, had met women following the most unfrequented paths, beggars turning their backs upon the villages where they expected to received alms, and priests on horse-back enveloped in large cloaks, plunging at a heavy trot into solitary defiles. It was reported that the bands of the north and of Morbihan had thoughts of reuniting their forces in order to undertake an expedition against Carhaix, where they were likely to be welcomed by the sympathy of many of the inhabitants.

The government instantly formed into companies in self-defence. I joined the volunteers of Faon, without seeking any particular rank, and our batallions soon commenced operations in all directions. These expeditions often attended with no positive result or precise information, were not very serious. In spite of all the fears loudly expressed from time to time, it was difficult for us to imagine any real danger. The terrible civil war kindled during the Republic between town and country, was known to us only by the recitals of our fathers. We had not participated in the bloody dramas that the "*blues*" and the chouans had enacted on our moors during a period of six years. It was to us scarcely more than an historical tradition. The reconnoitering parties ordered out by the superior authority, were considered rather as military promenades than important expeditions; their proved inutility had increased our confidence, and we began to laugh at the uneasiness of the prefect. But a letter from him at last arrived, informing us of the increasing activity of the royalist chiefs; how they had been seen traversing isolated farm yards, and how a convention was being held at the *Château de Gouare*; and concluding with a hint as to the necessity of redoubling our vigilance.

Our commander, a determined sportsman, was loved action for its own sake, decided on a grand march in the direction of Gouare. For two days we made our preparations, but not so much for a dangerous enterprize as for a promenade of curiosity. A mid-night walk upon the mountains was a novelty for the greater part of the volunteers, to which the idea of peril added a peculiar emotion, that was not without its charm.

We departed at night fall at a brisk pace, the cold weather being favourable to quick walking. A half transparent fog obscured the glitter of the stars. It was the last day of December; lights shone in all the casements of the little town, and we heard, as we passed by, the songs, the bursts of laughter or the stifled cries of joy which issued from the inside of doors carefully closed and bolted.

"*Gage!* they are all preparing for the New Year," said lieutenant Duroc, in a jovial tone; "this evening they make horns of sweet-meats for the children and pan-cakes for the parents. But let us quicken our pace a little, comrades, for we must return here to-morrow to claim our portion of the feast."

"Shall we have to keep walking until we meet the chouans?" inquired one of the volunteers.

The whole troop replied by a shout of laughter.

"The *percepteur* forgets that these gentlemen of the night are not visible to the naked eye," resumed M. Duroc; "their existence is an administrative creation which we owe to the bureaux of *M. le Préfet*. The birth has been inscribed, although the child is not yet born."

"What are we going to do then in the mountain, lieutenant?"

"We are going to *take* the air, my dear, sir."

"In that case one may smoke a cigar?"

"Aye! and even offer one."

The *percepteur* distributed some among his comrades.

"Never mind," said he, as soon as the cigars were lighted; "I ask myself, what is the good of this 'white night' since there is nothing to do in the mountain?"

"What good?" repeated the lieutenant, with mock gravity; "and the orders of the prefect, sir! Will you not let him have his bulletin from the great army? or save the empire by our interposition? You must know that we are here to gain for him the cross of the legion of honour, or a place in the senate—and let that keep your nose warm. For after all, gentlemen, it is only the nose that suffers from this cold fog. Besides the night is splendid—excellent weather to wait for the wolves to come out of their hiding-places! What a pity that *M. le Préfet* has not commissioned us to send him some of their furs, instead of the ears of the chouans."

And thus led on to his favourite topic, lieutenant Duroc related some of his hunting-adventures, interlarding the recital with fictions as well as puns.

Our troop, composed of about twenty volunteers, had by this time insensibly broken its ranks. Some had gathered around their lieutenant, who grew more and more animated, while others had followed in small groups, laughing and singing alternately. One would have taken us, not for a military expedition, but for a company of jolly comrades returning with their muskets on their shoulders from some *rendez-vous* of pleasure.

We continued in this manner as far as the banks of the river of "Terror" (‡), which we crossed between Saint-Goazec and Spezet.

Arrived in this place opinions differed as to the road we ought to take; there was not one among us all who knew anything about the footpaths which traversed the *lande*; and the increasing darkness rendered it still more difficult for us to discover our whereabouts.

After a long and confused debate, we at length decided upon taking a guide.

The sergeant, together with some volunteers, was accordingly sent for the purpose of seeking one at an isolated house lying a little towards the right. But before they had reached it, they returned

(†) The inhabitants of Brittany call January the white month (Gwen vear) on account of the snow; and December the black month (Kerdes; on account of the fogs and the rain

(‡) The river Laon, erroneously called Laune by geographers.

leading with them a young peasant whom they had found hiding behind a bush.

He at first appeared somewhat frightened, but the lieutenant succeeded in reassuring him; and he confessed that on hearing our approach, he began to be afraid, not knowing whether we were armed "in the name of God or in that of the Devil."

"And whom do you consider as the soldiers of the Devil?" inquired the lieutenant. "Faith! it may be said of the town-folks," replied the lad, naively; "for they recruit for the bishop of Vannes, and once forced our fathers to take arms with them, under the penalty of finding all their cattle slaughtered, and their poor huts reduced to ashes."

"Have they begun to reappear in the country?"

"Not to my knowledge; but there is a report from the village that they are forming themselves into bands."

"And so you took us for one of these bands?"

"Monsieur, will excuse me, but that is the truth."

"And you concealed yourself?"

"From fear of being forcibly compelled to make one of you."

"So you are not for the king?"

"No, sir."

"Then you are for the emperor?"

"Neither for the one nor the other."

"For whom, then?"

"For nobody, sir, seeing that if I be for some one I must fight for him; and besides I wish to be for myself, and for nobody else!"

The avowal was so frank, and the tone in which it was said, so natural that we could not repress our laughter.

"*Pardieu!* gentlemen," cried the lieutenant, "here is one at least who cannot be accused of fanaticism."

"Where were you going when you heard us?"

"To Saint-Goazec, sir."

"You know the route which leads to Gouarec by the *Landes*?"

"Eh! Sainte-Anne! I walk it every week."

"Then you shall conduct us thither."

The young peasant appeared disconcerted.

"Me conduct you!" he repeated; "why, to do that we shall have to turn back."

"Then turn back!" said Duroc, spinning him round upon his heels and pointing out the way.

"*Seigneur!* and those who are waiting for me down yonder?"

"They will have to wait," replied the lieutenant; and as he saw the peasant was preparing new objections: "That's enough!" he added, bluntly; "the fog is too cold for us to stay babbling in the moonlight—and see that one of you keep an eye upon him."

The boy perceiving that resistance was useless, resigned himself but with a bad grace, and as if yielding to compulsion. It was in vain that I attempted to justify the violence that was done him, by explanations; — he shook his head without a word and walked on before at a pace with which we had great difficulty in keeping up.

He lost no time in quitting the path we had followed, and led us along the side of the heath in the direction of a gloomy pass between the two hills.

The lieutenant who had once hunted in the *parages*, looked about him without being able to recognize a single feature of the landscape, and was about to express his doubts as to the route followed by our guide; when the latter forestalled him, and replied, in a peevish tone: "That if they knew the way themselves, his assistance was useless, and his further services might be dispensed with." He even made a movement as if he would return towards Goazec, and it required not only the persuasion, but the threats of the lieutenant to force him to continue the journey.

But the gaiety which had enlivened our departure, seemed to vanish in proportion as we advanced into this unknown region. It was piercing cold, the roads were bad, and our party had fallen into an almost universal silence. Instead of *lazzis* and bursts of laughter, there was nothing to be heard but complaints or curses.

But by a singular contrast, our guide seemed under a precisely contrary influence. In proportion as the temper of the others became gloomy, his cleared up. He seemed to be in his element at last, and grew quite talkative. After having told me the names of the woods that rose before us in the distance like spots blacker than the night, and pointed out several ruined farm-houses and manors, whose tottering walls traced their dark outlines upon the sky, he even condescended to accept some tobacco which I offered him.

He had just filled his earthen pipe, when a church bell sounded afar off. He counted the hours one after the other, and turning towards me when the last vibration had died away: "It is midnight," said he smiling; "the New Year has begun and you have unconsciously given me my first *étrenne*."

"God grant it may bring happiness!" I replied.

He looked fixedly at me for a moment, but said nothing, and put the pipe in his mouth without lighting it.

We had entered into the dark ravine which separates the two hills, and we beheld their naked summits on both sides of us, half visible in the star-light. I asked the young peasant where we were.

"In the land of the *sonneur* of midnight!" he replied.

"God help us then!" said the lieutenant, who had approached. "Gentlemen! be on your guard, you are entering the region of sprites and phantoms; we are in the immediate neighbourhood of a haunted spot! Do you not remember the terrible Ballad of Lao?"

"And if you have forgotten it I warrant your guide will be able to repeat it for you," added the sergeant.

"Aye, aye! let him sing it," echoed several voices.

"You hear!" said Duroc, turning to the peasant; "they call for the 'Guerz of the Sonneur of Midnight!'"

"This is no place to sing it in," observed the guide, whose eyes seemed to pierce uneasily through the darkness.

"Upon my soul he is afraid of awakening the Kourils," cried one of the band, laughing.

"Let him be reassured then; does he not see that we are armed?"

"And authorised by *M. le Prefet!*"

"Come, lieutenant, order him to sing it."

"For the good of the public!"

"If he refuses we will him declare him an enemy of the government."

These threats, uttered in a laughing tone could not have frightened our guide; but at any rate he appeared resolved upon obeying, and after a short prelude he sang the following Ballad in that high prolonged tone which gives to the Breton music a character so doleful, that the lightest heart grows sad to hear it.

The Ballad of the Sonneur of Midnight.

I.

The brave *Sonneur* of Cornouaille traverses the moor which leads to the house of the Kourils; in vain the women have told him that he must not tempt God; that there are things in the world which he ought not to know, and others which he ought to fear.

II.

Lao replied that, since the little black men had only the wind of the moors and the songs of the night-birds for sonneurs, he would approach them fearlessly and make them dance in the moonlight to the beautiful roundelays of Cornouaille.

III.

Thus speaking he takes his *binion* and goes on his way. In proportion as he advances his heart becomes bolder and the sound of the *binion* stronger and louder. He has already proceeded over half of the *lande* and bounds before him the great stones among which the Kourils live.

IV.

He fancies he hears a murmur growing louder and louder every instant. At first, like the warbling of a brook, then like the rush of a river and at last like the roaring of a sea.

V.

Lao begins to blow more forcibly and he feels no more fear.

VI.

All at once the moon rises and he utters a cry! On the right hand, on the left, behind, before — everywhere as far as his eye can see the heath is covered with Kourils running about and repeating in a loud voice: Pay, brave *Sonneur*, and lead the dance of the Kourils!

VII

In vain he resists; the *binion* approaches his lips in spite of himself; he plays and he dances involuntarily, until the stars grow pale. The sounds become weaker and weaker and are feel more about less freely.

VIII.

At last the cock crows. The *binion* falls from the lips of the *Sonneur*, his arms drop down on his knees, his head hangs upon his breast, and voices in the air repeat the chorus: Sleep, sleep, brave *Sonneur*! sleep till to-morrow night!

IX.

And on the following night and every night till the day of judgment, Lao will waken to lead the dance of the Kourils, amidst the agonies of hell; and the sound of his *binion* send forth its warning from afar: *Imprudence is the Sister of Death!*

I fancied there was an accent of dark and menacing irony in the voice of our guide when he pronounced these last words. I do not know whether my companions perceived this, but a long silence followed. Nothing was to be heard for several instants but the clash of our arms and the sound of our footsteps.

At last the lieutenant appeared as if he would shake off this moody impression by a derisive shout of laughter.

"*Mordieu!*" he exclaimed; "in spite of the warning given by the *binion* of Lao, I should not be sorry to learn how much breath there can be in a dead body!"

He had scarcely uttered these words when, as if in compliance with his desire, a *binion* resounded upon the moor from the right hand.

The whole company stopped with one accord. The sounds were loud but hurried, as if the *sonneur* were carried away in some rapid movement; they came nearer and nearer, till at last they suddenly ceased in one of the sharpest notes, as if the instrument had fallen from the mouth of the *sonneur*.

This unexpected silence made the boldest of us start; the lieutenant hastily drew his sword.

"Upon my soul! I will know who this fellow is that is playing the part of Lao!" cried he; "to the right, gentlemen, to the right, by the little foot-path!"

With these words he rushed towards the place whence the sound of the *binion* had proceeded, and we were hastening to follow him when the sounds arose again, but from the opposite hill with the same violence and the same *eclat*.

"Hark! now it is on the left," exclaimed the sergeant, in an altered voice.

"Are you quite sure of it?" asked Duroc, striving to struggle against his own convictions.

Before any one could reply, the *binion* burst forth anew, but this time on the right hand, as if it wished to leave no doubt on our minds.

We all stopped in alarm; some attempting vainly to conceal their fear, by multiplying explanations, each of which was refuted by the invisible and double *sonneur*, who continued playing alternately upon the two hills. The lieutenant, who had been awhile rendered dumb by surprize, turned round to inquire of the guide, but in the midst of the general panic, he had disappeared!

In vain each looked to his neighbour for an explanation; — no one could tell at what moment he had escaped. And in vain we ran from side to side, "searching the night with our eyes;"— the ravine was empty.

Nevertheless the mysterious *sonneur* continued to sound his *binion* sometimes to the right, a little behind us, sometimes to the left, a little before. The sounds became more and more distinct, and the pauses less prolonged, when at last they exploded above our heads, from both sides at once!

Twenty cries burst from our ranks at that instant, and every hand pointed to the two hills. A *sonneur* had just appeared on each height, dancing and walking along the edge; and behind each gathered a crowd of shadows at first indistinguishable in the fog, but when they had attained a portion of the elevation more illuminated than the rest we caught sight of glittering arms. A confused rumour of voices struck upon our ears, and the cry. "The chouans! it is the chouans!" went through our ranks.

It was in truth the chouans. In vain we sought to distinguish the end of those black lines winding down the sides of the hills; no sooner had the foremost reached the ravine than others poured on from behind; they descended the two hills like a double torrent.

The two bands had evidently perceived us, for they did not advance as if to unite, but as if manœuvering to surround us. We should thus have been cut off from all chance of safety. Our only resource was to regain the entrance of the ravine and to force a passage across the foreguard of the chouans, who were just reaching it. Duroc understood this, and having rapidly explained to us what we had to do, rushed forwards at our head with a resolution that was contagious.

At the moment when we emerged from the obscurity that had hitherto concealed us, the chouans uttered a loud cry, and the sound of fire-arms began to echo on the hill.

The lieutenant ordered us to divide, so that the balls of the enemy might take less effect, and the precaution was far from being needless. But as we arrived in face of those who defended the pass, each, by an instinctive impulse, kept close to his neighbour. This movement was fatal to us. A volley of balls reached our serried ranks, and we were soon surrounded with wounded and killed. In attempting to succour them the volunteers, who had at first escaped, were struck in their turn. Our troop which only returned the fire of the enemy by a few isolated shots, began to fall back and seemed to melt under the fire of the chouans. And, at last, when all hope was lost the instinct of self-preservation caused the survivors to throw down their arms and take flight in different directions. Some fell into the hands of the chouans and were massacred; others succeeded in concealing themselves among the bushes until morning, and went home to the Faon to tell the news of our disaster.

As for myself, favoured by chance during the whole combat, I had continued to fire upon the enemy without receiving a single wound; I even succeeded in forcing my way through the line stationed at the entrance of the ravine. There remained but a few steps and the road was free! I had charged my musket for the last time, and was attempting to pierce the darkness that shrouded the path I had to follow, when all at once a spark flashed from a bush at my right hand. I did not even hear the explosion. Struck on the side by a musket shot, I sank down on the ground and lost all consciousness.

I cannot say how long the swoon lasted; but I was awakened from it by cries and the glare of torches. It was the chouans visiting the field of battle to despoil the dead and to kill the wounded. I heard supplications interrupted by a shot, then silence, and then the noise of the victors plundering the bodies.

One of the bands now advanced towards the spot where I lay. I strove to rise, but in vain. My limbs seemed to have lost all relation with my will. The chouans continued to approach, rummaging the bushes on their way, until they were so near that the light of their torches forced me to close my eyes. At the same instant several cries burst forth — they had perceived, and were running towards me.

I lay motionless, my eyelids half-closed, but seeing all that passed around me.

A sinister-looking chouan bending over me, exclaimed,

"Another gentleman of the town to despatch!"

And he had raised his blood-stained hunting-knife, when suddenly an arm arrested its descent; and I heard a voice crying: —

"This prize is mine — leave him to me!"

"Why so?" asked the man with the knife.

"Why!" repeated the voice, "because the 'Blues' once killed seven Christians in my family, and I want to avenge them."

The chouan seemed to understand this explanation, for he went away grumbling and made room for the other, in whom I had already recognized our guide — the young peasant.

He leaned over me as if to assure himself that I still lived, and whispered in my ear: — "Fear not; but remain motionless!" and rising to load the English carabine which he wore *en bandoulière*, he placed the end of it upon my breast. The beating of my heart ceased for an instant and I held my breath. He made the sign of the cross.

"May God have mercy upon me!" he said, gravely. "This is in memory of my dead."

And the shot exploded. But the barrel of the gun had slid along my hunting vest, and the ball went labouring in the ground at my side. The explosion however stunned me, and I fell off into another half-swoon.

It was this that saved me. The chouans who approached holding torches to my face, believed me dead and left me.

I heard their cries, though vaguely, for some time after their departure; I saw their torches as they passed by: then all was dark and silent.

I but slowly regained consciousness. I had been benumbed and felt no pain. Languor had taken the place of resignation. There was apparently no chance of assistance for many hours, and I felt certain I could not survive so long. I therefore considered my fate as decided and submitted to it. My only regret was that I had not been able to express my last wishes on certain worldly affairs, which occupied my mind at this moment more than life itself.

Suddenly I heard a noise of footsteps along the pathway, as of people advancing with precaution, and on the search for something. I at last distinguished a voice, which said: "It is there!" Three shadows then approached me, and I recognised our guide followed by the two *sonneurs*.

I had raised myself upon my elbow, and the young peasant on perceiving me in this posture, uttered an exclamation of surprise.

"Holy Virgin! he moves!" he cried: "Quick! quick! and help me."

"What are you going to do?" asked I, in a half smothered voice.

"What we ought:" he replied, rapidly. "Come here, you others, and bear him away gently."

The two *sonneurs* lifted me from the ground and followed the young man as far as the entrance of the ravine, where we found a horse. After having mounted it himself, he raised me on to the saddle and made me sit before him, supporting me at the same time with his arm. We then commenced our journey.

All this took place without my being able to renew my questions. I was so feeble that to speak was too great an effort for me. And thus was I carried away without knowing what he intended to do with me, until we arrived at a village, which I afterwards knew to be Saint-Goazec. Our horse stopped before a door, at which one of the *sonneurs* knocked several times. A voice from the interior replied that the door would be opened immediately. At this announcement I was lifted down and carried to the stone seat that stood near the threshold. The young guide approached me and taking my hand in his, said:

"You are now at the doctor's house; — may Heaven save you! You gave me my first *étrenne*; I give it back to you."

On hearing the key turn in the lock, he threw himself upon the horse, and rejoined the *sonneurs* who had already departed.

It was several months before I completely recovered. During that time events had rapidly succeeded each other. The empire had crumbled to the dust—crushed under its barren glory;—and the exile of Ghent had reascended the throne of his ancestors. The chouans had no longer any motive for concealing themselves. He to whom I owed my life, came to see me with his uncle and his brother, in whom I recognized the two *sonneurs* of the last night of December.

Since then our intimacy has continued. I never fail to see them on this anniversary, and we drink together in memory of the *etrennes* of 1814.

The captain's story, often interrupted, had prolonged itself beyond the supper, to the hour when he was accustomed to retire. Unchangeable in her habits, Dinorah brought two wax-candles. It was now time for us to separate. After thanking the Captain for his recital, and shaking him heartily by the hand, I withdrew to the little chamber that had been set apart for me. As I entered it struck eleven by the neighbouring clock. I approached the window; the stars were unusually brilliant, and threw a soft light over the hill tops, and I heard afar off the sound of the *binious* melting away into the valleys. But their language had changed for me, and instead of awakening the memory of a love-song, it seemed to recall the terrible ballad of Lao, to repeat the warning words: *Imprudence is the Sister of "Death!"*

THE BONBON TRADE IN PARIS ON NEW-YEAR'S-EVE.

New-Year's-day is for the confectioners a golden mine whose rich vein it takes several days to exhaust. The elegant young ladies who serve in brilliant shops, sparkling with a thousand lights reflected by mirrors and crystal pendants without number, though so obliging and so active are scarcely equal to the task of pouring out for the impatient crowd the floods of sweet-meats for which they thirst: floods more abundant than those which issued, at the touch of the fairy's wand, from the diamond rocks of the Fortunate Isle! Statistical science, who is not a fairy, assures us that no more than three or four millions of francs worth of bonbons and confectionary are sold at Paris on New-Year's-day. But the fact is, that bonbons multiply in the hands of the Parisians to so wonderful an extent, that if the value of all the sweet-meats that people give each other could be calculated in money, it would certainly amount to at least twenty millions of francs. The meaning of this mystery is exceedingly simple. You give Mme X... a bag of *marrons glacés* (preserved chestnuts) tied with a pretty little red ribbon. Mme X... thanks you with a smile, opens the bag, graciously offers you one of your own chestnuts and eats one herself. She finds it exquisite; but as soon as you have taken your departure, she carefully ties up the bag and sends it to the children of Mme B..., her particular friend. Mme B... in great alarm least the bonbons, pastilles, *pralines* and preserved fruits, which fall like manna among the children, should make them sick, does not fail to offer the bag to pretty Mlle Sophie, daughter of her old friend colonel C..., Mme Sophie is god-mother to the little daughter of an old sergeant, now a dealer in guns and fishing tackle, in the rue Saint-Denis. What a capital thing! exclaims this last, who hastens to do homage to his neighbour, the haberdasher, an amiable widow of forty and upwards. The widow who has her share of self-respect thinks she ought not to owe her neighbours anything, so she sets to work making with her own hands another bag, as white as snow, puts the same *marrons glacés* inside it, substitutes a blue ribbon for the red one, and sends it back to Mme Sophie, who, it is to be hoped, will this time keep them for herself, unless indeed she be compelled to arrange them in a pyramid upon a dessert-plate for the good of the family. Even in this case I should not like to take my oath that the family will eat them! There are in Paris bags of bonbons, that it would be as fatiguing to follow during the first week of the New Year, as to trace the foot-steps of the Wandering Jew! All the necessary calculations being made, the bag of bonbons, whose cost-price was *six francs*, and whose history we have just related, has served the place of *six* bags; total thirty six francs.

It often happens that bonbons are worth less than the cove which contains them. It is almost impossible to imagine how much invention, art and labour, are expended on all sorts of boxes for bonbons, great and small. Those intended for rich *étrennes* are covered with delicate paintings, like the most beautiful fans, or they are carved, damasked inlaid, impearled, and gilt. Others again, more modest than these, imitate every natural form that the mind can imagine. The show-rooms and the factories of the confectioners, to say thus be said to exhibit in miniature all the products of human industry.

CHRISTMAS SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS

No. 660.—VOL. XXIII.] SATURDAY, DECEMBER 24, 1853. TWO NUMBERS, 1s. {WITH SUPPLEMENT GRATIS

A CHRISTMAS PICTURE, AFTER RAFFAELLE.—ENGRAVED BY W. J. LINTON.

CHRISTMAS GAMES FOR EVENING PARTIES.

From the time Christmas begins to loom, rubicund and holly-crowned, through the fogs of November, and Baker-street resounds with the heavy top-boots of our modern Colins and Strephons, the rattling wheels of the butch-rs' tax-carts, and the stifled moanings and apoplectic snortings of their victims, children become, to use a modern politcal phrase, the masters of the situation, and all our little descendants are forthwith advanced to the dignity of lords of the ascendant. Christmas is the saturnalia of minors; when guardians, natural and appointed, are thrust from their authority, and must see to obey the behests of their young charges. The domestic bark is seized by a crew of mutinous little hands, and navigated gaily through the frozen regions of the winter solstice, with "youth at the prow, and pleasure at the helm." Grave maturity must smooth its frown of state check its crookings, and admonitions; and, dressed in a livery of smiles, kneel a slave to the bright dreams and joyous fancies of childhood. Our drudging wits must be liberated from the treadwheel of daily cares, and dispersed abroad marauding for pleasant conceits, toys, and drolleries. We must quit our solemn trifles, and address ourselves earnestly to the office of ministering to the mirth and enjoyment of our little lords and ladies paramount. Mammas must turn their thoughts from the formal prescriptions of domestic cookery to the wild regions of flummery, tartlets, syllabubs and whipt cream; papas must sweep away all pre-occupations of office, desk, and ledger, into the lumber-room of their brains, rub up their reminiscences of school-boy pranks, and rack their fancies for new conundrums; and elder sisters must divide their cares between their own toilets and the becoming adornment of dollies for the younger branches in the female line. All, in fine, must tune themselves—hearts and minds—to the key-note of childish enjoyment, and prepare to enter, with due forgetfulness of all but the present urgency to please and be pleased, into the mirth-echoing realms of the child kingdom.

For the merry games in which, under such agreeable pressure from without, young and old, maid and wife, bachelor and husband, sire and grandchild, are wont at this season to mingle with equal zest, the French have a charming designation, expressive of the guileless simplicity which must animate all who would aspire to join them in their true spirit—*jeux innocens* they call them. Innocence—pure, childish innocence—being, indeed, their essential characteristic; and in that innocence lies all the refreshing enjoyment which they are capable of affording. Unlike the pretended relaxation of the card-table and its kindred, they do not, under the mocking title of play, quintessentialise the world's mammon-worship. In them is no mimic reproduction of the sordid appetites and corroding anxieties that belong to the pursuit of wealth—no watchful eagerness to swell our gains—no sinking of the heart at apprehended loss—no wearing excercise of the faculties under the pressure of these feverish and grovelling impulses in baffling combinatory and shrewdly calculated ventures. They transport, on the contrary, to a utopia of equanimity, an ideal state of joy and innocence, a glimpse of the golden age—that *hucus à non lucendo* of poets (golden, because not curst with gold)—where no musty rules and rigid observances call down frowns on the infractor, but laws are made for the exquisite delight of breaking them. Commend us ever to the frank and genial pleasures of such games (unknown to the subtle Hoyle), where the stakes are a joint-stock of frolic, fun, and gaiety; our gains the gains of all; our loss, haply, a little stuffness and self-conceit—better parted with than kept; and where the keen strife of wit with wit is a generous emulation for uncostly honours, to which defeat brings no pangs of envy, no sour griping of regret—while triumph becomes a general jubilee. Albeit, they remind us not of the base and unromantic phases of this work-a-day world, nor subject us with hypocritical playfulness to its heaviest yoke; yet are they not without some reflex images of the realities of life. The philosopher, while he laughs and romps with the wildest of his little playmates, may yet discover, in the sources of their mutual merriment, a type of human folly; and in "Hot Cockles," "Blindman's Buff," and "Hunt the Slipper," may carve out fantastic symbols of the ever-shifting scenes in the comedy of real life. On the first of these he may moralise to the effect that open-handed dealing is not always repaid by a similar return, but when our backs are turned, there are always numbers ready to inflict an injury; while it teaches that the delinquent who strikes the blow unseen by his victim, is not always safe from conviction, and that his "bold Roman hand" may betray itself by unmistakeable characteristics. In the second, he may discover an allegorical illustration of the truth, that the infirmities and misfortunes we incur by our own faults, render us in the world objects of derision, rather than pity; or he may see in the blindfold individual a lively image of love, whom all laugh and jeer at until they are caught, and become as helpless and ridiculous as themselves.

As the French have given to these games of happy childhood their happiest designation, so likewise have they proved the most prolific and ingenious inventors of them. Scarcely any indeed with which we are are familiar, with the exception of the most traditional and homely, whose antiquity is beyond research, but have been at various times transplanted from the social circles of the French. To them, accordingly, we unhesitatingly recur for a further supply, and have here gleaned together a few of these innocent pastimes which appear to have escaped the extensive gathering already made for the supply, of our active import trade in French fictions. It is not promised, however, that all of them are new to England.

THE LOTTERY, OR TOMBOLA.

This is quite a modern introduction, and is generally found productive of much fun. It gives rise to a great deal of excitement, without the disadvantage of rousing the vanity or the covetousness of the players, which are too often the moving springs of our amusements; while it leaves behind solid tokens, and visible remembrances of the past enjoyment; and our joyous laughter is made tributary to the comfort and happiness of the needy. It has, in short, so many recommendations, that it should be preserved from the fate of most novelties, which are allowed to fade into disuse, the more rapidly as they are adopted and launched into with eagerness. Let it be a custom among us which we "will not wilmingly let die." Now for the conduct of the game.

The mistress of the house who desires to set up a lottery, should have provided before-hand a number of fancy articles, toys, and elegant nicknackeries of various descriptions; and among these should be prepared one in particular destined to the discomfiture of some luckless expectant. This let should be carefully enveloped in several wrappers of tissue paper, and well tied up in cotton, and be by choice of any absurd and childish, or worthless article. It should be placed the last [illegible] to the remaining lots set out upon a table [illegible]. When the time of drawing has arrived, the mistress [illegible] takes a pair of [illegible] which she distributes among [illegible] wishes and agreed price between each card. [illegible] together [illegible] between [illegible] being [illegible] each. He then turns up the [illegible] of the [illegible] card in succession and calling it out. The drawer who has a similar card to the one called out, places his beside it. When the whole are thus gone through, those who remain holders of cards corresponding to those under the lots, are declared the winners; but of what, remains to be seen. The card under each lot is called out, beginning with the first; and the drawer who holds a similar one, names off the lot. Thus in succession through all the lots, until the last, or the great "sell" lot.

So much for the technical arrangement of the game; now let us sketch its dramatic effect—the movement and excitement to which it gives rise. As one by one the cards in the drawers hand are proclaimed worthless the laugh at their disappointment stimulates them to make another venture, and a general bidding takes place for those that remain; and as their number diminishes, and the consequent probability of any one of them becoming a prize proportionately increases, they fetch higher and still higher prices. The anxiety—the mingled hope and fear with which all eyes are fixed on the card about to be turned up, are emotions which not the coolest and soberest of the company can guard against; and when at last, the lots are distributed to the winners, the trepidation of each, lest his prize entitle him to the honour of contributing to the general mirth by being presented with the "sell," and having deliberately to unfold layer after layer of paper and wool until he reaches the kernel of the mortifying joke which is cracked against him.

The mistress of the house retains from the proceeds of the lottery the cost of the various articles drawn for, and the remainder is devoted to some charitable purpose.

This plan is by far preferable to that of requesting the invited guest to contribute articles; this has the appearance of levying a tax in kind which might not be kindly taken, especially as many would be afraid to bring anything that might be considered poor or worthless. Another rock ahead to be avoided is selling the cards at too high a price, which may be distasteful to the pockets or temper of many of the players The more rich and generous will always have an opportunity of displaying these qualities by subsequently bidding for the chances of other players.

GET OUT OF THAT.

This is one of those games to which we have alluded as being emblematic of some features of the every-day world—where each, in the struggle for a higher place, strives to supplant another, and inwardly wishes him to "get out out of that," that he may succeed to his advantages. Its principle is likewise the same which sets agoing the wheels of our great political machine—or rather its wheel, for, like a barrow, it should have only one—the common *weal*. The prime minister being the *fellow* in the centre; and his party in the house, the *spokesmen* whose tendency, like the gentleman's in Joe Miller's renowned anecdote, is certainly to *turn*, as well as to turn.

Our business, however, is not with political parties; nor does the mode in which they have practised the game of "Get out of that" time out of mind, require any description. In evening parties it proceeds thus:—The players seat themselves in a circle, with the exception of one who is deprived of his seat and stands in the centre. He is not content, however, to remain thus unprovided, and very unceremoniously proceeds to remedy his position. Advancing towards some one person in the circle, of whose seat he desires to possess himself, he politely requests him or her to "get out of that." To the natural answer, "What for?" he replies with perfect candour, "Because you have such and such a thing (naming something) and I have not." Whereupon the person so singled out, is obliged to get up and resign the coveted seat and obtain another by adopting precisely the same course. To render the game more animated, it is advisable to have two persons left standing—one of each sex—the lady addressing herself to the gentlemen, and *vice versa*. The players should take care they have not about them that which they name, as exclusively possessed by the person whom they address, and that they do not mention anything which has previously been named. A gentleman wishing to displace a lady, would designate her neckace, her ring, etc, her flounces, her bracelets, in short all the constituent parts of her toilet; while the lady would, in the same manner, refer to the gentleman's waistcoat, boots, studs, &c. If the game were limited to this, however it would soon grow wearisome, and the players would be tempted to tell each other, in reference to it, to "Get out of that." A certain amount of fancy and playful invention may be grafted on it, by introducing certain mental or personal qualities, real or imputed. As, for instance, a gentleman might request a lady to give up her place because she had an enchanting mixture of captivating grace and touching innocence, to the possession of which he could never aspire;—and, on the other hand, a lady might unseat a gentleman on the plea that he was possessed of an amount of self conceit and impudence which she would be very sorry to share with him. These little compliments may be varied in infinite ways, and sweetened or salted to the palate of the individual addressed—care being taken, however, to avoid wounding the susceptibilities of any one.

THE LOTTERY OF ADVICE.

There is another game which is susceptible of a philosophical application. Is not advice ever a lottery? When we ask it—a lottery, whether it will be worth having; when we give it—a lottery whether we shall be thanked for our pains, or our advice will be followed? Like physic, advice is frequently most unpalatable when most salutary; but as in the game about to be described chance directs the stroke of any such home-thrust be received, the wound soon heals, nor, according to the surgical phrase, by the first intention, but by the want of any intention at all

To play this game you prepare your advice ready cut and dry on small slips of paper, mingling occasional blanks therewith, and jumbling them all together in a little bag. The person who takes charge of the bag and hands it round for each of the assembled company to dip into, must ask the person about to draw "What do you think of this advice?" The drawer must reply—"I think it is pleasant, or disagreeable, or well-judged, or blank." The slip is then unfolded, and if the character of its contents has not been correctly guessed at, a forfeit is paid. This is generally the case; and when, moreover, the advice contained in the slip takes a satirical turn, not a little mirth is excited. We subjoin a few specimens of the sort of advice which may be given.

1. If you took as much pains to conceal the deficiencies inside your head as you do outside, your conversation would appear less bold.
2. If you were less sure of pleasing, you would be more sure to please.
3. Your attentions to a certain young lady amount to persecution—your only chance of winning her approval is to leave her off.
4. As abstinence is easier than moderation; you had better hold your tongue altogether.
5. If you do not decide among your many admirers, it will be said that you are devoid of mind, or you would make it up.

THE SHOEMAKER'S SHOP.

The person who conducts this game, and is the disciple of St. Crispin himself, is honoured with the title of master, takes his seat in the centre of the circle formed by the other players, all of whom select some object or utensil appertaining to the trade of a shoemaker, which they are to represent—as, for instance, the awl, the waxed thread, the last, the leather-knife, the sole, the leather, the shoe, the boots, the nails, the hammer; and even the names of persons and things more indirectly concerned, may be adopted—such as money, a customer, a shoebinder, &c.

Whenever, in the course of the game, the name adopted by one of the players is mentioned, he must immediately take the cue, and make his observation introducing the name of another object, who must come in after the same fashion. Whenever the word shop is used, all the players must rise from their seats and say, "Well! let us all go!" and their seats not allowed to resume their seats until they have been touched each in turn. When it is required to bring the game to a close the master says, 'I shut up shop!" We may give the following short example of the manner in which it may be played.

The Master. What's the matter with your You look all in the dumps, shoe-binder!

Shoe-binder. Well! isn't it enough to make one look so, to be all day here, binding shoes?

Master. You'd find it harder if you had to stitch leather.

Other. I don't know about that; she'd earn more money.

Young. Yes, indeed, ah! without me, I should like to know what would become of the master?

Master. You're all very necessary that's sure, but you're dependent on the leather shop.

Leather-knife. I don't know that you're so very proud fellow that he is not everything. Why he hasn't so much merit as the waxed-thread.

Waxed-thread. You think yourself my betters I suppose; why you've not even equal to the last.

Last. Though last, not least. Remember I support the boots.

Boots You don't support me any more than the sole.

Sole. I'd soon be off if I wasn't made to stick to it by those cursed nails

Nails And wouldn't I too, if I wasn't driven to it by the hammer

Hammer. I wouldn't move if it wasn't for the master.

Master. Here's a pretty to-do. When once pride gets into your head it's all up with the shop.

All (getting up). Well let's all go.

Master Stop, you stupid dunderheads. You'll all be sorry for it. The nails (nails sits down) wont know what to do without the [illegible] sits down). The leather (leather sits down) will have a dread [illegible] hand without the awl (awl sits down), and the leather-knife; and even the boots would droop without the last, and the shoebinder's heart would be in her shoes when she found there was no money.

All the players thus named in succession resume their seats. Any blunders or omissions are of course visited with forfeits.

THE MAGIC WAND.

This is not so much a game as an elaborate trick requiring some preparation; and, like all similar amusements, it can only be performed once in the same party, as once the trick is known, it can give rise to no more forfeits—one great source of pleasure being, according to the Rochefaucault maxim, in the misfortune of our friends: the amusement subsides to dullness. The chief actor or wizard, who wields the magic wand, must select two or three confederates, whom he initiates into the mysteries of his art. He then makes himself up with a shawl for a robe, a conical paper cap on his head, huge spectacles, and, in short, all the conventional appointments of a Zadkiel; and, standing in the middle of the room, commences tracing imaginary circles in the air and on the floor with his wand, and muttering any high-sounding nonsense. After a moment of profound reflection, he then touches one of his confederates with the extremity of his wand, and commands him to go and place himself at the other end of the room, and when there to close his eyes with both hands. The confederate obeys, making a low bow, and, turning towards the company to show that he is securely blindfolded. The wizard then bids him collect his faculties, and endeavour to guess on which person the wand shall rest. He then touches several persons lightly with the wand on the shoulder, exclaiming each time, "The wand moves." "The wand moves!" and, at last, resting it on the shoulder of the person who had spoken last, cries, "The wand rests!" The confederate will immediately name the individual thus pointed out, who is a confederate also, and purposely speaks last. He then takes the place of the first confederate, and the wizard moves his wand round as previously; his accomplices, without any appearance of design, exciting the company to talk. Silence is then enjoined, and the magician's wand is laid on the shoulder of the last speaker, who is immediately named by the blindfolded confederate, whose place he then takes, and, in his vain attempts to guess in turn on whom the magic wand is resting, pays an unlimited amount of forfeits. Chance may, perhaps favour him; and he is succeeded by another equally gifted seer who furnishes another abundant crop of forfeits. The magician, himself, may subsequently assume the part of the seer, and resign his wand to a confederate, while he astonishes the assembly by the correctness of his divination. This feat, when skilfully performed, never fails of exciting the organ of wonder in the audience to an extraordinary degree; while numbers will imagine they have discovered the secret, and seek to put their supposed discovery into practice—producing so many forfeits that it will be found difficult to dispose of them. The company may have their revenge when the trick is at last explained by clamouring for the burning of the witches or sorcerers, and, according as the dupes-makers are ladies or gentlemen, they are condemned to the extreme punishment of being kissed by all the gentlemen, or of singing a song or performing some other act of penitence.

JACK'S ALIVE.

This is an old game and one that furnishes no occasion for the display of ready wit; in fact, it would be impossible to find the smallest peg whereon to hang an impromptu. Nor do we mention it on account of its novelty or intellectual merits; but because it furnishes another simulitude to the ways of the world. "Jack," the lighted scrap of paper which is passed round while sti. "alive" from hand to hand, and brings down confusion on the luckless one in whose hand it expires, has its prototype in many a famished pauper or union Jack who is hurriedly thrust on parish to parish while yet the spark of life is in him, lest it expire within its bounds and bring odoguy on its authorities. The resemblance is a melancholy one; but like the skeleton in the Egyptian festivals, let it teach a lesson and remind us to contribute to Jack's Christmas cheer, that he may be kept alive till better luck befall.

THE HEALTH OF CARDINAL PUFF.

Among the forfeit games we may mention one with the above title, which we have never yet seen described in any collection, English or French. Whence it is derived, we have never been able to discover, nor to what particular Cardinal allusion is made under the name of Puff; though, had it been less ancient we might have made a shrewd guess. Certain it is, however, that the inventor of the game could have been no very enthusiastic admirer of the Cardinal in question, or he would not have rendered it so difficult and arduous a task to drink the health. The candidate for the honour of drinking the health of Cardinal Puff, is accommodated with a chair, a table, and a glass of wine; and if he can, he goes through the following complicated ceremonial. He first proclaims aloud, "I drink the health of Cardinal Puff," and takes his glass up with his thumb and one finger on the stem, takes one sip, and sets the glass down; then, with the first finger of each hand, he strokes the corresponding side of his upper lip, as though smoothing his moustache, raps successively once on the upper edge of the table, once on the under edge, rises once on his seat, and stamps once each foot successively. This is Part One of the ceremony. Part Two he commences by saying "I drink the health of Cardinal Puff! Puff!" taking the glass up this time with *two* fingers, *sipping twice*, setting the glass down *tick tack*, so on using *two* fingers and doing *twice* throughout as was done only once. Part Three, and last, consists in saying "I drink to the health of Cardinal Puff! Puff! Puff!" taking the glass up between the thumb and *three* fingers, *drinking off* its contents, striking the edge of the glass on his left thumb nail *three*, after the ancient fashion of quaffing *supernaculum*, setting the glass down *thrice*, striking his moustache *thrice* with *three* fingers of each hand, rapping *thrice* with *three* fingers first on the upper then on the under edge of the table, rising *thrice* on his seat and stamping *thrice* with each foot successively. To set the game going, it is necessary that some one should have rehearsed the feat so as to be perfect in it, and thus be in a position to set the example to be followed by those who think their observation and memory good enough to go through with it. The attempt is almost invariably a failure, as something is sure to be altered or omitted in the strict order of the ceremonial; and for each of these breaches a forfeit is exacted, and the health-drinker recommences until he finally achieves the feat without a blunder.

THE COCK AND BULL STORY.

Some degree of readiness of invention and fancy is necessary in the person who is selected to conduct this game, and who is called the story-teller, and sits in the midst of the other players: each of whom adopts some particular trade or calling—the gentlemen, for instance, that of an ironmonger, a butcher, a carpenter, an apothecary, a shoemaker, a pastry-cook, &c.; and the ladies, that of a milliner, a haberdasher, a flower girl, &c. The story-teller then informs them, that when, in the course of the story he is about to tell them, he fixes his eyes on any one of them, that person must immediately name some object or article appertaining to the trade or profession chosen by him or her, and that without hesitation or repeating what has been named before: any infraction of this rule entailing a forfeit. The story-teller himself pays a forfeit, and yields his place to a successor, if he break down or commit any blunder in telling his story. To show the absurd effect that may be produced by this arrangement, we will suppose the story-teller to commence thus:—

Once upon a time a poor fisherman was seized by the press-gang, and sent to sea. He left behind him an affectionate wife and two dear little (*looking at the pastrycook*)——

"Sausage Rolls!"

(*Looking* whom he loved most tenderly. Their sorrow at being thus separated may be more easily imagined than described. Months rolled

on; but, far from consoling the poor sailor's wife, time only added to her (*looking at the shoemaker*)——

"Upper leather!"

grief, for she received no tidings of her husband, who had left her quite unprovided with (*looking at the carpenter*)——

"Shavings!"

money. In spite of hard work, she was often unable to set a little (*looking at the apothecary*)——

"Spermaceti ointment!"

bread before the children. One day, a poor man with a patch over one eye, and who appeared worn out with fatigue, came to her door, and asked for (*looking at the ironmonger*)——

"A flat iron!"

a night's lodging. The poor woman hesitated, but reflecting that she had nothing to steal, consented; telling him at the same time she was sorry she could not offer him any (*looking at the haberdasher*)——

"Tape!"

supper. The stranger said he did not mind; all he wanted was (*looking at the milliner*)——

"A stomacher!"

to rest himself. So she made him up some (*looking at the apothecary*)——

"Pills!"

straw in the corner of the room, and retired or the night with her (*looking at the flower girl*)——

"Tulips!"

children. In the middle of the night she heard a strange noise, and looking through a chink in the door, saw the man sitting up, counting out a bag full of (*looking at the carpenter*)——

"Sawdust!"

gold. Her heart beat at the sight, as she thought how happy a little of it would make her, and all sorts of wicked thoughts came into her (*looking at the haberdasher*)——

"Stockings!"

head. However, she sighed, and stole back to her bed. In the morning the man got up, and, thanking her, proceeded on his journey, but not without making her a handsome (*looking at the milliner*)——

"Pelisse!"

bow. She looked wistfully after him, for she had expected he would at least have given her a few (*looking at the flower girl*)——

"Daffodils!"

pence. On turning round, disappointed at his meanness, what should she see in the corner where he had lain but his (*looking at the butcher*)——

"Calf's head!"

bag of gold. Again the tempter prompted her to break one of the Commandments; but she resisted, and, seizing the (*looking at the ironmonger*)——

"Gridiron!"

bag, ran after him. She soon overtook him, and returned him his treasure. Upon which the poor man tore off his (*looking at the apothecary*)——

"Blister!"

patch, and exclaimed, "Behold! your long lost (*looking at the shoemaker*)——

"Highlows!"

husband. The delighted wife fell into her husband's (*looking at the pastry-cook*)——

"Custard!"

arms, and they returned home arm-in-arm. The children jumped with delight about their papa, and were still more overjoyed when they were told they should have a good dinner, and might order what they liked. The dinner showed great diversity of tastes, for it consisted of (*looking at all the players*)——

"Tenpenny nails, cleavers, chisels, gallipots, top-boots, mantillas, jelly bags, nightcaps, and polyantnuses."

The story may be drawn out in this fashion according to the fancy of the story-teller, and the taste of the players.

THE PHILHARMONIC CONCERT.

If music is the food of love, noise in this game is the food of fun, and none whose nerves are unsophisticated, or whose ears are at all delicately strung, should come within a mile of where it is being played. It proceeds in the manner and form following:—The players seat themselves and form a circle after the manner of the military band in Kensington Gardens, each adopting an instrument of which he is the imaginary performer. One chooses the violin, and draws his right hand backward and forward over his extended left arm; another the horn, and puffs out his cheeks, imitating the acting of a horn-player; another the piano, and strums with his hands upon his knees; another the harp, taking a chair or any other suitable piece of furniture to figure as an harp, and so on through as many instruments as there are performers, some of them being absurdly out of place in an orchestra, such as a jew's harp, pan-pipes, and a hurdy-gurdy. Drums, tambourines, cymbals, triangles, and all sorts of noisy instruments may be introduced if the assembly be numerous enough, and add marvellously to the general effect. Each player must imitate the action, and, as well as he is able, the sound proper to the instrument on which he is supposed to be an executant, adopting any particular tune best suited to its peculiar character; and the utmost ardour and enthusiasm must be thrown into the various gestures of the performers. The spectacle which is then presented by this orchestra of imaginary musicians, all playing, *con furore*, is irresistibly ludicrous, and renders the gravity, which is prescribed on pain of a forfeit, a sheer impossibility. In the midst of the circle the conductor takes his post, a-straddle on a chair, with the back before him, in such a sort as to figure a desk, on which he beats time. He may get himself up after the similitude of the great Monsieur Jullien; whose attitudes and gestures, at the most excited pitch of his last "universal smash" polka, may be adopted as a model, but will need no exaggeration to be made as amusing as those of the orchestra which he directs. In the midst of the indescribable confusion of sounds over which he triumphantly presides, the conductor suddenly singles out one of the performers, and asks him why he is at fault. The individual so addressed must at once, and without a moment's hesitation, give some answer corresponding to the nature of his instrument:—for instance, the fiddler may say his bow wanted rosin, the harp-player that one of the strings had broken, the clarionet-player that his instrument was broken-winded. Any failure to do this, or any repetition of an excuse previously given, entails a forfeit.

THE DOCTOR.

To play this game it is not necessary, as might be supposed, to have taken a degree, or to have passed the College of Surgeons. The prescriptions of our doctor are distributed hap-hazard like those of the ingenuous medical gentleman mentioned in the preface of Don Guzman d'Alfarache, who carried a large assortment about in a bag, and when consulted, pulled out the first that came to hand, which he delivered to the patient, piously ejaculating, "Heaven send you a good one." The individual who personates the doctor, takes his place in the right of the semicircle formed by the other players who are all presumed to be his patients. Beginning with the one next to him, he gives a consultation to each in succession, going through the usual business of feeling the pulse, poking the ribs, and auscultating, and asking questions, as to their various complaints—the origin of which he attributes to any absurd cause, such as over eating, love, catching cold from talking to a very frigid young lady, &c. He must pronounce it to be something with a very hard crack-jaw name, real or manufactured—as for instance, *elephantiasis*, *peripneumonia*, and prescribe a number of drugs with equal pronounceable designation, at the same time taking down a note of each prescription. When he has gone through the whole number, he calls upon one of the players to tell him what is the matter with any of his patients whom he names and what he should advise as a remedy. The person so called on must repeat exactly the name given to the patient's complaint, and the drugs prescribed. If he is plucked in his examination, which is generally as sure to be the case as though he were before a board of real examiners, a forfeit is the penalty. The painful efforts of those who are unaccustomed to the hard words which medical men handy with each other, to retain and pronounce them, and the [illegible] way in which some are distorted, will make the looker-on visit more attention than it is generally found.

THE LOVERS' EXERCISE.

The gentleman who has to perform the part of [illegible] lady, and places himself in the centre of the room [illegible] another, takes a [illegible] the first couple. The sergeant then advances towards the troops, and, with a military accent, gives the following words of command:—"Eyes right!" "Attention!" "Take ladies' hands!" "Arms round ladies' waists!" "Right-about face!" "Make ready!" "Present!" "Fire!" The sergeant executes every movement himself as he commands it, and at the last very intelligible figure of speech, salutes his lady—the same manœuvre being performed by the whole of the troops. The effect is extremely martial and inspiring.

TUNING THE ORGAN.

The person who has to enforce this penance takes the part of the organist, and condemns the penitent to perform that of his assistant. Both stand in the centre of the circle, and request the ladies to stand upright on their chairs. When they have complied, they are told that they must consider themselves *organ-pipes*. The organist then says, there is to be a grand musical festival to-morrow, and he must tune his organ. So saying, he presses one finger of his left hand against the left side of his nose, and utters a long nasal sound, which he endeavours to make as like as he can to that of a tuneless organ-pipe. The lady towards whom he advances while discoursing this eloquent music, must answer him in the same tone, and imitating his action, which she will find it difficult to do with suitable gravity. "That won't do," says the organist, with a profoundly knowing air. "That's not the note." Then turning to the penitent, he tells him to set that pipe right. The process of setting the pipe right, consists in taking the lady up in his arms and transferring her to another chair. The organist repeats the same performance with another lady; imposing on the assistant the same laborious task until every lady has been moved from her chair, when the assistant, who is nearly dead with fatigue, is happy to hear that the organ is tuned.

IT WAS I.

The person on whom this penance is imposed, must arm himself with the most impenetrable stoicism, for he will have to run the gauntlet through a fire of sarcasms, and satirical innuendoes, to which he is obliged to lay himself open, and must actually point the weapon against his own breast, in a self torturing spirit, worthy of a Hindoo or a Catholic penitent. His task is simply to ask every player in succession, "What did you see this morning, or this evening—in the street or at the play?" and so on. To the answer which is given, whatever it may be, he is bound to answer "It was I." Thus if it be, "I saw a gentleman who, bought at other persons' valuation, and sold at his own, would realise a handsome fortune;" or, "I saw a man sneaking down an area to make cupboard love to the cook;" or "I saw a monkey playing tricks on an organ"—to all he must make the same humiliating confession. Happy and favoured may he deem himself if, while in this paltry of topsy-turvy compliments, some fair hand throw him a delicate bouquet, instead of a bad egg.

THE PRUSSIAN SOLDIER.

This penance is peculiarly a gentleman's, and is one of the least satisfactory to the performer. Why the military gentleman who is called upon to perform so accommodating a part for his friends, should be a Prussian, is not easy to see—unless, perhaps, because he is likely to look rather blue during the proceeding. The penitent must accoutre himself in the best way he can; taking a stick, or any other convenient implement to represent a musket. He must then, without uttering a word, place himself before one of the ladies, present arms to her, and stamp twice or thrice with his feet on the ground. The lady must immediately get up and follow the soldier, who conducts her to the other end of the apartment, where he leans his ear towards the lady, who whispers in it the name of any gentleman on whom she has fixed her mind. The soldier then proceeds with the same gravity, and observing the same strict silence, towards the gentleman, to whom he presents arms, accompanying the ceremony by stamping on the floor as before. The gentleman rises and joins the lady, accompanied by the soldier, who, when she has been saluted by the gentleman, conducts her to her place, presents arms, and returns to receive the gentleman's orders. This goes on through a series of gallant invitations obsequiously conveyed by the soldier, until some lady takes pity on him and invites him to become the favoured party, when he immediately puts down his musket, salutes the lady, and conducts her back to her seat.

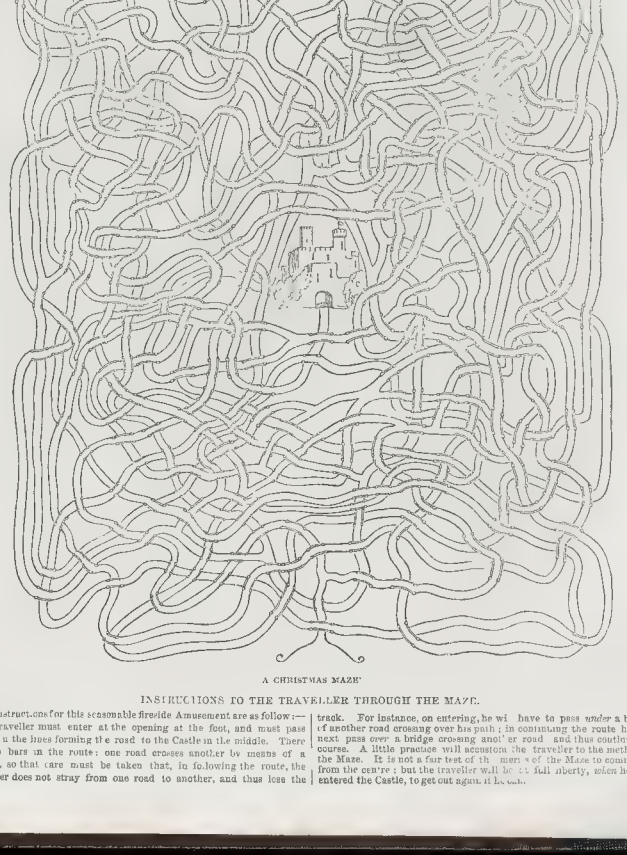
THE LEARNED PIG.

The person whose privilege it is to enforce the penance of the learned pig, may reserve for himself the part of the master of that wonderful animal, or may select any other member of the assembly who is likely to acquit himself of the task with most effect. The impersonator of the learned pig must walk upon all fours, and must obey the commands of his master, imitating the gait and grunt of that interesting quadruped to the best of his mimetic powers; while the master must introduce him to the assembly with all the usual jargon and flourish of a showman. "This, ladies and gentlemen, is the celebrated learned pig, Toby, of which you've all read so much in the *Times* newspaper. He has been offered the situation of editor of that journal, and likewise private secretary to Prince Albert; but refused these handsome offers, preferring to travel about in a caravan like the wild Arab of the desert. He was made a Doctor of Civil Law on account of his general acquirements and knowledge of the world, and corresponds with all the learned societies of Europe. He can read the human heart like a playbill, and will tell the age of any lady more correctly than the lady herself. Now, Mr. Toby, please to point out which of these young ladies is most fond of flirting."

The learned pig has then to go round, carefully examining all the ladies in succession, grunting and sniffing at them with his snout, and finally squatting himself down before one of them. This proceeding is generally accompanied by roars of laughter at the expense of the lady who receives this unenviable distinction. The master may, in the same manner, call upon the learned pig to point out the acute gentleman who left, an evening party, taking away a new hat, and leaving an old one, and so on; fixing as many playful charges on the company as may be found entertaining. The quadrupedal attitude of the learned pig will generally suggest as brief a display of his sagacity as possible.

THE DEAF MAN

This penance is almost as severe and mortifying as the last. The person on whom this temporary infirmity is imposed must stand out in the middle of the room, and to all that is said must answer three times following: "I am deaf; I can't hear!" The fourth time, however, the answer must be "I can hear." The fun to all but the unfortunate victim is for the first three times to make the deaf man some very agreeable proposal, such as bringing a lady to him and asking him to salute her, to which he is obliged to turn a deaf hear; while the fourth time he is requested to perform some humiliating act, such as to take a lady to another gentleman to salute, sing a comic song, recite extempore verses in praise of the lord mayor, dance a hornpipe, &c.; and to all these agreeable invitations his ears must be suddenly open. In fact, he must illustrate exactly the reverse of the old proverb, "none so deaf as those who wont hear." He is not obliged to accede to the requests that are made to him in the intervals of his deaf fit. This would be too severe.



A CHRISTMAS MAZE.

INSTRUCTIONS TO THE TRAVELLER THROUGH THE MAZE.

The instructions for this seasonable fireside Amusement are as follow:—The Traveller must enter at the opening at the foot, and must pass [illegible] the lines forming the road to the Castle in the middle. There are no bars in the route; one road crosses another by means of a bridge, so that care must be taken that, in following the route, the traveller does not stray from one road to another, and thus lose the track. For instance, on entering, he will have to pass *under* a bridge of another road crossing over his path; in continuing the route he will next pass *over* a bridge crossing another road and thus continue his course. A little practice will accustom the traveller to the method of the Maze. It is not a fair test of the merits of the Maze to commence from the centre: but the traveller will be at full liberty, when he has entered the Castle, to get out again if he can.

THE VILLAGE WAITS.

BY MRS. T. K. HERVEY.

THE village world is all a-tune:
The bees are singing in their hives;*
This one blest night beneath the moon
The silenced robin's note revives;

The loud winds, hushed—in love, not fear—
Sink whispering round the holly-tem,
Soft as when toned on Christ's own ear
Each angel voice of Bethlehem.

On such an eve the strains that pour
From every lowly hamlet spire,
From village street, or cottage door,
The wearied wings of echo tire:
The storm-bowed sailor on the deep,
And sea-rocked babes, and aged men,

Shall hear sweet carols in thei[illegible]
An[illegible]t their dre[illegible]

On such an eve each upward loo[illegible]
Is voiceful as a breathing sound;
And sighs from many a household nook
Turn prayers upon the hallowed gr[illegible]
A once dark world, made pure[illegible] snow,
Shows white to heaven; and Heaven shall hear
The faintest murmur of her woe,
The lightest dropping of her tear.

* It was an ancient superstition that on Christmas-eve the bees sang in their hives.

THE VILLAGE WAITS.—DRAWN BY E. FOSTER.

Young men and maidens shall go sing,
And children, that, with new-sprung heart,
Are Christ's beloved. earth shall ring
His praise who hath no counterpart;
Who pities the pitiless,
Who weepeth where the mourners weep,
Who turneth not from guilt's distress,
Who walketh on the unstained deep!

Sound, sound with voice, and sound with string,
Through this night's moon, and morrow's sun;
Bid ransomed souls their offerings bring,
Till music and deep prayer are one!
Through all the hours glad anthems swell
To hail on earth the Christ new-found,
And call the witness-stars to tell
How God's full day of love was crowned!

O! sacred love, and sacred song,
Glad stars, and music-breathing night,
Go hand-in-hand—a rapturous throng—
A glorious band in God[illegible]eat sight!
Mute aspect of the holy earth
Be mute no more, but holier still,
Throned in the light of this new birth—
This offspring of Divinest Will!

THE CHRISTMAS MARKET-WAGGON.—DRAWN BY E. DUNCAN.

Of the many loads of produce which gladden the heart of the beholder at various periods of the year, there is none more welcome than the waggon laden with produce for Christmas cheer, crowned, as in the accompanying picture, with a vast bush of HOLLY and Mistletoe—redolent of holy joy and ancient homage of the season, the heartiest observance in the Calendar. There is a sort of rude music in the very wheels of the waggon, as they roll along the hardened road, perchance aided by the bells upon the horses. But the mind's eye rises to the crowning glory of the Holly—the plant which constitutes so beautiful a feature in the winter scenery of England, and whose scarlet or yellow berries render it so universal a decoration of churches (hence the name Holy-tree) and dwelling-houses at Christmas time. This custom may be to commemorate the victory gained over the powers of darkness by the coming of Christ; and the gathering of Mistletoe is a relic of Druidic worship.

CHRISTMAS WEATHER:—SNOWBALLING.—FROM A PICTURE BY G. DODGSON, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS, 1853.—(SEE NEXT PAGE.)

SNOWBALLING.

BY EDMUND H. YATES.

Oh! wearied with this daily grind,
This wear and tear of brain and mind,
This conflict with the world unkind,
I pity him who does not find
Some pleasure in a school;
Who does not in each youthful scene
Recall some thoughts which once have been
His chief delight; the village green
On which he played (although I ween,
Perchance, but played the fool).

The cricket-ground, the wall for fives,
The bumping-block (oh! he who strives
For gain within these human hives
Will find, if he the fight survives,
Even tougher lumps than those);
And, more than all, the garden mound,
Whereon he took his "vantage ground,"
And gathered ruddy troops around,
To fight among the snows.

The sides are ranged, the ground is planned,
The wall is built; behind it stand
The troops defensive, such a band!
Each boy a snowball in his hand,
And valour in his eye;
Each is prepared the worst to brave—
For counsel comes before we shave,
What British boy would be a slave
When "Forward" is the cry?

And now the rival troops engage,
Besiegers mimic warfare wage:
Jack Wilson, the astute and sage,
Contrives by tricks, in Gamp called "bage,"
To gain the distant wall:
Ha, ha! he's down. the boaster proud!
For Tomkinson, 'mid laughter loud,
Pushes him backward 'mongst the crowd,
Which does but jeer his fall.

Stragglers from either side are out,
Peppering with balls each country lout,
Each red-cloaked dame, or farmer stout—
Respecting not the beadle's gout,
French teacher's execrations!
His "*mille diables!*" he may roar,
"*Ord nom!*" and "*sacre!*" forth may pour,
He but receives a dozen more,
To show the love of nations.

You call it mischief! Is our life
So truly free from party strife,
From broils so clear, of peace so rife,
That gun and pistol, sword and knife,
Are things to us unknown.
Have we such feeling for distress?
Is fun mixed with our bitterness?
Do we, though fighting, love not less
The hand ranked 'gainst our own?

For my part, no! The daily grind
Is more severe, the friends less kind;
More hard the wear and tear of mind;
Less pleasant sympathy I find
Than when I was at school:
Then wonder not my thoughts have strayed,
To what is in this sketch portrayed,
One of the games at which I played—
Perchance though, played the fool.

PRINCESS ILSE.

A CHRISTMAS TALE OF THE HARTZ MOUNTAINS.

[TRANSLATED FROM THE GERMAN BY L. F. SIMPSON.]

At the time of the Flood, when all the waters of the earth rushed together, climbed the hills, and with their waves rolled above the highest mountain-tops, there was a fearful disorder among the waters; and when, finally, the Lord took compassion upon the poor Earth, and allowed the clear light of heaven to break through the grey veil of the clouds, and commanded the waters to separate from each other and find their way back into their valleys, surely neither stream nor streamlet could have found its own course, if not legions of kind angels descended upon earth and led them carefully into the right path.

As the summits of the mountain ranges gradually appeared from out the flood, the angels descended on all sides, slowly, into the valleys, driving the waters before them. And as they descended, deeper and deeper, they organised, the course of rivers and streams, defined the limits of the sea, and enclosed the lakes within rocky boundaries, or green belts of wood and meadow. With broad brooms and besoms of sunbeams they swept along the damp earth, brushed the mud off the grasses, dried the heavy foliage of the trees; and so busily were they employed over their work, that the clouds of watery dust they stirred up hung like a veil of mist in the gulleys of the mountains.

Their labour had lasted many days, and was nearly completed, when a weary Angel sat resting himself upon one of the highest points of the Alps. The spot commanded a wide prospect towards north and south, towards east and west; and the Angel looked thoughtfully down upon the green earth, which had risen again so fresh and lovely from out the floods of Sin. "How changed is the earth!" he thought. "how glorious in its purity!—but will it always remain so pure? Will not all the misery and filth of Sin, which has been washed away by these great waters, again accrue? Will the black finger of Sin never again leave its dark impress upon the fair countenance of the purified Earth?" A deep prophetic sigh heaved in the breast of the good Angel, and he turned away his dazzled eyes from the morning sun, which, blood-red, was rising in the horizon. He cast a long look on the side where the streams of Germany had taken their downward path. He saw them gliding along in the distance: the great river, the Rhine, with its vine-wreathed banks following them, and a legion of streamlets and rivulets busily hurrying on in the rear. He rejoiced to see how well they were led—how all disorder had vanished, and how every stream and source, however small and unimportant, had been attended by some kind angel, who had directed it when and where to flow, when, with doubt and hesitation, it had run aside, and carefully guarded it when it too thoughtlessly bounded over the rocks. He saw the jovial Rhine, wreathed with vine-leaves, hastening along; and he fancied he heard in the distance his exulting shout as he greeted his beloved Moselle, who, wreathed with grapes also, came, blessing as a bride, to meet him.

Onward and onwards the waters rolled—their splash and roar reechoed in the distance, when the solitary angel on the mountain top was suddenly startled by another sound. He heard a violent sobbing and gentle sighing close to him. He arose, and, turning the corner of a rock from whence the sound proceeded, he found a young waterspring, wrapped in a white veil, bubbling and sobbing bitterly, lying upon the ground. With compassion he bent over her, and tenderly raised her gently and patted her veil, he recognised the little Ilse, [illegible] down in the valleys of the [illegible] Angel," have you been left here [illegible] the others left, and not on[illegible] many with them?" Little Ilse tossed [illegible] replied, "I have not been forgotten—old Mistress [illegible] her me a long time, and beckoned and called to me to [illegible] Oceart wanted to take me with them, but I [illegible] with them, even should I have to perish here all alone. [illegible] send into the valleys, like a common streamlet, to do service in the plains, to quench the thirst of oxen and sheep, and wash their clumsy feet—I, the Princess Ilse! Only look at me—if I am not of the noblest race! My father is a sunbeam, and the pure air my mother; my brother is the diamond, and my beloved darling little sister is the dewdrop on the rosebud. The waves of the Flood have carried me up to a giddy height; I have been allowed to wash the snowy crests of the kings of mountains, and the first sunbeam that broke through the clouds has embroidered my dress with spangles. I am a Princess of the purest water, and truly cannot descend into the valley! I, therefore, concealed myself, and pretended to be asleep, and old Weser, and the silly rills, who do not know better than to rush into her arms, at last went away mumbling."

The Angel shook his head sadly at the long speech of little Ilse, and looked earnestly and searchingly into her pale little face; and, after gazing firmly into her large, childish blue eyes, which were glistening with anger, he discovered in their clear depths dark spots, and ascertained that a dangerous guest had taken up his abode and played his pranks in the head of little Ilse. The little demon of Pride had taken possession of it, had driven out all pious thoughts, and maliciously grinned at the good angel out of the eyes of poor little Ilse. The little demon of Pride has turned the head of many a silly child, even when not a Princess of the purest water, and the compassionate Angel, aware of the danger she incurred, determined to save Ilse, at all price.

In his eyes, which could see so far, Princess Ilse was only a naughty child, and therefore he did not address her as "your Highness," or "your Grace," but simply as dear Ilse. "Dear Ilse," then said the Angel, "but if it was your own free choice to remain here, and not go with the other waters to the valleys, you ought to be perfectly satisfied at being here, and I cannot understand what you are crying and sobbing about."

"Alas!" replied Ilse, "when the waters had gone away, dear Angel, the whirlwind came here to sweep the mountains, and when he saw me he got into a great rage, he scolded and abused and shook me, and tried to throw me over that rock into a deep dark abyss, where daylight never penetrates. I begged and wept, and trembling pressed myself close up to the rock;—at last I succeeded in escaping from his powerful arms, and hid myself here in this fissure in the rock."

"And as you will not always succeed," said the Angel, "for the whirlwind keeps good order here, and carries a good broom—you must see, dear Ilse, that it was very silly of you to remain here all alone, and you will follow me willingly if I will lead you to good old Weser and your young companions."

"By no means!" exclaimed little Ilse; "I am a Princess, and I will remain here!"

"Ilse," said the Angel, with his mild mellow voice, "dear little Ilse, I mean it well with you, and you must love me also a little, and be a good child. Do you see yon morning cloud floating in the blue heavens? I will tell it to stop here and we will both enter it; you can lay your head on its soft cushions, and I will sit near you; and the cloud will take us down speedily into the quiet valleys, where the other streamlets are. I will there place you in your green bed and remain near you, and I will give you pleasant dreams and tell you amusing tales."

But Princess Ilse was incorrigibly obstinate, and with increased vehemence and disdain, she exclaimed: "No, no, I will not descend, I will not go to the valley;"—and when the Angel approached her and with gentle violence endeavoured to take her in his arms, she struck at him and spurted water into his face.

The Angel sat down sadly on the ground, and the silly little Princess retired to the hollow in the rock and congratulated herself at having shown so much spirit, and at having given short and negative answers to the Angel, who once again endeavoured to persuade her to accompany him.

When the good Angel saw that all his loving efforts were of no avail with little Ilse, that the demon of Pride held all her reason captive, he left the lost child with a sigh, and returned to his companions who were still hard at work.

Princess Ilse when she found herself again alone, determined to enjoy her high dignity to the utmost. She glided out of the hole in the rock, placed herself on a projecting point, spread out her vapoury garments in broad folds and hoped that the adjacent mountains would bow to her in homage, and that the clouds would advance towards her and kneel down before her garment. But nothing of the sort occurred, however proud her little Highness looked. At last she grew tired of sitting all alone, and felt very sad, and plaintively muttered to herself: "I could have borne a little annoyance, as in keeping with my high station; but even a Princess is not bound to bear so much." And as evening came on, and the sun set, and in the distance the noise of the approaching whirlwind became audible, the poor little Princess shed tears of fear; and although she felt proud at having shown so much firmness in not following the Angel, yet she felt lonely, however sweet, did not counterbalance her fear of the whirlwind.

It became darker and darker, thick heavy mists rose from the hollows, thunder rumbled in the distance, and little Ilse thought she would have died from very fear, her breath beat quick in the heavy not atmosphere around her. Suddenly a pale ray of light flashed in dark night, and when Ilse looked up trembling, she beheld before her the tall dark figure of a man wrapped in the folds of a large red cloak, who, bowing deeply, thus addressed her: "Most gracious Princess!" Such greeting was sweet music in the ears of little Ilse, and she suppressed the fear of the strange disagreeable figure, and hearkened to the enticing words addressed to her.

The dark man said that he had been for a long time near her, that he had heard her conversation with the Angel, and rejoiced that she had not hearkened to him. He could not understand how any one could propose taking so much loveliness and beauty, so charming a little Princess down to the flat earth and bury her alive in dark valleys. He spoke to her of the splendid future that was in store for her, if she would allow him to serve her; he described a pleasant country seat he possessed on one of the highest and most picturesque mountains of Germany; he would take her there, surround her with a brilliant court, and all the splendour and brilliancy due to her high rank; she should there live in joys and pleasures high above all the waters and rivulets of the universe. The heart of little Ilse beat high in joyful expectation of the fulfilment of all these fine promises. And when the strange man threw open his cloak and drew forth a large golden goblet, the stem of which was richly set with jewels, and placed it before the Princess, politely requesting her to step into it, that he might carry her to his beautiful mountain palace, where the splendid maids of honour were already preparing festivals in her honour, her little Highness was so overcome that all consideration vanished. In joyful haste, with both feet at once, she leapt into the golden goblet, so that the waters jumped up and a few drops fell upon the hand of the dark night, where they were immediately scorched up and a burning pain shot through the whole frame of poor little Ilse.

Frightened, the poor child darted towards the rim of the goblet, as if with the intention of jumping out, and looked up timidly into the face of the stranger. But he burst into a horse laugh, seized the goblet with a powerful hand, commanded the whirlwind to go on before that little Ilse might not fear its approach, and swift as an arrow, they hastened through the air. And Ilse, as the pain had soon subsided, was quieted, and allowed herself to be carried away. She little thought that she had given herself up to the Evil One, when she jumped into the golden cup which he held out for her. Now and then, it is true, she had qualms of fear as they dashed on through the dark night; and when the goblet was shaken by the rapid motion, little Ilse trembled and huddled close to the polished sides, drew her garments close around her; and took care that not another drop should be spilt—for she knew now what pain it would give her.

The night cleared up, and the moon arose slowly as they arrived at the Brocken. Soon afterwards the ground beneath greeted them; a motley group of wonderful figures was passing to and fro. The Lord of the Brocken commanded silence, placed the cup containing little Ilse upon a great stone, as upon a throne, and bid his gay vassals form a circle round her, and do her homage as Princess of the Wi[illegible]

This was a glorious moment for little Ilse, who felt that she was in her proper place. Proudly she raised herself, in a graceful column of water within the golden goblet, and with dignity graciously greeted those around her, and, half ashamed, hung her little head, when an "oh!" of admiration sounded from the circle. But this was not the hour of humility for Ilse with the demon of Pride in her head. A soft enchanting music resounded, and the delighted little Princess bubbled and danced in the polished vase, shook her waving locks, and let the pearly drops fall back again sparkling into the cup. The good natured old full Moon, who is not very particular, and shines upon all things, good and bad, could not help placing a wreath of sparkling silver stars upon the vain child's head, and his broad mouth grinned broader than ever, with intense delight, when little Ilse nodded to him with a sweet smile of thanks. But there were eyes in the Devil's court, which did not look upon the dancing little Ilse with delight and admiration: there was many a little heart in that company which deemed itself the most beautiful and the most charming Princess, and looked upon the triumph of another with jealousy and envy. Two such little witches went quite close up to the golden cup, and mocked little Ilse, and said impertinent things to her face. "See how she twists about, and tries to look graceful," said one; "and she is so thin and vapoury, that you can see through her." "I should like to know how the pale beauty will demean herself when she has to dance with the Whirlwind, and let herself be whirled round by him as we are," said the other, contemptuously, shrugging her shoulders; "and it will take her a life-time to learn how to ride upon a broomstick. But hark! the gongs and cymbals are striking up. We have a merry circle to dance, to stamp the ground, and dry up a morass for a dwelling for the pale Ilse. Then, all her finery will be over, and she must be our most obedient servant as Princess Cooking-water."

Little Ilse, who had heard all that was said, had lost all taste for dancing at the ill-natured speeches of the young Witches. She sat quite quietly at the bottom of the cup, and watched the wild figures as they sallied forth in procession to the other side of the mountain, and formed a circle for dancing, and pondered upon what the taunting words of the bad Witches really meant. The allusion to the Whirlwind had annoyed her considerably; but the morass and Princess Cooking-water were a source of serious alarm to her. No one had hitherto called her Princess Cooking-water; and she, who was to reign here, surely, was not meant to serve the Witches. She already thought of questioning the Lord of the Brocken on the subject, who was just then approaching her; but, before she could speak, he stood near her, and dipped his finger into the middle of the cup, which made little Ilse tremble all over with pain. But the Devil laughed and said: "The night is fresh, most gracious Princess; you are shivering with cold, and will freeze in this flat cup? I am preparing a warm rocking-cradle for you by yonder fire, where you may rest and warm yourself. If you will condescend to turn your bright face in that direction you will see how valiantly my head cook is stirring up the fire, and throwing pretty play-things into your bed, that you may not find time heavy on your hands. Let me carry you over there."

Little Ilse looked in the direction she was told, and beheld a huge iron caldron hung above a blazing fire, which crackled and fanned most lustily. But the old hag who presided over it, was of so hideous and repulsive an aspect, and the toys she threw into the caldron were so extraordinary, that little Ilse, who had already become distrustful, did not allow herself to be carried there at once, and said she should like to look at the dancing a little longer; she enjoyed the fresh air, she said, and the golden goblet answered all the purposes of a balcony; was far enough off not to be annoyed by the dust; and she could see all that was going on, and was very much amused.

The Devil thought he would not disturb her pleasure, and said he would return in an hour and fetch her; and, so saying, he left her, and joined the dancing crew.

The little Princess began to feel very dreary and sad, all alone, as she sat and watched, first the wild gestures of the weird dancers, then the fire and the caldron, into which she now plainly saw that the old hag threw in all sorts of disgusting animals—spiders, and toads, and snakes, and lizards, and bats, which she caught in the air as they hovered over the fire, and cracked their wings before throwing them, with wild gestures, into the caldron. A feeling of intense horror overcame little Isle at the company she had got into; and when she thought that she would be put in the caldron to warm, it became quite clear to her what the Witches meant when they mocked her, and called her "Princess Cooking-water." In mortal agony she pressed her two tender little hands together, drew her veil close over her pale little face to stifle the scream which rose to her lips from her anguished heart. "Oh!" she sighed, with tears, "had I but followed the Angel! he meant it well with me." And when she had cast a despairing glance around, and saw that she was left all alone on that side of the mountain, that all the witches and dancers were dancing on the other side, or hovering round the fire, the thought of flight rushed across her mind. "Away away!" she muttered," "no matter where;" and, quick as the thought, she leaped up to the rim of the goblet, let her white little feet and vapoury garments hang over it; and, still holding fast with both hands, she looked anxiously round to see that no one was watching her.

But no one was paying attention to the little Princess; only the good-natured old Moon stood aloft and smiled at her with unmoved countenance. But she looked up to him with tears in her eyes, with such an imploring childish look—one of her little fingers on her lips—that surely he could never have the heart to betray her, should he by any chance be asked what had become of little Ilse?

As soon as little Ilse was sure that she was unobserved, she let herself drop gently on to the ground. But the goblet was high, on a [illegible] block of granite, upon which it was placed, still higher, and, with all the precaution in the world, she made a little splash as she touched the ground; and, in great fear, lest she should have been heard, she glided, trembling, under two large stones. She had modestly taken off her wreath of stars, and left it in the cup. Scarcely life had been anything but pleasant to her, and now was no time to think of being a Princess, but to endeavour to escape as quietly and expeditiously as possible.

She clung tremblingly close to the stones, and begged of them to protect her; and the old stones, who had never felt such young and beating life against their hard breasts, felt themselves wonderfully touched, and closed around the Princess, so that no eye, not even that of the Moon, could discern her. They then pointed out to her a hole in the earth, and she made herself as slim as she could, and crept into it, and found in the soft cushions of earth which covered the stony ribs of the mountain on that side a long gallery, in all probability the work of some field-mouse. Little Ilse groped her way along it in the dark, and found that the gallery led down the mountain. She had already gone a considerable distance, when the gallery became wider and uneven: it appeared to lead through loose stones, and some turned over beneath her feet, and rolled on before her down the mountain. She sull glided on in the dark; but now and then she felt a sharp breath of air through the crevices, and the path, after a very steep descent, suddenly appeared to become more level, and she beheld the clear sky, with a star glittering here and there, which threw a pale light, and displayed a mass of big and little stones, among which no more path was visible. The wild music and the howling and dance up of the witches of the Brocken again burst upon her ear, and little Ilse who had already shuddered for a moment at having which path to take aroused by these sounds, sprang forward in haste and fear over the stones. She little cared for knocking her head and tearing her garments against the sharp points of the rocks. "Away, away!" she muttered—far away where the Prince of the Brocken and his wild legions cannot discover me!"

The breaking dawn caused her considerable alarm. "The night is [illegible]," she thought, "and will not betray me; but daylight is a chatterbox, and will soon tell which road I have taken." And she crouched into a hollow and found a compass as possible, and glided along, under the stones, only peeping out now and then to breathe a little of the fresh morning air.

Between high wooded hills, a deep dark-green gully led down towards the valley, and little Ilse rushed headlong into it. Numberless rocks and stones lay heaped, one upon another, at the bottom of the gully, wound round with the roots of pine-trees or overgrown with moss. They looked severe and very venerable, and did not seem at all inclined to make way for the little rill which came rushing so hastily and capriciously upon them. The kind Creator had taken compassion on poor little Ilse when, driven by fear, she shot over the stones, and had allowed the forest to open its green gates to her, and take her under its protection. The forest is a sacred asylum for children who have gone astray, who have come [illegible] and will in the world. None [illegible] spirits [illegible] and [illegible] pine-roots accompany them into the peaceful stillness of the woods; the demon of Pride is the very first to be excluded; and how could it exist in the presence of the [illegible] majesty of the lord of the forest, the Pine-tree, which makes no [illegible] upon the strength and glory given to him by God, who stands upright with uncovered head towards heaven, whilst storms [illegible] him, firm and immoveable upon the spot upon which the Lord [illegible] him, and prefers breaking asunder and dying [illegible] to bend to [illegible], truly a king "by God's grace."

It is true that Ilse did not yet comprehend all this; she thought that the pine-roots were making ugly faces at her, and she timidly gazed

† Two other rivers.

past them, deeper and deeper into the forest. That the little demon of Pride had silently left her when she ran away from the Devil and his witches on the Brocken; that it swam away in the tears of repentance when she shed;—of all this little Ilse was just as ignorant as when the demon took up his abode within her. [illegible] happier in the shade of the green woods, behind [illegible] ich the sun-beams, falling obl quely, cast over the [illegible] arthet she went from the Brocken, the more at ease and happier did she feel; she already thought that the firs and pines no longer looked at her so darkly and severely as then, but higher up; and [illegible] ous, venerable oaks spread their powerful arms over her, and light friendly beeches thrust themselves between the dark firs, nodded [illegible] with a smile, and endeavoured, with outstretched branches, first [illegible] e sunbeams and to shoot them at each other, like golden [illegible] Little Ilse, who, like all children, had soon forgotten her sor[illegible] ran merrily rippling along between them; and when a sunbeam, in the [illegible] yous game, fell to the ground, she picked it up, held it exultingly [illegible] high or fastened her veil with it, and then threw it as she sprang [illegible] ds, playfully, to the flowers and grasses, which inquisitively stood on her path, and looked after her. She was once again a happy mirthful child; and the green wood delighted in the little run-a-way, to whom he had given shelter. As regards the greater and lesser stones, who, wrapped up in their soft coverings of moss, lay dreaming on the ground—to be sure, all their quiet contemplations were disturbed since little Ilse, splashing, jumped over them; but, nevertheless, they were very good friends with her. When the fattest and heaviest of them came inconveniently in her way, and would not let her pass, she patted the cheeks of the rough old stones with her white hands, and, muttered soft entreaties into their ear. And when that did not answer, she grew angry, stamped impatiently with her little feet, and pushed so powerfully against them, that the old boys were obliged to give way; and, as soon as the slightest aperture was visible, little Ilse rushed into it with all her strength, drove the lazy stones asunder, and shot impetuously a head of them. When the ground became very steep, it was a charming sight to behold how the little Princess hopped, splashingly, from rock to rock. On these occasions she put on a neat little cap of white foam; and when it happened that it was broken or crushed against a projecting point of rock, she always had another ready at hand, white as the driven snow of the Alps, and freshly crimsed. On many a sunny glade of the mountain, where grass and moss are soft as velvet, and the large trees had separated far from each other, and made room for their young ones, who scattered in groups here and there, grew, and learnt how to become trees—there sat the young children of the firs on the ground, their stiff bushy green coats spread upon the sward, and thoughtfully nodded with their pointed heads, and wondered how little Ilse never became weary of the constant running and jumping The very small rills, however, were not so quiet as the fir-children. When they heard little Ilse warbling her soft bubbling song, they came dropping out of the sides of the rock, and glided quietly along through the soft moss, always nearer and nearer to Ilse. Little Ilse had distinctly heard their gentle rippling, and saw them coming, and beckoned them to hasten their steps. And when the little rills saw the little Princess jumping away deep below over the stones, they were frightened, and had not the courage to jump down to her, and yet saw no other way. Little Ilse then addressed them with her clear voice, and encouraged them, and shewed strong stepping-stones, well cushioned with moss, towards them, that they might step over them and reach her. And the rills took courage, and began to climb and jump nimbly from one stepping-stone to another. Little Ilse caught them in her arms, though some of them did fall clumsily into her lap, and she took them by the hand and said: "Come, you must now run along with me. Look how I do; jump when I jump; I will hold you tightly, that you do not fall." And the rills did as they were bid: they jumped over the big stones, holding Ilse's hand firmly by the maid, did not hurt themselves, and feared no longer; and they soon learnt to run and jump so well, that soon, even when they put on their white caps of foam, they could not be distinguished from Ilse.

The Devil on the Brocken was in a tremendous rage at the flight of the beautiful Princess. He was perfectly aware that as clear a spring was no prey for him; and that the demon of Pride, the surest hold he had upon young minds, had left her; he was at a loss how again to get hold of the truthful child. He bethought himself of the Whirlwind, whom he always found a good helper in need, called him out of his cave, and bade it run up the valley right against the swift little Ilse. This, he thought, would make her turn back and bring her again to the [illegible]

[illegible] did al. that he could to fulfil the Devil's behest. He howled, and whistled, and blew; he shook the trees till they trembled to their very roots, and sent their broken branches on to the ground to the very feet of little Ilse. He threw a young fir-tree, which had not yet gained a firm footing in the steep rock, right across her path; it caught the flowing veil of little Ilse, and nearly drew her down; but the little Princess tore herself loose, and did not care how much or her veil remained in the hands of the North-wind. She did not care for herself—she had no fear on her own account; she only thought of her dear trees, and saw well enough that he helped them to their support the storm if she could only have done so. She went to the young fir-tree, threw herself over it, shed a stream of tears over it, and compassionately washed its wounds. The small twigs of beech and oak, which the North-wind threw into her lap, she caressed with her soft arms, kissed their torn leaves, and carried them along with her for some distance, until she could deposit them gently upon some mossy bank.

And the Devil still stood on the Brocken, and ground his teeth when he saw that all the endeavours of the North-wind were of no avail, and could do nothing against little Ilse. "I will send out the Winter, then," he grumbled, "and bind her in chains." Dreary, grey Winter, with hunger and cold, with long, dark nights, in which temptation is abroad, and sin pursues its secret paths, has brought me in already many a poor soul, and surely will be able to overpower the delicate Water Princess. I bid thee, North-wind, blow continually down there as I stir not, shake the leaves from the trees, and prepare the way for Winter. You know that he never comes until he can tread on a heavy step through the bare branches."

And the North-wind, an obedient slave, blew again, wilder and sharper than ever, through the valley. The beeches stood trembling and shivering, and in terror allowed their yellow leaves to fall to the ground, the oaks grew quite red at their fingers' ends with cold, dropped the last leaves from their twigs, and, with their branches, anxiously expected the arrival of Winter. The fir-tree alone was calm, and unchanged bore his dark green regal mantle. Little Ilse, running at their feet, could not undo stand how all this was to end, and she [illegible] and exclaimed: "You silly, silly trees, why do you [illegible] me with all your dry leaves; do you no longer love little Ilse, and do you wish to scratch her eyes out with brown acorns an. hard beech-[illegible] Quite angry, she ran away from them, and shook the dry leaves out of her tresses, and out of the shining folds of her robe.

Soothing Winter had arrived on the Brocken, and his Satanic Majesty with his own hands hung a mantle of the thickest frieze upon his shoulders. He then quietly strode over the hills, and lowered gloomily over the valleys. At first he was not such an unpleasant guest, and endeavoured to gain good opinions; he decked out the trees and bushes [illegible] sparkling coats of hoar frost, so that little Ilse, quite dazzled with [illegible] magnificent splendour, did not know which way to look. Then came the flakes of snow dancing in the air, and the little Princess at first thought [illegible] that it was the clouds themselves that wished to pay her a visit in the [illegible] and renew the acquaintance commenced upon the mountain. [illegible] Winter laid his cold white covering thicker and thicker over [illegible] valley, burying everything beneath it—stones a[illegible] [illegible] d even the trembling blades of [illegible] [illegible] with [illegible] [illegible] [illegible] grieved much for her beloved green meadows, [illegible] e could no longer see; and when she assailed Winter [illegible] to wash off the snow from all the stones that she could re[illegible] [illegible] alleviate the small mosses, she was horrified to feel sharp ice-points encircling her delicate fingers, and she saw how the Winter forms and shining circles round the stones and the roots of the trees, which, [illegible] creasing sharp points, were to hold and encompass her, and, [illegible] letely enchain her delicate limbs. Grim Winter now laid [illegible] hand of ice upon the breast of the poor child; a cold [illegible] g seized upon little Ilse, and, trembling, she embraced the [illegible] of the Pine-tree, and looked up imploringly towards the [illegible]

She beheld him wrapped in the white covering of Winter; but from his branches beneath the cold snow, a deep over-green shone down upon her, and a mild breath of Spring fell warm and consoling upon her breast, and breathed new life and energy into her. "Oh, Pine-tree!" exclaimed little Ilse, "how do you manage to brave the winter, and to remain green and lively in his icy arms? Cannot I also learn how to do it?" "Because I am founded upon a rock," replied the Pine-tree; "and I lift up my head to heaven, and the Lord gives me the power to remain green for ever; and you, little Ilse, are sprung from the rock, and reflect in your pure waters the light of heaven unsullied as it pours down upon you; if true life is within you, that inward impulse, which the Lord gives, that strength will not fail you to overcome the winter. Place your trust in God, then, little Ilse, and exert yourself, and do not feel weary." "Dear Pine-tree," said little Ilse, "I will be strong and good, like you; and the Winter shall have no power over me." And, with a powerful exertion, she tore herself loose from the icy arms that held her; she struck at the rough hands which endeavoured to hold her garments tightly between the stones, and rushed impetuously down into the valley, breaking to pieces all the icy bonds that had impeded her movements. Old Winter could not keep pace with so lively a companion, and he seated himself, grumbling, in the snow, and was obliged to confess his impotency, and the impossibility of catching swift little Ilse.

On the following day, as the little Princess was dashing along in the exulting pride of triumph, driving before her the icicles which she had torn away from the stones, the Mosses on the banks called out to her: "O Ilse, dear Ilse, come and help us; the snow weighs so heavily upon our soft heads, we can no longer stand upright upon our slender stalks. Help us, little Ilse; Winter is so hard upon us!" And Princess Ilse condescendingly and compassionately approached them, carefully raised up a portion of the snowy canopy that covered them, put her sweet face beneath it, and whispered to the Mosses the wisdom she had learnt from the Pine-tree. "Because you are rooted on the rock, little Mosses, and the good God allows you to remain green under the snow, therefore, you must not forget that divine life is in you; and endeavour to be strong, and to raise yourselves up and grow under the soft winter covering. God will hearken to you, if you pray to him." And the Mosses bestirred themselves, and grew quite warm with their exertions; and, after a short time, gaily exclaimed: "Ilse, Ilse, it answers! we already stand upright and are really growing; the snow gives way wherever we grasp it with our green little hands"

Thus, little Ilse taught her playfellows, the mosses and grasses, how to use their strength and to brave the Winter. She gave the young grasses to drink of her pure living waters, and encouraged them to grow and stretch themselves, and to give the first greeting to Spring, when he at last again reappeared in the valley, cleared away the snow from the ground, and frightened back Winter to the Brocken; but even there the warm sun would not permit him to remain. A Fairy Tale had also thrown off his white over-coat and had placed bright green lights on the points of all his green branches in honor of Spring, and oaks and beeches resumed their green garments, and little Ilse lived happy, delightful days in the quiet, glorious forest, for many many hundred years.

Winter, it is true, returned every year, and acted the same cruel part towards the trees and plants, and laid his splendid traps in the hope of catching little Ilse. But the active, healthy child did not allow herself to be caught; as swift and as agile as a little lizard, she always managed to escape from his rough hands and arms. And every year the trees resumed their green, were never more beautiful nor fresher than in the spring, as if their hard struggle with the winter had given them new strength and vitality; and little Ilse was also more beautiful and glorious when the snow had melted in the valleys, and she danced along in full pride, foaming through the forest. The snow is like sweet mother's-milk for little mountain rills, and the more heartily they drink of it, the better do they prosper.

The green forest was proud of its adopted child, and because she no longer thought of herself, but only of her dear friends, the trees and plants, and how she could please them, and because she herself had entirely forgotten that she was a Princess—for that very reason all the others remembered it, trees and flowers, the stones, the slender mosses and grasses—and they esteemed her and honored her the highest respect, and did her homage in their own quiet sincere way

And wherever Princess Ilse ran through the valley, flowers and herbs crowd d around her feet, kissed the hem of her garment and her floating veil, and the tall silent trees stood whispering on her path and doffed their plumes to greet her as she passed. The grey mosses and blushing, the most lovely of the flower children of the forest, they loved little Ilse better than anything else, and wished always to be near her; they came quite close to her, bent over her brow and contemplated her with their deep earnest eyes, like pious hermits, and scattered upon the wet polished stones which Princess Ilse held tightly in her arms, and kissed them tenderly, and placed a soft carpet of moss beneath their feet that their delicate little limbs might have a firm footing upon the slippery ground. The bluebells lived in perfect harmony with the grasses and herbs, the happy life of flowers on some green patch, spanning their whole summer upon the wet stones which Princess Ilse held in her arms. The ferns also sought a footing on the damp stones, and fanned little Ilse, to cool her, with their splendid green fans, and equitted with such fans, and prevented the sun's rays from little Ilse. But the sunbeams also loved the dear child, and came down, as often as the grey clouds on the mountains allowed them, into the forest, and played with her among the trees. From time immemorial, the grey clouds were appointed guardians of the sunbeams, and because they themselves were so thick and clumsy and could scarcely move along, unless the whirlwind now and then came upon them with his staff and made them "move on," therefore they did not relish the joyous glimmer and dazzle of their agile wards, and their sports with little Ilse on the green sward, and they always kept themselves well sit upon the mountains like a wall, and would not allow the smallest bit of sunshine, however slim it made itself, to escape through them. Then they poured down rain into the valley, and chuckled with satisfaction at beholding little Ilse running along gloomily alone. The sunbeams were always much enlivened at the sight, and created quite a confusion behind the backs of the old ladies in grey, quizzing and teasing them with pointed phrases to such an extent, that they grew quite warm, and were finally compelled to beat a silent retreat to escape from their sarcasms. As soon as the clouds were clear, the sun beams rushed down into the forest, mirrored themselves in the sparkling drops still hanging on the trees, and romped often for a whole day with little Ilse on the grass. They were there one day when a white strawberry blossom, a very numerous family is spread over all the valleys of the Hartz, had stily ventured to admire its pretty face, in the sparkling dress of the little Princess But Ilse had seen her, and shook her finger at her, and exclaimed: "Oh for shame! little straw berry blossom, you are vain of the golden buttons on your bro[illegible] wish to mirror and admire yourself." The straw[illegible] [illegible] white leaves fall and darted back under the [illegible] But a sunbeam ran after her, laughing, and discovered her under the broad leaves; and the poor blossom was quite ashamed at being found out. And whenever she met a sunbeam, she blushed deeper and deeper till she at last, the colour of purple, could scarcely be seen for green leaves and quite abashed hung down her little head. Even at the present day she has not forgotten that her vanity was made so public, and still blushes and sinks her pretty little head whenever she sees a sunbeam.

Ilse's old friend, the good-natured full Moon, also paid her a visit some times; he did not mind the difficult path over the mountains, and dalted above the Ilsen-rock, the most beautiful point of the whole range, which the inhabitants of the valley had called after the little Princess; he would then look at her with a pleasant smile, and would fain dance [illegible] rippling away in the shade of the mountains, playing an anx[illegible] with the silver rays which he threw down to her.

The valley in which little Ilse dwelt, had now been inhabited [illegible] some time. At [illegible] Lse w[illegible] [illegible] [illegible] [

GOING TO THE PANTOMIME.—DRAWN BY J. LEECH.—(SEE PAGE 582.)

bring the hated French stranger to the ground. "Ilse, Ilse!" said the Pine-tree, in a warning voice from the forest, "what silly tricks are you playing now? Have you not yet learnt to understand that we must suffer everything which tends to the service and benefit of man? If we trees can put up with the presence of the chasseurs, surely you may do so much more readily. We certainly are not pleased at seeing it walking up the valley in its dusty garments. For shame, Ilse; look how the witches are laughing at you from the mountain-ridge."

The Devil's brood on the Brocken had been dispersed ever since pious Christians had taken up their abode there, and the little witches and sprites wandered now about the country in all sorts of enticing shapes and disguises, to entrap poor souls and gain them for their dark realm. A body of young witches, who still owed little Ilse a grudge for having thrown them into the shade by her dignified manners and beauty, on the Brocken, came regularly down into the valley every summer to watch her movements, and to endeavour, at least, to sow discord between her and her friends, if they could not do any other harm to her. Disguised in the brilliant scarlet dress of the foxglove, these little witches stood in coquettish groups upon the unwooded slopes of the mountain in the broad sunshine, and nodded to the ferns, and, endeavouring to separate them, they called out to the bluebells that the foxglove and bluebell were very near relations. The little bluebells, however, saw the deadly drop of poison in the brilliant flower-cup, and quietly shook their heads and went down to little Ilse, and asked their ferns to stand before them and spread out their fans, that they might shut out the wicked crew from their sight. Princess Ilse cast up a shy glance, and muttered quiet prayers as she passed on. She patted and praised her faithful bluebells and ferns, and when she found that the wet stones on her path looked up with too bright a face towards the bewitching flowers, she threw suddenly her silvery veil over them, and dazzled them with bright rays of light, which she caught up and threw good-humouredly into their faces.

As regards the chasseurs, however, Princess Ilse, although she could not prevent its presence in the valley, would have as little to do with it as possible. By side paths, through the deepest shades of the forest, she endeavoured, by meandering about, to lose sight of it altogether;

THE GOOSE CLUB.—DRAWN BY PHIZ.—(SEE PAGE 582.)

THE BOROUGH MARKET ON CHRISTMAS-EVE.—DRAWN BY G. DODGSON.—(SEE NEXT PAGE.)

and, when dancing along in joyous haste over the rocks, thinking that she had entirely got rid of her dusty companion, she suddenly came right upon it again; and the chaussée threw a little bridge over her, and Princess Ilse was obliged to glide bent under the yoke, and swallow her displeasure until she again appeared at the other side free and uncontrolled.

But the anger of little Ilse was never of long duration. Lower down in the valley she runs quietly alongside the chaussée, and humbly kisses the foot of the Ilsen-rock, on the summit of which a sacred cross is erected; for, as Princess Ilse has not died, she lives at this very day, and goes daily to the mills and iron-works in the valley to assist in their labours. On Sunday, when the mills are closed, and the industrious inhabitants of the valley of the Ilse wend their way, in their holiday attire, up the Castle-hill, to the venerable little church above, to pray and hear the word of God, which is preached there so pure and simply, with so much power and intensity, then is the silver voice of little Ilse distinctly heard bubbling its music with the chimes of the bells and solemn sounds of the organ, as they resound from out the old castle walls over the valley.

For many centuries a blessing to the valley through which she runs, little Ilse has, even now, lost nothing of her original freshness and beauty. For she had drunk of the cup of eternal youth which is prepared or all those who thirst for it, and known where to seek for it, an which is to be found in industrious, useful occupation, which springs up in purity and clearness, which puts aside every impure spot, and is transparent with the light of Heaven, and is placed by God upon a rock. Princess Ilse is an example to the world what may be made out of a silly wayward child, when the demon of Pride is taken out of it; and the sons of men who, yearning for sunshine, come from the barren tracts or bare hill-tops of this everyday life into the valley of the Ilse, they find that she breathes into them the simple pure feelings of childhood, makes them again become happy confiding children, as long as they remain under the shade of her luxuriant forest where the

THE WAITS; OR, MAKING THE MOST OF IT.—DRAWN BY H. G. HINE.—(SEE PAGE 583.)

…greener and the air fresher and more replete with vitality than …other spot on earth

Little Ilse has long since given up fearing the Devil and his witches as she glides under the shade of the Ilsen-rock. She even dares, at times, to play the part of Princess Cooking-water, and, when the summer visitors …the valley wish to make coffee on the mossy bank under the Ilsen-rock, she enters their kettles without hesitation, takes no praise to herself for the excellence of the coffee, and demands, as sole recompense, that those who have had the enjoyment of drinking coffee made of the Ilsen stream shall leave crumbs of cake behind for her friend the Field-mouse. This Field-mouse dwells in the crevices of the stones of the mossy bank, and descends in a direct line from the identical Field-mouse which built the gallery along the side of the Brocken, through which, many hundred years ago, Princess Ilse made her escape. It is true, that …every company has the honour of beholding the sharp little head and bright eyes of the graceful little animal emerging from its cushions of moss; for the mouse is very particular in its acquaintance, and timid, like all her race. But whoever does get a glimpse of him, is bound, "if he ill or ill Ilse's displeasure," to feed him with cake, or with whatever sweets men and mice love to nibble at among the crevices of rocks.

Such a treaty was duly agreed upon, on a beautiful day in August, in the year of our Lord, 1851, and sealed under the Ilsen-rock, and in the remembrances of the Hartz, of the coffee-drinkers assembled, that day who fed the mouse.

The tale has now nothing more to relate: it has built its nest in the …ocky valley, and feels no desire to follow little Ilse farther into the flat country where she joins the Ocker and the Ecker, and lower down the brilliant, which finally leads her, after all, to the old Weser. Old Weser drags Ocker and Ecker, and Aller and Ilse, and all their rills and tributaries, out into the open sea.

And my list o tale cannot tell what the feelings of poor little Ilse may be when she comes to herself, out far in the wide wide Ocean.

GOING TO THE PANTOMIME.

WITH AN ILLUSTRATION BY LEECH.

Mr. Jonathan Jones, like Mr. John Gilpin, is a

Citizen of credit and renown.

His name is great in the wholesale grocery trade; and I wish you or I had his cheque for a cool thousand. His temper is sweet, as you may guess by his trade, and see from Mr. Leech's capital and correct drawing of him. The two young gentlemen in the box, Jonathan and Jack, are as sharp shavers as need be—only you call them "young figs," and you will find claret cheap. They are half the day in their father's counting-house, and the other half learning French and German; for the old fogy laughs at the "classicks," and says, "My boys shall learn the living tongues, and when one goes to Paris and the other to Vienna, to open agencies, they'll be as up in the lingo as the natives themselves."

Place pour les dames, and particularly a good deal of *place* for Mrs. Jonathan Jones. You see her struggle to get into the cab. It reminds one—taking the door as a ravine—of Napoleon crossing the Alps. Behind, on the paternal arm, bangs Miss Bessy, who is all smiles and dimples, and sings like Miss Poole. On the other side, Miss Julia takes her father's arm: she sings unlike Grisi, but does not think so. The juvenile beside his mother is Master Bob, and appears to be imitating Mr. Weal, the new Clown. The small boy with the big hat, and the peculiar binocle—certainly not marked by the name of Voightlander, the King of the Opera-glasses—is Master Harry, mild and meek—the lamb to his brother's lions; while the gay deceiver, who, with his hand on his heart, and his toes turned in—the original manner, by the way, in which mankind walked—and who is pouring love-sweets into the little ears of gentle Fanny—is a snatched from a neighbouring house, one Tommy. The two smiling nurses—one with the baby—"a most beautiful child, and the image both of his father and mother"—look as pleased as though they were going themselves; while the poor solitary doctor's boy, with an innate disgust of his unsavory cargo, has bright visions of the Clown, and is thinking of throwing his basket over an area and sticking on to the cab behind; but, alas, his treasury is bankrupt—the last threepenny bit went for a bun and ginger-beer. Jeames may be observed standing grimly at the door. And the upper portion of a cabman's body, with his whip, has been introduced, indicating with singular clearness the hideosity of Mr. Jones in taking two cabs. The children follow in the second chariot, with the guardian Jeames, "who has been in the family well nigh seventeen year."

Thus, then, having packed and disposed of our family party—who depart with loud acclamations—we are sorry that we cannot (having no longer the brilliant pencil of Mr. Leech to illumine our path) narrate what took place before, during, and after the Pantomime.

THE GOOSE CLUBS OF LONDON.

WITH AN ILLUSTRATION BY PHIZ

The silence which the lower animals strictly observe respecting their own sentiments renders it impossible to ascertain, from good authority, what they really think of the manner in which we treat them. If they could speak, it would settle the question; as they cannot, we are reduced to guesses. There is, for example no dispute that while, in this country, and all over the Christian world, Christmas excites religious recollections, on which it is not our province to enlarge, nor our business to insist; it also evokes the highest gastronomical activity in both upper and lower classes. It is decidedly a feast, as well as a solemnity; and the feast is kept, and has been kept generally, with the most undying culinary fervour. When we say undying, we refer rather to the zeal than to those who show it. Well is it known at this season—especially among the out-patients of the hospitals of London—what can be effected by concentrating extraordinary vigour upon an ordinary action (not, alas! ordinary to all), the despatch, without the deglutition, of a dinner. Many of the votaries of the blessed season lay down their lives regularly every year, in the rites which they then celebrate, giving the last supreme proof of single-mindedness and enthusiasm, by undergoing a repletion which is always incommodious, and very often irreparable.

But to return to our geese. It is of that subject much rather than of the finer considerations of Christmas time that a great many people are thinking. The Goose-clubs have been as active as bee-hives for many weeks past. Sixpence every Saturday evening, after Wages received, for ten or twelve Saturdays, or even more; it seems but little for a fine goose; or, it may be turkey, and a bottle of spirits, to carry home on Christmas-eve, for next day's joyful dinner. But there are …clubs. Some of the Goose-clubs which abound in the poorest and most densely peopled districts of London require a light extra payment, while there will be more than one, and perhaps more than two, bottles to pack into the basket, and to garnish the …s in the end. Some of the clubs again soar above "the low line;" there, your instalments must be heavier, or, …shares being agreeable and easy-like," you may please yourself and make the payments "of an equal amount," provided you begin them earlier, and sustain them longer. "The object is to do everything comfortable, and to come it easy to subscribers." But, here, we say, the total amount subscribed must be more considerable, because the value proffered a itself far more interesting. There will be distinction in the prizes, and these will be determined by the dice or by a lottery, "all fair, and proper, and above board;" and Number One to have his first pick of the lot. His prize will include, in addition to the finest bird, a bottle of wine, and butts of the ardent liquors most in request, of each liquor one bottle—and it is expected that he will treat the company present. The second prize imposes a corresponding obligation on his drawer. In some places we believe, that the drawer of the third prize is amerced in the like honourable indebtedness, in the ratio of his luck. There is variety, we say, in the amount and methods of subscription, and in the nature and value of the goods delivered ultimately in return. But, in all these clubs, whether they be poor or costly, aspiring or modest, whether they content themselves with "the low line," or "come out strong, and do the thing somewhat spicy;" whether they be "neat and appropriate," —a set of speeches that are no better than they should be, or brilliant and pretentious, as is said of other speeches which are generally a great deal worse—in all these arrangements, we repeat, whether the principle of the club (which is, for the most part, the metropolitan principle), or that of the *raffle* (which is adopted in many rural places) be the basis of the plan, in all alike a provision is carefully made to ensure, on the part of contributing customers, a periodical extra potation, a supererogatory, yet unavoidable, amount of downright drinking. Boniface knows perfectly well what he is doing. He gets more for his goose than its nominal price. It appears a cheap goose at the money; but not seldom it proves the dearest which the poor man ever bought, the dearest on which his poor family were ever regaled. It is "expected" —and imagine not that convention obliges us to exercise their moral but irresistible despotism only in high society—it is "expected" of "gentlemen" when they come on Saturday to pay their instalments, that they should drink a drop of whatever they like best before departing. The expectation is not disappointed. Some comply with the rule, to comply with it; others comply with it, because they would have drunk even more than it requires, if it never existed, and they merely add that quantity to their predetermined allowance. It is the drunkard's joy, and the tippler's excuse; it is the boon-companion's snare, and, worse than all, it is frequently the sober and honest man's cup of enlistment, his recruiting fee among that lost and doomed battalion who reel through life in misty degradation, to end it in horror. Here, first, the taste—one day destined to prove so irresistible and so uncontrollable—is engendered in blood which knew nothing of it before. It is but little that the drunkard should be conscious that he is beyond injury; but drunkards can be trained; drunkards can be made of smaller occasion. Others are beginning where the old toper is ending; others are starting where he is arriving; others learn what *he* can never more unlearn; to others the nightmare, which he shall not shake off till he shakes of his carcase, is now but a strange sort of easy dream; down, far down the steep and slippery declivity, which he shall not re-ascend, he shall have companions or followers flung fast on the track; he could tell them that the first few steps include all the difficulty—he remembers something of it; easy enough, and swift enough, the subsequent rush, gathering new momentum, and overwhelming impulsion at every inch of progress; he knows it, and yet, growing idiotic, hardly knows it; knows it is, knows not how; and there they are, they come in a rout, they come on for his own bourne. Yes, it is a dear goose, even in money. That cheery sparkle of terminable insanity which the publican procures, did it even cease on Christmas eve, would be very large and very profitable for want be given in exchange but it ceases not any then; it is sometimes a life annuity, closed only by a death of despair, and by the ruin of a family. Eight shillings are not even the whole money price; there is the cost of the weekly tipplings, and possibly the cost of tipplings that become nightly, and then become matutinal as well as nightly. I suppose even this fraud or crime supplies at last the hands of the new expenditure—this new *at sacra* necessity; suppose even that work be not impeded, nor earnings forfeited, nor want (the want of a whole household) incurred; yet, in addition to the eight shillings and the "treats," perdition is sometimes estimated in the outlay for this peculiarly-purchased Christmas dinner.

On Christmas eve (not until after wages have been all duly paid in every establishment), the various subscribers assemble in the great lottery-room of the public-house which they respectively frequent. Those who may have for some time intermitted their periodical inebriation near the bar of the tavern, have liquidated the arrears on some subsequent Saturday. All is in trim, and it only remains to distribute the prizes. Under a wall, which, like every wall, indeed, is to-be-let with the evergreen hangings of the holly, are ranged the several assortments of bird and bottle; and generally they are located. The corresponding or duplicate tickets are deposited in a hat, from which each subscriber draws one forth. He gets the portion indicated by his lot. This implies that the landlord has himself divided and classified the prizes; and it is better so: for, otherwise a person might seem to be confronted at dice, and then perhaps find himself not sufficiently skilful, or rather sufficiently experienced, to choose the best bird. If he made a bad selection, he would still be obliged to defray the "treat" incidental to the first prize.

In the country the arrangements most in usage are, as we have hinted, on a different plan. The subscriptions are lower; but there are not prizes for all the sub-cribers. It is in fact a genuine lottery, leaving to the host a clear profit, and a profit more independent of the allurements of concomitant drink. There is hardly a village in many of the southern counties, where, for weeks before Christmas, the traveller may not see on the windows of the inns or taverns large placards inscribed with the words "To be Raffled for, on Christmas-Eve;" and a description of the edible and potable articles consigned to fortune is subjoined in the most picturesque verbal language of some host's eloquence. The qualification fee for partaking in the raffle need not be paid, in general, until the day itself of distribution—a destribution which will, probably, apportion quite as many blanks as premiums. At the appointed hour, dusk, in the parlour or tap room the aspirants—grooms, servant-maids, ostlers, mason, gardeners, broken-down tradesmen—a motley troop, like so many pilgrims to a holy shrine. Those who gain nothing are generally included among the recipients of the various "treats" which the more fortunate bestow; and so, for consolation's sake, many a disappointed loser is led to the public-house. The lucky and obliging persons who stupify others, are called the "standers;" not because they are peculiarly good at standing, in the true sense of that word, and certainly not because they know how to make others stand. On the contrary, the most direct and the most ordinary effect of their efforts appears to be to render standing a very difficult, uncertain, arduous, and even in many instances a desperate sort of achievement; a position, as it were, in the very face of the enemy, to be maintained at all hazards, though tasking the utmost powers of the defenders. They would say, to behold these resource and gallant men, still struggling with cheerful perseverance for their feet, notwithstanding that the ground seems to slip, and heave, and glide beneath them—one would say, but for the barred windows and the solid walls, and the serenely burning gas-lights, that a strong wind, amounting at times to a hurricane, was howling through the sheltered and comfortable chamber. But still they hold on, with a courage more unshaken than themselves; and it is only after they have continued "to stand something all round," for a considerable time, that they give up standing altogether. Then, in due time, their families, bold the prizes carried home—and often the now calm and peaceful prize-bearers themselves, whom over-exertion has reduced to a silent, meek, and even unconscious condition of mind. It has been known that the latter individuals have occasionally been the only objects borne across the domestic threshold. It has also been known that the head and its appendages have arrived before their straggling master. It has been known, again, that the latter should creep in a police-cell for the night, through his arrangement has not entered into his preconcerted plan; that he should keep time, unconscious of the bells, music and the many toned far-floating notes of proclamation which the bells of a thousand steeples were swinging through the frosty air of Christmas morning. It has been known that he had next day but little appetite for the dinner for which, during two preceding months, he had made provident exertions. In his little circle "some kind hearts have whispered, 'I wish he were here, enjoying the goose'" "Enjoying the goose, indeed!" says the poor mother of the family, who has a blackened eye, and loses less bright than would befit the season; "enjoying the goose, indeed! He'll enjoy *that*, for certain, whenever he goes enjoying *himself*."

Well it might be worse. There was a time, within the memory of persons still in the late and not die years of life, when the wife—who had long since "made her market," and whose eldest boy (if she herself did not choose to perform the errand) had fetched home from the scene of anything which might then have existed analogous to a modern goose-club, the proceeds of her husband's luck—if ere was a time when, sitting by the fire, she could have surely guessed where the absent owner of the vacant chair or honour was passing the vigil hours of the Christmas-eve. During the twelve days of the mirthful epoch cards were allowed by law in the public-houses, and at no other period of the year. Full advantage was taken of the license.

But there are other scenes, at home, even where a club-goose is to adorn the next day's table. The landlord, indeed, who long before had contracted in the country markets for the delivery of the necessary number, secures a rich profit out of the bargain; and it is significant of that truth that the raffles and lotteries in question should not be held at the poulterer's, where the staple particular of the trade would warrant and suggest it. There are however, as we have said, other scenes at home. The purchases have been made; the circle has been collected, so far as death and absence permit, and includes some visitor, some isolated friend, whose own chair is empty in a distant place; the evergreens make a bower of the room; the blazing fires pant and roar up the chimney; the stormy time has its own way out of doors—*quum ventus*; the year, for good or for evil, has closed its accounts with hearts that, for a while, cease to be uneasy any longer; the journeyman cares not a rush for his master, who hopes not now for an hour more of his services; trouble and care are voted digressions from the question before the room; the evening cup and the still later glass go round; and, with jest, and song, and story, the time must be honoured, and Christmas kept. Christmas kept! It will not be kept beyond its own appointed moment by those who have the most skilful appliances of friendly and hilarious detention; nor can those keep it who first have it not in that sense at all, the friendless and the houseless; for even Christmas finds such as it passes, rent leaves such as it found them. And the shudderings of their anguish in the wintry night air send along the electric chain "wherewith we are darkly bound" a softer and a painless shudder round many a warm hearth, where happier people listen for a moment to the muttering and unknown language of the angry wind; and they say that "somebody has passed over their graves," and think no more about the message of that mysterious telegraph. And they continue the convivial mirth till suddenly the bells break into jubilee; and the anniversary of that is come which, to borrow the words of Edmund Burke, "was a day of old proclaimed by the Holy Church a miserable saga, and not long before not worse announced by the voice of angels to quiet the innocence of shepherds."

The party separate in the hope that all will meet again next day to perform their respective parts in the "Popular Game of Goose."

Miles Gerald Keon.

A LONDON MARKET ON CHRISTMAS EVE.

WITH AN ILLUSTRATION BY G. DODGSON.

Will the reader be pleased to take a walk with us through the up roarious profusion and intricate variety of a great London market on the greatest of market-days? We will promise that his pocket shall not suffer, nor his sides be elbowed, nor his heels kicked, nor his hat knocked off, nor his dress torn, nor the gloss of it—if it has any—rubbed away. There are some who would submit to even those inconveniences for the sake of the spectacle which our companion shall behold, immunity from them all—safe, protected, safeguarded. Or, if a lady will trust herself to our guidance, she shall not so much as need her veil. If it rains, it shall not wet her; if it snows, as is very likely, she shall walk through it, and no flake descend upon her head—over it, and no flake shall remain. And for all, without being beset by any; see all, and be invisible; pass through the rude disorder of the densest crowd, and perchance amid blows, and not feel one single touch; may, she shall put questions, and get answers from whomsoever she be spoken to address; and out of them all not one shall know to whom he speaks, or even so much as that he does speak. On these terms let all come with us, who are inquisitive and timid; or inquisitive and lazy; or inquisitive and ill; or inquisitive, yet from some detaining cause, unable to follow a more corporeal guide; or, in fine, who may be desirous of meditating on the scene and the subject in which they themselves, perhaps, have made a part already.

First of all, notice the setting of the picture which we have to present to you. However wild and mixed and homely (like the proceedings of the time) still, like them, it stands under a beauteous and venerable shade, which no prospect, and casts, from the distance, a lofty influence over the tumultuous merrymaking and miscellaneous bustle of the scene below. That tall structure which every now and then wins the eye upward from the glare, and offers so pleasing an outline against the heaven, is nothing less than the famous and ancient Priory-Church of St. Mary Overy. The quaint name bespeaks the remote date; and what Christmas, with its ideas and sound, is to mince-pie, plum-pudding, and punch bowl, nearly that is this revered old edifice to the joyous and noisy plenty displayed and assorted beneath its shadow. For we are in the Borough Market; and St. Mary Overy's is its Christmas in stone.

The great conducive "pendent" is not the only particular to which we wished to refer when we spoke of the setting of our picture. It is a picture moulded in jewels peculiarly its own—the wild diamond of the gas-jets, flaring free of all impediment—the emerald and the garnet of sprays of heart-cheering evergreen, and of bright red berry. Indeed, the first impression that his almost unrivalled household market—after its stupendous fulness—is its lighting. In our days, we have in this respect a perfection of which previous times saw no specimen. That one butcher's shop, with its spouts of glare, soaring free, like winged steeds of fire, and subjected to no glass harness, would alone illuminate the entire space. It is not all honest people—but honest trade values it were—would have its radiance to be predominant and despotic—and does its best to exterminate the works that love darkness, especially pocket-picking: for there is scarce a pocket present worth picking which is not the voluntary intending tributary of half-a-dozen shops. You can hardly see, such is the rare glare, what you can hardly hear, such is the roar, such is the crowd; and, we must add, you can hardly hear, such is the hubbub. It is not merely the noise of bargainings, in which screaming does as much as reason can do towards abating exorbitant terms; nor the noise of those who announce what it is they have to sell at the full pitch of their voices, and then hoarsely reinforce the excellence of such cries respectively (we should fill a column in merely enumerating the rival cries which rage through the distracted air): it is not merely these sounds—nor the curses of altercation—nor "the discord of wheels that jostle," nor brays; but there are worse. Certainly, it is robust, and requires to be robust. That band or orchestra opposite the plate-glass windows of the grocer is doing its very utmost. But there is an organ-grinder within half pistol-shot, who has faith in the principles on which his instrument has been constructed: constructed, we allow, in disregard of harmony, but with profound attention to sound, and to the far-stretching and keen-wounding force of it. His, we need hardly remark, is not one of those pleasing and delicately-made machines called (peripatetic) cabinet-pianos. No: it is the emitter of a brazen-roaring, not-to-be-suppressed, all-pervading, long-persisting, and excessively loud-winded, style of melody, which takes no denial, and fears no rival. If we might use so bold a simile, without being considered American at resemble brass thunder. Yet, fearing, as we have said, no rival, this scientific and sallow stranger meets a superior. The superior is a boy with one leg; a man whose voice has made itself heard, ere now, although the artillery of two ninety-guns was taking at the same time.

But, "to bear is to conquer our fate;" let us disregard these distractions, and forcibly avert our much assailed senses to are things to be observed. What a number of large whi… …ed, the great majority late, and yet it is getting fuller … those to whom cheapness is an object, and to whom, besides (if it were not an object to them), the overcoming and beating down of the shopkeeper's first demands, is an exhilarating a joy, a triumph—these characters, we say, come forth at the re… …d of the market, like the reserves whom Tamerlane exhibited when, by the sacrifice of a more careless class of troops, he had fatigued the obstinacy

of his opponents. Prices are universally lowered now. The stock must be got off, and the fresh customers that pour into the scene know that fact well; we mean the fact that there is a feeling in the shop-keeping breast, in favour of clearing away the entire disposable assortment, which, in his fond hopes, the owner of that breast—or, in other words, the seller—may have accumulated.

Now, the first class of purchasers have retired; *they* were servants—housekeepers, frequently, with assistants, and coming, in some instances, and for certain articles on which certain savings were to be effected—from a great distance. The second class have also retired; *they* were also of the fair sex, carrying very small baskets, and sometimes followed by servants carrying very large baskets, but occasionally relying, on a different method, and requiring a good many of the purchased articles to be sent to addresses, taken down for that purpose, by the vendor. The third class have now come upon the scene; very different people, but in search, more or less, of the self-same description of good things. This class neither are servants, like the first; nor are attended by servants, like the second; nor can they presume to offer the mere addresses where they live as an equivalent for porterage, like part of the latter; but neither being servants, nor having servants, they get all things cheaper, come at a cheaper time, and offer in their whole guise and aspect, an infinitely more suggestive history, and a more fertile presentment of the domestic hearth. Ah! how various! Yonder is a resolute dame, evidently the mother of several children, though none are about her; obviously she has a servant, and the servant is minding the little ones at home. She will be her own carrier. Where is her husband? That is the point. She, not quite indeed victorious, yet not any way subdued, cares—but sighs not. Observe that frenzy of illumination, that palatial, yet thoroughly vulgar blaze, those inordinate, overweening, flaunting, gas-bespangled, public windows; he is inside, slipping, sliding, gliding, tottering on the brink of fifty abrupt collisions and ignoble "rows," but much restrained, and ultimately saved by the salutary remembrance of the severe guardian of his resides; from going not restrained, yet restrained (much to his advantage), when away.

Yonder, again, is happiness; much happiness. Where? You see that clean, white fustian jacket, and (odd as it may sound) those polished boots? Its owner is a thoroughly respectable man. His wife, often torn away and separated for a moment by the crowd, clings and grapples to his stout careless elbow. On his other arm hangs the capacious basket. Suspense-exempted woman and lucky man! They have a full purse at this close of the year; and to-night, when they hold their little retrospective review, conversing with grave cheerfulness about the past, their hearts shall expand tranquilly as they plainly ascertain and congratulate each other on the result.

Why do all that little family, you ask, hold fast to mother's gown? Because mother has no one at home in whose care to leave them. But why not, at least, in their father's? And where is their father? Better not ask; that woman's forehead is cut, and she, oth rwise being pretty, is frightfully disfigured by that wound and by the blackened eye, which tells such a tale of low, hideous, and brutal conduct, not practised, but endured. But even this episode, as it walks through the drama, succumbs to the spirit of the time and to the genius of the scene, and prevails not against the overruling influence of mirth and of cheerful activity pervading the general mass and preponderance of what you behold. Yonder is a brawl, vomited out of the door of a public-house; and seething, hissing, and murmuring to a considerable distance—disturbing, yet not interrupting—abating, yet not suppressing, the noise of complacent traffic and the bustling contentment of universal preparation. Not, perhaps, universal. To that book-nosed gentleman, with his hands in his trousers pockets, the time is no festival, and the market no particular occasion of profit. He is a Jew, and cares not for Christmas, one way or the other. There go some, who have either done all that the rest are doing, or have no such task to claim their attention. They are strolling, like ourselves, through the multiform changes, and enjoy their own thoughts. Thomas de Quincey tells us that, in his opium-eating days, the pleasure which beyond all that the formidable and dread ul habit procured him was the most valuable, the most inebriating, was the quick sympathy and divining fancy with which, in such glimpses, he penetrated into all the intents, operations, and history of the successive and torrent-like groups of a crowded market evening. We, with the aid, not of Asmodeus, have seen now the hints and imagined the filling up of the outlines of many a various social story. And now, the run of the market time seemed to speed away. And now the lamps are gone out the great lights of the scene. The three greatest last the longest; those of the grocers' shops, of the butchers', and (most brilliant of all), of the gin palaces. All are now extinguished, as midnight sounds; the place becomes quickly vacant of its crowds; and most people have gone home, where they hear the sounds of the storm without, drowned by the visit of the "waits" as they sprinkle every where a passing share of immemorial music in their ambulatory minstrelsy.

It is just 100 years—it is the centenary anniversary—since in the country places of England the memorable popular demonstrations took place, in opposition to the introduction of the new style. One great prejudice against it was, that from Rome had come the new and rectified astronomical calculation; it was some "popish novelty." And yet when the people, by thousands, turned out, in their indignation, armed with lamp and torch, and candle, to consult the midnight almanack of the Glastonbury thorn, and of its shoots, in different rural places—and to see by the traditional blossoming of the venerable plant, whether this was really Christmas, and whether the 25th of December, or the 6th January should prove in truth "the better man of the two," a feeling was manifested, for which a rooted prepossession would have been far more correct, by the name. M. G. K.

A NIGHT WITH THE WAITS; OR, MAKING THE MOST OF IT.

WITH AN ILLUSTRATION BY W. G. HINE.

WAITS ORCHESTRA.

First Violoncello	..	..	Mr. Scrape.
First Cornet-à piston	..	..	Mr. Blowhard.
First Trombone	..	..	Mr. Clang.
First Ophecleide	..	..	Mr. Grunt.
Bass Drum	..	..	Mr. Bang.
Triangle	..	..	Mr. Tinkle.

(*N.B.—The rest of the orchestra sent medical certificates, stating that their constitutions were too delicate to come out at night.*)

"Here's a go," said the Ophecleide.

"Such a disappointment!" said the Triangle.

"It's enough to break my 'art," said the Drum.

"I'll take to my bed," said the Trombone.

"You're all fools," said the Violoncello, who was respected as the most acute chap in the St. Giles Harmonic Society; "don't you see that the fewer we are the more we get."

This observation was received with a universal cheer, as having thrown a completely new light upon the subject.

"Look you," continued Mr. Scrape; "not only as regards the number to share; but, the smaller the number, the less the noise; which will please the unsocial amateurs, who will say, 'I never hear a band play more beautifully than when—(if you don't know what that means—it's soft); and so he'll naturally give us the more. And for the chaps as cut up rough, and have sick wives, there's quite enough on us to make a hubbyallow which will be dreadful to the afflicted person, and bring down a shilling at least."

The Cornet-à piston gave a shriek, the Trombone a clang, the Ophecleide a grunt, the Bass drum a bang, and the Triangle a tinkle, in token of the wisdom of the Violoncello; and the whole party saluted cut.

"Where shall we try first?"

"The Dials?" said the rest.

"Why?" said the Ophecleide, in a gruff voice.

"Because there we can just play at the seven corners, and then play down all the streets; and either disturb or delight the whole neighbourhood: it's all one."

It blew and it *snew* according to Mr. Tinkle, who said,

"It's very hard, as I have chilblains and no gloves nor mittens"—a statement which was echoed by the whole orchestra; but it was no use complaining, and so, selecting a corner-house—a "public"—where there were sure to be plenty of lodgers, they started at once in full swing in a sort of imitation of the "Row Polka." Up went the first-floor window—"Police! Remove those men." The "Police," however, had just pocketed a shilling subscribed by the band, and he answered—"Can't hear what you say, sir;" and this convenient reply he maintained during the whole performance.

The First-floor had a bad headache, and was sitting over a weak glass of brandy-and-water, with a wet towel round his forehead. He shouted "Police!" until his head grew worse; when, with an exclamation of an improper character, he flung down a bad shilling, and shut the window with such a crash that two of the panes went in pieces into the street. Second-floor was a Grub-streeter, who wrote verses and fictitious murders—the former for twopence a stanza, and the latter for a penny: his publisher, A. D., in fact, his proprietor, being one of the Catnachs, the celebrated encouragers of our ballad literature. This gentlemen relieved his poetic mind by shouting out—

Go away. Do not stay
Here, for we you do play.

And vanished to return to his duties. Third-floor was drunk upon that floor. He had a black eye and a contusion on the cheek bone. By his side sat a young wife, weeping; her baby asleep in her arms. From that window came neither reward nor complaint. From the second, only the poetic tribute we have recorded.

"This is slow work," said Violoncello; "try the next house."

Another polka. Window opened; and a head with a night-cap and a body with a dressing-gown appeared. The hands of the body bore a small yellow flute, with which the owner kept bad time

Meanwhile, the following conversation occurred within:—

"Mr. Tootleto, do you want to be my death?"

"No, Fanny; its only for a moment. These men play as well as Costa's band."

"Do you want to see me in my coffin, Mr. Tootleto?"

"Cover yourself up with the clothes," replied the husband.

Here there was a protracted fit of coughing.

"Do you hear that, Mr. Tootleto?"

"No, my dear," said the flute "amateur;" "I'm a listening to the band."

On this Mr. Tootleto was jerked back so violently and unexpectedly, that he dropped his flute, and the window shut with a smack.

"Nothing here," said Ophecleide.

"Yes," said Violoncello. "It will sell for sixpence." And he put the flute in his pocket.

"Never say die," quoth the energetic Drum. "Try the next."

The result was the contents of two chers of water from the second floor which were thrown so actrolly th they did great execution; the unrecking being followed by a consolatory assurance that there were two more pitchers at hand. The rapid closing of the window prevented all rejoinder.

"Here's treatment for hart," said Violoncello.

"And for bar'tists," said the Triangle.

"Try the next," said the persevering Bang.

"I've wet to the skin," said the Trombone. "I think I'll go home, and take gruel, and put my feet in hot water."

But the rest protesting, another experiment was made; on which a gentleman, in a Turkish cap and a flowered dressing-gown, with whiskers, beard, and moustaches, showed himself, and gently waved his right hand, from which hung tassels embroidered with gold. Presently, a sylph-like young lady appeared beside him, and encircled his motionless shoulders with her symmetrical arm, and looked up in his hairy face. The greater part of this information was given by the policeman who flashed his bull's-eye across the coupe. It was only for an instant; but a policeman's eyes are sharp, and he can see a very great deal in a very short time.

But to go on with the tale. The young lady disappeared into the room; but immediately returned with something like a silk purse in her hand. This she gave to her companion, who, with the purse into the street, exclaiming, "A pittance from a lover of art." And immediately the window closed, and the curtains resumed their sway.

"Now, then," said Violoncello, feeling the purse, "a half-sov.; it can't be nothing less from such a swell."

"I don't know that," said the Ophecleide; "perhaps it's only a sixpence."

"Pooh, pooh, pooh!" burst from them all. "Here, go under the lamp."

The coin was wrapped up in brown paper; then common writing-paper; then glazed writing-paper; then silk paper; and then appeared—a farthing!

The shock was dreadful—worse than the shower-bath; and then followed another shower-bath of malediction, which is a polite word for a naughty thing. When they had cooled a little—we mean morally—Violoncello, who had been examining the envelopes of the smallest of the coin, said, 'There's something written;" and, holding the glazed paper up to the lamp, he read, "A payment acceptable to the music." The malediction shower-bath began to operate again: "Here's a go!" "Here's a sell!" "Here's a do!" "Here's a humposition!" "Here's a hextraction." "Here's a swindle!" burst rapidly forth; and then again resumed, "He's a robber o' poor men!" "he's a ruffian, as don't know nothing about what music is!" "he's an extortioner!" But Violoncello stopped, and propounded the last and best theory:

"He's a swindler, or a forger, or a genteel burglar, or som'at of that kind; and he's disguised, and is passing in the Dials. What would a man respectable be doing in the Dials for with that there young lady if he hadn't a bad reason for it?"

"Ah, that's it; that's the explanation. Nothing but it." And Violoncello rose still higher in credit.

"One more house, and it will be the last," said the Violoncello; "but let it be respectable."

"Then we must leave the Dials." And so they did, selecting Gower-street as the flower of respectability; and began to play what they considered their *chef d'œuvres*—first, very piano; and, when they got impatient, very forte indeed. But respectability never opened either door or window. Its blank monotonous face ran down through a mile of lamps, and genuinely seemed impossible. Only thrice the doors opened, and twice a nursey came merely to tie stops.

The first said:—"You must go away. Your noise is spoiling the music in the drawing-room."

The second said:—"My master hates music that isn't music; and told me to tell you that if you played near his house, he would send for the police."

But the third was different. There was genuine love in the Dials for what there young lady if he hadn't a bad reason for it?"

"Ah, that's it; that's the explanation. Nothing but it." And Violoncello rose still higher in credit.

"One more house, and it will be the last," said the Violoncello; "but let it be respectable."

"Then we must leave the Dials." And so they did, selecting Gower-street as the flower of respectability; and began to play what they considered their *chef d'œuvres*—first, very piano; and, when they got impatient, very forte indeed. But respectability never opened either door or window. Its blank monotonous face ran down through a mile of lamps, and genuinely seemed impossible. Only thrice the doors opened, and twice a nursey came merely to tie stops.

The first said:—"You must go away. Your noise is spoiling the music in the drawing-room."

The second said:—"My master hates music that isn't music; and told me to tell you that if you played near his house, he would send for the police."

But the third was different. There was genuine love in the Dials for what there young lady if he hadn't a bad reason for it?"

A tidy servant-girl came tripping, with her dress held up, and said in a voice that was better music than any which had been made that night, "My mussis is ill, and couldn't sleep, and she can't bear loud music, but she sends you five shillings, and wishes the night was better for your sakes."

* * * * * * *

As a parting salute to the kind soul in whose duty she had been so ill treated, Violoncello proposed that they should play down the whole street; and so they did, and when "Tom the Queen," and the rest of that tuneful company, had been duly executed, the Violoncello declared that they had played down all the streets, and that it was time to go. At one gentleman came out in his slippers, and said he should go on custom, and contributed liberally. Another who demanded "Tom a Bedlam" from a window that proved loyalty. A poor third floor in an area threw out sixpence in a bit of paper. An old maid duly subscribed to the concert morally; and two little female mutineers, who came with one shawl over both their heads, held out each her threepenny bit. In fact, the neighbourhood was mollowing: supper, grog, and pipes, were soothing their cares; and the effect was quite a shower-bath of silver and copper—the most pleasant one the Waits had experienced; and so they played on steadily until it struck two (you may see by the end of the book that it was ten minutes to that hour), and then adjourned to a tavern, where the proceeds were finally settled in equal shares—every body and limb not suffering from the character of their instruments.

And so ends our "Night with the Waits."

ANGUS B. REACH.

THE MISTLETOE-SELLER.

BY EDMUND H. YATES

GAZING from the window casement on the trees all stripped and bare,
Heard I young and merry voices ringing through the frosty air;
Saw two maidens with their sister (she a widow's emblems wore),
Standing by an old man, selling Christmas at a garden door.

Brightly shone the maidens' faces; e'en the lonely widow's eye,
Kindled, as her thoughts were carried back into the years gone by—
As she gazed upon the berries symbolling the merry time—
Gazed upon the old man's face, and listened to his cheering rhyme.

"Buy my berries! buy my berries: here is holly red as cherries,
Rough and thorny as the season, holier than all trees that grow;
For according to the story, prickly leaves like these before ye,
Round the Saviour's brows were circled, eighteen hundred years ago.

"Maidens hasten—ne'er a trace on your bright foreheads care has left;
Hasten too, thou lonely widow, of thy lord so soon bereft;
Christmas adds to your enjoyments—Christmas lightens thy despair
Vanquished are our fears and sorrows in the genial Christmas air.

"Mistletoe! I, too, can sell you. Of its virtues need I tell you?
How of old the saintly Druids reverenced this humble tree?
What, when in this Christmas weather, loving hearts are met together
Are its properties peculiar, sure you need not learn of me."

Thus he sung; but as I listened sank my heart within my breast,
As I watched that elder sister, in the widow's mourning dressed.
What sad thoughts her heart must shelter of the loved one gone before
Who 'neath such a branch had pressed her in the vanished days of yore.

Blithely trolling out his carol went the old man on his way:
All his stock of mistletoe was purchased by the maidens gay;
And, as each one with her partner, 'neath the bough suspended, trips
Who shall say the pretty widow's are the only unkissed lips?

CHRISTMAS AT THE DIGGINGS.

(COMMUNICATED BY THE AUTHOR OF "THE THREE COLONIES OF AUSTRALIA.")

MOLLY DIBBS TO MISS JANE SCRUBBER.

MY DEAR JANE,—

How you will stare when you get this letter, and what's inside it. You must take care of the thin bits o paper, and take it down to Hi stin Friers, to the Bank, where they'll make it all right; and mind and don't lose 'em; and take a cab all to yourself as you go back, for fear of pickpockets. Oh, Jenny, little did I think this time three years, when you lent me four-pence to make up the money, after I pawned me shawl, and we started off to see the company go to Lady Blatherum s ball, that in less than three years I shall come to be one of the quality myself. I always thought Jack was made for a gentleman, though he laughed at the notion, and that was the reason that I would him with nothing but what he could carry at the end of his axe in a bundle; and wouldn't have old Toppington, with his flash gin palaces and five children; though, to be sure, aunt did go on awful, and never forgave me till day when we all quarrelled, and cried, and hugged one an another, and made it up at Gravesend, just before we sailed away for Australia.

Yes, my dear Jenny, Jack has gone and done the trick beautiful he made enough money at his trade at Melbourne to buy a lot of land, where I am going to have a regular house, with a parlour and a drawing-room all quite genteel; and then him and me can sa way to the diggings with Bill Sockum and his wife—her as was Betsy Grady; and Bob, the cockatoo, never; and a man and his wife by the name of Bagnall, that are natives—that is, not blacks, but born and reared here—leastways he was, she was from Maryborne. And we had a horse and cart, and was a-foreing on the road, and I popped out of doors same as when we once went gipsying to Epping Forest, and slept under the cart at night. And we had lots of luck, our holes turned out first-rate. Jack's share comes to nigh upon twelve hundred pounds. So when I go back to Melbourne I mean to set the fashions, which, of course, I can do, having been six months under-cheek-maid in Regent-square. As for our quality—at least, those that used to be before these diggings turned up—they know nothing about it. I only wish friends would send Lord Balmerston out for Governor. My Lady does know what's what, and she would have all my support.

Oh, Jenny, you've no notion how delightful things is here—everything topsy-turvy. We are the masters and mistresses, and the swells have to wait upon us. If any of them, although it should be the Gold Commissioner himself, want my Jack to go a job of carpentering, they must ask me first, and if I don't like their cut, I wait Jack to take me a walk, why then he says "No, thank you, my good man," quite polite like, "I can't find time to accommodate you."

Everything is contrary wise here to what it is with you in Whitechapel. When we are going to bed you are rousing up; when we are perspiring most dreadful, you are slapping your arms to drive away the blue frost.

We are now looking out for Christmas—we can tell it's coming on, Bagnall says, by its being so blessed hot. Oh, I shall think of you and me in Old England, flattening our noses against the cook-shops, longing for a slice of smoking plum-duff; when our Christmas pudding comes on the table, big enough to feed all your court, and not a few dabs of plums spread about almost out of holding distance, but as thick as you can stick. Why, Jenny, we have none of your half-ounces of tea and half-quarterns of bread: our party takes a chest at a time, with a couple or three bags of sugar, five hundredweight, and half a ton of flour. When we make tea we stir it up by the handful. Then, when we do make a feast, what *do* you think we have. You'll never guess. Why, real champagny fizzing stuff, like ginger-pop; only it gets into your head, and costs £2 a bottle. Not that we do much in that way, for Jack was always rather temperance; but there are plenty here of single fellows, with lots of luck, always ready to stand treat if I will just look to their shirts and buttons a bit, and likewise speak a word favourable to some of the single lasses.

But my dear Jane, when you read this, you will say, is there no unpleasantness in this Australia? Does everybody pick up golden nuggets and wash out lots of scales and dust? Not by no means, my dear. First, the flies is dreadful; likewise the dust and little black flies what get into your eyes and nose, so that green veils are as common as on a Epsom day in Kennington. Then when it rains, it rains as if the water-tap had burst right over your head, and blows so that my Jack says you must hold the hair on your head. Then as for the gold, bless your soul, it's not to be scraped up with your fingers. No; you must make pits as deep as wells, and go at it as if you was laying gas-pipes; and you may have no luck, and get nothing, or next to it. But then, there it is that we beat the swells. Five shillings a dozen for washing shirts, £1 to 30s. a day for carpenter-ing at houses, and such like: why what is it to me, as was used to stand at the wash-tub all day for 1s. 6d. and my victuals, and perhaps a drop of gin for Jack, as used to walk a good three miles to work, from six to six.

But Lord, Jenny, it makes me laugh—though, to be sure, I'm sorry for the poor devils—to see the figure the quality cut that come here, with their thin slimy boots and eye-glasses, thinking to pick up nuggets, as if the were pretty shells at Margate. They've got no money they've got no trade. They don't see as soon as us on the passage into port, when they find there's to go, they've nothing left but to turn out men, and wait upon us that are the real quality. Some would have 'em at no, they are so awkward and stupid; although the Bishop preached a sermon about lucky diggers being not too proud to poor guests. But I persuaded Jack to speak to our party for a couple that was uncommon badly off, and particular handy, for I thought I might pick up a notion or two a-out fashions for the times when I get Whitechapel House for a swarry in Melbourne. I remember one of 'em well when I was at the Square—he give me a bad half-crown to give a letter to our young lady, and wanted to kiss me, the blackguard)—by the name of the Hon. Captain Blatherum,

of the 19th Hussars, and did look beautiful in his uniform, to be sure, for he had not lost his front teeth then. But he keeps a-t that dark now, and calls hisself Mr. Frederick Blunder. I did hear from Mr. Tubs, the butcher, that the Captain had gone all wrong, and been signing somebody's name or something, and been obliged to go to Ballon in oreign parts. But I said nothing, except to Jack, for it is such an to have a real captain and a lord's grandson to blow up when I feel cross. But he is handy at nick-knocking off bottle rings and corks without breaking the bottles, and aint a bad cook, but such a azy beggar and such a one to lush, you would'nt believe. Our party likes him because he can sing, and no mistake. Our other slavey has been one of the slop gents, in white cravats, that roll out ribands so saucy. Slokum's wife remembers him; though he pretends his governor is a real gentleman, we know better. He's not much use, but he can sing too, and play on the fiddle, and the Captin likes him because he gets the wood and the water and does the dirty work. Oh, Jenny, I often wish you could see me on a holiday, in my gold-coloured satin gown and blue parasol, hanging on Jack's arm, with our little Maggie dressed exactly like little Lady Julia Huffy, and Jack looking so noble in his mustachios and red shirt, and these poor devils of swells running about quite respectful—ah! you would enjoy it, as I do. I often thunk of the pious lady at Capham, who was so genteel she would not have me, bekose I came from Whitechapel. I seen her son the other day driving a cart for his living, dirty, and raythe drunk.

But, never mind, my girl, you shall come and have a share of our luck, though you can't spend Christmas with us.

* * *

Mind, before the ship sails, and go and see Hampton Court and Windsor Castle, and bring pictures of both, and one of the Queen, and remember all about them, likewise a book. And I send a list of the clothes you are to bring for me out of the hundred pounds; and give five pounds to the deformed girl in Rosemary-row, that taught me to write; if it had not been for her, I could never have been one of the quality when we came to our fortunes. Also, buy me, for my drawing room table, four books—one white, one green, one red, one blue; and a little round thing they sell at spy-glass shops, called a globe, painted different countries; but mind the Belgrave-square is wrote on one side, and Victoria on the other.

Likewise, I shall want some clothes for Jack, who only wants the right things to be quite the gentleman. Go to Fubey, the tailor that used to make for Lord Huffy, and get two suits in the height of the fashion, Jack's exactly the same size as Lord Huffy, only a better figure about the chest. If Fubey makes any humming and hawing, show him the bank-notes—he'll do anything for money. And now there's one thing more to make Jack complete—that's a hat. I want the best; none of your ticket slops for me—your French silks and Paris velvets flaring in Whitechapel. There are some tidy shops in the Strand; but thoose don't come to my notion. You go to Pall-mall; there's a shop with one hat in the window—buy me that hat! If it will fit a gentleman, I am sure it will fit my Jack.

And now, dear Jenny, my paper is full, and I must end. Make yourself comfortable, and set out as soon as Captain Higgins tells you the *Barbary Bell* is ready; and drink our healths on Christmas-day, when we drink yours. Jack sends love, and says he has got a husband for you; so no more from your loving cousin,

MOLLY DIBBS.

P.S.—I open this letter to tell you how we manage Christmas at the Diggings. No fires, except to boil the pots; and no snowballing. But no work, and no shivering and shaking: everybody has plenty; for those that have not been lucky are welcome to take a tucker of what they please. For our party, we had a quarter of a bullock, and two wild turkeys; a lot of Van Diemen potatoes, at 2s. a pound. We don't dine in-doors, but just sit down on the grass—and there's very little of that near the Diggings—handy to a creek for water. The bachelors stand a dozen of champagne and a dozen of colonial, so we lay about and eat and drink, and give what's left to the dogs and the blacks.

The "swells" are rather down in the mouth; for I take their Christmas is as much the worser, as ours is the better, than it used to be. It's precious hot; but that doesn't prevent the fiddles from going like mad all round, and no end of dancing. Instead of the cradles swish-swashing down the valley, we hear the German brass band. They know all our tunes; and when they flare out with "A Good Time Coming," I feel rather choked in the throat like, to think that its come in earnest to us poor folks. I'm almost sure I saw a tear in the eye of the Captain when he caught the tune at the same moment Bill Stokum was roaring out "more Champagny, and look alive, my boy." So good-bye, once more! God bless you, my girl, and send you here soon to join our next Christmas pic-nic as well my swarry.

COLD CHRISTMAS?—NO!

BY CHARLES MACKAY.—THE MUSIC BY SIR. H. R. BISHOP, KT.

I.

Cold Christmas? No!
Our Christmas is not cold;
Although the north winds blow,
And pile the drifting snow,
And the beech trees on the freezing wold
Rock sadly to and fro,
Our Christmas bears a warm true heart;
His face is red with glee;
And he jests and laughs,
And he sings and quaffs.
He was never unkind to me, my love:
May he never be cold to thee!
Cold Christmas? No! no! no!
Cold Christmas! Say not so.
He is warm and bright,
And he brings delight
To the hearts both of high and low.

II.

Old Christmas? No!
Though states and kingdoms wear,
And change and ruin grow
From ages as they flow;
He's as light of tread, as young and fair
As a thousand years ago.
The morning beams are always new,
And scatter blessings free;
And the Christmas day
Is as new as they.
He was never old to me, my love;
May he never grow old to thee!
Old Christmas? No! no! no!
Old Christmas! say not so;
He shall never part
With his youth of heart
While there's love in this world below.

CHRISTMAS-EVE AT AN OLD FARM-HOUSE.

BY EDMUND OLLIER.

Christmas is a season of boisterous merriment, of hearty physical enjoyment, of feasting and hilarity; but it is also a time of obscure old-world faith and traditionary romance—of poetical beliefs and customs, derived from the superstitions of an earlier day, and lingering, ghost-like, about our winter hearths, even in these utilitarian times. It is true that they no longer form part of our religious creed, and it is well that they do not—for, as matters of serious belief, they are pernicious; yet still they find, and must always keep, a home in every loving and reverent heart, for the sake of their simple, child-like beauty, and for that redeeming sense of spirituality out of which they arose, and which still renders them of interest to all who have any perception of those vast, vague regions which stretch beyond the limits of bare reality.

The only way, however, to see Christmas—and, especially, its advent—surrounded by all its poetical associations, is to spend it in the country. In town it is tricked out in the last new fashions—very pretty to look at, yet in nowise romantic. But there are old, out-of-the-way nooks in England, which, lying from off the great high roads, seem to have been forgotten by the grand reformer, Time, and to be the same now as they were centuries ago: places where the dead men, whose very graves have long since vanished from the little, grassy churchyard, might come to life again, and return to their own identical houses, and go back to their work under familiar elms, and find their former haunts and manners still the same. These are the spots where you feel the Poetry of Christmas to its full; where you feast, as it were, in the presence of your ancestors, and see in imagination the shades of your English forefathers descend, like a gentle twilight, over all.

I once spent a Christmas after this manner at the house of a friend in Hertfordshire. My friend was a sort of gentleman farmer—a man of education, and passionately fond of ancient customs; and the house in which he lived was one of those delightful old edifices which give you the sense of home more completely than any modern building can. Its solid oaken timbers and massive brick walls did not, perhaps, really exclude the weather more perfectly than the light, economically-built tenements of the present day; but they gave you the *sentiment* of exclusion in a higher degree—and that is much. You seemed fortified—not simply housed—against the assaults of wind and rain and snow. You heard "the exculted tempest" raving at a distance, and knew that there was more than a brick and a half between yourself and it. Then there was something in the aspect of that old house, as in the aspect of all old houses, which in itself engendered a poetical frame of mind. Who could live for many days among its lustrous-paneled rooms, its deep-recessed bow-windows (one of them of stained glass), its fantastic passages leading to strange and shadowy nooks, its legendary chambers, its capacious fire places, its carved chimney-boards, and its vast echoing flights of stairs, without lapsing into a pleasant dream of antiquity and romance? Who could be cold, from outside, its crowning gables and grotesque chimney-pots, its glowing red-brick walls, mantled with ivy, and touched with wandering lines of moss, like gleams of sunlight fixed, without observing to himself, "This is the kind of nest for a poet to live in"? Who could listen at night to the old pensive language of the wind among the trees with which it was encircled, and not feel a more gentle and awfully loving sense of the Universe come over him? Another thing which made me like this house better than any other which I had ever seen, was the fact that, although situated in a most woody and rustic part of the country, it was at no very great distance from London; so that its occupants could pass from solitude to the thick of town life, and from that back again to solitude, with little expenditure either of time or trouble. Sitting in a dreamy mood by the fireside at night, one might almost imagine one heard the harbingers of the great heart of the metropolis coming towards one upon the wind, when it set strongly from the south. But this, of course, was merely fanciful, as the place of which I speak is about five-and-twenty miles from London.

One of the plainest signs, at the house of my friend F., of the near approach of the great festival, was the sallying of the whole family into the adjacent woods, accompanied by the men-servants, on the morning of Christmas-eve, for the purpose of cutting branches of evergreen, and of selecting a great log of wood for, ah, after the old manner, on the dining-room hearth; for, although it burnt coals at all other times of the year, he would on no account omit the Christmas Yule-block. On the occasion to which I am more particularly referring, he entertained us, while we were basking before a, with reminiscences of the manner and quaint customs of these sylvan incursions to the season. It is true, he observed, that they are of pagan origin; yet they seem to have the air of such hallowed relics of time, as ought to be typical of the enduring greenness and the wonder of the science. He remembered that mistletoe was the sacred plant of the British Druids; and that the old dark forests which, centuries ago, covered the greater part of this island, had often witnessed the solemn procession of white-robed priests through the glooms and the close interlacements, and had seen the mystical branches of this strange parasitical production lopped by golden sickles, and distributed among the people, who would burst forth into the outer day-light, shouting "The Mistletoe for the New Year!" He told us that the Celtic and Gothic nations, before their conversion to Christianity, paid equal reverence to this plant; and that even the ancient Greeks regarded it with a religious feeling. He also remarked, on the authority of Stukeley, that the custom of placing mistletoe on the altars of churches, was preserved in the North of England even so late as the early part of last century; and that at York, about the same period, mistletoe was carried on Christmas eve to the high altar of the cathedral, and a public and universal pardon of all wicked people was proclaimed "at the gates of the city towards the four quarters of heaven."

On our return, the yule-log was kindled, and the rooms were decked with the shining branches of evergreens; when my friend straightway grew eloquent on that beautiful superstition about the joyous spirits sheltering themselves in these artificial bowers during the time that their own woodland haunts are cold and dark and bare. After supper (at which there were mince-pies enough to give us all indigestions for a year), we had a huge bowl of wassail—genuine old English wassail; not made, according to the fashion of some degenerate sons of their fathers, of foreign wine, but of native ale, just heightened in its flavour by Eastern spices, and hissing with a wealth of roasted apples. The greater part of this having been speedily disposed of, our host proposed that the remainder should be devoted to a performance which he said his servants always expected—an old silly custom, as he described it, though I believe he was very well pleased to be a party to its execution—namely, the drinking a health to the apple-trees out in the open orchard. As we all thought there must be something very picturesque and striking in this ceremony, we were well pleased to be present at it; so, the farm-servants being summoned, away we went to the appointed spot, the oldest of the servants bearing the bowl at the head of the procession.

It was a dark, clear, still night; not cold, and with no falling weather, but filled with that deep solemnity and repose which you can only know to the full in winter and in the country. A sabbath quietness lay over the whole earth, and seemed to stretch upward to the heavens, which, in their vast and starless gloom, appeared hushed in the profound and mighty sleep. The trees and hedges, dimly seen, like intenser darknesses in the more general darkness, gave out no voice, and made no movement; for not the slightest wind was abroad. One of the servants carried a horn lanthorn, which, suddenly revealing in its progress small sections of the landscape, and as quickly merging them into chaos, and every now and then striking up gaunt shadows which lengthened out into the wide vagueness of the night, created around us a sort of phantasmagorial world of advancing and receding shapes. We met no ghosts, however; and, having arrived at the orchard, we formed ourselves into a circle around one of the best-bearing apple-trees (the rogues took good care, in their selection, that no discredit might be attached to the charm, by an untoward result the following autumn), and the wassail-bearer sang, to an ancient tune, that seemed as though it might have been chanted centuries ago by Saxon tillers of the soil, this stanza:—

Here's to thee, old apple tree!
Whence thou may'st bud, and whence thou may'st blow,
And whence thou may'st bear apples enow!
Hats full! caps full!
Bushel—bushel—sacks full,
And my pockets full too! Huzza!

Here we all set up a great shout, strangely mocked by the echoes; and the old fellow who performed the part of high-priest in this rough ceremony took a good draught from the wassail-bowl, and threw the rest of the ale, together with the fragments of apple, on "the lamb's-wool," at the tree. We then returned to the house; F. justifying the ceremony by the injunction of Herrick, one of his most favourite poets:—

Wassaile the trees, that they may beare
You many a plum and many a peare;
For more or lesse fruits they will bring
As you do give them wassailing.

On getting back again to the warm, bright room, another bowl of the same Christmas beverage was brewed; and, in the words of the poet just quoted,

We still sat up,
Sphering about the wassail-cup.

The yule-log burnt lustily and odorously; the evergreens flashed and flickered in the blaze; the strong liquor steeped our hearts as in the radiance of fifty summers; and we talked over all kinds of delightful Christmas traditions. We spoke of the blossoming of Glastonbury Thorn, which sprung from the staff of Joseph of Arimathea, and from which sprigs have been cut and propagated all over England, and, as the story goes, bud on Christmas-eve, and are in full bloom all the next day until night. We would by no means agree with the modern disbelief in this miracle, which we thought as respectable as many other aged miracles. We refused to acknowledge that there are similar trees all over the East, from the seeds of which others may be raised in this country; and we execrated the fanaticism of the Puritans, who cut down the original stock during the Civil Wars. From this we passed to graver subjects; and fell to telling the stock ghost-stories of the country round. Thence wider and wider did we launch forth upon the grey sea of Superstition; touching upon remote islands of ghastliness and dread; wandering in grim forests and haunted places between rocks; entering lonely houses upon deserted roads in the evening twilight; lurking about old churches and churchyards "in the dead waste and middle of the night;" digging for hidden treasure among ancient moss-grown ruins; attending Witch-Sabbaths in solitary barns; straying, in short, over the whole of that wild, dark region of belief which has been finely called "the night-side of Nature." Not that I, for one, place any serious faith in these dusky mysteries, which, viewed as a creed, can produce none but evil effects; still, while man remains such a riddle to himself—while there are such vast, unexplored chambers in our being—any attempt to people the darkness with tangible forms, however distorted by ignorance or fear, cannot fail to be of interest to all speculative minds, in the absence of certain intelligence. So I have always felt with respect to these matters; and so I believe my friend F. felt.

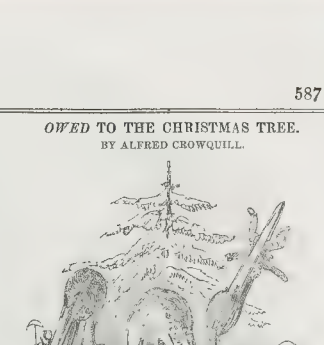
Among other superstitions of which we spoke, there was one which bears so exclusively upon the Christmas season, that I must here briefly advert to it. It was an old Swedish tradition, to the effect that "at the festival of Christmas," according to Olaus Magnus, "there is a strange mutation of men into wolves, in the cold northern parts; and that these human wolves attack houses, labour to break down the doors, that they may destroy the inmates, and descend into the cellars, where they drink out whole tuns of beer or mead, leaving the empty barrels heaped one upon another. And one skilled in the manners of this great change of a natural man into a brute, says that it is effected by a man mumbling certain words, and drinking a cup of ale to a man wolf; also, if in accent the same, the man natural may change himself into the form of a wolf, by going into a secret cellar or private wood."

At length our legends and our wassail came to a close; and, like the party of story-tellers in "L'Allegro," we retired to bed. Here I had not been long, before I heard the waits singing their carols beneath my window. The music which they chanted was wild, strange, and plaintive, yet soothing; and seemed at once to suggest the idea of "wind among still woods" at night. I lay in bed listening to them, and thinking at first, of the dark, hushed, far-outlying country all around, and out of which the voices appeared to be born; then, gradually, a sense of earth faded from beneath me, and I lay as if rudled in empty space, borne upward by those long, sighing melodies, which seemed as though they had been sounding out of my own heart from an antiquity, and as if they could not cease. They did cease at last, however; and then I fell asleep.

Such were some of the features of the advent of Christmas, as I experienced them at that old Hertfordshire farm-house. Never shall I forget them, [illegible] of comfort and romance mingled! [illegible] and quaint customs and light wishes, they [illegible]. By-gone [illegible] the [illegible] [illegible]

OWED TO THE CHRISTMAS TREE.

BY ALFRED CROWQUILL.



THE BIRDS THAT NESTLE IN THE CHRISTMAS-TREE.

That Christmas Tree, that Christmas Tree!
It is not what it used to be
When I was in my infancy—
That Christmas Tree!

That Christmas Tree, that Christmas Tree!
It held its arms out straight to me
With toys in all their brilliancy—
That Christmas Tree!

That Christmas Tree, that Christmas Tree!
Aspiring hopes it brought to me;
For King, indeed, I wished to be,
That Christmas Tree!

That Christmas Tree, that Christmas Tree!
My heart leap'd only just to see
The toys that might belong to me
From Christmas Tree!

And, happy time, when Christmas Tree
Such stolen kisses promised me,
When I was nearly twenty-three—
That Christmas Tree.

But now, alas! that Christmas Tree
Is sadly changed; indeed to me
'Tis not the same it all to see
That Christmas Tree.

I'm under wed-*lock!* lost the *key!*
I'm fast as any man can be;
'Tis called a matter o' money
As you will see.

Now of the Tree I'm parent stem,
My branches, when I look on them,
All youthful follies I condemn,
As wrong, you see.

My honeymoon had many fees,
In all its lawyer-like degrees,
For then they charge you what they please,

Those —— never mind.
But when our buds began to grow,
And stood out in an awful row,
And some came out in real full blow,
I'd lots to find

First Tom's commission in the Guards,
And dre-ses for the girls by yards,
And Joe's in-te-rannons at billiards,
Were dreadful bows.

Then suppers that I gave young men,
Who never would be off at ten—
Who were so long about the when
They would propose.

The tradesmen flocked at Christmas, too:
Of-course "they'd got it all just due,"
For which they must depend on you
To meet at all.

And then the suppers and wax-lights
With fiddlers and the harpsin-li-chords,
And then the men to put to rights,
After each ball.

Then that green brougham, just to show
We were above—all those below;
And let the neighbours see-n d know
We were genteel.

Next, singing, dancing, cla-sics, too
For all my little thriving cr-
Taught me what fathers only knew
In Fortune's wheel.

Then servants with their minds all bent,
On seeing out what must be spent
With taxes, follow-ers, and rent,
Were awful pests.

Then poor relations in a row,
In their attendance never slow,
Will always patronise you so,
And be your guests.

The girls all stick by their mamma,
And sadly sacrifice papa
For boxes at the opera,
Without remorse.

The draper, *modiste*, wreaths, and gloves,
To decorate my charming doves,
My situation much improves—
'Tis all of course.

Then courting in my house is rife,
And young sea-wil not take a wife
Without a good round sum for life
From out your cof.

Then wedding-breakfasts and *trousseau*,
Composed of what I do not know,
Are rather dear parts of the show,
And dreadful trash

Now these are fatal truths, you see;
And yearly come round all to me,
And hang upon my Christmas Tree,
Then why should I

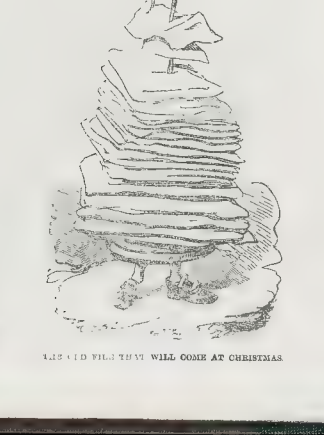
Sing praises of a by-gone je-ke,
Intended for the younger folks?
My merry Christmas is a joke,
To fun defy.

And really 'tis a horrid sneer,
To wish for me a happy year,
When all the wretched bills appear
To tax my purse.

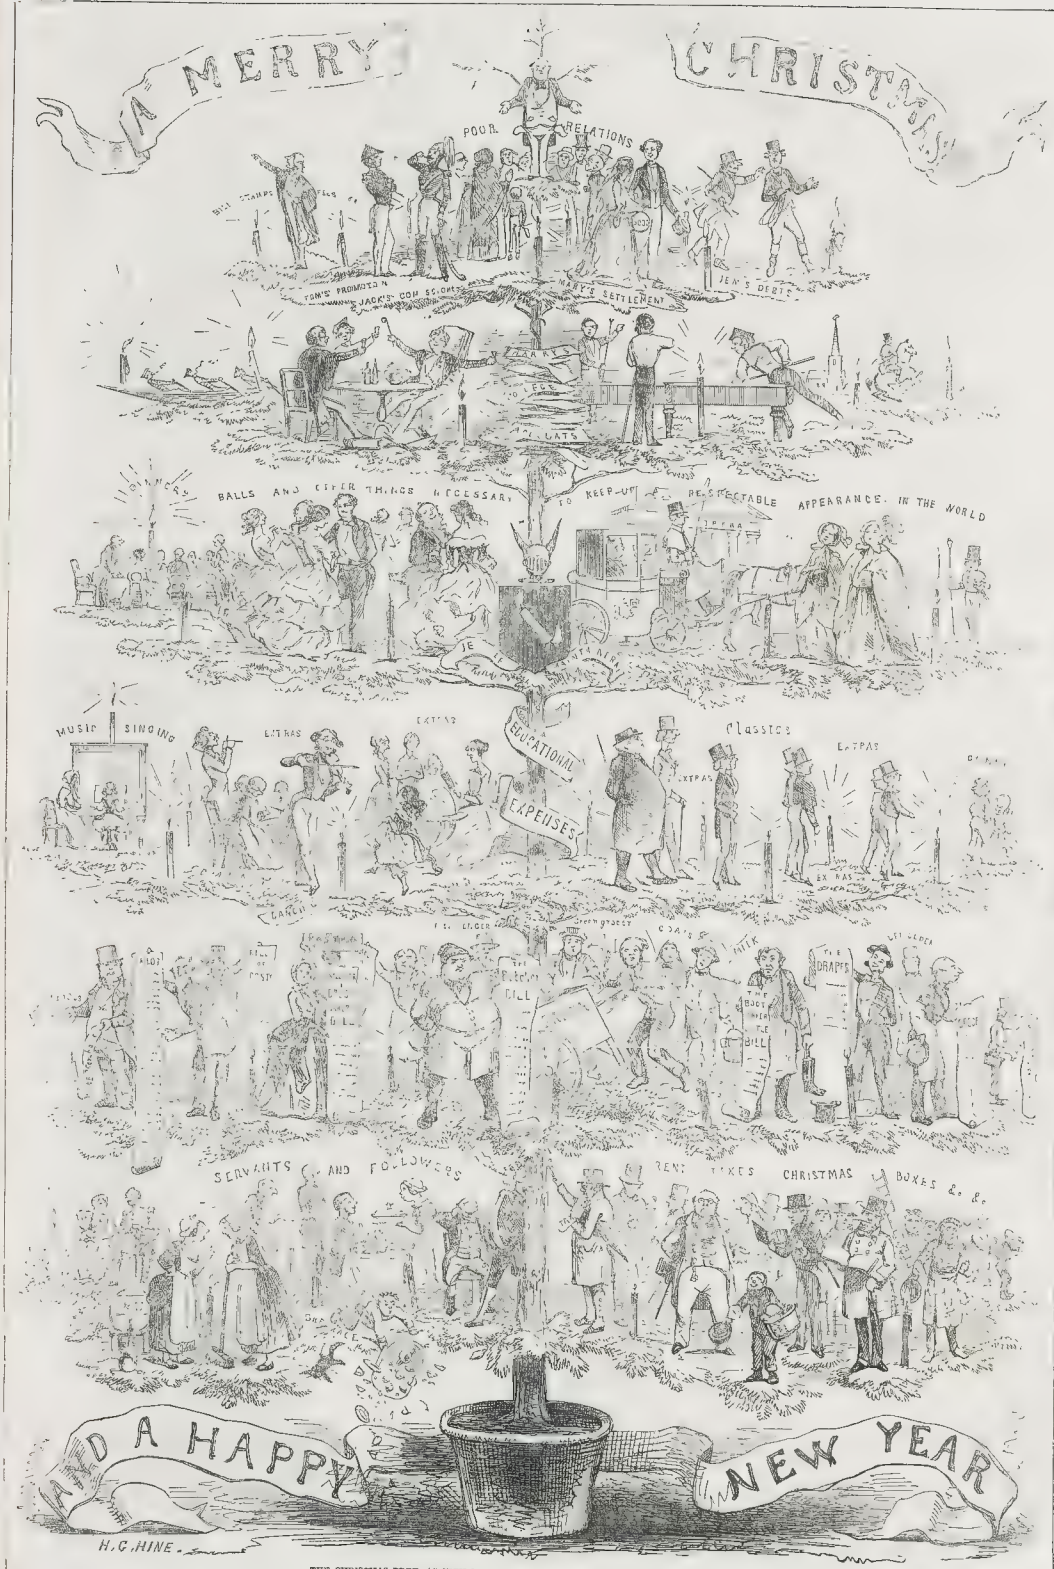
So resolute I still will be,
And say I do not like the tree,
That brings such bitter fruit to me—
For nothing's worse.

My tree is grand! as grand can be
It brings a prize to all but me;
For in each sweet a bit I see,
To check my smile.

One little stalk in amiest be-fun,
Bears, I-s-n that instant done,
With regret-b-let at always run
A SHARP OLD "Bill."



THE OLD FOLKS THAT WILL COME AT CHRISTMAS.



THE CHRISTMAS TREE, AS SEEN BY THE FATHER OF A FAMILY.—DRAWN BY H. G. HINE.

THE ILLUSTRATED LONDON NEWS

No. 661.—VOL. XXIII. SATURDAY, DECEMBER 31, 1853. [WITH A SUPPLEMENT, SIXPENCE.

THE OLD AND THE NEW YEAR.

THE close of the Old and the beginning of a New Year is a period always suggestive of serious reflections. Not only individuals and families, but nations, do well at such a time to review the past and the present, and to look, as far as human foresight can pierce it, into the dim and uncertain future. To the statesman and the journalist, but more especially to the latter, is in our day reserved the task of making this annual retrospect. For the day and for the week he is for the most part but the dry recorder of events of which he does not always see the sequence and the connection; but at the end of the year he rises to the dignity of history, and surveys events from a higher eminence, and with a more enlarged view. In this respect he performs a public service. He becomes the mentor and the adviser, as well as the annalist and historian, and proves the high state of civilisation that his country has attained, both by the duty which he undertakes on its behalf, and by the manner in which he discharges it.

In every such retrospect there are of necessity a light and a shade. In the darkest of times, and in the most deplorable of circumstances, there is always something for which men and nations have to be thankful. In reviewing the history of the year which ends this day, it will be found that the people of the British Isles have had much light for which to be grateful, and little shade of which to complain. At no previous period—not even when the victorious armies of Wellington and the Allies restored peace to long-distracted Europe in 1815—was the position of this country higher and more enviable than in 1853. In all our vast possessions rebellion and disaffection only showed themselves to be discomfited. Foreign warfare waged against us was, in every instance, shown to be powerless, either to benefit the aggressors, or to injure this country. India was maintained in peace; Burmah was reduced to submission; the Cape savages were brought, if not to reason, to obedience; and our vigorous colonial offshoots in America and Australia daily increased in power and prosperity. At home the state of things was equally cheering. By persistence in, and extension of, a wise commercial system, the burdens of trade and industry were removed or alleviated—impolitic taxes were repealed—our whole fiscal policy was rendered more consonant with the principles of equity, than it had ever been before—and the wealth and happiness of the people were in a large degree augmented. Great Britain—that old and venerable state—so far from having reached the natural period of decay, was proved to be in the enjoyment of a more elastic youthfulness than could be boasted by any other state in the European commonwealth. Strong in the indomitable character of the people, in the blessings of a free constitution, which was not the theoretical contrivance of an hour, but the practical result and natural development of the experienced wants of ages; and wiser than all other nations, either in the Old World or the New, in the comprehension and application of Free-trade principles, as well as of every other description of freedom which civilised communities can enjoy,—Great Britain was able to justify the confidence of her foremost men, that, so far from having passed her culminating point, she had not nearly attained the zenith of her splendour. The value of her colonies increased, not simply by the accidental wealth so suddenly revealed in the largest of them, but by the natural overflow of her teeming and hardy population to every region where there was wealth to be won by enterprise and industry; her workshops and factories resounded with the whir of wheels and the hum of well-paid labour; while, as a natural consequence, her prisons and workhouses became emptier than they were ever before remembered. Those who looked beneath this glittering surface of prosperity—who saw deeper into the inmost workings of the vast human hive, might have discovered many causes for national humiliation in the evils which legislation had either neglected to remove, or been impotent to cure. They might have seen ignorance producing its ordinary results in the impoverishment and degradation of thousands—and in the fomentation of ill-feeling and jealousies between classes dependent upon each other for fortune and subsistence, and both equally valuable to the nation. But, even with all these drawbacks—with juvenile criminality, almost breaking the hearts of philanthropists; with brutality and intemperance too certainly pervading the habits of the lower stratum of the community; with strikes and lock-outs, embittering the minds of masters and men in all the great manufacturing districts—it was impossible for the most desponding politician to deny that Great Britain was a free, a prosperous, and, compared with any other portion of Europe, an eminently happy country. However great might be the evils we had to endure, there were amongst us no despotic sovereign and rulers, no irresistible mob, no struggles for the first rights of men and nations, no great social questions, only to be solved by revolution and bloodshed; but a people renowned for their common sense and proud of their liberties, a settled and stable form of Government, and a Legislature laudably anxious to do its duty to the lowest as well as to the highest of persons in the social scale.

But the very brilliancy of our position as the foremost of free states, and the representative of public right in Europe, brought us both anxiety and peril. Being so great, we had great duties; being so mighty, we had responsibilities from which smaller states were exempt. We could not, in our own interest, any more than in the interest of civilisation and humanity, permit the wicked ambition of an irresponsible despot to triumph over an unoffending neighbour. We could not suffer the Czar—the representative of brute force and barbarism—to ride rough-shod over the rights of Turkey, and to re-arrange the map of Europe at his pleasure. Our generation was so unaccustomed to war except in remote Asiatic provinces, that it had come to believe in its impossibility nearer home. The Emperor of Russia aroused us from the comfortable delusion; and the thrifty, hard-working people of England, having to pay so severely for the wars of their ancestors, had to face the probability, if not the certainty, of a war on their own account. The prospect was not an agreeable one; and rather than believe in anything so incredible as a general war in the days of steam and electricity, the public, and perhaps some of our statesmen also, believed in what was still more incredible—in the generosity, the moderation, the love of justice of the Emperor of Russia. They did not remember that, in assaulting, distracting, and seeking to divide and appropriate Turkey, he was but following out the traditionary policy of his country and his dynasty, and would not be deterred from his purpose except by the use of the *ultima ratio*—the cannon or the sword. Hence the great error of the year 1853, and hence the dark cloud that hangs over the fortunes of 1854. Had the greedy invader been told by the Governments of Great Britain and France, or even by Great Britain alone, that the passage of the Pruth by his armies would have formed a *casus belli*, and that such an aggression would have been resisted to the last extremity by all the allies of Turkey, the war now imminent, if it have not commenced, would have been averted. The first false step would have been prevented, and foiled Rapacity might have had to wait twenty years for

SINOPE, FROM THE BAY. (SEE NEXT PAGE.)

another opportunity to satiate itself. But the nation, or its rulers, were not wise enough. Laudably anxious to prevent so great a calamity as a general war, and miscalculating the character and motives of the public disturber, the Czar was allowed to gain time, and to improve his opportunity. The fire that might readily have been extinguished in June, became in December a conflagration to threaten the world. The flames are springing up on every side, and must be put out. It has become the first duty of England and France to extinguish them. We are not sanguine enough to believe that it will be an easy one. But the people have no fears for the result, and will shrink from no sacrifice to attain it. They have a good cause—the public feeling is unanimous—and the detestation of Russia is as strong as the instinct which teaches that such ambition and aggression as the Czar has shown, are hostile to the liberties of all Europe. Never in the history of this country was a war undertaken under more inspiriting auspices, and with so little opposition or demur from any portion of the people. It is unfortunate that such a war should be necessary; but, being necessary, the British people will comport themselves in it as befits their high position, their ancient renown, and their innate sense of right.

War, pestilence, and famine, have successively threatened us in the memorable year that closes this night. The pestilence has as yet, but lain lightly, and judicious though tardy precautions may even now avert its heaviest visitations. Famine has, by wise legislation, been rendered less severe within our shores than in any other part of Europe, and has not yet pressed to so serious an extent upon the people as to derange the operations of industry, or inspire fears for the public tranquillity. Even the war has its favourable side. We have for our stanchest ally the greatest nation of the Continent, as well as the good wishes of every honest man and right-thinking politician throughout all parts of Europe that are not Russian and barbarian.

BATTLE OF SINOPE.

(From the Morning Chronicle.)

The following account of the disastrous engagement at Sinope is founded upon the investigations made there by the captain and officers of her Majesty's ship *Retribution*:—

On the 13th November a Turkish flotilla, consisting of seven frigates (one of 60 guns), three corvettes, and two steamers, anchored in the Bay of Sinope. On the 21st a Russian squadron of three two-deckers, a frigate, and a brig, stood in for Sinope, and, after reconnoitring the Turkish position, cruised off the harbour, maintaining the blockade in spite of very heavy weather. It was suggested to Osman Pacha, the Turkish Commander-in-chief, that as an action would be unavoidable, the best course would be to force the blockade, and make a running fight of it; but, not contemplating any reinforcement of the Russians, he unfortunately rejected the advice of his subordinates, upon the consideration of some of his vessels having been damaged in a recent gale, and on the probability of a successful result if the action was fought at anchor. On the forenoon of the 30th, a large Russian squadron, composed of three three-deckers and three two-deckers, under the command of Vice-Admiral Nachimoff, having also the flag of a Rear-Admiral, stood in for the bay under full sail before the wind, and took up a position close against the Turkish ships, the latter not firing upon them while doing so. Two frigates and three steamers remained outside to cut off the retreat of any Turkish vessel attempting to escape. Osman Pacha forthwith signalled his fleet to fight bravely to the last in defence of their country, and at noon a desperate action commenced. For upwards of an hour and a half the Turkish frigates resisted these fearful odds without flinching. The first of their losses was the *Navick* frigate whose captain, Ali Bey, being menaced with boarding by a huge three-decker, and having abandoned all hope of successful resistance, with desperate devotion blew up his vessel. At the end of the above period the destruction of the Turkish force was frightful and complete. Some of the ships were burned by the enemy's red-hot shot; others blew up; and the others, whose sides were literally beaten in by the enormous weight of the Russian metal, slipped their cables, and, with the exception of two, drifted on shore. The Russians now manned their yards, and cheered in honour of their bloody victory. Having done this, they immediately recommenced firing upon the helpless wrecks, from which a feeble dropping fire was still maintained with unequalled fortitude, and did not cease until they had completed the work of destruction and butchery. They then took possession of the two vessels which had run on shore; but, from their battered condition, abandoned and destroyed them the following day. One of the Turkish steamers, the *Taif*, alone escaped. She had slipped her cable shortly after the commencement of the battle, and, after forcing her way at some risk through the force cruising outside, brought the first intimation of this fatal event to Constantinople. Before the action comm nced the Turkish crews numbered 4800 men. Most of the survivors are wounded; among them are 120 prisoners, who were taken by the Russians on board the frigates abandoned by them, and who have been carried off to Sebastopol. Osman Pacha, the Commander-in-chief, who was wounded in the action, is among the prisoners. Hussein Pacha, the second in command, while trying to escape from his burning vessel, was struck by a grape-shot on the head, and killed. The loss on the Russian side is not accurately known, as they retired immediately after the battle; but four of their ships were disabled in their spars, and were towed out by steamers. The support afforded to the Turks by the land batteries was ineffectual, owing partly to the lightness of their guns, and partly to their fire being intercepted by the Turkish ships. The town of Sinope is completely destroyed, either by shells or burning timbers, and the whole coast is strewn with dead bodies. A few survivors have made their way, by swimming, to the town; but such is the consternation among the town authorities that as yet on their part is paralysed, and they can scarcely find means even to procure food or medical assistance for the sufferers. These latter found speedy alleviation at the hands of the medical officers brought by her Majesty's steamer *Retribution*, and the French steamer *Mogador*, who were zealously assisted by three of the survivors, surgeons on board the Turkish fleet.

It is clear that the Turks fought bravely, and stood to their guns to the last. Ali Bey, the commander of the *Navick*, seeing that his ship could not stand against the three-decker opposed to him, ordered her to be blown up; but, not feeling certain of the execution of that order, he himself threw the lighted match into the powder magazine.

The following table shows the loss of Turkish ships, men, the wounded, &c.:—

The *Navick*, 52 guns, 500 men, Ali Bey, captain (killed); opposed to a Russian three decker.—Blown up.

The *Nesim*, 52 guns, 500 men, Hassan Bey, captain (killed); opposed to a Russian two-decker of 80 guns.—Destroyed.

The *Fazeli-i-ed*, 32 guns, 400 men, Ali Maher Bey, captain (killed); opposed to a Russian two-decker of 80 guns.—Destroyed.

The *Gulbi-Sefit*, 24 guns, 200 men, Selis Bey, captain (killed).—Destroyed.

The *Am-Illah* (flag), 36 guns, 400 men, Osman Pacha (lost leg, and made prisoner); opposed to a Russian three-decker of 120 guns, which lost spars.

The *Damietta*, 58 guns, 500 men.—Destroyed.

The *Nedjbi-Feschir*, 24 guns, 200 men, Hussien Bey, captain (prisoner). On shore, dismasted.

The *Kaid*, 60 guns, 500 men, Elan Bey, captain (escaped); opposed to a large three decker.—Blew up.

The *Neemiah* (flag), 60 guns, 600 men, Hussein Pacha, second in command, and Captain Kadi Bey (killed); opposed to a large three-decker. —Blew up.

The *Feizi Marbout*, 22 guns, 240 men, Izc. Bey, captain. Destroyed.

The *Taif* steamer, 16 guns, 300 men, 300-horse power. Not engaged.

The *Iregli*, steamer, 4 guns, 150 men, 150-horse power.—Destroyed.

Making a total of 404 guns, and 4400 men.

Russian guns, 800; besides four steamers and two frigates not in the action. Weight of Russian shot, 68lbs., 42lbs., and 32lbs. Several shells and carcasses used did not explode.

Wounded and sound, brought to Constantinople by *Retribution* and *Mogador*		200
Left at Sinope, in charge of badly wounded		10
Wounded, left at Sinope, could not be moved		20
Prisoners, as supposed		120
Escaped on shore, it is presumed		1?0
Escaped, per *Taif* steamer		4??
		16??
Total number of men	4??	
Accounted for	1680	
Unaccounted for	2820	

The Russian Admiral Nachimoff addressed a letter to the Austrian Consul at Sinope, before leaving, to the following effect:—

I address you as the only official person at Sinope, requesting you to make known to the authorities, or your fellow Consuls, should there be such, that I much regret the destruction caused to the town during the engagement which has just taken place, which has been mainly caused by the obstinate resistance of the Turks, and by the fire spreading from those of their ships which blew up. I did not come here to destroy the town. My orders were to follow up and destroy the Turkish squadron which had proceeded to the coast of Circassia, and deposited arms and ammunition for the rebels who are in arms against the Emperor and his Government in those provinces.

In this letter it is also stated that shells were obliged to be fired in order to silence the Turkish batteries, &c.

The portion of the town which is completely destroyed is the Turkish quarter; the Greek portion is comparatively unharmed; although, from the position of the ships during the action, that part of the town was most exposed to the fire of the Russians.

The correspondent of a German paper states that nothing is left of the Turkish ships but heaps of fragments; of the crews, which amounted to 5000 men, at most 1800 are alive. The supineness of the Turks is considered inexcusable. From the 23rd November three Russian ships of the line cruised during four days in sight of Sinope. On the 29th a reinforcement of three three-deckers, two other ships of the line, two frigates, and four steamers arrived; and, on the following day, at noon, the Russian flag-ship summoned the Turks to surrender. For some time the Russians were completely sheltered from the guns of the strand batteries by the Turkish ships. The Turks having at last cut their cables, and let their ships drift on shore, the strand batteries opened their fire. The Russians then began to shell the town, which, with the frigates, was soon in flames. This was a fearful moment! The sea of fire, the roaring of the artillery, the continual explosions, and the fragments of human bodies which were buried about in all directions in the air formed one of the most fearful spectacles man ever beheld. The Turkish quarter was completely burned; and the houses in the other part of the town, where no bombs had fallen, were perforated with balls. The corps of Hussein Remsi Pacha, the Turkish Rear Admiral, was found in the water the next morning. The Russian fleet had left Sinope before the French and English vessels arrived. A British trader, which lay in the port, had two men killed by shots from the Russian ships; and, being subsequently run foul of by a burning Turkish frigate, she was destroyed. Her captain and crew, who escaped, say that the Turks "fought like devils," blowing up their own ships rather than that they should fall into the hands of the Russians. The Russian ships of the line poured in such tremendous broadsides that the decks of the Turkish vessels were literally carried overboard.

The view of Sinope, engraved upon the preceding page, is from a Sketch taken by a Correspondent last summer. Of the town several interesting descriptive details appeared in the ILLUSTRATED LONDON NEWS for December 17, page 506.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The *Jour de l'An*—the greatest fête in France—is, of course, the topic of all thoughts, all occupations, and all preparations. It is a subject of remark and interest that the approach of this epoch has a most soothing, humanising, and improving effect on both sexes, all ages, and nearly all classes and conditions. Your wife meets you with tender blandishments, and sees that your dinner, when you choose to give her the happiness of your society at that meal, consists of your favourite dishes; she hopes, too, that question of the *manteau de cour* that caused such sharp discussion last month. Your children are the most tractable little creatures in the world, suddenly metamorphosed from the squalling, quarrelsome, noisy, ungovernable brats of a few days ago; your nephews and nieces vie with each other in the expression of their tenderness. Your servants are up at work late and early; the service is performed in a way that excites in your mind as much satisfaction as astonishment: nothing is too hard for them, nothing can disturb the smiling equanimity of their dispositions. Jean is never at the *marchand de vin* when you want to send a letter to the post in haste; Jeanne never shrugs her shoulders or goes through any other pantomimic expression of impatience or dissatisfaction when you find fault with any of her performances. But it is the porter whom the rare and chilly sunbeams of the last fortnight of December warms into devotion and and attachment, and *petits soins*. To express the affection of that man for you and yours—his wife shares his sentiments—is beyond the power of words; to enumerate the proofs of that regard, out of the reach of calculation. The door is opened while the bell is yet in full swing; your newspaper is brought up before he has perused it; your letters pass at once from the postman's hands into yours; you may bring in as much dirt on your feet as ever you like; even your dog—verifying the old adage—receives caresses in lieu of curses. And thus you go on, happy and beloved, till the first week in January; when lo! Madame resumes the question of the train with renewed acerbity; the children fight and scream, and put your authority once more at defiance; Jean swears a new pact of friendship and fidelity to the *marchand de vin*; Jeanne downright scuba you, and the porter leaves you to freeze at the door, reads your newspaper twice over, leaves yesterday morning's letters till this evening, looks at you with thundering brow, if there remain a speck of mud on your boots, and kicks Azor, if he can catch him, in the yard. Now do gifts of all descriptions, sorts, and values pass from every body to everybody; now is the hand basket given by Mdme M. to Madame L.; now is it repacked and sent on from Madame L. to Madame S., with a tender note, saying she has chosen it herself at Jahau's or Monbro's; now do bonbons, from the little *sac* of stale *pratines* at *quatre sous*, to the magnificent *coffre*, casket, or basketful at £20 (such prices are occasionally given), circulate, and make children, and occasionally adults, very sick; now are cards left, sent, or even passed, under envelope, by post, to all with whom the senders can claim acquaintance; and thus goes by the day, in a mixture of expectation, excitement, delight, fatigue, and disappointment, such as, happily, no other day in the year can boast.

With the exception of the incidents connected with this fête, there is really very little of any interest stirring in Paris. The extraordinary amount of illness despite the seasonableness of the weather, which is for the most part clear, and keenly cold, throws a damp over society in general, there being hardly a family where there is not one or more members attacked. In consequence of this state of insalubrity, the Archbishop of Paris has granted a public *dispense* to permit the use of *aliments gras* all the Fridays, Saturdays, and other fast days that may occur, until further notice.

The Académie des Sciences has appointed M. Elie de Beaumont Perpetual Secretary of Mathematics, in the place of the late M. Arago.

The ridiculously quixotic affair of the double duel of MM. Soulé *père et fils* at Madrid, is the talk of all Paris. That M. Soulé, the younger, should have resented the impertinent remarks of the Duc d'Albe, on his mother's dress may easily be understood; but he having fought with his antagonist, that M. Soulé the elder should deem it necessary to render M. Turgot, merely as master of the house, amenable for the conversation of his guests; that he should demand a meeting, the result of which is that M. Turgot is somewhat severely wounded, is really carrying sensitiveness on the point of honour to a preposterous extent. At this rate, it is at the risk of a man's life to give a ball. Were we a punster, we should say, after all, he only receives one in return.

The Princess Mathilde has opened her *salons* with a magnificent *soirée* and concert. We believe it is her intention to receive every Tuesday evening throughout the season.

A marriage has taken place in the *beau monde* here which has caused much sensation, and, in many quarters, much disappointment, Mdlle. Molana, one of the richest—if not the richest—heiress in Paris, who possesses youth and beauty, in addition to her thousands, and who has had, as may well be supposed, more *prétendants* than she could well count or remember, has married M. Marguerite, a young man of the highest character and standing, and possessed of a fortune considerably larger than that of his bride. The *trousseau* and *corbeille* were such as are only seen at Royal marriages.

Louis Napoleon has pronounced his decision that the Prince Napoleon is to preside over the Commission of Admission of the Great Exhibition of Industry of 1855. The Commission is not yet formed, but the demands are innumerable.

Apropos of this subject, we are assured on authority that we cannot doubt, that Mdlle. Georges has actually applied for permission to take the canes and umbrellas at the door of the Exhibition. If this be true (as we have the best reasons for believing it to be), the state of distress which such a petition implies ought surely to be relieved from some fund more honourable to the credit of the French nation than the alms bestowed by the charity or curiosity of the chance visitors to a public museum. Many of the journals strongly advise the Théâtre Français to offer, and Mdlle. Georges to accept, a permanent engagement; or, at all events, one for a certain number of representations. Whether the counsel will be followed up on either side, we know not. It is a singular circumstance, and one not generally known, that the late appearance of that celebrated actress took place on the fiftieth anniversary of her début. It is stated that the authors of the popular piece, "Les Cosaques" (wherein, of course, the said *Cosaques* are made mincemeat of) have had a copy of the work printed on vellum, and magnificently bound, to present to the Sultan.

The theatres have nothing new at all worthy of notice. The popular pieces—"Les Cosaques," at the Gaîté; "Diane de *Lys*," at the Gymnase; "Maupra," at the Odéon; "Les Sept Merveilles," at the Porte St. Martin, &c.—continue to form the principal attractions of the moment.

It has been generally believed, in Paris, that the Emperor of the French has insisted upon a positive determination on the part of the English Government in accord with France; and that, after some hesitation, the Earl of Aberdeen had subscribed to all the conditions of the French Government in the contemplation of vigorous action against Russia. It was added, that Lord Palmerston had consented to resume office under these circumstances; and that he was coming to Paris to have a conference with the Emperor.

It has been currently reported in Paris, during the past week, that the English and French Governments have now very little hope of a pacific solution of the Eastern question, and that France and England are about to make preparations for an expedition to the Baltic early in the spring. Sir Charles Napier is to command the English fleet in that sea. The orders given to the French and English squadrons are said to be to cruise in the Black Sea in such a way as to constitute a sort of impassable maritime barrier from Varna to Batoum, not permitting either Turkish or Russian fleets to cross the line, but leaving each of them perfect freedom of action on their own side. This would be a less offensive act than the blockade of Sebastapol.

The *Moniteur* publishes the names of the members of the Universal Exhibition Commission, of which Prince Napoleon is to be the President. Among the names is that of Lord Cowley.

The dividend of the Bank of France for the second half of 1854, has been fixed at 84f. per share.

The rumour of Lord Palmerston's return to office caused a fall in the Funds.

SPAIN.

The Duke and Duchess of Montpensier have arrived at Madrid.

Two duels have recently taken place in the neighbourhood of Madrid, the first between the Duke of Alba and Mr Soulé, jun.; and the second between the Marquis de Turgot and Mr. Soulé, sen. At a ball at the French Embassy, the Duke of Alba (brother of the French Empress) remarked to some friends, "Look at Margaret of Burgundy," in allusion to the costume worn by Mrs. Soulé. The lady's brother, in a letter recently published, says:—

It is untrue that Madame Soulé presented herself in the costume of Marguerite de Bourgogne at the ball given by the French Ambassador; my sister wore a rose of blue velvet in the neck, with flounces of lace made of gold thread, and on her head a *torsade a glands d'or*.

The expression, overheard by Mr. Soulé's son, was warmly resented by him, and a hostile meeting took place on the 14th. After half an hour's combat without result, the seconds interfering, and declaring honour to be satisfied, it ceased, and the parties shook hands. On the morning of the day on which the duel between the Duke of Alba and his son took place, Mr. Soulé, sen., the United States Minister, sent the following challenge to the Marquis de Turgot, the French Ambassador at Madrid:—

Monsieur le Marquis.—The difference which has arisen between the Duke of Alba and my son took place in your *salons*. It was at your house, where I and my family were invited guests, and on the occasion of a *fête* of which the Duke of Alba might consider himself in some measure the hero, that the latter insulted Madame Soulé, without anything having hitherto happened to exonerate us from the bond of good fellowship which that circumstance causes to weigh on you. It is even positively stated that the insulting expression afterwards made use of by the Duke of Alba, and so nobly taken up by my son, first proceeded from your mouth. Under these circumstances, Monsieur le Marquis, I have a right to go to the true source which placed swords in the hands of the Duke of Alba and of my son, to make it mine as far as you are concerned, and to demand personally a satisfaction which you cannot refuse me. Mr Perry, an American citizen, and my friend, is charged to receive your reply. I have the honour to be, Monsieur le Marquis, your very humble servant,

"PIERRE SOULÉ, Citizen of the United States."

M. de Turgot declared on his honour, through his seconds, Lord Howden and General Cailler, that he did not make use of the expression imputed to him, and refused to admit that, as the insult took place in the *salons* of the Embassy, he was bound to give satisfaction for it. Mr. Soulé then insisted on M. de Turgot meeting him.

The seconds of Mr. Soulé were General Valdes (known for his extreme opinions), M. Gamindo, and M. Pacon, one of the editors of the *Clamor*. The pistol was the weapon. Two shots were exchanged. Mr. Soulé was not hit; M. de Turgot fell. His adversary's ball struck him in the leg, about three inches above the knee. The wound was serious; but the ball was extracted after some difficulty, and the wound is going on favourably. The whole of the Spanish nobility have left their names at the house of M. de Turgot.

AMERICA.

Accounts from Lower California state that territory had become a Republic. The Walker expedition, fitted out at San Francisco, had landed at La Paz, seized two Mexican governors, lowered the Mexican colours, raised their Republican flag, fought and gained a battle, declared Lower California free and independent and a Republic, and had chosen a President and Secretary of the navy. All this was done in one week by a handful of men from San Francisco.

Advices from the city of Mexico announce that rich golden discoveries had been made at Sonora.

The annual report of the Secretary of the Treasury, Mr Guthrie, propounds the Government plan for the revision of the tariff. In the first place, the list of free articles is enlarged so as to take from the revenue eight millions of dollars. The next point is that there will be only two classes of duties; articles specified at 100 per cent *ad valorem*; and all articles not specified, except those in the free list, at 25 per cent *ad valorem*. These modifications it is not proposed to effect until the 1st January, 1855. The Secretary of the Navy recommends the appropriation of five millions of dollars to build steam-frigates. He says that there are not forty ships which, if needed, could be brought into service in ninety days. The Secretary at War recommends the increase of the forces, from a minimum of 18,000 men, to 17,000 men in peace, and in war to 27,000.

HOSTILITIES BETWEEN TURKEY AND RUSSIA.

We hear from Constantinople that, on the 14th, the Ambassadors communicated to Redschid Pacha the proposals of the Great Powers. A Divan met on the 18th. After a long and animated discussion, it was resolved to authorise the Ministry to state that the Sublime Porte would be willing to send a Plenipotentiary to some place in neutral territory, not Vienna, for the purpose of treating for peace, provided the Porte should not be asked to accept anything it had refused; and that the old treaties, now abrogated by war, should not be renewed. Supposing Russia willing to treat on these terms, the Porte would meet her Plenipotentiary in presence of the representatives of the Four Powers, as proposed. With reference to the evacuation of the Principalities, the Porte would be willing to accept the guarantee of the Four Powers that they should be evacuated immediately upon the conclusion of a treaty of peace. It is also stated that the Sultan stipulates that the fleets of France and England shall remain in the Black Sea, guarding the coast of Turkey, so long as the Russians remain in the Principalities.

The subjoined formal and official note was transmitted on the 5th ult. to Lord Stratford de Redcliffe and General Baraguay d'Hilliers by Redschid Pasha:—

It was announced to the Ambassadors some days ago, by an official note, that Russian ships of war had been seen cruising in the vicinity of Sinope. The *Taif* steamer has just arrived from that locality, and it results from the report of the captain that on Wednesday last, 30th Sephir (November 30th), three Russian three-deckers, two two-deckers, and two frigates, entered the port of Sinope, and attacked a division of the Ottoman fleet anchored there, consisting of six frigates and three corvettes

Although the result of the action is not yet known, considering the situation of our ships, and the superior force of the enemy, it is presumed that a great disaster has ensued.

The English and French fleets have been sent to the Bosphorus, with the sincere intention of protecting the states of the Ottoman empire. This recent occurrence proves sufficiently that it is the determination of Russia to attack, by means of her fleet, those points against which operations on land are directed. The impossibility, however, of defending so vast an extent of coast without a sufficient force in the Black Sea is perfectly evident; and, although the Sultan's Government has the intention of sending thither the fleet, it will be inadequate to the object in view.

Hence, the Sublime Porte considers itself under the necessity of having recourse to the effective protectorate of the two allied Governments. The notification is made accordingly and at the same time to the Ambassadors of England and France.

Rébui ever 4. REDSCHID.

Orders left Marseilles on Wednesday for the French Admiral to confine the Russian fleet to Sebastopol. Stellar intelligence has been issued to the English naval forces; and it only remains to be seen whether the Emperor Nicholas will acquiesce in the temporary exclusion of his fleets from the Black Sea without making a declaration of war. The Emperor of Russia is said to have signified to the Cabinet of London, through his Ambassador, Baron Brunnow, that he will regard the entrance of the Anglo-French squadron into the Black Sea as a declaration of war. Lord Clarendon has replied that England does not desire war, but considers herself bound to protect the Turkish ports.

The Moldo-Wallachian troops are not to be incorporated with the Russian army and obliged to fight against the Turks. They are to be employed in the interior of the Principalities, to guard lazarettoes, public stores, hospitals, prisons, &c.

The Russian bulletin of the battle of Ougasti, in respect of which Gen. Bebutoff claims a victory over Abdi Pacha, has been published. The General admits that he lost 217 killed, of whom 9 are officers, and had 736 wounded, among whom is Prince Orbelian.

The Black Sea has of late been visited with violent storms. Eighty merchant vessels have been lost. The price of corn has risen enormously.

The Turks still hold Kalafat, which they have strongly fortified. A letter from Kalafat, by the special correspondent of the *Times*, supplies the following particulars relative to the Turkish entrenchments:—

The works which have been erected astonished me from their extent, and the rapidity of their construction. In the time of the old Turkish wars there were three redoubts on three hillocks, but now the whole has been circumvallated with breastworks, supported by thirteen earth bastions or redoubts, several of them with heavy long-range artillery, so as to make Kalafat not a mere entrenched camp, but a fortress of a very peculiar character, for there is no part of the simple breast-work glacis that is not swept in traverse by the heavy artillery of the redoubts and bastions. The strong, high, and broad line of the Danube sweeps the Krajova approach; and a sufficient corps of Turkish cavalry debouching at openings made in the breastworks to the right, an attacking Russian force would run a risk of being driven down into the Danube.

Works so extensive cannot be covered except by a very large force, for which Kalafat offers no accommodation. Tents are already out of the question, and the sudden change of the temperature has produced many fatal dysenteries. Recourse has therefore been had to a resource at once economical and efficacious. Spaces equivalent to a long barrack room have been dug of the earth and covered in. Suppose a log house of one story sunk to the eaves, the solid ground forming the floors and walls, and the ridged roof coming down to the ground nearly beyond the perpendicular beams, and you will have an idea of these winter barracks. The rain and damp are thus carried away from these earthern walls; light and ventilation are secured by garret and gable windows, fires burn to consume the earthy odour, mats act as arras, and the soldier is comfortable in winter's cold or summer's heat. I visited one, and found brick manuals at apposite distances; a clear space in the centre for pass-stage, and on either side each soldier's blanket and kit; the centre supporting beams were ranged round with well burnished muskets, and the drums at the gables, ready to beat the alarm and send the artillerymen to their posts, the infantry to the breastworks, while the cavalry await the decisive moment to clear the *debouches*

All these works bear no resemblance to the artificial Turkish entrenchments, such as one has frequently seen elsewhere. All are constructed on the most modern principles of engineering science. Their wide extent, and the extraordinary activity displayed in so short a time, have struck me with astonishment. I believe that since Torres Vedras, no lines of so striking a character have risen, as if by magic in execution, but clearly showing no hurry in plan or selection. This revolt of the Turks against their own habitually sluggish nature, this union of a burst of Asiatic energy with the science of Europe, compels my mind frequently to recur to the similar phenomena of the Hungarian war, with the satisfactory difference that the present movement is on the side of legitimate right.

I certainly do not think that it would be safe for Russia to pay a visit to Kalafat with less than 50,000 men. But there is an opinion in the camp that Russia may attempt a *coup de main* during the winter. I confess I do not think so. To say nothing of the present sharp work east of the Black Sea, Krajova is evident to the western arm of the Russian force, and, if a sufficient force be detached against Kalafat, the Russian force runs a risk of being broken through the middle from Nicopoli. It is more probable that the Russian plan is to draw the Turks to Krajova and to fall back on the Alma, while supports come up from Great Wallachia. After the passage of Kalafat, Prince Gortschakoff drew up a plan for attacking the Turks and driving them back on the Danube, and left it to his chief of staff, Kotzebue, to work out in all its details, but when it was ready he changed his mind.

There is every week some sharp skirmish between the Cossacks and the Turkish irregular Cavalry, in which some fall on both sides. The Cossacks are, after all, the flower of the Russian army, from their shrewdness, courage, and ubiquity. But the Bashi-Bozouk is a fair match for him. Armed with a rifle, slung over his shoulder, he takes aim and often hits a man of the opposing force at full gallop. He then throws behind the rifle, draws a long scimitar, and in the *mêlée* parries with it the Cossack lance; and, if successful, has all the advantage from his short weapon.

War has been officially declared by Persia against Turkey. A direct communication has already been opened between the Russian and Persians. The Russian General Yermoloff has been appointed to take the command of the 30,000 Persians. The Shah of Persia has informed his Consuls of his intention to suspend diplomatic relations with Great Britain.

INDIA.

From Burmah we learn that matters were improving in that quarter. The Governor-General is expected at Rangoon. The object of his visit to Rangoon is to arrange the civil government of the new territory himself. A force marched on the 9th of November from Peshawur towards the Kohat Pass to coerce the Afredees to allow us to build a fort. The force consisted of a light field battery, two companies of Sappers and Miners, her Majesty's 22nd Regiment, 20th Native Infantry, 66th Ghoorkas, and the 7th Irregular Cavalry. Lieutenant-Colonel Cotton (22nd Queen's) was to command it. The brigade is to be so disposed that it will blockade the pass while the fort is building, the site for which has been selected at Bazeed Khel, a locality six miles to the southward of, or nearer to the mouth of the pass than Muttunnee.

A bi-monthly steam communication is to be established forthwith between Rangoon and Calcutta.

Colonel Outram is expected to leave Calcutta for his former residency at Baroda, during December. Baroda is to be cut off from Bombay, and brought under the jurisdiction of the Supreme Government. This will be the strongest disapproval that could be administered to Lord Falkland.

Viscount Melville, K.C.B., has been appointed to command the Sirbind division, in the room of the late General Godwin, C.B.

The Shah of Persia is reported to have left Teheran with 30,000 cavalry and 1000 pieces of cannon, and 3000 camels loaded with ammunition, to operate against Turkey in concert with Russia. The Shah has despatched an envoy to Cabul on a mission, as it is thought, having reference to the course to be pursued by the Dost in the event of war between Russia and Turkey. A Russian army has marched *en route* to Khiva, where it has arrived, having first stormed the fortress of Ahmetzee.

CHINA.

There is no new feature to report in the proceedings of the Imperial and insurgent troops. Constant fighting is going on, with little result on either side. The losses of the Imperialists have been considerable, while the insurgents have suffered little, which gives them confidence. The Imperialists have received large reinforcements of about 14,000, and the foreign vessels hitherto employed at Chin-kiang-foo have come down to assist. Another force is ordered by the Tsoutae was seen close to Woosung; and, unless the insurgents receive assistance from Nankin, it is doubtful if they will be able to hold the city for any length of time against such a force.

The payment of the duties during the capture of Shanghai, and the present collection of them, are being agitated by the foreign authorities and Imperial Government, and causing some excitement.

The Mongols in the park at Pekin consist of 89 officers, 4000 men, and 400 camp followers. These were the only Mongols that have come within the great wall.

The-ping's northern army took Ping yang, in Shan see, on the 12th of September, left it a day or two after, and passed eastward of Plungtung. In the direction of Pekin, from which it was 500 to 600 miles distant.

It is difficult to arrive at correct information of the progress of the rebel forces in the north. It is not long since they were reported to be within 100 miles of Pekin.

From Ningpo we learn, under date of the 25th ult., that the city was quiet; but there was an impression that it could be revolutionised, without much disorder, in favour of the new dynasty.

Our dates from Amoy are to the 4th inst. Affairs there seemed approaching to a crisis; the fighting had harrassed and reduced the rebel force, which was in want of provisions and money, and hemmed in by the Imperial troops by land and a strong fleet of junks to oppose them on the water-side. It was expected the city would be retaken. Her Britannic Majesty's Consul had removed from the consulate to the foreign factories, and the captain of her Majesty's ship *Hermes* was to land a force at night time.

At Canton there is nothing new to mention; the city remains quiet, and the protective measures are efficient. At Toongkoon, in this province, the people are excited and furious against the Mandarins and Tartary, and there is apprehension that some trouble may spring from it.

It is generally understood that his Excellency the Governor Sir George Bonham's resignation has been accepted by Her Majesty's Government. His successor has not yet been nominated.

TIME-BALL AT THE CAPE OF GOOD HOPE.—The time ball attached to the Cape Observatory not being generally visible by the shipping on the eastern side of Table Bay, owing to the intervention of buildings, another has been established at the opposite side of the bay. It stands on the Lion's Rump, and commenced work on the 15th of last October. The observer should note the time by the chronometer when the ball begins to fall, and by subtracting one second from that time he will have the mean time of one o'clock p.m. by mean time at the Cape Observatory. The Cape Observatory stands in lat. 33 deg. 56 3 S., and long. 18 deg. 28 45, or 1 hour 12 minutes 55 seconds E. of Greenwich.

THE ART-UNION OF LONDON.—The distribution of the prints due to the subscribers of last year, namely, "Queen Philippa and the Burgesses of Calais," and "Christ led to the Crucifixion," has been commenced. This is effected to a considerable extent by means of the Society's local honorary secretaries situated in all parts of the world.

A CRYSTAL PALACE AT BIRMINGHAM.—Birmingham has resolved to have a Crystal Palace, but difficulties are interposed as to obtaining the site. At a meeting in the Town-hall, last week—in which Mr. Addenbrooke, R.E., Mr. Scholefield, M.P., Mr. Hill, Q.C., and other gentlemen took part—it was announced that a guaranteed fund of £50,000 by the noble offer of forty acres of valuable land near the Bristol road. Mr. Adderley (the donor of the land on which have been established the Reformatory institutions near the town) offered a plot of land in Edgbaston for another quarter; and, lastly, Mr. Joseph Sturge (always active in the cause of benevolence) gave up a valuable piece of land in Edgbaston for the same good purpose. The application to Parliament for the powers to levy a rate for carrying out the scheme were sanctioned by the meeting, and Mr. William Morgan (the town clerk) was instructed to prosecute the bill in Parliament.

BRITISH MUSEUM.—On no former occasion has this immense establishment been visited in so short a space of time by such a concourse of visitors as on Monday. Every room and lobby were crowded with thousands of well-dressed persons, in eager pursuit of knowledge. The immense collection of specimens of the animal, mineral, and vegetable kingdoms, and articles of vertu, which abound throughout the establishment. It is calculated that, before the close of the day, not less than 40 000 or 50,000 persons visited the Museum.

THE NATIONAL GALLERY.—The effect of the almost universal holiday on Monday, in the metropolis, was manifested here to an almost incredible extent. During the entire day, thousands upon thousands of well-dressed persons continued to crowd every room, and it was pleasing to mark the interest that was exhibited in viewing the numerous *chefs d'oeuvres* of Rubens, Correggio, Murillo, N. Poussin, the Carracc, Claude, and other ancient masters, and notwithstanding there could not have been less than 2000 persons in various rooms at one time, the strictest order and regularity were observed.

VOLUNTARY EDUCATION IN WALES.—The friends of voluntary education in the Principality are actively stirring to promote and secure the revival of the normal colleges, in order to obtain the strict moral and religious training of teachers for the Principality. For this purpose meetings are being held in the principal towns, and several gentlemen have formed themselves into a committee, for the purpose of carrying out their views on this subject.

THE GREAT METROPOLITAN WINTER POULTRY SHOW.—It has been determined to hold the second great Metropolitan Poultry Show, which started into existence last year, at the Baker street Bazaar, on the 10th, 11th, 12th, and 13th of January next. It is expected that a large amount of patronage which the club has received since last year, more especially amongst the nobility, the principal supporters of the show, are extended, and it is expected that the show will equal any which have been held throughout the kingdom.

MARKING IRON.—A label, with wire attached, was taken from a bull trout caught, in the end of last month, in one of the tributaries of the Teviot. The fish, when killed, weighed 4 lbs. 7 oz.; and the inscription on one side of the label is, "A Mitchell, 31;" and on the other side, "Tweed, 1852." This fish was marked on the 14th ult., on the Tweed, near Hornchiff, along with many others, by Mr. Mitchell; six months at the time was 24 lbs., so that it has gained 2 lbs. in about four weeks.

IMPROVEMENT IN STEAM NAVIGATION.—Considerable interest has been excited in Edinburgh by the successful trial of the steam-vessel for the deep-sea fishing. The new vessel is 100 feet long, with engines of thirty-horse power. Externally there is nothing to distinguish it from a sailing-vessel, except the presence, on each side of the keel, of a curved pipe ten inches in diameter, termed "a nozzle," communicating pipes admitting the water into a water-tight case with a hor zontal wheel fixed on a crank shaft attached by piston-rods to the engine; and on the water is discharged by the nozzles on each side of the vessel. These form the only propelling power, and the invention is remarkable for its simplicity and effect. These nozzles also are of service in navigating the vessel. Although capacity rather than speed was studied in the construction, it easily attained eleven miles an hour. Economy of fuel, freedom from vibration, light draught, and a high rate of speed, are among the advantages of the invention. When fitted with boats and fishing gear, it will proceed to the Firth of Forth, and, by lowering the boats and crews, will be able to conduct the fishing operations with safety and celerity.

TURKEYS AND HOPS (TO THE EDITOR).—I see in your Journal of the 24th ult. an extract from Mr. Yarrel relative to turkeys and hops (page 583), which states that both were unknown in England prior to 824. This is certainly incorrect as regards the latter; and to Yarmouth for the 3rd of Henry VI. (1453-4):—"Et tronag. 2 sacce de roppes." I made this extract a short time since whilst engaged in arranging the records of Great Yarmouth at the request of the Town Council of that borough. I shall hope one day, when sufficient remarks of my own store of this most important port from the time of Edward I.—I am, &c., HENRY HANOD, Norwich, Dec. 26, 1853.

CALIFORNIA.

(From our own Correspondent.)

SAN FRANCISCO, November 16th, 1853.

THE glowing accounts from the South of the recently-discovered gold mines on the Amazon are exciting much interest here, and a large band of adventurers are organising themselves into a company to proceed thither.

The mines are upwards of four hundred miles from the coast of Peru, and can only be reached from the Pacific by a tedious and trackless journey over the Andes; but on the Atlantic side the route is comparatively easy. The Peruvian Government have entered into a contract with a Dr. Whitmore to place two steamers on the Amazon, and they are to ply between the mouth of the river and Loreto—a distance of fifteen hundred miles—and the very neighbourhood where the gold mines have been discovered.

Showers, from time to time, are now giving us warning that the rainy season is coming on, and the hopes of the farmers are getting high. The agricultural interests of this country are fast becoming of great importance. It is scarcely more than five years since our broad prairie and beautiful valleys were the grazing ground of vast herds of cattle—the property of the indolent native Californians. But, after the first great excitement of digging for gold had subsided, the practical farmers who were in the country began to find that soil as rich as that bearing gold existed where not a particle of the metal was to be found; and that, by tillage, the yield to them would be as remunerative as digging in the golden ravines in the mountains. Attention thus began to be paid to agriculture; and the results in the harvest were thoroughly "Californian." The farmer found that he could obtain from 60 up to 80 bushels of wheat to an acre, by only just turning the soil; two crops of potatoes in the year; cabbages and turnips of a fabulous size; and crops of garden vegetables which follow each other in perennial growth. Hitherto, we have been mainly dependent upon Chili and the Eastern States for our supply of flour; but, next year, we shall have such a large harvest from the teeming richness of our soil, that not only shall we have abundant supply for our own wants, but be able to export.

Most of the English Quartz Companies are progressing favorably, and those whose prospects are considered most favorable here are the Anglo-Californian, the Nouveau Monde, and the Agua Fria. The West Mariposa is at a complete stand-still. The Anglo-Californian people have just completed the erection of their machinery, and expect to begin crushing in the course of a week or two. They have a powerful engine, one of the best quartz veins in the country; and, as they have adopted Corcoran's new method of crushing in lieu of the old method of stampers, they have a very fair prospect of turning out of their amalgamatus a goodly supply of gold.

A company has been organised in this city by some of the most influential and moneyed men, to establish a line of steamers between this port and China. This line will not only be very important in itself, but also as it will form the connecting link in the circle of steam navigation in the Pacific when the English line commences between Panama and Australia.

In connection with steam navigation, it was with much pleasure and satisfaction I lately saw the first cargo of coals arrive in our port a day or two since from our British possession, Vancouver's Island. The coal is good, and reported to be abundant. Hitherto, coal for use in the Pacific has been brought from England, the freight on which has been four and five pounds a ton. This, added to the cost of the coal, has been a serious item to the various steam companies in this part of the world.

Vancouver's Island is, I think, destined to become a point of great importance—not only to California, but to Australia. It is certainly the most important of all the British possessions in the North Pacific. It is about 80 miles wide by 400 long, and distant north from San Francisco about 900 miles. The soil is fertile and well watered; timber is abundant, the climate is healthy, and the island has several good harbours. The population of the island is about 600, of whom one-third are connected with the Hudson's Bay Company. Up to this time they have not had much commerce, but the impulse given to trade in the Pacific by the discoveries of gold in this country and Australia cannot fail soon to beneficially influence it.

Lola Montes, the erratic and notable, is quietly rusticating amongst the miners in Grass Valley, spending her time in the improvement of her garden, taming a young grizzly bear, and petting her parrots, poodle, and canaries.

M.

CHARITABLE DONATIONS FROM THE EMPEROR OF THE FRENCH.—The Emperor has ordered the sum of 700 f to be paid by Messrs. Oral and Armani, London, for the benefit of the Dreadnought Hospital establishment in the Thames. Scarcely any of our benevolent institutions appeared to have escaped the kindly consideration of the Emperor.

THE KING OF PRUSSIA AND THE ROYAL BUTCHER.—Last year, Mr. Minton, purveyor to her Majesty, forwarded portions of the prize ox fed by his Royal Highness Prince Albert, to the Emperor of the French, the King of the Belgians, and the King of Prussia, in order that they might have a specimen of prime English roast beef for the New Year's banquet. The present was acknowledged in condescending terms at the time, and Mr Minton has since received the following gratifying communication:—"Prussian Legation, London, Dec. 22, 1853. Chevalier Bunsen presents his compliments to Mr. Minton, and has great pleasure in informing him that the King of Prussia has been very much pleased with the Christmas beef sent last year. Chevalier Bunsen has received the commands of his Majesty to express the best thanks of his Royal master, and, as a token of acknowledgment, has to transmit to Mr. Minton a punchbowl and cups, of Berlin manufacture, which will be delivered to him as soon as they arrive from Berlin."

THE AUSTRALIAN MINT.—The *Cyclone* will convey the entire apparatus for the Royal Mint, about to be established at Sydney. Capt. Wardle, R.E., and Mr. Ralph Hunt, officers of the Mint, proceed out in the *Cyclone*. The melting-pots, crucibles, and other requisites for converting the dust into coin, have been supplied by Messrs. Morgan and Rees, and are the new kind known in the trade as their "patent plumbago" and "fluxing-pots," which have been selected on account of their superior safety and durability. We understand the experience of the last six months at the principal refining establishments (amongst which are included that of the Bank of England and the French Mint) proves the "plumbago" to be about six times more durable than the old "black lead" kind hitherto employed, and much less liable to accidents—a fact of some importance in this golden age.

EGYPTIAN TROOPS AND PILGRIMS IN ALEXANDRIA.

GREAT numbers of pilgrims from the Holy Mohammedan City have been for some time encamped along the shores of the Great Harbour, at Alexandria, waiting ships to convey them from Egypt—their varied costume, arms and tents having a very picturesque effect. On the 1st inst. the Mahmal—the emblem of Egyptian royalty that heads the Mecca caravan—entered the city in state, and was carried to the citadel with a clamour that defies description. Immediately began the Moloued Nebee, or the festival of the Prophet's birth—in fact the Moslem Christmas week. The ceremonies ended on the 10th with the "Dusah." On this occasion a man was killed by the Sheik's horse treading upon his head. We engrave a part of the Encampment of the Mohammedan Pilgrims. The open tent is the tent of the chief of the Hadji, or pilgrims. The steamer on the extreme right is Abbas Pacha's new frigate yacht. Then come the hulks in dock. The Egyptian Admiral's flag-ship, with its three masts, occupies the centre of the Sketch; next to which, on the left, is the Peninsular and Oriental steamship *Bryon*. The wharf on the extreme left is used by the transit administration for landing Indian mails, bullion, &c.

Our second Sketch shows one of the gates of Alexandria, with the great square of the city, which is now daily crowded with soldiers, either being drilled or making bargains with the women

ALEXANDRIA.—THE HAREOUP, AND ENCAMPMENT OF MAHOMMEDAN PILGRIMS

for food. The Egyptian soldiers are dressed in white, with red caps. The wives of the soldiers and other women seen in the square are generally veiled: but, in consideration of your being a stranger, they will sometimes take down their veil in order to give you a sight of their faces. Their veils are entirely different from those of Constantinople: those of the Egyptian women being generally suspended by a small gold fastening from the forehead, and then suffered to hang in a narrow piece of linen down to the feet.

Since the commencement of hostilities with Russia, the Pacha of Egypt has given the most loyal and energetic aid to his suzerain the Porte. The war upon the Danube, and in Asia, as we are informed by our private Correspondents in Egypt, has been the all-engrossing topic at Alexandria and Cairo. Large bodies of troops have been concentrated in both towns; and detachments of Egyptian soldiers have been despatched, from time to time, in the Pacha's fleet, to the seat of war, where they have, according to all accounts, distinguished themselves by their intrepidity, and by their animosity towards the Russians. A letter, from the Danube to a person in Alexandria, states that forty Egyptian soldiers were the first to cross that river, which they did by swimming; they then routed a Russian post, killing ten men. A hundred and fifty Albanians next crossed in a barge; they also routed a Russian party. The Turks then crossed the river in force.

Not less than 15,000 men are now waiting in Egypt for steamers to convey them also to the seat of war. These, with the soldiers and sailors already in the Sultan's army, and in the fleet, raise the contingent of the Pacha of Egypt to 40,000 men.

In addition to this large force, Abbas Pacha has in garrison, throughout Egypt, 40,000 more troops. In and around Alexandria there are at present 27,000 soldiers. Great complaints are made of the severity of the conscription, and of the arbitrary acts of violence resorted to in order to obtain recruits for the expedition. Six thousand veterans volunteered for service in aid of the Sultan lately. The lower classes speak boastingly of the deeds of their brethren in arms on the Danube, and very slightingly of the "Muscoes," as they call the Russian soldiers.

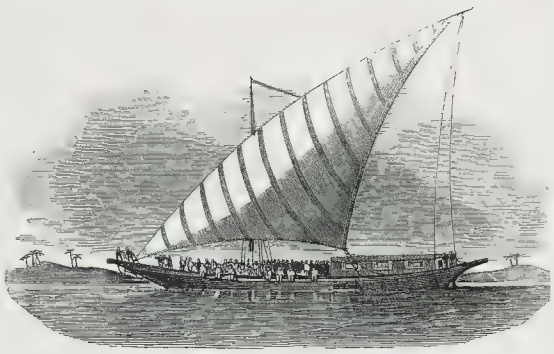
A new fort is being built at Alexandria for the better defence of the new or Eastern harbour, and several very heavy guns are to be mounted upon it. Our Correspondent adds:—

The prices of provisions are very high, and labour scarce, owing to the drain of men for Turkey.

The railway is completed, except two miles between Alexandria and Kaffrilus, a town on the banks of the Nile fifty-two miles from Alexandria. The completion of that short distance has been retarded by the great height of the Nile. It is expected that the Indian Mails and passengers will be enabled to proceed by railway from Alexandria to the Nile early in the spring, which will much expedite the Overland Mails, and add to the comfort of the passengers.

Cairo is perfectly quiet, and pretty full of English travellers, descended from, and about to ascend, the Nile.

Lord Elphinstone, the new Governor of Bombay, arrived at Cairo on the 5th, and was received with great distinction by the Pacha.



NILE BOAT

EGYPTIAN TROOPS IN THE GREAT SQUARE OF ALEXANDRIA

INAUGURATION OF THE GEELONG AND MELBOURNE RAILWAY.

COMMENCEMENT OF THE MELBOURNE AND GEELONG RAILWAY.

THE importance of railway communication between Melbourne and Geelong, in South Australia, was testified in a very interesting manner, on the 20th of September, when the foundation-stone of the terminus at Geelong was laid with great ceremony—this being the first building of the kind commenced in Victoria. Thousands of persons formed a procession in Geelong, among whom were all the Government, civic, and ecclesiastic dignitaries of the colony. The stone was laid by his Excellency the Governor of the Province, Mr. Latrobe. A tribe of aborigines, dressed in new blankets, and a party of Chinese, with banners, formed part of the procession, in which there was also a party of Germans working a printing-press. The Bishop of Melbourne, amidst thousands of persons, publicly blessed the undertaking. A banquet was given also to celebrate the event, to which a thousand persons were invited. There was a banner in the banqueting hall with an aboriginal motto, "Ghego mags, uri, uri," signifying "Run away, quick, quick." The wheelbarrow which the Governor used in moveing the first shovelful of earth, was made of polished cedar, with a carved wing on each side. The spade was of burnished steel, and the handle was made of Huron pine. The trowel was of pure gold, with an ebony handle. The mallet was of ebony, inlaid with gold. The whole of these costly and beautiful tools were presented to the Governor. During the procession the printing press in the midst of it printed a copy of verses which were distributed to the multitude. An Engraving of the scene (stated to be the first production of the kind in the colony), was executed by Messrs. Sasse and Winston, of Geelong, from which pictorial commemoration our Illustration has been engraved.

LOSS OF THE "HUMBOLDT" STEAM-SHIP.

THE wreck of this fine first-class steamer, announced on Monday week, per telegraph from Liverpool, created some sensation at Lloyd's, on account of the heavy amount of insurances that had been effected on her cargo, which is reported to have been worth upwards of £300,000. The *Humboldt* was a most powerful steamer, nearly 1400 tons burden. She was commanded by Captain J. D. Lines. She arrived off the entrance of Halifax Harbour, from Southampton, on the morning of the 6th of the present month. She had been twelve days out only from England; and, getting short of coals, Captain Lines bore up for the harbour to obtain fuel; and, on arriving off it, hove-to for a pilot, who shortly came on board, and undertook to take her into the harbour without delay. A dense fog prevailed soon after, but the pilot persisted in going on; and, in attempting to make the harbour, ran the vessel on to a formidable reef of rocks known as "the Sisters." It was about six o'clock at the time; and although the vessel was not making more than four knots per hour, the force with which she struck was most severe. She was immediately backed off, the pilot supposing she had not sustained any injury; but on sounding the pumps she was found to be making water so rapidly, that it became necessary, for the safety of the passengers on board, to run her ashore near Portuguese Cove, situate about twelve miles from Halifax. The Mail steam-ship *Osprey*, and one of the Dartmouth steamers, proceeded to rescue the passengers and crew, who were taken off in safety, together with most of their luggage. Very little of her cargo, however, was saved, and towards night the sea broke completely over her. By the last accounts it seems that her machinery had sunk through her bottom, and the vessel was a total wreck. Captain Lines is stated to have an interest in the vessel to the extent of £10,000, and unfortunately he was not insured.

We have to thank a Correspondent (Lieutenant J. F. Bland), who made the accompanying Sketch of the wreck while on horseback, the thermometer being near zero.

WRECK OF "THE HUMBOLDT" STEAM-SHIP, OFF THE ENTRANCE OF HALIFAX HARBOUR.

THE WALDENSIAN (PROTESTANT) CHURCH, AT TURIN.

(From a Correspondent.)

THE consecration of the Church, of which I forward an Engraving, took place on the 15th ult. The congregation at the Italian service consisted of about 1400; at the afternoon French service about 1000 or 1100 were present. Among these were the English Minister and his attachés, the Prussian Chargé d'Affaires, the Swiss Minister, and the American Secretary of Legation from Tuscany, the first Waldensian Deputy ever elected, Mr. Molan (now a second time member of the Chamber), many Roman Catholics of all classes, and not a few of the noble exiles from Lombardy, Naples, &c. The Rev. Mr. Revel, the Moderator, with seventeen pastors and professors of the Waldensian College at La Jour, assisted at the ceremony—the Moderator preaching the French sermon, and the Rev. Mr. Meille, pastor (with Mr. Bert, at Turin), the Italian sermon. The forms of the service are nearly similar to those of the Church of Scotland, and the singing to the accompaniment of the organ was admirable. Most of your readers will be aware that the Waldenses are the ancient inhabitants of the mountains of Piedmont and Dauphiné, and have held the Alpine passes between the sources of the Po and the Durance; around which, in spite of the centuries of persecution, they still cluster. Their faith is that of the Bible denuded of all Roman Catholic additions, which they have in all ages resisted. It appeared in the fifth century. In the beginning of the ninth, friends and enemies recognised it in the well-known controversial writings of Claud, Archbishop of Turin, who was the greatest opponent of Roman error and Roman tyranny of his day—in the eleventh and twelfth centuries. The MSS. still extant prove that the tenets of the Waldenses were substantially the same as those of the followers of Waldo and the Pooren of Lyons, of the Albigenses, of the Bohemian Brethren, of our own Wickliffites, or Lollards; which, in fact, are more formally set forth in a detailed confession of faith in 1530. This is, in all important matters, consistent with the great principles of Christian truth, as recognised by Evangelical Protestants. Having been deprived of Bishops at the death of Claud, the Church Government became, and continues to be, Synodical. From the above era their history is one of continued persecution, which, in 1686, appeared to have arrived at its maximum, amidst massacres and brutal cruelties. This called forth the interference of Cromwell and the States General of Holland; but, in spite of solemn treaties, in 1688 they were again forced to abandon their country by the Duke of Savoy. Two years afterwards, after thousands had perished, and some 4000 settled in Germany, 800 Waldenses, traversing Savoy from the Lake of Geneva to the sources of the Durance, near the Mont Cenis and Mont Genevre, entered their country in arms, led by their Pastor and Col. Arnaud. In spite of all opposition, they recovered some of their valleys, and have ever been faithful to their Sovereign. The Italian Waldenses, Vaudois, or Valdesi, amount now to about 20,000. The constitutional laws of Piedmont set them free, in 1848, from numerous disabilities; and the right of worshipping God in their native land, according to their conviction of the dictates of revealed religion, *de facto*, though not *de jure*, as at last accorded to them. Though still in great poverty, the assistance of England and Holland, with that of private friends, has enabled them, with extreme perseverance and self denial, to maintain an education in their valleys which is worthy of their faith. They have even now men capable of bearing witness to Gospel truth with dignity, knowledge, and zeal, whenever and by whomsoever called upon. The wonderful chain of events by which Providence has preserved them for so many ages in the maintenance of truth, seems at last to have brought them to an epoch when they may bear witness beyond their Alpine valleys in those fair plains of Italy into which they have as yet been denied an entrance. The consecration of this noble edifice is, therefore, a great political as well as religious event. Piedmont has the honour to be the first state in Italy to give civil and religious liberty to her subjects; the tyranny of the other Italian States has driven into this Constitutional Monarchy no less than 40,000 exiles who at this moment are under the protection of her laws.

NEW PROTESTANT CHURCH OF THE WALDENSES, AT TURIN.

The Church of the Waldenses, commenced in the autumn of 1851, is

in the Lombardo-Gothic or Romanesque style, of which so many ancient specimens remain in Verona, Monza, Milan, &c.; it is situated in the Stradale del Re (a wide street in the best part of the town, and planted with trees), surmounted by an iron railing; its front presents a Lombard retiring arch, flanked by small Gothic columns; above, is a handsome frontispiece, suitable to the style. The side walls are strengthened by massive buttresses, terminating in pinnacles; and at the angles are ornamented turrets, with crockets and finials. Over the entrance is the inscription Jeremiah vi., 16; within the ante chapel is a second, from John iv., 24. This ante-chapel, with its lofty groined roof and galleries on each side, giving entrance to the interior organ gallery of the Church, is imposing, being 20 feet wide, with a length equal to the width of the Church. The dimensions of the Church are 90 feet by 60 feet; its roof 50 feet above the floor; the apsis is 30 feet in diameter, and nearly equal in width to the nave. Six well-proportioned columns, besides two on each side, bearing semicircular arches (above highly-ornamented capitals) support a groined and boldly-indented roof. A series of handsome clerestory windows light the nave, &c.; the apsis and walls are pierced with round-headed lancet windows, ornamented with painted glass. The columns are of scagliola, the walls tinted yellow; a very handsome deep organ-gallery, on pillars, gives great effect to the west end. Rich cornices and varied detailed ornaments break the walls and roof with great effect. The single pulpit stands behind the table in the centre of the apsis; and the whole floor is covered with convenient backed benches, of walnut wood. The whole is light and cheerful, and, though somewhat profusely ornamented, yet being nearly of one colour, is not without a gravity of character; nor do the graceful details in any way deteriorate from the apparent solidity and general simplicity of construction. This is probably the only modern attempt in Italy at the revival of the ancient Mediæval style, called Lombard; and it has cost the public £6000, including its organ-railing, gas-heating apparatus, and furniture. It is, therefore, worthy of the noble city in which it stands—a monument of constitutional liberty as well as of Christian zeal.

SUB ALTINUS.

GREAT FIRE AT NEW YORK.

THE city of New York, we regret to state, has just been the scene of the most extensive conflagration that has happened there since the great fire of 1846.

The catastrophe we have now to record broke out on the 10th inst., in the extensive publishing and bookselling establishment of Messrs. Harper, Brothers, in Franklin-square. The accident is believed to have been occasioned by a boy having dropped a lamp into the camphine in the engine room, when it was being used for washing the rollers of the printing-presses. In an instant the entire establishment was wrapped in one sheet of flame. The building being filled with paper and matter of a light and combustible nature, the ignition from roof to basement was almost like the flashing of powder. To use the language of one of the police-officers on the ground at the time:—"When the report of fire was first given, I went to work carrying out books, &c., bent on saving as much as possible. While I was taking the first armful across the street, I could see no smoke, or nothing else that looked like fire, and I thought a bucket of water had ended the affair. In less than a minute I looked towards the building again, and flames were pouring out of every window, from the roof to the lower floor."

At about two o'clock nothing was standing of Harpers' immense warehouse but the outside walls, and within these the angry flames were raging. The wind was very high, and huge coals of fire were carried off to the distance of Beekman street, and even there fell thick and fast upon the roofs of buildings and the heads of spectators. From Harpers' buildings the flames ignited the opposite side of Pearl-street, although very little at this place, and for a time there was every appearance that this block would be consumed by the increasing fire. A few minutes after the first report of the fire, an immense concourse of the citizens assembled at the scene of the disaster, filling up for a long distance every street and avenue leading to Franklin-square. Soon after the fire, a heavy cloud of smoke hung over the city.

As soon as the fire had extended across Pearl-street, the efforts of the firemen were divided. The first building which ignited on this side of the street, was the Walton House, of Revolutionary memory. This was No. 326, Pearl-street, and every effort of the firemen to preserve it, on account of its historical associations, were of no avail. Adjoining the Walton House was the Franklin-square Hotel, which shared the fate of its neighbour, and is now a total wreck.

At an early hour in the evening the appearance of the ruins in Cliff-street was terrific. The entire establishment of the Messrs. Harper was one mass of rubbish, comprising six houses on Cliff-street, running through to Pearl-street, and taking in the same number of houses on that street. On the opposite side of Cliff street, the buildings Nos. 81 and 83, also occupied by the Messrs. Harper, were much scorched, but nothing more. Of the twelve buildings of the Harpers, between Cliff and Pearl streets, all that now mark the spot are a few smoking walls

In Pearl street the scene was rather more horrible than in Cliff-street. Looking towards the old Walton, there stands the distinguished wall of that venerable structure. Looking in the other direction there is a mountain of bricks and mortar, with now and then a bare wall. Adjoining Harpers' buildings, next to Ferry street, was the large publishing house of George F Coolidge and Brother, which also fell before the flames. The fire was stopped on the side towards Ferry-street at the drug store of W. W. Thayer. On the other side, the fire was stopped at a new building which the Harpers were erecting.

There were, in all, sixteen buildings burned! Harpers occupied twelve, Coolidge one, W. W. Thayer one, and the Walton House and Franklin-square Hotel. Besides these, there were four or five others more or less injured. The loss is stated at three-quarters of a million of dollars. The loss of the Harpers is fixed at 350,000 dols. They are insured for 25,000 dols. in various insurance companies in the city. This is the second time the Harpers have been burned to the ground.

Almost every engine in the city was on the ground. The bells rung a general alarm—which has not taken place for a great period.

The accompanying View of the ruins is sketched from the rear of the premises in Cliff-street.

REMAINS OF THE FIRE IN FRANKLIN-SQUARE, NEW YORK.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

PUBLISHERS and printsellers, at this festive period of the year, are living in that customary state of turkey and idleness handed down to them from what Pope would call their noble forefathers, Tonson and Humble. Even letter-press printers and copper-plate printers partake of this indifference to what is going on—or rather would be going on—in the world of letters. It is perhaps too much to expect that publishers should be alive, in the last week of the year, to what authors are anxious to give birth to in the year to come. Publishers (we include print-publishers as well) are looking to their printers and bookbinders' bills; and no growing, or even known, author could commit a more asinine thing than, at this festive period, to offer a MS. to a publisher who, beyond his numerous invitations from successful authors, has to digest the invitations he receives from his own company—the Stationers—not to allude (even momentarily) to those *hors* dinners which he delights in—exempt from drinking champagne and claret (as Tom Moore declared) from the souls of authors.

But the week has not been altogether barren of materials adapted to our weekly column. The chief topic has been Mr. Bentley's advertisement, wherein he boldly abandons all his recently advertised intentions to publish novels at one third of the usual price of publication—in other words to give for half a guinea, what he himself for half a century and more, had been in the habit of dealing out (successfully) at a guinea and a half. In his advertisement (will our readers kindly turn to what we said on a previous occasion?) he nobly contends that he is still right, that he has the public still on his side, but he feels unfortunately that the proprietors of circulating libraries are by no means with him. It seems to us (if the scheme be at all good) that it should not be ruined by Messrs. Routledge and Co., Messrs. Cawthorne and Co., and, to come to our own time, by Messrs. Mudie, the great monopolists of books likely to take the readers of *ordinaries* books. A great publisher, if he is assured of a fact, should not lightly forego one, or as lightly abandon one. Mr. Bentley appears to us (and this is the common belief of clubs, and of people with the mania of information), has been too hasty in giving way to the incomplete judgments of injudicious friends, and was far too hasty in abandoning a principle of which he knew but the first fruits.

It is hinted, and not improperly, what is the largest sum that a cheap-priced publisher could give for a novel by a successful author? But this is a question very difficult to answer. Even your cheap-priced publishers shirk the subject, and turn with publisher-like coolness to another topic. The booksellers who, much to their credit, delight in disseminating good books at unusually low prices, are at present unprepared to offer even Mr. Bentley's usual sum to a successful author. The market, it is urged, is not yet tried for new books at old copyright prices and reformed publishing prices. "We are," so the talk runs, "working the market with standard books of living authors at greatly reduced prices; we have advanced large sums on such works; and when we are secure, we shall be in a position to talk to successful authors about volumes (at one shilling each) at more than one guinea and a half prices.

Artists and art-auctioneers have largely partaken of the seasonable indifference exhibited by publishers and booksellers. At this period of the year an engraver would be a fool who carried a plate to a print-publisher with an expectation of doing any business with him. Equally foolish would a painter be who tried to sell a copyright to the same (for a time) indifferent personage. Sir Edward Landseer or Mr. Jacob Bell would fail in finding (this Christmas week) Messrs. Graves and Co., or Mr. Gambart, or Mr. Grundy (these three G's of art), in any one degree alive to the requirements of the public, or, stranger still, to their own individual wants. It seems odd, but so it is, that turkeys and plum-puddings, Christmas-trees, and things from Fortnum and Mason's, should deaden the desires of people at other periods of the year unusually alive to their own advantages.

If nothing has been done in art, something, however, has been lost to art during the present week. Our obituaries record the loss of a patron and an artist—each in his seventy-third year—we allude to Mr. James Wadmore and Mr. G. P. Harding. Mr. Wadmore's face was well-known in the studios of artists who were in favour with the public some thirty years ago. He had a fairly replenished purse, a liberal hand, a taste for art, and a determination to possess. To such means he added other facilities; he was known to many artists gifted with taste and skill, and holding the golden key of access to artists and dealers in art. By these means he became possessed of some fine examples of modern English art; and Turner could be nowhere studied to better advantage than at Mr. Wadmore's, at Upper Clapton. What a noble picture was that early study, the "Guardship at the Nore;" how fine he was and is in the "Dieppe" and the "Cologne." The Guardship was a picture of 1810; the other two pictures, creations (may we not so call them?) of 1825 and 1826. Mr. Wadmore's gallery will, it is said, be sold.

Mr. G. P. Harding was a man who spent his life usefully but unprofitably—in becoming acquainted with English historical portraits, and in copying them (in water colours) with a skill and a fidelity which would have delighted Walpole and gladdened the heart of George Vertue. No person was so well acquainted with the portraits of our English worthies and un-worthies to be found in the castles and mansions of our nobility and gentry, as was Mr. G. P. Harding. We call him Mr. G. P. Harding, to distinguish him from his father (if we are not mistaken), Mr S. Harding. No two men could be more alike; they were as much alike as were the two Vandervelde. The elder Harding had a liking for antiquity, caught from Horace Walpole; the younger Harding had all the same partiality with, at the same time, a dexterity and—above all praise—a fidelity known and admired by all in any way familiar with Houbraken and Lodge. We have said he was unfortunate. The world, indeed, was not with him. Skill and fidelity pre-suppose labour; and labour was the lot of poor Mr. Harding. We remember three sales of his works—one at Christie's, some nine years ago, in which the pick of his works were sold; a second at Sotheby's, about a year ago; and a third at the same house, during the present year. How much is it to be regretted that some Mr. Peto or Mr. Grissell did not buy the entire collection, and soothe and employ the remaining days of a rare artist, by keeping him at work in copying the best portraits of the best-known men. It would not have been a costly folly (we ourselves hating the word "folly" as applied to such an expenditure); and we are inclined to believe (since art is made a Stock-Exchange affair), that it would have been a profitable investment. Poor Mr. Harding, we repeat,—how much curious knowledge died with him! He laboured so assiduously that few copies of well illustrated books are without examples of his skill, and yet his very valuable MS. collection of portraits in the principal castles and mansions passed (at a good price, though) under the hammer of the auctioneer, in the very year in which he died. They should have been secured for the nation; but the Trustees of the British Museum never buy in advance—the great secret (when well considered) of all good and of all cheap acquisitions

A fact or two may well wind up this column of gossip. The selling price, in Alderman Moon's time, of Roberts's "Holy Land, Egypt, and Nubia, &c.," was *forty one* guineas; the remainder price, during the last week (the stones are destroyed) varied from ten to eleven guineas, though appraised at a price, and by good judges, varying from fourteen to eighteen guineas. Our friend Magnyip has asked—Are we to believe a Correspondent of the *Times*, that Mr. Tite (a good architect) has been desecrating the old Norman church of St. Cross, near Winchester?

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is currently reported that Mr. Disraeli has prepared the outlines of a measure of Parliamentary Reform.

A large whale, 25 feet in length, has been thrown on shore near Santon Court, Barns aple. The animal weighs upwards of four tons.

A man named Grandjean, waiter at the Caserne des Minimes, has been tried for uttering language insulting to the Emperor and Empress of France. He was found guilty, and sentenced to three months' imprisonment.

The Countess of St. Germans distributed blankets and warm cloth ng to 280 poor persons from the parishes of Castleknock and Chapelizod, at the Viceregal Lodge, on Christmas-day.

The famous establishment, *la Mère Moreaux*, at Paris, is for sale, at present, at the upset price of 150,000 francs.

The consumption of cigars in the Austrian States has been for some years increasing immensely. Before 1841, there were manufactured in that country 28,000,000 per annum, and now the quantity is 800,000 000. In addition, foreign cigars are introduced to the extent of 150,000,000 a year.

The Hon. Henry Elliott, now Secretary of Legation at the Hague, has been appointed Secretary of Legation at Vienna.—Mr. Nixon Moore, Consul at Beyrout, has been promoted to the rank of Consul-General in Syria.

Italy has just lost one of her most distinguished literary men, Thommaso Grose, at the age of 63. He is best known in England as the writer of "Marco Visconti."

The defalcations of Mr. W. B. Anderson, the foreign and general agent, at present under remand on a charge of forging bills of exchange, are much more serious than was at first anticipated, the entire amount involved being rumoured to reach between £130,0 0 and £150,000.

Earl Fitzhardinge's foxhounds return to their Cheltenham kennels at the end of the week, to be in readiness to resume their sports in the neighbourhood with the commencement of the New Year.

Bunyan's "Pilgrim's Progress" has been translated into Chinese, and sold at fivepence per copy.

"An Englishman, who desires the prayers of the Scotch Episcopal Church," has sent £7000 towards the building of the contemplated cathedral at Inverness.

Geefs, the sculptor, has just terminated a colossal statue of King Leopold in marble, to be erected in Brussels. The King is in the uniform of a general, having in his right hand the constitution, and in his left his sword.

Mr. Smith, the lessee of Drury Lane Theatre, has presented his principal scenic artists his assistant, the master mechanist, and the chief property-man, each with a silver snuff-box.

Mr. Peto has placed £2000 annually at the disposal of the Baptist Missionary Society for the next seven years.

The St. George's Hall, Liverpool, is now approaching completion, and it is intended to be opened early next September, with the performance of an oratorio for the benefit of the local charities. The total cost of the building will be about £200,000.

A young woman, aged nineteen, who was sentenced at the Middlesex Sessions to six months' imprisonment, has been in prison no less than twenty-one times, for frequenting houses with intent to steal, drunkenness, &c.

A shock of an earthquake was felt on the 21st at Nantes, similar to the rolling of a heavily-laden waggon, and immediately after a second was felt. The g ss was unusually low at the time.

Members of the Scottish Universities, following the example set before them in London, are stirring in the question of Parliamentary representation. A meeting has been held on this subject in the hall of the Glasgow Philosophical Society.

Joseph Burnley Hume, Esq., barrister-at-law; John Simon, Esq., and John Frederic Bateman, Esq., are appointed Commissioners for inquiring into the causes which have led to the late outbreak of cholera at Newcastle-upon-Tyne, Gateshead, and Tynemouth.

The *Moniteur* publishes the names of the members of the Universal Exhibition Commission, of which Prince Napoleon is to be the President. Among the names is that of Lord Cowley.

The oldest of the clergy of Rennes, and probably of France, M. Delaunay, curé of Saint-Aubin-des-Landes, has just died, at the age of 96. He had exercised his sacred profession 71 years.

A large circle of relations and friends assembled at Blenheim this week, to celebrate the anniversary of the Queen's birthday, on the 27th inst., on which day the Duke of Marlborough completed his sixtieth year.

A body of the West of England firemen have been selected for the London station in the brigade formed in the company's clo hing their first appearance will be on New Years-day, in procession.

The number of tigers killed in Java during the course of 1852 amounted to 717.

Mr. A. S. Logan has been appointed Junior Advocate-Depute; and Mr Thomas Cleghorn succeeds to the Senior Depute-Advocateship, rendered vacant by the appointment of Mr. Macfarlane to the Sheriffship of Renfrewshire.

New cars, with patent spring seats, have been built for the Philadelphia and Baltimore Railway, to be used as ladies' sleeping-cars.

The gold-dust deposited at the San Francisco Mint, from the discovery of the Californian mines, down to the present time, is equal to £41,000 000 sterling.

The foundation of the large tower for supporting the tubular bridge of the Canadian Grand Trunk Railway across the Ottawa river has been completed. The length of the bridge, extending over two branches of the river, will be nearly half a mile.

The War Expenses between this country and France were, in the year 1812, £100 671,348; in 1813, £120 893,887; in 1814, £116,843,869; in 1815 £116 491,051. The expenditure from 1803 to 1815, inclusive, was £1,139,729,236 sterling!

It is believed that the loss of life by the foundering of the Hull steamer *Marshall* was greatly overrated; instead of 150 passengers, as at first stated, the highest number given now is thirty-eight.

Smallpox has been very prevalent at Peterborough for some time past, and many individuals are suffering from it at the present time.

A man in a state of intoxication lost a leg at the Milford Junction of the Great Northern Railway, by attempting to get into a train which was in motion: he fell, and ten carriages passed over him.

A lady, formerly resident at Glasgow, has bequeathed £500 to the cathedral at Perth, and £2000 for the endowment of the Bishopric of Glasgow.

The Missouri Legislature has before it a bill providing that no married man shall be allowed to endorse a note without the consent of his wife; and that no endorsement shall be valid in law without such consent.

Mr. Alexander Smith, the Glasgow poet, is a candidate for the office of secretary to the Edinburgh University. Mr. Smith recently lectured at the Dumbarton Mechanics' Institute, on the life and genius of Robert Burns.

The Russian squadron in the Chinese Seas—consisting of the *Pallas* frigate, the *Oiwaza* corvette, the *Wostock* schooner, and the *Prince de Menschikoff*—visited Nangasaki in August last, and their crews were cordially received by the Japanese.

Mr. Christie, of Lincoln College, Oxford, has been chosen Professor of History in Owen's College, Manchester.

Mr. James Ewing, who represented Glasgow in the first Reformed Parliament, died lately, leaving to Free Church purposes £18,000, with £100 a year to the Sustentation Fund.

Captain Brock, who was many years in command of a surveying-vessel in the Mediterranean, has been appointed additional captain to Admiral Dundas's flag ship, in order to make surveys of the Black Sea.

Dr. Colenso, Bishop of Natal, sailed from Southampton, on Wednesday week, in company with Dr. Gray, Bishop of Cape Town, for their distant dioceses.

The ports of Hamburg and Rotterdam being closed by the ice, no more steamers will be dispatched from London to those cities. At Antwerp, also, the channel is frozen to twenty miles below that city.

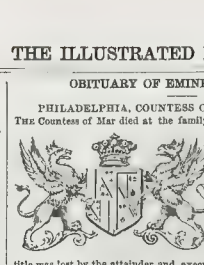
It is rumoured (says *Herapath*) that a gentleman —Mr. Lascelles —at the instigation of the Board of Trade, is engaged to try to arrange terms of peace between the two railway companies, the Great Western and the North Western.

A man, named Francis Bagan, left Jarrow, Durham, where he had been working as a pitman about five years ago, and went to the "diggings," of California, during the gold fever in that country, and so fortunate has he been that, in a letter directed to his wife, a rag cutter at a paper-mill, he has enclosed a bill of exchange for £100, with a message that "All well, he will come home and eat his next Christmas dinner with her in Old England." She also received a nugget of gold some few months since.

OBITUARY OF EMINENT PERSONS.

PHILADELPHIA, COUNTESS OF MAR AND KELLIE.

THE Countess of Mar died at the family seat Alloa-house, Clackmannanshire, on the 15th inst. She had been for some time suffering under a painful disease, but its fatal termination was sudden and unexpected.



Her Ladyship was eldest daughter of the late Sir Charles Granville Stuart Menteath, Bart., of Closeburn and Mansfield, representative of the ancient Earls of Menteth (which title was lost by the attainder and execution of its last possessor, Murdoch, Duke of Albany, attainted and executed in 1402), and also heir male of the Stuart family, by the marriage, in 1295, of Walter Stewart, third son of the Lord High Stewart, to the Countess of Menteth—whose tomb, with that of his wife, is in Inchmahone Priory on the lake of Menteth, in Perthshire.

The Countess of Mar was the wife of John, fifteenth Earl of Mar and Kellie, and premier Earl of Scotland, to whom she was married the 24th April, 1827.

The title of Mar is of so early a date that its creation is unknown. It is considered of Celtic origin, at which period the "Maormor" was the head of one of the four divisions of Scotland.

The Countess of Mar leaves no issue.

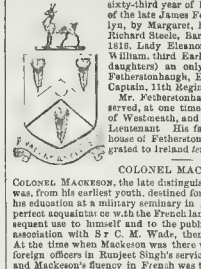
LADY HOWDEN.

THE Right Hon. Theodosia Sarah Frances Dowager Baroness Howden was the third daughter of John, first Earl of Glanwilliam, and the widow of Gen. John Francis Cradock, G.C.B., first Baron Howden, to whom she was married the 17th November, 1798, and who died in July, 1839. Lady Howden (who was much respected and beloved by all who knew her) died at St. Leonards-on-Sea, on the 17th inst., in the eighteenth year of her age. Her Ladyship leaves an only son, the

distinguished British Envoy to the Queen of Spain, John Robert Caradoc, present and second Baron Howden.

THOMAS JAMES FETHERSTONHAUGH, ESQ., OF BRACKLYN CASTLE, CO. WESTMEATH.

THIS gentleman, a landed proprietor of very ancient descent, and of extensive estates, died at his seat, Bracklyn, in the sixty-third year of his age. He was the eldest son of the late James Fetherstonhaugh, Esq., of Bracklyn, by Margaret, his wife, only daughter of Sir Richard Steele, Bart.; he married, 18th December, 1813, Lady Elsanor Howard, second daughter of William, third Earl of Wicklow, and leaves (with daughters) one son and successor, Howard Fetherstonhaugh, Esq., now of Bracklyn, lately a Captain, 11th Regiment.



Mr. Fetherstonhaugh, whose decease we record, served, at one time, as High Sheriff of the county of Westmeath, and was a magistrate and Deputy-Lieutenant His family, a branch of the ancient house of Fetherstonhaugh, of Northumberland, migrated to Ireland *temp.* Charles I.

COLONEL MACKESON.

COLONEL MACKESON, the late distinguished Commissioner at Peshawur, was, from his earliest youth, destined for a military career: he received his education at a military seminary in France, and thus acquired that perfect acquaintance with the French language which proved of such subsequent use to himself and to the public. This knowledge led to his association with Sir C. M. Wade, then Political Agent at Loodiana. At the time when Mackeson was there with his regiment (in 1831), the foreign officers in Runjeet Singh's service frequently visited the Agent, and Mackeson's fluency in French was turned to good account, and led to his being appointed Assistant Political Agent subsequently; was detached to Bahwulpore and Mithunkate, to survey the Sutlej and Indus, and to facilitate their navigation. For several years he was there stationed, variously employed—now exercising his talents as an accomplished surveyor, now unravelling the tortuous politics of the Punjaub. In 1837 he went with the late Sir Alexander Burns to Cabul; and, in 1839, was occupied in forwarding the progress of the army of the Indus along the banks of that river. He also accompanied Sir G. Pollock, with Prince Timoor, and displayed courage and energy of the highest order in the various affairs which occurred on the march to Cabul From that time till the close of operations in Affghanistan, and the final withdrawal of our forces in 1843, Brevet Captain Mackeson's management of our political relations is matter of history. In reward he obtained the local rank of Major, and was made a C B After this, Mackeson was at Sirsa, where he acted till the Sikh invasion of 1845, when his services were made available in the delicate office of Commissioner in the Cis-Sutlej states. In this capacity he was politically attached to Sir Harry Smith's force. The army of the Punjaub saw Mackeson again in the field as Governor-General's agent, in which office he won the high approval and respect of Lord Hardinge, Lord Gough, and Sir Walter Gilbert. At the end of 1851, Mackeson (then Brevet Lieut.-Colonel) was appointed to the office of Commissioner at Peshawur, a post of honour and of danger—as proved by his untimely fate, from the hand of an assassin.

COLONEL GOLDSMID.

COLONEL JOHN L. GOLDSMID, formerly an officer of note in the British service, and late a citizen of Watertown, in America, died recently in the United States. Colonel Goldsmid was the son of wealthy parents in the vicinity of London, where he was born in November, 1789. He entered the British army early in life, and served through the whole Peninsular War: first, in the disastrous campaign under Sir John Moore; and, afterwards, in the more brilliant actions of the Duke of Wellington. Goldsmid, ultimately raised to be a Lieut.-Colonel, was with Wellington at the battle of Salamanca, at the siege of Burgos, and in the retreat to Ciudad Rodrigo. At the battle of Victoria he had his arm broken. While serving in the Peninsula Goldsmid was again several times wounded. He was knighted by John VI., King of Portugal. Colonel Goldsmid was with Wellington's army in the campaign of 1815, though not at Waterloo, being absent to hasten the march of a detachment of Prussians. After this campaign he went with his regiment to the East Indies.

After a long sojourn in India, Colonel Goldsmid commenced travelling, which he continued more or less for nearly ten years, visiting during that time almost every nation and clime in the world. At his father's death, Colonel Goldsmid was left a large property, a great part of which he subsequently lost in an adventure in French Stocks, and by the failure of a London bank, so that in the year 1839 he found himself in New York with scarcely 3000 dollars. After some further travelling, he settled in a farm in the town of Champion, got married, and was known as an industrious, honest, and thriving inhabitant. Latterly Colonel Goldsmid has been a citizen of Watertown. his death was hastened by a fall from his carriage. He leaves a widow and two children.

DR. GILLKREST.

DR. JAMES GILLKREST, Inspector-General of Army Hospitals, and Corresponding Member of the National Academy of Medicine of France, expired on the 26th inst., at 1, St. Alban's place, London. This veteran officer entered the medical department of the army in 1801, and served in the West Indies with the exped tion under Sir Thomas Trigge. As surgeon of the 42rd, throughout the Peninsular war, he was present with the Light Division at various battles. For his conduct he received a medal with twelve clasps Dr. Gillkrest was subsequently in much active medical military service in America, Portugal, and Spain. In Paris, in the three days of July, 1830, he gave the benefit of his experience as a military surgeon to the wounded of both parties. In 1832, during the prevalence of cholera in London, he was indefatigable in his exertions among the poor, and in a series of letters to the *Times*, wrote a graphic sketch of the progress of that epidemic. After an arduous and eventful career of more than forty years, Dr. Gillkrest was promoted to the rank of Inspector-General of Hospitals, and placed on the retired list in December, 1846. Since his secession he presented to the French Academy of Medicine a work on yellow fever, which called forth a high eulogium from that learned body; and he contributed to the General Board of Health a valuable memorandum on the same subject, published in the Board's second report on quarantine. On various occasions Dr. Gillkrest had also published papers on cholera.

THE REV DR. MILL.

THE Rev. Dr. William Hodge Mill, Regius Professor of Hebrew at Cambridge, Canon of Ely, and Rector of Brasted, was a scholar and writer of no ordinary merit: he became distinguished early: he in 1813 took a high degree, and was elected Fellow of Trinity College. In 1820 he went out as first Principal of Bishop's College, Calcutta—a foundation of Bishop Middleton. On his return, in 1833, he received the place of Domestic and Examining Chaplain of the late Archbishop Howley. Subsequently he was appointed Christian Advocate. In 1843, his patron and friend, Archbishop Howley, present d to him the l ving of Brasted, Kent; and in 1848 he was elected Regius Professor of Hebrew, to which a canonry at Ely is attached. Dr Mill's attainments as a mathematician and linguist stood very high. His acquirements in Sanscrit won him a European reputation. As a classical Sanscrit production, his "Christa Sangreta" is a work unparalleled in modern literature. Dr. Mill died on Christmas-day at Ely, after less than a week's illness: he leaves behind him a widow and a daughter, the wife of the Rev. Benjamin Webb, of Sheen.

JOHN PRINGLE, ESQ.

JOHN PRINGLE, Esq., Sheriff-Substitute of Banffshire, was born in Edinburgh in 1785. Attaching himself to the profession of the law, he passed as a Writer to the Signet in 1811, and continued in business in Edinburgh for eight or nine years. A vacancy occurring in the office of Sheriff-Substitute of Banffshire, by the resignation of the late Mr. George Forbes, Mr. Pringle became his successor, on the 21st October, 1821. Mr. Pringle was not only remarkable for his able and active performance of his public duties, but also for his literary attainments, which were of no mean order. His writings bore evidence of vigorous thought and purity of style. Mr. Pringle was among the founders of the "Banff Institution for Science and Literature, and the Encouragement of Native Genius;" and, indeed, he was the chief party who effected the establishment of that society, in 1825. Mr. Pringle died at his residence in Banff on the 3rd instant.

WILLS.—The Marchioness of Anglesey having died intestate, her personal property has just been administered to.——The will of Sir Frederic Hamilton, Bart., has been administered to by Samuel Steward, Esq., the lawful attorney, and on behalf of Sir Robert North Collier Hamilton, Bart., the son and sole executor and sole legatee of real and personal estates—the latter valued for duty at £7000.—— The will of Henry Skrine, Esq., has been sworn under £100,000. His estates extended over Somerset, Berks, Sussex, and Middlesex. The will is of great length, and has no less than twenty seven codicils.—— The Rev. Thomas Hulse, LL.D., Rector of Buckland, Surrey, died possessed of personality amounting to £60,000; and the will has been admitted to probate. —The Rev. Joseph Simpson, Rector of Horsted, in Sussex, for twenty-three years, has bequeathed a sum of £600, to be divided among twelve societies.

THE PRICE OF COAL.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—A short time since there appeared in your valuable paper, under the heading of "Coal by Rail," an extract from one of a series of letters written by "Paterfamilias" to the *Times*. The paragraph in question contained "Paterfamilias's two most important statements, viz:—

1. That the difference in the price of Coal sold by the Great Northern Railway Company and that by the London coal merchants is 10s. per ton.

2. That coal merchants' profits are 6s 9d. per ton

Which, if left uncontradicted, are calculated seriously to injure the trade in the eyes of the public

Let any one compare the advertisements of this Railway Company with those of the London merchants, and it will be found that the difference in favour of the former is as much as 2s per ton, against which we have proof that coals ordered of the Railway Company cannot be delivered till two months and a half after receipt of order, whereas the merchant delivers within as many days

Forty or fifty miles down the Great Northern line (where there are no City dues to pay), coals are 3s. per ton dearer than at King's-cross, which sufficiently shows how these Companies treat the public where they have no trade all in their own favour. Now, the railways this year have exerted themselves to their utmost, the Great Northern, so much so, as seriously to endanger its passenger traffic (as witness the Hornsey accident). The following figures (from the Official Market Import List) show that the public, in spite of this, has been mainly dependent on the sea for its supply:

Coals brought to London by sea from Jan. 1 to Nov. 30, 1853	..	3 , ,78
" by rail	"	1,179

Moreover, when we have a sufficient number of "screws" in the trade, we shall quite undersell the railways. These vessels make three voyages for a sailing collier's one, besides many other advantages.

With respect to the second statement, Messrs. Cockerell an i Co. proved, in a letter to the *Times*, that while selling at 32s. the cost to them was 20s 11½d. per ton. Whence, then, comes the 6s. 9d. profit? If "Paterfamilias" will guarantee the merchants even 5s. per ton profit, he shall certainly have his statue erected in the Coal-Exchange.

Through the courtesy of another journal I have been enabled to give a full explanation of ALL the causes which have contributed to raise the price of coals, I, therefore, have confined myself to a brief contradiction of statements in the paragraph inserted in your Journal.

Let the working man who shivers over a small fire this winter, remember that one of the principal causes of the rise in price of coals is—Strikes!

I remain, your obedient servant,

Coal-Exchange, Tuesday. ONE OF THE TRADE.

THE PHOTOGRAPHIC SOCIETY.

The Winter Exhibition of the Works of the Photographic Society, New Bond-street, just opened, shows that great and successful progress has been made with this new and delightful and highly-useful process. The walls of the Gallery are covered with specimens of all classes of subject, some of considerable size, and all produced with a neatness of outline and a perfection of aerial effect which are perfectly marvellous. Amongst the most striking works are those of Martens—consisting of some of the grandest passages in Alpine and Swiss scenery; the Mount Rosa, the Glacier of Brethorn, the View of Vevay, and Mont Corvin—perfect gems; the latter exhibiting three distinct aerial distances. Baldus treats us to examples, equally successful in their way, of scenery in the south of France. Lesson shows the peculiar applicability of the process to the real action of the intricacies of architectural and sculptural detail, in his magnificent specimens of parts of Rheims Cathedral; and Mr. de la Motte applies it, in the same line, in a variety of views of the Crystal Palace, now in progress of building, and also displays its important usefulness, as a means of accurately copying the minutest details in Anglesarian specimens. Amongst the other exhibitors are Cundell, with Fine Art Subjects, Bedford with Landscapes, Robertson with Views of Constantinople and neighbourhood, Llewllyn with delicious Wood Scenes, and R. Petley with Pleasant Interiors of Old English Homes—the last two, we believe, amateurs.

OMER PACHA AND HIS PIPE-BEARER.

OMER PACHA'S military achievements in Bosnia were of a brilliant character, and his clemency to the conquered will always form a noble trait in his character. He displays incessant activity in organising the Turkish army, and in directing the construction of the fortifications upon the Danube. Among the soldiers he is much beloved. He addresses them with the utmost condescension and freedom, often entering their tents and addressing them individually by their names. He speaks with facility the German, Italian, and Servian tongues. He is much devoted to his wife, who is young, fair-haired, and good-looking; and he is passionately fond of his pretty daughter Eminé, a little girl nine years old, who is the companion of many of his rides in the neighbourhood of the camp. He may often be seen riding in the neighbourhood of his headquarters in a small open carriage drawn by four horses, with Eminé upon his knee, and her French governess following in another carriage, the cortège being brought up by a half-squadron of Lancers. He may also be seen riding, attended by his Pipe-bearer, as portrayed by our Artist. Omer Pacha is about fifty-two years of age, rather below the middle height, and with martial features.

OMER PACHA AND HIS PIPE-BEARER.—(SEE PRECEDING PAGE.)

SCENES AND INCIDENTS IN CONSTANTINOPLE.

Our Special Artistic Correspondent at Constantinople has sent us over several most interesting Sketches, illustrative of the exciting scenes every day occurring in that capital, incidental to the existing state of war, accompanied by spirited descriptive memoranda. It is impossible to engrave all these subjects at once, but we this week make a selection of three. The following is the letter of our Correspondent:—

(From our Special Correspondent.)

Constantinople, Dec. 5.

"By this mail I send you over a somewhat numerous and pretty varied selection from my portfolio of Sketches I have taken since my arrival. You know I am better with the pencil than the pen, and, therefore, you must not expect from me very long and learned disquisitions upon political matters, and the probable *dénouement* of the present confused and exciting state of things. Besides, you will already have read the important facts in the daily papers, to which I can add nothing, and of which I will not undertake to contradict anything. For, in truth, I do not pretend to dive into the secrets of Courts; preferring, rather, to observe society round me as it is, and to snatch some of its phases of expression at a moment when it is agitated to an unwonted degree by the fortuitous events now passing in our neighbourhood. Until a few days ago, the excitement was all of exultation and promise; new corps of *redifs*, or reserve troops, pouring in every day, and again marching off in the direction of the head-quarters, whether on the Danube or on the Asiatic shores of the Black Sea. These men, by the way, presented a marked and singular contrast to the recruits which one has seen driven from their homes to swell the ranks in many parts of Europe, as in Portugal, in Spain, in Russia itself, at the present moment—a contrast remarkable, not so much in the wild variety of costume in which they present themselves before being equipped for the service, as for the spirit of nationality and emulation which appears to animate them, and makes them rather volunteers than conscripts. The same spirit pervaded the community at large, and still pervades it, although the recent disaster at Sinope has given a sterner and a bitterer character to it. It would be impossible to describe the excitement which the first news of this cruel and cowardly proceeding occasioned, and which is now only partially allayed in the prospect of the active co-operation of the French and English fleets in the Black Sea.

"To return to my Sketches. The first is a domestic incident in the life of the Sultan—one of almost daily occurrence—yet curious in itself, and interesting to me, as it afforded me the opportunity of having a nearer view of his Majesty than any I had heretofore enjoyed. I was walking with a friend one fine afternoon in the neighbourhood of Eyoub,

THE SULTAN.—SKETCHED IN THE ENVIRONS OF PERA.

NEW REGIMENT OF COSSACKS OF THE DON, RAISED AT CONSTANTINOPLE.

near the Sweet Waters of Europe, when we saw approaching rather an unusual spectacle in this part of the world—a low chaise, of true Long-acre build, drawn by two horses, driven at a smart pace; which, on nearer approach, we discovered to contain the Sultan, who handled the reins in a very workmanlike manner. Two attendants ran, one on each side of the carriage; and behind, was an escort of soldiers, all dressed in the usual way, viz., frock-coats and the red cap. On arriving opposite the outer gate of a small kiosk, the carriage stopped, and the Sultan alighted, and entered. A glimpse at the interior showed that the splendidly-furnished *salon* of the kiosk was already brilliantly lighted up. The pipe-bearers of his Imperial Majesty had preceded the cortége; and I was told afterwards that it is the habit of the Sultan to go every day to one or other of his numerous kiosks—which generally command fine views of the Bosphorus—for the purpose of smoking, and whiling away a few hours in the *dolce far niente*. Poor man! his step, as he moved from the carriage to his little splendid solitude, was slow and languid, and his aspect grave and melancholy; for his spirit was oppressed with many misgivings, and he felt that there were foes to his peace lurking in more quarters than one. He was dressed in a dark green loose frock coat (green, you know, is the colour of the Prophet), and not unlike in cut that of a Catholic priest; and he carried his sword in his hand. When he approached, and we had recognised his exalted rank, my friend and I alighted from our horses, and as he passed we uncovered—a mark of respect which his Majesty acknowledged by a low bow. This is a compliment which the Padischa pays only to Europeans; the utmost his own subjects expect or get in return for the most abject obeisance, being a look. The sentries on both sides of the gate saluted their Imperial master in the fashion peculiar to the Ottoman troops—the firelock presented, but held only in the left hand, and the right hand raised to the head. When the Sultan had entered the kiosk, the two attendants began covering the horses with cloths—for horses are valued and prized here. In the background of the Sketch is introduced a new Palace, not yet finished, and some delicious groups of cypress.

"I witnessed most of the out-door ceremonies performed in honour of the arrival of the new French Ambassador, General Baraguay d'Hilliers, some weeks ago. Nothing could be more complimentary or enthusiastic. The scene at the Seraskeriat, or War-office, was quite a triumph—one of the grandest *accueils*, military and popular, it is possible to conceive and which far surpassed anything of the sort I had been witness of before The building in the background is that of the department; the particular portion on the left being occupied as a residence by the Seraskier: in the midst, or nearly so, is the upper part of the famed Seraskier's Tower. Along the whole of the front of the building was drawn up a line of infantry; and on the opposite side of the immense court were drawn up the *redifs*, as yet unarmed, and all dressed in various Oriental costumes, mostly with turbans on their heads; and some carrying bundles on their backs, fastened on with cords, in the fashion of knapsacks The other parts of the court were filled with the populace, men and women, who took great interest in the events of the day, and were easily kept within bounds by a few *kawasses* or policemen. General Baraguay d'Hilliers arrived on horseback, accompanied by a numerous and brilliant staff, composed partly of Turkish and partly of French officers. He was received with

GENERAL BARAGUAY D'HILLIERS REVIEWING THE REDIFS, AT CONSTANTINOPLE.

all possible honours by the Seraskier, Mehemed Ali Pacha, who was also attended by a brilliant staff. The General and the Seraskier first rode down the ranks, and afterwards walked down them on foot. The General expressed himself in the highest terms of their soldier-like and manly bearing. He afterwards inspected the artillery, with which he was much struck and pleased.

"A new corps has recently been formed by Zaheb Pacha, in imitation of the Russian Cossacks—and called, also, the *Cosaques du Don*, though composed of Poles. They wear a fur cap exactly resembling the new ordonnance cap of the French Hussars. They are well horsed, and altogether admirably equipped. I saw the regiment passing down near the Grands Champs des Morts the other day, and made a Sketch, which I enclose."

G.

In an interesting letter from Sir Charles Shaw which appeared in the *Morning Chronicle* some days ago, the writer states that, whilst on the Continent, in the winter of 1813 and 1814, he was much disappointed at the appearance of the Cossacks he there saw, so unlike the description of them which he had read. They were armed with the lance, sabre, and pistols, and mounted on animals much resembling starved Richland ponies; and, instead of being as soldiers, they more resembled bands of robbers. On inquiry, he found these were not real Cossacks, but peasants, whose houses had been burned down by the French army, and had followed in the rear of the Russians, in the uniform of Cossacks, for the purpose of realising their plundering propensities. Immediately after the abdication of Napoleon, in the spring of 1814, he had an opportunity, at Paris, of seeing the armies of Russia, Austria, and Prussia; and certainly no troops caused more wonder and admiration there, or were in better fighting order, than the Cossacks, especially those of the Don. They were in general very handsome men, their mothers having been stolen from the Circassians. They had a manly, independent look, and with a manner in speaking as if they felt so; while respectful to their hetman and officers, they showed they had a respect for themselves. Their horses, though small, were active and in the best condition, and altogether they were a superior class of men. Though serving as privates with the army, they were in some measure a sort of yeomanry, being mounted and dressed at their own expense; their system, both civil and military, being essentially democratic—electing their own officers, and being entitled to many privileges at home their districts were governed by corporations elected the r own municipal officers, they were subject to no Government taxes, and were not liable to the conscription, but they were bound to defend the frontier where they were quartered, and like yeomanry in time of war to the field against a national enemy. There they received pay and rations, and fu liberty to live at free quarters on their friends, and to plunder their foes when on the move. These were the men who had been seen to rear round all the Russians on their retreat to Moscow before Napoleon, and their advanced guard in following the French from Moscow to Paris. The Cossacks in Paris were armed in many different ways; they were of various hues, languages, uniforms, and personal appearance, having come from all the districts of the extensive frontier of Russia; but the finest body was decidedly the Cossacks of the Don. Although all the Cossacks were plunderers, they were strictly honest with their own class, proving in practice that there was honour among thieves. This was strangely exemplified when they were quartered in Paris, in 1814. They established regular parties, at a day's march from each other, to forward their plunder from the banks of the Seine to those of the Don and the Wolga, and the shores of the Caspian and Azoff seas. But the riches of Italy, Germany, and France first paved the way for the Cossacks losing their warlike character. On their return home after the war, with their pockets full of cash they naturally wished to enjoy it, and from Russian territory being at that time greatly extended, they did not find their former place of residence now on the frontier; consequently, war was not their daily occupation, and they still wished to retain all their privileges, and even to extend their liberal system of self-government But the democratic style of government was no longer to be the taste of the Russian despots, now that the military services of the Cossacks were no longer required, and means were taken to deprive them of their peculiar privileges. The Emperor Alexander recollected that when Moscow was the seat of the Russian Government, the nations of the Cossacks, then consisting of immense bands of robbers, had often changed the government of the Czars, and that the vicinity of the Cossacks was one of the chief reasons for Peter the Great changing from Moscow to St. Petersburg. But, be that as it may, it is certain that whenever Alexander found any body of the Cossacks attempting to resume or maintain the enjoyment of their privileges, he moved some of them to the most quiet part of his dominions, or he surrounded others with bodies of troops, forcibly removed to some distant part of his distant frontier, then giving them ground on condition that they defended his frontier; but privileges were done away with. The Emperor Nicholas carried on the same system, though with a cleverness and tact peculiar to himself; but, while indulging his own despotic notion, he has knocked the light privileges out of the Cossacks, and they are now incorporated in his army, subject to all the rules of regular and severe discipline; thus, though in appearance Cossacks, they have lost their natural characteristics, and they are now considered the worst soldiers in the Russian army, having proved themselves such in the Turkish war of 1828, 1829, and in the war against the independence of Poland in 1831. But still, in spite of their reality, there is, out of Russia, a romance attached to the name and dress of Cossacks, from the remembrance of what they were in 1812, 1813, 1814; and perhaps increased by Lord Byron's "Mazeppa, Ivan, after being a knight's page, joins their society, and from their democratic government obtained the rank of hetman or chief of Cossacks, and, joining himself to Charles XII. of Sweden against the Czar, actually defended by the Cossacks at the battle of Pultowa. Peter massacred many of them after the fight, and sent 12 000 of them to deepen the Lake of Ladoga, where the whole miserably perished, and at the same time exterminated other tribes.

But in making any remarks about the Cossacks as soldiers, Sir Charles Shaw does not include the Cossacks employed at the Caucasus, or, as they are specially called, the Line Cossacks, he says:—"I believe there are no better fighting men in the world than these men; but, from their composition, I believe in this war they will attach themselves to that party which proves itself the strongest. Many of the Cossack tribes were unfeelingly treated by Alexander that they emigrated to Turkey, and settled in the Balkan range of mountains; but about 5000 of them, in 1828 were tempted by Nicholas to return, and were sent off at once to the Caucasus and Sea of Azoff. Other four regiments of Cossacks, who had behaved ill in Poland in 1831, had many Poles incorporated with them, and as a punishment, were sent to the Caucasus; so it is to be hoped a proportion of those may now join the Turks."

MILITARY CLOTHING.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—Your Military Correspondent has misled you as to the profits of Colonels from off reckonings. For regiments at home, the clear gain is not above £600—generally less—instead of £929, as he says.

A CLOTHING COLONEL.

[In reply to the above, our Military Correspondent refers the "Clothing Colonel" to the Quartermaster's books of any infantry regiment. The original statement is correct, as will be seen by the following].

RETURN, showing the Amount Voted by Parliament for Clothing a Regiment at Home. Also, showing the Sums Expended for that purpose.—

CHROMO-LITHOGRAPHY AND NATURE-PRINTING.—The progress which the former art has made since the year 1851, and the marked attention which has been recently paid to the latter, in consequence of the successful efforts of the Imperial Printing-office at Vienna, have induced the Council of the Society of Arts to bring together a collection of recent specimens. There are upwards of fifty specimens of nature-printing from Vienna, of every variety (botanical, geological, entomological) shown, and also some of the earlier productions (as far back as 1847) of Dr. Ferguson Branson of Sheffield, to whom, it is believed, the invention is due. The private view took place on Wednesday evening, and the exhibition was opened to the public on Thursday.

THE WAR IN THE EAST.

(From our Special Correspondent.)

BELGRADE, Dec. 14th.

THERE are, here and there throughout Europe, small states or principalities, of which the existence would soon be problematical were it not that their situation renders them an object of desire to more than one powerful neighbour. Servia is one of these. It is needless to enter here into the contending and clashing interests of Turkey, Austria, and Russia; it is sufficient to bear in mind that Servia obeys the Porte as its suzerain, pays tribute to it, yet holds its head up as if it were really independent, and could defy at once the diplomacy of Russians, the bayonets of Austrians, and the scimitar of the Turk. "Where is Servia" once said a Parisian dandy to a travelling noble of this country. "Where is Servia? As well might I ask you 'Where is Paris?'" was the reply. The Servians, in truth, believe that their neutrality is the make-weight that keeps all parties even; and that a declaration on their part for one side would be fatal to the other, and involve the whole of Europe in instant war.

There are, however, very few Servians who are sufficiently deep in politics to be more than either Russian or Turkish in their leanings. But there are some who go so far as to foreshadow the existence of a Servian kingdom, having for its frontier, on the side of Austria—not the Save and the Danube, but the Danube and the Drave, taking in Slavonia, which speaks the Servian language; including Bosnia and Montenegro, whose inhabitants, dwelling in fastnesses inaccessible almost to any one but themselves, supply them with the plunder of the plains; and, finally, the Herzegovina, and a couple of ports on the Adriatic, which would make them independent of the Danube for supplies, and open a corn-market for European vessels without the necessity of entering the Black Sea. The more enlightened and better-informed Servians who thus anticipate on the eventualities of war are too often blind, however, to the fact that Servia, as at present constituted, can do little towards obtaining these grand ends without assistance. It is obvious that, from the Russians—into whose hands some Servians feel inclined to throw themselves—little would be gained, save absorption into the administrative and despotic system of a province of the Czar; from the Austrians, nothing save a participation in her large debts, and her conscription; whilst under the suzerainty of Turkey it is possible for them to grow in civilisation and in vigour. At present, however, the forces of the Servian cannot be rated so highly as they themselves would make the world believe, nor even as numerous authorities assert. It has been stated that in the Hungarian war the Servians supported Austria with an army of 25,000 men. Nothing can be more exaggerated than this. In the first place, the force which left Belgrade consisted of no more than 7000 men; and in the second, it is extremely doubtful whether the assistance thus afforded was effectual. It would seem, from what is known of them here, that these men were a source of greater fear to their friends than to their enemies. They entered Slavonia *en masse;* and, instead of acting in any disciplined or useful manner, they spent their time in plundering, not only the foes of the house of Hapsburg but the churches of the Greek persuasion through out the country which they overran. Their trophies of silver and gold, brought back to Servia after the expiration of the war, consisted principally of cups and chalices and precious images, stolen from the Greek Churches of the border. Again, it is asserted that Servia could furnish a body of troops of about 50,000 men. Undoubtedly such might be the case under a system of conscription, which would take the men from their homes and give them officers and discipline; but the only troops in Servia which are dressed and drilled consist of about 3000 men, clothed in Russian uniforms, and without officers. At a review, a few days since, the companies were accompanied in succession by the same regiments, lieutenants, and non-commissioned officers, who might be observed rushing from place to place in considerable hurry and trepidation. The Servians, however, are brave; and when disciplined, would be a splendid force. They are at present, however, in a somewhat barbarous state, being, in many respects, as backward as the people of the less polished parts of Turkey, and holding in considerable contempt the amenities and ordinary customs of civilisation. As an instance, it is only necessary to say that their women, although they enjoy the privileges of Christians, are scarcely less slaves than those of Turkey; and that, in Servian families, a father is never seen in great any but his sons with respect or affection. The Servian's wife obeys him as her lord, and gives him an amount of obedience that no civilised Europeans can conceive or would dream of exacting—she dare not eat until he has eaten, nor drink till he has helped himself. Nor is it likely that much can be done in the Christian countries following the rites of the Greek Church until some reform is made in the ceremonies and influence of that Church. We know that in Russia there are upwards of 200 holidays in the year. In that of Servia there are 265 holidays; and the Archbishop here, who was once the *marmiton* of Prince Milosch, has lately put forth the enormous pretension that the people of every Christian denomination should keep their numerous fêtes holy. The Servians who thus labours for a hundred days out of every 365 can be scarcely said to understand the value of time. There are, indeed, very few things that they can do. There are no carpenters, nor smiths, nor labourers throughout the country; and even the houses are built by workmen who come out of Austria in summer, to return in winter to their homes with their earnings. There is not an inn out of Belgrade where a traveller can sleep, and if he wants a bed he must take it with him. Such being the state of Servia, it is somewhat surprising to find its people putting forward such pretensions as their pride induces them to hold. It was with no small interest that I witnessed yesterday an imposing ceremony in commemoration of Servian independence. The privileges accorded by the Porte, at various times, were crowned at last by the granting of a berat or firman, which secured to the Servians the right of governing themselves; and the anniversary of this joyful day is celebrated with considerable pomp. On the present occasion, the brightest sunshine lent animation to the scene, and the brass ornaments of the Greek Church, as well as the zinc spires of the minarets, glistened in its rays, as the cannon boomed in honour of the day, and the band of the Royal regiment played upon the square the most inspiring tunes. The troops of the garrison dressed in Russian uniforms, were drawn up in martial array, and the officers in all the pride of gold lace and royal blue, strutted about the ground with considerable importance in their aspect.

The interior of the church is, like most of the Greek edifices of the same character, adorned with frescoes, which not only fill the vaulted ceilings, but which cover the panels of the screen. A dais was raised in front of the screen, on which by turns the Archbishop, in gold costume, and with a splendid mitre, officiated, assisted by splendidly-dressed priests, bearded nobly like himself. The service consisted chiefly of formulæ and ceremonies, more absurd in my eyes than those of the Roman Catholic Church; and the priests, when they approached their Master's chair, bowed low before and stooped to kiss his hand. A choir on each side chanted now and then a strange and inharmonious psalm, which sounded shrill and discordant throughout the edifice. The Ministers of the Servian Prince, Mr. de Fonblanque (the British Consul-General), and the official persons of the Austrian and French Embassies were present in brilliant costume. The ceremony being over, the Archbishop marched up to the dais, and delivered an exhortation to his flock to be moderate in their mode of life, and in the direction of the affairs which they might have under their charge. He returned, and two priests then advanced to the dais, and delivered—the first a prayer for the health of Abdul-Medjid, the Sultan, and the second a prayer for Alexander, Prince of Servia. As the priests retired, I observed an extraordinary movement amongst the assembled crowd. It seemed as if some remarkable circumstance had occurred; and, in truth, it appeared that it was so. The usual prayer for the Russian Emperor had been omitted on this occasion. The first emotion caused by this circumstance having subsided, the crowd quietly poured out of the various gates of the church.

A few sagacious people suppose that the desires of the Servian Government have been only thus obeyed by the Archbishop, in order that he may have an excuse for specially reading up a prayer for the Czar on St Nicholas Day next approaching; but the utmost endeavours are being made to make the Servian clergy abandon this design.

One word about rumours which are current in England respecting Servia. It is not true that the Servian Government has requested the return to Belgrade of Mr. Monkhim, the Russian Consul. That gentleman is at Semlin, suffering from chilblains—a remarkable affliction for a Northern. Meanwhile, although the Russian flag is struck from the mast before the Consular dwelling, and the arms are taken down, still the colours are paint-ed, and remain as an emblem on what may now be called symbolically the bare pole.

There is no truth in the statement of an engagement on the Servian frontier. The various stories of that kind are mere inventions.

PROVINCIAL INTELLIGENCE.

MOVEMENT IN BIRMINGHAM ON THE TURKISH QUESTION.—A requisition is now being signed, calling upon the Mayor to convene a public meeting to consider the Russo-Turkish question, and the policy of England in reference thereto.

RUSSIA AND TURKEY.—The following is in course of signature at Southampton: "To J. T. Tucker, Esq., the Worshipful the Mayor of Southampton.—We, the undersigned inhabitants of the borough and county of the town of Southampton, request you will convene a public meeting to take into consideration the important question of the unprovoked aggression of the Emperor of Russia against Turkey; and, should he not accept this expedient, to memorialise her Imperial Majesty the Queen to immediately adopt, in conjunction with her powerful ally, the Emperor of France, such prompt and energetic measures as will tend to preserve the integrity and independence of the Turkish Empire, and compel the Emperor of Russia to submit to such conditions as will guarantee the future peace and tranquillity of Europe and Asia."

RAILWAY APPOINTMENTS.—Mr. Parsons, late traffic manager of the Shrewsbury and Birmingham, has been appointed traffic manager of the South Staffordshire Railway, in the room of the late Mr. Ebsrall. Mr. Broughton, formerly traffic manager of the Grand Junction Canal, has been appointed traffic manager of the London and North-Western at birmingham. Mr. Hall, formerly of the Eastern Counties, and who returns to that company, has been appointed, as secretary of the Shrewsbury and Birmingham, by Mr. Kershaw, late of the Great Western.

THE MANCHESTER AND SALFORD EDUCATION BILL.—It is stated that Sir John Pakington has decided at the request of the Manchester and Salford Education Committee, that he would take charge of their bill at the approaching session of Parliament, on the ground that, a though concurring in the general principles of that very important measure, he is unable to adopt the plan prepared by the committee for the religious instruction to be given in those schools not connected with any particular denomination of Christians.

CHARITY IN THE BRISTOL CORPORATION.—By old testaments and deeds there are several gifts allotted to the Mayoress of Bristol, to be by her distributed at discretion; and, "in case of there being no Mayoress, by the Wife of the senior Alderman." Now, it so happens, that not only is our present worthy chief magistrate not married, but the two "most ancient aldermen" are likewise "single gentlemen." Here is a fix! The honourable trustees are at present considering what, under the circumstances, they will do with the gifts (and they are not few) so allotted. *Bristol Times.*

POOR-LAW UNIONS AND THE NEW STAMP ACT.—Inquiry having been made of the Poor-law Board whether cheques drawn by guardians of the poor upon their treasurer were liable to a stamp under the new Act, the Poor-law Board stated in reply, that poor-law unions were expressly exempt from the operation of the Act.

WORCESTER DIOCESAN ARCHITECTURAL SOCIETY.—A Diocesan Architectural Society has been established in Worcester, Lord Lyttelton being president. Its objects are to promote the study of ecclesiastical architecture, antiquities, and design, the collection of books, casts, drawings, &c., and the restoration of mutilated architectural remains within the diocese, and to furnish suggestions, so far as may be within its province, for improving the character of the ecclesiastical edifices hereafter to be erected or restored.

THE KENT DRAINAGE.—The movement in favour of draining the marshes on the Kent shore of the Thames is proceeding with some activity. A report of the committee appointed at a meeting on the 1st November has been printed, and was adopted last week, by a meeting of the persons interested. It alleges that these marshes seriously affect the health of the metropolis, and more especially the health of Woolwich, where the mortality is above the general average; and it shows that the drainage of them is practicable, and would be remunerative. It was stated at the meeting that Lord Palmerston had suggested the creation of drainage districts, with a body of Commissioners for each, one half to be nominated by the resident proprietors, the other half by the Crown.

THE POWER OF CONSCIENCE.—About twenty years ago a robbery was committed at the residence of Mr. Stephen Donster, near the White Bridges, Boston. Certain parties were suspected, but the offence was not brought home to them, and nothing more turned up till a few days since, when a person visited on Mr. Donster, and confessed being a party to the robbery. He, moreover, stated his desire to make restitution. He said there were four persons implicated in the robbery, two of whom were still residing in the town, and getting their living as respectable tradesmen. The other one, he said, had been transported. He made restitution to the extent of the loss.

A VORACIOUS BOA CONSTRICTOR.—Last week, Wombwell's fine collection of wild beasts arrived in Durham, from Stockton. A few days previous to its arrival, a singular circumstance occurred. During the cold weather, the boa constrictor, to protect it from the cold, was carefully wrapped in flannel, and two young crocodiles put beside it, with the object of imparting heat. On the keeper, however, opening out the flannel to look after his charge, to his utter astonishment, he discovered that one of the crocodiles had been swallowed by the boa! This is considered to be a feat unparalleled in natural history.

DEPREDATIONS BY FOXES.—A short time since, the foxes in the preserves of Viscount Beresford, at Goodhurst, Kent, made some heavy depredations upon the turkeys. In consequence of the snow, the keepers have been able to trace the foxes, and one day last week orders were given that the wood should be secured. Accordingly about thirty men, with guns, and others as beaters, commenced the day during the day they only succeeded in destroying one and moving another.

THE "ILLUSTRATED LONDON NEWS."—(From the *Morning Chronicle*, Dec. 24.) The Christmas Number of this Journal has just been issued, together with the usual Supplement at this period of the year; and it will undoubtedly prove more than usually entertaining to many a festive circle at this holiday season. In its pages it will be found that no class of its numerous readers has been forgotten: the old and the young, the grave and the gay, will equally find something both instructive and amusing. The Christmas Supplement, of course, is devoted entirely to holiday subjects. Christmas games, Christmas puzzles, and Christmas songs will be hailed with delight, and, no doubt, speedily put in practice, in many a social circle; and there are, also, several ghost and legendary stories of more than usual merit, which will be found acceptable round many a fireside. "The Christmas-tree, as Seen by the Father of a Family," will be recognised by *every paterfamilias* as the usual remembrance of the season make their appearance in

THE THEATRES, &c.

DRURY-LANE.

We might, after the fashion of our contemporaries, institute a learned analysis into the causes of the success of the new lessee of this theatre But, in our opinion the matter lies on the surface; and the character of the success of itself accounts for its achievement. No especial object is pursued by Mr. E. T. Smith; but the readiest means of turning a penny are perseveringly adopted. No high dramatic purpose, no regular basis for theatrical management, are proposed or attempted to be laid; but the question proposed is, what or who for a certain limited time is likely to command an audience? The stage is free to any such temporary experiment, and anything which cannot sustain itself for a long period, or is at present excluded from the more orderly arenas, is welcome to this, if at all likely, by the force of puffing, to prove attractive or a few weeks. As an agent for effecting eccentric engagements of the kind, Mr. Smith has shown himself to be an active and expert man of business; and as such has proved that there only wanted some middle man between the proprietors and probable customers of such an exhibitional edifice to secure the profitable regular incoming of a stated rent; the public being always open to impressions of the novel or the rare. Mr. Smith, in fact, trades from week to week, on the state of the market, and depends on the chances which have hitherto turned out to some extent profitable, not being over particular as to what he deals in, but regarding all as fish that comes to his net. This course of proceeding requires instinct, talent, and perseverance—and to these three English qualities the manager has not been deficient. And now, having reduced this marvel to the level of common sense, we may proceed to record that the theatre re-opened on Monday to a crowded audience, and that the name of the pantomime was "King Humming-top; or, Harlequin and the Land of Toys." So impatient were its would-be spectators, that the two introductory pieces—" Gwynneth Vaughan " and " Delicate Grounds," to wit—had no chance of a hearing; the latter, in fact, was completely cut short by the interruption of pit and gallery, and the curtain descended on the efforts of Mr. and Miss Graham, who, somewhat imprudently, made their début on a boxing night. The hero of the introductory portion of the pantomime is one *Chameleon* (Mdlle. Louise Blanche)—a Prince in search of *Happiness*, and in search of her impersonated in a Fairy (Miss F. Williams), who conducts him to the Island of Toys, where the implements of childish play are impersonated in silly stage grotesque and Titanesque. *Princess Happy* then engages his affection, and, by the Labyrinth of Love, through the Bower of Beauty, he reaches the Haven of Happiness, and the conclusion of the legend, which at this point merges into the harlequinade. *Columbine*, as we have already announced, is performed by Miss Annie Cleaver. The tricks of the pantomime were manifold. Mr. Tom Matthews (the *Clown*) abounded in humour, and particularly exhibited his vocal accomplishments, to the delight of the gods, who encored " Hot Codlins," and " Tippity witched." The spectacular decorations of the piece are frequent, each exceeding its predecessor, until the last, which transcended all the rest. The Ethair family, also, at various intervals, exhibited their athletic feats, as full of grace as wonder. Not satisfied with full-grown harlequins and columbines, however, the concoctor of the spectacle had provided the audience with a juvenile set, the tenants of " Pantomime House," who go through the different stages of infancy and adolescence, imitating the actions of their elder prototypes. The idea seems good, but in its illustration it was elaborated too minutely, and became tedious. The pantomime is, indeed, too long; but, when judiciously cut, and workable with more facility, will undoubtedly answer the purpose of holiday amusement.

HAYMARKET.

Mr. Buckstone's pantomime, founded on the laureate Southey's nursery tale of "The Three Bears," is an elegant literary contribution to the English boards, as well as a spectacle of considerable beauty to the Christmas sight-seer. Indeed, the piece combines the qualities of a burlesque or extravaganza, and those of a pantomime. *Little Silverhair*, feasted by the Fairies, and deriving from them the same spirit of mischief and appropriation, cannot help meddling with the porridge, the chairs, and the beds of the *Three Bears*, and falling under their sentence. Successively and fearfully they exclaim, " Out off her right hand!" " Out off her left hand!" " Out off her head!" She pleads for life—and, for a banner and a long nail; which boon, in their simplicity, the *Bears* grant, and are repaid by having their tails nailed to the floor. But they break away from their fastening; and it needs the intervention of the *Fairy Queen* to deliver the adventurous girl from peril. The rest of the legend, some beautifully-painted scenery was introduced:—A Ruined Abbey by Moonlight; a Lotus Lake and Waterfalls; a Fairy Dell at Daylight, and a Fairy Raft, with the phosphoric waters of Wonderland, were all exquisitely-executed scenes. Mr. Harry Marshall, as *Clown*, introduced some musical oddities qui'e in harmony with the general elegant spirit of the entertainment. His *fantasia à la Paganini* was good as well as effective. This is a feat requiring an accomplishment beyond the wonted qualifications in a *Clown*, and is an added excellence meriting especial appreciation. Two scenes, the Camp at Chobham, and the Haunted Chamber, were excellent in their arrangements. The ballet troupe of fairies was exceedingly pretty in its personnel and ordonnance. The last scene at Spithead, with Victoria Regina in her yacht, leading the British Fleet out to Sea, is especially magnificent There is reason to believe that, with its originality, beauty, and altogether novel appointments, this *first* pantomime at " the Little Theatre," will prove a thriving speculation.

PRINCESS'.

The pantomime at this theatre takes its character *from* its subject—" The Miller and his Men." It is pre-eminently the melodramatic pantomime, and the old melodramatic plot is worked out with careful stage-effect, and illustrated with magnificent scenery. The Axure Lake, with its fountains and its fairies, is of itself a most enchanting picture The Fays of the spot (Miss Kate Terry) assist the hero, Jack Robinson, the miller, though supported by the power of *King Salamander*, and despatches by a giant, *John Dory*, a diplomatic note to the *Fire King*—who lives in great state, and has a grand hall (to which the painter has done head-up justice)—every thing in the scene, which occupies the whole length of the stage, being red hot; and the cascades, or royal shower-baths, being compo-ed of fiery billows This extraordinary scene is overlooked by demon-crowds upon a rocky line or ledge in the background, who gaze down in curiosity upon the proceedings of the *King Salamander's* counsellor, upon the occasion, is a four-faced mystical animal, which can separate and re-unite itself at pleasure, and, when in fire, utters an oracular warning not to be despised by mortals—to wit, *Cold or Heat*. Nevertheless, the *King of Fire*, losing his temper, is soon about to bro l the *John Dory*, who brings the " note;" but the fairy Mistress of the latter brings *Water* to bear on *Fire*, and, by means of her fire extinguisher, puts the fire empire. It is not necessary to detail the more earthly parts of the story—the incidents are sufficiently known from previous dramas. In the crisis, *Grindaff's* mill fails, and makes a bridge, by which the Fairies effect a passage to the rescue of *Claudine*, after-wards *Columbine* (Miss Desborough). One scene in the " pantomime proper" is remarkable—in which *Harlequin* furnishes his apartments in a truly magical manner Six tall women, courteous in manner, and elegantly dressed, are called in: and, at the touch of the wand, become, by some most mysterious process, chairs, tables, clocks, and other articles of furniture. The completeness of the trick almost defeated itself, so instantaneously was the transformation produced. Next to this truly-wonderful scene, that of the Chobham Camp is entitled to take rank; and here a juvenile troupe of Coldstream Guards went through the required military evolutions with singular precision. The " Temple of Happy Land," which forms the concluding scene and tableau, was most gorgeously and felicitously rendered.

LYCEUM.

So far as the magnificence of the appointments and pictorial effects extend, the burlesque of this Christmas is quite equal, if it does not exceed, that of previous years. " Once upon a time there were two Kings," is a suggestive commencement. *Perwiginus the Proud*, King of Humanition (Mr. J. Bland) has a son, called *Brutus the Crooked* (Mr Wright), who returns victorious from a warlike expedition, wi n the *Princess Carpillona* (Miss St. George) as his captive. Her lady is the daughter of *King Placid the Easy* (Mr F. Matthews). Her mother, *Queen Dominuna* (Madame Vestris), supposes her to have been drowned when a child. Aided by the fairy *Amaranta*, (Miss Martindale) the *Princess* escapes; but is pursued by *Brutus* through a forest She comes to the place of retirement of *King Placid*, now dethroned, with his wife and daughters living happy in a verdant valley. She falls in love with *Corin*, a foundling (Mr. F. Robinson), adopted as his son by the benevolent ex monarch. The lovers are at length seized upon and carried off by *Brutus the Crooked*, and are, after a mock trial, condemned to the stake. The *Fairy* then intervenes, and proclaims *Corin* to be the lost son of *Perwinglus*; and *Carpillona* being claimed by the *Placids* as their daughter, *Brutus* tumbles through the trap, and the lovers are left to make themselves happy in the usual way. The scenery is painted by Mr Beverley, who has presented the public with two pictures of surpassing beauty—one, represen ing a " Sea-weed Hall," or hall embellished with sea-weed, extending through a succession of arches to an elfin bay, was so novel and rich that the audience summoned the artist to receive his well-merited applause. A grove of silvery palms, the branches of which disposed so to simulate natural aisles, was another great merit; and, with the groupings of character, united in a picturesque arrangement which was perfectly entrancing The house was crowded, and the success unequivocal.

ADELPHI.

The piece by Mr. Mark Lemon, at this theatre, is called " Number Nip, and the Spirit-Bride," and proves to be a production of much grace and unquestionable brilliancy. Two friends, *Count Rudolf von Wolfenstein* (Miss Woolgar), and *Baron Herman* (Miss Cuthbert) are at Wolfenstein Castle, and express considerable interest in *Estella*, a spirit-maiden (Mdme Celeste), who loves the *Count*, and *Number Nip*, the Gnome King (Mrs. Keeley), who is subject to the power of *Wolfenstein*, by the sway of a talisman. *Nip* would recover his freedom, which may be effected by the talisman being demanded on her wedding day, by a virgin bride, and given in evidence of his affection by the bridegroom, who, of course, can easily transfer the gift to the Gnome. By means of much glamourie, the Gnome is busy in producing a love-match which, however, falls to the lot of *Ida* (Miss Mary Keeley), a foster-sister of the *Count*. Poor *Ida*, notwithstanding, has her troubles. She is seized by pirates, and carried off to Tunis—put up to sale, and knocked down to the *Pacha*. But *Estella*, in the guise of a dancing-girl, so fascinates the purchaser, that he willingly resigns his bargain to *Rudolf*. On looking, however, into the palanquin for his beauty, he beholds instead the Gnome Demon. *Rudolf* himself, also, is not safe for, later wedding *Ida*, *Estella* claims him in marriage, when, as the bride, she undertook the rescue of the girl; but the latter expressing her willingness to die for her husband, the generous *Estella* recognises the purity of her affection, and yields her own rights. The Demon King, receiving his recovered talisman, sinks into the earth; and *Estella*, purified by her sacrifice, is rewarded by a visible apotheosis, ascending towards heaven, greeted by a spirit-chorus. All this was elegantly and cleverly managed. The acting was throughout meritorious; and the piece deserves the more consideration, as it indicates a desire, on the part of the management, to introduce a poetical element into the performances at this theatre.

OLYMPIC.

The drama of " Plot and Passion," continuing to be attractive, preceded the new pantomime on Monday. " Harlequin Columbus; or, the Old World and the New," as we have previously stated, forms its subject; but it is treated in a peculiar manner The scene, for instance, opens with Leiha's Wharf, and proceeds to Granada, with a distant view of the Alhambra. Their Majesties, *Ferdinand* and *Isabella* grant to *Columbus* permission to explore the New World, after which the great adventurer is represented on his outward voyage, until he and his crew land on the shores of "the undiscovered country." In the Temple of Guanahani a ball and banquet are given by the cacique, *Tazemandeotemala*. *Columbus* and his friends are disgusted by the cannibalism of the natives, and, on several occasions, from which they are delivered by some friendly sprites, who transform the characters. The Messrs. Roshez, as *Clown* and *Pantaloon*, well performed their respective parts; and some of the scenery, particularly that of the arctic regions, was exceedingly effective. The piece was decidedly successful.

STRAND.

" Harlequin and King Nutcracker; or, the World of Toys," proved a prosperous speculation on Monday. Founded on Hoffman's story, we renew our acquaintance with *Dame Trudchen* and her sick child, who sees in a vision, as the consequence of a nurse-potion, the *Spirit Malaria*, who lectures the public on sanitary matters; but is put to flight by the *Fairy Abernethie*, who rescues poor *Reinhold*, and conveys him to Toytown, in Fairyland. Here the Peter-in-Chief is *Nutcracker*, the first King of Troy, and announces the approach of his Royal master, who, on his arrival, is received by the juvenile people of Toytown with royal ordnance. *Reinhold* soon discharges the artillery of lollypops and brandyballs, whereupon the fairy *Abernethie* effects the needful transformations. The performers in this pantomime are chiefly children, and with the talents of Flexmore to corroborate their efforts, surprised the audience with their cleverness and aptitude.

SURREY.

Mr. Alfred Crowquill's pantomime at this theatre fully justified public expectation. It is entitled " King Mutis; or, Harlequin Heart Cake" The piece commences with allusions to the Crimean war, during which we are presented with the rival loves of *King Muffin* and *Prince Crumpet*, which require fairy machinery for their solution. Regiments of crumpets and muffins, armed with toasting forks, illustrate the scene of its transformation from the Hall of Justice to the Hall of Jewels. The leading political topic of the day was symbolised by the appearance of a live turkey and a grisly bear, the former being rescued from the latter by French and English soldiers. There were also some hits at the hotel-keepers, which told. Signor Remolino's gymnastic performances formed part of the entertainment, and were much applauded.

SADLER'S WELLS.

" Harlequin Tom Thumb" is the novelty among pantomimes this year; and, not content with the glories of the small hero, it ekes out its attractions with " Gog and Magog, and Mother Goose's Golden Goslings." The plots intertwine and form a web like that of life, of many colours. *Gog* and *Magog* in childhood, in their dread of improvement and the ruin of vested interests, initiate a train of hits civic, political, and social, and conducts us to *Giffer Thumb's* cottage, and other scenes more or less picturesque and fantastic, until the usual transformations take place. The house was excessively crowded, and so impatient that it was exceedingly difficult to catch the plot of the performance.

MARYLEBONE.

The pantomime at this theatre has proved eminently successful. It is entitled " Harlequin Ugly Mug, and My Lady Lee of Old London Bridge" The scene opens, as we have said, at Stonehenge. The moonlight falls upon a sleeping sprite, by whom and whose comrades the Queen of *Fairies* is rescued in her efforts to prevent the marriage of *Lady Lee* with the son of *King Ugly Mug*, whose hand she designs for *Miss Beauty*. London Bridge, by her agency, is broken down; but by that of *Granite, Stonebuilder*, and other Stonehenge sprites, is rebuilt, so that *Lady Lee* passes safely over, and the lovers have to be delivered by being transformed. Some of the scenes in this piece are truly beautiful, and the whole has been got up with great cost and taste. The tricks are abundant, and some of them peculiar. The acting, also, was very good, and the whole speaks well for the liberality and judgment of the conductors.

STANDARD.

The pantomime at this theatre had a true English title, and was received with most hearty welcome. " Plum Pudding and Roast Beef; or, Harlequin Nine Pins, and the Card King of the Island of Games," was the name thereof; in which *Roast Beef* wishes to effect a marriage between *Young Holly*, his son, and *Fair Mayberry*, the daughter of *Plum Pudding*—the latter being a somnambule; a circumstance which, however, does not prevent the young couple from celebrating their wedding at Chobham. An endeavour, however, is made to prevent them from carrying out their intention by *King Noodle*, of the Island of Games, who enters with a retinue, consisting of about 150 persons, representing different games, such as Dice, Dominoes, Nine Pins, and Cards; the emblems and groupings of which reflect credit on Mr Douglass, the inventor. The transformation scene was well managed, and very splendid. Of the " pantomime proper," the great scene is that of the Trades, in which about 250 mechanical figures, all in action, represent the different callings.

THE CITY OF LONDON.

The " Ocean Queen; or, Harlequin and the Mystic Branch," is the name of the pantomime at this theatre. The cedar cottage of *Dame Chatterbox* and dwelling of *Young Friendless*, the orphan boy, with the *Fairy Daylight* and her companions, introduces the subject. The *Fairy Mid-day* next wakens up *Korac*, an active sprite, who, after performing several of his antic evolutions, falls at her feet, and she desires him to seek out the *Fairy Queen*. The *Fairy Coral Branch* next takes *Friendless* under her protection. The Ruby Castle of the Drachenfell anon presents *Friendless*, lost in wonder. The Demon returns from the hunt, with his scarlet troop of hunters. Ultimately he seeks to make *Friendless* his victim; but the latter secures a magic branch, which causes the Fiend to sink in flames. Subsequently, *Friendless* is ordered to plunge into the waters to save the enchanted *Queen*, who sleeps beneath the deep. The Silver Waters rise, obscuring the scene entirely from view; on clearing away it presents before us the Enchanted Palace of Oriental Pearls, with Scalectic Grotto, containing the *Queen* and her attendants in enchanted sleep—it expands by extensive machinery invented by Messrs. Kawdrey and Barnett, from drawings by Mr Simmons. *Friendless* here enters. The *Queen* is ultimately changed to *Columbine*; *King Ruby*, to *Pantaloon*; and *Guzzlerina*, to *Mary Clown*; while *Korac*, as *Sparkle*, takes the form of *Sprite* Among the hits of the day are Chobham Camp effects; Moses and Son's, Aldgate, &c.; till the characters arrive at the " Anchor of Hope," when the Fairy Queen appears, sending them to the Grand Palace of Neptune; finishing with a pantomimic tableau.

ASTLEY'S.

" Old Billy Button's Journey to Brentford" is the title of the pantomime. The curtain rises discovering the abode of the demon *Stoicap*, Guardian of the Magic Needle Here *Goldeye*, *Silvereye*, *Short*, *Stump*, *Whitechapel Knitting*, *Packing*, and *Darning* sprites are busily employed making the Magic Needle. The romantic Garden of Industry, on the Land of Perseverance, next presents golden windmills working—bees flattering round the hives—*Treebeck* in his glory—the entire fairy court at work, some churning, others knitting. A festive dance takes place. The *Queen* informs the court that she intends to stun a Christmas pantomime. The story now commences. *Billy Button* receives a letter for his vote, enclosing £10 for his journey to Brentford. After many mishaps with *Stitcher*, he dresses in his best, and starts for the livery stables. *Billy* tries to mount, but his horse begins kicking, and throws *Billy* sailing out for his life. *Goldeye* appears with the Mag'c Needle We now find ourselves at the hustings, in Brentford town. Speech making and heads breaking. At this particular moment *Billy Button* arrives. The *Ladies' Favourite* was engaged to take him to the hustings, which he does, and throws him there. The *Fairy Queen*, *Betty*, and *Timothy* then make their appearance, and are changed to *Harlequin* and *Columbine*; *Stitcher* to *Pantaloon*, and our old friend *Billy Button* to *Clown*. The pantomime finishes in an emblematical Bower of Industry.

THE CRYSTAL PALACE AT SYDENHAM.

We resume our Illustrations of the progress of the Crystal Palace, with a representation of the workshop in which Extinct Animals modeled to the size of life from their remains, in living attitudes, are being prepared under the direction of the eminent physiologists and geologists who have this department under their control.

Hitherto we have been accustomed to wonder at or study these monsters of the old world, either in pictures of a small size, illustrating the descriptions of writers on the subject; or in museums where a vast fragmentary or an almost complete fossil skeleton, gave us a vague idea of these predecessors of the living family of nature. But at Sydenham we are not to be contented with either pictures or dry bones.

The Gardens and Park are sufficiently advanced to enable us to form a tolerably correct idea of the general plan in which Sir Joseph Paxton has endeavoured to produce a fitting foreground to his Palace.

The Palace stands upon the brow of a hill rising about 200 feet above the valley where the railroad, which is to be its principal feeder, creeps along almost unobserved.

On leaving the Central Transept (which is now rapidly approaching completion, all the arches being turned), the visitor descends a flight of granite steps 120 feet wide, which lead to the Upper Terrace. This terrace, 1700 feet long and 60 feet wide, margins the whole length along the base of the Building, between the wings, separated only by a sloping bed of turf, terminating at each end, by flights of steps, which lead to the wings now in progress Fifteen feet lower lies the Terrace Garden, which is reached by six flights of steps; it is bounded on the southern side by a stone balustrade, with numerous recesses, crowning the wall which supports the terrace: and, at each end, by the wings of the Palace, ending with two square towers, which appear to rise from projecting bastions. This Terrace Garden will be adorned with one central ornamental fountain, throwing out a *jet d'eau*; besides others of elliptic shape; as well as with statues, vases, rich colored flower-beds, shrubs, and trees, on which the shadows of the projecting transepts will fall. From the Terrace Garden, three flights of stone steps the side balustrades being adorned with statues and tazzas—will descend to a garden fifteen fee lower

From the tower which terminates the south wing, proceeds a covered way communicating with the railway station. Thus the visitor will be enabled at all seasons and leave the Palace, at all times, dry-shod. A central walk, ninety-six feet in breadth leads from the centre of the Terrace Garden through the lower garden, until it divides, and reuniting on the other side of a basin, 200 feet in diameter, continues on more than 3000 feet through a garden, which will be a grand-ful mixture of the English and Italian styles. Alongside the great walk will flow the water of the upper basins in a series of cascades, until at the extremity they fall over an open colonnade 240 feet long and 15 feet high, and rush into a winding bed of conti.ue us basins extending on each side the walk, more than half a mile in length, which will send forth from central groups, and surrounding tazzas many hundred spouting fountains. The extent of the ground in which these waters will be displayed, is much magnified by the ingenious treatment: broken ground, in mounds artificially winding in a most natural manner, crowned with forest trees, groves of rich evergreen shrubs, expanses of turf, intermingled with flowerbeds and stonework, give the effect and the solitude of miles of distance to a garden of a few thousand feet—In all about 300 acres. On ordinary occasions the basins will be filled with the gentle overflowings of the upper fountains pouring from the mouths of sea-monsters, just enough fountain and *jets d'eaux* to give life and freshness, and harmony to the scene. But it will be only on the great fête days that the vast streams of water will be unloosed; and, rushing upwards in a thousand spire-like streams, and dashing downward over their arched colonnades and rocky boundaries will make the whole extent of gardens and park resonant with the tumultuous murmuring of a volume of water only one-sixth less than that of the cataracts of Niagara.

On leaving the great basins, at every step the visitor will approach nearer—if not natural scenery, at any rate that which is best known as the English garden style. On a natural knoll near the railway, an ornamental iron colonnade has been erected, which will be covered with climbing roses, and other plants of similar habit; and from this centre, gorgeous in all the colours of our most beautiful flowers, walks will radiate in many directions, with here and there shrubs and trees, and arranged in harmonious group, at once pleasant to the eye of the mere pleasure-seeker, and interesting to the botanical student One of these winding paths will lead to a collection, now in progress of formation, of all the hardy trees and shrubs worth culture in this country, arranged according to the Jussieuian, or Natural System of Botany, and to a pool of about six acres which will receive, by open and secret channels, the waters of the larger basins. On this tidal pool, at a convenient distance from the spectators, islands of irregular shapes will be placed, and covered with luxuriant vegetation. On one of these islands will be placed, in natural attitudes, and amid appropriate vegetation, animals of the secondary, and others of the tertiary period; while opposite to each will be full-proportioned representations of the plants in which the remains of these vast beasts were found. To add to the illusion, the waters of the pool will rise and fall, partially submerging the amphibious inmates from three feet to eight feet alternately, during the playing of the great waters, after the manner of an actual tide. Thus, then we shall see, passing among the mazes of the Iguanodon, or monstrous lizard, thirty feet high, and a hundred feet long from snout to tip of tail. The Megatherium or monster Sloth, will appear in the act of climbing an antediluvian tree; huge Chelonians are to bask upon its banks. The Plesiosaur, with its reptile body and swan-like neck, will wallow in the mud; while the Brobignagian grandfather of turtles, gaping, shall frighten aldermen with ideas of retribution in its monstrous jaws

And so the visitor, exhausted with the marvels of ancient art and modern commerce and ingenuity, within the Building—satiated with palms and plantains, orange groves, and *Victoria Regia*—will be able to find refreshment amid the stately luxury of Italian gardens outside whence, step by step, descending amidst fountains of flowing waters, green turf, bright flowers, luxuriant shrubs, and stately trees, statues and vases, and other works of art, he may finally take refuge on the borders of an old English green, a coppice, or a woodland dell, wild enough to please the ghost of Robin Hood; unless he prefers to turn aside and study, in strata and strange beasts, the history of that old world before which the trophies and gods of Assyrian kings are but as of yesterday.

The Illustration upon the next page is engraved from a drawing by Mr. P. Delamotte.

"THE EXTINCT ANIMALS" MODEL-ROOM, AT THE CRYSTAL PALACE, SYDENHAM.—(SEE PRECEDING PAGE.)

ROYAL ACADEMY PRIZE (HISTORICAL PAINTING).—"ORESTES PURSUED BY THE FURIES."—PAINTED BY C. ROLT.

ROYAL ACADEMY PRIZES.

THE presentation of Medals to the successful students of the Royal Academy took place on the 10th inst., in the Lecture-room; and, it being a Gold Medal year, the company was numerous.

In a short introductory address, the President, Sir Charles Lock Eastlake, adverted to the generally satisfactory quality of the works which had been submitted for competition, as speaking well for the prosperity of our School of Art. He then proceeded to the distribution of the Prizes.

The Gold Medal for Historical Painting was awarded to Mr. Charles Rolt.

The subject given for competition was "Orestes, pursued by the Furies (seen by him alone), is comforted by his Sister." The story, as told by Euripides in his tragedies of "Electra" and "Orestes," is as follows:—*Clytemnestra*, while *Agamemnon* is absent at the Trojan war, forms a guilty connection with *Ægisthus*, and her husband, on his return, is cruelly murdered by *Clytemnestra* and her paramour. *Orestes* would have shared his father's fate; but is privately conveyed to his uncle, the *King of Phocis*, while his sister *Electra* is married to a peasant, in order that she may never aspire to the throne. *Orestes*, upon arriving at the years of manhood, burning with the desire of avenging his father's death, visits Mycenæ, and, incited by his sister, murders the guilty pair. This crime meets with the punishment always supposed by the ancients to attend parricide. He is tormented by the Furies, who show him the apparition of his mother, with the bloody dagger, and point to the wound in her breast. The lines chosen for illustration are:—

Orestes. Ah mother! do not set thy Furies on me:
See how their fiery eyeballs glare in blood,
And wreathing snakes hiss in their horrid hair.
There, there, they stand ready to leap upon me.
Electra. Rest thee, poor brother, rest thee on thy bed
Thou seest them not, 'tis fancy's coinage all.
Orestes.—EURIPIDES (*Potter's Translation*).

Mr. Charles Rolt, the successful candidate, has previously received three medals in the subordinate classes. A glance at our Illustration will at once show how well he has merited his present distinction. The award was made unanimously.

Next was awarded the Gold Medal for the best Group in Plaster, the subject "The Death of Procris."

Labitur, et parvæ fugiunt cum sanguine vires.
Dum que aliquid spectare potest, me spectat.
OVID'S *Metamorphoses*, lib. vii., 27

Mr. Edgar George Papworth, to whom was awarded the gold medal for the model of the above subject, is a grandson of the distinguished sculptor Mr. E. H. Baily, R.A., of whose classic genius Mr. Papworth seems to have inherited no inconsiderable portion. He also carried off the First Silver Medal for the model of a single figure. If our memory serves us well, there has been only one other instance in the history of the Academy of the same person taking this double prize in the same year.

The Gold Medal for Architectural Design—subject "A Design for a Military College in honour of F.M. the Duke of Wellington," was awarded to Mr. Richard Norman Shaw. The building is intended to contain 1000 cadets, with the requisite officers and masters. The plan is in the form of a parallelogram, with wings projecting at the extremities; in the centre is a portico, approached by a double flight of steps, and leading into a hall of octagonal form, rising up into the central dome (in this hall spaces are left for frescoes, illustrative of

ROYAL ACADEMY. PRIZE (ARCHITECTURAL DESIGN).—DESIGN FOR A WELLINGTON COLLEGE, BY R. NORMAN SHAW.

ROYAL ACADEMY PRIZE (HISTORICAL SCULPTURE.)—"DEATH OF PROCRIS."—BY EDGAR G. PAPWORTH.

the life of the Duke of Wellington). The remainder of the principal floor is occupied by the dining-hall, chapel, lecture-theatre, library, model-room, laboratory, geological museum, infirmary, class and professor's rooms; as also houses for the governor, chaplain, medical attendant, masters, orderly officers, &c. The basement is devoted to the workshops, kitchens, and other offices; and nearly the whole of the upper floor to the dormitories. The style chosen is Italian; which, while admitting of great grandeur by means of the dome and portico, does not in any way interfere with an ample supply of windows, so essential to a building of a domestic character. A large parade-ground is provided in front (as shown in our View), enclosed by a wall and balustrade. This is a highly meritorious composition.

The Silver Medals were awarded as follows: For the best painting from life, to Mr. Joseph Powell; for the best painting from the living draped figure, to the same: and for the best drawing from life, to the same; for the second best drawing from life, to Mr. David N. Fisher; for the third best drawing, to Mr. Henry Garland; for the best model from life, to Mr. E. G. Papworth; for architecture—subject, "The Basement and First Columnar Order of the West Front of St. Paul's Cathedral"—to the one candidate, Mr Charles Arthur Legg; for the best drawing from the antique, to Mr. James Waight; for the second best, to Mr John H. Banks; for the third best, to Mr. Henry Gale; for the best model from the antique, to Mr John Adams; for the second best, to Mr. Edward Mitchell; for specimen of sciography (the science of shadows for architectural drawings), to Mr. John Charles L. Sparks

After the ceremony of distributing the medals had taken place, Sir Charles Eastlake delivered a well judged and ingenious discourse on the use and abuse of academic training—pointing out that however needful, nay, indispensable, is gradual study, the substitution of its results for the inventions of a healthy and poetical mind, must necessarily lead to the most enervating affectation.

MUSIC.

THE "MESSIAH."

The present state of Music in this country is not to be inferred from the condition of those of its branches which depend on the fashions of the day. The English musical stage, it is true, has fallen into a state of utter decay—indeed, it can scarcely be said to exist; and, among those classes by whom it might be supposed music would be most highly cultivated, it has become more a frivolous display of showy difficulties—an exhibition of vocal and manual dexterity, than a beautiful art, appealing, perhaps more strongly and immediately than any other, to our best sentiments and feelings. But look at Music in its loftiest form, as it is cultivated by the great body of the people of England: look at Sacred Music; and, in particular, look at the music of Handel. In the metropolis alone, and in the course of a single week—that which preceded Christmas—the "Messiah" has been thrice performed, in our greatest music halls, and in the presence of assemblages amounting to many thousands—assemblages not of the votaries of fashion, but of the middle classes, who may be regarded as the representatives of the nation. And, we observe, numerous performances of the same great work have taken place in the provinces. Nor is this anything extraordinary. Not only this mighty masterpiece, but the other principal works of the illustrious musician—"Samson," "Israel in Egypt," "Judas Maccabeus," "Saul," "Jephtha"—are daily becoming, more and more, household words among us; and thousands—we may say millions, are able to comprehend and feel their sublimity and beauty. Nay more, this grand and lofty music is not merely heard on great public occasions; it has entered into the bosoms of thousands of families, to whom, in their domestic circles, it affords the most delightful of their enjoyments. The effect of this is apparent in the state of musical publication. Edition after edition of the "Messiah" and other works of Handel follow each other in rapid succession, suited to the means of every class of purchaser; and, of the "Messiah" in particular, we may safely say that a greater number of copies have been circulated throughout England within the last ten years than during the whole previous period of a century since its composition. This knowledge and appreciation of the works of Handel has led to a similar knowledge of other great works of the same class. In proof of this it is only necessary to name the "Creation" of Haydn, the "Last Judgment" and "Crucifixion" of Spohr, and the "St. Paul" and "Elijah" of Mendelssohn—all foreign works, but more generally known and more fully appreciated in England than in the native country (pre-eminently musical as it has the character of being) of their composers. We lately had occasion to compare the present high and palmy state of the French opera with the decay and degradation of our own. But what of that, when, in a much loftier and more important branch of the art, we have so immensely the superiority? It is hardly credible, but it is true, that the "Creation" has had *two* performances in Paris in the space of half a century; and that none of the works of Handel, Spohr, or Mendelssohn, in their entire state, have ever been performed there at all! While this is the case, we may console ourselves for the inferiority of our national opera, and wait with tolerable patience for its revival.

Mr. Macfarren, in his preface to the new and valuable edition of the words of the "Messiah," just published by the Sacred Harmonic Society, expresses an opinion as to the length of time occupied by Handel in the composition of that most gigantic of works, in which we find it impossible to concur. From dates, in Handel's handwriting, on the original score, it appears that the manuscript was written between the 22nd of August and the 12th of September, 1741. "This mighty work," says Mr. Macfarren, "created to be the wonder of all ages, is thus shown to have been begun and ended in the incredibly short space of twenty-two days: and we have ample reason to believe that the composition was contemporaneous with the transcription, that *the whole was conceived and committed to paper with a speed almost extemporaneous*, and not, as we know to have been the case with Mozart and some other composers, whose music was conceived in form and in detail before a note was written." Now, we cannot believe this, simply because it is incredible; and we do believe that Handel adopted what is known to have been the common practice of great composers, those particularly who have been remarkable for rapid writing; that he meditated not only on the general design of the work, but upon the construction of the separate movements, and formed a distinct conception of the whole before putting pen to paper. Mozart, in one of his letters, describes this mental process with that *naïveté* which gives such a charm to his correspondence:—

> You say (he writes to a friend) you should like to know my way of composing, and what method I follow in writing works of some extent. I really can say no more on the subject than the following, for I myself know no more about it, and cannot account for it. When I am, as it were completely myself, entirely alone and of good cheer—say travelling in a carriage, or walking after a good meal, or during the night when I cannot sleep: it is on such occasions that my ideas flow best and most abundantly. Whence and how they come I know not, nor can I force them. The ideas which please me I retain in memory, and I am accustomed, as I am told, to hum them to myself. If I continue in this way, it soon occurs to me how I can turn this or that morsel to account, so as to make a good dish of it, that is to say, agreeably to the rules of counterpoint, the peculiarities of the different instruments, &c. All this fires my soul; and, provided I am not disturbed, my subject enlarges itself, becomes methodized and defined; and the whole though it be long, stands almost finished and complete in my mind, *so that I can survey it, like a fine statue or a beautiful picture, at a glance.* * * When I proceed to write down my ideas, I take out of the bag of my memory, if I may use the phrase, what has previously been collected in it in the way I have mentioned: for this reason, the committing to paper is done quickly enough; for everything, as I said before, is already finished, and it rarely differs on paper from what it was in my imagination.

The circumstances mentioned by Mr. Macfarren, in support of his opinion, amount only to presumption, not to positive evidence. When we consider the character of "The Messiah"—the sublimity of its subject, the entire originality of its design, the magnitude of its dimensions, the profundity and elaboration of its stupendous choruses, and the exquisite adaptation of every separate part to the general conception of the whole—we feel it utterly impossible to admit the supposition that a work so evidently the result of the deepest thought, as well as the highest genius, could have been a hasty, unpremeditated effusion produced in less time than was bestowed by Rossini or Donizetti on the slightest of their Italian operas

> "Qui quid mihi ostendis nisi, incredibile odi."

TAX ON IRISHMEN.—By the Rolls of Parliament, A.D. 1477, it appears Irishmen residing in London were subjected to the following scale of taxation: Irishmen having no lands, twopence out of every twenty shillings; Irishmen keeping houses, an annual duty of two shillings: and merchants, born in Ireland, thirteen and fourpence per annum.

RUSKIN ON ARCHITECTURE AND ART GENERALLY.*

(THIRD AND CONCLUDING NOTICE.)

In our two former articles (inserted on the 3rd and 17th instant) we have examined pretty closely the fundamental principles which Mr. Ruskin sets forth as the basis of his observations; and we have shown them to be repugnant to all hitherto received doctrines, and, as we conceive, irrational in themselves; whilst the assertions of fact by which they are illustrated, are singularly at variance with undoubted history. Mr. Ruskin's "Foundations" being thus untenable, it would be waste of time to discuss all the minor dogmas and whimsical fancies propounded by him; and, if we had consulted our own impulse, we should probably have closed his book finally with our last paper on the subject. In the cause of truth, however, we feel bound to persevere a little further with the task we have undertaken. The extent to which Mr. Ruskin's writings have been read and spoken of, and the sort of authority which he has obtained with a certain class of readers, shows that there is a large number of persons who attach great interest to the subjects of which he treats, and who, being without any previous knowledge of it, are open to being misled by those who speak much and confidently. And *certes*, Mr. Ruskin, gifted with an astounding volubility—a flow of words so rapid, so copious as, even in the reading, to make one hold the breath—lays down the law in a manner well calculated to impose upon the uninitiated, and almost to throw those gifted with "a little knowledge" off their guard. To dissent when Ruskin speaks is not to differ in opinion—that is an idea which could not be entertained for a moment; it is to disallow truth itself, to kick against fate, to be guilty of flat rebellion against orthodoxy, which is *Ruskinism*. And withering is the rebuke which all receive, who have ever ventured to say anything, or do anything, which does not accord with his canons of criticism. Vetruvius, Palladio, and all their followers, including Inigo Jones, Wren, Vanbrugh, and Chambers, are, of course, consigned to excoration, with all that pertains to the Renaissance; whilst, in Gothic, we do not find that there are any great masters, in Mr. Ruskin's judgment, with the exception alone of the architect of Mr Hope's church (chapel?) in Margaret-street, which we are assured, "challenges fearless comparison with the noblest work of any time," and which, "if either Holman Hunt or Millais could be prevailed upon to do, at least, some of the smaller frescoes," would, of course, be the grandest and most perfect thing of the kind in the world. What the name of the fortunate builder of this imposing structure may be, we unhappily do not know, and Mr. Ruskin does not tells us; but we are sorry when he holds out the cheering hope of a revival of Gothicism amongst us, that he should have thought it necessary, or in good taste, to deal such savage blows as he does against a most enthusiastic and indefatigable labourer, as well as writer, in the cause, recently deceased; and who, though living at the time the volume in which the remarks we refer to appeared (vol. i.) was published, was living in the darkness of mental sorrow, in the vale of tears and in the shadow of death. After quoting of poor Pugin, a passage from his "Remarks on Articles in the Rambler," Mr. Ruskin speaks after this style:—

> One might have put this man under a pix, and left him, one should have thought; but he has been brought forward and partly received as an example of the effect of ceremonial splendour on the mind of a great architect. It is very necessary, therefore, that all those who have felt sorrow at this, should *know at once that he is not a great architect, but one of the smallest possible conceivable architects;* and that by his own account and setting forth of himself.

Mr. Ruskin then quotes a passage in which Pugin laments his disappointments and shortcomings in his darling profession, exclaiming: "I believe, as regards architecture, few men have been so unfortunate as myself. *I have passed my life in thinking of fine things, and studying fine things, designing fine things, and realising very poor ones.* I have never had the chance of producing a single fine ecclesiastical building, except my own church, where I am both paymaster and architect; but anything else—either for want of adequate funds, or injudicious interference and control, or some other contingency—is more or less a failure," and then instances particularly the case of St George's, which he says "was spoilt by the very limited sum laid down by the committee, that it was to hold 3000 persons *on the floor at a limited price; in consequence, height, proportion, and everything was sacrificed to meet these conditions*;" instances, also, the case of Kirkham Church, which "was spoiled through several hundred pounds being reduced on the original estimate. To effect this which was a great sum in proportion to the entire cost, the area of the church was contracted, the walls lowered, tower and spire reduced, the thickness of the walls diminished, and stone arches omitted."

For these remarks—which Mr. Ruskin does not understand, but which we contend to be very sensible in principle (with details of calculation we have nothing to do)—Pugin is ridiculed by the author of the "Stones of Venice" in a style more remarkable for coarseness than acrimony. "Let his ineffableness be assured of this, once for all," he says, "that no difficulty or restraint ever happened to a man of real powers." And then, after criticising parts of the building (St. George's), he asks, was it "in pecuniary embarrassment" that so and so was done? and answers, "Not so; but in mere incapacity of better things." Adding:—

> There is much in this man, if he were rightly estimated, which one might both regard and profit by: he has a most sincere love for his profession—a hearty, honest enthusiasm for piscinæ and piscinas; and though he will never design so much as a pix or piscina thoroughly well, yet better than most of the experimental architects of the day. Employ him, by all means, *but on small work.* Expect no real ideal of him; but no one, at present, can design a better finial—that is an exceedingly beautiful one over the western door of St. George's; and there is some spirit in the grotesqueness and activity of tails, in the supporting figures at the imposts. Only do not allow his good design ng of finials to be employed as an evidence in matters of divinity, nor thence deduce the incorruptibility of Protestantism and Art, &c.

With much more of sectarian pedantry, Mr. Ruskin constantly indulges; and which we are fain to attribute to that which he has laid down as one of the essential features of the true Gothic genius, viz., "disturbed imagination."

But we will have done with purely architectural questions, and consent, by way of leave-taking, to go with Mr. Ruskin into some of the general fields of art. It appears that the purpose of the Appendix we have last quoted from, and of some other passages in various parts of the work, is to show the connection between religious feeling and art. What Mr. Ruskin's notions of religion, in the gross, may be, it is difficult to discover; but, in the special passage before us, we do not fail to discover the intention to set up Protestantism in antagonism to Romanism, and the compatibility of the association between Protestantism and Art distinctly asserted. How are we astonished, therefore, when, in the second volume, we find him coming out with such a terrible announcement as is comprehended in the following passage:—

> The more I have examined this subject, the more dangerous I have found it to dogmatise respecting the character of art which is likely, at a given period, to be most useful to the cause of religion. One great fact first meets me. I cannot answer for the experience of others, but *I never yet met with a Christian whose heart was thoroughly set upon the world to come, and so far as human judgment could pronounce, perfect and right before God, who cared about art at all.* I have known several very noble Christian men who loved it intensely, &c; but still, the general fact is indeed so, that *I have never known a man who seemed altogether right and calm in faith, who seriously cared about art.*

The presumption and impertinence of this remark almost surpass belief;—it certainly defies comment. It need hardly be remarked, that

A NEW ROMAN HISTORY.

In 2 vols., 18mo, with Illustrations, price 12s.,

HISTORY of ROME for YOUNG PERSONS By Mrs. HAMILTON GRAY. With numerous Wood Engravings.

"The clear, lively, and pleasing style of narration is admirably [illegible] to awaken and sustain the attention."—Athenæum.

EMPERORS of ROME, from AUGUSTUS to CONSTANTINE: being a Continuance of the "History of Rome." 1 vol., 18mo, with Illustrations, 3s.

"We have no hesitation in saying, that this is one of the best histories of the Roman Empire for children and young people which has come under our notice. Mrs. Hamilton Gray has made herself acquainted with all the most important ancient writers on the subject which she treats, and a no with the criticisms of Niebuhr and other modern investigators of Roman history."—Athenæum

It may be recommended as a clear, rapid, and well-arranged summary of facts, pointed by frequent, and not reflections [illegible] one book in a very good companion of the Imperial history, primary designed for children, and useful for all "—Spectator

"It would be an erroneous impression to convey of this volume, that it is written merely for the young and children. In reality, it is an abridgment far more likely to be useful to grown-up persons, who can shut upon the working of great events, and make their own observations upon men and things. A striking characteristic of the book is the impartiality of its tone, and its high moral feeling."—Examiner

CHEAP EDITION OF THE LIVES OF THE QUEENS OF ENGLAND.

NOTICE.—With the Magazines, on the 1st of January, will be published, beautifully printed in post 8vo, embellished with Fourteen Portraits, including that of the Queen, price 7s. 6d., elegantly bound, the first Volume of a New and Cheap Edition of the

LIVES of the QUEENS of ENGLAND,—By AGNES STRICKLAND This New and Cheap Edition, embellished with Portraits of every Queen, engraved from the most authentic originals, and elaborately and clear into improvements, will be regularly published and completed in Eight Monthly Volumes, each Containing, on an average, 700 pages each, price 7s. 6d. per Vo ume, handsome y bound, and those who may desire to obtain copies on the day of publication, are requested to send their orde immediately to their respective booksellers

In announcing a Cheap Edition it is important and interes ing work, which has been considered unique in biographical literature, the publishers beg to call the attention of the public to the fact of its not from the Preface:—"A revised edition of the "Lives of the Queens of England, embodying the important collections which have been brought to light since the appearance of earlier impressions, is now offered to the public. The intimate relationship which the Consort of William the Conqueror, comprises thirty Queens who have worn the crown matrimonial, and for the regal dualism of this realm. We have related the progress of every Queen, described her influence, traced the in fluence of family connections and national habits on her conduct, both public and private, and given a concise outline of the domestic, as we, as the general history of her times, and a effects on her character; and we have done so with singleness of heart, untinged by selfish interest or narrow views. Such as they were in life we have endeavoured to portray them, both in good and ill, without regard to any other considerations than the development of the facts. Their motives, their feelings, their feelings, their conduct, will be found faithfully chronicled in this work, which also includes the most interesting of their letters. The hope that the "Lives of the Queens of England" might be regarded as a national work, honourable to the female character, and generally useful to society, has encouraged us to the completion of that task "

Published by Henry Colburn, by his successors, HURST and BLACKETT, 13, Great Marlborough-street, London, and to be had of all Booksellers.

FAUST: a Faithful Version of GOETHE. With Copious Notes, Grammatical, Philological, and Exegetical. By FALCK, Ph. Dr.

An edition of the first master-piece, prepared for the use of those students of German who read without mas er. The plan is highly original, and the Notes are full of information, which will be found of the greatest service to every student of the language of Goethe, will be found a useful book, and a great deal of pains must have been expended on its compilation and preparation.

"The book is an example of great skill and labour worthily bestowed. The explanatory notes are not only useful, but display numerous illustrations which they bring to bear upon the passage in question, exceedingly apposite and interesting."—Athenæum

Dr. Leahan has produced an edition of this wondrous poem worthy of his skill as a professor, and to serve the studious author. The volume abounds with evidence of extraordinary patient study, and whether the use of the student, or the entertainment of the scholar, it will prove a most acceptable addition to the literature of Germany.

"It is very complete guide to the understanding of a work in which above most others, the student requires judicious assistance."—Athenæum.

"The work has been performed conscientiously and with ability."—Literary Gazette

"In the Exegetical Notes, a large extent of reading is brought to bear upon the several points of the difficult poem."—Naval and Military Gazette

"We have had occasion to mention with praise many of Dr Lebahn's editions of celebrated German works, but we rather like Faust to be placed considerably above them all."—Naval and Military Gazette

"We have had occasion to mention with praise many of Dr Lebahn's editions of celebrated German works, but we rather like Faust to be placed considerably above them all."—Britannia

4.

THE BEST CHRISTMAS PRESENT FOR YOUNG LADIES.

THE PIANISTE'S HANDBOOK: a Guide for the Right Comprehension and Performance of our best Compositions. By CARL ENGEL. Price 10s 6d., post-free

"Mr. Carl Engel's Handbook may be commended, not only on the score of utility which qualify it exhibits to an on limit degree—but on that of new ness of plan, and originality of treatment. The author is the master into the art of playing upon the pianoforte, but is informa on of the most important and necessary kind is connected with the physiology of that art besides introducing him, by graduate steps, to the great composers, he has carried on the exercise of the reporter of harmony, with whose works no one who aspires to be a pianist should be unacquainted."—Musical World

5.

A really solid, thoroughly useful addition, and can fully-arranged essays in style of the Spectator, Rambler, and would find a place beside Johnson, Addison, Lady's Companion

"This vol. is a most valuable addition to the musical student's library We recommend young teachers to study this work, and some of our readers perhaps would gain much from reading it, and following the suggestions thrown out in it in their own compositions."—Press

"This admirable Handbook" is undoubtedly one of the most perfect works of its kind in so compact and condensed a form, that we know of. Constant practice, and an attention to the excellent instructions given by the author, are surely to pro uce, not only a masterly player, but to perfect the pupil in the means of a science where the extent so much that is superficial It merits patronage, and we trust it will meet with the success it really deserves."—Weekly Dispatch.

6.

Now ready, in 1 volume, post 8vo, price 10s. 6d.,

THE PHRENOLOGIST'S DAUGHTER.

7.

BEAUTIFUL CHRISTMAS PRESENT.

THE GOOD-NATURED GIANT. A Tale. Beautifully illustrated price 2s. 6d.

"We have seldom met with a more charming fairy tale, or rather extravaganza, than the volume before us. Its moral is good and useful lessons and of good natured satire and fun. The pabl shers have amply added to its attraction by the elegant manner in which they have brought it out. Lone binding and illustrations are in good [illegible] style—affluence of a mind consequence in a work of this kind Bell and Coulthard's Gazette

The most attractive fairy tale thus has appeared for years."—Courier

7.

(Continued from page 603.)

to have justified Mr. Ruskin to himself, in propounding it, he must have considered himself as infallible a judge in matters of religion as of art; and, all we can say is, that if he is as shallow and wrong-headed in his theology as in what relates to art, we should be sorry to have him for our religious teacher. Where, besides at Venice, he has had an opportunity of picking up art-knowledge, we do not know; but he is constantly putting forth the most extraordinary assertions, as if for the very purpose of making people stare. For instance, he says:—

I believe that the four painters who have had, and still have, the most influence, such as it is, on the ordinary Protestant Christian mind, are Carlo Dolci, Guercino, Benjamin West, and John Martin. Raffaelle, much as he is talked about, is, I believe, in very fact, rarely looked at by religious people, much less his master, or any of the truly great religious men of old. But a smooth Magdalen of Carlo Dolci, with a tear on each cheek, or a Guercino Christ or St. John, or a Scripture Illustration of West, or a black cloud with a flash of lightning in it of Martin's, rarely fails of being vastly, often deeply, felt, for the time.

Now, so far to the contrary, we will make bold to affirm that of all the old masters the one which is best known and appreciated in Protestant England, even in religious subjects, is Raffaelle—whose cartoons and Bible subjects generally have been copied amongst us times out of number, whose innumerable studies of the "Virgin and Child" are one or more of them familiar to the merest tyro in art, and whose masterly and practical genius in story-painting is to no small extent appreciated amongst us. The next best-known master, perhaps, is Leonardo da Vinci, by the prints of his "Lord's Supper;" and after him, Correggio, the Carracci, Rembrandt, and Murillo. Both Carlo Dolci and Guercino are comparatively unknown in England. As for West and Martin, more so; indeed they are of too recent date to be admitted as illustrative of art-predilections, which generically cannot be considered as of yesterday's date.

Mr. Ruskin pretends to classify all the artists of various schools, down to our own time, in a peculiar order of merit. The reader may judge of the amount of judgment and taste displayed in making the selection when he finds that "Murillo, Zurburan, Camillo Procaccini, Rembrandt, and Teniers, all naturally belong to the third and lowest class; also Salvator Rosa, Carravaggio, and Correggio: the characteristics of this class being described thus:—

This last class perceive and imitate evil only. They cannot draw the trunk of a tree without blasting and shattering it, nor a sky except covered with stormy clouds; they delight in the beggary and brutality of the human race; their colour is for the most part subdued or lurid, and the greatest spaces of their picture occupied by darkness.

Correggio gets a good wigging for his "Antiope," in the justness of which it may be possible to concur, without, at the same time, forgetting the divine character of his Madonnas and Saints, the sublimity of his "Passion in the Garden," or the touching sadness of his "Magdalen." But what are we to say when we find Murillo also dragged out at the author's cart's-tail—not on account of his "Madonnas" or religious subjects (these are passed over as beneath notice), but for his "Beggar and Peasant Boys;" in which he is brought into comparison with our own W. Hunt, who, we are assured, is vastly his superior. With all admiration for Mr. Hunt's clever pencil, we have too much respect for his modesty and judgment to believe that he will feel flattered by the comparison upon such authority. As a sample, however, of Ruskinism in what relates to the feeling and elegancies of art, take his observations on Murillo's "Beggar Boys," forming part of our Dulwich Collection, a picture which has, up to this period, been universally admired for its wonderful truth, life, and suggestive sympathy:—

But look (he says) at those two ragged and vicious vagrants that Murillo has gathered out of the street. You smile at first, because they are eating so naturally, and their roguery is so complete. But is there anything else than roguery there? or was it well for the painter to give his time to the painting of those *repulsive and wicked children?* Do you feel moved with any charity towards children as you look at them? Are we the least more likely to take any interest in ragged-schools, or to help the next pauper child that comes in our way, because the painter has shown us a cunning beggar feeding greedily? Mark the choice of the artist. He might have shown hunger in other ways, and given interest even to this act of eating by making the face wasted or the eye wistful. [How sentimental!] But he did not care to do so. He delighted merely in the disgusting manner of eating, the food filling the cheek; the boy is not hungry, else he would not turn round to talk and grin as he eats.

And, then, as if this were not enough of namby-pambyism, he adds:—

But observe another point in the lower figure. It lies so, that the sole of the foot is turned towards the spectators, not because it would have lain less easily in another attitude, but that the painter might draw and exhibit the grey dust engrained in the foot. Do not call this painting of nature; it is mere delight in foulness. The lesson, if there be any in the picture, is not one what the stronger. We all know that a beggar's bare foot cannot be clean; there is no need to thrust its degradation into the light, as if no human imagination were vigorous enough for its conception.

We must add, in conclusion, that the work abounds in engraved illustrations of decorative features in Venetian architecture, which in themselves are highly interesting.

Some of the critical remarks upon these subjects, and upon many of the smaller points of formative beauty, are ingenious and discriminative, and such as we can often concur in. But even these lose much of their value in our estimation from the impossibility of going hand in-hand with the author in the broader fields of criticism, in which they are but the stray flowers.

COSTUME OF THE EMPRESS OF THE FRENCH, WITH THE NEW COURT MANTLE.

PARIS FASHIONS FOR THE NEW YEAR.

PARIS FASHIONS FOR THE NEW YEAR.

Before we describe the General Fashions for the New Year, we must glance at the most superb item of the day, "the Court Mantle;" the choice of which has been a matter of greater difficulty than can be imagined by those unacquainted with the importance of the High Court of Fashion. The decree was delayed until the carrying of it into effect can only be ensured by the most extraordinary exertion; but (says our Correspondent) the gravity of the question, it is true, necessitated this tardiness. First, it was necessary to consider whether there should be a mantle of a particular shape for the Empress; another for the wives of the Ambassadors; another for those of the senators; and, lastly, one for the simple mortals of the most. Next, was the description of material to be regulated—what was to be the length? The latter specially occupied several sittings. Finally, after many speeches and smart replies, the matter was agreed on; and the day was gained by the great "Equality" party, who caused its powerful voice to be heard even in the august and aristocratic assembly at the Tuileries. The trains are to be of equal length for all ladies, whether they be Ambassadresses; wives of Ministers, of Senators, or of Councillors of State: the Empress alone will have the privilege of a longer train. Only the members of the Imperial family are authorised to wear the ornament of the Bee. Prince Napoleon, the son of Jerome, has adopted Bees of gold, as ornaments to the whips of his postilions and grooms.

The materials most used for the Court Mantle are velvet, plain or spangled; or watered silk, old style; cloth of gold or silver. Nearly all are ornamented with rich embroidery, and with a trimming on the edge, either in lace or feathers. The great difficulty will be how to wear this garment, and to raise or lift up the train on the left arm. There are professors who advertise to teach this accomplishment: there will also, doubtless, be several schools.

In our Illustration we have adopted a costume of the Empress—not the first, but that which will enable our readers best to appreciate the new garment. The Mantle is of green velvet embroidered with gold, with a border ornamented with a tress of gold lace; Dress with three volants of lace of gold and puffings (*Bouillonnes*), held in by diamonds. Diadem of diamonds, and a feather rolled at the back of the head.

We have little in the way of general novelty; for so much attention has been devoted to the Court Mantle, that the other parts of ladies' dress have been comparatively neglected.

The dresses which are to be worn under the mantle are necessarily of great richness. Lace and gold and silver are considered to assort well with this superb mantle. We have seen some silks with volants of cut open-work; and embroidered in gold, so as to imitate lace made of gold. There are three volants thus ornamented. The front of the body and the trimming of the sleeves are cut in the same way. These dresses are of enormous price; others are made of cloth of gold or silver. The ground is entirely gold or silver, with either a continuous pattern, or detached bunches of flowers, which rise from the ground of the stuff in uniform, or in one colour, or mixed colours; and the golden threads reappear so as to constitute ornaments in the midst of the flowers, or in the more brilliant portions of the pattern. Dresses for balls are composed of light material, such as gauze, in which silver predominates; the patterns being either detached bunches of flowers, scattered flowers, or stripes running along the volants; or, finally, a gauze entirely of silver. The latter, however, resembles, in some degree, the gauze which is put over vases and gilt time-pieces, to preserve them from dust.

Descending from the costumes of the Court, we find volants never so much worn as at present; and the fullness of dresses carried to the extreme. A few dresses of plain stuffs, without patterns, are seen; but they are trimmed on the front. Thus, we have seen a chestnut-coloured dress (which, together with red currant, are the colours in fashion) trimmed with two bands, of the width of the hand, of plush of the same colour; five bows, with hanging ends, fill up the vacant space. The body is also trimmed with wide bands, and bows similar to those of the petticoat, and they serve to close it in front. The sleeves are trimmed at the edge, and on the inside of the arm, with a similar plush. At present nearly all the trimmings of bodies of dresses are placed on flat, varying from the point of the body, ascending the front up to the shoulder, getting gradually larger, and coming down on the back, following the small side-seam. The Basquine forms the continuation of this kind of ornament, which is called "braces," and forms a kind of trimming for the back, which, since the berthe has been laid aside, has been entirely flat.

THE ILLUSTRATIONS.

Silk taffetas Bonnet, chestnut-colour, with bunches of flowers in velvet

PARIS FASHIONS FOR THE NEW YEAR.

of various colours. Velvet Mantle, trimmed with sable fur; sleeves closed. Gloves lavender. Dress, Gros-de-Tours.

ROBNET—back part of velvet, with three rows of lace, the second falling back, and ornamented with two feathers, rolled. Visiting Mantle, or cloak, of black velvet, with two volants of lace. The head (or hood) is trimmed with a ruche of satin ribbon; two bows ornament the shoulders. The upper volant falls down nearly on the head of the second volant. The head is also ornamented with a ruche, similar to the first, and with two bows also starting from each side. The sleeve is pretty short, and is trimmed with the same lace as the upper volant. Dress of damask, or plain brocatelle.

We have already spoken of these trimmings, and now give a charming costume, the volants of which are ornamented with a band of feathers of the same colour as the dress; upon a costume of shot, or two colours, this trimming is of corresponding hues.

Note.—The sign — denotes below the average.

The reading of the barometer decreased from 29·91 inches at the beginning of the week to 29·33 inches by the afternoon of the 22rd; increased to 30·23 inches by the afternoon of the 25th; decreased to 29·33 inches by the afternoon of the 27th: increased to 30·27 inches by the morning of the 29th; and decreased to 30·15 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.050 inches.

The temperature of the week has been low. The highest was 41·9° on Fr day; it decreased to 35° early in the morning of the 24th, increased to 39·5° by 1h p.m., then declined to 29° by the morning of Christmas-day, increased to 37° during the day; the night was very cold; the temperature declined to 21° by the morning of the 26th; the day was very cold; the point 29° was not reached till 9h p.m., and then further increased to 36° by 9h p.m.; but afterwards declined to 26° by the morning of the 27th; rose then to 34°; declined to 26·5° by the 28th; increased to 34° by 2h p.m. The night following was bitterly cold; the temperature at 9h a.m., on the 29th was as low as 20°, and 31·9° was the highest reached during the day.

The mean daily temperature was below the average on every day of the week. On Christmas-day the decrease was 5·4°; on the 26th and 29th it exceeded 10°; and on the 29th it was 12° in defect.

The mean temperature of a fortnight ending 1860, was 35·3°; that of the 27th of December in 1838, was 28·6°, the 28th in 1840, was 29·1°; the 29th in 1840, was 29·4°; in 1839 it was 31·7° on the 29th.

The mean temperature of the week was 31°, which is 6·2° below the average of the same week in 40 years.

The range of temperature during the week was 21·9°, being the difference between the highest on the 23rd, and the lowest on the 29th.

The mean daily range of temperature during the week was 9·4°.

Snow fell on the 27th and 28th.

Lewisham, Dec. 30, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 1545 children were registered within the week ending December 24, in the metropolitan districts: of these, 800 were boys, and 745 were girls. The deaths registered in the week numbered 1209—exceeding the estimated number by 149. In this increase is partly due to a number of inquests which have been held within the quarter, and not returned till the last week; but chiefly from the coldness of the weather. The number of deaths among children was 7 (average, 560); and among adults was 878 (average, 618) so that the increased coldness has most severely affected adults. During the week there were 7 fatal cases registered of the respiratory disease, exceedingly few of these, 183 were from bronchitis, and 110 from pneumonia. In the zymotic class of diseases, hooping-cough was fatal in 63 cases. There were 19 deaths from diarrhœa, of which none occurred in the south, but 5 in the north, or central districts, out of a population of 1,260,679, in the east districts there were 7, out of a population of 485,522; and in the south districts 3, out of a population of 616,849.

THE ALBERT-PARK MOVEMENT.—It is rumoured that the Government are not indisposed to grant £250,000 towards the estimate of the cost of the Park, viz. £280,000, leaving the balance to be supplied by the locality. The idea of an improvement rate, exceedingly small or lengthened period, which, as the money will not be required immediately, will not be overburthensome to the ratepayers. The land to be purchased will be taken, according to the Parliamentary notice, in the parishes of St. Mary, Islington, Hornsey, and Stoke Newington—in all about 620 acres. The plans will be deposited for public inspection at the parish clerks' in St. Mary, Islington, Hornsey, and Stoke Newington, this day.

INCREASE OF PAY TO THE CITY POLICE.—The increase of pay which the chief Commissioner has so long urged on the Court of Aldermen has at length been obtained. The rise is general, and the scale is as follows:—Sergeants, £1 2s. to £1 10s.; serjeants, £1 4s. to £1 8s.; first-class privates, £1 2s. to £1 4s.; second ditto, £1 to £1 2s. The inspector of the reserve men is raised from £3 10s. to £3 15s., and the detectives from £1 8s. to £1 10s. The change takes place on the 1st of January, 1854, after which period, it is said, stringent regulations will be adopted as to the probationary men and new entrants. The candidates must be five feet eight inches in height, and not have more than two children at the period of entering; and the person offering himself will be expected to satisfy the inspectors of his intention of taking permanent service, with a view to promotion in the force.

GREAT AND NUMEROUS FIRES.—A very large fire took place on Friday week, at Esher, when the extensive premises known as the Royal Paper Mills, belonging to Messrs. Murray and Co., were nearly destroyed. The damage is said to be over £100,000.——On Christmas-day, the Blue Anchor tavern, in Whitechapel-road, was much damaged by a fire, which, it is supposed, also suffered by burglars, as the vessels, and the effect of the water thrown by the fire-engines ——On Monday morning a large building, No. 200, Upper Thames-street, consisting of eight floors, sixty feet deep by forty feet wide, was completely destroyed, leaving nothing but the bare walls standing. The warehouse was occupied by Mr. Lunster, wholesale stationer and rag-merchant, and much damage was done to the neighbouring houses. The extent of the fire is at least several thousand of pounds.

The firemen of the various offices were very much actively engaged from five p.m. on Tuesday until nearly noon on Wednesday, there having been during that period not fewer than eight fires in various parts of the metropolitan district. One was at Camberwell, another in the Cambridge-road, Bethnal-green; a third, in North-street, Manchester-square; a fourth in Brick-lane, Bethnal-green. One occurred near the Royal Naval School, New Cross, of considerable extent, in the premises of Messrs. Lee and Co., brickmakers. Another fire took place in Culling-street, City. It broke out in the third floor, but was confined to that portion of the premises. An alarming explosion of gas took place in the premises of Mr. G. Bates, straw-bonnet maker, Whitechapel road. The gas exploded with such force as to cast the ceiling down, and to set the flooring on fire. The flames were soon extinguished, but not until considerable damage was done.

On Thursday morning another great fire occurred on the premises of Mr. Bunnett, upholsterer, in Great Winchester-street, London-wall—the building and contents nearly destroyed, and much damage done to six neighbouring houses. The same day, another fire took place in the St. John's Infant Schools, Horsleydown. A shed, which did much damage, was at Mr. Baker's, a pastry-cook, in Great Chapel-street, Westminster. A fourth was in Church-street, Bethnal-green-road; and a fifth at a cartwright's, in Mansell-street. Another occurred, at the last, in the four lives were in peril; but the conductor of the Royal Society's escape quickly attended, and took three children from the first-floor window, and thus passed their mother down stairs in safety.

GENERAL POST-OFFICE, December, 1853.—Newspapers addressed to the British possession of Acera, on the west coast of Africa, will be forwarded by the Contract Mail Packet free of postage, provided they are posted in conformity with the general regulations applicable to newspapers sent through the post to British colonies and countries beyond sea. Upon each newspaper addressed to Dutch Accra, a rate of twopence must be paid in advance.

TREATMENT OF THE POOR IN ST. MARYLEBONE.—On Monday Mr. Austin again attended at the board-room of the workhouse, and was occupied for nearly three hours in reading over the depositions which have been taken in the case of the infant Walsh. No fresh evidence was gone into, and the inquiry was adjourned until Monday next.

THE WINDBOUND.—Easterly and north-easterly winds have now prevailed for some days, and it is, therefore, certain that a large fleet of homeward-bound vessels must be detained in the shops of the Channel. It is desirable that the Government should despatch vessels to their assistance. Many are doubtless in want of provisions and stores of one kind or other.

ASSEMBLING OF PARLIAMENT, ON JAN. 31, 1854.—WINDSOR, Thursday.—Her Majesty he d a Privy Council at three o'clock this afternoon; present, his Royal Highness Prince Albert, Earl Granville, Lord Cranworth, the Earl of Aberdeen, Lord John Russell, the Right Hon. W E. Gladstone, Sir James Graham, the Right Hon. Sidney Herbert, and Lord Ernest Bruce, Vice-Chamberlain. At the Council, Parliament was ordered to be further prorogued from the 3rd of January until Tuesday, the 31st of January, 1854; and a proclamation was issued summoning Parliament to meet on that day for the despatch of public business.

REUNION DES ARTS.—This society had its last meeting of the season on Wednesday evening, at their rooms, in Harley-street. There was an excellent concert of chamber music, vocal and instrumental. The singers were Madame Amedel, Miss Ternan, Miss Messent, and Signor Ciabatta, who performed several favourite opera airs and concerted pieces. Beethoven's Trio in E flat, for the pianoforte, violin, and violoncello, was played by Miss Arabella Goddard, M. Ries, and M. Paque.

SOIREE AT THE SOCIETY OF ARTS.—A soirée was given on Wednesday by this society, which was numerously attended. On the tables were a variety of models of inventions and machinery and the useful arts, a superb collection of frozen, objects in porcelain, parian, and the finer kinds of pottery, whilst the walls were covered with exquisite engravings and richly-coloured prints, done by the process of chromolithography. Next were twelve flower subjects, executed by the "Naturselbstruck" process, and combining, with the accuracy that belongs to this process alone, the most beautiful variety of tint. The English specimens were those of Dr. Brunson before mentioned, and one or two sent in by Messrs. Bradbury and Evans, who have patented the art in this country under the name of Nature-printing. With the aid of "Naturselbstruck," as the process is termed, the rarest leaf, or the most unique fossil may be multiplied *ad infinitum*. In the department of chromolithography it is satisfactory to know that the finest specimens are those of our own artists. The specimens shown by Vincent Brookes, Leighton Rowney, and Baxter, have all the brilliancy and delicacy of paintings, and did fair justice to the extensive use of pictures in the interior decoration of working men's house.

GALLERY OF ILLUSTRATION.—Messrs. Grieve and Telbin have added to the attractions of their admirable panorama of the "Ocean Hall," some striking views in the Arctic Regions, which, besides their pictorial merit, possess the additional merit of authenticity, being chiefly, we are informed, taken from the sketches of Captain Ingleheld, of her Majesty's ship *Phœnix*. These scenes give a better idea of the dangerous and the strange mode of life in these inhospitable regions than pages of description; and some of the episodes are extremely effective, as, for instance, that of the death of a bear, and that of the Christmas merry-making of a ship's crew. The representation of the aurora borealis, and the imminent peril of the ship of being crushed amongst icebergs, are remarkably fine scenic presentations.

ROBBERY OF BIRDS FROM ST. JAMES'S-PARK.—Three white birds and one black one have been stolen from the ornamental water in St. James's-Park, the property of the Ornithological Society. The society have issued a notice offering a reward of £5 for the capture and conviction of the guilty party.

SHIPWRECKED FISHERMEN AND MARINERS' ROYAL BENEVOLENT SOCIETY.—The committee of this institution held their usual weekly meeting on Friday week. Fifty-five men, belonging to vessels shipwrecked on the coast, were reported to have been relieved and forwarded to their homes. The committee considered the cases of eleven widows and fourteen orphans, and seventeen mariners applying for help. Among the several cases £80 0s. 6d. was awarded. The attention of the committee was called to the conduct of Captain Ludlow, of the American ship *Monmouth*, in rescuing the survivors of the ship *Meridian*, 104 in number, wrecked on the island of Amsterdam, from whence he took them to the Mauritius. The following minute was carried unanimously:—That this committee views with feelings of admiration the conduct of Captain Ludlow, of the *Monmouth*, in standing on and off for nine days until he had rescued every sufferer from the island, and his benevolent care of them while on board his ship, considering the circumstances in which he exerted himself in the cause of humanity did honour both to his character as a sailor and a man,—do therefore award to him the gold medal of this institution, the estimate of which is £20.

COMMERCIAL TRAVELLERS' ORPHAN SCHOOL.—On Tuesday, the annivesrary dinner of this excellent institution was celebrated at the London Tavern; the Right Hon. the Lord Mayor in the chair, supported by Mr. Sheriff Wallis, and many other friends of the charity. The report was read, and approved of in the usual way, and nearly £3000 were added, by subscription, to the funds of the society.

THE WEATHER AND THE PARKS.—In consequence of the severe frost which prevailed during the early part of the week, the ice in St. James's park, Hyde park, Kensington-gardens, and the Royal Botanic Society's men were in attendance with their dredges, and did all in their power to confine the skaters to the borders of juveniles, with a sprinkling of adults, have assembled each day since Monday. The Royal Humane Society's men were in attendance with their dredges, and did all in their power to confine the skaters to the borders of juveniles, with a sprinkling of adults, have assembled each day since Monday. The ice considered most safe. On the upper part of the Serpentine there were also several persons engaged in the pursuit of pleasure on the ice, and a still greater number were occupied in the Round Pond in Kensington-gardens. On Tuesday and Wednesday, there were several immersions, but fortunately no life was lost.

SUDDEN BREAK UP OF THE FROST.—On Friday morning the Parks presented a very melancholy aspect as compared with the previous days. On the frozen waters of St. James's, Hyde, and Regent's Parks, as also Kensington-gardens, but a few solitary individuals were to be found. At seven o'clock on Thursday night the thermometer stood at 9h degrees, having previously been at 16°. From that hour the mercury rose rapidly, the wind changing from N.N.W. to W.S.W. during the night. Early in the morning a fall of rain took place, with the mercury change at 6h. 5m. A rapid thaw then commenced, the wind bearing during the entire morning S. by S.W. On Friday evening, however, the frost again set in.

MEMORANDA OF THE SEASON.

CHRISTMAS BEEF FROM WINDSOR.—On Tuesday Mr. Minton, butcher, of Peascod-street, Windsor, was honoured with the commands of the Queen to dispatch a handsome present of Christmas beef to his Royal Highness the Duke of Brabant, at Brussels. Mr. Minton selected portions of an extraordinary Hereford ox, fed on the Flemish Farm, near Windsor. The Prince's ox was exhibited at the Smithfield Club Cattle Show, when it was highly commended. It was purchased, by competent judges, to be one of the finest specimens of beef ever slaughtered.

HER MAJESTY'S NEW YEAR'S GIFTS.—The 1st of January falling on a Sunday, her Majesty's customary New Year's gifts to the poor in Whitehall on New Year's morning will be distributed on Monday next, in the Riding-house, Windsor Castle. The gifts consist of beef and plum-pudding, and 25 per cent added to the subscriptions of the poor in the purchase of coals for the winter. The gifts are delayed by grants from the Lord Steward's and Lord Chamberlain's departments. The distribution takes place in the presence of her Majesty and the Royal family, and is under the superintendence of the Hon. and Rev. Gerald Wellesley, chaplain to the Queen, and a committee.

THE CHRISTMAS RAILWAY TRAFFIC.—The amount of Christmas traffic on all the leading metropolitan railways appears to have considerably exceeded that of any former year. On the London and North Western, during the period called the "Christmas week," there passed down the line 97,000 parcels and Christmas presents, and up 12,250 for distribution throughout London, exclusive of many thousands of parcels coming by goods trains. Last year, on this line the down parcels were 78,000, and the up 12,000. In the passenger traffic there was a corresponding increase. The Great Western conveyed, exclusively on the goods traffic, 16,000 parcels and presents by their down passenger trains to all parts of the west, and 13,000 from the west up. The Great Northern disembogued from King's-cross 10,000 parcels up, and also 10,000 down, by trains exclusive of goods trains; and the Eastern Counties, in four days, carried 15,000 parcels up from the agricultural districts, and about half that number down. In each case special arrangements were made on a large scale for the speedy transmission of these Christmas cargoes.

THE METROPOLITAN WORKHOUSES.—On Christmas-day the inmates of the different metropolitan and suburban workhouses were liberally regaled with Christmas fare. A comparison of the present with last year shows a tendency to increase in the amount of metropolitan pauperism, although there are only three inmates less in the amount of that increase is at present considerable. In St. Pancras alone there is an increase of 1576 persons receiving relief. The total number receiving relief is at present 44,000.

GIFT OF A MARRIAGE PORTION.—On Tuesday the annual draw for a marriage gift of £100, left by Mr. Henry Raine, the founder of Raine's Charity, St. George's-in-the East, took place at the asylum, in Turkey-street, Old Gravel-lane. The charity educates fifty boys and fifty girls. After leaving the school, they go out to service, and when twenty-two, they are eligible to receive the marriage portion. There are frequently five or six candidates; on this occasion there was only one. She was an orphan, and had been in the service of the Rev. Mr. Quekett. She had a very excellent testimonial from the reverend gentleman, and at once obtained the gift. Should she get a suitor, he must be approved of by the trustees, when she will be married on the 1st May, the day being celebrated throughout the parish. The whole of the 100 children, with the trustees, are to be present in the church. The founder was, in 1719, an extensive brewer in the parish.

CHESS.

TO CORRESPONDENTS.

M. P., of Manchester, is aggrieved that we did not publish the result of the Chess Match last week, and "has no doubt the omission was intentional." A. B. C., who wrote to inquire whether checkmate could be given when only the two kings were left on the board, is equally sure that we were actuated by "personal motives" in not replying to his inquiry at once. When M. P. learns that the match did not terminate until late on Wednesday night, and the result was not communicated to us until mid-day on Thursday, and A. B. C. is to d that his important query reached us on Friday evening; and both are instructed that the "form" containing the Chess articles goes to press many hours before that time (without which they would probably receive their copies of the paper on Monday instead of Saturday morning), we hope they will relieve their minds of all unchristian surmises, and believe that the conductors of a newspaper like the ILLUSTRATED LONDON NEWS are quite as much interested in a [illegible] as the readers are themselves.

A. B. C., Cheltenham.—It would be extremely difficult for either party to claim checkmate under such circumstance. See our notice to M. P.

NAUTILUS.—In sending Solutions of the Problems and Enigmas, it is sufficient for Correspondents to attach their initials, or any signature they please; but all other communications must be authenticated by the name and address of the writer, or no notice whatever will be taken of them.

FRERES.—The *Chess Players' Chronicle* for January, we observe, contains a list of the British Chess-clubs. You should send the account of your newly-formed society to the Editor.

SOLUTIONS OF PROBLEM No. 514 (by Hungarus), C. B., Ashby; Ignotus, Dorcas, J. T. Y., J. K. B., F. N., P. P. H., W. H. T. A., Manly, Guilelmus, J. P., are correct.

SOLUTIONS OF PROBLEM No. 515 (by Grange) are received from D. Civis, Mercator, W. P., W. Tran Bun, Old Jack, J. K. B., J. T. Y., T. T., of Hanworth; C. A. M., St. Bees; Barrows, Jacket Shrewsberry, F. P. Hall, Guilelmus, J. P., H. F. N., G. R., Omicron, Victoria, Gemmer Cartes, Fulle-Chess, are correct. All others are wrong.

*** Although it is impossible for us to make individual acknowledgment of the many pleasant communications, full of hearty greetings and amusing criticisms, which we have had the gratification of receiving during the last few days, we [illegible] Correspondents that we fully appreciate their kindness, and thank them heartily [illegible] cordially wish to each "A HAPPY NEW YEAR!"

PROBLEM No. 516.

By E. B. C., of Plumstead.

MATCH BETWEEN MESSRS. HARRWITZ AND LOWENTHAL.

This remarkable contest, after lasting nearly three months, and presenting in that time the most extraordinary vicissitudes, perhaps, ever seen in a Chess Match, came to a close on Wednesday night, the 21st inst., the final score giving

Harrwitz	..	..	..	11
Löwenthal	..	..	..	10
Drawn	..	..	..	12

Such a result may well have astonished everybody. To us who have witnessed the games in progress, and have carefully examined them in detail afterwards, it seemed, at first, incredible. That, in a great match, one player should win a number of games at the beginning, and his opponent gain a larger number by better play afterwards, and thus win the battle, would not much surprise us: we have seen such things before. But here the case is widely different. We see the Hungarian, at one period of the match, win seven games in succession; at another, absolutely throw away, after winning them, double that number every one of which a player of half his skill could have scored. We have seen him, even in the last few games, so completely out-manœuvre his adversary, that the victory has actually trembled on a single move, and yet be missed it; nay, even in the last game of all, when they stood 10 and 10, and excitement had reached its highest point, we find him acquire a position so decidedly superior that his friends present considered the match won; and again before that in his adversary's lap! What is the solution of all this? How is it that a player can come within a move of winning a game, and of a game of winning a match, and lose both? A dozen conjectures are offered us, all more or less wide of the mark. What does the Hungarian himself say? Let us hear him. Mr. Löwenthal attributes his defeat mainly to the twenty minutes' limitat on on each move. Well, we believe the restriction had a disastrous influence on his play; and that, freed from this irritating limitation, he would have won the match, after gaining so fine a start, and having two games tacked to his score; but this does not meet the difficulty. There were, undoubtedly, instances where the situation required more than twenty minutes; but there were more where he might have won to a certainty, if, instead of taking only two minutes, he had reflected for five. We are not more satisfied with his plea of "nervous excitement." Some allowance must of course be made for it—but Mr. Harrwitz, who had to fight a painfully up-hill battle, had much more cause to be nervous than Mr. Löwenthal had.

No, the real truth appears to be this: Mr. Löwenthal's *best* play is superior to Mr. Harrwitz's *best*; but, while the former sometimes sinks to a knock beneath the topmost force, the latter has the faculty—a rare one, in a match—of always playing up to the mark when it is required. The former, by ingenious combinations, or some happy inspiration, acquires a winning position, and then, through one unlucky blunder, loses more than he has gained. The latter, without an attempt at combination worthy the name, often without any apparent endeavour, even, to gain advantages, undismayed by any peril he may be in, plays coolly on, biding the time when his enemy will relax, and, when he does, steps in, and wins or draws the game. Taking the games all through the contest, we believe it will be found that this gave the general characteristics of the two competitors. Exceptions, of course, present themselves. The Hungarian has won a few games right off; and his antagonist, in two or three instances, played timidly and unskilfully. In the match, however, the games prove, we think, indisputably, Mr. Löwenthal to be the finer, the more learned, and more finished player; and Mr. Harrwitz the surer, the more powerful, and the more dangerous one. Appended is the concluding game of the Match. (Since writing this, we hear that Mr. L. has challenged Mr. H. to play another match for the same stake, but without a limitation to the number of moves.)

GAME THE LAST.

(Sicilian opening.)

WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK (Mr. H.)
1. P to K 4th	P to Q B 4th	24. K R takes B	Q to her B sq
2. B to Q B 4th	P to K 3rd	25. Q R to K sq	Q R to Q 4th
3. Q Kt to Q B 3rd	P to K R 3rd	26. P to K R 3rd	P to K R 4th
4. P to Q 4th	Kt to Q B 3rd	27. P to Q B 4th	P takes P (in passing)
5. P to Q 3rd	P to K Kt 3rd		
6. P to K B 4th	K Kt to K 2nd	28. B takes P	K to Kt sq
7. K to Q B 2nd	P to Q 4th	29. Q to K B 3rd	P to Q B 5th
8. B to Q K 2nd	B to K Kt 2nd	30. K to Q 4th (c)	R takes R
9. B to Q 2nd	Kt to Q 5th	31. B takes R	R to Q sq
10. Castles	Castles	32. Q to K 4th	Q to K 3rd
11. P to Q R 5th	P takes K P	33. B to Q Kt 6th	R to Q 2nd
12. P takes P	B to Q 2nd	34. R to Q B sq	P to K Kt 4th
13. P to Q 6th	B to Q B 3rd	35. R takes Q B P	R to Q 8th sq (ch)
14. K to Kt 5th	Q to her B 2nd	36. K to B 2nd (d)	P takes P
15. B to Q B 4th	Q R to Q sq	37. R to Q 4th	R takes R
16. Q R to Q B sq	P to Q Kt 3rd	38. B takes R (e)	P to K B 3rd
17. B takes Kt	P takes B	39. Q to K Kt 6th	Q to her 2nd
18. R to K sq	K to K sq	40. B to Q B 3rd	P takes P
19. Q to K Kt 4th (c)	P to K R 3rd	41. B takes P (f)	Q to her 7th (ch)
20. Kt to K B 3rd	Kt takes Kt (ch)	42. K to B sq	Q to her B 8th (ch)
21. Q takes Kt	K to R 2nd (b)		
22. Q to K B 2nd	P to Q 5th	43. K to his 2nd	Q to K 6th (ch)
23. Kt to K 4th	B takes Kt		

And Mr. Lowenthal resigned the Game and the Match.

(a) We do not quite understand the motive for p ying the Queen thus.
(b) What was the object of this?
(c) P to K 6th would have been a dangerous move for Black.
(d) Mr. Löwenthal's friends considered that, had he played to R 2nd instead, he might have won without very much difficulty from the point.
(e) The game is now easily drawn by either party.
(f) It is lucky to be believed that, in the deciding game of a great match, with so much at stake, any player above a fifth rate would have been guilty of such a gross *bêtise*. This, of course, loses the match at one blow!

CALENDAR FOR THE WEEK.

SUNDAY Jan. 1, 1854.—1st Sunday after Christmas. New Year's Day.
MONDAY, 2.—Edm und Burke born, 1730. Lavater died, 1801.
TUESDAY, 3.—General Monk died, 1670.
WEDNESDAY, 4.—Roger Ascham died, 1568.
THURSDAY, 5.—Duke of York died, 1827.
FRIDAY, 6.—Epiphany. Twelfth Day. Old Christmas Day.
SATURDAY, 7.—Fire Insurance due. Fenelon died, 1715.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JANUARY 7, 1854.

Sunday	Monday.	Tuesday.	Wednesday	Thursday.	Friday.	Saturday.
M. h. m. 3 10	A. h. m. 3 40	M. h. m. 4 4	A. h. m. 4 26	M. h. m. 4 55	A. h. m. 5 20	M. h. m. 5 45	A. h. m. 6 10	M. h. m. 6 35	A. h. m. 7 0	M. h. m. 7 15	A. h. m. 7 45	M. h. m. 8 10	A. h. m. 8 40

TO CORRESPONDENTS.

THE BLACK SEA AND THE SEAT OF WAR IN ASIA.—Our Correspondent at Towcester will see, in an early number of our Journal, that his request has been anticipated.

J. J. ROBINSON, Forbes.—We regret that we cannot publish the verses

XENOS, Ardlinster.—A newspaper posted for Geelong, as described by our Correspondent, will be duly delivered, unless it be stolen by the underlings of the Post-office—by no means an unusual occurrence.

E. L.—The Arms of Prince Albert are:—"Quarterly, 1st and 4th, the Royal Arms, differenced by a label of three points, on the centre point scrosegu. 2nd and 3rd, Barry of ten, sa. and arg. A cross treflé vert for SAXONY." He bears a crown.

NEMO.—We apprehend you cannot change, but must be content with the Christian name you bear.

SCOTIA.—The daughter of an Earl would clearly take precedence of the daughter of a commoner.

G. J.—If the daughter be resident with her father, she may have engraved on her card the name of her father's house.

A KEY TO THE CHRISTMAS MAZE,
In the ILLUSTRATED LONDON NEWS Dec. 24, page 575.

On entering the Maze, pass up to the left, leaving the road to the right (which is a feint). In following up the course, after 20 or 30 windings, we fall into a cross road, a little below on the left of the Castle. Turning to the right, we come to a fork, close to the entrance of the Castle. Take the *lower* road *leading to the left*, which passes close over the flag staff of the Castle. We then fall into a branch road up and down, close under a bridge, take the road down, and this will lead to a point or meeting of four roads. Take the road leading to the right of the Castle, and by following it up we pass close to the right corner of the Castle. A little further on the road again separates into two, under a bridge; come down, and avoiding the road leading to the left of the Castle, we come to a fork, a little to the left of the entrance. By taking the lower road, and avoiding the road to the right, the Castle will at once be reached.

THE CENSUS.—Early in the New Year will be published, the CENSUS of the UNITED KINGDOM, prepared for the ILLUSTRATED LONDON NEWS, comprising a Comparative View of the Population (distinguishing the Sexes) of every Parish and Town in the Empire in 1841 and 1851: with a Detailed View of the Population of the Metropolis, a Comparison of the Population in Counties and Towns, and of the whole Empire, at Different Periods; and a Variety of Interesting Information concerning the Movement of the Population—the groundwork of all Political Science. Accompanied by a Statistical Map of Great Britain and Ireland, with Diagrams, exhibiting, by symbolic signs, each town according to its population; also, the area of each County, and average number of inhabitants per square mile, and the Railway and Telegraph Systems, correctly laid down, compiled and drawn by JOHN DOWER, F.R.G.S.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 31, 1853.

THE odious and treacherous butchery committed by the Russians at Sinope is far more than sufficient to justify the Turkish Government in refusing any terms of compromise, or of listening to any negotiation, until the outrage shall have been avenged. But Mahomedan Turkey shows itself far more Christian in its conduct than the so-called Christian Emperor of the Russians. As if to afford one more decisive proof, in addition to the many which it has given to the world, of the justice and moderation which characterise its actions, the Turkish Government, in a Great Council convoked at Constantinople on the 18th instant, agreed that the collective note of the Four Allied Powers should be received. Notwithstanding the bitter remembrance of Sinope, the Porte consents to despatch a Plenipotentiary to some neutral capital, not being Vienna, to treat for peace; and accepts the declaration of its Allies, that the evacuation of the Danubian Principalities is to be a *sine qud non* in the negotiation, and that the territorial limits of the Ottoman Empire are not to be changed or affected. These are the stipulations of the Allies as well as of Turkey; but Turkey adds, in her own behalf, and as essential to her own dignity and security, that all treaties existing between the Ottoman and the Russian Empire anterior to the war, are to be considered as null and void. It is not to be expected that the Czar will adhere to these terms, just and reasonable as they must universally be considered. Turkey cannot abate one iota of them, unless the grip of the aggressor be at her throat; and Russia, having gone so far, cannot accede to them, unless reduced to the same extremity. The strong arm will, therefore, have to decide the question; and the new proposal for a Conference will share the fate of its predecessors, and be rendered useless by events, which are far more rapid and potent for the solution of knotty points than Notes or Protocols.

The Emperor of Russia, finding the public opinion of the civilised world against him, is looking out for allies wherever he can. He appears to have secured as one of his tools the effete and imbecile Court of Teheran, which has just declared war against Turkey on one pretence, and against England on another. The object is, of course, to create alarm for our Indian Empire. British power, we anticipate, will make short work of the Shah. But the Emperor Nicholas, like a prudent man—for there is a kind of prudence to be observed even in the most desperate of schemes—is looking about for more serviceable supporters than the rotten empire of Persia; and is endeavouring to detach Austria, if not Prussia, from the Quadruple Alliance, and to coerce Sweden and Denmark into making common cause with him. It is impossible to say what success may attend his efforts. But this much is certain: if Austria detach herself from the English and French alliance, her doom is sealed. She will fall to pieces at the first concussion, and Hungary and Italy will reign in her stead. If Prussia be not stanch, a similar fate will await her; and Poland, resuscitated and restored, will claim a large slice of her dominions, and give her considerable trouble besides—to say nothing of a possible Westphalian kingdom that may emerge from the chaotic embroilments of a general war. The geographical position of Sweden and Denmark would make them valuable allies of the Czar; but there is not only public opinion in those countries, but both of them suffer, and have suffered, from Russian spoliation, and neither of them has forgotten or forgiven it. The restoration of Finland to its lawful owners would be an inducement that might tempt Sweden to join the Anti-Russian alliance, even if other arguments should prove powerless to move her. Denmark could not be of much service to the Czar if Sweden joined the other side, and Denmark is too vulnerable to risk lightly the friendship of Great Britain. But, whatever success may attend the Czar in his efforts to strengthen his bad cause, the fleets and armies of Great Britain, France, and Turkey—even did Germany contribute no armies to the alliance—would be amply sufficient to give the Russians more work than they can accomplish. The Russian fleet in the Black Sea is not likely to be in existence long after the formal declaration of war by England and France, and the Russian fleet in the Baltic will melt away in the spring with as much rapidity as the floating ice of that region, if England be driven to the necessity of attacking it. If we reflect upon the fortunate fact that the whole of the immense frontier line of the Russian Empire is inhabited by enemies of her power—by races and tribes, either Mahomedan or Christian, whom she has conquered and oppressed—by Finns, Germans, Poles, Sclavonians, Turks, Circassians, Tartars, Cossacks, and other populations, that it would take an ethnologist some trouble to catalogue—we may dismiss from our minds any fear that we shall be deficient in allies. Russia may now sing her blasphemous "Te Deums" if she please; but the day will assuredly come when she will have to change her tune—to sing "Miserere"—and to clothe herself in sackcloth and ashes.

THE differences between Lord Palmerston and his colleagues in the Ministry have been removed, and his Lordship's resignation has been withdrawn. The public knows nothing whatever of the circumstances which led, in the first place, to the Noble Viscount's secession; and, in the second, to his return to office. Those who desire to satisfy their curiosity on the subject, and to learn the exact truth on a matter—once of European, but now, happily, only of English interest—will have to wait until the meeting of Parliament, for the explanations which will no doubt be freely asked, and as freely given. Without expressing any opinion upon a point on which we do not profess to be in the slightest degree informed, we can but reiterate what we have already stated, that Lord Palmerston's resignation at such a time was peculiarly unfortunate. The proof that it was so, lies in the efforts that were made to induce his Lordship to reconsider his determination, and in the satisfaction with which the success of those efforts has been hailed throughout the country. Lord Palmerston has re-instated himself in popularity, and may now hold or express whatever opinions he pleases on the proposed new Reform Bill of Lord John Russell without again running much risk of losing it. The Eastern question is, at the present time, the question of all others; and Reform Bills, however interesting in themselves, or however advisable to be settled, must yield their place to the one great topic. Whether Lord Palmerston be, in home politics, the Tory that some represent him, or whether he be a Reformer of the Whig school, or of one more advanced, is a consideration of no great moment, when war with Russia will occupy us in Europe, and when war is threatened against us in Asia by the intrigues of the same unscrupulous Power. The momentary discouragement that must have been felt, wherever Turkey and justice had a friend, and Russia and insolent rapacity a foe, at the announcement that Lord Palmerston was no longer a member of the Ministry, has long ere this given place to a better feeling; and confidence, for a moment shaken, has been fully restored. Rightly or wrongly, the people of this country, and of Europe generally, were of opinion that Lord Palmerston was the advocate of strong and prompt measures in defence of Turkey. Rightly or wrongly, they were of opinion that Lord Palmerston was the energetic supporter of an Anglo-French alliance in defence of European civilisation against Tartar barbarism; and his retirement was hailed with pleasure by no one who was not either a supporter of Russian policy, or who did not imagine that the Aberdeen Ministry was lukewarm and dilatory in supporting the Sultan. The one party, happily to be numbered only by units in Great Britain, have had but small cause and fleeting moments for rejoicing; the other have seen in his Lordship's resumption of office, a greater cause for rejoicing than was afforded by his retirement. His return proves the former misgiving to have been unfounded, and proclaims to the world, that at the present time, whatever may have been the case hitherto, his Lordship and his colleagues are fully agreed as to the course to be adopted against the public enemy.

THE COURT.

The Queen held a Privy Council on Thursday afternoon, at Windsor Castle. The Council was attended by his Royal Highness Prince Albert, the Earl of Aberdeen, the Earl Granville, the Lord Chancellor, Lord John Russell, the Right Hon. W. E. Gladstone, the Right Hon. Sidney Herbert, Sir James Graham, and Lord Ernest Bruce acting for the Lord Chamberlain. At the Council, Parliament was ordered to be further prorogued from the 3rd January until Tuesday the 3 st of January, 1854; and a proclamation was issued, summoning Parliament to meet on that day for the dispatch of public business. The Queen gave audiences to the Earl of Aberdeen, the Earl Granville, and the Lord Chancellor. The noblemen and gentlemen attending the Council travelled to and from Windsor by a special train on the Great Western Railway.

The extremely cold weather of the past week has added a novelty to the usual Court pastimes in the diversion of skating. The Prince Consort, with the Prince of Wales and Prince Alfred, have indulged in the agreeable exercise in the Home Park, almost daily since the frost set in. On Thursday morning, several officers of the regiments quartered at Windsor had the honour of joining the Royal party. The Queen, accompanied by Lord and Lady John Russell, walked down to the ice, and remained a considerable time.

His Royal Highness Prince Leopold of Saxe-Coburg, whose arrival at the Castle was announced last week, took his departure for Southampton on Tuesday, *en route* for Lisbon, to pay a visit of condolence to the King Consort.

Their Royal Highnesses the Duke and Duchess de Nemours visited her Majesty on Monday.

The Earl of Clarendon, Lord and Lady John Russell, and Lord Raglan, have been among the guests of her Majesty during the past week.

The Duke and Duchess of Cleveland are dispensing a princely hospitality to a distinguished party at Raby Castle. The noble Duke and Duchess have caused their annual bounties to the poor to be distributed during the past week.

The Duke and Duchess of Richmond have a select party staying with them at Goodwood.

POSTSCRIPT.

TURKEY AND RUSSIA.

Authentic intelligence from Constantinople dated the 19th inst. states that negotiations on the peace project have commenced, and that the Porte manifests a pacific disposition. The combined fleets at the above date were still at Beycos.

A letter from Syra, dated Dec 18, says:—

Lord Dudley Stuart has preceded us to Constantinople, on board the *Liverpool* screw-steamer. It is said that his Lordship's intention in visiting Constantinople is to persuade the Sultan to accept the services of the Polish refugees, in being believed that a general desertion of Poles serving in Russian regiments would take place if they were sure of being received in a corps of their own countrymen on entering the Turkish territory. It is also reported that his Lordship advocates a levée of the Christian subjects of the Porte, a step which would certainly settle the question as to the Russian or Turkish leaning of the Rayahs. Desertion to the Russians from such a corps would perhaps be as frequent as Polish desertions from Russian regiments.

A telegraphic despatch from Vienna, dated Wednesday evening, states that the Russian steamer *Pruth* has sent two Turkish villages on fire by throwing red hot balls into them.

The Austrian Government appear to be already endeavouring to evade the consequences of the Protocol and instructions of the 5th of December. They have explained, in a *quasi* Ministerial journal, that the share of Austria in the negotiations implies no relaxation of her partiality to Russia:—

The Imperial Royal Government (of Austria), by having once more agreed with the two great Western Powers in the most friendly and sincere spirit, in order to re-establish the troubled peace in the Orient by means of a collective mediation, has not denied the continuance of the friendly sentiments which it entertains towards its allied neighbour (Russia) in the remotest degree, nor will hereafter have to do so. On the contrary, we still recognise in the intimate friendship between these two great monarchs the safest guarantee for the peace of the world, and the conservative interests of Europe.

It is a satisfactory contrast to this suspicious conduct of the Court of Vienna to find that Prussia has taken a more independent line. Count Portalès, who was some time Prussian Minister at the Porte, has arrived in London on a special mission connected with the affairs of the East; and, it is hoped, that he is the bearer of instructions favourable to the unbroken concert of the Four Powers.

An attempt has been made by a mandate from St. Petersburg to engage the Swedish Courin the contest, with a view to closing the Swedish ports, and eventually the Baltic itself, against English and French vessels. King Oscar has re-organised the higher departments of the military and naval administration, with a view to securing greater unity and efficiency in the event of hostilities. Diplomatic negotiations are pending between the Governments of Sweden and Denmark, having for their object the conclusion of a league, offensive and defensive, between the two States. Sweden is arming by sea and land, and Denmark will immediately fortify her coasts, and place Copenhagen in a state of defence.

It is said that the English squadron in the Tagus has been ordered home to strengthen the Channel fleet. The state of affairs is thus seen to be really critical, and there seems to be little prospect that peace can be maintained.

FRANCE.

PARIS, Thursday Evening.—Letters from Vienna, of the 26th, say that the Ulemas had declared their willingness, if the Ottoman Government should not succeed in raising a loan abroad to supply the required amount from the funds destined to religious purposes.

The first aide-de-camp of the Minister of Marine has set out for Toulon, where he will embark for Constantinople, with instructions to the Admirals.

The Bourse has been dull to-day. The Three per Cents are 74.50; and the Four-and-a-Half per Cents, 101 25.

From Vienna the Metalliques are quoted at 93½; and the Exchange on London, 11.17.

The return of Lord Palmerston to power has given the greatest satisfaction on this side of the Channel. It shows a singular change in the feeling of the French public towards England, that the man who but a few years ago was considered France's greatest enemy, whose name was a bugbear held up to frighten the timid, is now most popular. His retirement was most universally regretted, especially by the Government, and his return is a matter of congratulation, as if it were all that was required to humble Russia.

The good understanding between the English and the French Government upon the Eastern question, has been further cemented by a very important act. In virtue of the line of policy agreed to between the two Governments, a draft was sent to London on Saturday last of a declaration to be drawn up by the two Governments, and communicated to Russia in their joint names. In that declaration it is intimated that France and England will not permit Russia and Turkey to make war against each other in the Black Sea, and that they accordingly interdict them from doing so. This appears to be the correct version of the intentions attributed to the Governments, of sending a flag of truce, with a message to the same effect, to Sebastopol.

M. Fortoul, Minister of Public Instruction, and M. Thayer, Director-General of the Post, are gazetted as Senators.

An Imperial decree sanctions the amalgamation of the junction of the Rhone and Loire and the great central Railway Companies.

General Lefio, late questor of the Legislative Assembly, and at present a refugee in Jersey, has received a retiring pension of 4000f.

The premium paid by the city to the Paris bakers during the first fortnight of November, to keep the price of bread at 40c. the kilogramme, amounted to 671,000f.—the real price being 49c.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. F. Batchelor to Calstock, Cornwall; Rev G. Nasler, M.A., to Roughan; Rev. F. T. Scott, M.A., to Sibert-wold, with Coldred annexed, near Dover. *Vicarages:* Rev. S. W. Mant, M.A., to Bramford, with Burstall annexed, near Ipswich; Rev. M. W. F. St. John to Brampton-cum-Sawtry. *Incumbency:* Rev. W. Dawson to St. John the Evangelist, Moor Allerton. *Perpetual Curacies:* Rev. J. Davies to Smallwood, Cheshire; Rev. T. H. F. P. Dawson Christ Church, Ramsgate, Kent; Rev. A. E. Hutton to Higher, Dalston, Cumberland; Rev. W. T. Newingham to St. John's, West Derby.

ST. PAUL'S CATHEDRAL PREACHERS.—The Bishop of London has appointed the following gentlemen special preachers at St. Paul's Cathedral for January next:—Sunday, Jan 1, the Rev Henry Vena, B.D.; Sunday, Jan. 8, the Rev. W. J. Hall, M.A.; Sunday, Jan. 15, the Rev Robert Graham Moon, M.A.; Sunday, Jan. 22, the Rev. R. G. Baker, M.A.; Sunday, Jan. 29, the Rev John Smith, B.D.; Monday, Jan. 30 (King Charles the Martyr), the Rev. E. G. Moon, M.A.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev S. Smith, by the congregation of St. George's Church, Camberwell, on completing the 21st year of his ministrations in the parish; Rev. G. Troughton, LL.B., curate of St. Paul's, Withington, near Manchester, by the congregation; the Rev Robert Chas Jenkins, M.A., Incumbent of Christ Church, Faversham-green, on his appointment to the Rectory of Lyminge, in Kent, by his parishioners and friends.

LETTERS FROM PARIS.—Very general complaints are heard at the repeated irregularities in the delivery of letters from Paris. In several instances lately these letters have not been delivered in the City till two days after their date.

REV. WILLIAM JAY, OF BATH.—This well-known dissenting clergyman died on Tuesday evening last, at his house in Percy-place, in the 85th year of his age. He was born in the same year as Napoleon, the Duke of Wellington, Sir Walter Scott, &c.

COUNT PORTALES, charged with a special mission from his Majesty the King of Prussia, arrived in London on Sunday night.

THE LATE QUEEN OF PORTUGAL.—A grand mass was celebrated for the late Queen at Lisbon, on the 17th, in the cathedral of San Vincent. A very distressing circumstance here occurred. The vault being too low for the coffin, it was placed near the altar whilst the necessary preparations were being made to deepen the floor, the swelling of the body partially burst the coffin, and they were compelled to place it in another (the fourth). It still stands in the church.

THE PRESTON STRIKE.—At a meeting of the masters, held at the Bull Inn, on Thursday, the following resolution was carried:—"That, inasmuch as no disposition has been as yet shown by the operatives generally to resume work, this meeting do adjourn to January 26, 1854. Should it, however, in the meantime be ascertained that many of the operatives are desirous of returning to their work, immediate steps will be taken by the associated masters to open their mills."

LATEST INTELLIGENCE.

TURKEY AND RUSSIA.

The sub-marine telegraph brings positive and more ample confirmation of the intelligence from Constantinople, by which it appears that the Sultan was willing to treat for peace on the terms proposed by the Four Powers. The *Moniteur* states that the last advices from Constantinople announce that the Divan was perfectly agreed with the representatives of France, England, Austria, and Prussia, on the conditions upon which the Porte could honourably treat for the re-establishment of peace.

All military operations on the Danube have stopped. Omer Pacha and his army are at their winter quarters of Schumla. Ismail Pacha, however, still occupies Kalafat on the Wallachian side of the Danube. He has there well entrenched himself and the army of 40,000 men. It is thought the Russians will attack him there before spring. This will not so much depend upon them as upon the weather. The state of the road renders the transport of artillery at this season very difficult.

The following has appeared in the *Official Journal* of Persia:—"His Majesty the Shah of Persia has intimated the order to the *Chargé d'affaires* and personnel of the British Legation at Teheran to proceed with him to Soolan, Kerrich, and to Tulkan, and from thence to the military camp at Soulrenie." This is assigned as the cause of difference between the British representative and the Shah.

FRANCE.

The *Moniteur* publishes a decree abolishing the restrictions imposed by the rescript of the 8th February, 1826, on raw cotton imported into France from Great Britain and the British possessions in Europe.

There has been a rumour in Paris that there has been a third duel in March, between the Duke of Alba and Mr. Soulé, the American Ambassador, and that Soulé was killed.

M. Visconti, member of the Institute, and architect to the Emperor, has just died suddenly at Paris.

GOVERNOR OF HONG KONG.—We have reason to believe that DR. ROBERT MONTGOMERY MARTIN will succeed Sir George Bonham as Governor of Hong-Kong and Chief Superintendent of British Trade in China.—*Globe.*

SHIPS OF WAR BUILDING FOR RUSSIA.—We understand that an official letter from the Secretary of the Home Department has been received by the civil authorities of Glasgow, requesting to know particulars respecting some war steamers building on the Clyde, as it is reported, for the Emperor of Russia. His Lordship has, we believe, been misinformed in the subject, as there are no ships building here for Russia; but there are at present being constructed two pairs of powerful first-class marine engines and machinery for war-steamers, by one of our first engineering firms, under contract to have them at Cronstadt by the end of May, to fit them up in the vessels there by his own workmen. Although there are no ships building here for the Autocrat, we have reason to believe that his Lordship may learn something on the subject if he institutes inquiries on the banks of the Tyne or Wear.—*North British Daily Mail.*

COMBINATION AGAINST STRIKES.—The manufacturers of Lancashire have formed a new combination for the purpose of putting down the Preston strike—a step which cannot but have most important consequences. The meeting was held at Manchester; it represented manufacturers of printable-ts line of corrugation, Ashton, Stalybridge, Bury, Colne, Darwen, Glossop, Hyde, Preston, Salford, Stalebridge, and Stockport. This meeting is suggested by the form the strike has taken.

OPENING OF A RAILWAY.—The South Wales Railway, from Herbert to Haverfordwest, was opened on Wednesday with great relje cings, and in the presence of a large concourse of spectators.

THE CITY FORGERIES.—William Anderson was on Thursday examined at great length, at the Mansion-house, on the charge of another forgery, amounting to £4,000, on the Governor and Company of the second charge having been gone through, the prisoner, who had buried his face in his handkerchief during the proceedings, and who seemed deeply affected by the painful position in which he was placed, was again asked whether he wished to say anything. As in the first case, he replied through Mr. Hobler, that he should reserve his defence. He was then remanded for a week, as it is understood another charge of a different character will be gone into.

THE DREADFUL SHIPWRECK NEAR DUBLIN.—During the hurricane on Tuesday night and Wednesday morning, the *Enniscrone* steamer, for the Irish Channel, she was boarded by Captain Gordon's coastguard station; and went down fifteen miles E.N.E. off Lambay. Seven of the crew were saved by the fishing smack *Emerald*. The captain, his wife, and her sister second mate, and five men were drowned; and another of the crew died on board the smack.

LIVERPOOL, Thursday.—A dense fog prevailed this morning, and many casualties occurred to the craft in the river. The *Baltic*, which yesterday, during the state of the tide, in her route for Philadelphia, proceeded from her moorings, but brought up in Bootle Bay, until the fog cleared up. She had on board eight passengers, and a full cargo. The *City of Glasgow* (s.s.) arrived from Philadelphia, with eighty passengers, and 103,000 dollars

NAVAL AND MILITARY INTELLIGENCE.

MUTINY IN THE CHINESE SEAS.—We hear there has been a mutiny on board the *Inconstant*. It seems that the men, who have not had liberty for sixteen months, sent in a petition on the subject to Admiral Fellew, who immediately ordered the ship to be got ready for sea. In the evening there was a noise below, when the drum was beat to quarters, and seven of the men refused to come on deck, upon which the officers were ordered to compel them at the point of the sword, and in doing so several of the men were severely wounded.—*China Mail.*

A RUSSIAN SCREW FLEET.—We have the best authority for stating that the Russian High Admiral has recently impressed on the Czar's Baltic fleet, one-half of the ships were at once condemned as worthless, and it was determined to build, *on contract*, a number of screw line of battle ships—one account says less than thirty! We may possibly find some of these contracts taken in the Clyde, or the Thames, and may safely calculate upon a portion of the vessels being built by the Americans. But it will take at least two years to get so large a fleet fit for sea—even if the cash is forthcoming.—*Daily News.*

WARLIKE PRECAUTIONS.—We understand that almost every infantry regiment now stationed in Ireland are under orders for foreign service. Many have been sent to every large station, and are in a state of infantry, to have the whole of their subalterns examined as to their eligibility and fitness for promotion. This savours much of 2nd battalions, and the 9th, a cavalry regiment—called out.—*Service Gazette.*

THE ARMY IN INDIA.—Several of the soldiers who had purchased their discharges with the intention of proceeding to Australia, have requested and obtained permission to rejoin their regiments, as, after mature reflection, Commander-in-Chief issued a paternal order warning the European soldiers against being tempted to relinquish the certainty of pension in their old age for the more than doubtful and hazardous future involved in emigration to Australia.

THE AUSTRALIAN MAILS.—The next contract mails for the Australian colonies will be despatched from Southampton on the 4th of January by the Overland route for King George's Sound, Adelaide, Port Phillip, and Sydney, by the screw steamer *Ripon*. Arrangements have been entered into for the despatch of the outward mails of February by the screw steamer *Bosphorus*, and conveyed to Adelaide, Melbourne, and Sydney, touching only at St. Vincent. This contract will not interfere with the departure of the steam-ship *Oriental* from Southampton for Port Phillip and Sydney on the 26th January. This vessel has no postal arrangements to fulfil, and will therefore merely take out ship-letter bags.

TESTIMONIAL TO JAMES STRINES, ESQ.—This gentleman has lately been presented with a most gratifying testimonial of esteem and gratitude, signed by all the passengers on board the *Bombay* merchant-vessel homeward bound from Port Phillip. It appears that, in lat. 27 deg. S., and long. 38 deg. W., the *Bombay* sprung a leak; when Mr. Strines, the chief officer, was in charge of the ship, the captain being confined to his bed by illness, but under his directions. Mr. Strines, whose age does not exceed twenty three years by great exertion and good seamanship, succeeded in carrying the *Bombay* into Rio Janeiro—distant when the leak broke out about 400 miles.

THE STRINES PRINTING COMPANY'S CHRISTMAS PARTY took place on the 23rd inst., at the Print Works, near Stockport, where two large rooms were tastefully decorated for the festival. The guests numbered 250, and one of the tables was occupied by fourteen men whose united ages exceeded one thousand years, and whose joint service in the Strines Printing Company exceeded seven hundred years. Two of the partners of the firm presided; and the amusements included dancing and glee-singing; the junior portion of the company were regaled with tea, and entertained with the exhibition of dissolving views and a voltaic battery, after which they retired. The adult people then sat down to Christmas fare; after which several toasts were drunk; and the festivities concluded with a ball.

IRELAND.

DUBLIN, Wednesday.—The weather is very severe; the snow of yesterday morning has been followed by hard frost, which has left strong ice on all the public roads. Thanks to railways, the citizens of Dublin are independent of the canals for their supply of provisions from the interior of the country.

MR. J. O'CONNELL AND THE LEAGUERS.—Mr. J. O'Connell has issued an address to the "independent" electors of Clonmel for their successful exertions in the cause of freedom of election. A great victory it was, in the estimation of the successful member, although no opposition occurred.

MELANCHOLY SUICIDE OF COLONEL LAYARD.—We have to announce the death, by his own hand, of Colonel Brownlow Villiers Layard, late of the 8th Infantry, and formerly M.P. for Carlow. An inquest has been held, and a verdict of "Temporary derangement of the mind" returned.

ILLNESS OF THE LORD BISHOP OF KILMORE.—The Right Rev Dr. Leslie, who has reached an advanced age, has been suffering very severe illness, at Kilmore-house, Cavan; but latterly there have been symptoms of improvement. Dr. Leslie had been consecrated Bishop of Dromore in 1812. His Lordship was translated to Elphin in 1819, and to Kilmore in 1841.

EAST GLOUCESTERSHIRE.—The election for the Eastern Division is expected to come off about the middle of January, and the friends of good government and progressive reform will rejoice to hear that Mr. Holland's prospects of being returned are daily improving.—*Cheltenham Examiner.*

SOUTH STAFFORDSHIRE ELECTION.—The Hon. Arthur Wrottesley, and William Mathews, Esq., are already fixed upon as the proposer and seconder of Lord Paget, who met his preliminary central committee last week, and afforded general satisfaction by his frank and manly conduct. The canvass, as far as it has at present proceeded is distinguished by very favourable results.

DEATH OF GENERAL RADOWITZ.—This well-known General died at Berlin on Christmas-day, at noon. His death was tranquil, and without pain. He has left a very large circle of loving friends, and the German patriotic fund has good been accustomed to regard him as one of the celebrities of the times.

DECIMAL COINAGE.—LIVERPOOL.—A town meeting, convened by the Mayor (Mr. J. B. Lloyd), was held in the Sessions-house on Tuesday, his worship presiding, to promote the subject of decimal coinage. Speeches were delivered by Mr. W. Brown, M.P.; Mr. T. B. Horsfall, M.P., Mr. Thornely, M.P., and other gentlemen; and resolutions were unanimously adopted, approving of the principle of decimal coinage. Copies of the resolutions were ordered to be forwarded to the Prime Minister, the Chancellor of the Exchequer, the President of the Board of Trade, and Lord John Russell.

LATEST BETTING AT TATTERSALL'S ON THURSDAY EVENING.

DERBY.	
9 to 1 agst King Tom (taken)	33 to 1 agst Ret. of St. George (taken)
10 to 1 — Ruby (taken)	40 to 1 — Seythian (taken)

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Owing to the unfavourable news from the East, the continued rise in the value of money, and the panic of heavy sales of securities on the Continent and elsewhere, the Market for National Securities has been subject to numerous fluctuations. We may observe, however, that, though they have been a tendency to decline, prices have been fairly supported. There has been a steady, but by no means active, demand for money, the value of which keeps comparatively high. In Lombard street, much caution is shown in discounts, and the lowest rate for first-class acceptances is five per cent.

Monday being almost a close holiday in the City, was a *dies non* in the Stock Exchange. On Tuesday the Consol Market opened steadily, and the Three per Centsfor the Account marked 94 to 94¼ and 93⅞. The Three per Cents Reduced were 93¾ to 94⅛; the New Three-and-a-Quarter per Cents, 93⅝; and South Sea Annuities, 93⅝. India Stock, ex div., was 244½ to 245; Bank Stock, 220. Exchequer Bills sold at 3s. to 6s. pm. The transactions on Wednesday were unimportant. The Three per Cents Reduced were 94 to 93⅞; the New Three-and-a-Quarter per Cents, 93⅝ to 93⅝. Consols for Account, 93⅜ to 94, and Long Annuities (1860), 5⅛. India Bonds were 3s.; Exchequer Bills 3s. to 5s. pm. India Stock for the Account was 245. On Thursday the Consol Market was inactive. The Three per Cents for the Account 93⅝; the Three per Cents Reduced, 93⅝ to 94; and the New Three-and-a-Quarter per Cents, 93⅜. Exchequer Bills were tolerably firm at 4s. to 3s. Scrip.

The Market for Miscellaneous Securities has been far from active. In prices, however, no material change has taken place. London and Westminster Bank Shares have marked 40; New South Wales, 83; Provincial of Ireland, 60; Union of Australia, 75 to 74; Union of Madrid 21; Australasian Investment, 65; Australian Agricultural, 22; Colonial Bank, 30; New Zealand, 2; Peel River Land and Mineral, 9⅝; Peninsular and Oriental Steam, 67; South Australian Land, 39; Scottish Australian Investment, 2⅝; Berwick Bay, 1⅛; Australian Agricultural, 22; Crystal Palace, 3; Hungerford and Vauxhal., 8¾; West Middlesex, 113; Hungerford bridge, 12, Waterloo, 5¾; Vauxhall, 22; Albion Insurance, 95; Argus Life, 21, Crown Life, 6; Globe, 14; Guardian, 2; Hope, 3; Law Life, 20; Law Property, 20; Pelican, 45; Rock Life, 8; Royal Exchange, 240; Sun Life, 65; Australian Royal Mail Steam, 2¾; Electric Telegraph 17¾

So far as last week, £1,000,000 in gold has arrived from Australia, £125,000 from New York, and £60,000 from other quarters. The demand for gold on Continental account has been rather active, and about £1,000,000 has been forwarded from London and the outports. Notwithstanding the adverse state of things in China, silver bullion has been in request for shipment by the next packet. The stock in the market is unusually small.

The returns from the Bank of England continue favourable. The Treasury balance is large—upwards of £10,000,000 sterling, but it will now rapidly diminish, on payment of the dividends and the petty stocks. The holders of the latter have, it appears, consented to accept £2,000,000 of Exchequer Bills, in lieu of cash; so that the whole amount to be paid in money will be very little over £4,000,000. The stock of bullion is about £15,500,000.

There has been a steady market for Foreign Bonds in prices no material change has taken place. Brazilian Five per Cents have been marked 98; Chilian Three per Cents, 77. Danish Five per Cents, 103⅜; Equador Bonds, 4; Grenada Deferred, 7; Greek Bonds (Blue), 6⅝ to 7; Mexican Three per Cents, for the Account, 21; Portuguese New Four per Cents, 45; Portuguese Three per Cents, 40; Russian Four and-a-Half per Cents, 98; Ditto, Small, 98; Sardinian Five per Cents, 90; Spanish Three per Cents, 46⅝; Ditto, New Deferred, 22; Dutch Four per Cents, 93 to 93⅛.

Owing to the settlement of the Account, the amount of business doing in Railway Shares has been limited. The total "calls" for January are £1,466,186—£1,186,250 being on account of foreign companies. In Jan. 1853, the total calls were £1,241,760. The following are the official closing money prices on Thursday:

ORDINARY SHARES AND STOCKS.—Caledonian, 85; Eastern Counties, 13⅛; East Lancashire, 63; Edinburgh and Glasgow, 94; Great Southern and Western (Ireland), 104; Great Western, 83; London and North-Western, 103½; London and South-Western, 77; Manchester, Sheffield, and Lincolnshire, 22; Midland, 63; Scottish Central, 89½, North Staffordshire, 13; Oxford, Worcester, and Wolverhampton, 36; Scottish Central, 92; Shropshire Union, 2⅝, South-Eastern, 60; York, Newcastle, and Berwick, 61

PREFERENCE SHARES.—Caledonian, 99½; Eastern Counties New Six per Cent Stock, 13⅛; Great Northern Five per Cents, 121; Ditto, Redeemable at 10 per Cent prem., 110; Great Western Fredeemable 5 per Cent, 89; Oxford, Worcester, and Wolverhampton, 104.

FOREIGN.—Luxembourg, 11⅛; Ditto, Guaranteed, 5; Northern of France, 34.

The inquiry set on foot respecting the position of some of the new Mining Companies has tended to check operations in Mining Shares. On Thursday Agua Fria were done at 1⅝; British Australian Gold, ⅝; Imperial Brazilian, ⅝; Ditto, Cocaes and Cuieba, 2⅜; Colonial Gold, 1⅜; Linares, 11⅜; Nouveau Monde, 1⅛; Port Phillip, ⅛; and United Mexican, 4⅜

The Bank of England has given notice that it is prepared to pay off the petty Stocks immediately, without charge for discount. The English Stock Market for ruled steady on Monday, with a downward tendency. The Three per cents have marked 93⅝ to 94⅛; the Three per Cents Reduced, 93⅝ to 93⅝; and the New Three-and-a-Quarter per Cents, 93⅜. Foreign Bonds and Railway Shares are tolerably firm. Exchequer Bills, 7s. to 8s. premium.

THE MARKETS.

Friday Evening.

CORN EXCHANGE (Friday).—Fresh up to this morning's market, the arrivals of English wheats were very limited; hence, the show of samples was compara tively small. The attendance of both town and country millers was by good. The demand for all kinds of wheat was to an advance on the prices of last week of from 2s. to 3s. per quarter and fine qualities were speedily offered. There was a good inquiry for foreign wheat, partly for shipment to the Continent, and prices were from 2s. to 3s. per quarter higher than on Friday last. The imports are only 4670 quarters. Floating cargoes sold freely, and the quotations had an upward tendency. We had rather an active inquiry for barley, and fine parts is obtained 1s. per quarter. Malt was in short supply, and good copies, at extreme quotations. The oat trade was rather active, and good dry corn produced 6d. to 1s per quarter more money White peas were 1s to 2s higher. Grey and maple, as well as beans, moved off readily, at extreme rates. The flour trade was firm, and American barrels were 1s. dearer.

ARRIVALS.—English wheat, 1110; barley, 17.3; malt, 1645; oats, 3240; flour, 890. Foreign, wheat, 4070; barley, 1780; oats, 8250, flour, 9760 barrels.

English. Wheat, Essex and Kent, red, 62s. to 70s.; ditto, white, 66s. to 80s. Norfolk and Suffolk, red, 61s to 70s.; ditto, white, —s. to —s.; rye, 44s. to 46s., grinding barley, 32s. to 36s.; distilling ditto, 37s. to 39s., malting, ditto, 40s to 46s.; Lincoln and Norfolk malt, 63s. to 68s.; brown ditto, 52s. to 58s.; Kingston and Ware, 67s to 69s.; Chevalier, 70s. to 71s.; Yorkshire and Lincolnshire malt, 62s. to 65s.; potato ditto, 58s. to 61s.; Lanphai and Cork, black 34s. to 36s., ditto, white, 37s. to 41s.; ditto potato, 34s. to 41s.; ditto, old, 46s. to 50s.; grey peas, 39s. to 42s.; maple, 42s to 43s.; white, 36s. to 38s.; boilers, 41s. to 43s. per quarter. Town-made flour, 65s. to 70s.; households, 54s. to 56s.; Stockton and Yorkshire, 54s to 56s per 280 lbs. *Foreign.* Wheat, in a retail way, 5s. per bush; American, 35s. to 46s. per barrel.

Seeds.—Since our last report very few transactions have been reported in this market. Prices however, have ruled tolerably firm

Linseed, English, sowing, 56s to 60s.; Baltic crushing, 47s. to 52s.; Mediterranean and Odessa, 50s to 54s; hempseed, 35s. to 38s. per quarter. Coriander, 10s to 15s. per cwt. Brown mustard-seed, 10s. to 13s.; white ditto, 12s to 14s.; tares, 7s. 6d. to 8s. per bushel. English rapeseed, £30 to £34 per last of ten quarters. Linseed cakes, English, £5 5s. to £10 10s., ditto, foreign, £3 5s. to £11 10s. per ton. Rapeseed cakes £6 0s. to £6 10s. per ton. Canary, 60s. to 70s. per quarter. English Clover-seed, red, 56s. to 66s., ditto, white, 65s. to 72s.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. of household ditto, 9d to 10d per 4lb. loaf.

Imperial Weekly Average.—Wheat, 70s. 6d.; barley, 37s. 11d.; oats, 25s. 6d.; rye, 44s. 4d.; beans 40s. 10d.; peas, 42s. 8d

The Six Weeks' Average.—Wheat, 71s. 8d.; barley, 42s. 2d.; oats, 25s. 7d.; rye, 43s. 0d.; beans, 39s. 3d.; peas, 39s 11d.

Teas.—For all kinds the demand is very inactive; but we have no decline to notice in prices. Coffee remains quiet, at 3d. per lb.

Sugar.—Owing to the holidays, very few transactions have taken place in any kind of raw sugar this week. Importers, however, are firm. Refined goods move off steadily. Brown sugars are worth 44s.; and low to fine grocery 44s. 6d. to 47s. per cwt. The total clearances to the 31st inst. were 5,649,134 cwts. against 5,287,152 cwts. in 1852

Coffee.—A large business has been done in good ordinary Native Ceylon, at 47s. 6d. to 50s. per cwt. Plantation, as well as foreign qualities, are heavy.

Rice.—The market is firm, but the transactions have not been extensive

Provisions.—Most kinds of Irish butter—in supply of which good more off slowly, at full prices. Best English is rather dearer In English very little is doing The Bacon market is low, and the quotations have an upward tendency. Hams, lard, and cheese are quite as dear as last week.

Tallow.—Our market is very firm, and prices are as the Autumn. P.Y.C., on the spot, 58s. 6d. to 59s. 6d.; and, from January to March, 59s per cwt. Town tallow, 57s. per cwt.; last week; rough fat, 3s. 3d. per 8lb.

Oils.—Linseed oil is steady, at 28s. 3d. to 29s. 6d. per cwt. Rape qualities command extreme rates. Turpentine is dull. Spirits, £2 14s. in puncheons, £2 18s.; rough, 14s. per cwt.

Spirits.—The sale for rum is to-day firm Proof Leewards 2s 7d to 2s 7½d; and East India, 2s 6½d. to 2s 7d. per gallon. There is more doing in brandy, the value of which has an upward tendency Genevas and corn spirits are in fair request

Hops.—During the pre-sent week there has been a slight improvement in the demand for new

NEW BOOKS, &c.
